TRUMP'S EPA: Agency at a crossroads -- Complete coverage

August 10, 2017

Latest News

Trump's Deregulatory Agenda Creates Murky Landscape For 2-1 Order Suit

As a federal court prepares to hear arguments over the legality of President Donald Trump's executive order (EO) requiring EPA and other agencies to repeal two rules for every new rule issued, sources say that the case will likely hinge in part on the extent to which the order is already having an effect on agency regulations.

Environmentalists Wary Of Judges' Suggestion To Take CPP Stay To High Court

Environmental groups defending the Obama EPA's Clean Power Plan (CPP) appear wary of a recommendation by two judges on the U.S. Court of Appeals for the District of Columbia Circuit to return to the Supreme Court and ask the justices to address the status of an extraordinary stay they placed on the rule's implementation back in 2016.

As EPA Faces Doubts, API Floats Options For 2-Year Methane NSPS Delay

As EPA faces doubts over its authority to delay Obama-era methane limits for new oil and gas drilling operations, a major oil and gas industry group is presenting a menu of legal authorities the agency could use to justify the proposed two-year delay in a likely attempt to shore up vulnerabilities following the agency's court loss over its 90-day stay of the rule.

NRDC Attorney Says To 'Expect More Lawsuits' Targeting EPA Deregulation

AUSTIN, TX -- A Natural Resources Defense Council (NRDC) attorney is vowing to vigorously challenge EPA efforts to scale back rules and relax enforcement, saying environmentalists are “energized” by the Trump administration and promising a return to the frequent -- and largely successful -- litigation of the Bush years.

EPA Task Force's Superfund Reform Recommendations Draw Mixed Reaction

A task force's report of Superfund reform recommendations recently endorsed by EPA Administrator Scott Pruitt is drawing a mixture of reactions, with one

organization representing community groups blasting the report for failing to reference public health protections, while some attorneys who represent industry generally see the report as "a step in the right direction."

Facing Limited Funds, States Suggest Congress Ease CERCLA O&M Duties

Highlighting a growing budgetary concern, state waste managers are inviting Congress to amend the Superfund statute to ease requirements that states assume full cost responsibility for operation and maintenance (O&M) of remedies at Superfund sites that lack an identifiable or financially solvent potentially responsible party.

White House Denies Murray Coal Exemption, Despite Trump Promises

Posted August 22, 2017, 01:55 P.M. ET

By Rebecca Kern and Stephen Lee

The White House has denied requests to issue an emergency order to keep Murray Energy Corp. coal mines and FirstEnergy Corp. coal plants operating and the companies out of bankruptcy, despite President Donald Trump's promises to back the requests.

Murray Energy and FirstEnergy's executives met with Trump in late July and early August to ask the administration to provide an emergency order to keep the facilities open—an order the companies said is needed to help them avoid bankruptcy.

They claim their bankruptcies would endanger electric grid reliability, so the emergency order is warranted, according to Aug. 4 and Aug. 18 letters from Murray Energy to the White House and the Energy Department. The letters were obtained by the Associated Press and posted online. Murray Energy declined to comment to Bloomberg BNA.

Murray CEO Robert Murray said in the letter that FirstEnergy is "on the verge of bankruptcy" and if the company declares bankruptcy it would be forced to close the coal-fired power plants. FirstEnergy's bankruptcy would "force" Murray Energy into immediate bankruptcy, leading to 150,000 direct and indirect Murray Energy coal-mining job losses in West Virginia, Pennsylvania, Ohio, Kentucky, Illinois and Utah, according to the letters.

Jennifer Young, a spokeswoman for FirstEnergy, told Bloomberg BNA that the company still hasn't heard anything official from the Trump administration. FirstEnergy operates coal plants in Ohio, Pennsylvania, and West Virginia.

"We've spoken to federal officials on numerous occasions about the importance of baseload plants and the need for action to preserve those assets," Young said. "For FirstEnergy Solutions, which is the competitive side of our business that owns the power plants, bankruptcy could be a possibility."

The decision not to issue an emergency order appears in direct conflict with White House statements and action the Trump administration has taken in the past to support coal-mining jobs, including repealing the Clean Power Plan and removing the U.S. from the Paris Climate Agreement.

A White House spokeswoman told Bloomberg BNA Aug. 22 that they denied issuing an emergency order under the Federal Power Act because the companies' request "at this time is not an appropriate use of this authority."

Section 202(c) of the Federal Power Act allows the Energy Department secretary in a state of emergency to "require temporary connections of facilities, and generation, delivery, interchange, or transmission of electricity as the secretary determines will best meet the emergency and serve the public interest."

The Trump administration has used the emergency order under the Federal Power Act twice in the past seven months for a state-owned dam in Oklahoma and two Dominion Energy Virginia coal plants in Yorktown, Va. The Obama administration never used the emergency exemption. It was previously used during the 2000 California energy crisis and after Hurricane Katrina in 2005.

The Energy Department has yet to respond to Bloomberg BNA's request for comment.

Power Plant Emissions Should Be Part of Pipeline Review: Court

Posted August 22, 2017, 12:35 P.M. ET

By Chris Marr

Carbon emissions from gas-burning power plants should have been considered in federal regulators' review of a Florida natural gas pipeline, a federal appeals court ruled today.

A group of connected pipeline projects, including the 515-mile Sabal Trail, will need an updated environmental impact review by the Federal Energy Regulatory Commission following the U.S. Court of Appeals for the District of Columbia Circuit's decision. The Sabal Trail went into full commercial service in early July, carrying natural gas from an Alabama terminal through southern Georgia and to Florida power plants owned by NextEra Energy and Duke Energy. NextEra and Duke are also co-owners of the pipeline, along with Spectra Energy.

A three-judge panel agreed with the Sierra Club and two riverkeeper groups that argued FERC's original review of the project didn't adequately consider its climate change impacts. The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, the majority owner of Bloomberg L.P., an affiliate of Bloomberg BNA.

The pipeline will let Florida power companies burn more natural gas instead of pursuing renewable energy alternatives, the plaintiffs said in their court filings.

"We conclude that at a minimum, FERC should have estimated the amount of power-plant carbon emissions that the pipelines will make possible," Judge Thomas B. Griffith wrote in today's opinion. The court remanded the case to FERC for preparation of a new environmental impact statement.

The opinion marks a departure from three recent rulings by the same court against the Sierra Club, in which the group contested federal approvals of liquefied natural gas facility projects. The judge noted a difference in those cases—that the LNG facilities' natural gas exports would be beyond

FERC's regulatory authority and therefore beyond the scope of its consideration for environmental review.

"Here, FERC is not so limited," Griffith wrote. "Congress broadly instructed the agency to consider 'the public convenience and necessity' when evaluating applications to construct and operate interstate pipelines."

Colorado Governor Orders Pipeline Rule Update After Fatal Accidents

Posted August 22, 2017, 02:29 P.M. ET

By Tripp Baltz

Colorado Gov. John Hickenlooper (D) Aug. 22 directed the state's Oil and Gas Conservation Commission to upgrade its rules on inspection and pressure-testing of natural gas flow lines, one of a series of steps he has taken to improve safety following two deadly accidents. Hickenlooper announced in all seven steps the state will take involving the oil and gas industry. In April, two men were killed when a leaking flow line connected to a natural gas well owned by Anadarko Petroleum Co. caused a house to explode near Firestone, Colo. In May, a worker was killed and three others were seriously injured in an explosion caused by a buildup of combustible products in a trench being dug between oil storage tanks at an Anadarko site.

The direction to the OGCC involves rules for natural gas flow lines connecting wellheads to production facilities. The governor also called for an enhancement of the "8-1-1" system, where people can call to learn the location of underground pipelines before digging. Hickenlooper directed the commission to develop rules similar to those contained in a notice to oil and gas operators he ordered sent out following the Firestone explosion. The notice required companies to identify, inspect, and pressure-test all flowlines within 1,000 feet of homes and other occupied buildings. That process resulted in the testing of 120,000 flow lines at 23,000 different well sites across the state, he said.

Energy Transfer Suit Claims Greenpeace Incites Eco-Terrorism

Posted August 22, 2017, 03:11 P.M. ET

By Andrew Harris and Tim Loh

Energy Transfer Partners LP accused Greenpeace International, Earth First! and other groups of inciting terrorist acts and vandalism to generate publicity and raise money for their causes while hampering the ability of the Dakota Access pipeline majority owner to raise money for projects.

Energy Transfer is the second company to attack Greenpeace and its allies in court for engaging in what the firms claim is a racketeering scheme far beyond ordinary environmental advocacy (Energy Transfer Equity, L.P. v. Greenpeace Int'l, D.N.D., No. 1:17-cv-173, 8/22/17).

Resolute Forest Products Inc. made similar allegations over Greenpeace's campaign against logging in a May 2016 RICO lawsuit. Both companies are represented by Kasowitz Benson Torres LLP, a New York-based law firm whose managing partner Marc Kasowitz is President Donald Trump's attorney.

Greenpeace said the lawsuit won't stop its mission of "protecting the environment and standing in solidarity with vulnerable communities around the world."

The construction of the Dakota Access Pipeline, running from western North Dakota to southern Illinois, sparked months of protests last year and clashes between environmentalists and police drew international attention. The pipeline went into service June 1 following the construction of a final link under a part of Lake Oahe near the Standing Rock Indian Reservation.

Greenpeace led a corrupt environmentalist organization, Energy Transfer claimed in the lawsuit, an enterprise that "cynically planted radical, violent eco-terrorists on the ground amongst the protesters, and directly funded their operations and publicly urged their supporters to do the same."

Negative publicity generated by the demonstrations caused Energy Transfer to lose "many hundreds of millions of dollars," and damaged its ability to raise money from capital markets, according to the complaint, filed Aug. 22 in Bismark, N.D.

Energy Transfer is seeking unspecified monetary damages, which would be tripled under U.S. racketeering laws, as well as a court order barring the groups from further protests and an order for the groups to return money to donors.

"Under the 'Greenpeace Model,' raising money and the network's profile is the primary objective, not saving the environment," Energy Transfer said. "'Issues are selected according to which ones will generate maximum publicity and donations, irrespective of the environmental merits."

Greenpeace said it hasn't yet received the lawsuit.

"We will comment in more detail at the appropriate time, but rest assured we will fully defend ourselves against legal attacks on our existence," Greenpeace spokesman Travis Nichols said.

The environmentalists' campaigns are based on fabricated evidence and witness accounts to deceive the public, Energy Transfer said.

The criminal enterprise, through Earth First! and Red Warrior Camp, funded and incited acts of terrorism in violation of the U.S. Patriot Act, Energy Transfer claimed. That included attempts and actual destruction of an energy facility and arson on government property, the company said.

Those acts, according to the lawsuit, including the burning of construction equipment and use of blowtorches to cut holes in parts of the pipeline. Had oil been flowing when the sabotage occurred, the pipeline might have exploded, endangering human lives and resulting in an environmental disaster, Energy Transfer said.

Among the other groups being sued by Energy Transfer is BankTrack, a Dutch not-for-profit group that raises money for non-governmental organizations.

The Dakota Access pipeline project spurred legal challenges from Native American tribes, principally the Standing Rock Sioux, objecting to the pipeline's path across man-made Lake Oahe. Energy Transfer intervened in that action on the side of the U.S. Army Corps of Engineers.

In June, a Washington federal court judge, having rejected earlier entreaties to block the project, said the Corps hadn't adequately considered the impacts of a potential spill from the line on fishing, hunting and "environmental justice, or the degree to which the pipeline's effects are likely to be highly controversial," and ordered it to reconsider those factors.

The Resolute Forest lawsuit is pending in federal court in San Francisco.

Energy Transfer Told to Revise Rover Gas Line Drill Plans

Posted August 22, 2017, 01:23 P.M. ET

By Catherine Traywick

Energy Transfer Partners must submit revised horizontal directional drilling plans for the Rover natural gas pipeline along with other information before FERC will allow the company to resume drilling in certain areas, the agency said in an Aug. 22 filing.

Energy Transfer will have to provide names, contact information, and qualifications for all drilling inspectors, specialists and engineers, the Federal Energy Regulatory Commission said in the filing. FERC said it also would require weekly horizontal directional drilling monitoring reports from the company.

The company submitted a revised drilling plan Aug. 4, incorporating recommendations for third-party review. FERC halted horizontal drilling on certain segments of the pipeline following a 50,000-barrel spill of diesel-tainted drilling fluid.

Supplying Lithium Gets Trickier as Electric Revolution Looms

Posted August 22, 2017, 11:09 A.M. ET

By Laura Millan Lombrana and Jonathan Gilbert

Hidden within the salt flats high in the Andes mountains of South America are vast deposits of the lithium that Elon Musk may need for his electric-car revolution. But extracting the mineral from brine ponds created by Orocobre Ltd. has proved more difficult than expected.

Bad weather and pump glitches meant production at the Olaroz facility in northern Argentina was 21 percent below Orocobre's initial target in the year through June. While things are getting back on track, Chief Executive Officer Richard Seville says the company "either underestimated the complexity or overestimated our capability."

Producers everywhere have struggled to keep up with demand as electric cars went from almost no sales a decade ago to more than half a million vehicles last year. The battery in a Model S from Musk's Tesla Inc. uses about 45 kilograms (100 pounds) of lithium carbonate. More mines are planned, but difficulties at Olaroz—the first new South American lithium mine in two decades—are limiting funding for new ventures in Argentina, home to the world's third-largest reserves.

"The uncertainty on the supply side is driving prices up and making investors nervous," said Daniela Desormeaux, CEO of Santiago-based lithium consulting firm SignumBOX. "We need a new project entering the market every year to satisfy growing demand. If that doesn't happen, the market will be tight."

Australia is the biggest lithium producer, though Chile and Argentina account for 67 percent of global reserves, according to the U.S. Geological Survey.

Extracting lithium from the salt flats that dot the arid northern regions of the South American countries is a lot easier and cheaper than digging underground for metals like copper. Producers just pump the brine solution into evaporation ponds, harvesting the mineral once the moisture is gone.

Orocobre's experience in Argentina shows the process isn't without its challenges, especially for a newcomer.

The Brisbane, Australia-based company initially forecast production at 15,000 metric tons for the year through June. That was cut to 12,000-12,500 tons. And the final tally ended up at 11,862. Unusually cold and overcast weather slowed evaporation and restricted transport of supplies, while pumping glitches meant there wasn't always enough brine in the right places. Since then, Orocobre has invested in improving pumping from one pond to the next, just in time for the key evaporation period, Seville said in an interview last week.

The company's shares have retreated 30 percent this year after doubling in price last year.

"Lithium production isn't easy," Juan Esteban Fuentes, CRU Group's head of South America, said in an interview in Santiago. "It requires high technical and chemical knowledge. Clearly there will be more disruptions, to the extent that there are miners entering the market that have never extracted lithium and do not have that technical knowledge."

Rising demand for lithium used in a new breed of lightweight, rechargeable batteries caught producers of the mineral off guard. Tesla's gigafactory in Nevada aims to manufacture about 500,000 car batteries a year by 2018. The soft, silver-white metal is also used in cell phones.

Prices of lithium carbonate, the primary base-chemical produced by the industry, more than doubled in the five years to 2016, according to UBS Group AG. The material advanced about 5 percent to average $14,250 a ton in July from June, according to Benchmark Mineral.

With demand expected to keep rising as electric cars gain a bigger share of the global auto fleet, Argentina and Chile are attracting interest from mining companies because it costs about $2,000 to $3,800 a ton to extract lithium from brine, compared with $4,000 to $6,000 a ton in Australia, where lithium is mined from rock.

Still, most projects are expected to struggle to get off the ground.

Of the 39 lithium ventures tracked by CRU, only four have firm commitments, and all of those are in China, adding about 24,000 tons of annual supply. Another 10 projects representing 400,000 tons are rated "probable"—in Canada, Chile, China, Mexico, Argentina and Australia—but probably only about 30 percent will make it into production, CRU said.

Orocobre's teething problems are being closely watched by investors, who are becoming more reluctant to fund projects by new entrants in Argentina, said Gabriel Rubacha, head of South American operations at Lithium Americas Corp.

Lithium Americas is developing a project in Jujuy province with industry veteran Soc. Quimica & Minera de Chile SA, a partnership that was essential in securing the $174 million needed to get

started. “Most lithium projects in Argentina fail because they can’t close financing,” Rubacha said. “We are totally relying on SQM’s expertise.”

Santiago-based SQM is investing in Argentina after Chile’s government moved to withdraw its license to exploit one of the world’s largest deposits. That withdrawal is subject to an arbitration process between the company and state development agency Corfo that may be concluded this year, according to Corfo.

Expansions by established producers including China’s Tianqi Lithium Corp. and North Carolina’s Albemarle Corp. probably will leave a small global surplus by year end, but supply disruptions could put the market back into deficit, CRU’s Fuentes said. If annual demand for Tesla’s Model 3 reaches 700,000 units, as Musk says could happen, the industry will need additional supplies from lithium newcomers.

While Chilean copper giant Codelco is looking to enter the lithium business via a partnership at its Maricunga tenements, the project will require deals with some of the salt flat’s 40 land owners to make the operation large enough to be profitable.

Chile deems lithium to be “strategic,” which means would-be producers need authorization from the Nuclear Energy Commission and operating conditions are set directly with the government on a case-by-case basis. Wealth Minerals Ltd. estimates it will take seven years to set up an operation in Chile.

“But we have a window of only 25 years to develop these projects because prices can fall again as soon as a replacement to lithium appears,” Marcelo Awad, Wealth’s Chile manager, said in an interview in Santiago.

Ford Offers U.K. Drivers Cash to Scrap Dirty Diesel Engines

Posted August 22, 2017, 7:36 A.M. ET

By Jessica Shankleman

Ford Motor Co. became the latest automaker to offer cash to U.K. drivers if they scrap the most polluting vehicles on the roads, targeting about 15 million cars and vans across the country.

From Sept. 1 to Dec. 31, Ford will offer to pay drivers as much as 4,000 pounds ($5,200) for cars and 7,000 pounds for vans if they replace vehicles at least eight years old with newer models, according to a press release by the Detroit-based automaker Aug. 22.

Ford and its peers already give German drivers financial incentives to replace the dirtiest cars. It’s seeking to tackle an pollution problem caused by a loophole in European vehicle standards, which meant harmful nitrogen dioxide levels in the air rose as carbon dioxide emissions fell.

The U.K. has the largest fleet of diesel vehicles in Europe after drivers were encouraged to switch from gasoline, which emits more carbon dioxide for each mile driven. Mercedes-Benz AG and BMW AG, which also makes the Mini, have started similar scrappage programs in the U.K., according to

the Society of Motor Manufacturers & Traders.

The U.K. government last month joined France in saying it would seek to end the sale of new diesel and gasoline fueled cars by 2040 as part of a wider plan to tackle the country's toxic air pollution levels that have exceeded legal limits for the last seven years. London Mayor Sadiq Khan said a diesel scrappage program in the capital could costs as much as 515 million pounds.

"It's a good time for the industry to respond," said Andy Barratt, chairman and managing director of Ford Britain, in a phone interview. "There are around 15 million older vehicles we're targeting on the roads and updating these would have a positive and immediate effect on air quality."

China's Top Wind Utility Lifts Profit With Policy Help

Posted August 22, 2017, 10:30 A.M. ET

By Bloomberg News

China Longyuan Power Group Corp., the nation's biggest developer and operator of wind farms, said government-led efforts to boost clean energy consumption supported higher first-half profit.

Net income in the six months ending June 30 rose 6 percent to 2.42 billion yuan ($363 million), according to a statement to the Hong Kong stock exchange on Tuesday. In China, "the newly installed capacity for hydropower, wind power and solar power recorded year-on-year increase, while the newly installed capacity for coal power and nuclear power decreased year-on-year," according to the statement.

The result shows how policy support is aiding Chinese wind power. The government has called for grid operators to buy more clean energy while restricting new wind farms in regions where turbines have been turned off because of weak demand. Those measures reduced wasted power curtailed from grids struggling to absorb the influx of renewables.

Wind power output rose 0.5 percent in the first half, covering about 5 percent of China's total electricity generation, according to Longyuan. The company's wind generation rose 11 percent during the period, trailing a 14 percent rise in coal generation, it said last month. Output from other renewable energy sources fell 7 percent.

Idle Power

Guangdong, Ningxia and Guangxi accounted for the biggest increase in wind power production, according to Longyuan.

The amount of idled wind power in China dropped about 28 percent in the first half, according to data from the National Energy Administration, the agency charged with coordinating the nation's energy policy. A total of 23.5 billion kilowatt-hours of wind power was wasted in the first six months, down 9.1 billion kilowatt-hours from a year earlier, the NEA said last month.

"We see the remaining growth in power output as being due mainly to improved curtailment," Vincent Yu, a Shanghai-based analyst at SWS Research Co., wrote in a July 28 note.

Brazil's Utility Giant Soars as Government Plans Privatization

Posted August 22, 2017, 10:46 A.M. ET

By Vanessa Dezem and Julia Leite

Brazil's troubled state-run utility Eletrobras jumped the most in almost two decades on a government proposal to privatize the company amid the country's deep fiscal crisis.

The government could raise as much as 20 billion reais ($6.31 billion) by shedding its controlling 67 percent stake in Latin America's largest power company, according to Deputy Energy Minister Paulo Pedrosa. The government will remain as a shareholder and maintain power to veto management decisions, the ministry said in an emailed statement.

"The state is not able to contribute to Eletrobras," Pedrosa said. "The idea is to modernize the sector. We have the proposal sewn up with the federal government."

Voting shares surged as much as 35 percent in Sao Paulo trading, the biggest intraday jump since January 1999, as analysts from Santander to Safra said the unexpected proposal could unlock value for shareholders and make the company more efficient. However, details on the plan are still unknown and the outcome could be "tricky" to foresee, Safra analyst Kaique Vasconcellos wrote in a note to clients.

The finance ministry's executive secretary, Eduardo Guardia, told reporters Aug. 22 that the government had not yet defined a model for the sale. The country's nuclear power plants would not be sold, authorities said during the press conference.

Other state-run companies including Petrobras and Banco do Brasil also rose Aug. 22, leading the advance in Brazil's Ibovespa gauge along with Eletrobras.

Political Uncertainty

Despite investors' positive initial reaction, a successful sale will largely hinge on Congress approval of a new regulatory framework the government is drafting, a process that could take months. The proposal seeks to undo interventionist policies created under former leaders Luiz Inacio Lula da Silva and Dilma Rousseff.

In addition, political uncertainty may continue to weigh on Brazil's business climate. Many investors have remained on the sidelines during the political turmoil that resulted in one president impeached, another charged with corruption and dozens of executives and politicians imprisoned over a massive scheme of kickbacks that originated at state-run oil company Petrobras. Widespread disillusionment with political parties has boosted the chances of an outsider winning next year's presidential race, opinion polls show.

Beleaguered President Michel Temer, who has battled corruption charges, has committed to a 2018 fiscal goal that hinges on Congress passing measures to generate 18 billion reais ($5.7 billion) in much-needed revenue. The government is said to be mulling a portfolio of 58 privatizations which would be announced Aug. 23, newspaper O Globo reported without revealing how it obtained the information.

Brazil will aim for a budget gap before interest payments of 159 billion reais in both 2017 and 2018, Finance Minister Henrique Meirelles announced in a press conference Aug. 15. Previously, the government's deficit targets were 139 billion reais for this year and 129 billion reais for the next.

Change of Route

The company's net debt reached 23.4 billion reais ($7.3 billion) in June, topping Fitch Ratings' rankings on debt raisers in Latin America, according to a report dated August 16. The company is also the region's third biggest cash bleeder, with an estimated $987 million decline in free cash flow.

"Despite all the effort, the debts and burdens of the past have increased and require a change of route to not jeopardize the future of the company," the ministry said in the statement. "The way out is to seek resources in the capital market, attracting new investors and partners."

—With assistance from Eduardo Thomson.

Driving the Day

Good Thursday morning. BUZZ IN THE CAPITOL -- SMALL TAX PACKAGE THIS YEAR? -- If Congress can't squeeze through a big tax reform package this year, there's already talk among some about passing a smaller package of tax cuts before the end of 2017, with the promise of trying to complete a larger reform effort in 2018. This would be a way for Republicans to say they gave the tax relief they promised. With health care reform far off, tax is the ball game for Republicans as they head into the 2018 election. There is optimism -- some would call it exuberance -- that Republicans will be able to get a large-scale tax package through in the 36 legislative days before the year's up. **FOR YOUR SITUATIONAL AWARENESS --** Washington has a government funding fight in roughly two months.

FOR YOUR RADAR -- NOT GOOD FOR HILL REPUBLICANS -- From the most recent Quinnipiac poll: "American voters disapprove 78 - 15 percent of the job Republicans in Congress are doing, worse than their 70 - 25 percent disapproval in a June 29 Quinnipiac University poll. Even Republican voters disapprove 61 - 32 percent. Voters disapprove 63 - 29 percent of the job Democrats in Congress are doing, virtually unchanged from June.

"Voters say 47 - 38 percent, including 44 - 32 percent among independent voters, that they would like to see Democrats win control of the U.S. House of Representatives in the 2018 Congressional elections. Voters also say 49 - 40 percent, including 47 - 34 percent among independent voters, they would like to see Democrats win control of the U.S. Senate next year." http://bit.ly/2fTsHO4

ET TU, SCOTT PRUITT? -- WAPO'S BRADY DENNIS and **JULIET EILPERIN: "EPA's Pruitt took charter, military flights that cost taxpayers more than $58,000":** "The

most expensive of the four trips came in early June, when Pruitt traveled from Andrews Air Force Base to Cincinnati to join President Trump as he pitched a plan to revamp U.S. infrastructure. From there, the administrator and several staff members continued on a military jet to John F. Kennedy airport in New York to catch a flight to Italy for an international meeting of environmental ministers. The cost of that flight was $36,068.50." http://wapo.st/2wWQkj8

-- AN EPA OFFICIAL emailed us the authorization memos from the EPA's general counsel's office for the flights Pruitt took: http://politi.co/2fBCgUV ... http://politi.co/2k3xZuG ... http://politi.co/2hyaNnD

-- FROM MORNING ENERGY: "Any other non-commercial flights? 'This is it,' a spokesman told ME on Wednesday, adding he believed Pruitt had only flown by helicopter once to survey hurricane damage."

-- NOT FLYING PRIVATE: ELAINE CHAO. She was spotted flying coach yesterday on American Airlines flight 1597 from Phoenix to BWI. She was attending a conference for the American Association of State Highway and Transportation Officials.

-- THE FRONT PAGE OF THE NYT has a tease of their story about Trump's anger toward Tom Price. http://nyti.ms/2fAsQJ1

BULLETIN - AP at 6:12 a.m.: "BEIJING (AP) - Reports: China orders most North Korean-owned businesses, ventures with Chinese partners closed under U.N. sanctions."

STORY OF THE DAY -- CAPITOL HILL BUREAU CHIEF JOHN BRESNAHAN -- "Senate Republicans have never heard of Roy Moore: Numerous GOP senators said they were not familiar with the Alabama Senate candidate's controversial views - but they want him elected": "What about Moore's history of racially insensitive comments? Haven't heard anything. Homophobic remarks? Nada. Moore's claim that some American communities are living under Sharia law? Crickets. Moore's statement that 9/11 happened 'because we've distanced ourselves from God'? Nothing for you on that. Moore's assertion that Democratic Rep. Keith Ellison shouldn't be allowed to serve in Congress because he's a Muslim? We'll get back to you. Moore saying Mitch McConnell should be replaced as Senate majority leader? Uhh, zip.

"'I don't know anything about Roy Moore,' said Sen. Chuck Grassley (R-Iowa). 'If I've read anything he's said, I wouldn't have any recollection of it.' 'I don't know him. I think I'll leave it there,' said Sen. Susan Collins of Maine, who laughed when asked about Moore. 'I supported Luther Strange.' 'I've never met the gentleman,' said Georgia Sen. Johnny Isakson. 'Being from Georgia, which is next to Alabama, I've heard his name in the Alabama Supreme Court. I know what I've seen on TV and what I've read in the papers.' ...

"'Who won? I wasn't paying attention,' [Nevada Sen. Dean] Heller said. 'I'm just

worried about taxes.' 'He's going to be for tax reform, I think,' volunteered Sen. Rob Portman of Ohio. 'I don't know, I don't know him.' South Carolina Sen. Tim Scott, the lone African-American Republican in the Senate, said he 'didn't know anything about Roy Moore, and I'm not going to comment about anything I haven't read about. ... I literally have not followed that race.' ... 'Roy Moore is unique,' Shelby said cautiously. 'A lot of people have history up here.'" http://politi.co/2yJVbBk

ELIANA JOHNSON: "Moore's win conjures 2018 nightmare - for both parties": "Roy Moore's win in Alabama's Senate primary has raised the specter of a nightmare scenario for Democrats and Republicans: The GOP picks up a handful of seats next year, padding its Senate majority, but with candidates like Moore, who buck party leadership as often as they fall in line. ... 'All of us who saw the rise of Trump and thought, 'Oh, this country could never elect somebody who brags about assaulting women and mocks the disabled and war veterans, we're thinking differently now,' said Paul Begala, the veteran Democratic strategists. ... 'What do they say in recoveries? You have to hit bottom? I thought that with Trump they hit bottom,' Begala said of the GOP. 'But, apparently not, because Moore is worse.'" http://politi.co/2y9LYpf

-- "Roy Moore's Alabama Victory Sets Off Talk of a G.O.P. Insurrection," by NYT's Alex Burns and Jonathan Martin: "Republicans are confronting an insurrection on the right that is angry enough to imperil their grip on Congress, and senior party strategists have concluded that the conservative base now loathes its leaders in Washington the same way it detested President Barack Obama. ... Mr. Strange's demise, senior party strategists and conservative activists said Wednesday, makes it likelier that Republican incumbents in the House and Senate will face serious primary challenges in 2018, fueled by anger at the party's apparent ineptitude at wielding power in Washington. ...

"Republicans increasingly worry that their base's contempt for Mr. McConnell is more potent than its love for Mr. Trump. Mr. McConnell could be an anchor around incumbents in the same fashion as Representative Nancy Pelosi, the House Democratic leader, who is routinely used to undermine Democratic candidates." http://nyti.ms/2xCT7ep

RICH LOWRY, "The GOP Identity Crisis": "The Republican Party can't pass Obamacare repeal but it can nominate Roy Moore. This is the state of the GOP in a nutshell. It is a party locked in mortal combat between an establishment that is ineffectual and unimaginative and a populist wing that is ineffectual and inflamed. It is rare for a governing coalition to have a bitter factional fight-usually the party out of power deploys the circular firing squads-although, on the other hand, this particular coalition isn't doing much governing." http://politi.co/2xEAIDC

JOSH DAWSEY: "Bannon's next move: 'Repeat Alabama'": "Steve Bannon was amped early Wednesday, sounding as though he'd guzzled 20 Red Bulls at a victory party for Alabama's Roy Moore as he plotted his next slash-and-burn campaign with trademark pugilism. He left Alabama after orchestrating a call between Trump and Moore for a flight to Colorado to meet with potential 2018 Senate candidates gathered

there - and is planning extensive travel in coming months to recruit candidates to challenge incumbents across the country, people close to him say.

"Bannon says he remains on Trump's team, but others in the White House have their doubts about the former chief strategist's allegiance. He has told friends he is over the slights in the White House, but some close to him say he still seethes about a number of top officials, including Trump's son-in-law Jared Kushner and economic adviser Gary Cohn, whom Bannon routinely savaged as 'Globalist Gary.' He is publicly supportive of Trump but can be sharply critical in private, associates say." http://politi.co/2yuJ3Dy

-- COVER DU JOUR - STEVE BANNON on the cover of Bloomberg Businessweek, **"Where To Next?"** by Josh Green (online headline: "Bannon's Back and Targeting China"): "Bannon, who's been consulting with Henry Kissinger and other foreign policy veterans, is preparing a project to sound an alarm about what he views as the primary economic threat to America: China. ... As a candidate, Trump pledged to take aggressive action against China. And though he's continued to talk tough, he's done little to make good on his threats. ... That lack of progress has convinced Bannon that an outside entity is necessary to focus U.S. attention-and political pressure-on confronting China more aggressively. What made up his mind, he says, was a pair of September meetings at Kissinger's country home in Connecticut. ...

"The day after [Roy] Moore's victory, Bannon flew to Colorado to interview candidates in western states to carry the populist mantle in 2018. His effort to steer the GOP toward nationalism, Bannon explains, will involve encouraging candidates to take hard-line positions toward China. 'Every day we are going to be making China a huge part of the '18 and '20 elections,' Bannon says." https://buswk.co/Bannonisback ... ***The cover*** http://bit.ly/2wYP6Pv

-- BANNON is headlining tonight at a conference put on by the Council for National Policy in Colorado Springs. He'll be talking about how conservatives win in 2018, according to someone familiar with the planning of the conference, which will also hear from David Clarke and Scott Walker.

****** **A message from Morgan Stanley**: Refurbishing and recycling are extending product life cycles. Is this the next big disruptive trend? Read more from Morgan Stanley. ******

THE LATEST ON PUERTO RICO ... -- "Now even money is running out in storm-hit Puerto Rico," by AP's Ben Fox and Danica Coto in San Juan, Puerto Rico: "First, Hurricane Maria knocked out power and water to Puerto Rico. Then diesel fuel, gas and water became scarce. Now, it's money. The aftermath of the powerful storm has resulted in a near-total shutdown of the U.S. territory's economy that could last for weeks and has many people running seriously low on cash and worrying that it will become even harder to survive on this storm-ravaged island." http://bit.ly/2wYaXXw

INSIDE THE WEST WING -- "Kelly folds Navarro's trade shop into National

Economic Council," by Andrew Restuccia, Nahal Toosi and Tara Palmeri: "White House chief of staff John Kelly is folding adviser Peter Navarro's trade office into the National Economic Council - a move that could limit Navarro's influence in the West Wing. The Office of Trade and Manufacturing Policy, which is run by Navarro, will now be housed within the NEC, four administration officials told POLITICO. That means Navarro will report to NEC Director Gary Cohn, with whom he has repeatedly clashed in recent months. ... 'I'm a chain of command guy and will follow Chief Kelly's orders,' Navarro said in a statement to POLITICO. ...

"Kelly's decision to have Navarro report to Cohn, who has pushed behind the scenes to temper Trump's hardline instincts, could further isolate the former economics professor. Cohn is Navarro's 'nemesis,' according to an associate of Navarro's. The two men have sometimes yelled at each other during White House trade meetings, and Cohn has often been dismissive of Navarro's policy proposals. ... Supporters of Navarro's agenda worry the reassignment is the latest signal that the president is abandoning his trade promises." http://politi.co/2k8li0P

TAX REFORM KICKOFF -- WSJ'S RICH RUBIN -- "5 Takeaways From the GOP Tax Framework: What we know so far about the effect on households' tax burdens, budget deficits, business, and more": **"1. Don't try too hard to calculate your tax bill.** The framework offers plenty of specifics on tax rates and some deductions, but nowhere near enough for most people to figure out what they would pay. ... **2. The wealthy win, but stay tuned.** Key features of the tax plan skew the benefits toward upper-income households. ... Republicans left themselves an opening for a tax bracket above 35% that would apply to the very highest earners, and that could leave some in the top 1% worse off, especially in a high-tax state such as New York where the state and local tax deduction is valuable. **3. There will be bigger budget deficits.** ...

"4. It's the beginning, not the end. Congress still has a long checklist ahead. First, the House and Senate have to adopt a budget resolution. That will specify the maximum size of the tax cut over the next decade. It will also unlock the fast-track procedures known as reconciliation. Under reconciliation, a subsequent tax bill can pass with a simple majority and not require votes from Democrats.

"After the budget's done, the House and Senate will each write their own tax bills and advance them through committee. Expect the plans to diverge as legislators try to get the math to work and to wrangle the votes. The House will be tricky because GOP members from New York, New Jersey and California will resist the repeal of the state and local tax deduction. In the Senate, Republicans have just a two-vote margin, meaning each senator will have significant sway. **5. Business fights lie ahead."** http://on.wsj.com/2wn01TA

-- "Trump Tax Plan Benefits Wealthy, Including Trump," by NYT's Binyamin Appelbaum: "The tax plan that the Trump administration outlined on Wednesday is a potentially huge windfall for the wealthiest Americans. It would not directly benefit the bottom third of the population. As for the middle class, the benefits appear to be modest.

The administration and its congressional allies are proposing to sharply reduce taxation of business income, primarily benefiting the small share of the population that owns the vast majority of corporate equity.

"President Trump said on Wednesday that the cuts would increase investment and spur growth, creating broader prosperity. But experts say the upside is limited, not least because the economy is already expanding. The plan would also benefit Mr. Trump and other affluent Americans by eliminating the estate tax, which affects just a few thousand uber-wealthy families each year, and the alternative minimum tax, a safety net designed to prevent tax avoidance." http://nyti.ms/2xylyeZ

-- AP'S JOSH BOAK: "$5 trillion question for Trump tax plan: How to pay for it?": "How do you pay for an estimated $5.8 trillion tax cut? For President Donald Trump and Republican congressional leaders, that is the mostly unanswered $5,800,000,000,000 question.

"The plan they released Wednesday took a first step toward outlining how Republicans propose to cover some of the monumental cost over the next 10 years, mainly by removing certain tax breaks. But even those proposed changes were left vague - and wouldn't remotely pay the full cost of the tax cut.

"The administration says it would eliminate most personal tax breaks. Possibly gone would be people's ability to deduct state and local taxes as well as eligible medical expenses. But doing so would still leave the tax cut more than $2 trillion shy of paying for itself. The Trump administration argues that it can accelerate the economy's growth far beyond its current pace and, in doing so, generate enough federal revenue to cover the shortfall. Most economists have called that wishful thinking." http://bit.ly/2yKgSl8

REAL TALK ABOUT TRUMP'S WASHINGTON -- AP's JULIE PACE: "The dysfunctional dynamic now stands at the center of Republicans' last chance this year to prove they can pass major legislation -- a sweeping, multitrillion-dollar tax cut that GOP officials believe is crucial to the party maintaining its congressional majority in the midterms. 'Literally, if they can't do this, they can't do anything,' said Tim Pawlenty, the former Republican governor of Minnesota and head of the Financial Services Roundtable, a bank lobbying group." http://bit.ly/2ylTyUP

-- "Ryan vents over stalled GOP agenda in Senate," by Cristiano Lima: "Speaker Paul Ryan on Wednesday said it was 'extremely frustrating' that the Republican majority in the Senate had been unable to push through pieces of the GOP agenda that have passed in the House. Equipped with graphs highlighting the disparity between the number of bills passed by the House and the number that have stalled in the Senate, Ryan (R-Wis.) aired his grievances during an interview on Fox News. He cited the upper chamber's inability to convert on the Republican Party's major goals thus far during the Trump administration.

"'Is that frustrating for the House? You bet it's frustrating in the House,' Ryan told Fox

News' Sean Hannity, saying that 274 of the 337 bills that have passed in the House as of Sept. 22 have not made it through the Senate. Ryan singled out the Senate's inability to pass a bill for repealing and replacing the Affordable Care Act as a particular point of disappointment for House Republicans, while highlighting their successes on legislation for financial regulations and immigration. 'The point is we're on schedule in the House,' he said. 'We passed the health care bill back in May. We passed the repeal of Dodd-Frank. We did Kate's law. We did sanctuary cities.'" http://politi.co/2wXNrcW

TRUMP'S DAY -- President Donald Trump will meet with Acting Homeland Security Secretary Elaine Duke. He will participate in the 70th anniversary celebration of the National Security Council and meet with Chinese Vice Premier Liu Yandong.

REMEMBERING HUGH HEFNER - Laura Mansnerus in the NYT: "Hugh Hefner, who created Playboy magazine and spun it into a media and entertainment-industry giant - all the while, as its very public avatar, squiring attractive young women (and sometimes marrying them) well into his 80s -- died on Wednesday at his home, the Playboy Mansion near Beverly Hills, Calif. He was 91. His death was announced by Playboy Enterprises.

"Hefner the man and Playboy the brand were inseparable. Both advertised themselves as emblems of the sexual revolution, an escape from American priggishness and wider social intolerance. Both were derided over the years -- as vulgar, as adolescent, as exploitative, and finally as anachronistic. But Mr. Hefner was a stunning success from his emergence in the early 1950s. His timing was perfect." http://nyti.ms/2hyPv9w

RUSSIA STILL AT IT -- "Twitter, With Accounts Linked to Russia, to Face Congress Over Role in Election," by NYT's Daisuke Wakabayashi and Scott Shane: "After a weekend when Americans took to social media to debate President Trump's admonishment of N.F.L. players who do not stand for the national anthem, a network of Twitter accounts suspected of links to Russia seized on both sides of the issue with hashtags such as #boycottnfl, #standforouranthem and #takeaknee. ... Since last month, researchers at the Alliance for Securing Democracy, a bipartisan initiative of the German Marshall Fund, a public policy research group in Washington, have been

publicly tracking 600 Twitter accounts - human users and suspected bots alike - they have linked to Russian influence operations. ...

"Of 80 news stories promoted last week by those accounts, more than 25 percent 'had a primary theme of anti-Americanism,' the researchers found. About 15 percent were critical of Hillary Clinton, falsely accusing her of funding left-wing antifa - short for anti-fascist - protesters, tying her to the lethal terrorist attack in Benghazi, Libya, in 2012 and discussing her daughter Chelsea's use of Twitter. Eleven percent focused on wiretapping in the federal investigation into Paul Manafort, President Trump's former campaign chairman, with most of them treated the news as a vindication for President Trump's earlier wiretapping claims." http://nyti.ms/2wYC98o

--"Russian-bought Black Lives Matter ad on Facebook targeted Baltimore and Ferguson," by CNN's Dylan Byers: "At least one of the Facebook ads bought by Russians during the 2016 presidential campaign referenced Black Lives Matter and was specifically targeted to reach audiences in Ferguson, Missouri and Baltimore, sources with knowledge of the ads told CNN. ... Senator Mark Warner, the top-ranking Democrat on the Senate Intelligence Committee, said Tuesday that the 'million-dollar question' about the Facebook ads centered on how the Russians knew whom to target. ...

"The targeting issue is also important because, if it appears that the targeting was particularly sophisticated, questions may be raised about how the Russians knew where to direct their ads. Further, information about the targeting could help investigators determine whether or not there was collusion between these ad buyers and the Trump campaign." http://cnnmon.ie/2k5sYSu

HMM - "Chad's Inclusion in Travel Ban Could Jeopardize American Interests, Officials Say," by NYT's Helene Cooper, Mike Shear and Dionne Searcey: "President Trump's decision to impose his updated travel ban on Chad came over the objections of Pentagon and State Department officials, who argued that alienating the nation, one of America's more reliable counterterrorism allies in Africa, risked harming long-term national security interests, administration officials said on Tuesday. Mr. Trump accepted the recommendation of Elaine C. Duke, his acting secretary of Homeland Security, to include Chad in the travel ban after she wrote in a classified report that the country had done too little to crack down on Islamic extremists.

"The president announced the travel restrictions after the White House's Domestic Policy Council distributed Ms. Duke's report to relevant agencies to seek input, according to officials at the State Department and the Pentagon. Officials at both departments were opposed to banning travelers from Chad, concerned about American interests, as were diplomats at the American embassy in the capital of N'Djamena, administration officials said. But Stephen Miller, the president's senior policy adviser, urged adoption of the entire list as recommended by Ms. Duke." http://nyti.ms/2hAQYfz

-- "Alleged leaker Reality Winner said she stuffed NSA report in her pantyhose," by Josh Gerstein: "A National Security Agency contractor accused of leaking a classified

report on Russian hacking aimed at the 2016 election told FBI agents she smuggled the document out of a high-security intelligence facility in her pantyhose. That and other details appear in a transcript federal prosecutors filed in court Wednesday detailing the interrogation of 25-year-old linguist Reality Winner by the FBI as they carried out a search warrant at her home in June.

"After insisting for some time that she printed out the report and kept it on her desk for a few days before disposing of it in a burn bag, Winner caved and acknowledged she hid the document before sending it off to a news outlet, now known to be the Intercept. 'So how did you get it out of the office?' FBI agent Justin Garrick asked. 'Folded it in half in my pantyhose,' Winner replied." http://politi.co/2k4ZrIF

****** **A message from Morgan Stanley** : For decades, households and companies have been recycling for the good of the environment. Now there's an added incentive: it's also good for the bottom line. New technology and increasing climate-based legislation is creating new business opportunities based on the circular economy. Read more from Morgan Stanley. ******

TROUBLE ON THE LEFT? -- "Poll: Voters skeptical of Feinstein reelection bid," by David Siders: "Half of likely California voters say Sen. Dianne Feinstein should not run for re-election, according to a new poll conducted by the Public Policy Institute of California. Forty-six percent of California adults and 50 percent of likely voters say Feinstein should not seek a sixth term, according to the poll. Yet the survey does not test Feinstein against any other potential candidate, and a majority of Democrats - 57 percent - say Feinstein should run again.

"Though Feinstein's public approval rating has ticked down slightly from January, it stands at a relatively favorable 48 percent among California adults and 54 percent among likely voters. The poll comes as Feinstein sustains increased criticism from her party's left flank, with the possibility of a Democratic challenger in next year's election." http://politi.co/2wl9VFv

****** **A message from Morgan Stanley** : Refurbishing, reusing and recycling are helping to squeeze more life out of all the 'stuff' being consumed. Could this be the next big disruptive trend in global markets? A report from Morgan Stanley argues that new technology and increasing climate-based legislation around the world is creating new business opportunities based on the circular economy. A circular economy uses

products, materials and resources for as long as possible, by refurbishing, sharing, leasing or recycling. The goal is to extend product life cycles, generating environmental and economic benefits along the way. Pioneering companies in a number of sectors are already shifting in this direction. The global economy, driven by consumer frenzy to have the latest, best new model, now must contend with climate change, water scarcity and damage to the physical environment. Companies that embrace these trends can find new revenue streams and cut costs. Read more from Morgan Stanley. ******

Feds Forgive Flint's $20M Water Debt, Fund $3.2M Lead Registry

Flint, Mich., won more federal aid as the EPA announced it is forgiving $20.7 million of the city's debt and the Department of Health and Human Services awarded funding for a registry of those exposed to the city's lead-contaminated water.

Endangered Species

Court Reaffirms Protections for Wolves in Great Lakes Area

Removal of the gray wolf population in Minnesota, Wisconsin, and the Upper Peninsula of Michigan from Endangered Species Act protections in 2011 was invalid, a federal appeals court ruled Aug. 1. The U.S. Fish and Wildlife Service determined the wolf population in the three states is thriving, but the U.S. Court of Appeals for the District of Columbia Circuit said the service failed to consider all ramifications of the determination as required by the act (Human Society of the U.S. v. ...

Energy

Democrats Prioritize Clean Energy Bid Ahead of Tax Talks

A Democratic proposal to overhaul and simplify the energy tax code could play a major role in broader tax negotiations on Capitol Hill, so long as Republicans choose to seek bipartisan input, Senate Democrats told Bloomberg BNA.

Energy

Ex-Justice Department Lawyer Tapped as Solicitor at Interior

Ryan Nelson, a lawyer who served in the Justice Department's environmental division, was tapped to be the solicitor of the Interior Department.

Energy

Fate of U.S. Nuclear Now Hinges on One Utility in Georgia

With a multibillion-dollar nuclear project in South Carolina dead, the fate of America's nuclear renaissance now rests on one utility: Southern Co.

Energy

Heller Continues Energy Nomination Block Over Yucca Concerns

Deputy Energy Secretary nominee Dan Brouillette hasn't responded to questions about plans for permanent nuclear waste storage at Yucca Mountain, Sen. Dean Heller (R-Nev.) says, so he is keeping a hold on Brouillette's nomination.

Motor Vehicles

Norway Boosts Hydrogen Cars With Refueling Station Subsidies

Hydrogen refueling station operators in Norway are eligible for up to 1 million kroner ($158,900) annually in subsidies after a plan to boost the industry was approved by European regulators.

Oil & Gas

Billionaire Behind Dakota Access Defends New Natural Gas Line

Billionaire pipeline magnate Kelcy Warren, who just months ago defeated environmentalists to finish his controversial Dakota Access oil pipeline, has stepped into the limelight once again—this time, to defend a natural gas line being built across the eastern U.S.

Chemicals

Practitioner Insights: Enhancing TSCA Reform Implementation

By Lynn Bergeson, James V. Aidala, Jr., Charles M. Auer, Richard Engler, and Oscar Hernandez: The Frank R. Lautenberg Chemical Safety for the 21st Century Act significantly amended the Toxic Substances Control Act. The act, which has been in force for just over a year, made substantive changes to multiple sections of TSCA that are proving to be even more consequential than anticipated (new TSCA is identified as Pub. L. No. 114-182 and old TSCA was identified as Pub. L. No. 94-469).

Driving the Day

Good Saturday morning. Washington is recalibrating. John McCain has once again upended Republicans' plans to pass healthcare legislation. President Donald Trump has quickly pivoted to the blame game -- tweeting about everything from McCain to Rand Paul to Steph Curry this morning.

CONSIDER THIS: Next week Republicans will settle a brutal primary in Alabama and the fate of the health care repeal-and-replace process will be sealed. This could give Trump back-to-back losses. It also could give back-to-back losses to Senate Majority Leader Mitch McConnell, an unusual situation for the Kentucky Republican. **THE BIG QUESTION:** Will this again push Trump into Democrats' arms?

WHAT PRESIDENT TRUMP IS TWEETING -- @realDonaldTrump at 6:42 a.m.: "John McCain never had any intention of voting for this Bill, which his Governor loves. He campaigned on Repeal & Replace. Let Arizona down!" ... **at 6:50 a.m.:** "Arizona had a 116% increase in ObamaCare premiums last year, with deductibles very high. Chuck Schumer sold John McCain a bill of goods. Sad". ... **at 6:59 a.m.:** "Large Block Grants to States is a good thing to do. Better control & management. Great for Arizona. McCain let his best friend L.G. down!" ...

... **at 7:04 a.m.:** "I know Rand Paul and I think he may find a way to get there for the good of the Party!" ... **at 7:13 a.m.:** "Alaska had a 200% plus increase in premiums under ObamaCare, worst in the country. Deductibles high, people angry! Lisa M comes through." ... **7:17 a.m.:** "It was great being with Luther Strange last night in Alabama. What great people, what a crowd! Vote Luther on Tuesday." ... **at 8:45 a.m.:** "Going to the White House is considered a great honor for a championship team.Stephen Curry is hesitating,therefore invitation is withdrawn!"

-- @jaketapper: "Focusing like a laser on the major problems of the American people: black professional athletes with opinions." ... **CBS'S JACQUELINE ALEMANY** (@JaxAlemany): "Tom Brady chose not to come to the White House and Trump didn't say a thing."

TRUMP IN ALABAMA, via Burgess Everett in Huntsville: "The president also threw a jab at Strange's opponent, Roy Moore, a controversial former Alabama chief justice, who, he argued, could lose to a Democrat in the December general election.

"'Roy has a very good chance of not winning in the general election," Trump said. "Moore is going to have a hard time winning.' Trump's speech, which stretched on for well over an hour, represented a political risk. In declaring his unwavering support for Strange, who has the support of establishment figures like Senate Majority Leader Mitch McConnell, the president is squaring off against longtime loyalists such as former chief strategist Steve Bannon who have come out forcefully for Moore ...

"'I'm taking a big risk, because if he doesn't make it, they're going to go after me,' the president said, referring to the many members of the media who were in attendance at the Von Braun Center. Trump said he would face accusations that he couldn't get his candidate over the finish line.

"At some moments, he seemed to be bracing for the possibility of a Strange loss. He acknowledged that polls had shown the senator trailing throughout the race. And he said that if Moore came out ahead on Tuesday, he would campaign for him before the general election.'I told Luther if his opponent wins, I'll be here campaigning like hell for him,' Trump said." http://politi.co/2hq022W

-- WAPO'S JENNA JOHNSON: "'I might have made a mistake. I'll be honest, I might have made a mistake,' Trump told a crowd of several thousand gathered at the Von Braun Center that cheered much louder for him than for the candidate he was there to support, Sen. Luther Strange, who was appointed earlier this year to fill the seat vacated by Attorney General Jeff Sessions. ... 'And, by the way, both good men. Both good men,' the president said of the two Republican candidates. 'If his opponent wins, I'm going to be here campaigning like hell for him. But, I have to say this ... Luther will definitely win.'" http://wapo.st/2ho9dol

-- "Trump to NFL owners: Fire players who kneel during anthem," by AP's Jill Colvin and Catherine Lucey: http://bit.ly/2fnU3P1

NOT FAKE NEWS -- "Carson breaks with Trump, backs Moore for Alabama Senate seat," by Cristiano Lima: "'Judge Moore is a fine man of proven character and integrity, who I have come to respect over the years,' [HUD Secretary Ben] Carson wrote in a statement. 'I was delighted to hear he is running for the US Senate.' Carson, a devout Christian who garnered strong support from the religious right during the 2016 Republican primaries, praised Moore for his 'Judeo-Christian values.'"

http://politi.co/2xB8tC8

IS HEALTHCARE REPEAL DEAD? -- "Dems not declaring victory yet on Obamacare," by Elana Schor and Heather Caygle: "When John McCain cast the decisive vote against Obamacare repeal two months ago, Chuck Schumer waved an arm to quiet fellow Democrats as they burst into audible elation. Don't gloat or cheer over the GOP's failure, Schumer signaled - a move he made again on Friday in a statement, after McCain delivered what looks like a fatal blow to his party's seven-year drive to dismantle the Affordable Care Act. Far from celebrating, Democrats tempered their responses to McCain with reminders of the bipartisan health care talks that Republicans had walked away from when they took one last shot at repealing Obamacare.

"And even as their liberal base turned a rally to pressure McCain into a thank-you celebration, Democrats stopped far short of declaring repeal dead. ... Senate Majority Leader Mitch McConnell's office did not immediately respond to questions about whether he will still hold the vote on the bill." http://politi.co/2xA7NwZ

-- "Is Obamacare finally safe?: The clock may finally have caught up with Republicans after nearly 10 months of failed repeal efforts," by Jen Haberkorn and Paul Demko: "Obamacare has endured more than seven years of political attacks, dozens of congressional repeal votes and four Supreme Court challenges. But as of today, the Democrats' universal health care law is as secure as it's ever been. Sen. John McCain's (R-Ariz.) opposition to the latest repeal effort sponsored by his closest friend in the Senate likely doomed the bill - and with it, the hope that Republicans could fulfill their campaign pledge to undo Barack Obama's signature domestic policy achievement before a Sept. 30 deadline.

"On top of that, the insurance markets are alive and, despite skyrocketing premiums and dwindling competition, face no threat of immediate collapse. ... 'I'll be honest, it seems unlikely that we'll be voting on this' next week, Sen. Joni Ernst (R-Iowa) told a town hall meeting Friday in Iowa City shortly after McCain's announcement." http://politi.co/2yjJBMp

-- "Why McCain screwed the GOP on Obamacare repeal - again: His friendship with Lindsey Graham was less important than his grievances with the process," by Burgess Everett and Seung Min Kim: http://politi.co/2xA5MRd

-- ALASKA GOV. BILL WALKER on the bill, to the New York Times: "In an interview, Mr. Walker said he did not believe any special accommodation could be reached for his state, because the overall structure was so damaging to Alaska. He said he had communicated his concerns extensively to Ms. Murkowski.

"'Alaska would fare very, very poorly,' he said. 'Nothing has been brought to my attention that would increase my comfort level.' A spokeswoman for Ms. Murkowski, Karina Petersen, said the senator is studying the matter. 'Senator Murkowski is still

focused on how the bill will impact Alaska, specifically,' Ms. Petersen said. 'She's continuing to gather data and is looking at the details of the bill to determine what's best for her state.'" http://nyti.ms/2xvOJPO

****** **A message from UC Davis:** At UC Davis, unusual collaborations in veterinary medicine, human health and engineering lead to groundbreaking treatments for beloved pets and other animals, from furry to feathered. Those breakthroughs lead to translatable human medicine. It's a One Health approach that benefits the health of all. Learn more at 21stcentury.ucdavis.edu. ******

INSIDE THE ROOM -- NYT'S CARL HULSE: "Behind New Obamacare Repeal Vote: 'Furious' G.O.P. Donors": "As more than 40 subdued Republican senators lunched on Chick-fil-A at a closed-door session last week, Senator Cory Gardner of Colorado painted a dire picture for his colleagues. Campaign fund-raising was drying up, he said, because of widespread disappointment among donors over the inability of the Republican Senate to repeal the Affordable Care Act or do much of anything else. Mr. Gardner is in charge of his party's midterm re-election push, and he warned that donors of all stripes were refusing to contribute another penny until the struggling majority produced some concrete results. 'Donors are furious,' one person knowledgeable about the private meeting quoted Mr. Gardner as saying. 'We haven't kept our promise.'" http://nyti.ms/2jTUEJJ

HOW IT PLAYED -- NYT: "McCain Rejects G.O.P. Health Bill, Likely Dooming It" http://nyti.ms/2xXHYYM ... **WAPO:** "Latest effort to repeal Obamacare on brink of failure after GOP defections" http://wapo.st/2yxPd6M ... **WSJ:** "GOP Health Push in Jeopardy as McCain Withholds Support" http://on.wsj.com/2xnpyNZ

-- AROUND THE COUNTRY: ARIZONA REPUBLIC (big McCain photo): "TWO THUMBS DOWN: McCain announces he will vote against latest attempt to repeal ACA" http://bit.ly/2xZojrq ... **THE POST AND COURIER:** "McCain votes no on Graham's bill: Decision likely dooms friend's health care legislation that McMaster now supports" http://bit.ly/2y001O4 ... **CLEVELAND PLAIN DEALER:** "Clinic CEO lobbies against repeal: Cosgrove says new bill being rushed without hearings" http://bit.ly/2undnAR

COMING ATTRACTIONS -- "Trump to talk tax reform in Indiana on Wednesday," by Nancy Cook: "President Donald Trump is planning to head to Indiana on Wednesday to give a major speech on tax reform, the same day that the 'Big Six' tax negotiators will unveil their broad-brushstrokes proposal for overhauling the tax code. ... Following the president's Indiana trip, several Cabinet secretaries including Treasury Secretary Steven Mnuchin and Small Business Administrator Linda McMahon will also participate in tax reform-related events and media outreach across the country."

-- "GOP eyes corporate tax rate of 20 percent, retreating from Trump's lofty goal," by WaPo's Mike DeBonis, Sean Sullivan and Damian Paletta: "Republicans are targeting a corporate rate of 20 percent in their federal tax overhaul plan, according to three people familiar with the emerging blueprint - a number that represents a

substantial cut from the current 35 percent rate but falls short of the 15 percent President Trump has long pushed for. The plan remains fluid ... But they said the template is taking a more definite shape ahead of a planned rollout next week by the 'Big Six' negotiators from the White House, Senate and House." http://wapo.st/2jSTTAX

FLOTUS WATCH -- "Meetings with Prince Harry, Canadian PM for Melania Trump," by AP's Darlene Superville: "Melania Trump is ... leading the U.S. delegation to an international sporting event for wounded service members, her first solo trip outside the United States to represent her adopted country. On the agenda for daylong stop Saturday in Toronto: a first-time meeting with Britain's Prince Harry, founder of the Invictus Games; a meeting with Canadian Prime Minister Justin Trudeau; remarks at a reception for the nearly 100 American athletes participating in the weeklong Olympic-style competition; and attending the opening ceremony." http://bit.ly/2xZyNqT

PALACE INTRIGUE -- "Aides warned Trump not to attack North Korea's leader personally before his fiery U.N. address," by LATimes' Brian Bennett: "Senior aides to President Trump repeatedly warned him not to deliver a personal attack on North Korea's leader at the United Nations this week, saying insulting the young despot in such a prominent venue could irreparably escalate tensions and shut off any chance for negotiations to defuse the nuclear crisis. Trump's derisive description of Kim Jong Un as 'Rocket Man' on 'a suicide mission' and his threat to 'totally destroy' North Korea were not in a speech draft that several senior officials reviewed and vetted Monday, the day before Trump gave his first address to the U.N. General Assembly, two U.S. officials said.

"Some of Trump's top aides, including national security advisor H.R. McMaster, had argued for months against making the attacks on North Korea's leader personal, warning it could backfire. But Trump, who relishes belittling his rivals and enemies with crude nicknames, felt compelled to make a dramatic splash in the global forum." http://lat.ms/2yxdGJk

-- "Enforcer or 'choke point'? Kelly seeks to bring order to chaotic White House," by WaPo's Ashley Parker and Phil Rucker: "White House Chief of Staff John F. Kelly has a new evening routine: He periodically strolls the perimeter of the White House grounds late at night, inspecting the compound and chatting with Secret Service agents to see if they have what they need. Just two months into his new post, Kelly has expanded his portfolio to include issues large and small throughout the administration - from influencing personnel staffing at the agencies to vetting President Trump's reading materials to his periodic nighttime walks along the White House fence line to check security.

"The no-task-too-small leadership style - dating to Kelly's training in the Marine Corps, where he rose to a four-star general - has its benefits for a president who often sows chaos in his wake, implementing a sense of order and discipline in a White House known for lacking both. But it also has prompted grumbling about micromanaging within the West Wing, where some staffers complain that Kelly may be growing his mandate

too far and that his strict regimen stifles the creativity and spontaneity that have been hallmarks of Trump's enterprises. As one of Kelly's subordinates put it, the chief of staff sometimes becomes 'a one-man choke point.'" http://wapo.st/2xpbPGc

DRAIN THE SWAMP! -- "Corey Lewandowski appears to be working with another lobbying firm," by Theo Meyer and Daniel Lippman: "Months after Corey Lewandowski, Donald Trump's former campaign manager, quit the lobbying firm he co-founded after the 2016 election, he appears to be working with a new one, reviving questions about whether he is still cashing in on his relationship with the president. The firm, Turnberry Solutions LLC - a name that calls to mind Trump Turnberry, the president's Scottish golf resort - is staffed by two lobbyists who worked for Lewandowski's old firm. While Lewandowski has denied any link to the firm, there's plenty of evidence to the contrary. Lewandowski was on a recent conference call between Turnberry and one of its clients, according to the client, and Turnberry also created an email address with his first name on it.

"A source familiar with the firm told POLITICO that Lewandowski also traveled to Poland earlier this month with two of Turnberry's lobbyists to pitch the firm's services to the Polish government. ... Lewandowski has touted his access to Trump outside his work with Turnberry, too. In a recent conversation with Elin Suleymanov, the Azerbaijani ambassador to the U.S., Lewandowski promised that he could get the Azerbaijani president a meeting with Trump ... Asked whether he had promised access, Lewandowski responded by text message: 'No - I don't do foreign work. Sorry.'" http://politi.co/2yyguGa

Playbook Reads

PHOTO DU JOUR: President Donald Trump hugs Senate candidate Luther Strange during a campaign rally in Huntsville, Ala., on Sept. 22. | Evan Vucci/AP Photo

BILL SCHER: "Joe Biden's Platform for 2020: Anti-Populism": "On Monday, former Vice President Joe Biden wrote a blog post that proves two things: Blogging isn't dead and neither is Biden's political career. In fact, in Biden's essay, and in other little-noticed public pronouncements, you can see him sculpting a role for in the 2020 presidential campaign that perhaps only he could get away with playing: the voice of anti-populism. Though Biden's essay was largely ignored amid the constant hum of Trump-related stories, it made a bit of news in wonk circles because Biden used it to announce his opposition to a 'universal basic income,' that newly vogue policy proposal in which every American would receive a periodic check from the government regardless of their work status." http://politi.co/2hlYjiF ... ***Biden's post*** http://bit.ly/2fihRQF

RUSSIA WATCH -- "Wisconsin, Ohio, California among states targeted by Russian hackers in 2016 race," by Reuters' David Shepardson and Dustin Volz: "Wisconsin, Ohio, California and 10 other states said on Friday they were among 21 states that Russian government hackers targeted in an effort to sway the 2016 presidential election in favor of Donald Trump though no votes were changed. The Department of Homeland Security confirmed it had notified the states of the activity but declined to identify them. ...

"Alabama, Alaska, Colorado, Connecticut, Florida, Minnesota, Texas and Washington state also confirmed they were targeted by Russian hackers but said they were not successful. Arizona and Illinois confirmed last year that they were targets. The Associated Press confirmed Iowa, Maryland, North Dakota, Pennsylvania, Delaware, Oregon, Oklahoma and Virginia were also targets, bringing the total states identified to 21. Those states did not immediately return messages seeking comment late Friday." http://reut.rs/2xqsNnX

OBAMA ALUMNI -- "Pod Payoff: Crooked Media's Jon Favreau Buys L.A. Bungalow for $1.9M," by Realtor's Claudine Zap: "Jon Favreau, a former speechwriter for President Barack Obama, finally has a place for his Sonos speakers, Parachute sheets, and Blue Apron meals. Those are some of the sponsors he enthusiastically hawks on the popular podcast 'Pod Save America.' ... The Crooked Media co-founder and his wife, Emily Black, have settled in SoCal, where they purchased a Spanish-style bungalow in L.A. for $1.9 million in early August. The three-bedroom, three-bath home was built in the 1920s and comes 'beautifully updated,' according to the listing." ***With 8 pix on one page*** http://bit.ly/2wMJQOM

****** **A message from UC Davis:** Ranked first in the world for veterinary medicine, UC Davis believes collaborating across disciplines in animal, human and environmental health is the best way to advance the health of all creatures great and small. Using this "One Health" approach to problem solving, our research - much of which is federally funded - is resulting in cost-saving, translatable treatments for cancer, breakthroughs in stem cell therapy, increased awareness and management of emerging zoonotic diseases, better protection for endangered species, and comprehensive responses to environmental crises like oil spills and floods. Learn more about UC Davis health innovation at 21stcentury.ucdavis.edu. ******

MEDIAWATCH - "The mysterious group that's picking Breitbart apart, one tweet at a time," by WaPo's Paul Farhi: "Hardly anyone paid attention last November when a strangely named Twitter account, Sleeping Giants, sent its first tweet into the digisphere. 'Are you aware that you're advertising on Breitbart, the alt-right's biggest champion, today?' read the tweet, aimed at a consumer lending outfit called Social Finance. 'Are you supporting them publicly?' Within 30 minutes, Social Finance replied, tweeting that it would stop running ads on Breitbart. It was, it turns out, the start of an odd, and oddly effective, social media campaign against Breitbart ...

"Sleeping Giants is a mysterious group that has no address, no organizational structure and no officers. At least none that are publicly known. All of its leaders are anonymous, and much of what it claims is difficult to independently verify. A spokesman for the group wouldn't identify himself in interviews for this article. But the group does have a singular purpose, pursued as relentlessly as Ahab chasing a whale: It aims to drive advertisers away from Breitbart." http://wapo.st/2fnUNDM

-- JIM WINDOLF has been named NYT's new media editor. He previously edited Men's Style. http://bit.ly/2fgZThD

GREAT WEEKEND READS, curated by Daniel Lippman, filing from NYC:

--"She told them she was Hugo Chavez's ex-wife and worked in the White House. And she'd make them rich," by WaPo's Manuel Roig-Franzia: "Madame Giselle ... is forever boasting of being the secret wife of Egyptian President Abdel Fatah al-Sissi, even saying she facilitated the first phone call between the Middle Eastern leader and President Trump ... Over homemade Turkish coffee in her lavishly appointed apartment or across the table at pricey restaurants, the neighbors say, she has shared in a confiding tone that she occupies a prime White House office next to Trump's daughter, Ivanka Trump." http://wapo.st/2xsTJVs (h/t Longform.org)

--"Is Trump mentally ill? Or is America? Psychiatrists weigh in," by Carlos Lozada on Sunday's WaPo Outlook cover: "[S]ome psychiatrists and other mental-health professionals are shedding long-held norms to argue that Trump's condition presents risks to the nation and the world. 'The Dangerous Case of Donald Trump' features more than two dozen essays breaking down the president's perceived traits, which the contributors find consistent with symptoms of narcissistic personality disorder, sociopathy and other maladies." http://wapo.st/2wbjUwV

--"How Canada has been secretly giving asylum to gay people in Chechnya fleeing persecution," by John Ibbitson in the Globe and Mail: "Canada has quietly brought in 22 people, with more to come, despite risks to Canada-Russia relations." https://tgam.ca/2wbMWg0

--"Jeff Bridges Will Be 'The Dude,' Now and Forever," by Caity Weaver in GQ: "Jeff Bridges will always be known as The Dude, and at age 67, he's okay with it. More than okay with it, even. GQ's Caity Weaver visits the famously relaxed actor for an appropriately chill hangout." http://bit.ly/2xnCL9k

--"My Journey to the Heart of the FOIA Request," by Spenser Mestel in Longreads: "Fifty years ago, the Freedom of Information Act gave the public access to government secrets - all you had to do was ask. How a simple request became a bureaucratic nightmare." http://bit.ly/2wGj6Vg

--"How Big Business Got Brazil Hooked on Junk Food," by NYT's Andrew Jacobs and Matt Richtel: "As growth slows in wealthy countries, Western food companies are

aggressively expanding in developing nations, contributing to obesity and health problems." http://nyti.ms/2xkLnjm

--"The great nutrient collapse," by Helena Bottemiller Evich on The Agenda: "The atmosphere is literally changing the food we eat, for the worse. And almost nobody is paying attention." http://politi.co/2xodFas

--"After My Husband's Death, I'm Learning To Steward The Light He Left Behind," by Mary Katherine Ham in The Federalist: "'All of us who knew him and loved him are keepers of this fire. It's there, and it lives on, and it is something we can breathe life into every day.'" http://bit.ly/2hp9gwh

--"How a tax haven is leading the race to privatise space," by Atossa Araxia Abrahamian in The Guardian: "Luxembourg has shown how far a tiny country can go by serving the needs of global capitalism. Now it has set its sights on outer space." http://bit.ly/2wGTVSd

--"How Motherhood Affects Creativity," by Erika Hayasaki in The Atlantic: "Cultural messages tell women that making art and having children are incompatible pursuits. But science suggests that women may become more creative after having kids." http://theatln.tc/2xXySLz

--"My Drowning and Other Inconveniences," by Tim Cahill in Outside magazine: "My face turned blue, then gray, and then my heart stopped beating altogether. I died that December day on Tequila Beach. This created a great deal of consternation. I was, at the time, 71 years old, and most of my team was half my age or less. These fine and foolish folk had every reason to imagine that I had all the skills necessary to handle a winter trip down the Grand Canyon." http://bit.ly/2wGyh0q

--"What is behind the violence in Myanmar?" by Samira Shackle in the New Humanist - Q&A with Francis Wade, author of "Myanmar's Enemy Within": "'You'd be hard pressed to find any justification for violence in the scriptures of Theravada Buddhism, which is what the majority in Myanmar practice. Those Buddhists who have perpetrated violence acted with the conviction that if Buddhism ceased to exist in Myanmar, the country would descend into anarchy.'" http://bit.ly/2fG6rqF

--"The Rise and Fall of the Word 'Monopoly' in American Life," by Stacy Mitchell in The Atlantic: "If 'monopoly' sounds like a word from another era, that's because, until recently, it was. ... Breaking up too-powerful companies was a bipartisan goal and on the minds of many voters. But, starting in the 1970s, the word retreated from the public consciousness. Not coincidentally, at the same time, the enforcement of anti-monopoly policy grew increasingly toothless." http://theatln.tc/2sqnpAf

--"Blago: His Life in Prison," by David Bernstein in Chicago Mag: "Five years ago, Rod Blagojevich kissed his wife and daughters goodbye, waved one last time to reporters, and flew to Colorado to start a 14-year sentence. In his first prison interview,

the ex-governor reveals in startling detail what life has been like on the inside." http://chi.mg/2xAEZ7H

BIRTHWEEK (was yesterday): Center for Public Integrity national security reporter Patrick Malone (hat tip: Dave Levinthal) ... Politico Europe's Bianca Opris

BIRTHDAYS: Sean Spicer, celebrating by spending the day with his family (h/t Ron Bonjean) ... Todd Ricketts ... Connolly Keigher ... Daisy Schuurman ... Maria Karl (hubby tip: Jonathan) ... Elise Jordan (h/t Ben Chang) ... Nick Everhart of Content Creative Media ... Kimberly Fritts, CEO of Podesta Group ... NYT's Mike Schmidt ... Amanda Cox, editor of The Upshot ... Abbey Watson ... Bruce "The Boss" Springsteen is 68 (h/t Randy Whitestone) ... SoRelle Wyckoff, polisci and gov't graduate student at

the University of Maryland and a Cornyn alum ... Ralph Hellmann is 56 ... NBC News' Julia Edwards ... Politico's Bernie Becker and Meredith Kirsch ... Todd Metcalf, principal at PwC's Tax Policy Services and Senate Finance alum, is 47 ... NARAL's Kelly Sackley ... Naomi Seligman, comms dir for LA Mayor Garcetti (h/t Tim Burger) ... Saunji Fyffe ... Tom Martin, president and CEO at American Forest Foundation (h/ts Jon Haber) ... Politico Europe's Santa Silapetere ... Brooke Brogan, celebrating in NYC (hubby tip: Fritz) ...

... Jonathan Peled, Israeli ambassador to Mexico ... Rep. Jason Lewis (R-Minn.) is 62 ... Clint Reed, chief of staff for Sen. Rubio ... Izabela Teixeira of GE corporate communications ... Gabriella Schwarz, managing editor and head of news at Flipboard and a former CNN politics and WH producer, who covered President Obama ... Julius Niyonsaba, a legislative aide for Sen. Durbin (h/t Mike Inacay) ... EPA's Lincoln Ferguson, Pruitt's senior adviser, is 27 (h/t Amy Graham) ... Maura O'Brien ... William Ricci ... former U.N. High Commissioner for Human Rights Navi Pillay ... Amb. Kristen Silverberg, now managing director and general counsel at the Institute of International Finance ... Armaan Pai of Centerview Partners ... Kyle Cotner ... Siraj Hashmi of Red Alert Politics ... Ryan Shucard, VP of SevenTwenty Strategies ... Ken Rynne ... Blair Fowler ... Dustee Tucker ... Matt McAlvanah ... Corey Tellez ... Loretta Solon Greene ... Matt Hirsch ... Dan Conley ... Neil Schoolnik is 46 ... Tom Daley ... Katrina Mendiola ... Stan Davis ... Dale Leibach (h/ts Teresa Vilmain)

THE SHOWS, by @MattMackowiak, filing from Austin:

-- ABC's "This Week": Treasury Secretary Steven Mnuchin ... Sen. Bill Cassidy (R-La.) ... Sen. Lindsey Graham (R-S.C.) ... Bernard Tyson ... Ret. Gen. James Cartwright, Evan Osnos. Panel: Steve Inskeep, Anna Palmer, Jake Sherman, Cecilia Vega

-- CNN's "State of the Union": Steven Mnuchin ... Sen. Susan Collins (R-Maine) ... Preet Bharara. Panel: Nina Turner, Rick Santorum, Jen Psaki and Rep. Jason Lewis (R-Minn.)

-- NBC's "Meet the Press": Marc Short ... Sen. Rand Paul (R-Ky.) ... House Minority Leader Nancy Pelosi (D-Calif.). Panel: Stephanie Cutter, Stephen Henderson, Eliana Johnson and Rich Lowry

-- CBS's "Face the Nation": Sen. Susan Collins (R-Maine) ... Sen. Cory Gardner (R-Colo.) ... Rep. Adam Schiff (D-Calif.) ... Marc Short. Panel: Margaret Brennan, David Nakamura and Atul Gawande

-- "Fox News Sunday": Bill Gates ... Marc Short. Panel: Karl Rove, Julie Pace, Kim Strassel and Juan Williams

-- Fox News' "Sunday Morning Futures": Sen. Luther Strange (R-Ala.) ... former Attorney General Michael Mukasey ... former Gov. Mike Huckabee (R-Ark.) ... former Gov. Bill Richardson (D-N.M.). Panel: Mark Kissel and Ed Rollins

-- Fox News' "MediaBuzz": Mollie Hemingway ... Joe Trippi ... Erin McPike ... Shelby Holliday ... Carley Shimkus ... Shana Glenzer

-- CNN's "Inside Politics" with John King: Panel: Michael Shear, Mary Katharine Ham, Phil Mattingly and MJ Lee

-- CNN's "Fareed Zakaria GPS": Iranian foreign minister Javad Zarif ... Afghanistan president Ashraf Ghani

-- CNN's "Reliable Sources": Sen. Mark Warner (D-Va.). Panel: Bill Carter, Neera Tanden and Sarah Kliff ... Carl Bernstein and Julia Ioffe

-- Univision's "Al Punto": Report from Mexico City, including interviews with Mexico City Mayor Miguel Angel Mancera, as well as with survivors and victims' relatives ... report from Puerto Rico

-- C-SPAN: "The Communicators": David Cohen, questioned by Tony Romm ... **"Newsmakers":** Strobe Talbot, questioned by Susan Glasser and Gardiner Harris ... **"Q&A":** Ann Telnaes

-- PBS' "To the Contrary": Panel: Del. Eleanor Holmes Norton (D-D.C.), Jennifer Higgins, Maria Teresa Kumar and Ann Stone

-- Washington Times' "Mack on Politics" weekly politics podcast with Matt Mackowiak (download on iTunes, Google Play, or Stitcher or listen at http://bit.ly/2r37J6h): Rick Santorum ... Lanhee Chen.

****** **A message from UC Davis:** Ranked first in the world for veterinary medicine, UC Davis believes collaborating across disciplines in animal, human and environmental health is the best way to advance the health of all creatures great and small. Using this "One Health" approach to problem solving, our research - much of which is federally funded - is resulting in cost-saving, translatable treatments for cancer, breakthroughs in stem cell therapy, increased awareness and management of emerging zoonotic diseases, better protection for endangered species, and comprehensive responses to environmental crises like oil spills and floods. Learn more about UC Davis health innovation at 21stcentury.ucdavis.edu. ******

Subject: POLITICO's Morning Transportation: FAA-ding back? — Same old (infrastructure) song — Chao's 'special perk' — Senate budget knocks HTF

By Brianna Gurciullo | 10/06/2017 10:00 AM EDT

With help from Lauren Gardner, Stephanie Beasley and Tanya Snyder

Morning Transportation will not publish on Monday, Oct. 9. Our next Morning Transportation newsletter will publish on Tuesday, Oct. 10.

FAA-DING BACK? House leadership didn't include Transportation Chairman Bill Shuster's FAA bill on the chamber's schedule next week, our Lauren Gardner and Kathryn A. Wolfe scooped for Pros. That development - days after the Rules Committee put members on notice for an expected meeting on the bill (H.R. 2997 (115)) next week - raises quite a few questions after weeks of proponents promising an early October vote. Among ours: How much does GOP leadership care to push this after two false starts? (Rules first indicated its intent to get the bill to the floor back in July.) How involved are administration officials - considering that President Donald Trump came out in support of the air traffic control spinoff just months ago - in pushing this to rank-and-file members who are on the fence? How many more target dates will we hear before we reach the ultimate one, March 31?

Crowded out: Lawmakers are planning to vote on a hurricane recovery aid package this month. In September, Shuster attributed the lack of floor time for his bill to Hurricanes Harvey and Irma. His staff also said appropriations sucked up floor time last month. But, at the same time, the Rules Committee's call for amendments this week sent a signal that GOP leaders had the measure on their minds again.

Turn that frown upside down: House Transportation Committee member Thomas Massie (R-Ky.) on Thursday offered his thoughts about why leadership might be holding back: "My theory would be there's a lot of undecideds that, probably, if the vote were called on the floor, would vote 'yes,'" he told POLITICO. "But it's probably a risk they don't want to take. That's my guess."

ICYMI: Shuster anticipates that the House will "adopt an amendment that will be even more explicit in prohibiting federal appropriations" for his proposed nonprofit corporation, according to his prepared remarks for a Tuesday floor speech. We missed it because Shuster didn't actually say that during his speech, which was limited to five minutes.

YAY FRIDAY: Thanks for tuning in to POLITICO's Morning Transportation - your daily tipsheet on all things trains, planes, automobiles and ports - where your host is jealous of Lauren's yoga-and-puppies-filled evening. Send tips, feedback, lyrics and pup pics to bgurciullo@politico.com or @brigurciullo.

"First boots out on the Martian Floor to proclaim... Oh, that Elon! Sent me all the way, Son, a hundred thirty-nine million miles away!" (h/t Wired)

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

SAME OLD SONG: Administration officials invited a slew of industry representatives to what was billed as an infrastructure briefing on highways, only to have them come away without hearing anything new, Lauren scooped for Pros. The meeting came after Shuster hinted earlier this week that he was anticipating seeing more infrastructure principles from the White House relatively soon. While Lauren was told the word "soon" was used, that was also in the context of working with lawmakers once they've made progress on health care and taxes ("which means not soon," one industry source cracked).

But with a different name: One attendee asked about the president's recent comments on public-private partnerships, but all Deputy Transportation Secretary Jeff Rosen would say is that they're one tool in the toolbox (a line that transportation reporters often hear on Capitol Hill). Was that a shift in tone? Who knows. We're told Trump infrastructure adviser DJ Gribbin dished out grains of salt by admitting this: "Anything we say today is subject to change without notice."

Since U been gone: Frustration is mounting among industry folks who were ecstatic that infrastructure was a front-and-center issue for the president. There's been a fair level of engagement among administration officials and those interested in having their asks considered, but the last big splash on infrastructure came in the fiscal 2018 budget proposal (which, even then, was pretty muted). Big legislative pushes will be tough to say the least next year.

ARE WE THERE YET? Chairman John Barrasso (R-Wyo.) said members of the Senate Environment and Public Works Committee "are all well on our way to creating a legislative blueprint that's going to address America's most critical infrastructure needs" during a hearing Thursday on Paul Trombino's nomination to be FHWA administrator. As far back as May, Barrasso has been saying that he's figuring out bipartisan principles for infrastructure legislation. And in late June, he and ranking member Tom Carper (D-Del.) asked colleagues for their "infrastructure priorities."

ELLIOTT CONFIRMED: Howard "Skip" Elliott is on his way to PHMSA with the Senate confirming his nomination to be administrator Thursday.

CHAO'S 'SPECIAL PERK': Transportation Secretary Elaine Chao has taken flights on government aircraft on seven occasions - a not all that uncommon practice for DOT chiefs, The Washington Post reports . Flights to Italy and France for official business "cost taxpayers tens of thousands of dollars," the Post writes. Marianne McInerney, DOT's public affairs director, told the newspaper that Chao "prefers to travel commercial" and "typically flies coach." And, McInerney said, each flight on a government airplane passed a review by DOT's ethics counsel. She said Chao resorts to such planes when it costs less than commercial flights for her entourage, for security reasons or because of scheduling issues.

SENATE BUDGET KNOCKS HTF: The Senate Budget Committee wants to cut transportation expenditures to match gas tax revenues into the Highway Trust Fund - which have

been diminishing for years. The proposed cuts - a 20 percent drop in budget authority between fiscal 2018 and fiscal 2027 when you account for inflation - conflict with Trump's pledge to rebuild the nation's infrastructure. But the budget is mostly a messaging document; appropriators rarely go along with such spending levels. Tanya Snyder has more for Pros.

Meanwhile: The House passed its budget (H. Con. Res. 71 (115)) on Thursday. As POLITICO's Sarah Ferris reports, the budget has the "procedural power to unlock a filibuster-proof tax bill."

ALWAYS A TARGET: The chairman of the Republican Study Committee wants lawmakers to offset the costs of providing aid to areas hit by recent natural disasters. Among other recommendations, Rep. Mark Walker supports cutting subsidies to Amtrak starting in fiscal 2018 to help pay for the relief funding, the North Carolina Republican's office told Sarah.

MT MAILBAG: Texas' governor and members of Congress are asking for $18.7 billion for the state as part of the next aid package, including $10 billion for the Army Corps of Engineers and $150 million for DOT. Check out their letter to both chambers' appropriations committee heads here.

DRONE, HELICOPTER CRASH UNDER INVESTIGATION: The NTSB has launched an investigation into a crash involving a drone and an Army helicopter. The agency said in a release Thursday that the crash happened Sept. 21 near Staten Island, N.Y. "The Army helicopter sustained damage to its main rotor blade, window frame and transmission deck," NTSB said. "A motor and arm from a small drone, identified as a DJI Phantom 4, were recovered from the helicopter." Those investigating have spoken to the operator of the drone.

HIT THE BRAKES: A National Academies committee could not determine whether an advanced braking system DOT required in 2015 for unit trains carrying flammable materials performs better than other options, Lauren reports, a finding that likely provides a pathway for regulators to overturn the mandate. Congress required DOT to revisit the issue in the FAST Act, and to use National Academies studies completed this year to either justify the costs of the electronically controlled pneumatic brakes requirement or repeal it.

THE BEST SUMMER EVER: TSA screened more passengers this summer than any other in its history. TSA said it saw more than 2 million passengers per day at airport checkpoints in the lead up to the Memorial Day and Fourth of July weekends. Three of those days landed on TSA's Top 10 busiest. Of the total 239 million passengers screened this summer, about 99 percent waited less than 30 minutes at checkpoints while PreCheck passengers breezed through in under 10 minutes, according to the agency. Administrator David Pekoske credited TSA's "strong partnerships" with airlines, airports and local law enforcement for the feat, a big turnaround from last summer's saga of long airport security lines. TSA nerds can check out the full list of Top 10 screening days here.

OUT OF THIS WORLD: Vice President Mike Pence on Thursday charged Chao and other Trump Cabinet members with crafting a plan for slashing space industry regulations, Jacqueline Klimas reports. Jacqueline has more on the first meeting of Trump's National Space Council for Pro Defense.

STOPPING BY: As we previewed in Thursday's MT , Yousef Al Otaiba, the United Arab Emirates' ambassador to the United States, checked out Boeing South Carolina and spoke about his nation's Open Skies agreement with the U.S. "Simply put, without Open Skies, the full scope of Boeing's business with UAE airlines, and the economic benefits realized by communities all across the U.S., would not be possible," he said, according to the UAE Embassy. Al Otaiba argued that any efforts to "roll back Open Skies will only hurt communities like Charleston and employees like those at Boeing and its suppliers across the U.S. and world."

Trade dispute conflation? The Partnership for Open and Fair Skies, of which American Airlines, United Airlines and Delta Air Lines are members, fired out a statement Thursday criticizing the UAE and two of its carriers, Etihad Airways and Emirates Airline. "U.S. carriers are Boeing's largest customers. But more importantly, Boeing is at the forefront of challenging foreign government subsidies exactly like those given by the UAE to Emirates and Etihad," spokeswoman Jill Zuckman said, apparently referring to Boeing's dispute with Bombardier.

SHIFTING GEARS: FHWA, House Appropriations and Senate Environment and Public Works alumnus David Napoliello began Monday as a staffer for House Transportation Committee Democrats.

THE AUTOBAHN:

- "CSX official who urged Christie oil train veto to lead oil train regulator." NorthJersey.com.

- "Trump administration asks Supreme Court to dump travel ban cases." POLITICO.

- "Technology crammed into cars worsens driver distraction." The Associated Press.

- "Despite travel warning, cruises to Cuba continue." The New York Times.

- "Amazon is testing its own delivery service to rival FedEx and UPS." Bloomberg.

- "Treasury inspector general finds no wrongdoing in Mnuchin plane travel." POLITICO.

- "With traffic lights out, Puerto Ricans cope with road snarls." The Associated Press.

- "Bombardier spends $2.4 billion a year on aerospace in U.S.: document." Reuters.

- "These hybrid electric jets could change how we live and work by 2022." The Verge.

- "Driverless tech startup Nauto has hired execs from Microsoft and Alphabet." Recode.

THE COUNTDOWN: DOT appropriations run out in 64 days. The FAA reauthorization expires in 177 days. Highway and transit policy is up for renewal in 1,091 days.

Subject: POLITICO's Morning Energy, presented by the Nuclear Energy Institute: Long time, no FERC — EPW nomination hearing shelved for now — Upton leaning toward Michigan Senate bid

By Anthony Adragna | 09/20/2017 10:00 AM EDT

With help from Darius Dixon, Eric Wolff and Alex Guillén

BACK TO FERC: At long last, after six months without a quorum, FERC is holding its first monthly meeting since January. Absence makes the heart grow fonder, so expect particularly long security lines. FERC bumped this month's meeting up a day in order to accommodate Rosh Hashanah, which begins tonight, but the commission will return to its normal every-third-Thursday lineup next month.

So, what's actually on today's agenda? Not a ton. The agenda is of average length: 23 electric items, including tariff changes, rehearing orders and three reliability standard rulemakings. Given the destruction left in the wake of Hurricanes Harvey and Irma, the standard on emergency preparedness and operations got our attention: NERC has asked FERC to approve a rule submitted in March that seeks to clarify what kind of damage and threats to electric facilities are reported, and when. FERC is also poised to act on a request to revise the terms of the SunZia Southwest transmission project, whose owners are aiming to transmit at least 1,500 megawatts of New Mexican wind power capacity farther west.

Where's the meat? While working at less than 110 percent after such a a long period might seem a little slow to ME, if the agency wants to chip away at its backlog, a half-dozen industry types and energy lawyers that regularly deal with FERC said to be patient, considering how much there is for four new commissioners and new staff to take in. (FERC chairman nominee Kevin McIntyre and Democratic commissioner pick Rich Glick sailed through the Senate energy committee Tuesday but their approval by the full Senate is still up in the air.)

The agency has churned out more than 65 "notational" orders since Chairman Neil Chatterjee and Commissioner Rob Powelson were sworn in last month, including its approval of the NEXUS natural gas pipeline project, three settlements, and the move to rescue Millennium's Valley Lateral project. On Thursday, Chatterjee told reporters FERC has a "great strategy in place in working through these orders" and defended the agency's pace so far. The truly meaty issues of market compensation for power plants and how FERC wants to address the impacts of large state energy programs, like those in New York and Illinois, are likely to sit tight until all leadership table seats are filled.

Let there be protesters: Although the anti-FERC crowd didn't show up at Senate Energy and Natural Resources to disrupt Tuesday's vote on the remaining agency nominees, protesters seem like they want to make up for it today. Protesters sent out a notice on Tuesday saying they will "greet" FERC commissioners outside the headquarters starting at 8:30 a.m. and "will then take their concerns into FERC's open public meeting." The party starts at 10 a.m. at FERC headquarters, 888 First St., NE, and will be webcast here.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and Bracewell's Frank Maisano identified Justice Earl Warren as the one-time Emmy host. For today: What future president once made an appearance on *Laugh-In* as part of a push to rehabilitate his image? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

EPW NOMINATION HEARING POSTPONED: After the Senate opted to adjourn earlier than expected in recognition of Rosh Hashanah, the Environment and Public Works Committee delayed a planned hearing for EPA and Nuclear Regulatory Commission nominees slated for today, Pro's Alex Guillén reports. The panel declined to say when the session would be rescheduled, though William Wehrum's nomination to run the air office and Michael Dourson's selection to run its chemical efforts are still expected to be most controversial.

Speaking of which, four environmental groups - Earthjustice, the League of Conservation Voters, NRDC and Sierra Club - sent a letter to senators opposing the Wehrum nomination. "While he served in senior leadership positions with the EPA air program, courts held the agency in violation of the federal Clean Air Act 30 times," they wrote. "In private practice with corporate law firms, Mr. Wehrum has represented industrial interests in nearly 35 lawsuits that sought to weaken or void EPA clean air and public health safeguards. Americans deserve better for the nation's chief clean air official."

MACRON: WE WON'T RENEGOTIATE PARIS DEAL: While he said he "profoundly respects" Trump's decision to leave the Paris climate agreement, French President Emmanuel Macron told the U.N. General Assembly that the accord would not be renegotiated and "we won't go back." He added that "the door will always be open" for Trump to discuss the issue and added the agreement could be strengthened with new commitments from other countries.

ICYMI: Trump used his U.N. General Assembly to stress the U.S. was open to further actions to cripple Venezuelan President Nicolas Maduro's regime, hinting at possible further sanctions. "We are prepared to take further action if the government of Venezuela persists on its path to impose authoritarian rule on the Venezuelan people," the president said. "I ask every country represented here today to be prepared to do more."

BABY STEPS FOR CLIMATE HAWKS: Sens. Lindsey Graham and Sheldon Whitehouse are working together on a carbon tax bill, the South Carolina Republican told a conference in Connecticut on Tuesday, according to Time . "I believe that the greenhouse effect is real, that CO2 emissions generated by man is creating our greenhouse gas effect that traps heat, and the planet is warming," said Graham. "A price on carbon-that's the way to go in my view." He pledged to discuss the idea with the White House. Whitehouse, in response, tweeted: "Lots of work to do, but this is a good step."

** **A message from the Nuclear Energy Institute**: Nuclear is doing more than ever before. It's powering the grid, boosting the economy by billions, creating jobs, propelling space travel and even helping doctors. It's moving us forward in ways we never thought possible. Explore all nuclear energy is doing at discovernuclear.com. **

NORTHAM DODGES ON PIPELINE STANCE: Asked twice during Virginia's gubernatorial debate whether he backed the Atlantic Coast pipeline, Lt. Gov. Ralph Northam wouldn't clearly answer. Upon pressing from NBC's Chuck Todd, the best he could offer was "I have been as clear as I can" that if done with adequate environmental safeguards "then I do support them."

UPTON LEANING TOWARD SENATE BID: Republican Rep. Fred Upton, former Energy and Commerce Committee Chairman, is reportedly 90 percent sure he'll give up his powerful House perch to launch a challenge to incumbent Democratic Sen. Debbie Stabenow, WHTC reports . The Michigan outlet reports the congressman's family has given their blessing to a Senate run, though it says a decision will wait until late fall at the earliest. "He continues to explore all of his options and is busy with a packed schedule back here and in D.C.," Tom Wilbur, his communications director, said in a statement.

GRIJALVA ARRESTED AT TRUMP TOWER: House Natural Resources Committee ranking member Raul Grijalva was among a group of Democratic congressmen arrested outside Trump Tower on Tuesday during decision to halt DACA, POLITICO's Louis Nelson reports. Joining Grijalva in what they called "civil disobedience" were Rep. Luis Gutierrez, Adriano Espaillat and Speaker of the New York City Council Melissa Mark Viverito.

DEMOCRAT RAISES CONCERNS OVER ACCURACY OF ZINKE'S REPORT: A BLM official said Tuesday the agency did not fact check Interior Secretary Ryan Zinke's report on national monuments before it went to the White House for review. Sen. Martin Heinrich originally raised questions about "more than a few simple factual errors included" in Zinke's analysis. John Ruhs, BLM's acting deputy director of operations, then said his agency was "not part of the writing of the reports" but "did answer questions and provide data as necessary." Video of the exchange during an Energy and Natural Resources Committee hearing, flagged by the Center for Western Priorities, is available here.

Interesting call: Interior employees now have the opportunity arcade game "Big Buck Hunter Pro" in their cafeteria after Zinke announced its installation Tuesday and the "Secretary's Shotgun Showdown" to emphasize hunting and fishing at the agency. The winner gets bragging rights and a "Beverage on the Balcony" with Zinke (perhaps a Moose Drool Brown Ale). The Natural Resources Democrats shot back on Twitter: "This is a crucial time for our national monuments & @SecretaryZinke is tweeting about playing an arcade game."

MAIL CALL! CONCERNS RAISED OVER SUPERFUND OVERSEER: Rep. Frank Pallone, top Democrat on the Energy and Commerce Commerce, sent a letter to Pruitt raising concerns over the appointment of his senior adviser Albert Kelly to run the Superfund management task force given he settled with Federal Deposit Insurance Corporation this summer. "Despite this, Mr. Kelly has been selected as and remains in a senior role at the EPA and is tasked with protecting the solvency and continued effectiveness of the Superfund program and the Superfund Trust Fund," Pallone wrote. "These funds should not be entrusted to someone who has been barred from working for every financial institution from credit unions to Wall Street banks."

And questions of disaster readiness too: Seven members of the House Sustainable Energy & Environment Coalition sent a letter to Pruitt requesting information on how the agency is preparing toxic sites for extreme weather events, especially given calls for steep cuts to the EPA's budget. "We are concerned that efforts to reduce the Agency's staff and budget, along with plans to cut or eliminate climate mitigation and adaptation programs, will leave the Agency ill equipped to protect communities from the environmental hazards associated with extreme weather," they write.

TAX REFORM: SOLAR INDUSTRY FEELS DEPRECIATED: The solar industry's top priority in the tax reform discussion is to protect the investment tax credit, the benefit that lets developers take a credit worth 30 percent of the value of their solar array until the credit expires in 2022, Abigail Ross Hopper, CEO of the Solar Energy Industries Association, tells ME. But the Big Six tax writers want to the tax code to reflect "unprecedented capital expensing," meaning they want to accelerate how fast businesses can deduct the cost of assets.

But solar doesn't really want that, Ross Hopper said. It wants assets to depreciate at the current schedule so they can take the full ITC while it's still in existence. "We like the way it's set up now," Hopper told ME. "What we have been advocating for on the Hill is to be able to use current depreciation schedule with ITC rather than accelerated depreciation."

LATEST TWIST IN SOLAR TRADE CASE: Days before a crucial vote in the case, Solar Energy Industries Association sent a letter to the International Trade Commission saying the petitioners in the case - Suniva and SolarWorld - haven't submitted a plan for how they would benefit if tariffs were placed on solar imports. The group says the failure to submit a plan "evidences both a lack of respect for the process contemplated by the statute and an apparent inability to devise a genuine plan for the industry's adjustment to import competition." The R Street Institute released a short paper arguing the administration "should avoid imposing tariffs or other import restrictions on solar products

LISA JACKSON HITS PRUITT'S EPA: Former EPA Administrator Lisa Jackson told TechCrunch Tuesday the agency she used to run "hasn't changed" but that Pruitt is running it unlike any administrator has previously. "Every EPA administrator has committed to regulate transparently," she said at a conference in San Francisco. "We don't have that commitment anymore. It's not the EPA, it's that the leadership has decided to move away from the transparency that assures people that their health and their community come first rather than somebody else's bottom line."

EPA WATCHDOG DINGS SUPERFUND WORKER DISTRIBUTION: EPA needs to do a better job of allocating funding and jobs to Superfund sites that need the most attention, according to a new report from the agency's inspector general. Although the inquiry began last year and covers Superfund sites nationwide, the report was released in the wake of criticisms of EPA's response to hurricane-related damage at sites in Texas and Florida. Investigators concluded that Superfund employees were not distributed according to current regional workloads, meaning some regions have had to slow their cleanup work amid a Superfund jobs shortage. Six of EPA's ten regions - including Region 6, which covers Houston - admitted their work has been slowed or delayed in recent years because of regional Superfund worker

shortages. The IG recommended EPA consider a better way to prioritize Superfund sites nationally and distribute job funds accordingly, possibly like the system used by the Army Corps of Engineers for sites it cleans up. EPA said it would take action within a year.

PAST DUE: EPA's inspector general released a report Tuesday that the agency failed to follow through on a 2005 agreement with livestock groups to develop methodologies for estimating airborne emissions from farms, Pro Agriculture's Jenny Hopkinson reports. The watchdog said the agency had no timeline for completing the work, though EPA said it will develop by the beginning of 2018 a plan for when and how it will complete the emissions estimating methodologies.

MOVER, SHAKER: Anna Burhop has joined Bracewell's Policy Resolution Group as a partner in its Washington office where she'll offer federal legislative and regulatory advice. She comes from the American Chemistry Council and before that worked on the Senate Environment and Public Works Committee under both Sens. Jim Inhofe and David Vitter.

QUICK HITS

- Fire breaks out at Valero's Port Arthur, Texas, refinery. CNBC.

- National Guard chief: Climate change possibly causing 'bigger, larger, more violent' storms. The Hill.

- Farming district says it won't pay for Delta tunnels in a vote that could kill the project. Sacramento Bee.

- Icahn's oil refiner CVR starts unwinding biofuels bet. Reuters.

- Some question decision to keep Texas nuclear plant open during Harvey. Austin American-Statesman.

- What happens when the coal and nuclear plants close? Houston Chronicle.

- Caribbean oil terminals make preparations ahead of Hurricane Maria. Reuters.

THAT'S ALL FOR ME!

** **A message from the Nuclear Energy Institute**: Nuclear energy does amazing things every day. It adds billions to the economy. It powers cities, that power business, that power thousands of high quality jobs. With a little help from nuclear energy, we're propelling space travel to the farthest reaches of the galaxy. And nuclear energy is even helping doctors diagnose and treat patients. Nuclear is doing all of these things while keeping the air clean. Explore all the extraordinary things nuclear is doing to help push us forward at discovernuclear.com. Nuclear. Power the Extraordinary. **

September 26, 2017

Today on Climate Beat . . .

. . . we loaded some cargo, reporting that trailer manufacturers are asking an appellate court to stay all portions of EPA's greenhouse gas rule for medium- and heavy-duty trucks that apply to trailers, arguing that the agency's reconsideration of those provisions while refusing to stay them ahead of a looming compliance deadline irreparably harms them.

Speaking of transportation, the Federal Highway Administration says it will resume implementing an Obama-era rule requiring states to track GHGs from national highways, in response to separate litigation by environmentalists and states that charged the agency violated the Administrative Procedure Act by suspending the rule.

Staying in court, environmentalists and ExxonMobil are planning settlement talks that could narrow or even resolve a novel suit claiming that federal waste and water permitting laws require the oil and gas giant to adapt its Massachusetts oil terminal to the effects of climate change, after a judge largely rejected Exxon's motion to dismiss the case.

And in more Exxon news, our daily news roundup looked at Exxon's plans to cut emissions of the potent GHG methane from its natural gas operations, and the possible effect of that move on EPA's oil and gas methane rules.

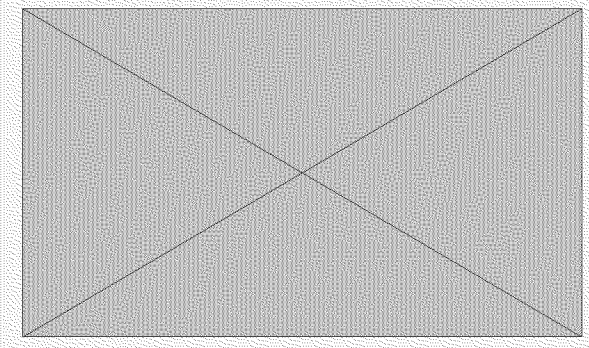
As the White House acts, how to take on the opioid scourge

Sally Satel | National Affairs

President Trump yesterday announced his intent to declare the nation's painkiller-addiction crisis a public health emergency. This spring, AEI's Sally Satel offered a guide for how America should fight the opioid epidemic in an essay for National Affairs. "We need to allow medical professionals, law-enforcement officials, community organizations, and the loved ones of those affected to attempt different, even radical,

solutions," writes Satel.

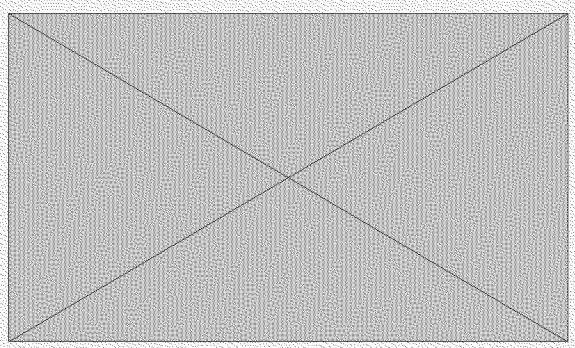


Reuters

President Trump must face our fatal Syria policy contradiction

Frederick W. Kagan | The Hill

Now for the hard part in Syria and Iraq. US strategy in Syria is completely incompatible with the strategy to address Iran that President Trump recently announced. American officials have repeated the mantra that "Bashar Assad must go." The White House ordered a missile strike on the air base from which Assad launched a chemical weapons attack. None of this has slowed the expansion of the Iranian military footprint in Syria.



Reuters

Report: Public opinion, President Trump, and the Republican Congress

Karlyn Bowman and Eleanor O'Neil | AEI

How do Republicans feel about their party's leaders? The November issue of AEI's Political Report compares Republicans' views on President Trump to their ratings of Paul Ryan, Mitch McConnell, and Republicans in Congress generally. The rank and file have more confidence in President Trump to deal with major issues than they do in Republicans in Congress — and it's not close.

Reuters

By definition, global powers don't pivot. The US military needs to rebuild now.

Mackenzie Eaglen | The National Interest

Too often since the turn of the century, the Pentagon has acted less like a Department of Defense and more like a Department of War. America vacillates between investments in immediate battlefield needs and high-risk gambles on disruptive technologies for the distant future. Coupled

with ruinous Budget Control Act caps, what results is a military that is undermanned, outgunned, and overcommitted.

Subject: POLITICO's Morning Transportation: All eyes on Duke — Pilots to airlines: Sharing is caring — Settling the (CBO) score

By Stephanie Beasley and Brianna Gurciullo | 08/08/2017 10:00 AM EDT

With help from Tanya Snyder

ALL EYES ON DUKE: Riddle me this, MT readers: Who is Elaine Duke? "Duke, the acting DHS secretary since John Kelly became White House chief of staff a week ago, is probably the least recognized of President Donald Trump's Cabinet," your MT co-host as well as POLITICO's Ted Hesson and Andrew Hanna write. Duke has worked at a slew of agencies, including DHS, TSA and the Department of Defense, over a three-decade long career. But her relatively low profile has generated questions about how she might approach some of Trump's most controversial agenda items, like curbing illegal immigration and the construction of a southern border wall, as well as how she will handle transportation security. Here's what we know:

You are appreciated: POLITICO interviewed more than a half dozen former DHS officials, and all had high praise for Duke, who was TSA's first deputy assistant administrator for acquisition. "She's a Day One plank holder at DHS," said James Norton, who worked with Duke at the department from 2003 to 2007. Duke is viewed as having a wealth of institutional knowledge, particularly when it comes to management and operations. A DHS spokesman said last week that department employees feel like they are in "good hands" with Duke. And Sen. Claire McCaskill (D-Mo.) said she is hopeful Duke gets the nod to fill the position permanently.

Keep ya head up: But it hasn't been all good cheer for Duke, who served as the point person between DHS and European transportation officials earlier this year when the department was considering expanding electronics restrictions to flights from Europe and elsewhere. As MT readers know, some European officials were frustrated when Kelly began publicly discussing the idea before meeting with them. And though many breathed a sigh of relief after Kelly decided to require "enhanced" security measures to avoid expanding the ban, some groups like the International Air Transport Association have continued to complain about the timeline and the nature of the requirements. However, a senior DHS official interviewed by POLITICO refuted the idea that there were tensions, and said the Europeans "were very comfortable with the rationale."

IT'S TUESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. We at MT are laughing, probably a little bit too hard, at this pupper tweet. Don't forget to send tips, feedback and lyrics: sbeasley@politico.com or @Steph_Beasley and bgurciullo@politico.com or @brigurciullo.

"Just a small town girl / Livin' in a lonely world / She took the midnight train / Goin' anywhere."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with tunes (picked by us and readers) that are all about flying, driving, commuting and sailing?

SPEAKING OF AVIATION SECURITY: The Coalition of Airline Pilots Associations wants airlines to share sensitive security information about aviation threats with flight crews. "At present, DHS leaves it up to airlines as to whether or not to share security risk assessed information as passed by DHS to the airlines," Captain Lee Collins, CAPA's president, told POLITICO. "We believe that airline captains, who are designated under federal regulation as in-flight security coordinators ... should have access to all sensitive security information that may have an impact on that flight." Collins said the group has spoken with House Homeland Security Committee ranking member Bennie Thompson (D-Miss.), and that he has agreed to help them with their quest.

It's all about timing: Collins said the preference is to enlist Thompson's help to get DHS to see the wisdom of its position. But should that not work, he said a House-passed DHS reauthorization bill (H.R. 2825 (115)) could be a potential vehicle. The Senate has yet to release its own version, though Senate Homeland Security Chairman Ron Johnson (R-Wis.) recently said he might introduce a bill when the chamber returns from recess in September.

SETTLING THE SCORE: Four key Democrats asked the CBO on Monday to take a fresh look at the latest version of the House FAA reauthorization bill, which they say probably adds more to the deficit than the CBO's initial score reflects. The lawmakers - Reps. Peter DeFazio (D-Ore.) of the Transportation Committee; John Yarmuth (D-Ky.) of the Budget Committee; Eddie Bernice Johnson (D-Texas) of the Committee on Science, Space, and Technology; and Richard Neal (D-Mass.) of the Ways and Means Committee - said that the Rules Committee's version of the bill, (H.R. 2997 (115)) would cut airport construction grants by $1 billion, authorize an additional $945 million for research and development and reduce excise tax revenues by $15 billion without offsetting the loss.

TELL ME MORE, TELL ME MORE: Trump's many advisory councils, consisting of company executives, are facing allegations of flouting government transparency requirements, McClatchy reports. The Trump administration is being sued over the alleged lack of public details released about the groups, including the president's infrastructure council. "Critics worry the advisory groups' secrecy is leaving Americans in the dark about what the federal government is doing and if the people crafting policy will benefit from the proposals," McClatchy's Anita Kumar writes. The infrastructure group is co-chaired by Steven Roth and Richard LeFrak, who both work in real estate in New York.

AND SPEAKING OF TRANSPARENCY: The units inside agencies in charge of helping cull regulations are mostly comprised of political appointees - "some of whom may be reviewing rules their former employers sought to weaken or kill," The New York Times and ProPublica report. A number of agencies won't make the names of task force members public.

At DOT: Daniel Elwell served on the agency's task force before he was named deputy FAA administrator. Elwell used to lobby for American Airlines and worked for the Aerospace Industries Association as well as Airlines for America. Marianne McInerney, also a task force member and DOT's director of public affairs, was once president of the American International Automobile Dealers Association and an exec at electric and hybrid auto companies. And another

member, Jonathan Moss, formerly was United Airlines' managing director of international and regulatory affairs. "An agency spokeswoman said all deregulation team members had signed agreements requiring them to recuse themselves from issues that narrowly affect recent employers," NYT's Danielle Ivory and ProPublica's Robert Faturechi write.

OPEN SKIES DEBATE AS HOT AS EVER: Nearly 30 groups signed onto a letter to Trump administration leaders and lawmakers Monday asserting that U.S. jobs "are potentially jeopardized by demands from three U.S. passenger airlines to restrict access to the U.S. market for two Open Skies partners, in breach of our obligations." The groups - including ACI-North America, Alaska Air, Atlas Air, the Business Travel Coalition, FedEx, Hawaiian Airlines, JetBlue and the U.S. Travel Association - wrote that American Airlines, Delta and United "complain of unfair subsidies" provided by Qatar and the United Arab Emirates, but they "have chosen not to use the Department of Transportation procedures that Congress established to hear such claims."

'Sad': The Partnership for Open and Fair Skies - a group that counts American, Delta and United as members - fired back on Monday. "It's pretty sad that some people are willing to risk the economic well-being of the American aviation industry and the 1.2 million jobs it supports, just to defend the Gulf carriers' ability to keep on taking billions of dollars in foreign government subsidies," spokeswoman Jill Zuckman said. "The truth is that Open Skies agreements already provide a way to deal with rule-breakers, and anything else is just an attempt to delay and derail American jobs."

Slice of PI: Want to read more about Open Skies appeals? Head over to POLITICO Influence.

ON TO THE NEXT ONE, PLEASE? Trump's unwillingness to give up on Obamacare is irking Senate tax writers who want to get going on a tax code overhaul, POLITICO tax whizzes Bernie Becker and Aaron Lorenzo report. "We're not going back to health care. We're in tax now. As far as I'm concerned, they shot their wad on health care and that's the way it is. I'm sick of it," said Senate Finance Chairman Orrin Hatch (R-Utah). A host of must-pass items will also be on Congress' plate in September, including an FAA reauthorization or extension.

MT MAILBAG: A coalition of groups including The Club for Growth, Heritage Action for America and Freedom Works sent a letter to Sen. Mike Crapo (R-Idaho) urging him to "denounce special interests who seek to strongarm President Trump into dropping the appointment of Scott Garrett as the next president of the Export-Import Bank."

What's going on here? Ex-Im advocates like the National Association of Manufacturers have opposed former New Jersey Rep. Scott Garrett's nomination to head up the Ex-Im Bank because he has repeatedly called for the bank to be shut down, and they fear he could attempt to undermine it as president. Crapo, who is chairman of the Senate Banking Committee, has yet to hold a hearing to review Garrett's nomination. The coalition said it would "vocally oppose" any nominations to Ex-Im's board if Garrett's nomination was not considered.

THE AUTOBAHN:

- "Your plane could fly itself by 2025 ... if you're cool with that." Quartz.

- "The UK government has issued new cybersecurity guidelines for smart cars." The Verge.

- "Summer flight delayed? Don't assume it's a storm." The New York Times.

- "'Driverless' van in Virginia is driven by man dressed like a car seat." NBC Washington.

- "Cyber threats prompt return of radio for ship navigation." Reuters.

- "Canada's infrastructure projects take off while Trump's plans sputter." The Washington Post.

- "An arcane American law protected by powerful interests is causing insane traffic jams." Quartz.

- "Trump's trade pullout roils rural America." POLITICO Magazine.

- "BuzzFeed news trained a computer to search for hidden spy planes. This is what we found." BuzzFeed News.

- "Uber's search for a female CEO has been narrowed down to 3 men." The Washington Post.

THE COUNTDOWN: DOT appropriations run out in 53 days. The FAA reauthorization expires in 53 days. Highway and transit policy is up for renewal in 1,149 days.

Subject: POLITICO's Morning Energy, presented by ExxonMobil: What to watch for as Bonn climate talks kick off — Next step toward WOTUS unwind arrives — Trump pushes Aramco for U.S. listing

By Anthony Adragna | 11/06/2017 10:00 AM EDT

With help from Eric Wolff and Kalina Oroschakoff

BONN JOUR! Starting today, international negotiators gather in Bonn for the COP23 - the first U.N. climate summit to be chaired by a small island nation, Fiji. It's also the first meeting after President Donald Trump announced his intention to pull the U.S. out of the landmark Paris accord in June. Let's take a quick look at what to expect between now and the conference's end on Nov. 17:

-**The U.S. question:** An open question remains how much the U.S. decision to withdraw from the Paris accord will be a distraction to the nitty gritty work of filling out the details of the 2015 pact. The Trump administration opted to send longtime diplomat Thomas Shannon as the delegation's lead in Bonn rather than a cabinet member, suggesting a low-key role on the sidelines. But U.S. officials are expected to tout the benefits of nuclear energy and fossil fuels in combating emissions, according to the New York Times. Meanwhile, a high-profile delegation of U.S. governors, mayors, private sector leaders and others are traveling the conference as a signal that much of the country remains committed to aggressive climate action.

-**Loss and damage:** Fiji, backed by other vulnerable island countries, is keen to focus attention on the loss and damage already linked to climate change (think, hurricanes, floods and rising sea levels). Many island nations are raising pressure on negotiators, especially from wealthy nations, to tackle loss and damage issues such as funding, risk preparedness, weather forecasting and new insurance proposals. This, compounded by a number of high-profile weather events this year, will make it one of the more challenging discussions at the summit, according to Camilla Born from the environmental think tank E3G.

-**Working out the rules:** Another challenge will be to advance work on rules to make sure countries meet the Paris agreement's goals ahead of next year's COP24 - when parties said they would sign off on the rulebook underpinning the deal. A thorny discussion here will be around setting a common and transparent monitoring and reporting system that ensures emissions reductions can be compared across countries. It's a sensitive issue with emerging economies such as China, long wary of letting outsiders glance their domestic books, but a priority for the EU, which wants to make sure everyone pulls their weight. The battle could therefore be over whether it will be a bifurcated system, setting different guidelines for developed and developing countries, or universal.

-**Assessing progress:** Negotiators will also have to work out how the first stock-take of national progress toward achieving climate pledges will play out next year. The idea behind the 2018 meeting is to pave the way for countries to increase their emissions reduction targets in 2020, when parties are for the first time required to communicate renewed (and ideally strengthened)

commitments, as set out under the Paris deal. The outgoing Moroccan COP22 presidency and the incoming Fijian presidency have published a joint document outlining their vision for the meeting.

-**Who's coming?** According to the UNFCCC, close to 20 world leaders, including French President Emmanuel Macron and German Chancellor Angela Merkel, are slated to attend. Also expected to participate: Arnold Schwarzenegger, UN Secretary-General António Guterres, Paris Mayor Anne Hidalgo, California Governor Jerry Brown, UN Special Envoy Michael Bloomberg and several U.S. lawmakers, including Sens. Sheldon Whitehouse and Brian Schatz . EPA Administrator Scott Pruitt won't attend, though other agency staff will.

ICYMI: POLITICO Europe's Kalina Oroschakoff and Pro's Emily Holden's seven people to watch during the summit here.

WELCOME TO MONDAY! I'm your host Anthony Adragna, and Hunton & Williams' Joe Stanko was first to identify Laika as the first dog in space 60 years ago. For today: Which current senator is a former shoe store owner? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

NEXT STEP IN WOTUS UNWIND: EPA and the Army Corps of Engineers sent a proposed rule delaying the effective date of of the Waters of the U.S. Rule to the White House for review, a move designed to give the administration more time to design its own version, Pro's Eric Wolff reports . An agency spokeswoman said the action would "amend the effective date associated with the 2015 Clean Water Rule to give the agencies time to consider the two-step process proposing to rescind and revise the 2015 rule." The new proposed rule is separate from any rule intended to replace WOTUS. The agency declined to say when the new effective date would be or if it would make any other tweaks to the regulation.

DEMOCRATS TALK DISASTER RELIEF PRIORITIES: Thirty members of the Senate Democratic caucus sent a letter Friday to OMB Director Mick Mulvaney outlining their priorities for a third disaster supplemental spending package expected to be requested by the administration later this month. "We can invest in technology, conservation and infrastructure that will mitigate further damage and make our communities more resilient," they wrote. Particular requests include "specific legislative language" concerning electric grid reconstruction in Puerto Rico and the U.S. Virgin Islands, as well as "further investments" in NOAA's weather infrastructure and forecasting capabilities.

High-profile visitors: House Transportation Chairman Bill Shuster and Ranking Member Peter DeFazio, Senate Energy Chairman Lisa Murkowski and Senate EPW Ranking Member Tom Carper were among those lawmakers visiting Puerto Rico this weekend, according to local media. Also along: Sen. Kamala Harris, Sen. Bill Cassidy, Sen. Al Franken and Rep. Garret Graves.

Let's reschedule: House Homeland Security ranking member Bennie Thompson wrote to Chairman Michael McCaul asking for the panel to reschedule a hearing on hurricane response

and recovery that was suddenly shelved last week. Link to letter here.

QUITE THE PUBLIC PITCH: Tweeting at 2:49 a.m. in Hawaii, Trump asked Saudi Arabia to list shares of its biggest oil company on the New York Stock Exchange. "Would very much appreciate Saudi Arabia doing their IPO of Aramco with the New York Stock Exchange. Important to the United States!" he wrote . That comes as Saudi Arabia moves toward an offering of shares of its state-run oil company - the world's largest energy company - on international markets. He later told reporters aboard Air Force One: "They're not looking at it, but I want them to strongly consider the New York Stock Exchange or NASDAQ, or frankly anybody else located in this country, but those are the big two... I just spoke to the king a little while ago, and they will consider it."

ANOTHER INVESTIGATION ARRIVES: GAO agreed last week to probe whether Pruitt's appearance in an August video from National Cattlemen's Beef Association violated laws "on the use of appropriated funds for lobbying and publicity or propaganda purposes and the Antideficiency Act," Pro's Alex Guillén reports. House Democrats asked GAO to begin the investigation.

TEAM ETHANOL FIRES BACK: If Trump watches the ads on Fox & Friends, then he's getting an earful on the Renewable Fuels Standard these days. Starting today and through the Nov. 20, Fuels America, an umbrella group of ethanol producers and trade associations, will be running an ad reminding Trump of his promises to farmers and accusing oil refiners of demanding a taxpayer funded bailout. The refiners had the inverse ad up during Fox & Friends last week.

Ticking clock: EPA's final RFS rule went to the White House for review last week, and Pruitt has promised to release it by the statutory Nov. 30 deadline.

** **Presented by ExxonMobil:** We're collaborating with FuelCell Energy on a novel idea to use fuel cells to capture carbon at natural gas power plants, and in the process reduce emissions and increase electrical output. This technology could be a game changer in addressing the world's growing need for energy, while also reducing the impact on the environment. Learn more. **

HIT THE FLOOR! House lawmakers this week are expected to vote on the Hydropower Policy Modernization Act H.R. 3043 (115), which aims to speed the regulatory approval process for hydropower projects. And they're also expected to consider compromise legislation H.R. 2874 (115) overhauling the National Flood Insurance Program to impose new penalties on homeowners with repeat flooding, though with softer consequences than originally floated.

MEGA HOUSE ENERGY PACKAGE GETS MARKUP: The House Natural Resources Committee is expected Wednesday to mark up a broad new energy package H.R. 4239 (115) on Wednesday after its introduction on Friday, Pro's Ben Lefebvre reports . Among other provisions, the SECURE American Energy Act would would roll back Obama-era offshore drilling rules, create an offshore oil and gas revenue program for East Coast drilling and give more oil and gas permitting power to the states.

CLIMATE REPORT AT ODDS WITH TRUMP STANCE: Even as the White House stuck with its line the climate "has changed and is always changing," scientists from the 13 agencies who worked on the National Climate Assessment that concluded human activity is driving climate change said they saw no effort from the administration to meddle in their work, Pro's Emily Holden reports.

In response, Paul Bledsoe, who helped release the first national climate assessment while at the Clinton White House in 2000, emails his take: "The White House clearly judged that the firestorm over delaying or suppressing the report release, especially ahead of the Bonn climate talks, would be greater than from the findings themselves."

NEW TACTIC IN CLIMATE FIGHT: Speaking at the Vatican over the weekend, California Gov. Jerry Brown asked the Catholic Church to throw its weight behind his efforts to undermine Trump's climate rollbacks abroad, POLITICO California's David Siders reports. Brown urged religious establishments to help "awaken the world" to efforts to reduce greenhouse gas emissions and described the president's rejection of mainstream climate science as a "lie within a lie."

PRINCE OF WYOMING? Blackwater founder Erik Prince tells NBC News he's still "mulling" a challenge to Wyoming Sen. John Barrasso . "They have been in the wilderness for eight years, saying oh, if only we had a Republican president and now they have one," he said. "[They're] kind of out of excuses." One fact of note: Barrasso has received just 5.5 percent of his total $2.4 million haul of itemized individual contributions since the start of 2013 from Wyoming. There's no public polling on how the theoretical Barrasso v. Prince matchup would go.

MAIL CALL! TIME OUT! Two top Energy and Commerce Committee Democrats - Frank Pallone and Bobby Rush - sent a letter asking that a hearing slated for Tuesday on two bills making significant changes to the Energy Star programs and efficiency standards for ceiling fans be postponed until witnesses from EPA and DOE are available. "These bills would make substantial changes to the popular Energy Star Program and efficiency standards for ceiling fans, and should not be rushed through the Committee process without adequate input from the agencies tasked with executing these potential changes," they wrote to Chairman Greg Walden and Energy Subcommittee Chairman Fred Upton.

DEMOCRATS TO PRUITT: WITHDRAW SCIENCE ADVISER POLICY: Six senior House Democrats on the Science and Energy and Commerce committees asked Pruitt to withdraw his "biased, harmful" policy barring scientists who receive agency grants from serving on scientific advisory panels. "We advise you to follow [Federal Advisory Committee Act] regulations and policy in selecting qualified individuals to serve on EPA's science advisory committees just as previous administrations led by both parties have done. Anything less is a great disservice to the public interest," they wrote.

CALIFORNIA TALLIES WILDFIRE NEEDS: Golden State bigwigs, including Brown, Sens. Dianne Feinstein and Kamala Harris and 39 California House members, sent a letter to Trump Friday asking for $7.4 billion in federal funds to help the state recover from devastating wildfires. Letter link here.

MORE TIME NEEDED: A bicameral group of 81 Democrats, led by Sens. Maria Cantwell and Tom Udall and Reps. Jared Polis and Raúl Grijalva, asked Interior Secretary Ryan Zinke in a letter released Friday to extend the public comment period on its proposed repeal of BLM's methane waste rule from 30 to 90 days and to offer public hearings in the Western U.S. "The American people deserve to get a proper return on this natural gas resource, and any attempt to roll back this rule would represent a giveaway to industry polluters," they wrote.

THIS TIME IT'S PERSONAL: In light of U.S. Forest Service recommendations to potentially allow new uranium mining near the Grand Canyon, House Natural Resources Ranking Member Raúl Grijalva wrote Chairman Rob Bishop a letter to ask for a hearing on his bill H.R. 360 (115) to create a national monument in the area. Grijalva separately asked Agriculture Secretary Sonny Perdue for his rationale behind the recommendation and whether the public would have the opportunity to comment.

NEW PHASE OF KEYSTONE FIGHT: Volunteers with Bold Nebraska went door-to-door in the five Nebraska Public Service Commissioners home districts to raise concerns about the use of eminent domain and environmental concerns surrounding the Keystone XL pipeline. The Nebraska regulators expect to make a final decision on the pipeline permit by the end of the year.

ADS URGE NO DRILLING IN ANWR: The League of Conservation voters is targeting Republican Reps. Bruce Poliquin and Darrell Issa with ads (sample here) urging them not to support opening ANWR to drilling. It's part of an ongoing $200,000 campaign.

NO REAL RUSH ON METHANE: EPA is now all-but-certain not to take any final action on the Obama-era 2016 methane regulation targeting emissions rule for new oil and gas wells until the next year, Pro's Alex Guillén reports in Energy Regulation Watch. That comes as the agency issued a notice last week floated the idea (offered by the American Petroleum Institute) to implement longer phase-in periods for key requirements of the rule rather than seeking an outright stay.

MOVER, SHAKER: Katie Waldman leaves her post as press secretary for Montana Sen. Steve Daines this Thursday for a "new opportunity."

QUICK HITS

- Donald Trump accused of obstructing satellite research into climate change. The Guardian.

- To make coal plants in southern Illinois competitive, Dynegy seeks lawmakers' help. St. Louis Post-Dispatch.

- In the Country Where Coal Is King, a Battle With the EU Looms. Bloomberg.

- Contractor wasted millions on unnecessary supplies for S.C.'s failed nuclear reactors. Post and Courier.

- Ohio city refuses to give up fight against gas pipeline. AP.

October 11, 2017

BREAKING NEWS

EPA Floats ANPR For Replacing Clean Power Plan But Schedule Uncertain

EPA has submitted to the White House Office of Management & Budget (OMB) its draft advance notice of proposed rulemaking (ANPR) seeking comment on options for replacing the Obama administration's Clean Power Plan (CPP), a measure that will launch a lengthy and uncertain process for how -- or whether -- the agency will regulate power sector greenhouse gases.

Subject: FERC nominees back states' authority to shape energy portfolios

By Darius Dixon

09/07/2017 01:58 PM EDT

Kevin McIntyre, President Donald Trump's pick to lead FERC, left no legal wiggle room today about states' ability to establish renewable portfolio standards.

"We do have a federal system of law," he told Sen. Tammy Duckworth at his confirmation hearing before the Senate Energy and Natural Resources Committee. "FERC has its role and the states have theirs and there's no question that the states have the absolute right to implement these renewable portfolio standards."

Similarly, Rich Glick, a Democratic nominee to the agency, said that the Supreme Court laid out the ways how states could push their own energy agendas without infringing on FERC's jurisdiction in a decision last year.

Sen. Catherine Cortez Masto asked: "Do you agree that states have the authority to establish the resource mix that best serves their customers?" Both nominees agreed they did.

But neither nominee weighed in on one of the most contentious issues on FERC's agenda: how the agency will address state programs in New York and Duckworth's home state of Illinois, that created incentives for nuclear power plants within their borders. New York designed its program as an update to its RPS by turning it into a Clean Energy Standard. Both programs are facing lawsuits in federal court.

Earlier this year, Energy Secretary Rick Perry suggested that there may be a national security interest for the federal government to interfere with state energy decisions.

WHAT'S NEXT: The McIntyre and Glick nominations could get voted on in the Senate energy committee as soon as next week.

Analysis

Air Pollution Control Guide

Federal

Protection of the Ozone Layer (Significant New Alternatives Policy). Updated to reflect a ruling by the U.S. Court of Appeals for the District of Columbia Circuit that vacated part of a final rule issued by the Environmental Protection Agency in 2015 (Mexichem Fluor Inc. v. EPA, D.C. Cir., No. 15-1328, 8/8/17). The rule forbade the use of hydrofluorocarbons (HFCs) under the EPA's Significant New Alternatives Policy (SNAP) program. The EPA uses the SNAP program to identify substitutes for Class I and II substances after the agency determines that alternative substances reduce the overall risk to humans or the environment. The EPA also may restrict the use of substitutes depending upon the risks involved. The court said the EPA overstepped its authority in forbidding the use of HFCs and vacated the parts of the 2015 rule that required manufacturers to replace HFCs with an acceptable substitute.

Ozone (Current Standards). Revised to provide a more in-depth discussion of the national ambient air quality standards for ozone. This update also reflects a revised deadline for the EPA to make final attainment determinations for the standards announced in October 2015. The EPA previously announced plans to postpone the Oct. 1 deadline for determining which regions of the country meet or violate the updated ozone standards, citing the lack of adequate data to make those determinations. But on Aug. 2, the EPA announced it would continue to work with states to meet the Oct. 1 deadline, saying the "gaps" in the data on air pollution necessary to make those decisions "may not be as expansive as we previously believed."

State

California (Fugitive Dust Standards). Updated to reflect a final rulemaking by the South Coast Air Quality Management District. The rule establishes regulations to limit the amount of fugitive dust emissions resulting from earth-moving activities at cleanup sites. The rule took effect July 7.

Ohio (Incinerators). Updated to reflect a final rulemaking by the Ohio Environmental Protection

Agency regarding infectious waste incinerators and pathological waste incinerators. The rule rescinded requirements for both types of incinerators because there are very few facilities subject to those requirements in Ohio. Since the rules were rescinded, the remaining facilities affected by the rules instead are subject to the federal plan, which is set forth at 40 C.F.R. pt. 62, Subpart HHH. The rescission took effect Aug. 10.

Water Pollution Control Guide

Federal

Section 404 Dredge or Fill Permits (Nationwide Permits). Updated to reflect the reissuance by the U.S. Army Corps of Engineers of 50 nationwide permits for dredge or fill activity in U.S. waters, including wetlands. The chapter also is updated to reflect the issuance of new permits for low-head dam removal and the creation of living shorelines to prevent coastal erosion. The Corps also issued a general condition for NWPs barring dredge or fill activity that adversely affects federal works, such as locks and dams.

State

Alaska (Operator Certification). Updated to reflect rule changes. Supervising operators of publicly owned treatment works must be certified at a level equal to or greater than the system's classification and must be on-site or able to be on-site within one hour. The Alaska Department of Environmental Conservation (DEC) won't renew certificates expired by more than one year. The operator-in-training certification no longer exists.

Alaska (Wetlands Protection). Updated to describe the Alaska wetlands program plan, approved by the federal EPA, which seeks to categorize wetlands and review the current water quality certification process under Section 401 of the Clean Water Act to identify possible ways to expedite the permitting process.

Alaska (Oil Spill Prevention and Contingency Plans). Updated to reflect rule changes that require the DEC to take public comment for 30 days on proposed Oil Discharge Prevention and Contingency Plans submitted by operators of oil barges, pipelines, tank vessels, and related operations, and direct the applicant to publish a notice announcing the public comment period.

Alaska (Oil Spill Responsibility Requirements). Updated with the requirement for nontank vessels to submit completed and signed application of proof of financial responsibility within 15 days of when operations are expected to begin. Other facilities must submit the application at least 30 days, but no more than 90 days, before operations begin.

TRIBUNE-REVIEW

An End To EPA's 'Sue & Settle'

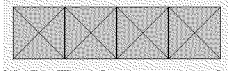
Editorial
October 22, 2017
http://triblive.com/opinion/editorials/12850517-74/trib-editorial-an-end-to-epas-sue-settle

The days of special interests potentially forcing policies from the Environmental Protection Agency through a process known as “sue and settle” are over. EPA Administrator Scott Pruitt has issued guidelines that preclude any regulatory tinkering under the guise of lawsuit settlements or backdoor deals that limit public comment and/or hamstring the agency's due diligence.

“We will no longer go behind closed doors and use consent decrees and settlement agreements to resolve lawsuits filed against the agency by special-interest groups where doing so would circumvent the regulatory process set forth by Congress,” Mr. Pruitt said.

The Obama administration has denied imposing any illegal regulations originating from EPA settlements with environmental groups. Pruitt's directive simply closes the door to any questionable agreements in the future.

Under the new policy, the EPA will contact any state or entity affected when a lawsuit settlement or consent decree is under consideration. It also ensures that the EPA won't create any new regulations in the settlement process.



That's fair. And it should prompt other federal agencies that routinely face agenda-driven litigation to do the same.

Yet Pruitt's move drew rebukes from environmentalists, one of whom predicted that the EPA boss “will be spending a lot more of your taxpayer dollars defending his inaction in court.”

If need be, yes — but openly and without any nodding and winking.

Subject: Senate to vote on Wehrum nomination to lead EPA air office

By Anthony Adragna

11/08/2017 10:53 AM EDT

Senate Majority Leader Mitch McConnell said today the chamber would vote to move forward on William Wehrum's nomination to lead EPA's air office.

He didn't specify a time but said the cloture vote would occur after the confirmation of Peter Robb to be general counsel of the National Labor Relations Board. That would likely put a final vote for Wehrum on Thursday.

McConnell lauded Wehrum as "qualified" and someone "who will help undo some of the damage" he said the Obama EPA did through regulations.

"This is an office in desperate need of new leadership from someone who understands how to implement air policies in a balanced way rather than with extreme regulatory overreach," McConnell said. "Mr. Wehrum is the right person for the job."

Democrats and environmental groups have strongly opposed the nomination.

AEI's daily publication of independent research, insightful analysis, and scholarly debate

Reuters

The Republicans' budget mess

James C. Capretta | Real Clear Policy

With a Republican in the White House and Republican majorities in the House and Senate, this should be the moment when Republicans finally pass a carefully constructed plan with achievable and defensible spending cuts, pro-growth tax changes, and long-term deficit reduction. But the administration doesn't have a plan for progress yet.

Shutterstock

What does the US economy need now?

James Pethokoukis | AEIdeas

The US economy generated 209,000 jobs in July, a bit stronger than analyst expectations and above the average monthly jobs gains this year. Given the strong growth, policymakers should be thinking long term about deep structural reform. What sorts of tax, regulatory,

spending, trade, and immigration policies are best for sustained growth that benefits folks up and down the income ladder?

Reuters

Reagan cut taxes. The economy boomed.

Phil Gramm and Michael Solon | The Wall Street Journal

Economic growth faded as President Obama raised taxes and smothered the economy with unprecedented regulatory burdens. If we reverse those policies, could we not bring back the Reagan growth rates America enjoyed in the 1980s? Evidence suggests the answer is yes.

Reuters

There is a real gang threat in the US

Roger F. Noriega | AEIdeas

MS-13 has a strong foothold in the United States, and its gang members are responsible for murders, extortion rackets, and human trafficking operations in American cities. Attorney General Jeff Sessions is right that strong US leadership and engagement is needed to rid both the US and Northern Triangle of the MS-13 scourge.

D.C. Circuit Rejects Stay Of Coal Ash Rule Challenge But Delays Argument

The U.S. Court of Appeals for the District of Columbia Circuit has rejected EPA's push to indefinitely stay litigation over the 2015 coal ash disposal rule while the agency reconsiders the regulation, but is delaying Oct. 17 oral argument in the case until Nov. 20 for briefing on how states' bid for ash permitting authority might affect the case.

EPA Weighs Coal Ash Permitting Applications From Georgia, Oklahoma

EPA regions are assisting Georgia and Oklahoma on their applications for delegated Resource Conservation & Recovery Act (RCRA) authority to permit coal ash disposal -- believed to be the first two filed so far -- but officials in both states say they are still awaiting a decision on whether their filings are “complete” and eligible for approval.

Industry, Environmentalists Likely To Seek Rehearing Of Solid Waste Case

Industry and environmental groups will likely seek rehearing of a federal appeals court ruling that vacated part of the Obama EPA's definition of solid waste (DSW) rule, but if those appeals fail, EPA will likely write a direct, final rule that closely adheres to the July decision, says a Chicago-based environmental attorney

Vehicle GHG Rules Become Major Flashpoint For Climate Damages Fight

The Trump administration's review of vehicle greenhouse gas and fuel economy rules is becoming a major flashpoint over the White House's efforts to diminish the role of monetized climate benefits in regulatory cost-benefit analysis, with environmentalists essentially threatening litigation over any failure to account for increased GHGs due to weakening the vehicle standards.

Citing Deference, Judge Upholds Corps' Regional CWA Wetlands Policies

A federal district court has upheld the Army Corps of Engineers' practice of using regional “supplements” to update its 30-year-old manual for categorizing wetlands under the Clean Water Act (CWA), deferring to the Corps' position that a policy rider

in the Corps' fiscal year 1993 funding law seen as barring the practice expired with that year's budget.

Environmentalists Urge 9th Circuit To Hear All Suits Over EPA TSCA Rules

Environmentalists are urging the U.S. Court of Appeals for the 9th Circuit to consolidate and hear lawsuits filed in several circuits challenging EPA's initial rules for implementing the revised Toxic Substances Control Act (TSCA), after avoiding filing any cases in the D.C. Circuit out of concern the court might be more sympathetic to EPA.

RFS Data Notice Prompts Questions Over Possible Cuts To Biofuels Goals

EPA's release of a notice of data availability (NODA) on possible further cuts to advanced biofuel and biodiesel blending targets under the renewable fuel standard (RFS) is prompting questions about whether the notice might spur last-minute changes to EPA's looming 2018 RFS and how it might influence the pending 2019 RFS.

CWA Settlement Could Set Standard For Pending Water Jurisdiction Cases

The Trump administration has settled a long-running Clean Water Act (CWA) enforcement case that allows the defendant to seek a new finding on whether the actions at issue in the case are subject to the law once EPA issues its new CWA jurisdiction rule, creating a potential standard for other CWA cases launched by the Obama administration.

In Lesson For EPA Buyouts, IG Audit Faults Office's Unapproved 'Early Outs'

Providing a lesson for the Trump EPA as it seeks to ramp up employee buyouts and early retirements, a new Inspector General audit finds that Office of Inspector General's (OIG) buyout program during fiscal year 2014 was mismanaged, minimally supervised, and resulted in almost $350,000 in unapproved payments.

EPA Declines Industry Call To Delay Nano Reporting Rule But Expands Guide

EPA has denied an industry request to delay the effective of date of the Obama administration's Toxic Substances Control Act (TSCA) reporting rule for nanomaterials in commerce, but it has updated implementing guidance to better clarify reportable substances and is promising to answer additional questions in future updates to the guide.

EPA Backs Utilities' Push To Rework Key Provisions Of Power Plant ELG

EPA is preparing to start a rulemaking to rework three key portions of the contested Obama-era Clean Water Act (CWA) effluent rule for power plants, backing utilities' push to soften mandates they say are unjustified -- even while the power companies in litigation defend other parts of the rule against environmentalists' attempts to tighten them.

EPA TSCA Guide May Give Industry New Strategies For Risk Evaluations

Chemical industry officials say that new EPA guidance to third parties on drafting their own risk evaluations for the agency's consideration as part of the revised Toxic

Substances Control Act (TSCA) may give industry new strategies for the reviews, but the law leaves several questions unanswered as it gives little guidance over how the process will work.

Subject: Scientific integrity panel clears Pruitt over CO2 comments

By Alex Guillén

08/01/2017 06:44 PM EDT

A panel of EPA employees says Administrator Scott Pruitt's controversial March comments on television that carbon dioxide is not the primary driver of climate change did not violate the agency's scientific integrity policy.

"Expressing an opinion about science is not a violation of the EPA Scientific Integrity Policy," the panel wrote.

The panel's two-paragraph finding was included in a letter from Thomas Sinks, director of EPA's Office of the Science Advisor, addressed to the Sierra Club, which formally complained about Pruitt's comment but said it had not received a copy of the response.

EPA earlier today sent out a press release touting an article on the letter in the conservative Washington Free Beacon.

The agency's scientific integrity policy "specifically encourages employees to express their opinion should the employee disagree with scientific data, scientific interpretations, or scientific conclusions," the panel wrote, noting that Pruitt "did not suppress or alter Agency scientific findings."

The special panel was formed by EPA's Scientific Integrity Committee, which is made up of high-ranking EPA officials. It did not comment on the accuracy of his statement, which departs from the scientific consensus that carbon dioxide is the primary driver of global warming.

Elena Saxonhouse, a senior attorney with Sierra Club, said in a statement that the group had "been told by EPA staff that the proper process is for the party that filed the complaint to be informed first, not the media." She added: "Pruitt's 'opinions' can have especially weighty consequences for the many scientists working below him, yet the letter treats him like any other employee."

Subject: BREAKING NEWS: NFL Commissioner Goodell says Trump showed a 'lack of respect' for players

National Football League Commissioner Roger Goodell said on Saturday that President Donald Trump had demonstrated a "unfortunate lack of respect" for the league and its players by suggesting that team owners should get rid of players who disrespect the flag.

"Divisive comments like these demonstrate an unfortunate lack of respect for our great game and all of our players, and a failure to understand the overwhelming force for good our clubs and players represent in our communities," Goodell said in a statement, which not did not explicitly mention the president.

The president was addressing the actions of NFL players who have protested during the national anthem, following the example of former San Francisco 49ers Quarterback Colin Kaepernick, who started the national anthem protests last season amid a wave of protests about police violence. "Wouldn't you love to see one of these NFL owners, when somebody disrespects our flag, to say, 'get that son of a bitch off the field right now - he's fired, Trump said at a rally in Alabama for Sen. Luther Strange.

Subject: Federal Insider: Feds' charitable giving reflects worry; reciting oath on video reflects pride and Trump counterpoint

Feds' charitable giving reflects worry; reciting oath on video reflects pride and Trump counterpoint

By Joe Davidson

Greg Guthrie and other federal employees are uploading videos of themselves reciting their oath of office to the Uphold the Oath project, which is described as a "digital grassroots project that celebrates America's federal civil servants and encourages them to publicly reaffirm their commitment to the ideals listed in the oath of office." (Courtesy of Greg Guthrie)

"I, [name], do solemnly swear (or affirm) that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion; and that I will well and faithfully discharge the duties of the office on which I am about to enter. So help me God."

Oath for Federal Employees

Federal workers have ways of making their feelings known, sometimes privately, sometimes for all to see.

Their charitable contributions provide insight into their anxieties. The oath of office some are now choosing to publicly repeat on videos demonstrates their fealty to the Constitution, not politicians, including the top one who considers them swamp dwellers. Repeating the oath is a simple act and a powerful counterpoint to President Trump's narcissistic notion of loyalty.

Let's start with a new report that shows some notable changes in federal employee giving, revealing their worries during a politically divisive 2016.

While their allegiance to the Constitution means federal employees serve taxpayers without partisan bias, what they do with their own money points to their apprehensions about the direction of the country that became more evident as Trump's candidacy grew.

An analysis of contributions to the Combined Federal Campaign (CFC), an umbrella charitable effort for federal employees, demonstrates "federal donors clearly reacted to the election of Trump in 2016, providing several charities with a sizable Anti-Trump bounce in their pledge results," Marshall Strauss, chief executive of the Workplace Giving Alliance, said in an email Friday to his board of directors. The Alliance is a coalition of CFC organizations and reports on federal employee giving.

"For example," Strauss continued, "the American Civil Liberties Union [Foundation] was up almost 400 percent in comparison with its 2015 CFC results, the Southern Poverty Law Center (SPLC) saw its pledge number jump by 345 percent, and the Natural Resources Defense Council (NRDC) saw its pledge total jump 180 percent."

Current and former feds do that by taking videos of themselves for posting on the project's website, reciting their pledge to "support and defend the Constitution."

Note: That doesn't say support and defend the president, an idea that seems to trouble the self-absorbed Trump and his minions.

Recall what former FBI director James B. Comey said was Trump's directive to him: "I need loyalty."

Comey didn't give it and was later fired.

It's not just Trump. In February, Breitbart.com, previously and currently led by former White House chief strategist Stephen K. Bannon, published a threatening list of "bureaucrats [who] are actively engaged in sabotaging President Trump's agenda."

In the current political environment, simply affirming the oath could be interpreted as an act of defiance against a Trump presidency that has disgraced the office — even if the project participants don't see it that way.

Uphold the Oath

It is important to note Trump is not mentioned on the website and there is nothing to indicate in conversations with the organizers or federal employees that he is the target of this effort.

Swearing to "well and faithfully discharge the duties" is a weighty moment when workers enter federal service. They are a dedicated bunch, whose federal employees in a "deep state" conspiracy against the president, Ian

These organizations have taken principled stands against Trump's harmful policies:

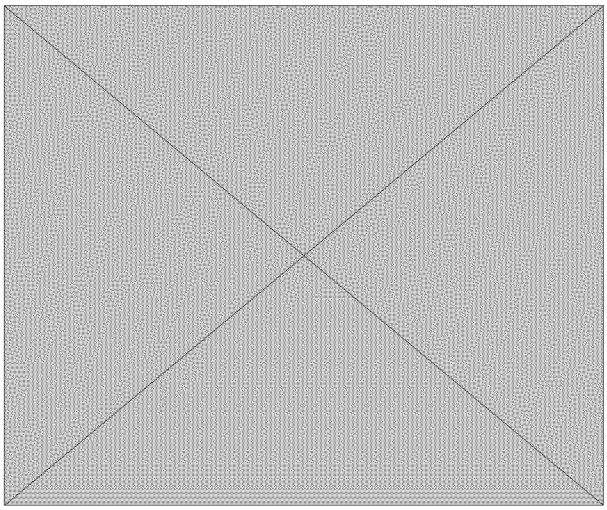
ACLU says Trump wants to " Enshrine a Business Right to Discriminate Into the Constitution."

SPLC President Richard Cohen wrote about "the malignant bigotry at the heart of President Trump's agenda."

NRDC tracks "Trumps attacks on the environment."

Planned Parenthood, the Sierra Club and the National Park Foundation also received significantly more in donations, according to the report.

"Organizations focused on civil rights and environmental protection saw some of the biggest increases in pledges in 2016," it said, "presumably reflecting a perception that these topics would lack support from the new administration."



A private, charitable contribution is one form of patriotic expression. A video declaration is another.

But given Trump's "drain the swamp" comments and Breitbart-like criticism of

ADVERTISEMENT

devotion to mission, sense of service to the American people and the Constitution is fused with passion.

Confirming that is a new effort to "Uphold the Oath," described as a "digital grassroots project that celebrates America's federal civil servants and encourages them to publicly reaffirm their commitment to the ideals listed in the oath of office."

Bassin, executive director of Project Democracy, the effort's organizer, said "this felt like a time when it was important for public workers to know they are not alone."

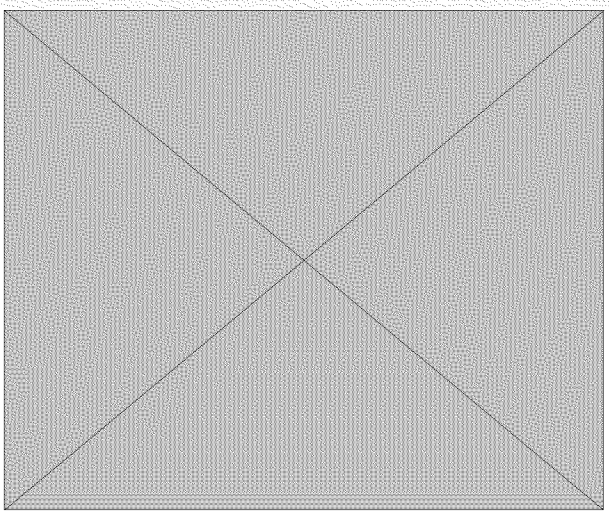
He quickly added, however, that this is not the only time, recalling President Ronald Reagan's comment during a 1986 news conference: "The nine most terrifying words in the English language are: I'm from the government and I'm here to help."

That's insulting to people like Greg Guthrie, a Commerce Department staffer who has been a federal employee for 25 years.

The District resident didn't mean his video as a message to Trump, but to his fellow employees, whom he encouraged "to stand up and be proud of who you are." Recording the video, he said, "made me feel sort of empowered, really, as a federal employee …. especially nowadays you kind of feel almost beaten down, with a lot of the negative rhetoric."

Former fed Terry Babcock-Lumish, who committed to a career of public service as a junior at Carnegie Mellon University and has worked for local,

ADVERTISEMENT



state and federal governments, said she did a video because she wanted “to convey pride in being a federal civil servant.” She is “very troubled by the idea that civil servants are being questioned or doubted when they are working across administrations.”

Her message: “I’m really proud of having served in the federal government as a federal civil servant.”

EPA Opens Door to Cutting Biodiesel, Renewable Fuel Quotas

Posted September 26, 2017, 03:27 P.M. ET

By Jennifer A. Dlouhy

The EPA wants public input on potential reductions in annual renewable fuel quotas, including mandates for biomass-based diesel in 2018 and 2019.

The Environmental Protection Agency issued a notice Sept. 26 providing historical data on imports of renewable fuel and possible strategies for using its statutory authority to waive annual targets established by Congress. It includes options for reductions in the biomass-based diesel, advanced biofuel and total renewable fuel volumes beyond what the EPA proposed in July in its 2018 renewable fuel standard rule.

The EPA cites a provision allowing it to reduce annual biomass-based diesel requirements as much as 15 percent for up to 60 days, with extensions allowed, if there's a renewable feedstock disruption or other market circumstance that would make its price jump. But "waiving the standard for 60 days" without adjusting the annual requirement "would provide no relief," the EPA said.

The agency asked in the notice whether it would be appropriate to reduce the annual standard by as much as 15 percent or, alternatively, allow refiners and importers to reduce individual quotas by an amount pegged to production and import levels within a specific 60-day period.

The notice follows the Commerce Department's decision to slap duties on biodiesel from Indonesia and Argentina, amid heavy lobbying by oil companies and trade groups asking the EPA to lower annual biofuel targets.

Bob Dinneen, president and CEO of the Renewable Fuels Association, said in a statement that there was no rationale for further lowering the 2018 advanced biofuel or total renewable fuel volume requirements.

Puerto Rico May Be Grid Innovation Testing Ground: Energy Nominee

Posted September 26, 2017, 02:53 P.M. ET

By Rebecca Kern

Puerto Rico has the potential to be a testing ground for new electricity delivery technologies from U.S. national labs as the Caribbean island looks to rebuild its electric grid, an Energy Department nominee told senators today.

Senate Energy and Natural Resources Committee members asked Bruce Walker about what can be done to improve the U.S. territory's resilience against future hurricanes, after Hurricane Maria knocked out Puerto Rico's entire electric grid, leaving its 3.4 million residents without power.

Walker said he sees a "tremendous opportunity" to use Puerto Rico to deploy projects developed at Energy Department national laboratories "to introduce new concepts and perhaps new architectural construction."

Walker discussed the potential for a more "collapsible" electric grid system in Puerto Rico that can come down in a hurricane with high winds—but be restored quickly.

"I think that, plus with new innovation with new technologies, will allow for the redevelopment and reconstruction of the actual overall system in Puerto Rico," he said.

If confirmed, Walker would head the Energy Department's Office of Electricity Delivery and Energy Reliability, which works to ensure the U.S. energy delivery system is secure, resilient and reliable and helps develop new technologies to improve electricity infrastructure.

Scana Says S.C. Is Seeking Criminal Probe of Nuclear Project

Posted September 26, 2017, 02:30 P.M. ET

By Jim Polson and Mark Chediak

South Carolina's attorney general called for a criminal probe into Scana Corp.'s handling of the canceled V.C. Summer nuclear expansion project, adding that it may not be entitled to charge customers for the plant.

Attorney General Alan Wilson was joined by state legislators in calling on the South Carolina Law Enforcement Division to open a probe, Scana said in a Sept. 26 filing. Separately, Wilson questioned the state law that allows utilities to recover the costs of unfinished or abandoned power plants. Scana said it will fully cooperate "with any potential government investigation."

Scana and its partner, state-owned utility Santee Cooper, halted construction on two new reactors at the Summer plant after costs ballooned to over $20 billion, a decision that leaves Southern Co. as the only utility building a nuclear plant in the U.S. Scana had asked utility regulators for permission to recover $4.9 billion in expenses for the project before withdrawing the request in August to give officials more time for review.

"Our citizens have paid billions of dollars and got absolutely nothing from it but a money pit," Wilson said in an emailed statement. The law "at the heart of the failed nuclear reactors" is "constitutionally suspect."

The announcements follow the disclosure last week that the U.S. Attorney's office in South Carolina

is carrying out a grand jury probe of Santee Cooper. Scana said last week it had received a subpoena from the U.S. Attorney seeking information about the project.

South Carolina Governor Henry McMaster (R) was among those opposed to scrapping the project, saying that the reactors are still worth finishing.

"The politics has reached a fever pitch," Paul Patterson, a New York-based utility analyst for Glenrock Associates LLC, said. "The operative word is 'uncertainty.'"

California Mulls Following China With Combustion-Engine Car Ban

Posted September 26, 2017, 9:03 A.M. ET

By Ryan Beene and John Lippert

The internal combustion engine's days may be numbered in California, where officials are mulling whether a ban on sales of polluting autos is needed to achieve long-term targets for cleaner air.

Gov. Jerry Brown (D) has expressed an interest in barring the sale of vehicles powered by internal-combustion engines, Mary Nichols, chairman of the California Air Resources Board, said in an interview Friday at Bloomberg headquarters in New York. Brown, one of the most outspoken elected official in the U.S. about the need for policies to combat climate change, would be replicating similar moves by China, France and the U.K.

"I've gotten messages from the governor asking, 'Why haven't we done something already?'" Nichols said, referring to China's planned phase-out of fossil-fuel vehicle sales. "The governor has certainly indicated an interest in why China can do this and not California."

Embracing such a policy would send shockwaves through the global car industry due to the heft of California's auto market. More than 2 million new passenger vehicles were registered in the state last year, topping France, Italy or Spain. If a ban were implemented, automakers from General Motors Co. to Toyota Motor Corp. would be under new pressure to make electric vehicles the standard for personal transportation in the most populous U.S. state, casting fresh doubts on the future of gasoline- and diesel-powered autos elsewhere.

California has set a goal to cut carbon dioxide emissions by 80 percent from 1990 levels by 2050. Rising emissions from on-road transportation has undercut the state's efforts to reduce pollution, a San Francisco-based non-profit said last month.

"To reach the ambitious levels of reduction in greenhouse gas emissions, we have to pretty much replace all combustion with some form of renewable energy by 2040 or 2050," Nichols said. "We're looking at that as a method of moving this discussion forward."

Legal Means

California has the authority to write its own pollution rules, which dates back to the 1970 Clean Air Act. Those rules are underpinned by waivers granted by the U.S. EPA.

Nichols said the state would likely take a different legal route to enable a possible ban rather than

use an EPA waiver, since the Trump administration would be unlikely to approve one. For example, California could use vehicle registration rules or control the vehicles that can access state highways, she said.

"We certainly wouldn't expect to get a waiver for that from EPA," Nichols said. "I think we would be looking at using some of our other authorities to get to that result."

China will likely order an end to sales of all polluting vehicles by 2030, the chairman of electric-car maker BYD Co. said Thursday. France and the U.K. have announced 2040 as their end date for sales of fossil fuel-powered cars.

A ban for California could also still be decades away from implementation, and just how far out remains to be seen, Nichols said.

"There are people who believe, including who work for me, that you could stop all sales of new internal-combustion cars by 2030. Some people say 2035, some people say 2040," she said. "It's awfully hard to predict any of that with precision, but it doesn't appear to be out of the question."

Coal Export Terminal Permit Rejected in Washington

Posted September 26, 2017, 01:51 P.M. ET

By Paul Shukovsky

Building the largest coal export terminal in North America would have "too many unavoidable" consequences, the Washington Department of Ecology said this morning when it denied the proposed Millennium Bulk Terminals a necessary water permit.

The denial effectively kills the proposed terminal, but the company could still appeal the decision.

"There are simply too many unavoidable and negative environmental impacts for the project to move forward," Ecology Director Maia Bellon said in a statement.

Millennium, owned by Lighthouse Resources Inc., would have shipped up to 44 million metric tons of coal a year to Asia. It was the last hope in the near-term for a Northwest terminal allowing for export of U.S. coal from the Powder River Basin in Wyoming and Montana and the Uinta Basin in Utah and Colorado to markets such as South Korea, Japan, and Taiwan. Regulators have blocked other proposals in the region.

Europe's Gas Industry Gathers and Asks Whether It Should Exist

Posted September 26, 2017, 02:16 P.M. ET

By Kelly Gilblom

Ask about this winter, and European natural gas executives question if there's enough supply. Ask about life in a few decades, and the same people wonder whether their business will exist.

"Society now requires more from us than to promote our own product," said Annie Krist, chief

executive officer of GasTerra, a natural gas wholesale venture between Royal Dutch Shell Plc, Exxon Mobil Corp. and the Dutch State, at a gathering of gas executives in Rotterdam. "We should be asking: are you prepared to put your business model up for discussion? Are the good times over?"

Krist's comments at the Platts European Gas Summit reflect the sort of existential questions industry executives increasingly face. While striving to position gas as an alternative to dirtier coal in a worldwide effort to reduce carbon-dioxide emissions and stem global warming, they realize that cleaner and cheaper renewable fuels may be sounding the death knell for gas.

Listen to Kirst, who runs the largest gas buyer in the Netherlands, where people have proposed ripping gas grids out of the ground to force a switch to greener fuels, and you hear that gas is an endangered species. Others are more circumspect.

Jason Tate, chief operating officer of European gas and power at BP Plc, said gas is now the cornerstone of their business and will be an expanding part of their portfolio for years as they move away from oil. Pierre Vergerio, the chief operating officer at Edison SpA, the Italian natural gas distributor, said he believed gas has a bright future.

At the other extreme, Sergei Komlev, head of contract structuring at the export arm of Gazprom PJSC, Europe's biggest supplier, warned of "eco-jihadists" that could end civilization by eliminating the use of natural gas and fossil fuels too quickly. He also believes the way gas has been priced for decades, in long-term bilateral contracts linked to the price of crude, works just fine, even as the company opens up a new office in St. Petersburg that relies on trading hubs.

"We are decarbonizing the economy, we at the same time are providing a guarantee that just in case something happens, gas will always be there," he said. "By the way, the theory of global warming is based on what? On models? Manmade models that could be mistaken."

At least over the next few months, the work of the gas industry will be critical to Europe. The continent is heavily reliant on imports of the heating and power fuel as its largest onshore field in the Netherlands faces mandatory output cuts.

Its two largest pipelines suppliers, Russia and Norway, already say they'll send record volumes of the fuel. To supplement those volumes in case of a severe cold snap, EU countries need to attract liquefied natural gas away from Asia. They'll also need to look very carefully at coal prices, which may dip below gas prices and crater demand for its use in power generation, or vice versa.

Other key takeaways from day one of the Platts Gas Summit:

• Who's to blame for the move against gas in the Netherlands? It may well be Napoleon, Gasterra's Kirst said. After all, he's the one that decided mineral wealth should go to the state instead of to individual landowners, who only suffer from activity on their property. "We're not Texas," she said.

• Centrica Plc isn't worried about the closure of its Rough gas storage facility, the U.K.'s largest. Gautam Mukherjee, head of gas, liquids and economic analysis at Centrica, said Britain has many other sources it can pull from. "At some point that will matter, but it's just not something that's sort of impacting the market today."

• Edison's Vergerio said he isn't worried that a big breakthrough in battery technology will lead to a massive uptake in the use of wind and solar for power, which now struggle with intermittency issues. Gas will always be needed for its reliability. "Do we need gas in the long-run? I'm convinced of that."

Britain's Grid to Share Clean Energy Data After Green Summer

Posted September 26, 2017, 7:47 A.M. ET

By Mathew Carr

As low-carbon energy met more than half of the U.K.'s power use this summer, the nation's power grid operator plans to debut a program that will make it easier for households to benefit from cheap solar and wind generation.

The London-based network manager is working on publishing data that will help consumers switch on appliances at times when it's cheapest to do so, National Grid Plc said by email. Clean-energy sources including wind, solar and nuclear met a record 52 percent of power use in the three months through Sept. 22, compared with 35 percent four years ago, it said.

"Clear and concise information that can tell you in advance when's best to turn on the washing machine, load the dishwasher or charge your car, for example, is a step in the right direction toward a low-carbon future," said Duncan Burt, director of the grid's system operator.

Software will combine grid data with that from the U.K.'s Met Office, which forecasts weather, in order to estimate the share of renewable and non-renewable energy on the network during the next 48 hours. The plan will relieve pressure on the system during peak times, reduce the need for back-up fossil-fuel plants, and potentially cut household bills, National Grid said.

In March, the grid operator said it may pay big energy consumers to use more electricity on sunny weekends when solar energy is plentiful and demand is low. This eases the need for other grid balancing measures such as calling on power producers to reduce output.

Under the plan to provide additional data:

• The project's information system will be available so developers can create consumer apps

• National Grid is also working with environment groups WWF and Environmental Defense Fund Europe on the project

• Other nations could use the model to help meet emission-reduction goals, said Bryony Worthington, executive director of Environmental Defense Fund Europe

Brazil's Courtship with Big Oil Tested at Temer's First Auction

Posted September 26, 2017, 11:31 A.M. ET

By Sabrina Valle

President Michel Temer's efforts to repair Brazil's strained relationship with the world's biggest oil companies will be put to the test Sept. 27 when his government auctions 287 exploration blocks.

Temer, who became president last year following the impeachment of his predecessor, swiftly pushed through business-friendly regulations and expanded resource access to woo producers including Royal Dutch Shell Plc, Total SA and Exxon Mobil Corp. Brazil's most recent oil round in 2015 flopped at a time when the terms were less attractive to foreign operators.

Brazil is also selling power plants, its main utility and even the national mint to accelerate its slow climb from the deepest recession on record. It opened the country's most prized offshore oil region to foreign control and scaled back buy-in-Brazil requirements for goods and services to address long-standing complaints from drillers. Officials are predicting robust turnout at Wednesday's sale, which will serve as a gauge of investor confidence in Brazil's recovery.

"The success of the auctions will be measured by the quality of the companies that bid," Decio Oddone, the head of the National Petroleum Agency, said Sept. 21. "If rounds this year are successful, they will bring Brazil side by side with the biggest oil producers in the world."

The Temer government is planning a total of nine oil auctions that it expects to bring in as much as $80 billion in investments during the life of the projects. Brazil has two more auctions planned for October for areas in the offshore pre-salt region that holds Brazil's most productive oil fields.

Thirty-two companies including Shell, Total, BP Plc, Exxon, as well as state-controlled Petroleo Brasileiro SA, have signed up to compete in the so-called 14th round that has a combined minimum signing bonus of 1.7 billion reais ($540 million).

The most recent round in 2015 was considered a failure due to the low number of competitors and areas sold. It was the first round ever without participation from Rio de Janeiro-based Petrobras, which was grappling with a massive graft scandal and high leverage at the time. It raised less than 500 million reais in signing bonuses and investments, one of the worst results since Brazil ended Petrobras' monopoly on exploration and production two decades ago.

Offshore blocks in the Campos, Santos, and Sergipe-Alagoas basins, where large discoveries have already been made, are expected to draw the most attention from oil majors. They include six blocks in a section known as SC-AP3 where there is evidence of pre-salt formations, while located outside the official pre-salt polygon that has a special development model.

The block with the most expensive minimum bid, SEAL-M-501, is in deep waters of the Sergipe-Alagoas basin where Petrobras has announced large discoveries.

"Brazil's geological potential is unquestionable, but there is an enormous global competition for resources and investments," Flavio Ofugi, Shell's government relations representative in Brazil, said Sept. 15. "Brazil can't lose this window of opportunity."

Corporate Demand Growing for Clean Energy Certificates in Brazil

Posted September 26, 2017, 11:04 A.M. ET

By Michael Kepp

Corporate demand in Brazil is growing for renewable energy certificates, signaling that companies are using more renewable power from certified producers.

Brazilian companies and local offices of multinationals, including Procter & Gamble, Johnson & Johnson, GE Global Research, and Nivea, the Germany-based personal-care brand, have bought 137,160 internationally registered renewable energy certificates (RECs) from 19 certified renewable power plants—50,000 in 2016 and 87,160 in the first eight months of 2017, Fernando Lopes, a partner at Instituto Totum, which certifies and issues RECs, told Bloomberg BNA.

"Demand for RECs is growing quickly in Brazil, where 80 percent of the electricity matrix comes from renewable sources, and we expect 100 companies to have bought these seals in the next two years," said Lopes. "Companies in Brazil buy RECs from certified renewable power plants to prove that some of the energy they consume is renewable and to improve their corporate image as being sustainable."

Igor Oliveira, sustainability manager for Nivea in Brazil , which bought 815 RECs from an Instituto Totum-certified small hydropower plant for its new Sao Paulo headquarters, told Bloomberg BNA that the company bought the seals because "applied sustainability can help construct a better world."

Each certificate represents 1 megawatt-hour of renewable power and is sold for between 1 to 5 Brazilian reais (32 cents to $1.60).

Marketing Tool

The three mainstream systems for documenting, tracking, and registering certified use of renewable energy are the REC system in the U.S. and Canada, Guarantee of Origin system in Europe, and International-REC (I-REC) system in Brazil and 15 other countries.

"I-REC launched in Brazil in 2016, a time when there weren't any other international certifications system here and when we believed there would be a demand for them, which is on the rise here," Oliver Crouch, a member of the I-REC Standard Advisory Group, told Bloomberg BNA.

Many companies buy renewable energy certificates in Brazil to help qualify their facilities to receive a Leadership in Energy and Environmental Design (LEED) certification for sustainable buildings, awarded by the U.S. Green Building Council.

The Clube Atletico Paranaense soccer team in southern Parana state bought 2,600 RECs in March from an Instituto Totum-certified small hydropower plant so that its stadium, now under renovation, could get LEED certification, which it expects to receive by December.

"The LEED certification of our stadium will show that our soccer club is committed to sustainability," Luiz Volpato, a club architect coordinating the stadium's renovation, told Bloomberg BNA. "Once we get the LEED seal we can use it for marketing purposes."

Taking the LEED

GE Global Research, the research and development arm of General Electric, bought 4,100 renewable energy certificates from a small hydropower plant in Brazil in July 2016 to get LEED certification for three buildings in Rio de Janeiro.

"Buying those RECs to help us get LEED certification helps us create a more sustainable corporate image, which is good for business," Cleber Barbosa, a manager of GE Global Research in Brazil,

told Bloomberg BNA.

Proctor & Gamble, the U.S. consumer goods corporation, bought them in 2016 to help get LEED certification for a manufacturing plant it built just outside Rio de Janeiro, Annette Amadin, an engineering leader for P&G in Latin America, told Bloomberg BNA.

"P&G also bought those RECs to help make our corporation more sustainable and to meet our long-term sustainability targets, one being the goal of running our manufacturing on 100 percent renewable power," said Amadin.

Voluntary Reductions Platform

Other companies buy RECs to prove and register their greenhouse gas emissions reductions on voluntary emissions reductions platforms, like Brazil's GHG Protocol or Carbon Disclosure Project, or to qualify to join the RE100, a global initiative of businesses committed to using 100 percent renewable electricity, said Lopes of Instituto Totum.

"I expect future demand for RECs to grow from companies for a variety of reasons, one being to help make them eligible for listing on the Corporate Sustainability Index of Brazil's stock exchange, set up to help environmentally and socially conscious investors build sustainable stock portfolio," he said.

Laura Albuquerque, technical adviser for the Brazilian Business Council for Sustainable Development, said, "These certificates are new to Brazil but we foresee a growing demand for them by companies that need to show transparency in their sustainable activities."

Companies currently account of 10,000 of the 20,000 terawatt-hours of global demand for renewable power, with households accounting for the rest, said Crouch. And 2,500 terawatt-hours of that corporate demand comes from renewable energy.

Subject: Morning Energy, presented by Chevron: Energy dominance meets market realities — Multiple congressional probes of Whitefish contract — RFS concessions fuel GOP war of words

By Anthony Adragna | 10/27/2017 05:47 AM EDT

With help from Alex Guillén and Eric Wolff

MY HEART DRILL GO ON? Interior Secretary Ryan Zinke has made opening up more areas for oil and gas drilling a key part of delivering on President Donald Trump's pledge to unleash "energy dominance" but there may not actually be that many takers, Pro's Ben Lefebvre reports. Interior plans to offer 10 million onshore acres in the National Petroleum Reserve in northern Alaska in December and 77 million offshore acres across the entire Gulf of Mexico in March, but the combination of low oil prices and ample private land available for fracking may keep some away. "It's almost like having a fire sale of all the acreage," said Ken Medlock, director of the Baker Institute's Center for Energy Studies at Rice University in Houston. "Wouldn't surprise me at all if there's a lot of acreage that doesn't sell."

Short-term cash infusion: The federal government is likely to make money from the bids themselves, but many companies are likely to sit on the acreage and wait for oil prices to rise before they start drilling. Both the Gulf and Alaska have high production costs given the remoteness of both locations, making new projects in those locations a tough sell to companies. The most likely outcome of the Gulf lease sale is that a modest number of companies may buy acreage next to drilling rigs already in operation. "They're still showing up [to the lease sales], just not buying a lot," Justin Devery, a principal energy researcher at IHS Markit, told Ben.

That irks advocates: When companies leave lands idling the public gets hit twice since the lands cannot be used and they aren't generating income for taxpayers, according to Nada Culver, senior counsel and director at The Wilderness Society's BLM Action Center. "We will lose the ability to use those lands, and at the same time we're not necessarily going to see a return."

Relatedly, the Senate Energy and Natural Resources will hold a Nov. 2 hearing on the potential for oil and gas exploration in ANWR as the committee seeks to meet reconciliation instructions from the budget to raise $1 billion in revenue over the next decade.

AND FOR YOUR RADAR TODAY: Trump huddles with Zinke in the Oval Office today 11:30 a.m. No topic specified, though ME bets Zinke's recommendations on national monument designations will pop up.

TGIF EVERYONE! I'm your host Anthony Adragna, and QEP Resources' Shane Schulz was first to identify Hawaii, Idaho, New Hampshire, Rhode Island and Maine as the five states with two House seats. For today: Which four states have the most congressional seats? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

LET THOSE WHITEFISH LETTERS FLY: Lawmakers penned three separate letters Thursday seeking information related to the $300 million contract awarded to the tiny Whitefish Energy based in Zinke's hometown, Pro's Ben and your ME host report.

—A bipartisan group of House Energy and Commerce lawmakers wants a briefing from Whitefish Energy. "In light of the questions that have been raised about your company's involvement in recovery efforts ... it is important to develop a clear understanding of the facts," they wrote in a Thursday letter to Whitefish Energy CEO Andrew Techmanski.

—House Natural Resources Chairman Rob Bishop and Oversight Subcommittee Chairman Bruce Westerman asked the Puerto Rico Electric Power Authority for all documents related to its decision to ink the Whitefish contract. They also asked more broadly for information on how PREPA enters into third-party contracts and what procedures it must follow if it departs from the normal process. Link.

—Senate Energy ranking member Maria Cantwell and Ron Wyden asked GAO to investigate the contract in a separate letter.

Bipartisan resiliency push for rebuilding: A powerful bloc of senators, including the top Republican and Democrat on the Senate Energy and Natural Resources Committee and the Finance Committee chairman, are pressing the Senate leadership for weather-resilient distributed energy to rebuild the power grids of Puerto Rico and the Virgin Islands, Pro's Emily Holden reports. "Decentralized energy resources operating in microgrids are more likely to remain functioning during and after storms," says the letter, spearheaded by Sen. Al Franken and signed by Sens. Lisa Murkowski, Orrin Hatch, Rob Portman and Cantwell.

Remember that Superfund drinking water story? Sens. Tammy Duckworth and Elizabeth Warren led five of their Democratic colleagues in questioning whether residents on the smaller Puerto Rican island of Vieques had adequate communication infrastructure to heed EPA warnings not to drink water from Superfund sites. "We are unable to guarantee residents there will heed EPA's guidance and avoid the potential adverse health effects associated with drinking contaminated water unless there is sufficient Federal Government presence on the island to provide access to clean drinking water," they wrote in a letter. "We urge you to make monitoring and securing the Vieques site a priority for the duration of recovery."

Another CODEL leaves: A bipartisan group of lawmakers, helmed by House Majority Leader Kevin McCarthy and Minority Whip Steny Hoyer, are visiting the U.S. Virgin Islands, Puerto Rico and the Florida Keys today and Saturday to examine ongoing recovery efforts from the string of recent hurricanes. Also traveling: Bishop, Jeff Denham, Norma Torres and Anthony Brown. Their visit comes as the Rhodium Group released a report Thursday concluding Hurricane Maria caused the "largest blackout in American history." Trump signed into law Thursday legislation H.R. 2266 (115) that provides $36.5 billion to help FEMA with recovery efforts, relieve about half of the National Flood Insurance Program's debt and to keep Puerto Rico's government operational.

Hearing scheduled: The Energy and Commerce Energy Subcommittee announced it would hold

a hearing next Thursday to examine the state and federal responses to the storms, as well as ongoing recovery efforts.

Cornyn: Don't force disaster offsets: Count Senate Majority Whip John Cornyn as opposed to OMB Director Mick Mulvaney's plan to seek offsets for the next batch of disaster relief. "I'm as concerned about the deficits and debt as anybody, but this is emergency spending and we need to get help to the people who need the help," he told reporters.

INHOFE: GRASSLEY'S RFS POSTURING 'QUESTIONABLE': Sen. Jim Inhofe isn't a fan of fellow Republicans Chuck Grassley and Joni Ernst holding up EPA nominees last week to extract concessions on the Renewable Fuel Standard. "I think it's questionable in terms of being appropriate," he told ME. "I think [Grassley] used a lot of pressure there that was very effective, I'll say, but that I didn't agree with."

And Ernst bashes new hold: After a delay in the confirmation vote on EPA air nominee Bill Wehrum (who passed out of committee on Wednesday), Sens. Ted Cruz and Mike Lee retaliated by slapping a hold on Bill Northey's selection to become undersecretary for Farming Development and Conservation at USDA. But that move drew swift condemnation from Ernst. "That has nothing to do with Bill Northey, they need to get that right," Ernst told ME, referring to the USDA hold. "I don't see the connection. Bill Northey, he'll be in charge of conservation programs, it will have nothing to do with the RFS. So why are they blocking him because of the RFS? Just because Big Oil doesn't like it."

So is this officially a fight? Senior Republicans downplayed the likelihood their conference would continue to hold up Trump nominees over biofuels. "This happens every day, just happens to be the topic du jour, but we'll work it out," Cornyn told reporters. And EPW Chairman John Barrasso suggested the move might have just been the senators doing what's in the best interest of their states: "Every senator gets to speak for themselves and do whatever they need to do," he told ME.

** **A message from Chevron:** When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat—buckwheat. Watch the video: http://politi.co/2gyQXsp **

DUCKWORTH: JUST WAIT! She's been urging her GOP colleagues to let EPA's final biofuels volumes come out on Nov. 30 before considering Wehrum's nomination on the Senate floor, because Duckworth questions the legality of the reassurances Pruitt sent to corn-state senators last week. "I don't know that it doesn't open the administration to lawsuits from the very same oil interests Mr. Wherum used to represent," she told ME. "I've been pressuring them to not accept just the word of Mr. Pruitt ... It's simple — just wait, let the rulemaking be done. Just wait!"

MAIL CALL! GOTTA SHOW YOUR WORK! A group of 19 members of the Senate Democratic caucus requested all the documents related to EPA's cost-benefit analysis that they argue relied on "mathematical sleights of hand to over-state the costs of industry compliance" but formed an important part of the proposed repeal of the Clean Power Plan. "Denying the science

and fabricating the math may satisfy the agency's paperwork requirements, but doing so will not satisfy the requirements of the law," the letter, led by EPW ranking member Tom Carper , said.

Senators: This won't be popular: Eleven Democratic senators are wagging their fingers at Zinke's decision to dramatically increase entrance fees to many of the country's most popular national parks, such as Grand Canyon, Yellowstone and Yosemite. "We believe that it is especially problematic for your Department to propose fee increases at the same time that the Trump Administration is recommending slashing National Park Service funding levels and holding virtual fire-sales on our public resources at below market value," the letter , led by Cantwell, said. The timing of the increase is especially curious as Zinke proudly boasted of record numbers of visitors just a few months ago.

Wildfire funding must come next: A bipartisan group of eight senators asked Trump in a letter to prioritize federal funding for wildfires in the next round of disaster relief funding. "We urge you to make it a priority that all Americans who need emergency assistance get what they need, whether affected by a hurricane, wildfire, or other disaster," the letter, led by Sen. Kamala Harris, wrote.

LAWSUIT ROUNDUP! 'SUE AND SETTLE' ORDER GETS FIRST TEST: The state of North Dakota says EPA Administrator Scott Pruitt's recent "sue and settle" directive bolsters its own argument to nullify a court order requiring the agency to review oil and gas wastewater rules. Environmental groups complained that EPA had not updated its oil and gas wastewater disposal rules since 1988, despite major changes related to the fracking boom and a statutory requirement that EPA reconsider the rules every three years. In December, they struck a deal that requires EPA to decide whether or not to update those rules by March 2019.

North Dakota says Pruitt's order backs up their request that the D.C. Circuit overturn the consent decree. Pruitt's "sue and settle" order "aligns with North Dakota's argument that the settlement in this case imposed obligations on U.S. EPA that go beyond" the law's requirements, the state wrote in a short letter to the court on Thursday. Environmental groups have pointed out that, in the event EPA does decide to take action, the agency will go through the normal notice-and-comment rulemaking process. Oral arguments are slated for Nov. 7.

Not waiting any longer: Environmental Defense Fund sued EPA Thursday over a series of unfilled FOIA requests concerning Pruitt's ethics conflicts, schedule and plans for agency science, Pro's Emily Holden reports. The agency has faced a flood of public records requests during the Trump era with the Office of Public Affairs warning some may take more than a year — well over statutory limits — to fulfill.

Not a pleasant diversion? A handful of green groups filed a lawsuit in federal district court challenging federal approval of a project that would divert water from the Colorado River to customers in the Front Range area of Colorado, Pro's Esther Whieldon reports. The Windy Gap Firming Project would divert tens of thousands of acre feet of water from the Colorado River each year to help fill a new reservoir on the Front Range area of Colorado.

ANALYSES OF PERRY GRID PROPOSAL RELEASED: Implementing Energy Secretary

Rick Perry's grid resiliency proposal could cost consumers up to $10.6 billion per year, according to new research from the Energy Innovation and the Climate Policy Initiative. Ninety percent of the benefits to the nuclear sector would go to just five companies — Exelon, Entergy, PSEG, NextEra and FirstEnergy — while 80 percent of the benefits to the coal industry would also go to just five companies — NRG, Dynegy, FirstEnergy, American Electric Power and Talen Energy. Former FERC Commissioner Colette Honorable co-authored initial perspectives on the grid proposal comments for Reed Smith here.

THEY'RE GOING TO MIAMI: A large group of Transportation Committee members — Chairman Bill Shuster, Garret Graves, Grace Napolitano, Brian J. Mast, Daniel Webster, Frederica Wilson, Lois Frankel, Mario Diaz-Balart, Carlos Curbelo and Eddie Bernice Johnson — gather this morning at 9:30 a.m. at Port Miami to discuss concepts for the next Water Resources Development Act. Webcast here.

STANDING STRONG: There may be a new political dynamic in Germany, but all the parties involved in talks to form a government agreed Thursday to uphold previously set climate goals for 2020, 2030 and 2050, POLITICO Europe's Emily Schultheis and Cynthia Kroet report. The parties — the center-right CDU/CSU alliance, the liberal Free Democratic Party (FDP) and the Greens — did not, however, discuss all the specific means by which these goals would be reached.

MOVER, SHAKER: Mary Martin is the new chief counsel for both the House Energy and Commerce Energy and Environment subcommittees. She's previously been deputy chief counsel for both subpanels and before that was policy counsel and committee executive to the environment, technology & regulatory affairs division at the U.S. Chamber of Commerce.

Interior's 'fire sale' for oil leases may come up short Back

By Ben Lefebvre | 10/27/2017 05:01 AM EDT

The Interior Department's latest attempt to jump-start President Donald Trump's pledge to unleash American "energy dominance" might run into cold market reality.

Interior plans to offer up for lease every available tract in the Gulf of Mexico as well as every open acre in Alaska's National Petroleum Reserve-Alaska in a bid to spur more oil and gas development. But with oil still hovering at $50 a barrel, and private land available in West Texas and North Dakota for fracking, Interior's plan to flood the market may find relatively few takers, experts said.

"It's almost like having a fire sale of all the acreage," said Ken Medlock, director of the Baker Institute's Center for Energy Studies at Rice University. "Wouldn't surprise me at all if there's a lot of acreage that doesn't sell."

Interior Secretary Ryan Zinke has said making the federal land available would prime the pump for more oil and gas production. The department plans to offer 10 million onshore acres in the NPR in northern Alaska in December and 77 million offshore acres across the entire Gulf of Mexico in March. And Interior will start offering leases for the entire Gulf of Mexico twice a year, a change from the previous practice of annual lease sales offering only specific portions of the Gulf at any given time.

"In today's low-price energy environment, providing the offshore industry access to the maximum amount of opportunities possible is part of our strategy to spur local and regional economic dynamism and job creation and a pillar of President Trump's plan to make the United

States energy dominant," Zinke said in the offshore lease announcement.

While the lease sales are likely to generate some money for the federal government, analysts said the agency might be limited to a short-term cash infusion from the bids themselves, rather than generating much in royalties on production, since many companies would likely sit on the acreage and wait for oil prices to rise before drilling.

"Bidding on those leases generates revenue in [the first year] for the U.S. taxpayer, which has a benefit all its own," said Kevin Book, managing director for research at ClearView Energy Partners LLC. "As a result, offering as much as possible for lease may have the effect of maximizing bid bonuses, particularly if the leases come with favorable terms."

Interior's lease sales likely won't spur much oil and gas development in the Gulf or Alaska, however. The remoteness of both areas means production costs are high, making new projects in those locations a tough sell to companies that are grappling with low oil prices and are focused on increasing production in the lower 48 states.

U.S. oil production averaged 8.8 million barrels a day last year, up from 5.6 million barrels in 2011, according to Energy Information Administration data. Nearly 1 million barrels per day of U.S. crude are being exported this year.

Deep-water offshore projects cost billions of dollars and can take a decade to develop, and many companies have slashed spending in those areas, according to a recent report from market consulting agency IHS Markit.

The most likely outcome of the Gulf lease sale will be a modest number of companies picking up acreage adjacent to drilling rigs they already have operating, analysts said. That means that the March offshore lease sale may see a repeat of the result from the big offshore sale Interior held in August, said Justin Devery, a principal energy researcher at IHS Markit.

Interior had touted that last offshore lease sale as the biggest ever held by the department, with leases for 76 million acres up for sale. But the revenues for the government still fell relatively short, with Interior garnering $121 million from bids on 508,096 acres.

"The last [sale] was big and wide and there were only about 100 bids, so it wasn't an overwhelming response, that's for sure," Devery said. "The guys out there, they're adding inventories, adding to plays they already have, but there's no wildcatting going on. They're still showing up [to the lease sales], just not buying a lot."

In Alaska, there may be even less interest. BLM offered 1.5 million acres in the NPR-A in December 2016, and oil companies bid on only 613,528 acres.

ConocoPhillips, which announced in January a promising discovery in the area, accounted for nearly half of the 92 overall bids in that sale, with only three other, smaller companies participating. ConocoPhillips declined to say whether it was interested in properties in the upcoming NPR-A lease sale.

Oil companies already hold leases for just over 1 million acres of federal lands n Alaska, according to government data. Of that, only 16,822 acres are in production.

The remainder of those are acres the public cannot use and are not generating income for taxpayers, noted Nada Culver, senior counsel and director of the Wilderness Society's BLM Action Center.

"We will lose the ability to use those lands, and at the same time we're not necessarily going to see a return," Culver said. "So the American taxpayer is getting ripped off twice — you can't use these lands, and you're not getting a return on them letting these companies lock them up."

Committees seek info on Whitefish Energy contract for Puerto Rico Back

By Ben Lefebvre and Anthony Adragna | 10/26/2017 04:02 PM EDT

Several lawmakers today stepped up their efforts to get more information about how a small Montana company was selected to help rebuild Puerto Rico's electric grid.

The House Energy and Commerce Committee is asking fora briefing from Whitefish Energy. Republicans on the House Natural Resources Committee are seeking answers from the Puerto Rico Electric Power Authority, the utility that selected the Whitefish, Mt.,-based firm. And the ranking Democrats from the Senate Energy and Natural Resources and Finance committees requested an investigation from the Government Accountability Office.

"In light of the questions that have been raised about your company's involvement in recovery efforts ... it is important to develop a clear understanding of the facts," a bipartisan group of Energy and Commerce Committee leaders wrote today in a letter to Whitefish Energy CEO Andrew Techmanski.

Separately, House Natural Resources Chairman Rob Bishop and Oversight Subcommittee Chairman Bruce Westerman sent a letter to PREPA seeking all documents related to its decision to ink the Whitefish contract and for an explanation of how it enters into third-party contracts.

Senate Energy ranking member Maria Cantwell and Sen. Ron Wyden, the top Finance Democrat, asked GAO to investigate the contract in their own letter.

Whitefish Energy's contract with the Puerto Rico Electric Power Authority has raised questions about whether the small, young company is equipped to do the work. The company is based in the hometown of Interior Secretary Ryan Zinke, but officials with the company and department have said that had nothing to do with it winning the contract.

Murkowski, Cantwell press for distributed power in Puerto Rico, Virgin Islands Back

By Emily Holden | 10/26/2017 05:42 PM EDT

The top Republican and Democrat on the Senate Energy and Natural Resources Committee are calling on the Senate leadership to press for weather-resilient distributed energy to rebuild the power grids in hurricane-ravaged Puerto Rico and the U.S. Virgin Islands.

Committee chairmanLisa Murkowski and ranking member Maria Cantwell, today signed on to a letter spearheaded by Sen. Al Franken (D-Minn.). Sen. Orrin Hatch (R-Utah) and Rob Portman (R-Ohio) joined them.

The senators said Hurricanes Irma and Maria exposed the vulnerability of the power grids on the islands, and some communities face months without electricity. Congress has already approved about $52 billion in aid for recent hurricanes and is expected to sign off on more spending.

"Decentralized energy resources operating in microgrids are more likely to remain functioning during and after storms," the letter said, noting that the declining costs of solar, wind, energy efficiency and battery storage in many instances makes them more affordable than existing power sources. The islands rely mostly on power plants fueled by oil, natural gas and coal.

In a speech over the weekend at the Alaska Federation of Natives convention, Murkowski broke with the party line to emphasize that "climate change is real" and she backed adding more alternative energy across the state, where rural communities often rely on diesel generators.

"Our world is changing," she said, according to Alaska Public Media. "And we all know that climate change is at the heart of this change."

White House seeks offsets for third disaster package Back

By Sarah Ferris | 10/25/2017 11:52 AM EDT

The White House plans to ask Congress for "tens of billions" of dollars in additional disaster relief funding next month and urge lawmakers to at least partially offset that spending.

OMB Director Mick Mulvaney told Senate Majority Leader Mitch McConnell in a letter Tuesday that the Trump administration will formally request the money "in mid-November," marking the third emergency aid package in three months.

Mulvaney also delivered his strongest plea yet for GOP leaders to offset the funding, rather than considering it "emergency" dollars that don't count toward Congress' spending limits, as first reported in POLITICO Playbook.

"As we move toward the longer-term issue of rebuilding the impacted areas of our Nation, we believe it would be appropriate that the Congress consider reducing spending elsewhere," Mulvaney wrote in the letter.

The comments — consistent with Mulvaney's stance when he served in Congress — will likely complicate passage of the next cash infusion for FEMA.

Congress has now approved more than $52 billion in emergency disaster aid this year, clearing the latest $36.5 billion package (H.R. 2266 (115)) Tuesday.

The budget director said he will craft the next spending request with direct help from affected lawmakers — an apparent attempt to appease Texas and Florida members who say they were ignored in the White House's last request.

Those frustrations have become an issue for the administration. Sen. John Cornyn has said he plans to block the confirmation of Mulvaney's deputy director, Russ Vought, until the Texas Republican is assured that his home state will receive adequate aid in the next package.

Pruitt issues EPA directive to curb 'sue and settle' Back

By Alex Guillén | 10/16/2017 12:34 PM EDT

EPA Administrator Scott Pruitt today signed a directive and accompanying memo meant to curtail what he has criticized as EPA's "sue and settle" practice.

The new directive calls for more agency outreach to industry groups and will require EPA to post various documents related to such lawsuits online.

Pruitt and other Republicans have long been critical of EPA for settling suits with environmental groups over missed statutory deadlines. Green groups and Democrats note the consent decrees generally only lock in a timeline for the agency to act, not the underlying regulatory details.

EDF sues EPA over delays in releasing public records Back

By Emily Holden | 10/26/2017 04:41 PM EDT

The Environmental Defense Fund said today it is suing EPA for failing to release public records about Administrator Scott Pruitt's potential ethics conflicts, schedule or plans for agency science that the group has has sought under the Freedom of Information Act.

According to the lawsuit filed with the D.C. Circuit of the U.S. Court of Appeals, one of EDF's requests dates back to January, and the others are from March and June. A statutory deadline gives EPA 20 days to make a determination on whether to release information unless there are certain "unusual circumstances." EDF says EPA has not demonstrated those circumstances or sought an extension.

The agency has said it is receiving high volumes of public records requests. The Office of Public Affairs, for example, recently said it received 154 requests in fiscal 2017, compared to 14 in fiscal 2016. OPA has said some requests will take more than a year to fulfill.

An EPA spokesperson said the agency does not comment on pending litigation.

EDF is seeking information about an ethics agreement Pruitt signed while his nomination was pending, including why he determined he could work on a rule to withdraw the Clean Power Plan even though he brought lawsuits against it as attorney general of Oklahoma.

The group is seeking Pruitt's daily schedules, too. EDF argues that releases so far have included many redactions and that a recently published public calendar is brief and vague.

Green groups sue over federal approval of Colorado River diversion project Back

By Esther Whieldon | 10/26/2017 04:28 PM EDT

A handful of environmental groups today filed a lawsuit challenging the federal government's approval of a project that would divert water from the Colorado River to customers in the Front Range area of Colorado.

The lawsuit filed with the U.S. District Court for the District of Colorado challenges the Bureau of Reclamation's decision in 2014 and the Army Corps of Engineers' action in May approving

the Windy Gap Firming Project. That project, proposed by the Northern Colorado Water Conservancy District, would divert tens of thousands of acre feet of water from the Colorado River each year to help fill a new reservoir on the Front Range area of Colorado.

The decision comes as lower basin states are working on a plan to voluntarily reduce their usage beyond mandatory levels to address problems caused by the river's shrinking supplies.

The green groups contend the agencies failed to consider alternatives to the project and ignored flaws and gaps in the data and in Reclamation's review.

"This case boils down to inadequate analysis and poor decisionmaking resulting in significant water diversions from the already depleted Colorado River," said the lawsuit filed by the Save the Colorado, Save the Poudre: Poudre Waterkeeper, WildEarth Guardians, Living Rivers and Waterkeeper Alliance.

Subject: POLITICO's Morning Score: Brooks fights to stay relevant in Alabama — Dem poll finds Collins down in hypothetical GOP gubernatorial primary — NRSC attacks Baldwin

By Maggie Severns | 08/08/2017 10:00 AM EDT

With Kevin Robillard, Daniel Strauss, Zach Montellaro and Scott Bland

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

ONE WEEK 'TIL ALABAMA - "Brooks fights to stay relevant in Alabama primary," by Campaign Pro's Daniel Strauss: "Rep. Mo Brooks has been fighting for weeks to shake attack ads by allies of Sen. Luther Strange. But now, with a week until Alabama's special Senate primary, comes the worst sign of all for Brooks: Those attacks are slowing down. Strange and Senate Leadership Fund, the super PAC run by allies of Senate Majority Leader Mitch McConnell, have turned the bulk of their negative advertising against former Alabama Chief Justice Roy Moore ahead of the Aug. 15 primary, in a sign that Brooks' outspent, insurgent campaign may have fizzled against better-known opponents. 'I've seen a number of polls and every poll I've seen has Luther leading Roy Moore by between 3 and 5 points. Mo at one time was up to about 20 [percent],' said Perry Hooper, a Strange supporter and the former co-chairman of the Trump campaign in Alabama. "The last I've seen has him at 15, 16 [percent]. I guess anything can happen but the trend looks like people like what Luther has been doing.'" **Full story.**

- FINANCIAL TIMES - "Luther Strange's fundraising momentum grows in July, outraises Mo Brooks by 6-to-1; Roy Moore third," by AL.com's Howard Koplowitz: "Strange is also sitting on the most cash on hand of the major candidates in the race with about $934,000 in his campaign account, according to the most recent filings submitted to the Federal Election Commission. ... In July, Strange raised about $387,000 - or more than $150,000 than the roughly $226,000 raised by Rep. Mo Brooks, who was second in fundraising for the month among the major contenders in the election. For the entire election cycle, Strange has outraised Brooks by a more than 6-to-1 margin. ... Former Alabama Supreme Court Justice Roy Moore was in third with $152,000 raised in July and about $456,000 for the cycle. Brooks was the biggest spender last month among the top three contenders in Tuesday's special election, with his campaign spending about $827,000 in July." **Full story.**

- CHUCK NORRIS ENDORSEMENT - Actor endorses former Moore for Senate. In a press release, the "Walker, Texas Ranger" star says "Alabama needs Judge Moore there doing what he's always done: fighting to protect our constitutional rights to life, religious liberty, and the freedom to protect ourselves and our families. And he will always put principle over politics."

EARLY POLLING DATA - FIRST IN SCORE - PPP survey shows Collins in trouble in Maine GOP primary: If Maine Republican Sen. Susan Collins makes a bid for governor in 2018, she might have trouble making it through a Republican primary. A survey from the Democratic firm Public Policy Polling, obtained by Campaign Pro, shows Collins' approval rating among likely GOP primary voters at just 33 percent, with 62 percent disapproval. Seventy-seven percent of the Republican primary electorate approves of President Donald Trump's performance, while 79 percent approve of Gov. Paul LePage's performance. The highest-profile Republican in the race now, former LePage health commissioner Mary Mayhew, would lead Collins in a hypothetical matchup, 44 percent to 33 percent. Given the choice between Collins and "someone else," just 28 percent of voters chose Collins. It's unclear who commissioned the survey, which polled 672 likely GOP primary voters on Aug. 1 and 2. **Full poll results here.**

- "Poll Shows Nevada's Dean Heller Vulnerable In GOP Primary," by the Daily Caller News Foundation's Ted Goodman: "The poll, conducted by Strategic National, a Republican-leaning consulting firm, revealed that Heller would face stiff competition from Nevada Republican Rep. Mark Amodei and businessman Danny Tarkanian should either man choose to take on Heller. In a three-way primary between Heller, Amodei and Tarkanian, Amodei received 27 percent to Heller's 26 percent, well within the margin of error of 4.4 percent. Tarkanian, the son of the legendary University of Nevada, Las Vegas (UNLV) basketball coach Jerry Tarkanian, received 21 percent. Head to head versus Tarkanian, Heller received 38 percent to Tarkanian's 34 percent, within the margin of error. [Twenty-seven] percent said they were undecided between the two. ... The poll, which surveyed 500 registered Nevada Republicans on Aug. 1 and 2, revealed that Heller holds a 31 percent approval rating, with a 43 percent disapproval rating." **Full story.**

- The polling picture is pretty clear: The Republican base is mad, and willing to turn on previously popular incumbents. A Public Policy Polling survey last week had Arizona Sen. Jeff Flake's approval at just 22 percent among Republicans, with 57 percent disapproval. Republicans will scoff at the PPP results, but on-the-ground reporting (and polling from Alabama's Senate contest) backs up the idea that Republicans who are breaking from Trump or his agenda risk alienating the party's base. A Bangor Daily News story from this weekend featured a former party chairman saying Collins, long the most popular politician in the state, wouldn't be able to clear the GOP primary field. Another activist, Christian Civic League of Maine board member Bob Emrich, was blunt: "I do not believe she can win the Republican primary."

- But wait, there's more! AAN's new polling on tax reform: The House leadership-aligned American Action Network is out with a poll today that tests voters' moods and messages about tax reform. The poll found more than half of Americans believe the personal income tax should be overhauled. AAN found that 70 percent of Democrats would like to see their lawmakers working in a bipartisan manner. The poll was conducted between August 1st and August 3rd by GS Strategy Group. The margin of error is plus or minus 3.1 percent. Full results here.

Days until the 2017 election: 91.

Days until the 2018 election: 455.

Thanks for joining us! You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com, dstrauss@politico.com and mseverns@politico.com

BADGER STATE ACTION - NRSC attacks Baldwin over Tomah VA scandal in radio ads: The National Republican Senatorial Committee is running a radio ad this week in the Wausau and La Crosse markets attacking Democratic Sen. Tammy Baldwin, alleging Baldwin swept a scandal, in which doctors overprescribed opioids to veterans, "under the rug." "The Inspector General report uncovered the scandal - Tammy Baldwin buried the report," the ad's narrator says. "Whistleblowers tried to tell Tammy the truth. But Tammy Baldwin's office told them not to talk to the press. Tammy Baldwin looked out for her own political health - instead of the health of our veterans." **Full ad here.**

- Wisconsin GOP attacks Wachs: Democratic state Rep. Dana Wachs launched a bid for governor on Monday, and the Republican Party of Wisconsin immediately launched a digital ad campaign attacking him as a "liberal trial attorney" who "has a history of filing frivolous lawsuits to try to pad his own pockets."

THE LEFT'S NEW 'LITMUS TEST' - Bernie Sanders throws his weight behind Medicare-for-all: POLITICO's Gabriel Debenedetti reports: "The Vermont senator himself has not explicitly said he'll support primary challenges to those who won't support his push for a so-called Medicare-for-all health care plan. But there are plenty of signs that Sanders and his allies view the issue as a defining moment for Democratic lawmakers. 'Our view is that within the Democratic Party, this is fast-emerging as a litmus test,' said Ben Tulchin, the pollster for Sanders' White House run.

"The fears are acute enough that when the Nevada chapter of Our Revolution - the political group spawned from the Sanders presidential campaign - endorsed long-shot candidate Jesse Sbaih in the state's Democratic Senate primary over party favorite Rep. Jacky Rosen, retired former Sen. Harry Reid felt the need to call Sanders directly. Don't endorse Sbaih, and don't let the national Our Revolution group accept its Nevada chapter's recommendation to back him either, the former minority leader implored his friend. Sanders agreed, said a Democrat familiar with the interaction." **Full story**.

Q&A - Missouri Republican Austin Petersen goes on the record about his Senate run, via Campaign Pro's Kevin Robillard: "Austin Petersen started his run for the Libertarian Party's presidential nomination last year while he was living behind a convenience store in Kansas City. ... Now, he's running in the GOP primary for Missouri Senate, hoping his small-government views and small-dollar donations can fuel a Rand Paul-style primary upset.

Why are you running for Senate? I think Claire McCaskill's got to go. I'm mostly focused on her. I'm frustrated with a lot of the progress on health care, and I'm a little nervous about the

prospects for tax reform now. Government spending is really the big target for me. I think we spend too much, and we tax too much. I'm an across-the-line fiscal conservative.

Are you nervous about tax reform? I'm an optimist in my personal life, but I'm a pessimist about government. Now that this health care has failed so spectacularly, I wonder if they're going to be able to get anything done substantively on taxes. ...

How will you separate yourself from Attorney General Josh Hawley and other Republicans in the primary? What's your path to victory? I'll be talking, not just about the basic red meat you get from conservatives, but about criminal justice reform, about eliminating mandatory minimums. I'll probably be the only candidate in the race ending the federal war on drugs. ... I have to raise money. I think I need to raise about $1.5 million by next August; $3 million would be great. With $1.5 million, I'll get one good shot." **Full story.**

CODA - QUOTE OF THE DAY: "I don't give a s--t, you understand? I just don't give a s--t." - Democratic West Virginia Sen. Joe Manchin , explaining his reaction to GOP opponent Patrick Morrisey's attacks on tax reform to the Charleston Gazette-Mail.

Subject: EPA to revamp 2015 power plant discharges rule

By Annie Snider

08/14/2017 01:43 PM EDT

EPA will conduct a new rulemaking to "potentially revise" portions of a 2015 regulation limiting toxic discharges from coal-fired power plants, according to a letter sent by Administrator Scott Pruitt to the U.S. Small Business Administration Friday and obtained by POLITICO today.

The 2015 rule set new technology-based limits on heavy metals like mercury and arsenic that power plants discharge into waterways. The previous limits had not been updated in more than 30 years.

The portions of the rule Pruitt said could be revised are the most contentious and expensive ones governing how coal waste is managed by power plants.

"This new rulemaking has the potential to gut the rule. The two most impactful provisions of the rule by far — in terms of the amount of toxics that power plants are dumping into water bodies, and the costs to industry of complying with the rule — are the two main ones that EPA is reconsidering," Thomas Cmar, an Earthjustice attorney, said in an email.

Pruitt's letter indicates EPA will ask the 5th Circuit Court of Appeals to put challenges to the 2015 rule from the coal industry on hold while EPA conducts the new rulemaking. The letter makes no mention of other lawsuits joined with that litigation from environmental groups and drinking water utilities that challenge the overall rule.

EPA did not immediately reply to a request for comment.

WHAT'S NEXT: EPA would need to file an official notice in order to launch a new rulemaking. The agency is also due to update the 5th Circuit Court of Appeals today on the status of its review of the 2015 rule.

Subject: SAB appointee doesn't represent North Carolina, state says

By Alex Guillén

11/08/2017 10:16 AM EDT

Donald van der Vaart, the former head of North Carolina's Department of Environmental Quality, will not represent the agency or the state in his recent appointment to EPA's Science Advisory Board, the DEQ told a local television station.

Van der Vaart, a Republican who was considered for a top EPA appointment, demoted himself at DEQ to a non-political position that cannot be removed at will following last fall's gubernatorial win by Democrat Roy Cooper.

But his position on SAB will not come with Cooper's blessing, according to DEQ.

"DEQ does not support his participation on the EPA's SAB," the agency told local TV station WRAL. DEQ will not participate as a representative of the DEQ or North Carolina, the agency added.

Neither van der Vaart nor EPA immediately returned requests for comment this morning.

Subject: Morning Media: Eric Bolling's uncertain future -- Kayleigh McEnany joins Trump TV -- How Trump's FCC aided Sinclair's expansion

By Hadas Gold | 08/07/2017 06:07 AM EDT

With Alex Weprin

WHAT'S NEXT FOR ERIC BOLLING? On Friday Yashar Ali, writing in HuffPost, reported that the "Fox News Specialists" co-host had sent lewd text messages and photos to two colleagues several years ago. I, along with other reporters, have had sources telling me the same for some time, but Ali tracked it down and confirmed the photos were sent with the unnamed recipients themselves. Fox News announced on Saturday Bolling is suspended "pending an investigation." Live news replaced the Saturday edition of Bolling's show "Cashin' In," which had already been pre-taped and Mediaite reports that Fox News contributor Lisa Boothe will be Bolling's first substitute on the "Specialists" today.

-- Bolling has denied the allegations, via his lawyer: "Mr. Bolling recalls no such inappropriate communications, does not believe he sent any such communications, and will vigorously pursue his legal remedies for any false and defamatory accusations that are made."

Bolling's name and image have been removed from the "Specialists" social media accounts, though he's still on the show's page on FoxNews.com. The investigation will be conducted by the law firm Paul, Weiss, Rifkind, Wharton & Garrison, the same firm that spearheaded reviews of Bill O'Reilly and Roger Ailes. It's another possible black eye for the channel that's been roiled by similar allegations over the past year, and likely something executives there want to get over and past as quickly as possible.

Good morning and welcome to Morning Media! KAYLEIGH MCENANY DITCHES CNN FOR TRUMP TV: Last week we told you about Trump's campaign arm starting their own version of "Trump TV" starring the president's daughter-in-law Lara Trump. The effort, which says it's providing the "real news," got some help over the weekend with its newest anchor: Kayleigh McEnany. The lawyer and conservative columnist had been a CNN contributor now for more than a year, making a name for herself as one of the cadre of paid CNN contributors who unfailingly defended Trump, no matter what he did. But McEnany has ditched her CNN contract to work for the man himself, or at least his campaign (a quick search shows she hasn't been on air at CNN nearly as often as she used to be). As with Lara's videos, McEnany sits in front of a Trump-branded background sharing only positive news about the president from Trump Tower in New York City.

Related: Trump tweeted last night "The Fake News refuses to report the success of the first 6

months..." citing ISIS, job growth, etc.

PENCE BLASTS NEW YORK TIMES REPORT THAT HE'S PREPPING FOR 2020. The Vice President said the Times report, about the Republican "shadow campaign for 2020" that has sprung up as doubts about Trump continue to grow, said Pence has gone a step further than a typical Vice President by "creating an independent power base, cementing his status as Mr. Trump's heir apparent and promoting himself as the main conduit between the Republican donor class and the administration."

-- "Today's article in the New York Times is disgraceful and offensive to me, my family, and our entire team," Pence said in a statement Sunday. "The allegations in this article are categorically false and represent just the latest attempt by the media to divide this Administration." The Times' response, published in their own article about Pence's pushback (meta!): "We are confident in the accuracy of our reporting and will let the story speak for itself."

GREAT READ: HOW TRUMP'S FCC AIDED SINCLAIR'S EXPANSION, via my colleagues Margaret Harding McGill and John Hendel. "Sinclair Broadcast Group is expanding its conservative-leaning television empire into nearly three-quarters of American households - but its aggressive takeover of the airwaves wouldn't have been possible without help from President Donald Trump's chief at the Federal Communications Commission ... The FCC and the company both say the agency wasn't giving Sinclair any special favors by reviving the loophole, known as the "UHF discount," which has long been considered technologically obsolete. But the Tribune deal would not have been viable if not for Pai's intervention: Sinclair already reaches an estimated 38 percent of U.S. households without the discount, leaving it almost no room for growth." Read the full deep-dive here.

"WE'RE AFTER LEAKERS, NOT JOURNALISTS," -- that's what Deputy Attorney General Rod Rosenstein said on "Fox News Sunday." But Friday's leak crackdown announcement by Attorney General Jeff Sessions has raised many a media alarm, as Sessions said the Justice Department is considering making changes to its policies on subpoenaing news organizations. There's a fear by first amendment advocates that the DOJ will try to make it easier to pry into journalists' phone records or emails or even, potentially, to prosecute them.

-- Rosenstein is scheduled to meet this week with members of the News Media Dialogue Group, the group that gave input when the DOJ revised its guidelines in 2015 for issuing subpoenas and search warrants to journalists, and Washington bureau chiefs from several news organizations.

THE ECONOMIST IS THE MOST TRUSTED NEWS SOURCE IN THE COUNTRY, according to a recent survey from the University of Missouri's Reynolds Journalism Institute. Rounding out the top ten are Reuters, the BBC, NPR, PBS, The Guardian, The Wall Street Journal, Los Angeles Times and Dallas Morning News. Least trusted are Occupy Democrats, BuzzFeed, Breitbart, 'Social Media', Trump (as in the President), Infowars, Yahoo and 'the Internet.' Read more here.

REVOLVING DOOR:

--Hillary Krieger is the new Washington editor for FiveThirtyEight. She was previously with CNN.

--Geoff Bennett is joining NPR's White House team as a White House Reporter. He was previously covering Congress for the organization.

SOUNDBITE: "I wish we could do like John Travolta with Saturday Night Fever, where he starts dancing. He's disco dancing, and then all of a sudden, within one year, you have a million more discothèques all over the world ... You wish that you could do the same thing with the environmental issues or in the redistricting or good government practice." [Arnold Schwarzenegger]

TIL: For more than fifty years the British Army required its soldiers to sport a moustache. [Business Insider]

Shoutout to the Northern Neck News from Virginia. I picked up a copy while visiting a friend's Chesapeake Bay beach house. It's been in operation since the 1870s.

EXTRAS:

-- Facebook is starting to put more posts from local politicians into people's News Feed. [Recode]

-- Israel has taken steps to eventually shut down operations of Al Jazeera in the country. [Reuters]

-- Margaret Sullivan has some advice for new White House chief of staff John Kelly in her latest WaPo column. [Washington Post]

--New York Times TV critic James Poniewozik is writing a book about "Donald Trump as a TV/pop-culture character." [James Poniewozik]

-- Today's donor class is throwing its weight and dollars behind organizations that specialize in memes. [New York Times]

--NBC News' Chuck Todd talks to TVNewser about his "Meet The Press" film series. [TVNewser]

-- Some Gizmodo Media verticals will possibly be getting shows on Fusion. [Recode]

--NBC really wants to reboot "The West Wing," as it is doing for "Will & Grace." No, seriously, they are talking to Aaron Sorkin about it. [Deadline]

Driving the Day

BULLETIN -- NORTH KOREA SAYS IT'S PLANNING TO FIRE MISSILES TOWARD THE U.S. TERRITORY IN AUGUST -- AP's Eric Talmadge in **SEOUL** at 4:59 a.m.: "North Korea has announced a detailed plan to launch a salvo of ballistic missiles toward the U.S. Pacific territory of Guam, a major military hub and home to U.S. bombers. If carried out, it would be the North's most provocative missile launch to date.

"The announcement Thursday warned that the North is finalizing a plan to fire four of its Hwasong-12 missiles over Japan and into waters around the tiny island, which hosts 7,000 U.S. military personnel on two main bases and has a population of 160,000.

"It said the plan, which involves the missiles hitting waters 30 to 40 kilometers (19 to 25 miles) from the island, could be sent to leader Kim Jong Un for approval within a week or so. It would be up to Kim whether the move is actually carried out. ... North Korea, no stranger to bluffing, frequently uses extremely bellicose rhetoric with warnings of military action to keep its adversaries on their heels. It generally couches its threats with language stating it will not attack the United States unless it has been attacked first or has determined an attack is imminent. ...

"'We keep closely watching the speech and behavior of the U.S.,' it said. Such a move would not merely be a test launch, but a demonstration of military capabilities that could easily lead to severe consequences. South Korea's military responded by saying North Korea will face a "stern and strong" response from Washington and Seoul. Taking it a step further, Japan's Defense Minister Itsunori Onodera told parliament a missile attack on the U.S. territory would be a Japanese national emergency because it would threaten Japan's existence as a nation." http://bit.ly/2ftIrtL

-- ERIC TALMADGE is the AP's correspondent in Pyongyang. ***His very cool Instagram feed*** http://bit.ly/2wKTqlV

TOP-ED -- SUSAN RICE in the NYT, "It's Not Too Late on North Korea": "We have long lived with successive Kims' belligerent and colorful rhetoric - as ambassador to the United Nations in the Obama administration, I came to expect it whenever we passed resolutions. What is unprecedented and especially dangerous this time is the reaction of President Trump. Unscripted, the president said on Tuesday that if North Korea makes new threats to the United States, "they will be met with fire and fury like the world has never seen." These words risk tipping the Korean Peninsula into war, if the North's leader, Kim Jong-un, believes them and acts precipitously.

"Either Mr. Trump is issuing an empty threat of nuclear war, which will further erode American credibility and deterrence, or he actually intends war next time Mr. Kim behaves provocatively. The first scenario is folly, but a United States decision to start a pre-emptive war on the Korean Peninsula, in the absence of an imminent threat, would be lunacy." http://nyti.ms/2vRgYIi

INVESTORS SEEK SHELTER -- FT: "The Swiss franc led a rally among haven assets across global markets on Wednesday as investors retreated from equities in the wake of escalating rhetoric between North Korea and the U.S. ... The Swiss franc, often favoured in times of stress for its perceived stability, made its most notable gains against the euro, strengthening by as much as 1.5 per cent. Against the dollar the franc rose as much as 1.4 per cent." http://on.ft.com/2urTWV1

GEORGE STEPHANOPOULOS (@georgestephanopoulos): "EXCLUSIVE: I'll sit down live with @Scaramucci for his first interview since being fired from the WH, this Sunday only on @ThisWeekABC" ... **@StephenAtHome:** "On Monday 8/14 Anthony Scaramucci will be my guest on @colbertlateshow. This is just a heads up for our censors to get ready! #themooch".

Good Thursday morning. COINCIDENCE?: "Fire and fury" is a mission in the videogame "World of Warcraft." Who had a business and personal connection to "World of Warcraft"? Stephen K. Bannon (http://slct.al/2wKMlli).

SPOTTED: Stephen Miller, sans tie in a summer linen sportcoat, yesterday outside Woodward Table on 15th Street with his dry cleaning.

DEPARTURE LOUNGE -- "U.S. Ambassador Haley Loses Two Key Aides at United Nations," by Bloomberg's Kambiz Foroohar: "U.S. Ambassador to the United Nations Nikki Haley has lost two of her top aides, key departures that come at a time of growing international tensions between the U.S. and North Korea.

"Haley's Chief of Staff Steven Groves resigned, as did her communications director Jonathan Wachtel. Haley said on Twitter Wednesday it was because of 'family

concerns.' The departures also come ahead of Haley's trip to Vienna to review Iran's nuclear activities with the UN's International Atomic Energy Agency. Groves, an adviser who had arrived from the conservative think tank Heritage Foundation had argued for the U.S. to 'sever relations' with UN's Human Rights Council for criticizing Israel and to pull out of the Paris climate change agreement. ...

"'**Both Jonathan&Steve have recently encountered** family concerns,' Haley said. 'They will always be a part of the team & dear friends.'" https://bloom.bg/2vQC4GT

ATTN. DONALD TRUMP, MARC SHORT, STEVEN MNUCHIN and GARY COHN -- MITCH MCCONNELL SPEAKS -- by the North Kentucky Tribune's managing editor Mark Hansel: "'A Congress goes on for two years and part of the reason I think that the story line is that we haven't done much is because, in part, the President and others have set these early time lines about things need to be done by a certain point,' McConnell said. ...

"'**Don't start judging [too] soon, the accomplishments of this congress** , sending bills to this president, who will sign them,' McConnell said. 'I'm not going to tell you when we are going to finish tax reform, but we'll finish it. That's the way we begin to change America.'" ... 'I've been, and I will be again today, not a fan of tweeting -- I've said that to him privately and I've said it at other events publicly,' McConnell said. 'I think it would be helpful if the President was a little bit more on message.'" http://bit.ly/2ww8Rih

-- SO, JUST TO REVIEW ... This event was Monday, but has not gotten much attention (h/t Morning Money). The man who controls the Senate's calendar is not setting a timeline for tax reform, and he wishes the White House would stop setting artificial deadlines. And he says the president should stay on message. Over to you, Mr. President.

ADAM NAGOURNEY -- NYT, A1 -- "Democratic Fight in California Is a Warning for the National Party" : "California Democrats have emerged as something else: a cautionary tale for a national party debating how to rebuild and seize back power. Even at a time of overall success, state Democrats are torn by a bitter fight for the party leadership, revealing the kind of divisions -- between insiders and outsiders, liberals and moderates -- that unsettled the national party last year and could threaten its success in coming years. ...

"The fight pits Eric C. Bauman, a longtime party leader, against Kimberly Ellis, a Bay Area activist. Mr. Bauman won the election by just over 60 votes out of 3,000 cast at the party convention in May, but Ms. Ellis has refused to concede, claiming voting improprieties, like permitting ineligible people to vote for Mr. Bauman. ... Ms. Ellis, 44, has from the start presented herself as an outsider: It is her first run for party leadership. ... Mr. Bauman has spent 30 years working for the Democratic Party, including leading the Los Angeles County Democratic Party. He was a delegate for Mrs. Clinton in last year's presidential election. With his gruff demeanor and a strong-as-ever Bronx accent -- no matter that he came here 40 years ago -- he has been called 'Boss Bauman,' as Mr.

Bauman himself noted in an interview." http://nyti.ms/2vlJYYl

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : If you know only one fact about rising drug costs, know this one: drug makers set prices for prescription drugs. To help manage nearly double-digit price increases, employers, unions and government programs use PBMs to negotiate lower net prices to help curb costs for employers and patients. Learn more at affordableprescriptiondrugs.org ******

WHAT HAPPENED TO DWS? -- MARC CAPUTO: "Blowback from staffer scandal burns Wasserman Schultz": "The chatter about a House leadership post is gone. So is talk of statewide office. After Hillary Clinton's defeat, there's no prospect of an administration job for Rep. Debbie Wasserman Schultz. She's under fire for mismanaging an IT employee under a House IT investigation who was arrested on a seemingly unrelated mortgage fraud charge. Wasserman Schultz broke her public silence on Awan last week, portraying herself as the victim of 'right wing media' attacks rooted in anti-Muslim bigotry.

"Here's fellow Florida Democrat and DNC member Nikki Barnes saying what many others are saying privately: 'We wish she would go away and stop being so public by doubling down on negative stories ... None of this makes sense. It doesn't sound like racial profiling ... there must have been something for her .... This adds to Debbie being re-branded as the Democrats' disastrous destruction,' Barnes said. 'Those of us on the DNC know we have to rebrand ourselves and earn the people's trust. And unfortunately Debbie's name does not scream trust. It screams power. It screams limited access. It screams WikiLeaks now. DNC lawsuit. It screams a lot of negative things to the public. That's not how we want to rebrand ourselves.'" http://politi.co/2vRpSGJ

STRANGE STORY OF THE WEEK -- "Hearing loss of US diplomats in Cuba blamed on covert device," by AP's Matthew Lee in D.C. and Michael Weissenstein in Havana: "In the fall of 2016, a series of U.S. diplomats began suffering unexplained losses of hearing, according to officials with knowledge of the investigation into the case. Several of the diplomats were recent arrivals at the embassy, which reopened in 2015 as part of former President Barack Obama's reestablishment of diplomatic relations with Cuba.

"Some of the diplomats' symptoms were so severe that they were forced to cancel their tours early and return to the United States, officials said. After months of investigation, U.S. officials concluded that the diplomats had been exposed to an advanced device that operated outside the range of audible sound and had been deployed either inside or outside their residences. It was not immediately clear if the device was a weapon used in a deliberate attack, or had some other purpose." http://bit.ly/2wKAbsz

-- DEPT. OF DIPLOMACY: "Trump friend Tom Barrack said to be in talks to become ambassador to Mexico," by Josh Dawsey: "Tom Barrack, a real estate investor and a close friend of President Donald Trump's, is in talks to become

ambassador to Mexico, according to three White House officials and advisers familiar with the matter. The high-profile post -- one of the most important in Trump's orbit, given his tense relationship with the country and his crackdown on immigration along the border -- has been the subject of intense talks within the administration ... Barrack, a gregarious billionaire, is the front-runner for the position but has expressed some concerns about taking it, one of the White House officials said. It is unclear whether he will end up accepting, 'but it is his if he wants it,' one of these people said." http://politi.co/2wwuT4u

GET IT YET? -- BREITBART VS. MCMASTER -- "Exclusive - Zionist Organization of America Analysis Determines McMaster Hostile to Trump, Calls for Reassignment," by Matt Boyle. http://bit.ly/2vHRQ7s

ALEX ISENSTADT SCOOP -- "Top Trump donor ponies up to take out Flake," by Alex Isenstadt: "One of Donald Trump's most generous political benefactors is providing a six-figure donation to a super PAC devoted to unseating Sen. Jeff Flake, an Arizona Republican who has been fiercely critical of the president. Robert Mercer, a reclusive hedge fund billionaire who was intimately involved in Trump's rise and helped to bankroll his 2016 campaign, is contributing $300,000 to a super PAC supporting former state Sen. Kelli Ward, who is challenging Flake in a Republican primary next year. It's the latest sign that Trump's political machine is preparing to take on Flake, whose persistent attacks have angered the president. The White House has met with Ward and two other Republicans who are mulling primary challenges to the Arizona senator, state Treasurer Jeff DeWit and former state GOP Chairman Robert Graham." http://politi.co/2urDacO

SCOOP - "Feds sought cooperation from Manafort's son-in-law," by Josh Dawsey and Darren Samuelsohn with Daniel Lippman: "Federal investigators sought cooperation from Paul Manafort's son-in-law in an effort to increase pressure on President Donald Trump's former campaign chairman, according to three people familiar with the probe. Investigators approached Jeffrey Yohai, who has partnered in business deals with Manafort, earlier this summer, setting off 'real waves' in Manafort's orbit, one of these people said.

"Another of these people said investigators are trying to get 'into Manafort's head.' Manafort, who is a focus of the broad federal and congressional investigations into Russian meddling in the 2016 presidential campaign, is also under investigation for his business and real estate transactions, including some that involve Yohai. ... It is unclear if investigators have secured cooperation from Yohai, who also hasn't been accused of wrongdoing. ... Mueller's targeting of both Manafort and his son-in-law over potential criminal wrongdoing is a familiar tactic in white-collar cases, commonly called 'climbing the ladder.'" http://politi.co/2ustbzZ

FOR TY COBB -- "Trump's Legal Team Is No Match for Mueller's: The president could learn from Bill and Hillary Clinton's years of litigation," by Bloomberg's Tom Schoenberg with Shannon Pettypiece: "As Mueller adds experienced prosecutors and broadens his investigation, Trump's legal team still appears disorganized and

understaffed. An army of well-paid lawyers would help the president get in front of the investigation: preparing responses to allegations before hearing about them from prosecutors or reporters, anticipating where Mueller is going, and developing a counternarrative to stymie him. ... Instead, Trump's defense has been almost entirely reactive-responding to the latest bombshell report with uninformed statements by surrogates. ...

"Bill and Hillary Clinton -- both Yale Law grads -- set up a war room on the top floor of the old executive office building next to the White House, where lawyers and staff would go through documents that needed to be turned over. Meetings were held several times a day, with lawyers shuttling between the White House, the executive building, and the offices of Skadden and Williams & Connolly a few blocks away. Dowd and Sekulow have offices less than a 10-minute walk from the White House, and at this point the legal team doesn't see any need to set up a Clinton-style war room. ... Trying to deal with Mueller without a high-powered legal operation 'is like going to a knife fight with a stick of butter in your hand,' says Nicholas Allard, a former Washington attorney who's now the dean of Brooklyn Law School. 'The team should reflect the importance of what's at stake, which is nothing less than the future of this presidency.'"

IN THE SKIES -- "Unarmed Russian Air Force jet overflies the Pentagon, Capitol, CIA," by CNN's Jon Ostrower, Peter Morris and Noah Gray: "An unarmed Russian Air Force aircraft overflew the US Capitol, the Pentagon, Central Intelligence Agency and Joint Base Andrews at low altitude on Wednesday as part of a longstanding treaty that allows the militaries of the United States and Russia to observe the other from the air, according to two people familiar with the flight. The flight was part of the Treaty on Open Skies, which allows military aircraft from the United States and Russia and other nations

to fly aerial observation flights to observe military sites of the 34 signatory nations. The Russian Air Force Tupolev Tu-154 on Wednesday afternoon passed at around 3,700 feet over downtown Washington and Joint Base Andrews in Maryland, where Air Force One is based, according to tracking website Flightradar24.

"The jet is authorized to enter P-56, the highly secure airspace surrounding the White House. ... A second flight by the same jet [was] planned for between 5 p.m. and 6 p.m. Wednesday, when the Russian jet [was scheduled to] overfly Bedminster, New Jersey, where President Donald Trump is vacationing ... A law enforcement source told CNN that the plane also overflew Camp David, the presidential retreat in the Catoctin Mountains, the Trump National Golf Course in Virginia, and Mount Weather, one of the U.S. government's secret relocation bunkers. United States Air Force personnel were on the flight and the aircraft is capable of a variety of intelligence gathering." http://cnn.it/2vpKMtw

THE 16-YEAR-OLD WAR -- "Trump's indecision on Afghanistan leaves generals in lurch," by Wesley Morgan: "U.S. and Afghan military commanders battling the Taliban and the Islamic State are encountering an obstacle they never expected, sources close to them say: months of indecision by President Donald Trump on whether to commit thousands of additional American troops. Instead of approving their plan for more troops as anticipated, the president has caught his generals off guard by questioning whether the 16-year-long effort to stabilize Afghanistan is still worth it, according to current and former military officials familiar with the conversations. ...

"Amid the uncertainty, the security situation on the ground continues to deteriorate. Deaths of Afghan security forces in the early months of 2017 were 'shockingly high,' the special inspector general for Afghanistan reconstruction recently reported, continuing a years-long upward trend. The Afghan government 'controls or influences' only 60 percent of the country's 407 districts as of early this summer, down from 65 percent the same time last year, according to the U.S. military headquarters in Kabul." http://politi.co/2urJ4uc

NETANYAHU'S STAND -- "Netanyahu Accuses 'the Left' and the Media of Trying to Oust Him," by NYT's Isabel Kershner in Jerusalem: "In Trumpian fashion, Mr. Netanyahu denounced the 'fake news media,' which he said had joined with 'the left' in what he called 'an obsessive and unprecedented witch hunt against me and my family, in order to carry out a coup.' The point, he said, was to press the law enforcement authorities to file charges, no matter what." http://nyti.ms/2vpocRX

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers and other health care purchasers; however, the list price - the important starting point for those negotiations -- continues to rise, at a rate of nearly ten percent in 2016 alone. Increased competition, faster reviews of generics and biosimilars and ending anti-competitive practices can also bring down the cost of medications for patients. Learn more at affordableprescriptiondrugs.org ******

MEDIAWATCH -- "United Nations Appoints Alison Smale of The New York Times to Top Post for Public Information," by NYT's Somini Sengupta: "The United Nations on Wednesday named Alison Smale, a veteran correspondent and editor at The New York Times, as its most senior official in charge of shaping the 193-member organization's global public image. As the next under secretary general for global communications, Ms. Smale, 62, will join the cabinet of the United Nations' top leader, Secretary General António Guterres, and be among a small circle of influential women around him. ... Ms. Smale, a British citizen, is currently The Times' bureau chief in Berlin. She had been the executive editor of The International Herald Tribune, based in Paris, for four years, before it was renamed The International New York Times in 2013." http://nyti.ms/2hMgrSL

--"Disney paying at least $177 million to settle 'pink slime' lawsuit," by CNN's Tom Kludt: "In a footnote on the company's quarterly earnings report on Tuesday, Disney said it paid $177 million that was 'incurred in connection with the settlement of litigation,' at least some of which was related to a years-long legal dispute with South Dakota-based meat processor Beef Products Inc. ... [A] lawyer for BPI told CNNMoney that its settlement was worth even more than $177 million. ... Even just $177 million would likely represent roughly a year's worth of advertising revenue for ABC's evening news program, a significant sum for the network and a sign of how damaging defamation suits can be for media outlets after the Hulk Hogan case sent Gawker into bankruptcy." http://cnnmon.ie/2vQzXD0

--"Google reveals sites with 'failing' ads, including Forbes, LA Times," by Digiday's Lucia Moses: "On June 1, Google rolled out its Ad Experience Report, a tool it's using to evaluate and score websites based on their ad creative and design. It provides screenshots and videos of ads that have been identified as annoying to users, such as pop-ups and autoplaying video ads with sound, and 'prestitial' ads with countdown timers.

"So far, Google has identified about 700 sites as warranting corrective action out of around 100,000 sites it's reviewed so far. Half of the roughly 700 got a 'failing' status and the other half a 'warning.' ... Those listed as failing include Forbes; Tronc-owned Orlando Sentinel, Sun-Sentinel and Los Angeles Times; Bauer Xcel Media's Life & Style and In Touch Weekly; The Wrap; Chicago Sun-Times; Tribune Broadcasting's Fox 13 Now; and Sporting News." http://bit.ly/2vRCRIr

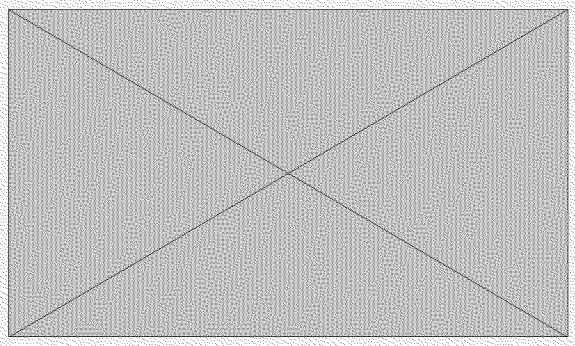
Subject: AEI Today: Does America still believe in the right to be wrong?

The whole idea of a free society is based on a very simple idea that is very hard to live by: People have the right to be wrong.

AEI's daily publication of independent research, insightful analysis, and scholarly debate



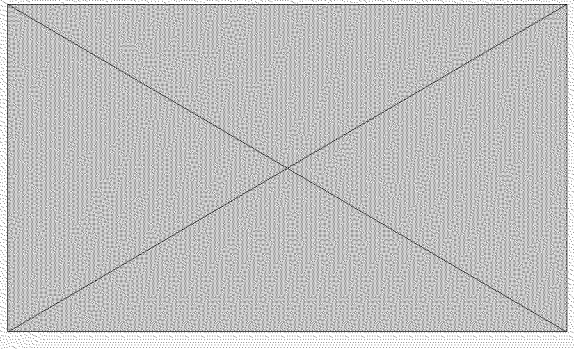
Reuters

Does America still believe in the right to be wrong?

Jonah Goldberg | National Review Online

You might think that current controversies over NFL players refusing to stand for the national anthem, the vandalizing and removal of statues, and the "PC" firestorms erupting across campuses aren't about religion. But you'd be wrong. History's religious conflicts were ultimately about what values and ideas should be imposed on everybody. Traditional religion may be

receding in American culture, but politics is taking on a religious flavor to compensate.

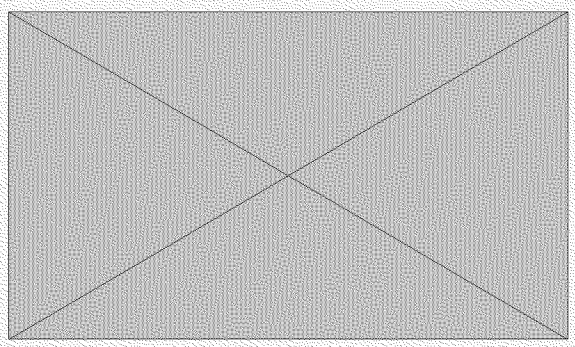


Reuters

Volkswagen and the urge for collective punishment

Benjamin Zycher | AEI

A rotten apple spoils the barrel, the old saying goes. And because of regulatory politics and the incentives of agency officials, the spoilage often proceeds unimpeded — even if the rotten one and the others occupy separate barrels. Witness for example the Volkswagen diesel emissions scandal that emerged in 2015, a brazen act of business malfeasance that will cost VW at least $15 billion. It's full steam ahead for the regulatory bureaucracy.



USA Today

Disrespecting the flag is a disgraceful way to protest the president

Marc A. Thiessen | The Washington Post

The NFL's game operations manual says that "all players must be on the sideline for the National Anthem" and must "stand at attention, face the flag, hold helmets in their left hand, and refrain from talking." But it turns out the league is selective when it comes to the speech it protects. Last September, the Dallas Cowboys asked for permission to wear helmet stickers in honor of police officers massacred in Dallas. The NFL refused.

Reuters

Germany's swing to the right isn't just about migrants

Paul Zajac | AEIdeas

The migrant issue has swayed the German elections, with the Alternative for Germany leveraging anti-immigrant sentiments to break into the German Bundestag. But there's more to the story. The other party that made significant gains is the Free Democrats. What do the two parties have in common? A deep rejection of any increased

solidarity in the Eurozone, which taxpayers fear would end with Germany paying for everyone else's public debts.

From: Hadas Gold - POLITICO Media
Sent: Wed 8/16/2017 10:39:15 AM
Subject: Morning Media: Trump's press conference draws outsized coverage -- New poll results on trust in news -- AP to avoid using 'alt-right'

By Hadas Gold | 08/16/2017 06:37 AM EDT

With Alex Weprin and Cristiano Lima

WELL, WE HAD BEEN WAITING FOR A PRESS CONFERENCE AND BOY, DID WE GET ONE. President Donald Trump took questions from the media in the lobby of Trump Tower yesterday, a move that several reports suggested was impromptu considering White House officials hadn't said ahead of time that there would be a press conference ("That was all him -- this wasn't our plan," a White House official told CNN's Jeff Zeleny). Trump doubled down on his initial reaction to a deadly white supremacist rally in Charlottesville, Virginia, laying blame on "both sides" and asking why the "alt-left" isn't being held accountable for the violent clashes. Observers from mainstream media outlets and many politicians including Republicans thought the press conference was a mess, and it backtracked on the statement Trump made yesterday directly condemning white supremacists and neo-Nazis.

-- Predictably, the right-wing media loved the press conference though, particularly how Trump bashed the mainstream media and highlighted left-wing violence -- Breitbart's homepage: "Trump on fire: Blast's reporters' handling of Charlottesville violence." Charlie Hurt, opinion editor of The Washington Times, Fox News contributor, Breitbart News contributor, and a Drudge Report editor: "And THIS is why Donald Trump is president." Gateway Pundit: "EPIC! Trump Blasts #FakeNews Media and Alt-Left Thugs At Trump Tower Presser." Mike Cernovich: " Trump's press conference calls out left wing domestic terrorism." Cassandra Fairbanks: "I have never ever been so pleased with a politician. He just verbally beat their asses while telling the truth."

-- Among mainstream outlets, the presser drew outsized coverage. It dominated coverage all afternoon and evening on cable news and the "CBS Evening News" even dedicated its entire half hour to the presser and the response to it, a move which you almost never see on the usually pressed-for-time network newscasts. All of the networks dedicated extensive time to replaying parts of the presser in full, which is also unusual.

-- Then there was Fox News, the president's favorite cable news channel. Initially the reaction wasn't favorable to Trump. The "Fox News Specialists" hosts, who were on right after the press conference, blasted the presser, with host Kat Timpf even saying she was ready to burst into tears. Laura Ingraham, who is said to be in talks for a program at the channel, even lobbed some criticism at the president. But come primetime, during the host-driven hours, much of the focus was on left-wing violence, the media, and other topics. Sean Hannity seemed to revel in the media reaction: "It was an epic beatdown of the liberal mainstream establishment media they are now in full complete panic meltdown mode,."

BONUS VIDEO - NBC's cameras caught Chief of Staff's John Kelly's reaction during a part of

the press conference.

HE MAY HAVE DELETED IT BUT THE RETWEET WAS HEARD LOUD AND CLEAR. Just two days after a woman was struck and killed by an alleged white supremacist plowing his car into a group of protestors, Trump retweeted a tweet that appeared to show a cartoon train, labeled "TRUMP" hitting a person with the CNN logo superimposed on their head. The original tweeter of the cartoon said in a tweet that it has no connection to the events in Charlottesville, and that in the cartoon "the reporter is trying to hold the train back. His feet are popping up railroad ties," not being hit by the train. Regardless, a White House official, speaking on background to reporters, said the tweet was "inadvertently posted" and "immediately deleted" when noticed. The first time Trump shared a tweet featuring violence against the CNN logo, (a GIF of himself beating up a person with the CNN logo superimposed on its head), he kept it up and the White House vigorously defended it.

-- But retweets take two clicks, as several people have noted. It's a lot easier to mistakenly hit "like" by accident. When you want to retweet a tweet, on all platforms Twitter pops up a notice giving you the option to "retweet" or to "quote tweet." This isn't the first time Trump has retweeted something and then claimed it was a mistake. In 2015, Trump blamed an intern for manually retweeting a tweet which mocked Iowans.

Good morning and welcome to Morning Media! Today is my last day at POLITICO after more than five years. As we announced last week, I'm joining CNN as a correspondent covering European politics, media and global business. I will miss this place, the work and the people here immensely. I want to thank all of you for reading and all for all your tips and comments. I also want to specifically thank **Alex Weprin** (**@alexweprin** / **alexweprin@gmail.com**) for being my guide and editor through my too-short Morning Media tenureship, **Cristiano Lima** (**clima@politico.com** / **@ludacristiano**) for his assistance, Joe Pompeo for showing me the ropes, and all my POLITICO colleagues for their tips and contributions. I hope you'll continue following my work at CNN. My twitter handle will remain the same: **@Hadas_Gold**. **Alex Weprin** will take the reins from here. **Archives**. Subscribe.

THE AP IS AVOIDING THE TERM "ALT-RIGHT": "At AP, we have taken the position that the term "alt-right" should be avoided because it is meant as a euphemism to disguise racist aims. So use it only when quoting someone or when describing what the movement says about itself. Enclose the term "alt-right" in quotation marks or use phrasing such as the so-called alt-right (no quote marks when using the term so-called) or the self-described "alt-right."" More on their explanation here.

NEW POLITICO/MORNING CONSULT POLL: VOTERS TRUST LOCAL NEWS OVER NATIONAL NEWS via POLITICO polling guru Steven Shepard - Voters trust local news over national news and generally perceive their regional media sources as more ideologically balanced, according to a new POLITICO/Morning Consult poll out today. Asked which they trust more to tell them the truth, 41 percent say local news, 27 percent say national news and 32 percent don't have an opinion. Democrats have more faith in national news, saying 39-36 percent they trust it more than their local news. But Republicans (45-21 percent) and independents (41-22 percent) trust local news more by roughly two-to-one margins.

-- National news outlets are viewed as more liberal: A combined 55 percent say the national news is very or somewhat liberal, compared to only 16 percent who say national news outlets are very or somewhat conservative. Compare that with local news: 40 percent say it's liberal (though only 14 percent say it's very liberal), while 26 percent say they consider local news very or somewhat conservative. **Toplines: http://politi.co/2uYvRET | Crosstabs: http://politi.co/2uGk7LG**

THAT NEW YORK TIMES DOCUMENTARY WILL BE ON SHOWTIME: On Monday I broke in Morning Media that New York Times reporters were being followed around by a documentary crew filming them for a documentary about their reporting on Trump. Now the Hollywood Reporter and CNN are reporting the documentary will air on Showtime, and is being filmed by Liz Garbus for a multipart series.

THE TIMES' JAMES BENNET TO TESTIFY TODAY IN SARAH PALIN DEFAMATION SUIT: At 2 p.m. in New York City the Times' editorial page editor James Bennet will testify regarding an editorial which initially connected the former governor and vice presidential candidate to a shooting which killed six people and severely injured former Congresswoman Gabrielle Giffords in 2011. The Times subsequently corrected the editorial.

THE MOOCH DELIVERS FOR COLBERT, via Alex Weprin: Anthony Scaramucci might not have lasted in the White House, but he has a place in late night comedy, if Monday's ratings for CBS' "Late Show" are any indication. Monday's show. Per preliminary Nielsen overnight ratings, Monday's show was the most-watched Monday night ever for the program, and tied an episode from May as the most-watched regular episode of the program since 2015.

-- Speaking of "The Mooch," what does he have planned now? THR's Jeremy Barr suggests that a book or another TV gig could be in his future.

NEW BREITBART NEW YORK TIMES MAGAZINE FEATURE goes "Down the Breitbart Hole". The piece takes a sympathetic look at the organization and its editor, Alex Marlow. Written over a lengthy period of time, the author, Wil S. Hylton, notes the divers emakeup of Breitbart's staff, Marlow's own lack of political certitude on many issue Breitbart attaches itself to, and the obsession the rest of the media has with Breitbart, including what he says were incorrect reports that the staff of Breitbart were told to lay off writing about Jared Kushner. Hylton says he sat in on a "dozen" editorial calls during that time period and only heard Marlow asking for "more dirt on Kushner." Also of note: Marlow claims the administration is keeping them at arm's length - he even traveled to Sicily for the G-7 meeting, hoping to interview Trump but the president declined to see him.

REVOLVING DOOR:

-- Adam Bryant, author of The New York Times "Corner Office" column, announced he's leaving the paper after 18 years and over 500 columns penned, our former colleague Joe Pompeo reported.

-- HuffPost announced that Shelley Venus is taking over its video operations from Charlotte Koh, who's pursuing local media opportunities in Los Angeles.

-- Elle announced a spate of promotions, including columnist R. Eric Thomas moving into a senior writer role and Sally Holmes and Gena Kaufman shifted into roles as executive director of social media and director of special projects, respectively.

-- The Weekly Standard is relaunching NFL writer Gregg Easterbrook's "Tuesday Morning Quarterback," the popular sports column, next Tuesday.

SOUNDBITE: "Honestly, if the press were not fake and if it was honest, the press would have said what I said was very nice. - excuse me - unlike you and unlike the media, before I make a statement, I like to know the facts." [Donald Trump]

EXTRAS:

-- This week Fox News and The Daily Caller quietly deleted posts from January that appeared to advocate for using cars to run over protesters. [The Daily Beast] The Daily Caller also removed articles and the author page for Jason Kessler, the organizer of the "Unite the Right" rally in Charlottesville who had previously written for the site.

-- CNN refused to air a Trump campaign ad that featured an attack on the channel. "CNN would accept the ad if the images of reporters and anchors are removed," a network spokesperson said in a statement. "Anchors and reporters don't have 'enemies,' as the ad states, but they do hold those in power accountable across the political spectrum and aggressively challenge false and misleading statements and investigate wrong-doing." [BuzzFeed News]

-- The Nation is reviewing a story which cast doubt upon the Russian hack of the DNC emails. [Washington Post]

-- Vogue has a big profile on Oprah Winfrey, including details on her new gig as a correspondent for "60 Minutes." [Vogue]

-- According to data from NewsWhip, content from the AP "drove higher total engagement on Facebook than any of the Top 10 individual publishers in June and July." [AP]

-- Marketplace and BBC unveiled a new global business broadcast initiative led by veteran BBC reporter Anu Anand and set to launch Sept. 5 in the U.S. [Current]

-- Have swarming journalists turned the Capitol subway into the epicenter of D.C. politics? [WaPo]

-- "How SB Nation profits off an army of exploited workers." [Deadspin]

-- This tweet by Barack Obama quoting Nelson Mandela became the most liked tweet in Twitter history yesterday. [Twitter]

Driving the Day

BULLETIN -- NYT'S MICHAEL GORDON in Amman, Jordan: "Defense Secretary Jim Mattis said that President Trump, who had been accused by lawmakers of dragging his feet on Afghanistan, had settled on a new strategy after a 'rigorous' review.

"'The president has made a decision,' Mr. Mattis told reporters on an overnight flight that arrived in Amman ... on Sunday. 'I am very comfortable that the strategic process was sufficiently rigorous.' Mr. Mattis received the authority in June to send nearly 4,000 troops to Afghanistan so that the United States military could expand its efforts to advise Afghan forces and support them with American artillery and air power. But Mr. Mattis had refrained from building up the American force there until the Trump administration settled on a broader strategy. Mr. Mattis declined to say what steps the president had ordered, including troop levels. He added that Mr. Trump wanted to announce the details to the American people, and that the president was expected to do so in coming days. ...

"The decision to send troops is just one component of a strategy that is also expected to outline ways to pressure Pakistan to shut down the sanctuaries that the Taliban and other extremist groups have maintained on its territory. 'It is a South Asia strategy; it not just an Afghanistan strategy,' Mr. Mattis said." http://nyti.ms/2x2TxKm

Good Sunday morning. SNEAK PEEK -- DAVID REMNICK in the New Yorker, coming out tomorrow: "Early last November, just before Election Day, Barack Obama was driven through the crisp late-night gloom of the outskirts of Charlotte, as he barnstormed North Carolina on behalf of Hillary Clinton. ... During his speech in Charlotte that night, Obama warned that no one really changes in the Presidency;

rather, the office 'magnifies' who you already are. So if you 'accept the support of Klan sympathizers before you're President, or you're kind of slow in disowning it, saying, 'Well, I don't know,' then that's how you'll be as President.'" http://bit.ly/2ihQqes ... ***A look inside the magazine*** http://bit.ly/2vPCKvX

-- WORTH NOTING: Obama has not publicly responded to Trump's comments post-Charlottesville except to post a tweet quoting Nelson Mandela.

MARK LANDLER and **MAGGIE HABERMAN: "With Bannon's Ouster, Question Remains Whether His Agenda Will Be Erased, Too"** http://nyti.ms/2x2QKRw

-- JOSH DAWSEY and **MATT NUSSBAUM:** "The departures from Trump's White House have come at a dizzying pace in recent weeks: multiple communications directors, the chief of staff and the press secretary have all left, along with top aides on the national security council and a number of CEOs from influential business councils. But none of the departures are likely to change the dynamics as much as that of the polarizing Bannon, whose ouster on Friday could alienate conservatives, hearten some who feared his brand of populism-nationalism, and dial down the fights inside 1600 Pennsylvania Ave.

'"Bannon is the intellectual heart and soul of the Trump movement,' said Mark Corallo, a prominent GOP operative who served briefly as the spokesperson for Trump's private legal team. 'He was the think tank. He's the idea generator. ... He was the guy who was the most thoughtful about how to enact the agenda, how to build a coalition.'" http://politi.co/2vdOox4

BREITBART'S LEAD STORY -- "Report: Powerful GOP Donor Sheldon Adelson Supports Campaign to Oust McMaster" http://bit.ly/2vPDzET

-- BANNON SPEAKS to Bob Costa and John Wagner, who reported from Bedminster: "'If the Republican Party on Capitol Hill gets behind the president on his plans and not theirs, it will all be sweetness and light, be one big happy family,' Bannon said. ... 'No administration in history has been so divided among itself about the direction about where it should go,' Bannon said, adding that Trump's base is frustrated by a congressional agenda that has dovetailed more with traditional Republican priorities than the agenda Trump championed." http://wapo.st/2wepaDo

--"Breitbart bullish on Bannon return, promises 'aggressive expansion,'" by Cristiano Lima: "Breitbart News is riding high amid its reunion with executive chairman Steve Bannon. ... 'I think we definitely are planning on stepping up our game,' Breitbart News Washington editor Matthew Boyle said during the outlet's weekly SiriusXM show on Saturday. '[W]e're planning a lot of aggressive expansion and much more aggressive reporting than we've already been doing ... We've been a pirate ship without a captain for a year ... We're thrilled to have our captain back." http://politi.co/2xfu5AT

THERE WE GO! -- DAILY MAIL SAYS IVANKA AND JARED PUSHED BANNON

OUT: "How Jewish convert Ivanka got 'Bannon the Barbarian' to go: Trump's daughter 'helped to force out' aide blamed over President's failure to condemn neo-Nazi rally ... Chief strategist Bannon, 63, helped orchestrate the President's election victory ... But many blamed him for Trump's failure last week to condemn neo-Nazis ... 'Pushed out' by daughter Ivanka and her husband because of his far-Right views": http://dailym.ai/2v3rp8p

-- FRONT PAGE OF THE BALTIMORE SUN: "Jared Kushner's firm seeks arrest of Maryland tenants to collect debt," by Doug Donovan: "The real estate company owned by Jared Kushner, son-in-law and top adviser to President Donald Trump, has been the most aggressive in Maryland in using a controversial debt-collection tactic: getting judges to order the arrest of people who owe his company money. Since 2013, the first full year in which the Kushner Cos. operated in Maryland, corporate entities affiliated with the firm's 17 apartment complexes in the state have sought the civil arrest of 105 former tenants for failing to appear in court to face allegations of unpaid debt, The Baltimore Sun has found." http://bsun.md/2weo36H

-- TIMES OF ISRAEL: "Abbas says Trump administration 'in chaos'": "'Each time they reiterate their commitment to a two-state solution and the stop to settlement building, Abbas says. 'I urge them to tell Netanyahu that, but they are deterred.' 'I don't even know how they are dealing with us, because his entire administration is in chaos,' he adds." http://bit.ly/2uVkvWM

MNUCHIN RESPONDS TO CRITICS IN HIS YALE CLASS -- via Zach Warmbrodt: "I don't believe the allegations against the president are accurate. I believe that having highly talented men and women in our country surrounding the president in his administration should be reassuring to you and all the American people." ***Mnuchin's full statement*** http://bit.ly/2v3Q0tY

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: If you know only one fact about rising drug costs, know this one: drug makers set prices for prescription drugs. To help manage nearly double-digit price increases, employers, unions and government programs use PBMs to negotiate lower net prices to help curb costs for employers and patients. Learn more at affordableprescriptiondrugs.org ******

NEW POLL -- "Trump's Job Rating Is Below 40 Percent in Three Key Midwest States," by NBC's Mark Murray: "President Donald Trump's job-approval rating in the three states that helped propel him to the White House - Michigan, Pennsylvania and Wisconsin - stands below 40 percent, according to a trio of NBC News/Marist polls of these key states in the Midwest. In addition, Democrats enjoy double-digit leads in Michigan and Pennsylvania on the question of which party voters prefer to control Congress after the 2018 midterms, and they hold an 8-point advantage in Wisconsin.

"And in all three states, more than six-in-10 voters say Trump's conduct as president has embarrassed them, versus just a quarter who have said it's made them proud. These three NBC/Marist polls were conducted Aug. 13-17 - after the August 12 unrest

and violence in Charlottesville, Va., as well as in the midst of President Trump's multiple responses to that unrest and violence." http://nbcnews.to/2v3zs58

ABOUT YESTERDAY ... -- BOSTON GLOBE FRONT PAGE: "MAKING A STAND AGAINST RACISM ... Resolute and ready, they marched ... Rally by tens of thousands is peaceful but pointed" -- ***A1 pdf*** http://bit.ly/2ve082l

-- "'Free speech' rally speakers, little heard, end event quickly," by the Boston Globe's Beth Healy: "By 12:45 p.m., only 45 minutes into their official program, organizers of the Boston Free Speech rally ended the event and were escorted by police out of the park, to chants of 'Go home, Nazis' from the crowd. A Facebook post for the event listed 14 speakers and was scheduled to last for two hours." http://bit.ly/2fX8NEr

-- @realDonaldTrump: "Great job by all law enforcement officers and Boston Mayor @Marty_Walsh. Our great country has been divided for decades. Sometimes you need protest in order to heal, & we will heal, & be stronger than ever before! I want to applaud the many protesters in Boston who are speaking out against bigotry and hate. Our country will soon come together as one!"

... AND IN CHICAGO: "7 shot, 1 fatally, in West Pullman attack among 33 shot in 13 hours," by the Chicago Tribune's Elva Malagon and Denease Williams-Harris. http://trib.in/2v32Zfp

WHAT OTTAWA WANTS YOU TO READ -- "The Trump Unit: Inside Canada's PMO squad to save NAFTA," by the National Post's Alexander Panetta: "The Canadian government has created an election-style nerve centre to handle White House-related challenges and officials who describe its operations say it has about eight regular staff: two former trade officials, two senior PMO officials, an ambassador, a writer, a cabinet minister, and it's run by a young staffer with a reputation for staying cool while smothering political fires.

"The most blistering inferno it's preparing to confront is a scenario where the president threatens NAFTA. Everybody involved anticipates the threat level from Trump will rise with the heat of negotiations. A well-connected Washington lobbyist milling about last week's talks said a Trump pullout threat is virtually assured: 'Almost 100 per cent.' Trade lawyer Dan Ujczo said it's a logical play for the president: 'The threat of withdrawal is his key negotiating leverage.'" http://bit.ly/2wlnOad

GREAT STORY -- ANNIE KARNI on **NEWT GINGRICH: "Newt Gingrich goes to spouse school":** "Last week, Newt Gingrich sat in a classroom surrounded by 11 women and one other man, furiously jotting notes. In the weeklong intensive, where classes ran from 9 a.m. to 4 p.m. with only a short cafeteria lunch break in between, the former House Speaker and onetime presidential candidate received a crash course in a new role: invisible spouse. When he moves to Rome with his third wife, Callista Gingrich, to become husband of the Ambassador to the Holy See, the ubiquitous Fox

News talking head, will have no official diplomatic role abroad, beyond being generally presentable and essentially not heard from.

"It will be a challenge for an outspoken sometimes-booster, sometimes-critic of the Trump administration, who said he does not plan to terminate his contract with Fox News. But like former President Bill Clinton during his wife's two bids for the presidency, Gingrich will be taking on the secondary role of booster after a public life spent demanding the limelight. Aware that this new, less celebrated, role will take some getting used to, Gingrich eagerly enrolled himself in what he referred to, excitedly, as 'spouse school.'

"The program, run by the State Department and hosted on the Arlington campus of the Foreign Service Institute, was started in the 1950s, when it was referred to simply as the 'Wives Seminar.' Over the years, a State Department official said, it 'has evolved into a variety of training and orientation programs for foreign affairs family members.' Today, topics include: 'expectations and personal goals for your time overseas,' 'post morale,' 'the official residence,' 'navigating a public diplomacy role,' 'legal issues and ethics,' as well as 'stress management.'" http://politi.co/2x2pnHl

WHAT AMERICA IS READING ... -- THE BIRMINGHAM (ALA.) NEWS: "With Jones, Democrats dreaming big again: 'Mount Rushmore of political upsets'" http://bit.ly/2iguP5O ... **ARIZONA REPUBLIC:** "Sign of respect for the eclipse: Navajos won't be watching 'sacred communication' between sun and moon" http://bit.ly/2x3k8XK ... **CHARLOTTE OBSERVER:** "HERITAGE OR 'SHAMEFUL HISTORY'?: Gastonia's Confederate monument, one of dozens standing quietly on N.C. public property, inspires loyalty even as people question its message" http://bit.ly/2vPqZ8F ... **JANESVILLE (WIS.) GAZETTE:** "Now available: One-fourth of business space vacant in downtown Janesville." http://bit.ly/2wtHAjd

-- RARE: INDIANAPOLIS STAR FULL FRONT PAGE EDITORIAL: "LET'S STAND AGAINST HATE. TOGETHER" http://bit.ly/2vPTuTS

REMEMBERING ARTHUR FINKELSTEIN - NYT's Sam Roberts: "Finkelstein, a reclusive political Svengali who revolutionized campaign polling and financing and helped elect a bevy of conservative candidates, including President Ronald Reagan and Prime Minister Benjamin Netanyahu of Israel, died on Friday night in Ipswich, Mass., where he lived. He was 72. ... Mr. Finkelstein was among the first political strategists in the late 1970s to grasp the potential of a United States Supreme Court ruling that allowed putatively independent political committees to spend money on behalf of individual candidates and causes. ... He also pioneered sophisticated demographic analyses of primary voters and methodical exit polling, and of using a marketing strategy, called microtargeting, to identify specific groups of potential supporters of a candidate regardless of their party affiliation." http://nyti.ms/2xfq2En ... ***Statement by his family*** http://bit.ly/2ihkjeR ... ***National Review profile*** http://bit.ly/2we3uqY

-- AP: "Comedian, civil rights activist Dick Gregory dies," by Daisy Nguyen: "Dick

Gregory, the comedian and activist and who broke racial barriers in the 1960s and used his humor to spread messages of social justice and nutritional health, has died. He was 84. Gregory died late Saturday in Washington, D.C. after being hospitalized for about a week, his son Christian Gregory told The Associated Press. He had suffered a severe bacterial infection. As one of the first black standup comedians to find success with white audiences, in the early 1960s, Gregory rose from an impoverished childhood in St. Louis to win a college track scholarship and become a celebrated satirist who deftly commented upon racial divisions at the dawn of the civil rights movement." http://bit.ly/2fWy16a

SUNDAY BEST -- JAKE TAPPER talks to **OHIO GOV. JOHN KASICH** on CNN's **"STATE OF THE UNION": TAPPER:** "If everything continues like it has been, does a Republican need to step forward to challenge President Trump in three years?" **KASICH:** "Well, Jake, as you said, I don't have any plans to do anything like that. I'm rooting for him to get it together. We all are. We're only like seven months into this presidency. ... What we have to start thinking about, all of us, not just the president, but down where we live, in the neighborhoods, in the communities, we've gotta build a stronger America. Look, why am I on this show. You asked me to come on.

"I'm trying to have a responsible voice. To call things out when they need to be called out, but also to support my country. So what I hope is going to happen ... I hope we're going to have stability, the president is going to learn from these episodes and we're going to do better. That's what I hope is going to happen. We'll have to wait and see."

-- FOX NEWS SUNDAY: "Trump ally blast congressional leaders," by Kyle Cheney: "A top ally of President Donald Trump offered hints Sunday of a coming war on Republican leaders in Congress, a battle presaged by the return of former chief strategist Steve Bannon to Breitbart News.

"'There's a lack of leadership on one side of Pennsylvania Avenue,' said David Bossie, a former Trump campaign adviser, appearing on 'Fox News Sunday.' Bossie, who said he's spoken to Bannon 'many times' in recent days, said Bannon's departure from the administration will help the administration at 'leaning into Congress.' He repeatedly decried a 'failure of leadership in the House and Senate.' 'Mitch McConnell and Paul Ryan have to step up,' Bossie said, adding, 'The House and Senate leadership has not bought into the president's agenda fully.'" http://politi.co/2vdLIF0

-- SEN. TIM KAINE talks to **JOHN DICKERSON** on **CBS'S "FACE THE NATION"** about Robert E. Lee's statue in the Capitol: "Every state gets two statues to put in Statuary Hall or throughout the capital. Just using Virginia as an example. The state gets to choose two people to represent the entire scope of the state's history. Virginia obviously chose George Washington, the father of the country. But the second choice that was made in 1909, and has never been changed, is Robert E. Lee.

"I think as you look at the scope of Virginia history here in 2017, and if you want there

to be two people to really stand for who Virginia is, why wouldn't you think about Pocahontas who, had she not saved John Smith's life, we wouldn't even be here possibly? Why wouldn't you think about a Barbara Johns, who led a school walkout in Prince Edward County that ultimately became part of the Brown versus Board, desegregation decision? Why wouldn't you think about Governor Wilder, the grandson of a slave, a decorated Korean War combat veteran, who became the first elected African-American government in the history of the country? I think from 2017 looking backward, I think Virginia could probably do better in the two people that we choose to stand for us in Statuary Hall. And I think a number of the other states can do better as well."

-- SIREN: @facethenation: Sen. Scott: "'As we look to the future it's going to be be very difficult for POTUS to lead. His moral authority remains compromised.'"

JAKE'S TIP OF THE DAY -- WEAR THESE SHOES (Allbirds are kind of great) **-- NYT Style: "To Fit Into Silicon Valley, Wear These Wool Shoes,"** by Nellie Bowles. http://nyti.ms/2vdNIaQ

DEPT. OF TAX REFORM IS HARD -- "Left warns Democrats in tax reform fight," by Elana Schor: "Liberal activists who hounded the GOP throughout its failed Obamacare repeal bid are gearing up to hit any Democrat who strays from the fold on tax cuts for the wealthy - including some of the party's most politically vulnerable incumbents. Democrats were spared the sight of their progressive base battling centrists on Obamacare, which proved a uniquely unifying issue for both wings of the party. But there's no guarantee that taxes will be another kumbaya moment for Democratic leaders, who have long struggled to contain tensions between red-state lawmakers facing tough reelections and a grassroots emboldened by resistance to President Donald Trump's agenda. ...

"Liberal groups are vowing to fight the GOP tax bill as hard as they battled Obamacare repeal. They're expecting Democrats to stand together against any legislation that cuts taxes for the rich, even if it also trims tax bills for others. And they're prepared to unleash their energized grassroots on any lawmaker who doesn't get on board." http://politi.co/2wlrl8H

IMPORTANT -- THE HILL'S BEN KAMISAR: "The Republican National Committee

expanded its massive fundraising lead over the Democratic National Committee in July as the Democrats posted their worst July haul in a decade. The DNC raised just $3.8 million in July, compared to the $10.2 million raised by the RNC in the same month. While the GOP has no debt, the DNC added slightly to its debt in July, which now sits at $3.4 million." http://bit.ly/2uUsZxC

THE OPPOSITION -- "Amateur sleuths hunt for Trump bombshells," by Darren Samuelsohn: "Nearly 3,000 miles from special counsel Robert Mueller's Washington offices, another investigation into President Donald Trump is underway. This one unfolds in the public libraries and coffee shops of San Francisco, where a self-employed 40-year-old named Geoff Andersen has worked since November for 16 hours a day, seven days a week, burning through nearly $45,000 in personal savings and donations from friends and family in pursuit of hidden truths about Trump's rise to power. ... Andersen is not alone in his largely solitary quest. Countless amateur sleuths are on the case, from a short-order cook in Belfast whose research was recently cited by the Daily Beast to a Florida art teacher who tells POLITICO he is applying his pattern-recognition skills to Trump's sprawling business empire.

"Undaunted by a lack of subpoena power or search warrants, and the government's vast legal and technical expertise, countless people like these are poring through Trump's personal and business records, as well as overlooked 2016 campaign clues. They share their findings through email, blogs, Twitter, Facebook, Reddit and even tips to reporters and the FBI. Most labor in obscurity, but all are motivated by the lottery-like odds of a discovery that has eluded journalists and prosecutors but which just might bring down a president." http://politi.co/2fW575P

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers and other health care purchasers; however, the list price - the important starting point for those negotiations -- continues to rise, at a rate of nearly ten percent in 2016 alone. Increased competition, faster reviews of generics and biosimilars and ending anti-competitive practices can also bring down the cost of medications for patients. Learn more at affordableprescriptiondrugs.org ******

VALLEY READ -- KARA SWISHER: "Jeff Immelt has emerged as the front-runner to become Uber's CEO": "While the tension on the board of the car-hailing company remains high - due of late to an ugly lawsuit that one of its major investors, Benchmark, is waging against its ousted co-founder and CEO Travis Kalanick - sources said that a majority of the board is coalescing around the experienced Immelt.

"That could certainly change, said sources, and there are two other executives who are also still being considered, neither of whom is a woman, as some had hoped. Sources said a vote of Uber's directors is likely to happen within the next two weeks, which does not have to be unanimous, although most directors are hoping it will be. In any case, Immelt has pulled ahead, said several sources. One of Immelt's earliest and strongest supporters on the board is Arianna Huffington, said sources, but he is also the

top choice of several directors. Others still undecided - including Benchmark, which has weakened its status because of the lawsuit and ensuing publicity - have become convinced that Uber needs to hire someone who can quickly deal with a number of pressing and problematic issues and consider Immelt fully capable of handling that well." http://bit.ly/2vPtw2O

MEDIAWATCH -- "Jersey Gov. Chris Christie no longer a candidate to replace Mike Francesa at WFAN," by N.Y. Daily News' Bob Raissman: "Scratch Chris Christie off the list of candidates to replace Mike (Sports Pope) Francesa when he leaves WFAN (if he actually does) in December. FAN sources said the suits searching for Francesa's replacement have informed the New Jersey Governor his Gasbag services will not be needed." http://nydn.us/2vUASAc

BONUS GREAT WEEKEND READS, curated by Daniel Lippman, filing from Nantucket:

--"After The Flame," by Wayne Drehs and Mariana Lajolo in ESPN the Magazine: "The 2016 Summer Games were supposed to bring Rio and Brazil to new financial and athletic heights. What's left behind? A city and country shrouded by corruption, debt and broken promises." http://es.pn/2vGuvCn

--"A Brief History of Traveling With Cats," by Jackie Mansky in Smithsonian: "Fierce felines of history sailed the world, survived Europe's crusade against them and made it all the way to Memedom." http://bit.ly/2uTzyfG

--"Bangalore, before the dystopia," by Harish C Menon in Quartz - per The Browser's description: "Bangalore has gone from Garden City to Garbage City in 30 years. Renowned as the tech hub of India, producing 10% of India's GDP, the city is 'a disaster in slow motion'. Population and area have tripled with little in the way of planning or infrastructure. Green spaces and watercourses have been concreted over. Quality of life has fallen to the lowest of all Indian cities. Residents 'grapple with self-combusting foaming toxic lakes". By 2025 Bangalore 'will be simply uninhabitable." http://bit.ly/2v4ADAs

Playbookers

SPOTTED: Rep. Joe Crowley (D-N.Y.) at Cisco Brewery on Friday on Nantucket ... John King on an American Airlines flight from DCA to Nantucket on Saturday morning.

WEEKEND WEDDINGS -- "Elise Stefanik, Matthew Manda" -- N.Y. Times: "Ms. Stefanik, 33, is a United States congresswoman, representing the 21st District of New York. She is a Republican serving on the House Armed Services Committee; the Committee on Education and the Workforce; and the House Permanent Select Committee on Intelligence. Elected in 2014 at age 30, she is the youngest woman elected to Congress in United States history. Previously she served in the Office of the Chief of Staff in the White House under President George W. Bush. She graduated from

Harvard. ...

"Mr. Manda, 34, is the marketing and communications director in Alexandria, Va., for the Media Group of America, which owns and operates the media outlet Independent Journal Review. Previously he was the communications director for Representative Kevin Yoder, Republican of Kansas, and as the political director for 2010 campaign for Senator Jerry Moran, Republican of Kansas. The groom graduated from the University of Kansas. ... The couple met through mutual friends in January 2012 at a party hosted by the bride in Washington." ***With pic*** http://nyti.ms/2wlkegi

-- Pool report: "At the Hall of Springs in Saratoga State Park, guests noshed on Baby lamb chops, a raw bar pork belly sliders, potato pancakes, antipasti in honor of the bride's Italian roots, a Cannoli bar and a gelato bar. The Bride and groom had a choreographed dance to 'Can't Take My Eyes Off You.' The father and daughter dance was to Hamilton's 'Dear Theodosia.'" ***Pics*** http://bit.ly/2x2Paix ... http://bit.ly/2fWc3Qv

SPOTTED: Russ Schriefer and Nina Easton, Lenny and Amelia Chassé Alcivar, Ryan Coyne, Joel and Laura Cox Kaplan, Anita and Tim McBride, House Majority Leader Kevin McCarthy (R-Calif.), Reps. Carlos Curbelo (R-Fla.), Will Hurd (R-Texas), Chris Collins (R-N.Y.), Mimi Walters (R-Calif.), David Young (R-Idaho), John Katko (R-N.Y.), Susan Brooks (R-Ind.) and Joe Wilson (R-S.C.), New York State Assemblyman Dan Stec, NY State Conservative Party Chair Mike Long, Megan and Tyler Foote, Phil Musser, Mike Leavitt, Tom and Corinne Hoare, Lindley and Dustin Sherer, Aly and Graham Wheeler, Ali and Stuart Siciliano, and Anthony Katie Pileggi.

-- Jonathan Nabavi, vice president of public policy and government affairs at the NFL, and **Catherine Hansen**, who works on congressional relations at Blue Cross Blue Shield Association, were married Saturday in Bar Harbor. ***NYT announcement with pic*** http://nyti.ms/2vdRW2h ... ***Wedding pic*** http://bit.ly/2xfxklj **SPOTTED:** Andrew Kovalcin, Rebecca and Matt Haller, Bradley Hayes, Adriana Brizuela and Chris Gindlesperger, Nicole Gustafson, Ali Tulbah and Alana Nolan, Sergio Rodriguera, Allison O'Brien, Nat and Melissa Sillin, Dan Finucane and Danielle Bruccheri and Sean Fairchild.

ENGAGED -- Andrea Saul , who works on communications at Facebook and was national press secretary for Romney 2012, got engaged on Saturday to **David Nosbusch**, who works in business development at Box and is a Harvard Business School grad. He proposed on the 18th green at 3 Creek Ranch in Jackson Hole, with friends and family nearby. They met through mutual friends watching college football at NorthStar Cafe in San Francisco.

WELCOME TO THE WORLD - Krista Zuzenak, co-founder of mKz Inc and member of Team Pelosi, and **Brian Zuzenak,** partner at Moxie Media and member of Team McAuliffe, "welcomed their 3rd roommate Isabelle Emma on [Friday]. Isabelle weighed 7 pounds 4 ounces and despite many bets that Baby Z was a boy she surprised and melted the hearts of her parents, family and friends. The couple fell in love across departments at the DCCC and can't wait to introduce her to the entire Pelosi/McAuliffe

Family." ***Pic*** http://bit.ly/2uVun37

BIRTHDAYS: Fox News's Fin Gomez, celebrating in Iceland running a half marathon ... Lea Berman ... Chuck Campion, chairman and co-founder of Dewey Square Group (hat tips: Rick Ahearn) ... Jenny Backus ... Amb. Michael Froman, a distinguished fellow at CFR and former USTR, is 55 (h/t Andrew Bates) ... Brad Fingeroot ... Politico's Doug Palmer ... Scott Rothrock, CTO at advanced-manufacturing company Xometry and a Politico alum ... BPI birthday twins: partner Ben LaBolt and COO Ann Marie Habershaw (h/ts Jen Nedeau and Addie Whisenant) ... Angelica Alatorre ... Nicholas Himebaugh ... Kenny Swab ... Jordan Kittleson ... Shannon Travis ... Linnea Dyer Hegarty ... Katie Peters, comms director for Americans for Responsible Solutions ... Casey Badmington ... Eleni Roumel ... Steve Pfrang ... Shannon Harris ... Ari Goldberg, VP of comms at First Focus, is 44 ... Faryar Shirzad ... Jen Brown ... Lona Valmoro ... Bob Hudek ... Ryan O'Keefe (h/ts Teresa Vilmain)

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : The high prices that drug makers set for prescription drugs can put financial strain on patients, employers, unions and others who provide health care coverage to more than 50 percent of Americans. Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers, unions and government programs. But, as list prices - the starting point for those negotiations -- continue their nearly double-digit increases, the effects ripple throughout the system. The key to ensuring greater access and affordability lies in fostering greater competition. Facilitating faster reviews of generics and biosimilars, identifying off-patent drugs with little or no generic competition, and ending anti-competitive practices that keep safe, effective alternatives out of the market are also key to abating rising drug costs for patients. Learn more at affordableprescriptiondrugs.org ******

August 1, 2017

Today on Climate Beat . . .

. . . we talked regulation, noting that the Trump administration is said to be planning a significantly scaled-back replacement rule for the Obama EPA's Clean Power Plan, with the new rule focusing on greenhouse gas reduction strategies that can occur "inside the fence" of a regulated power plant such as efficiency upgrades.

In climate science news, leaders of 16 scientific groups are asking EPA Administrator Scott Pruitt for a meeting on his planned "red team, blue team" review of climate change science, arguing climate science for years has undergone significant peer review and that Pruitt's effort has the potential to undermine the "integrity" of the scientific process.

In personnel news, the Senate Judiciary Committee is poised to vote on the nomination of Jeffrey Clark to head the Department of Justice's environment division, with the panel having scheduled an Aug. 3 business meeting to vote on several nominations including Clark's.

Elsewhere in the Senate, a bipartisan group of senators is floating legislation to create a new investment tax credit for offshore wind facilities, saying the technology "offers enormous potential" for producing domestic clean energy near large population centers that could rely on existing transmission lines.

And staying in Congress, Rep. Debbie Dingell (D-MI) has introduced legislation to prohibit the "closure, consolidation, or elimination" of EPA offices, underscoring that Democrats likely will keep pressing Pruitt for assurances that he is not planning to shutter EPA regional or program offices in tandem with proposed budget cuts.

Leading the News

Enforcement
EPA Adds Agents to Guard Pruitt, While Fewer Fighting Crimes
The EPA has 151 federal law enforcement officials working environmental crimes cases—49 short of the number set by a 1990 law—and there is no indication their ranks will increase.

News

Air Pollution
Canadian Potash Producers Guided on Emissions Monitoring
Fertilizer and animal feed companies in Canada should monitor and report particulate matter emissions from their production as the world's largest supplier of potash cracks down on pollution.

Chemical Security
EPA to Probe Arkema Plant's Safety Procedures After Explosion
The EPA is opening an investigation into whether Arkema's chemical plant in Crosby, Texas, was in compliance with existing regulations when explosions occurred at the plant after it suffered flooding from Hurricane Harvey.

Chemicals
Furniture Industry Has Grave Concerns Over EPA Solvent Ban
The furniture industry would be destroyed if the Environmental Protection Agency enacts a broad ban of a common paint-stripping chemical, business owners told the agency Sept. 12.

Climate Change
Exxon Must Disclose Accounting Details in N.Y. Climate Probe

Exxon Mobil Corp.'s attempt to use "accountant-client privilege" to avoid handing over audit documents in a politically charged climate-change probe was dealt a final blow by New York's top court.

Climate Change

Tone Down Climate Change in Suit Against Exxon: Judge

A federal judge said he wanted to avoid having "the Scopes Monkey Trial of the 21st Century," and ordered an environmental organization to remove claims based on climate change in its lawsuit against Exxon Mobil Corp.

Emissions Trading

EU Said to Mull Marking U.K. Carbon Permits in Contingency Plan

The European Commission will propose marking carbon allowances issued by the U.K. as of January 2018 as part of Brexit-related rules to make the world's biggest emissions market resistant to potential supply turmoil.

Proposed Maryland Offshore Wind Ban Draws Diverse Opposition

A proposal to ban offshore wind projects in Maryland waters is attracting opposition from a band of unlikely allies, with oil company representatives front and center.

Hydraulic Fracturing

Delaware River Basin Fracking Talks Could Be Revived

A de facto moratorium on hydraulic fracturing in the Delaware River basin—in place since December 2010—could be up for discussion again before a multistate watershed commission.

Motor Vehicles

China Solar-Cell Maker Explores Electric Cars With World No. 2

Golden Concord Group Ltd., a Chinese energy conglomerate, said it's seeking opportunities in electric vehicles, joining investors like billionaire Li Ka-shing who are pushing into the sector as the government works on a plan to phase out internal-combustion autos.

Renewable Energy

German Coastal States Urge Merkel to Raise Offshore Wind Targets

Germany's coastal states and cities urged Chancellor Angela Merkel to raise the nation's offshore wind power target to take advantage of the technology's plummeting costs.

Renewable Energy

Solar Developers Hoarding Panels as Threat of U.S. Tariffs Looms

Solar developers are suspending construction as the looming threat of U.S. import tariffs has driven up prices and spurred hoarding, crippling panel supplies.

Renewable Energy

Utility-Scale Solar Hits Cost Goal, Focus Turns to Reliability

The solar industry has met the Energy Department's goal to reduce the average price of utility-scale solar to 6 cents per kilowatt-hour—three years ahead of the agency's 2020 target.

Sustainability

Evian Aims to Deflect Water Criticism by Going Carbon Neutral

Evian aims to become the first major spring water brand to go carbon neutral amid criticism that packaging water from the French Alps and transporting it around the world in plastic

bottles causes unnecessary environmental damage.

Sustainability
Tyson, Cargill Trail Nestle on Water Conservation, Study Shows
Agricultural giants such as Cargill Inc. and Tyson Foods Inc. are trailing their counterparts and customers in the food and beverage industries when it comes to using, tracking and conserving water, according to a report from a climate-change researcher.

Water Pollution
StarKist to Pay $6.3 Million to Settle Samoan Water Violations
StarKist Co. will pay $6.3 million and bring its tuna processing plant in American Samoa into compliance with federal environmental laws under a Sept. 12 agreement.

Hillwatch

Air Pollution
DIESEL EMISSIONS
• (S. 1447) The bill would reauthorize the Diesel Emissions Reduction Act, the popular federal clean air program commonly known as the DERA program, for targeting emissions from older diesel engines. • The bipartisan bill would reauthorize the program through fiscal year 2022 at its current funding level of $50 million. The program provides grants and rebates to states and localities to move away from diesel engines and upgrade or replace older diesel engine ...

Air Pollution
OZONE STANDARDS
• (H.R. 806, S. 263) The legislation would postpone deadlines under the Environmental Protection Agency's updated ozone air pollution standards. • Both called the Ozone Standards Implementation Act of 2017, the bills would give the EPA another eight years to determine which areas of the country do not meet the 70 parts per billion ozone standards set in 2015. • The legislation also would extend from every five years to every 10 years ...

Brownfields
BROWNFIELDS
• (H.R. 1758, S. 822) These bills would reauthorize the Environmental Protection Agency's Brownfields Program, which provides grants and training to redevelop contaminated land. The House bill would add grant considerations for brownfields contaminated by petroleum products and reduce the amount of a grant that can be used for administrative costs. The Senate bill specifies that small and rural communities should be considered for a subcategory of program grants, emphasizes ...

Climate Policy
CARBON CAPTURE
• (S. 1535) The Furthering Carbon Capture, Utilization, Technology, Underground Storage, and Reduced Emissions (FUTURE) Act would increase tax credits for carbon capture and sequestration under Section 45Q of the Internal Revenue Code of 1986.

Climate Policy
CARBON TAX

• (H.R. 3420, S. 1639) The American Opportunity Carbon Fee Act would put in place a carbon tax of $49 per metric ton of greenhouse gas emissions, to be collected by the Treasury Department. The fee would be applied to all fossil fuels when mined, processed, refined, or imported, and would be increased 2 percent annually to adjust for inflation.

Coal Mining

COAL MINE CLEANUP

• (H.R. 1731, S. 728, S. 738) The RECLAIM Act (all three bills) would draw $1 billion from the federal Abandoned Mine Land fund and deliver the money to coal states so they can clean up their most polluted or dangerous old mines. Money in the fund comes from a tax on coal production. • The bills are also meant to promote economic revitalization, diversification, and development in economically distressed communities. The Office of Surface Mining Reclamation ...

Energy

ENERGY POLICY

• The Energy and Natural Resources Act of 2017 (S. 1460) would require the Energy Department to expedite approval of liquefied natural gas export projects, while authorizing $90 million in annual spending for safeguards against cybersecurity attacks. The nearly 900-page bill also includes a range of energy efficiency, power grid modernization, and pipeline measures.

Energy

ETHANOL

• (H.R. 1311, S. 517) Both bills, the Consumer and Fuel Retailer Choice Act, would allow sales of transportation fuel containing 15 percent ethanol (E15) in the summer months.

Energy

NUCLEAR POLICY

• (H.R. 590, H.R. 1320, S. 512) H.R. 590, the Advanced Nuclear Technology Development Act, would direct the Energy Department and the Nuclear Regulatory Commission to create a regulatory framework specifically for advanced reactors. • H.R. 1320, the Nuclear Utilization of Keystone Energy Act, would change the structure for the annual fees nuclear companies pay the NRC, including limiting the amount of funding for NRC administrative support. ...

Energy

NUCLEAR RESEARCH

• (H.R. 431, H.R. 589, S. 97) The Nuclear Energy Innovation Capabilities Act would expand private and public institutions' research and development of advanced nuclear energy technologies. Those efforts would include partnerships with Energy Department national laboratories. • Advanced reactors are cooled by substances other than water, such as liquid metals and sodium, and reportedly have a stronger safety profile and lower costs than current reactors.

Pesticides

PESTICIDE REGISTRATION

• (H.R. 1029) The bill would reauthorize the Environmental Protection Agency to collect fees from industry to license pesticides, review their risk to health and the environment, and provide funds for farmworker training programs. The Pesticide Registration Improvement Extension Act would reauthorize the 2003 version of the law for three more years.• The bill would allow the EPA to raise up to $31 million—an increase from $27.8 million—to maintain the ...

Pesticides

PESTICIDE USE

• (H.R. 953, S. 340) These bills would block the Environmental Protection Agency from requiring pesticide applicators to obtain Clean Water Act discharge permits before they apply pesticides into, over, or near bodies of water. • The EPA's National Pollutant Discharge Elimination System program requires permits for pollutant discharges into federally protected waters. Pesticides are registered for use by the EPA under the Federal Insecticide, Fungicide, ...

Water Infrastructure

WATER INFRASTRUCTURE

• (H.R. 3387) This bill would amend the Safe Drinking Water Act by reauthorizing a key infrastructure loan program at a higher funding level, providing funding to remove lead from school drinking fountains, and giving the EPA more authority to force small water utilities to consolidate, among other measures.

Water Infrastructure

WATER RIGHTS

• (H.R. 2939, S. 1230) The bills would forbid the Forest Service and other permitting agencies from demanding that a business operating on federal lands relinquish its water rights in exchange for a permit. They were introduced in response to a 2014 draft proposal from the Forest Service that suggested the agency should acquire private water rights to improve its management of groundwater on federal lands.

Water Pollution

BALLAST WATER

• (H.R. 1154, S. 168) These bills would direct the Coast Guard to establish national regulations for ballast water discharges under the National Invasive Species Act. The resulting standards would supersede the Environmental Protection Agency's ballast water regulations under the Clean Water Act and preempt most rulemaking at the state level. The EPA regulates ballast water and other incidental discharges from ships, such as gray water and rainwater runoff from decks.

Water Resources

RURAL WATER ASSISTANCE

• (S. 518) The Small and Rural Community Clean Water Technical Assistance Act (S. 518) would authorize $75 million in training and assistance funds for publicly owned wastewater utilities to comply with federal regulations.

EPA Opens Door to Cutting Biodiesel, Renewable Fuel Quotas

Posted September 26, 2017, 03:27 P.M. ET

By Jennifer A. Dlouhy

The EPA wants public input on potential reductions in annual renewable fuel quotas, including mandates for biomass-based diesel in 2018 and 2019.

The Environmental Protection Agency issued a notice Sept. 26 providing historical data on imports of renewable fuel and possible strategies for using its statutory authority to waive annual targets established by Congress. It includes options for reductions in the biomass-based diesel, advanced biofuel and total renewable fuel volumes beyond what the EPA proposed in July in its 2018 renewable fuel standard rule.

The EPA cites a provision allowing it to reduce annual biomass-based diesel requirements as much as 15 percent for up to 60 days, with extensions allowed, if there's a renewable feedstock disruption or other market circumstance that would make its price jump. But "waiving the standard for 60 days" without adjusting the annual requirement "would provide no relief," the EPA said.

The agency asked in the notice whether it would be appropriate to reduce the annual standard by as much as 15 percent or, alternatively, allow refiners and importers to reduce individual quotas by an amount pegged to production and import levels within a specific 60-day period.

The notice follows the Commerce Department's decision to slap duties on biodiesel from Indonesia and Argentina, amid heavy lobbying by oil companies and trade groups asking the EPA to lower annual biofuel targets.

Bob Dinneen, president and CEO of the Renewable Fuels Association, said in a statement that there was no rationale for further lowering the 2018 advanced biofuel or total renewable fuel volume requirements.

California Mulls Following China With Combustion-Engine Car Ban

Posted September 26, 2017, 9:03 A.M. ET

By Ryan Beene and John Lippert

The internal combustion engine's days may be numbered in California, where officials are mulling whether a ban on sales of polluting autos is needed to achieve long-term targets for cleaner air.

Gov. Jerry Brown (D) has expressed an interest in barring the sale of vehicles powered by internal-combustion engines, Mary Nichols, chairman of the California Air Resources Board, said in an interview Friday at Bloomberg headquarters in New York. Brown, one of the most outspoken elected official in the U.S. about the need for policies to combat climate change, would be replicating similar moves by China, France and the U.K.

"I've gotten messages from the governor asking, 'Why haven't we done something already?'" Nichols said, referring to China's planned phase-out of fossil-fuel vehicle sales. "The governor has certainly indicated an interest in why China can do this and not California."

Embracing such a policy would send shockwaves through the global car industry due to the heft of California's auto market. More than 2 million new passenger vehicles were registered in the state last year, topping France, Italy or Spain. If a ban were implemented, automakers from General Motors Co. to Toyota Motor Corp. would be under new pressure to make electric vehicles the standard for personal transportation in the most populous U.S. state, casting fresh doubts on the future of gasoline- and diesel-powered autos elsewhere.

California has set a goal to cut carbon dioxide emissions by 80 percent from 1990 levels by 2050. Rising emissions from on-road transportation has undercut the state's efforts to reduce pollution, a San Francisco-based non-profit said last month.

"To reach the ambitious levels of reduction in greenhouse gas emissions, we have to pretty much replace all combustion with some form of renewable energy by 2040 or 2050," Nichols said. "We're looking at that as a method of moving this discussion forward."

Legal Means

California has the authority to write its own pollution rules, which dates back to the 1970 Clean Air Act. Those rules are underpinned by waivers granted by the U.S. EPA.

Nichols said the state would likely take a different legal route to enable a possible ban rather than use an EPA waiver, since the Trump administration would be unlikely to approve one. For example, California could use vehicle registration rules or control the vehicles that can access state highways, she said.

"We certainly wouldn't expect to get a waiver for that from EPA," Nichols said. "I think we would be looking at using some of our other authorities to get to that result."

China will likely order an end to sales of all polluting vehicles by 2030, the chairman of electric-car maker BYD Co. said Thursday. France and the U.K. have announced 2040 as their end date for sales of fossil fuel-powered cars.

A ban for California could also still be decades away from implementation, and just how far out remains to be seen, Nichols said.

"There are people who believe, including who work for me, that you could stop all sales of new internal-combustion cars by 2030. Some people say 2035, some people say 2040," she said. "It's awfully hard to predict any of that with precision, but it doesn't appear to be out of the question."

Puerto Rico May Be Grid Innovation Testing Ground: Energy Nominee

Posted September 26, 2017, 02:53 P.M. ET

By Rebecca Kern

Puerto Rico has the potential to be a testing ground for new electricity delivery technologies from U.S. national labs as the Caribbean island looks to rebuild its electric grid, an Energy Department nominee told senators today.

Senate Energy and Natural Resources Committee members asked Bruce Walker about what can be done to improve the U.S. territory's resilience against future hurricanes, after Hurricane Maria knocked out Puerto Rico's entire electric grid, leaving its 3.4 million residents without power.

Walker said he sees a "tremendous opportunity" to use Puerto Rico to deploy projects developed at Energy Department national laboratories "to introduce new concepts and perhaps new architectural construction."

Walker discussed the potential for a more "collapsible" electric grid system in Puerto Rico that can come down in a hurricane with high winds—but be restored quickly.

"I think that, plus with new innovation with new technologies, will allow for the redevelopment and reconstruction of the actual overall system in Puerto Rico," he said.

If confirmed, Walker would head the Energy Department's Office of Electricity Delivery and Energy Reliability, which works to ensure the U.S. energy delivery system is secure, resilient and reliable and helps develop new technologies to improve electricity infrastructure.

Coal Export Terminal Permit Rejected in Washington

Posted September 26, 2017, 01:51 P.M. ET

By Paul Shukovsky

Building the largest coal export terminal in North America would have "too many unavoidable" consequences, the Washington Department of Ecology said this morning when it denied the proposed Millennium Bulk Terminals a necessary water permit.

The denial effectively kills the proposed terminal, but the company could still appeal the decision.

"There are simply too many unavoidable and negative environmental impacts for the project to

move forward," Ecology Director Maia Bellon said in a statement.

Millennium, owned by Lighthouse Resources Inc., would have shipped up to 44 million metric tons of coal a year to Asia. It was the last hope in the near-term for a Northwest terminal allowing for export of U.S. coal from the Powder River Basin in Wyoming and Montana and the Uinta Basin in Utah and Colorado to markets such as South Korea, Japan, and Taiwan. Regulators have blocked other proposals in the region.

Scana Says S.C. Is Seeking Criminal Probe of Nuclear Project

Posted September 26, 2017, 02:30 P.M. ET

By Jim Polson and Mark Chediak

South Carolina's attorney general called for a criminal probe into Scana Corp.'s handling of the canceled V.C. Summer nuclear expansion project, adding that it may not be entitled to charge customers for the plant.

Attorney General Alan Wilson was joined by state legislators in calling on the South Carolina Law Enforcement Division to open a probe, Scana said in a Sept. 26 filing. Separately, Wilson questioned the state law that allows utilities to recover the costs of unfinished or abandoned power plants. Scana said it will fully cooperate "with any potential government investigation."

Scana and its partner, state-owned utility Santee Cooper, halted construction on two new reactors at the Summer plant after costs ballooned to over $20 billion, a decision that leaves Southern Co. as the only utility building a nuclear plant in the U.S. Scana had asked utility regulators for permission to recover $4.9 billion in expenses for the project before withdrawing the request in August to give officials more time for review.

"Our citizens have paid billions of dollars and got absolutely nothing from it but a money pit," Wilson said in an emailed statement. The law "at the heart of the failed nuclear reactors" is "constitutionally suspect."

The announcements follow the disclosure last week that the U.S. Attorney's office in South Carolina is carrying out a grand jury probe of Santee Cooper. Scana said last week it had received a subpoena from the U.S. Attorney seeking information about the project.

South Carolina Governor Henry McMaster (R) was among those opposed to scrapping the project, saying that the reactors are still worth finishing.

"The politics has reached a fever pitch," Paul Patterson, a New York-based utility analyst for Glenrock Associates LLC, said. "The operative word is 'uncertainty."'

Syngenta Said to Pay More Than $1.4 Billion in Corn Accord

Posted September 26, 2017, 02:16 P.M. ET

By Jef Feeley and Margaret Cronin Fisk

Syngenta AG agreed to pay more than $1.4 billion to U.S. farmers who complained that the marketing of the company's genetically modified corn seeds shut them out of the Chinese market, according to people familiar with the deal.

The settlement with more than 100,000 farmers was announced Sept. 26 in a Minnesota class-action trial. It resolves all farmers' litigation in the U.S. but doesn't include Canadian lawsuits, according to Paul Minehart, a Syngenta spokesman. Minehart wouldn't confirm the amount of the settlement, saying the terms will be made public when the deal is presented to a judge.

The pact resulted from months of negotiations between a four-lawyer team representing farmers and Syngenta's attorneys, according to the people familiar with the meetings, who said they weren't authorized to speak publicly about the settlement.

Syngenta halted the trial involving about 22,000 Minnesota farmers to announce the settlement. Those farmers were seeking more than $400 million in damages over their corn losses.

The settlement comes three months after Syngenta lost a $218 million jury verdict to a class of Kansas farmers, in the first trial over the corn-contamination claims. Several other trials were pending as lawyers pursued suits on behalf of hundreds of thousands of corn growers claiming as much as $13 billion in losses. The farmers alleged Syngenta caused five years of depressed corn prices.

Minnesota Lawsuit

The Minnesota farmers claimed Syngenta, the Swiss agrochemical giant, rushed its GMO seed to market before getting import approval from China. In 2013, China stopped taking shipments from the U.S., calling the corn contaminated. The farmers said Syngenta misled them on when the Chinese would approve the seed.

Corn prices dived and didn't recover because China found other sources, the farmers said.

Syngenta had denied causing harm or damages. Two droughts in years leading up to the launch of the company's Viptera seed elevated prices, Syngenta lawyer Mike Brock told jurors at the Minnesota trial. When Viptera was released, heavy rains set off a bumper crop in the U.S.

"It rained, and when that happened, the bottom dropped out of the price of corn," he said.

The Minnesota case is In re Syngenta Litigation, 27-cv-15-3785, District Court, Hennepin County, Minnesota (Minneapolis).

Europe's Gas Industry Gathers and Asks Whether It Should Exist

Posted September 26, 2017, 02:16 P.M. ET

By Kelly Gilblom

Ask about this winter, and European natural gas executives question if there's enough supply. Ask

about life in a few decades, and the same people wonder whether their business will exist.

"Society now requires more from us than to promote our own product," said Annie Krist, chief executive officer of GasTerra, a natural gas wholesale venture between Royal Dutch Shell Plc, Exxon Mobil Corp. and the Dutch State, at a gathering of gas executives in Rotterdam. "We should be asking: are you prepared to put your business model up for discussion? Are the good times over?"

Krist's comments at the Platts European Gas Summit reflect the sort of existential questions industry executives increasingly face. While striving to position gas as an alternative to dirtier coal in a worldwide effort to reduce carbon-dioxide emissions and stem global warming, they realize that cleaner and cheaper renewable fuels may be sounding the death knell for gas.

Listen to Kirst, who runs the largest gas buyer in the Netherlands, where people have proposed ripping gas grids out of the ground to force a switch to greener fuels, and you hear that gas is an endangered species. Others are more circumspect.

Jason Tate, chief operating officer of European gas and power at BP Plc, said gas is now the cornerstone of their business and will be an expanding part of their portfolio for years as they move away from oil. Pierre Vergerio, the chief operating officer at Edison SpA, the Italian natural gas distributor, said he believed gas has a bright future.

At the other extreme, Sergei Komlev, head of contract structuring at the export arm of Gazprom PJSC, Europe's biggest supplier, warned of "eco-jihadists" that could end civilization by eliminating the use of natural gas and fossil fuels too quickly. He also believes the way gas has been priced for decades, in long-term bilateral contracts linked to the price of crude, works just fine, even as the company opens up a new office in St. Petersburg that relies on trading hubs.

"We are decarbonizing the economy, we at the same time are providing a guarantee that just in case something happens, gas will always be there," he said. "By the way, the theory of global warming is based on what? On models? Manmade models that could be mistaken."

At least over the next few months, the work of the gas industry will be critical to Europe. The continent is heavily reliant on imports of the heating and power fuel as its largest onshore field in the Netherlands faces mandatory output cuts.

Its two largest pipelines suppliers, Russia and Norway, already say they'll send record volumes of the fuel. To supplement those volumes in case of a severe cold snap, EU countries need to attract liquefied natural gas away from Asia. They'll also need to look very carefully at coal prices, which may dip below gas prices and crater demand for its use in power generation, or vice versa.

Other key takeaways from day one of the Platts Gas Summit:

• Who's to blame for the move against gas in the Netherlands? It may well be Napoleon, Gasterra's Kirst said. After all, he's the one that decided mineral wealth should go to the state instead of to individual landowners, who only suffer from activity on their property. "We're not Texas," she said.

• Centrica Plc isn't worried about the closure of its Rough gas storage facility, the U.K.'s largest. Gautam Mukherjee, head of gas, liquids and economic analysis at Centrica, said Britain has many other sources it can pull from. "At some point that will matter, but it's just not something that's sort of impacting the market today."

• Edison's Vergerio said he isn't worried that a big breakthrough in battery technology will lead to a massive uptake in the use of wind and solar for power, which now struggle with intermittency issues. Gas will always be needed for its reliability. "Do we need gas in the long-run? I'm convinced of that."

Britain's Grid to Share Clean Energy Data After Green Summer

Posted September 26, 2017, 7:47 A.M. ET

By Mathew Carr

As low-carbon energy met more than half of the U.K.'s power use this summer, the nation's power grid operator plans to debut a program that will make it easier for households to benefit from cheap solar and wind generation.

The London-based network manager is working on publishing data that will help consumers switch on appliances at times when it's cheapest to do so, National Grid Plc said by email. Clean-energy sources including wind, solar and nuclear met a record 52 percent of power use in the three months through Sept. 22, compared with 35 percent four years ago, it said.

"Clear and concise information that can tell you in advance when's best to turn on the washing machine, load the dishwasher or charge your car, for example, is a step in the right direction toward a low-carbon future," said Duncan Burt, director of the grid's system operator.

Software will combine grid data with that from the U.K.'s Met Office, which forecasts weather, in order to estimate the share of renewable and non-renewable energy on the network during the next 48 hours. The plan will relieve pressure on the system during peak times, reduce the need for back-up fossil-fuel plants, and potentially cut household bills, National Grid said.

In March, the grid operator said it may pay big energy consumers to use more electricity on sunny weekends when solar energy is plentiful and demand is low. This eases the need for other grid balancing measures such as calling on power producers to reduce output.

Under the plan to provide additional data:

• The project's information system will be available so developers can create consumer apps

• National Grid is also working with environment groups WWF and Environmental Defense Fund Europe on the project

• Other nations could use the model to help meet emission-reduction goals, said Bryony Worthington, executive director of Environmental Defense Fund Europe

Corporate Demand Growing for Clean Energy Certificates in Brazil

Posted September 26, 2017, 11:04 A.M. ET

By Michael Kepp

Corporate demand in Brazil is growing for renewable energy certificates, signaling that companies are using more renewable power from certified producers.

Brazilian companies and local offices of multinationals, including Procter & Gamble, Johnson & Johnson, GE Global Research, and Nivea, the Germany-based personal-care brand, have bought 137,160 internationally registered renewable energy certificates (RECs) from 19 certified renewable power plants—50,000 in 2016 and 87,160 in the first eight months of 2017, Fernando Lopes, a partner at Instituto Totum, which certifies and issues RECs, told Bloomberg BNA.

"Demand for RECs is growing quickly in Brazil, where 80 percent of the electricity matrix comes from renewable sources, and we expect 100 companies to have bought these seals in the next two years," said Lopes. "Companies in Brazil buy RECs from certified renewable power plants to prove that some of the energy they consume is renewable and to improve their corporate image as being sustainable."

Igor Oliveira, sustainability manager for Nivea in Brazil , which bought 815 RECs from an Instituto Totum-certified small hydropower plant for its new Sao Paulo headquarters, told Bloomberg BNA that the company bought the seals because "applied sustainability can help construct a better world."

Each certificate represents 1 megawatt-hour of renewable power and is sold for between 1 to 5 Brazilian reais (32 cents to $1.60).

Marketing Tool

The three mainstream systems for documenting, tracking, and registering certified use of renewable energy are the REC system in the U.S. and Canada, Guarantee of Origin system in Europe, and International-REC (I-REC) system in Brazil and 15 other countries.

"I-REC launched in Brazil in 2016, a time when there weren't any other international certifications system here and when we believed there would be a demand for them, which is on the rise here," Oliver Crouch, a member of the I-REC Standard Advisory Group, told Bloomberg BNA.

Many companies buy renewable energy certificates in Brazil to help qualify their facilities to receive a Leadership in Energy and Environmental Design (LEED) certification for sustainable buildings, awarded by the U.S. Green Building Council.

The Clube Atletico Paranaense soccer team in southern Parana state bought 2,600 RECs in March from an Instituto Totum-certified small hydropower plant so that its stadium, now under renovation, could get LEED certification, which it expects to receive by December.

"The LEED certification of our stadium will show that our soccer club is committed to sustainability," Luiz Volpato, a club architect coordinating the stadium's renovation, told Bloomberg BNA. "Once we get the LEED seal we can use it for marketing purposes."

Taking the LEED

GE Global Research, the research and development arm of General Electric, bought 4,100 renewable energy certificates from a small hydropower plant in Brazil in July 2016 to get LEED certification for three buildings in Rio de Janeiro.

"Buying those RECs to help us get LEED certification helps us create a more sustainable corporate image, which is good for business," Cleber Barbosa, a manager of GE Global Research in Brazil, told Bloomberg BNA.

Proctor & Gamble, the U.S. consumer goods corporation, bought them in 2016 to help get LEED certification for a manufacturing plant it built just outside Rio de Janeiro, Annette Amadin, an engineering leader for P&G in Latin America, told Bloomberg BNA.

"P&G also bought those RECs to help make our corporation more sustainable and to meet our long-term sustainability targets, one being the goal of running our manufacturing on 100 percent renewable power," said Amadin.

Voluntary Reductions Platform

Other companies buy RECs to prove and register their greenhouse gas emissions reductions on voluntary emissions reductions platforms, like Brazil's GHG Protocol or Carbon Disclosure Project, or to qualify to join the RE100, a global initiative of businesses committed to using 100 percent renewable electricity, said Lopes of Instituto Totum.

"I expect future demand for RECs to grow from companies for a variety of reasons, one being to help make them eligible for listing on the Corporate Sustainability Index of Brazil's stock exchange, set up to help environmentally and socially conscious investors build sustainable stock portfolio," he said.

Laura Albuquerque, technical adviser for the Brazilian Business Council for Sustainable Development, said, "These certificates are new to Brazil but we foresee a growing demand for them by companies that need to show transparency in their sustainable activities."

Companies currently account of 10,000 of the 20,000 terawatt-hours of global demand for renewable power, with households accounting for the rest, said Crouch. And 2,500 terawatt-hours of that corporate demand comes from renewable energy.

Brazil's Courtship with Big Oil Tested at Temer's First Auction

Posted September 26, 2017, 11:31 A.M. ET

By Sabrina Valle

President Michel Temer's efforts to repair Brazil's strained relationship with the world's biggest oil companies will be put to the test Sept. 27 when his government auctions 287 exploration blocks.

Temer, who became president last year following the impeachment of his predecessor, swiftly pushed through business-friendly regulations and expanded resource access to woo producers including Royal Dutch Shell Plc, Total SA and Exxon Mobil Corp. Brazil's most recent oil round in 2015 flopped at a time when the terms were less attractive to foreign operators.

Brazil is also selling power plants, its main utility and even the national mint to accelerate its slow climb from the deepest recession on record. It opened the country's most prized offshore oil region to foreign control and scaled back buy-in-Brazil requirements for goods and services to address long-standing complaints from drillers. Officials are predicting robust turnout at Wednesday's sale, which will serve as a gauge of investor confidence in Brazil's recovery.

"The success of the auctions will be measured by the quality of the companies that bid," Decio Oddone, the head of the National Petroleum Agency, said Sept. 21. "If rounds this year are successful, they will bring Brazil side by side with the biggest oil producers in the world."

The Temer government is planning a total of nine oil auctions that it expects to bring in as much as $80 billion in investments during the life of the projects. Brazil has two more auctions planned for October for areas in the offshore pre-salt region that holds Brazil's most productive oil fields.

Thirty-two companies including Shell, Total, BP Plc, Exxon, as well as state-controlled Petroleo Brasileiro SA, have signed up to compete in the so-called 14th round that has a combined minimum signing bonus of 1.7 billion reais ($540 million).

The most recent round in 2015 was considered a failure due to the low number of competitors and areas sold. It was the first round ever without participation from Rio de Janeiro-based Petrobras, which was grappling with a massive graft scandal and high leverage at the time. It raised less than 500 million reais in signing bonuses and investments, one of the worst results since Brazil ended Petrobras' monopoly on exploration and production two decades ago.

Offshore blocks in the Campos, Santos, and Sergipe-Alagoas basins, where large discoveries have already been made, are expected to draw the most attention from oil majors. They include six blocks in a section known as SC-AP3 where there is evidence of pre-salt formations, while located outside the official pre-salt polygon that has a special development model.

The block with the most expensive minimum bid, SEAL-M-501, is in deep waters of the Sergipe-Alagoas basin where Petrobras has announced large discoveries.

"Brazil's geological potential is unquestionable, but there is an enormous global competition for resources and investments," Flavio Ofugi, Shell's government relations representative in Brazil, said Sept. 15. "Brazil can't lose this window of opportunity."

Brazil's Temer Backs Down Again From Amazon Mining Plans

Posted September 26, 2017, 8:34 A.M. ET

By David Biller

Brazil's government has backed down from its proposal to allow mining activities in a reserve within the Amazon rainforest after it sparked outcry from opposition lawmakers, environmental organizations and supermodel Gisele Bundchen.

In a statement issued Sept. 25, the Mines and Energy Ministry said it had asked President Michel Temer to revoke a decree that, if approved by Congress, would have stripped protections from an area known as Renca, short for National Reserve of Copper and Associates, that's larger than Switzerland. It said that wider debate is needed over the future of the area.

"The Ministry of Mines and Energy clarifies that the reasons that led to the adoption of the decree ordering the extinction of the reserve are still valid," the ministry said. "The country needs to grow and generate jobs, attract investment for the mining sector and explore the region's economic

potential." Temer will revoke the decree on Tuesday in the nation's official gazette, according to the statement.

For a deeply unpopular politician who has repeatedly stated his indifference to his single-digit approval ratings, Temer has appeared sensitive to criticism over his proposed policies in the Amazon. This is despite his dependence on congressional support from lawmakers linked to agribusiness and mining, some of whom regard environment protections in the rain forest as a brake on development. The Sept. 25 announcement follows an earlier government climb down on the Renca, as well as backtracking on a separate proposal to downgrade environmental protections for another national park in Amazonia, known as Jamanxim.

For Thiago de Aragao, the director of strategy for Arko Advice, a political consultancy, international pressure played a role. "This particular issue regarding the Amazon received a lot of criticism from outside of Brazil," he said. "For the image of the country, not the image of the government, the decision to stop this outweighed the decision to continue."

In June Temer tweeted to Gisele Bundchen his decision to veto two bills that would have drastically reduced the area of Jamanxim under conservation. The supermodel responded that she would "continue watching" developments closely. The president subsequently submitted a new bill which would downgrade a slightly smaller area.

Last week, Bundchen took to the stage at a nationally televised rock concert in Rio de Janeiro to give a speech calling for greater protections for the Amazon.

Even before Temer assumed power in May 2016, the Amazon was well on its way toward its worst deforestation in eight years. In the year through mid-2016, 7,900 square kilometers (3,050 square miles) of Amazon forest was chopped down, according to data from the National Institute for Space Research, or INPE, released last month. That's bigger than the size of Delaware, and up 29 percent from the prior year.

Israel Air Pollution Rises as Pipeline Repair Halts Gas Use

Posted September 26, 2017, 12:01 P.M. ET

By Matthew Kalman

Sulfur dioxide concentrations in the air around Ashdod in Israel rose after the country's sole natural gas pipeline was shut down, forcing power stations to fall back on coal, fuel oil and other dirtier fossil fuels, the Environmental Protection Ministry said.

Monitors near the Eshkol power station in Ashdod recorded a 12 percent increase in sulfur dioxide during the past two days, compared to days with similar meteorological conditions, the ministry said in a statement Sept. 25. Sulfur dioxide produced by coal-burning power plants has been linked with higher rates of cardiovascular and pulmonary diseases.

Repairs to a crack in the pipeline were expected to be completed and gas supplies restored early Sept. 27, the partnership that owns the license of the offshore Tamar field announced in a statement

to the Tel Aviv Stock Exchange Sept. 24. The gas supplies to Israel were halted on Sept. 21 after the crack was found in an emission pipe used to release natural gas and pressure from a platform during a scheduled upgrade, the Tamar partnership said.

The operator, Noble Energy Inc., informed the partners that "there is no safety and environmental exposure," the partners said, but the ministry said it was closely monitoring pollutant levels after the Israel Electric Corp. announced it was switching to other fossil fuels.

"The use of fuels other than natural gas increases the emission of pollutants into the air," the ministry said. "The production of electricity with fuel oil causes the emission of sulfur dioxide at a rate that is 100 times higher than the emission when generating electricity with natural gas."

Israel Electric said in a stock exchange filing on Sept. 24 that it was prepared for the scheduled maintenance and could switch to power stations using primarily coal, liquefied natural gas, diesel, and fuel oil. Costs of those fuels are significantly higher than gas, it said.

MARK HALPERIN'S CAREER QUICKLY UNRAVELED after five women accused him Wednesday night of sexual harassment while he was political director at ABC News. First, Halperin stepped back from his analyst role at NBC and MSNBC for a yet-to-be-determined time. Then HBO killed the movie version of Halperin and John Heilemann's forthcoming book on the 2016 election. Finally, Penguin Press canceled plans for the book itself. Now "Game Change," the most lucrative franchise in political journalism, appears doomed. My full piece is here.

-- More women have already come forward. Emily Miller, on Twitter, and an unidentified woman journalist to The Daily Beast claimed Halperin also harassed them at ABC. And Dianna Goldberg, a former ABC News researcher, alleged that Halperin had urged her to sit on his lap while he had an erection. Presumably, there will be more digging into Halperin's treatment of women during his tenure at ABC News, which ended in 2007, and the following decade in which he assumed high-profile gigs at Time, Bloomberg and Showtime and covered three presidential elections.

-- As allegations against Halperin mount, it becomes harder to see how he can come back. Halperin had already faced criticism for his kid-glove treatment of Donald Trump during the 2016 campaign. Now his 2016 coverage of issues like sexism and misogyny will be seen in a new light, especially his dismissal of candidate Trump's alleged misconduct toward women and his framing of Hillary Clinton's candidacy. As the New York Times' Jodi Kantor noted, "very few narrators had the power that Mark Halperin did to shape the political discourse -- which was often specifically about gender."

Good morning and welcome to Morning Media. Please send tips and suggestions to **mcalderone@politico.com and @mlcalderone. Daniel Lippman contributed to the newsletter. Archives. Subscribe.**

"LEON WIESELTIER WAS ALWAYS HIDING IN PLAIN SIGHT," by Splinter's Clio Chang: "The Atlantic's Adrienne LaFrance called the snowballing around Wieseltier the 'Harvey Effect.' But it should not have taken Harvey Weinstein's downfall to bring Wieseltier to his reckoning. In my conversations with seven former editorial staffers, it's clear that much of his alleged behavior was far from secret. The fact that he faced no consequences in his three decades at TNR shows how sexism and harassment can become so intrinsic to a company's culture that it is rendered completely banal. "

"12 HOURS V. 20 MINUTES: FOX'S UNEVEN SEX HARASSMENT COVERAGE," by AP's David Bauder: "A news organization's instinct to downplay a story that reflects poorly on itself isn't unusual. But in this case, some are attributing the disparity to politics. Weinstein has long been a supporter of liberal causes, while O'Reilly is a hero to many on the right, for whom Fox is the network of choice."

JILL ABRAMSON INVESTIGATING SEXUAL HARASSMENT: The former New York Times executive editor noted her ongoing reporting in a Guardian column: "I've spent the past two weeks investigating sexual harassment allegations at another media company. I've approached lots of scared young women who tell me about awful experiences but won't talk on the record because they've signed non-disclosure agreements or fear becoming unemployable if they talk."

SOUND BITES:

"I think what's hard for a lot of women right now is the confirmation that things are exactly as bad as we thought. There's a satisfaction in knowing you weren't imagining it all, but it's a pretty dark feeling nonetheless." [Jessica Valenti]

"I warned my daughters before they went into the workforce. Wish someone warned me. I thought I was 'the only one' & it was somehow my fault." [Jackie Calmes]

"Let's be very clear-- the one responsible for any sexual misconduct that may have taken place is the man who instigated it. NOT the women who were victims of it, nor their friends and colleagues who tried to support them through it." [Clarissa Ward]

"Yes, there needs to massive cultural change. And there are so many brave, heroic women telling their stories. But it's also ok if you didn't" [Maeve Reston]

"Today alone, 5 people reached out w/ sexual harassment allegations against 5 different media figures. This isn't slowing. It's snowballing." [Dylan Byers]

TODAY: Slate launches "Reconstruction: A Slate Academy," the second installation of the site's "History of American Slavery" series. The first episode of the series will be available to the public, though the rest is exclusive to members of premium program Slate Plus. Chief political correspondent

Jamelle Bouie -- who moved to Charlottesville prior to recent white nationalist violence -- developed the project with Slate history writer Rebecca Onion.

"DON'T BE DISTRACTED BY THE TRUMP DOSSIER FUSS" Bloomberg View executive editor and Trump biographer Tim O'Brien breaks down the recent frenzy: "It's an odd media moment. As interesting as the Post's article might be, anyone who's paid close attention over the last year knew all along that Democrats had paid for the opposition research that turned into the Steele dossier. That fact was part of articles published last October by Mother Jones, then later by CNN, the New York Times and Vanity Fair."

"HOW FACEBOOK, GOOGLE AND TWITTER 'EMBEDS' HELPED TRUMP," by POLITICO's Nancy Scola: "Facebook, Twitter and Google played a far deeper role in Donald Trump's presidential campaign than has previously been disclosed, with company employees taking on the kind of political strategizing that campaigns typically entrust to their own staff or paid consultants, according to a new study."

DAVID RUBENSTEIN, TV STAR: The Washingtonian's Ben Wofford looks at the unlikely trajectory of Carlyle Group's David Rubenstein to Bloomberg TV host: "One might presume that awarding a prime-time slot (Wednesdays at 9 pm) to the most famous billionaire in Washington elevates the town's gratuitousness to new heights. This summation would be correct if not for one thing: The show is doing well. Now in its third season, it's one of Bloomberg's fastest-growing programs. Viewership is up by 67 percent. A new agreement grants PBS affiliates nationwide the option to syndicate, meaning Rubenstein's face could beam into every cord-cutter's living room soon enough."

EXTRAS:

-- Variety profiles Norah O'Donnell.

-- Jacobin editors stress importance of their print magazine, eschew industry fads.

-- BuzzFeed restructures entertainment desk, resulting in four employees leaving.

-- Choire Sicha talks NYT Styles section.

Driving the Day

Happy Sunday. SPOTTED last night having dinner at one big table at BLT Prime at the Trump hotel: President Donald Trump, Gen. John Kelly, Dina Powell and David McCormick, Treasury Secretary Steven Mnuchin and Louise Linton, and Commerce Secretary Wilbur Ross and Hilary Geary Ross.

FIRST IN PLAYBOOK - TRUMP'S WEEK -- Monday: President Trump is presenting the Medal of Honor. ... **Tuesday:** He holds a small business event at the White House. ... **Friday:** Trump visits FEMA headquarters to get a briefing on the hurricane season. This week's theme is the "American dream."

GROUNDHOG DAY -- "As Trump steams, Senate Republicans consider new repeal effort," by Burgess Everett, Josh Dawsey and Rachael Bade: "Senate Republicans' party-line attempts to repeal Obamacare aren't dead just yet - at least not if President Donald Trump has anything to say about it. Trump, increasingly impatient with the long-stalled repeal effort, met with three Senate Republicans about a new plan to roll back the health care law on Friday, signaling some lawmakers -- as well as the president -- are not ready to ditch their seven-year campaign promise.

"The group is trying to write legislation that could get 50 Republican votes, according to multiple administration and Capitol Hill sources. The proposal from Sen. Lindsey Graham (R-S.C.) would block grant federal health care funding to the states and keep much of Obamacare's tax regime. White House officials also met with House Freedom Caucus chairman Mark Meadows (R-N.C.) to brainstorm how to make the idea palatable to conservatives, according to two sources familiar with the meeting." http://politi.co/2tNTxf7

-- ONE CONSERVATIVE said to us the other day that Obamacare is a tax bill -- even the Supreme Court said so. So keeping the taxes would be akin to keeping the entire law, for many conservatives.

ON THE PRESIDENT'S MIND -- yesterday at 12:19 p.m.: "After seven years of'talking' Repeal & Replace, the people of our great country are still being forced to live with imploding ObamaCare!" ... **at 12:27 p.m.:** "If a new HealthCare Bill is not approved quickly, BAILOUTS for Insurance Companies and BAILOUTS for Members of Congress will end very soon!" ... **at 1:04 p.m.:**"U.S. Stock Market up almost 20% since Election!" ...

... **at 4:36 p.m.:** "Unless the Republican Senators are total quitters, Repeal & Replace is not dead! Demand another vote before voting on any other bill!" ... **at 7:15 p.m.:** "I love reading about all of the 'geniuses' who were so instrumental in my election success. Problem is, most don't exist. #Fake News! MAGA" ... **at 7:29 p.m.:** "I am very disappointed in China. Our foolish past leaders have allowed them to make hundreds of billions of dollars a year in trade, yet..." ... at **7:35 p.m.:** "...they do NOTHING for us with North Korea, just talk. We will no longer allow this to continue. China could easily solve this problem!" ... **at 7:37 a.m.:** "Don't give up Republican Senators, the World is watching: Repeal & Replace...and go to 51 votes (nuke option), get Cross State Lines & more."

****** **A message from BP: We operate the largest renewables business of any major oil and gas company in the world.** *Learn more in our Economic Impact Report.* ******

KELLYANNE CONWAY on **"FOX NEWS SUNDAY":** "He's going to make that decision this week [whether to end cost sharing reduction payments], and that's a decision that only he can make." http://politi.co/2uOlPYq

-- A FEW QUICK NOTES: Every permutation of repeal and replace got fewer than 50 votes, so ancillary issues -- like being able to buy insurance across state lines -- is besides the point at this moment. **IF TRUMP** follows through on his threat to end the employer contribution for members of Congress, that would be a big deal, and could strip lawmakers of one of the only appealing benefits of their job. **ALSO:** Congress has to fund the government at the end of September and lift the debt ceiling shortly after that. Not passing anything until Obamacare is repealed and replaced is not necessarily a realistic position.

-- @burgessev: "Historically, conservatives use filibuster to block progressive legislation. Take this away and the next D Washington has few limits."

... AND THIS: "Lawsuits could force feds to pay Obamacare insurers," by Paul Demko: "A pending court decision could force the Trump administration to pump billions of dollars into Obamacare insurers, even as the president threatens to let the health

care law 'implode.' Health insurers have filed nearly two dozen lawsuits claiming the government owes them payments from a program meant to blunt their losses in the Obamacare marketplaces. That raises the prospect that the Trump administration will have to bankroll a program the GOP has pilloried as an insurer bailout." http://politi.co/2vbn2LD

****** **A message from BP: We invest more in the U.S. than in any other country. And we reinvest every dollar we earn here right back into the American economy.** *See how our investment in America is at work in your community.* ******

NEW CBS NEWS NATION TRACKER POLL -- "Six months in, the latest CBS News Nation Tracker study shows President Donald Trump's strongest backers like seeing him fight his chosen opponents: they want the President to call out those he believes disloyal, fight with the mainstream media, and they're the only group among the segments in this study where a majority wants the President to do more tweeting. But what they applaud seems precisely what most others dislike, and that is costing the President potential support, even as many give him credit for an improving economy."

PETER BAKER: "Trump Tries to Regroup as the West Wing Battles Itself": "President Trump enters a new phase of his presidency on Monday with a new chief of staff but an old set of challenges as he seeks to get back on course after enduring one of the worst weeks that any modern occupant of the Oval Office has experienced in his inaugural year in power. With his poll numbers at historic lows, his legislative agenda stalled and his advisers busy plotting against one another, Mr. Trump hoped to regain momentum by pushing out his top aide, Reince Priebus, and installing a retired four-star Marine general, John F. Kelly, to take command. But it is far from certain that the move will be enough to tame a dysfunctional White House.

"The shake-up followed a week that saw the bombastic, with-me-or-against-me president defied as never before by Washington and its institutions, including Republicans in Congress, his own attorney general, the uniformed military leadership, police officers and even the Boy Scouts. No longer daunted by a president with a Twitter account that he uses like a Gatling gun, members of his own party made clear that they were increasingly willing to stand against him on issues like health care and Russia. The setbacks came against the backdrop of a West Wing at war with itself, egged on by a president who thrives on conflict and chaos. Mr. Kelly, who had been serving as secretary of homeland security, brings a career of decisive leadership to his new assignment as White House chief of staff. But he confronts multiple power centers among presidential aides, all with independent lines to the man in the Oval Office who resists the discipline and structure favored by generals." http://nyti.ms/2wbgNog

THE KELLY LOOKAHEADS ...

WAPO'S PHIL RUCKER, BOB COSTA and **DAN BALZ: "Trump enlists Kelly to enforce order, but can the 'zoo' be tamed?"**: "When Kelly made the rounds on Capitol Hill before his nomination hearings in January, he did not know Trump very well

and asked people there to share stories about the president-elect. He wanted to know how Trump made decisions. Told that Trump relished competing power centers around him, Kelly grimaced and said nothing. ...

"Trump's transition documents included a lengthy memo about White House structure, based on past administrations. 'They didn't follow the product at all,' said a person with direct knowledge of what transpired as Trump was setting up his administration. 'They did it instinctively ... The president-elect didn't want to say no to anybody.' The result was the White House that now exists, populated by advisers with competing ideologies that reflect an administration that is an amalgam of populist nationalists, hard-line conservatives and establishment Republicans - and a few Democrats. ...

"The environment is poised to change in the Kelly era. The new chief of staff is expected to have full control over the Oval Office and schedule, officials said. Trusted aides such as Hope Hicks, Dan Scavino and Keith Schiller -- as well as senior advisers such as Kushner, Bannon and Conway -- will continue to have casual access to the president." http://wapo.st/2tNL0cg

ANDREW RESTUCCIA, BRYAN BENDER and **JOSH DAWSEY: "Kelly's first task: Stabilize the West Wing:** The no-nonsense retired Marine Corps general will soon be thrust into the center of the West Wing soap opera": "When he officially becomes chief of staff on Monday, Kelly, a no-nonsense retired Marine Corps general, will be thrust into the center of the West Wing soap opera, where President Donald Trump's policy agenda regularly gets preempted by feuding advisers and headline-grabbing scandals. ... 'I think this is the best and last shot,' said one person close to Kelly. 'This is it.' ...

"Kelly wants to have more of a pecking order among the staff and a more 'traditional' approach, one White House official said. But others in the White House said it's too early to make predictions. 'Everything is up in the air. Anyone who tells you they know anything is lying,' a White House official said. ... Kelly has built relationships with several top White House aides in recent months, including chief strategist Steve Bannon and senior adviser Stephen Miller, who have played a central role in Trump's immigration crackdown.

"Kelly has nonetheless expressed frustration about the White House to friends and associates, complaining about the slow pace of hiring and bristling at having to answer to lower-level aides, according to one person who has spoken to him and another person familiar with the tension. ... Asked to name any similarities between the two men, the person said, 'They're both Catholic, but that's probably about it.' ... Kelly is expected to make his first staff change at the White House on Monday, when he'll bring in Kirstjen Nielsen, his chief of staff at DHS." http://politi.co/2tTD0KV

THE NEVER ENDING CAMPAIGN -- "How 2018 became the new 2020," by Gabe Debenedetti: "The 2020 Democratic presidential road show is already underway. And 2018 is beginning to look like the dress rehearsal. Top contenders are making

endorsements, picking sides in party primaries and aggressively working the fundraising circuit on behalf of 2018 candidates, all the while building their own name recognition. With many of presidential prospects on the ballot themselves next year, potential challengers to Donald Trump are also stockpiling cash to help run up their re-election margins to burnish their stature for the big election on the horizon.

"The early focus on the midterms is a marked departure from previous practice, and a further acceleration of the presidential campaign cycle. Prior to the 2016 presidential primary season, for example, Hillary Clinton and Bernie Sanders largely stayed off the campaign trail and out of elections until late 2014 - roughly six months before they officially announced their campaigns. But with a historically large presidential field taking shape, more than a dozen prominent Democrats - including governors like Terry McAuliffe and Steve Bullock, and senators like Cory Booker, Elizabeth Warren, and Kamala Harris - have recognized the need to distinguish themselves from the crowd. And they are already working hard to advance their brand while helping to reinvigorate the dilapidated party infrastructure in advance of the midterm elections." http://politi.co/2viPoo7

TRUMP is at his Virginia golf resort this morning, per the pool.

-- @markknoller: "By my count, it's his 36th visit to one of his golf clubs, 15th time at the one in Sterling, VA - since taking office."

VICE PRESIDENT MIKE PENCE is in Tallinn, Estonia. Pence chief of staff Nick Ayers alerted staff and reporters on the trip that Jarrod Agen, communications director, had been promoted to deputy chief of staff, according to pooler Ashley Parker of the Washington Post.

IN MOSCOW ... -- "The Kremlin is done betting on Trump and planning how to strike back against U.S. sanctions," by WaPo's Andrew Roth in Moscow: "Regardless of whether the Kremlin believes its own denials of interfering in the 2016 elections, there is one undeniable truth: Russia is now Washington's greatest political foe. Understanding that President Trump is 'tied hand and foot,' as one foreign policy hawk here put it, Moscow is weighing options for retaliation.

"After a dalliance on the Trump train, Russia is once again channeling the ruthless realism that drives its political id, and embracing its role as antihero. 'Okay, you think we're bad guys, we're going to be bad guys, and we'll see whether you like it or not,' said Konstantin Eggert, a television political commentator, describing the Kremlin thinking." http://wapo.st/2tUhg1k

RUSSIAN DEPUTY FOREIGN MINISTER SERGEI RYABKOV on potential retaliation as because of new U.S. sanctions to **ABC'S MARTHA RADDATZ:** "If the U.S. side decides to move further towards further deterioration we will answer, we will respond in

kind. We will mirror this. ... "I can assure you that different options are on the table and consideration is being given to all sorts of things, both symmetrical or asymmetrical to use a very popular word in the world of diplomacy."

FOR YOUR RADAR -- AP: "U.S. bombers fly over South Korea after North's 2nd ICBM test": "The United States flew two supersonic bombers over the Korean Peninsula on Sunday in a show of force against North Korea following the country's latest intercontinental ballistic missile test. The U.S. also said it conducted a successful test of a missile defense system located in Alaska. The B-1 bombers were escorted by South Korean fighter jets as they performed a low-pass over an air base near the South Korean capital of Seoul before returning to Andersen Air Force Base in Guam, the U.S. Pacific Air Forces said in a statement. ...

"'**North Korea** remains the most urgent threat to regional stability,' said Gen. Terrence J. O'Shaughnessy, Pacific Air Forces commander. "Diplomacy remains the lead. However, we have a responsibility to our allies and our nation to showcase our unwavering commitment while planning for the worst-case scenario.' 'If called upon, we are ready to respond with rapid, lethal, and overwhelming force at a time and place of our choosing,' O'Shaughnessy said." http://bit.ly/2hcLebc

SUNDAY BEST ...

-- HOUSE MINORITY LEADER NANCY PELOSI defends her leadership to **CHRIS WALLACE** on **"FOX NEWS SUNDAY" --** "I am a master legislator. I know the budget to the nth degree. I know the motivation of people I respect the people who are in Congress. I think this is a great moment for those of us who understand what is at stake with the Affordable Care Act - what our possibilities are in terms of working together with the Republicans as has been our experience in the past. So I feel very confident about the support I have in my caucus. I have never not been opposed within my caucus."

--PELOSI ON JOHN KELLY: "I look forward to working with General Kelly. I've worked with him as Secretary Kelly at the Department of Homeland Security. So I will be speaking with him today. We look forward to working together. It's a very important position - the President's chief of staff to the President of the United States. And it has to be recognized that he is the chief of staff."

-- HHS SECRETARY TOM PRICE talks with **CHUCK TODD** on **NBC'S "MEET THE PRESS: TODD:** "So if they come up with a fix that helps, essentially gives some certainty to the insurance companies to go into rural markets, are you then going to implement the Affordable Care Act as it was meant to be, including encouraging people to sign up, encouraging enrollment, encouraging Medicaid expansion?" **PRICE:** "Well, our, as I said, our responsibility is to follow the law and again we take that responsibility very seriously and we will continue to do so. But remember that the current law right now is failing the American people. As I mentioned, I think, we've got 40 counties across this - 40 counties that will no longer have any insurance company next year.

"That's not a choice for anybody. You've got a third of the counties right now that only have one insurance company providing coverage. That's not a choice for anybody. You've got premiums that are up, deductibles that are up, people having that insurance card and no care, got insurers fleeing the market. 83 insurance companies fled the health insurance market last year. That's before this administration came in. This system is imploding upon itself and that's what we're trying to care of. That's what the president has said. That's why we need repeal and replace."

-- PRICE to **ABC'S MARTHA RADDATZ** on **"THIS WEEK" -- TRUMP DOESN'T REALLY WANT TO LET OBAMACARE EXPLODE: RADDATZ:** "But he says... -- let it -- let Obamacare implode, then deal. What does that mean?" **PRICE:** "Well, I -- again, I think what that does is punctuate the seriousness with which he understands the American people are having to deal with the current situation."

-- OMB DIRECTOR MICK MULVANEY talks with **CNN'S JAKE TAPPER** on **"STATE OF THE UNION" -- TAPPER:** "When General Kelly is sworn in on Monday as White House chief of staff, will all staff members immediately begin reporting to him?" **MULVANEY:** "I don't know. I answer to the chief of staff. And I will continue to do that. The Office of Management and Budget actually reports directly to the chief of staff. Obviously, we answer to the president, as everybody does in the West Wing. But, as far as I know, my reporting doesn't change, nor do I have any reason for it to change. So, we will continue to do our business at OMB the same way we did last week. I think we're doing some good work, and look forward to continuing that under General Kelly's leadership."

FUN -- NYT's NEW PODCAST - Per The Times: "[W]e published the first episode of 'The New Washington,' a new limited-run politics podcast that takes you inside Trump's Washington. Each episode of 'The New Washington,' which airs once a week and will run through the fall, features interviews with politicians and Washington insiders, along with insight, analysis and perspective from some of The Times's most intrepid reporters. ... In the introductory episode, Michael Barbaro talks with Carl Hulse about the most interesting and important characters in Washington today and what he's learned from his decades covering these figures -- and sharing a home, and in one case a barber, with them." http://nyti.ms/2u8FbFR

PHOTO DU JOUR: President Donald Trump waves to well wishers after dining at Trump International Hotel on July 29 in Washington, DC. | Chris Kleponis/Pool/Getty Images

WAPO'S ROXANNE ROBERTS in **REHOBOTH BEACH, DEL. -- "Joe Biden still wants to be president. Can his family endure one last campaign?"** http://wapo.st/2u9e2CH

HOMESTATE POLITICS -- "Lisa Murkowski walked a tightrope in Alaska when she voted 'no' on Obamacare repeal," by the L.A. Times' Kyle Hopkins in Anchorage: "The chairman of the Alaska Republican Party says phones at the state GOP office have been ringing off the hook with Republicans angry or confused by Murkowski's votes. To some moderates, independents and Democrats, she is a folk hero. Supporters planned a 'Stay Strong Lisa' rally on Saturday in Anchorage." http://lat.ms/2viM38A

ELECTION WATCH -- "Hackers descend on Las Vegas to expose voting machine flaws," by Kevin Collier in Las Vegas: "Election officials and voting machine manufacturers insist that the rites of American democracy are safe from hackers. But people like Carten Schurman need just a few minutes to raise doubts about that claim. Schurman, a professor of computer science at the University of Copenhagen in Denmark, used a laptop's Wi-Fi connection Friday to gain access to the type of voting machine that Fairfax County, Virginia, used until just two years ago. Nearby, other would-be hackers took turns trying to poke into a simulated election computer network resembling the one used by Cook County, Illinois.

"Elsewhere, a gaggle of hackers went to work on a model still used in parts of seven states, as well as all of the state of Nevada. Though the device was supposedly wiped before it was sold by the government at auction, the hackers were able to uncover the results the machine tallied in 2002. They were among the hundreds of cybersecurity experts who descended on 'Voting Village,' one of the most talked-about features of the annual DEF CON hacker conference. In a cramped conference room, they took turns over three days cracking into 10 examples of voting machines and voter registration systems - a reminder, they say, of the risks awaiting upcoming U.S. elections." http://politi.co/2eYkwSM

BONUS GREAT WEEKEND READS, curated by Daniel Lippman, filing from the Deutsche Bahn ICE train from Munich to Berlin, where he's attending the American Council of Germany's American-German Young Leaders Conference:

--"Scott Pruitt's Crimes Against Nature," by Jeff Goodell in Rolling Stone: "Trump's EPA chief is gutting the agency, defunding science and serving the fossil-fuel industry." http://rol.st/2uCAUhf

--"Patagonia's Big Business of #Resist," by Abe Streep in Outside Magazine: "The iconic brand has long been the conscience of the outdoor industry, forsaking hefty profits to do the right thing. Now the company is going to war against the Trump administration over protections for public land in a bid to become a serious political player-which happens to be very good for sales." http://bit.ly/2h7eQGN (h/t Longreads.com)

--"Strippers, Insane Asylums, Assassination, and Termites: Inside the Insane History of the World's Greatest White House Replica," by The Daily Beast's Will O'Connor in Baton Rouge: "Governor Huey Long was so anxious to get to the White

House that he built his own in Baton Rouge. An assassin's bullet cut short Long's ambitions, but his gaudy knock-off survives." http://thebea.st/2uO1fHK

--"Slaves of Isis: the long walk of the Yazidi women," by Cathy Otten in The Guardian: "When Isis rounded up Yazidi women and girls in Iraq to use as slaves, the captives drew on their collective memory of past oppressions - and a powerful will to survive." http://bit.ly/2v83KXp

--"Kristin Beck: A Navy SEAL in Transition," by Devin Friedman in the Nov. 2015 issue of GQ: "Back when she was a member of SEAL Team 6-Kristin Beck liked to grow her beard real long. But as disguises go, that was nothing compared with the life she lived as a man. What's it take, and how does it feel, for a paragon of masculinity to travel so far to find her true self?" http://bit.ly/2v2g9fN (h/t Longform.org)

--"Naked Truths: Who are we without our clothes?" by Jamie Lauren Keiles in Racked -- per Longreads' description: "Keiles spends a week at a naturist camp to learn 'why people get naked.' As she exercises, sun tans, and square dances her way through a week garbed for the most part only in shoes, she gets stripped not only of inhibitions around her own body, but also of notions around naturist intent, learning that most enthusiasts take off their clothes not for sexual reasons, but simply to feel free." http://bit.ly/2vbWRVU

--"Instagram is Pushing Restaurants to be Kitschy, Colorful, and Irresistible to Photographers," by The Verge's Casey Newton: "[S]ome entrepreneurs are taking the idea a step further, designing their physical spaces in the hopes of inspiring the maximum number of photos. They're commissioning neon signs bearing modestly sly double entendres, painting elaborate murals of tropical wildlife, and embedding floor tiles with branded greetings - all in the hopes that their guests will post them." http://bit.ly/2v3C06j

--"Afghanistan's Young Liberal Elites Challenge the Taliban," by Susanne Koelbl in Der Spiegel: "A young, liberal elite has emerged in Kabul, including many women. It is taking a stand against the Taliban's atrocities in the form of political and artistic initiatives and wants to put an end to Afghanistan's culture of violence." http://bit.ly/2v1XjWn

--"Tough Talk," by Steve Kolowich in the Chronicle of Higher Ed: "A black philosopher at Texas A&M thought forcing a public discussion about race and violence was his job. Turns out people didn't want to hear it." http://bit.ly/2h6YCxB (h/t Longreads.com)

Playbookers

SPOTTED: Ed Gillespie at gate 42 at Reagan airport Sunday morning. A "couple folks walked up to wish him well," per our tipster.

HAPPY 28th ANNIVERSARY to Diane and Paul Begala.

WEEKEND WEDDINGS - "Deanna Howes, Peter Spiro" -- N.Y. Times: "Mrs. Spiro, 31, is the communications director at the Association of Jesuit Colleges and Universities, which is in Washington. She graduated from Fordham and received a master's degree in communication from Johns Hopkins. ... Mr. Spiro, 47, is the chief of staff to Representative Ro Khanna, a California Democrat. The groom graduated from Tulane and received an M.B.A. from Georgetown. ... The bride and groom first met at a political fund-raiser in 2013, and after an encounter at another fund-raiser, several emails and a much longer conversation at an awards dinner, they began dating in 2015." ***With pic*** http://nyti.ms/2uN7Hyr ... ***Wedding pic*** http://bit.ly/2uKnu2J

SPOTTED: Rep. Ro Khanna, Archbishop of Vilnius Gintaras Grusas, Rev. Michael J. Sheeran S.J., former Amb. to Malta Gary Matthews, former Rep. Tim Bishop (D-N.Y.), ret. Lt. Col. Jim Zumwalt, Heather Purcell, Geo Saba, Kevin Fox, Will McKelvey.

--Conrad Lucas, West Virginia GOP chairman and likely 2018 congressional candidate, last night married **LeFlore Barbour,** an RNC alum now a strategic partner at Direct Edge. The couple met in 2014 at an RNC meeting, and the wedding was in New Orleans. ***Pic*** http://bit.ly/2eYC2WV

SPOTTED: former Miss. Gov. Haley Barbour, Rep. David McKinley (R-W.Va.), Arkansas Attorney General Leslie Rutledge, RAGA political director Seth Wimer, RNC members Sharon Day, Christine Toretti, Henry Barbour, John Ryder, Vicki Drummond, Jonelle Fulmer, Doyle Webb, Jonathan Barnett, Jeannie Luckey, and Melody Potter, and Austin Barbour, Greg Thomas, Rob Cornelius, Jordan Burgess, Kayla Kessinger, Roger Hanshaw, Riley Moore, Brent Robertson, Katie Hirkman, former WV state Justice John McCuskey, Lane Flynn, Katie Leslie, and Jeppie Barbour.

--"Jamie Farnsworth, Andrew Finn": "Mrs. Finn, 33, is a digital and operations manager for education initiatives at NBC News in New York. [She is also an alum of 'Rock Center' and CBS News.] She graduated from the University of Wisconsin-Madison. ... Mr. Finn, 34, is a special counsel in the litigation group at Sullivan & Cromwell, a New York law firm. He also graduated from the University of Wisconsin-Madison, though the couple didn't meet until after both had moved to New York. He received a law degree from New York Law School. ... The couple met in Manhattan in 2015 at a Memorial Day weekend party. They talked about their common background in Wisconsin, and laughed when they exchanged cellphone numbers, as each had retained a 608 area code from their time in Madison." ***With pic*** http://nyti.ms/2hczSE3

OBAMA ALUMNI -- "Casey Pallenik, Bradford Simmons": "The bride, 30 ... is a director of business development for Atlantic Media in Washington. She is also studying for an M.B.A. at Johns Hopkins. Previously, she was a political appointee of the Obama administration, where she served as a staff assistant in the East Wing visitors office, facilitating public tours and large events at the White House. She graduated cum laude

from American University. ... The groom, 31, is a foreign affairs officer at the State Department, where he advises on energy security matters in the Asia Pacific. He graduated from Emory University in Atlanta and received a master's degree in international affairs from George Washington University. ... The couple met in 2007 while studying abroad in Prague." ***With pic*** http://nyti.ms/2vb33wt ... ***Wedding pics*** http://bit.ly/2tUquux ... http://bit.ly/2wbfgi5

--SPOTTED: Graham Brookie, Samantha Tubman, Jonny Dach, Leslie Dach, Chelsea Bollinger, Emily Boyle, Mike DelMoro, Will Jennings and Adrienne Watson, Tess Hetzel, Dana Rosensweig, Elizabeth Pan, Julia Duncan, Micah Fergenson, Andrea Richter, Thayer Surette, Josh Volz, Alex Kahl, Rachel Alben, Kelly McCoy and Sid Mahanta.

BIRTHDAYS: Jim Rutenberg ... WSJ's Shane Harris ... Dave Kochel, Jeb and Mitt alum ... Chris Battle ... Carl Lavin ... Medicare is 52 ... Arnold Schwarzenegger is 7-0 ... Anita Hill is 61 ... Trump WH alum Michael Short ... Eleanor Smeal is 78 ... former Rep. Pat Schroeder (D-Colo.) is 77 ... Michelle Bernard ... Mario H. Lopez, president of Hispanic Leadership Fund (hat tip: Joseph Culotta) ... Rebecca Kutler, VP at CNN ... former CFTC Chairman Tim Massad is 61 ... Chelsie Gosk, social media at Airbnb and a New Yorker alum ... Freeman Klopott ... Meredith Simpson ... Megan Rodriguez ... Fran McCarthy (h/t Jon Haber) ... Tony Maciulis is 41 ... Mark Beatty, 270 Strategies founding partner and 2012 Obama deputy battleground states director. "It's his last bachelor birthday -- he marries the love of his life in less than a month!" (h/t Lynda Tran) ... Ben Marter, comms director for Sen. Durbin ... Candace Randle ... Robert Gottheim ... Brad Jenkins of Funny or Die ... Bill O'Leary, a partner at Heidrick & Struggles, celebrating by playing golf and having dinner with the kids (h/ts Ben Chang) ...

Navy relieves two officers of their duties over USS John McCain's 'preventable' collision in August, which killed 10 sailors

The Navy blamed "poor judgment" and "poor leadership" for the incident in a statement announcing that the vessel's commanding officer and executive officer would be relieved of their duties because of a loss of confidence. This is a

developing story. It will be updated.

Subject: Playbook Power Briefing, presented by JPMorgan Chase & Co.: Obamaworld pushes back after POTUS invokes death of John Kelly's son -- PAUL says he won't vote for Senate GOP budget right now -- TRUMP tumbles in FORBES 400 -- TOM MARINO withdraws as drug czar

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by JPMorgan Chase & Co.

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Tuesday afternoon. OBAMA WORLD PUSHES BACK ON TRUMP -- From a former Obama White House official: "President Trump's claim is unequivocally wrong. President Obama engaged families of the fallen and wounded warriors throughout his presidency through calls, letters, visits to Section 60 at Arlington, visits to Walter Reed, visits to Dover, and regular meetings with Gold Star Families at the White House and across the country."

-- OBAMA'S OFFICE declined to comment on the existence -- or lack thereof -- of a call between Obama and John Kelly about the general's son passing away. **OBAMA,** however, did host a breakfast for Gold Star Families on May 30, 2011. **KELLY** and his wife sat at Michelle Obama's table, according to someone familiar with the breakfast. White House Press Secretary Sarah Huckabee Sanders did not immediately respond to an email request for comment.

TRUMP ON TALK RADIO, EARLIER -- "Trump invokes death of John Kelly's son in furor over calls to fallen soldiers," by Nolan McCaskill: "President Donald Trump on Tuesday invoked the death of the son of his chief of staff, John Kelly, as he defended his claim from a day before that Barack Obama and other past presidents didn't always call the families of slain service members. Trump also said he doesn't feel a need to clarify his remarks. ...

"'So they ask me that question, and for the most part, to the best of my knowledge, I think I've called every family of somebody that's died, and it's the hardest call to make, and I said it very loud and clear yesterday. The hardest thing for me to do is do that. ... Now, as far as other representatives, I don't know,' he continued. 'I mean, you could ask General Kelly did he get a call from Obama. You could ask other people. I don't know what Obama's policy was. I write letters, and I also call.'" http://politi.co/2zfFgdu

THIS SEEMS LIKE IT'S A GIGANTIC PROBLEM -- BURGESS EVERETT SCOOP: "Rand Paul opposes Senate GOP budget": "Sen. Rand Paul is prepared to vote 'no' on the Senate GOP budget if leaders do not agree to cut billions in spending from the

plan, he said in an interview Tuesday.

"The Kentucky Republican said he spoke to President Donald Trump on Tuesday morning about the impasse with GOP leaders, which could lead to a high-profile intraparty defection on the budget this week.

"With Sen. Thad Cochran (R-Miss.) out indefinitely, Republicans may be able to lose only one vote and still pass the budget, which is needed to pave the way for the GOP's tax push.

Paul said he wants to get rid of the $43 billion that exceeds federal budget caps Congress agreed to in 2011. 'I've told them I'm a 'yes' if they'll not exceed the budget caps,' Paul said. 'If leadership is unwilling to compromise with somebody who is concerned about the debt, then they deserve to lose.'" http://politi.co/2gLNi7e

-- QUICK REMINDER: No budget means no tax reform. Period. The end.

TRUMP VS. MCCAIN, CONTINUED -- "Trump and McCain smack at each other over 'spurious nationalism' comments," by Louis Nelson and Elana Schor: "President Donald Trump on Tuesday slapped at Sen. John McCain's condemnation the previous night of 'spurious nationalism,' warning the Arizona Republican that 'at some point I fight back and it won't be pretty.'

"'Well it's a shocker,' the president told radio host Chris Plante in response to a question about McCain's comments. 'Yeah, well I hear it and people have to be careful because at some point I fight back. You know, I'm being very nice. I'm being very, very nice. But at some point I fight back and it won't be pretty.' The Arizona senator brushed off the apparent threat. 'It's fine with me,' McCain told reporters on Capitol Hill on Tuesday. 'I've faced some fairly significant adversaries in the past.'" http://politi.co/2zvE6f6

MARK YOUR CALENDAR -- @JenniferJJacobs: "Trump will announce his Federal Reserve chair pick before he leaves on Asia trip Nov. 3, person familiar confirms to me."

****** **A message from JPMorgan Chase & Co.: 30 Years in the Waiting** It's been more than three decades since America reformed its tax system. As the world became more competitive, our tax code remained the same, putting America at a disadvantage when it comes to creating new jobs. Learn how tax reform can jump-start our economy: http://politi.co/2xE3I1i ******

A LIST THE PRESIDENT WON'T LIKE -- THE FORBES 400 ranking of the richest Americans is out today. The total combined net worth of this year's list is a whopping $2.7 billion and to even make the list, a person must have at least $2 billion. Forbes estimated that President Trump's net worth tumbled by nearly $600 million to $3.1 billion due to a "tough New York real estate market, particularly for retail locations; a costly lawsuit and an expensive presidential campaign." **THE TOP TEN:** Bill Gates, Jeff

Bezos, Warren Buffett, Mark Zuckerberg, Larry Ellison, Michael Bloomberg, Charles Koch, David Koch, Larry Page and Sergey Brin. ***The entire list*** http://bit.ly/2zvvd4X

NEW PHILANTHROPIC GIANT -- "George Soros Transfers $18 Billion to His Foundation, Creating an Instant Giant: The pioneer of hedge-fund investing has transferred the bulk of his wealth to Open Society Foundations," by WSJ's Juliet Chung and Anupreeta Das: "George Soros, who built one of the world's largest fortunes through a famous series of trades, has turned over nearly $18 billion to Open Society Foundations, according to foundation officials, a move that transforms both the philanthropy he founded and the investment firm supplying its wealth.

"Now holding the bulk of Mr. Soros's fortune, Open Society has vaulted to the top ranks of philanthropic organizations, appearing to become the second largest in the U.S. by assets after the Bill and Melinda Gates Foundation, based on 2014 figures from the National Philanthropic Trust." http://on.wsj.com/2kVUGBA

WAPO/60 MINUTES REPORT FALLOUT -- @realDonaldTrump at 8:39 a.m.: "Rep.Tom Marino has informed me that he is withdrawing his name from consideration as drug czar. Tom is a fine man and a great Congressman!"

WAR REPORT -- "U.S.-Backed Forces Capture Raqqa From ISIS," by NYT's Anne Barnard: "Kurdish-led forces said on Tuesday that they had taken all of the northern Syrian city of Raqqa from the Islamic State, a major blow to the militant group, which had long used it as the de facto capital of its self-declared caliphate.

"Officers with the Syrian Democratic Forces, an American-backed militia group made up of Syrian Kurds and Arabs, said by phone and in press statements that they had taken control of the city after a monthslong campaign. But the United States Central Command stopped short of declaring victory, saying that fighters were checking to make sure all areas were clear.

"Celebrations had already begun in Raqqa, where residents had lived under the repressive rule of militants who beheaded people in a central square for offenses as minor as smoking or communicating on the internet without permission. Fighters could be seen cheering in the streets, according to residents reached by phone and text message." http://nyti.ms/2zhtJul

AFTERNOON READ -- JASON ZENGERLE in the NYT Magazine, **"Rex Tillerson and the Unraveling of the State Department:** With an isolated leader, a demoralized diplomatic corps and a president dismantling international relations one tweet at a time, American foreign policy is adrift in the world": "Accommodating the president, rather than working with him, is not a normal mission for a secretary of state - and for Tillerson, it seems to be an increasingly doomed one. 'The president's always saying, "Rex's not tough," and "I didn't know he was so establishment,"' says one Trump adviser. ... The question among many people inside and outside the Trump administration is not necessarily what's keeping Tillerson from resigning; it's what's stopping Trump from

firing him. One Trump-administration official offered me a tentative theory: 'Losing a chief of staff in the first year is a big deal, but losing a secretary of state is an even bigger one.'" http://nyti.ms/2zv1pFE

SCOTUSWATCH -- "It's a Fact: Supreme Court Errors Aren't Hard to Find," by ProPublica's Ryan Gabrielson: "The decisions of the Supreme Court are rich with argument, history, some flashes of fine writing, and, of course, legal judgments of great import for all Americans. They are also supposed to be entirely accurate. But a ProPublica review of several dozen cases from recent years uncovered a number of false or wholly unsupported factual claims.

"The review found an error in a landmark ruling, Shelby County v. Holder, which struck down part of the Voting Rights Act. Chief Justice John Roberts used erroneous data to make claims about comparable rates of voter registration among blacks and whites in six southern states. In another case, Justice Anthony Kennedy falsely claimed that DNA analysis can be used to identify individual suspects in criminal cases with perfect accuracy.

"In all, ProPublica found seven errors in a modest sampling of Supreme Court opinions written from 2011 through 2015. In some cases, the errors were introduced by individual justices apparently doing their own research. In others, the errors resulted from false or deeply flawed submissions made to the court by people or organizations seeking to persuade the justices to rule one way or the other." http://bit.ly/2zxfRNA

--"Book's challenge: Can you do squats like Justice Ginsburg?" by AP's Jessica Gresko: "[A] new workout book written by [RBG's personal trainer Bryant] Johnson, out Wednesday: 'The RBG Workout: How She Stays Strong ... and You Can Too!' ... came about this year after Politico Magazine wrote a piece on the workout. Johnson, 53, took reporter Ben Schreckinger through Ginsburg's workout. The result was a piece titled, 'I did Ruth Bader Ginsburg's Workout. It Nearly Broke Me.' ... Ginsburg ... [wrote] the book's foreword. Schreckinger help**ed Johnson write t**he text. The result is an approx **imately 120-page vo**lume that walks readers through Ginsburg's hour-long workout with illustrations of the justice doing each exercise." http://bit.ly/2gLKOWA ... *$10.52 on Amazon* http://amzn.to/2ig0IMh ... *Ben's original piece* http://politi.co/2ihia30

IN NEVADA, POST-SHOOTING -- "Nevada law on background checks for gun purchases not enforced," by CBS' Julianna Goldman: "Gun control advocates acknowledge that the expanded background checks they want would not have prevented the Las Vegas massacre. But last week, they went to court to try to make Nevada enforce the background checks that are already on the books. Last year, the NRA spent more on a Nevada ballot initiative than in any congressional race, fighting a proposal to expand background checks, including at gun shows. ...

"Nearly a year later, however, the law is not being enforced. State and federal officials are in a standoff over who does the background checks on private gun transfers. So at a Reno, Nevada, gun show just days after the country's deadliest mass shooting in Las

Vegas, Everytown for Gun Safety easily and legally bought four semi-automatic rifles and a 100-round capacity magazine without any background checks." http://cbsn.ws/2xOpKci

COMING ATTRACTIONS -- Former President George W. Bush and **Laura Bush** are launching a new Bush Institute project that is "affirming faith and U.S. leadership in freedom, free markets, democracy, and institutions" with an event at Jazz at Lincoln Center in New York City on Thursday. The former first couple will give remarks and panel discussions will include U.N. Ambassador Nikki Haley, Madeleine Albright, Condoleezza Rice, Jean Case, Mel Martinez, Wes Moore, Jeffrey Rosen and Sen. Ben Sasse (R-Neb.).

DANIEL'S POSTCARD FROM THE HOOVER INSTITUTION -- MICHAEL MCFAUL, former U.S. Ambassador to Russia and now a Stanford professor, spoke at a media roundtable on Monday: "What I thought I would do ... is just go through the list in U.S.-Russian relations over the last several months and talk about wins vs. losses ... What I want you to understand is that's the way Putin thinks about the world ... The score is 13-1-1. 13 wins for Putin, one draw and one win for us ... **[The wins for Putin and losses for the U.S.:]** Withdrawal from TPP ... Withdrawal from the Paris Accords ... Threat to withdraw from the Iran nuclear deal ... Threat of NAFTA withdrawal ... Syria ... Internal divisions within the United States ... Absence of any discussion of democracy or human rights abroad ... Decline in America's image ...

"'Leader of the free world': how many people use that phrase when describing the American leadership today? ... Ukraine can see an indifference [from the U.S.] ... Momentum of the nationalist-populist movement ... Tensions with North Korea ... Closer Russian-Chinese ties ... Reducing our staff in Russia at the embassy ... **Draws:** backlash from violating our sovereignty in 2016 ... And finally ... **we got one victory!** The closing of the consulate in San Francisco: Score that one for the United States of America, minus for Putin ... that facility did other things besides just having a National Russia Day there."

--KORI SCHAKE, a Hoover Institution fellow and an NSC, State and DoD alum: "The most alarming thing to me about the Trump administration ... is that Mick Mulvaney ... who was an entirely sensible, [fiscal] conservative when he was in Congress is now arguing that debt shouldn't matter at all and that economic growth is going to take care of this problem. ... If markets lose confidence in the dollar or if interest rates go up or if Europeans, Chinese or bitcoin become more reliable as alternative holding currencies this is actually going to be an enormous problem for the American government.

"And if you want a near term parallel, watch what is happening to British ability to pay for their defense articles now that Brexit begins to be a real thing because the British are buying Joint Strike Fighters and other things from the United States, they're being required to pay for them in dollars and they're having to cut fighter planes off the list because the appreciation of the dollar relative to the pound is actually foreclosing what they thought they could buy."

MEDIAWATCH -- Mike Zapler has been promoted to the role of deputy managing editor at POLITICO. He'll oversee a combined political reporting unit and continue to lead the Congress team.

SPOTTED Sen. Tim Kaine (D-Va.) and Jim Messina having breakfast at Bistro Bis this morning

--SPOTTED in and around the Kennedy School and the Charles Hotel in the last day: Ash Carter, Jeh Johnson, Ernie Moniz, Sally Jewell, Shaun Donovan, Samantha Power, John Podesta, Caroline Kennedy, Eric Rosenbach, Liz Sherwood Randall and Juliette Kayyem. Rachel Maddow moderated a national security-focused Institute of Politics event Monday night (http://bit.ly/2xMnaUj) with Carter, Johnson, Moniz and Power.

HAPPY ANNIVERSARY to Chicago WLS-AM morning host John Howell and his wife Sarah

****** **A message from JPMorgan Chase & Co.: Keeping Jobs at Home** America is falling behind when it comes to a tax system that helps spur job growth and expand economic opportunity. A 2017 EY report found that the existing tax structure has put job creators here at home at a disadvantage: updating the outdated tax system could have kept nearly 4,700 companies in the United States. That could mean more products made here in America, more parts sourced from American companies and billions of dollars spent here at home. As JPMorgan Chase Chairman and CEO Jamie Dimon put it, "Reforming the tax code is the single most important thing that Congress could do to jump-start our economy, create jobs, and raise wages for American workers." Subject: Sierra Club sues DOE for communications on grid study

By Darius Dixon

08/14/2017 01:26 PM EDT

The Sierra Club sued the Energy Department today to force the agency to divulge communications between top officials working on a contentious electric grid study and any outside groups.

The lawsuit filed in the Northern District of U.S. District Court of California would require the agency to respond to a Freedom of Information Act request the Sierra Club filed on May 1. The deadline to comply with that FOIA passed on May 30.

Sierra's FOIA request specifically demands communications that Energy Secretary Rick Perry, DOE Chief of Staff Brian McCormack, and senior adviser Travis Fisher may have had with groups such as the Edison Electric Institute, Institute for Energy Research or utility representatives.

The lawsuit says the Sierra Club had at least four email exchanges with the agency about the requested communications after the FOIA deadline passed, and EPA failed to meet subsequent goals to comply with the FOIA request by mid-July and early August.

"Given DOE's demonstrated pattern of failing to produce documents by the dates it has communicated to the FOIA requester, Sierra Club is far from certain that any documents, much less a comprehensive response to our request, will be provided in late August," Sierra Club attorneys write.

WHAT'S NEXT: Sierra Club has asked the court to direct DOE to produce the communications "immediately" but it's unclear how quickly the case will proceed.

Subject: BREAKING NEWS: Economy created 156,000 jobs in August

The economy added 156,000 jobs in August, the Labor Department reported Friday, down from 189,000 in July.

Average hourly private-sector earnings were up 2.5 percent over the previous year. In July, earnings were also up 2.5 percent. The unemployment rate was 4.4 percent, up from July's 4.3 percent.

Analysts surveyed by Bloomberg had predicted the creation of 180,000 jobs, an increase in over-the-year hourly earnings of 2.6 percent, and an unemployment rate of 4.3 percent.

Subject: Morning Energy: FERC may have an August pulse — Asian carp plan set to jump — No changes for Grand Canyon-Parashant

By Darius Dixon | 08/07/2017 05:41 AM EDT

With help from Esther Whieldon, Annie Snider, Alex Guillén and Eric Wolff

AUGUST WATCH: Free of Congress, wilting from the heat and anxious for some vacation time before the kids are back in school, most of Washington's policy apparatus is likely to shut down now for the rest of August. But this summer may be different for FERC since the Senate approved two nominees last week. After losing its quorum for the first time in its history early this year, the pressure is on for the agency to shrink the backlog that built up over the past six months. Remember, it's not just natural gas pipelines. There are also mergers, rehearings, and electric and natural gas rate cases, not to mention enforcement probes and potential settlements. Digging out from under that backlog — while dealing with the day-to-day workload — will take several months to get FERC caught up.

Neil Chatterjee and Rob Powelson were confirmed to FERC last Thursday, but it's not clear when they'll take the oath. When former FERC Chairman Norman Bay was confirmed by the Senate as a commissioner three years ago, he wasn't sworn in for 20 days. Of course, the circumstances are a bit more urgent now and a lot of people who depend on FERC may get more than a bit impatient if Chatterjee and Powelson head out for summer vacation. Just remember: They weren't the ones who brought FERC's work to a standstill or slowed the confirmation process. FERC commissioners don't normally hold a monthly meeting in August, but that's just tradition, not a rule. They also aren't limited to holding only one meeting a month, and there's plenty they can approve without having a public session. All in all, this may be a different sort of August for FERC.

BROUILLETTE IN THE BUILDING? One of the Senate's last votes before jetting out of town last week was to confirm Deputy Energy Secretary Dan Brouillette, a move that was welcomed by the Energy Department and those groups and companies who work with the agency. One of the most frequent complaints inside and outside the agency for months has been about the lack of confirmed nominees (Brouillette is just the second at DOE) to help take the bureaucratic busy work off of Perry's plate. Although it's August, we may see more activity out of the agency as Brouillette settles in. His swearing-in date hasn't been publicly released yet.

HAPPY MONDAY! I'm Darius Dixon, returning to the morning slot and attempting to fill Anthony's big ME shoes. Hayley Moller at Glover Park Group was the first by a mile to call out the myth/rumor of President William Howard Taft getting stuck in a bathtub. He apparently weighed about 354 pounds around the time of his inauguration in 1909. Annie dove into atomic history trivia last week and your new host can't resist jumping in the deep end. What Manhattan Project physicist later founded a science museum? Name the museum and its location. Send your answers to moi — along with your tips, energy gossip and commentary — at ddixon@politico.com, or follow us on Twitter @dariusss, @aadragna, @bjlefebvre,

@Morning_Energy, and @POLITICOPro. And tell me if that was too easy!

CARP PLAN A-COMING: The Army Corps of Engineers is poised to dodge a major controversy when it releases a long-awaited draft plan for blocking invasive Asian carp from reaching Lake Michigan. A notice posted in the Federal Register Friday indicates the plan, due out today, will recommend using noise, electric barriers, water jets and other measures to deter carp from migrating further upstream, where recreational and environmental interests fear they would devastate the ecosystem and pose a safety threat to boaters. That's a much less controversial approach than others under consideration, like shutting down barge traffic on the waterway. The draft plan was originally due out at the end of February, but the Trump administration put it on hold amid worries from shippers. That delay drew an outcry from Great Lakes lawmakers, and multiple appropriations riders were aimed at speeding its release.

One fish, two fish, every fish! If you're reading about Asian carp then you probably know how frustrating they are to deal with. But for the uninitiated, who may not know how crazy this fish is, watch this.

NEVERMIND! NO EPA RFS ANNOUNCEMENT AFTER ALL: EPA has changed course, and will not announce its intent to leave the Renewable Fuel Standard as-is, multiple sources tell ME. Instead, it will wait until the official documents are ready for the Federal Register, most likely in a few weeks. The sources say nothing has changed with the agency's policy decision, which is backed by the president: It will still leave refiners on the hook for the cost of complying with the program. But while it had been planning to announce the decision last week or today, it has now decided that industry and the public were sufficiently notified by POLITICO and other media reports last week. No public statement will be issued until all the t's are crossed and i's are dotted.

MC ZINKE WON'T TOUCH THIS: Interior Secretary Ryan Zinke announced on Friday that Arizona's Grand Canyon-Parashant national monument is "no longer under review" and that he's recommending that it be left alone amid a White House-directed study. The monument, which spans more than a million acres, was designated by President Bill Clinton in 2000. "The land has some of the most pristine and undeformed geological formations in North America, which show the scientific history of our earth while containing thousands of years of human relics and fossils," Zinke said. He has now officially removed five monuments from the original list. Seventeen remain under the microscope.

GREENS SCORE KEY WIN IN COAL ASH SUIT: A federal judge ruled for the first time Friday that a coal-fired power plant would have to remove the material from a leaky coal ash pond, rather than simply cap it and leave it in place — a pricey proposition. The lawsuit, brought by the Southern Environmental Law Center and a local Tennessee group, challenged the Tennessee Valley Authority's management of coal ash at its Gallatin Fossil Plant, although the conditions there are similar to those at plants across the south. "While the burden of closure by removal may be great, it is the only adequate resolution to an untenable situation that has gone on for far too long," Chief District Judge Waverly Crenshaw, Jr. of the Middle District of Tennessee wrote in his order.

DOCS SHOW ENERGY CONNECTIONS AMONG EPA APPOINTEES: Key Trump administration appointees at EPA previously provided legal representation or held investments in some of the companies the agency regulates, according to newly released financial disclosures. Erik Baptist, EPA's senior deputy general counsel who arrived from the American Petroleum Institute in June, recently sold off investments of less than $1,000 apiece in Exxon Mobil and ConocoPhillips. Another top appointee in the general counsel's office, David Fotouhi , still holds a number of energy-related investments, according to his disclosure. They include Phillips 66, Dow Chemical, Halliburton, Clorox, Solar Capital Ltd. and Energy Select Sector SPDF, an index with oil and gas holdings. Fotouhi, previously an attorney at Gibson Dunn & Crutcher, had a client list there that included Tesoro, General Electric and oil company Maxus Energy.

Meanwhile, Patrick Traylor, the deputy assistant administrator in the Office of Enforcement and Compliance Assurance, previously represented a number of energy interests at Hogan Lovells, including Southern California Edison, the American Petroleum Institute, Transocean, Koch Minerals, NRG Energy, Venture Global LNG, Delfin LNG, Denbury Resources, AES Corp., Vopak, Flint Hills Resources, The C. Reiss Coal Company, BHP Billiton and Bloom Energy, as well as Daimler Truck North American and U.S. Steel. And Byron Brown , EPA's deputy chief of staff, disclosed that his wife owns between $265,000 and $550,000 in stock in Hess, where she is a senior lobbyist.

Meanwhile, a new Interior nom is Mr. Clean: Trump's pick for Interior Department assistant secretary on land and minerals management, Joe Balash, has an ethics agreement and financial disclosure form that are as boring as they come, listing his pension fund and less than a handful of index funds. Balash, who works for Sen. Dan Sullivan, is a former Alaska Department of National Resources commissioner and ex-staffer for Sarah Palin when she was governor. Balash has advocated for opening up the National Petroleum Reserve in Alaska for additional leases — a goal he shares with Zinke.

BOEM WRAPS UP WORK ON STALLED CAPE WIND: The Interior's Bureau of Ocean Energy Management on Friday issued its final supplemental environmental impact statement for the stalled 468-megawatt Cape Wind project after a court in July 2016 held the agency should have used better data to determine the conditions of the seafloor for the project before it issued a lease for the project. The final EIS says that the additional data it gathered does not change its prior finding that drilling foundations for the project in the seabed would only temporarily disturb sedimentation and the overall impacts to water quality would be minor. Cape Wind is on ice after it missed a financing deadline, prompting National Grid and NStar (now Eversource) to cancel contracts to buy power from the project.

SCANA CHIEF 'SORRY' FOR SHUTTING NUCLEAR PROJECT: The CEO of SCANA made a public apology to its customers for its plans to walk away from its V.C. Summer nuclear project last week. "I want to express that I am deeply disappointed and sorry that we were unable to complete the new nuclear units. You put your trust in us to build these units in order to bring additional clean, reliable energy to our state," CEO Kevin Marsh wrote in an op-ed. "I understand your frustration and share in your disappointment."

MOVERS, SHAKERS: Susanna Murley has taken over as the head of communications for the

Energy Department's SunShot Initiative. Murley replaces Jamie Nolan who left last week. Murley's previous jobs include at the Solar Energy Industries Association and the Chesapeake Climate Action Network.

Subject: Morning Media: Scaramucci launches media redemption tour -- Eric Bolling initiates lawsuit against Yashar Ali -- Fox CEO 'confident' Sky deal will be approved

By Hadas Gold | 08/10/2017 06:15 AM EDT

With Cristiano Lima and Alex Weprin

ERIC BOLLING INITIATES LAWSUIT AGAINST YASHAR ALI OVER SEXTING STORY: Ali, who wrote a freelance article for HuffPost [he also writes for New York magazine and Mother Jones] reported that two women had received explicit photo messages from Bolling several years ago lead to the Fox News host's suspension over the weekend while an outside law firm investigations. Bolling's lawyer has said he "recalls no such inappropriate communications" and that the article is "is false, defamatory, and obviously intended to destroy this good man's career and family." Bolling himself took to Twitter recently to proclaim that he was going to clear his name.

-- This "summons with notice" is the first step in a lawsuit. The summons says Bolling is suing for $50 million in damages over the article, but only names Ali, not HuffPost. However, HuffPost on Wednesday evening announced that even though Ali was under a freelance contract they stand by him and are willing to financially back him up through the legal process. Ali said in a statement "I stand by my reporting and will protect my sources, especially the victims, at all costs."

-- By issuing the summons, Bolling is essentially making sure Ali preserves any records he may have. But continuing on with the case could open Bolling up to discovery. According to the New York Supreme Court, "after a summons with notice is served, the defendant [Ali] will demand that the plaintiff serve a complaint. The plaintiff [Bolling] must then have the complaint served within 20 days after being served with the demand, or the case may be dismissed." On Twitter, Ali has suggested that Bolling shouldn't continue the suit and lead it to discovery.

-- Of note: Bolling's lawyer is from the same firm, Kasowitz Benson Torres that represented former Fox News host Bill O'Reilly, and previously represented President Donald Trump.

FOX CEO 'CONFIDENT' SKY TAKEOVER WILL BE APPROVED, by Alex Weprin: 21st Century Fox CEO James Murdoch told shareholders on Wednesday that the company was "confident" that the U.K. would grant government approval to its proposed takeover of Sky in 2018. "We remain confident our transaction will be approved, but more likely in the first half of 2018 than before the end of this calendar year," Murdoch said on the company's earnings call.

-- Murdoch, in an email to staff at the company, wrote that "culture is critical," and emphasized the company's diversity and inclusion efforts.

-- Despite the troubles stemming from harassment allegations, Fox News was the financial bright spot for 21st Century Fox, helping offset lower revenues from Fox's film division and

broadcast unit. Variety has more.

--Former Fox News anchor Greta Van Susteren weighed in on the channel's problems in a Facebook post. "The bottom line? A network should never be defined by a handful with bad behavior (or even alleged bad behavior) who get lots of attention for their conduct (real or not) but by the thousands who every day work really hard to do a good job...maybe not a perfect job...but always trying to do a good job."

--And speaking of former Fox News stars, Bill O'Reilly teased the unveiling of new behind-the-paywall content for paid subscribers of his independent website last night, writing on Twitter that on Wednesday, "Premium Members will see a new prototype production of my No Spin News analysis." The former top Fox anchor said a public version of the rollout is set for today.

Good morning and welcome to Morning Media! Yesterday it was announced that I'm leaving POLITICO after more than five years to join CNN to cover European politics, media & global business. It's an incredibly bittersweet departure for me because I love POLITICO, what it stands for, the people here, and the journalism we produce. This was one of those unexpected opportunities that pop up in life. Never fear -- Alex Weprin will take the reins in the meantime and there will be more news on the POLITICO front coming soon.

I hope to keep in touch with all of you. My Twitter DM's will always be open. Until Aug. 16 you can reach me at hgold@politico.com / @Hadas_Gold. Morning Media is edited by **Alex Weprin** (@alexweprin / alexweprin@gmail.com) and produced with writing/reporting help from **Cristiano Lima**. (clima@politico.com / @ludacristiano). Archives. Subscribe.

THE MOOCH KICKS OFF HIS MEDIA REDEMPTION TOUR ON ABC's 'THIS WEEK' ON SUNDAY, the show's anchor George Stephanopoulos tweeted this morning. Just about every major news show has been chasing to get former White House Communications Director Anthony Scaramucci, but we heard last week that Mooch chose ABC News as his first stop.

SCARAMUCCI WILL THEN GO TO STEPHEN COLBERT FOR HIS FIRST LATE-NIGHT POST-EXIT INTERVIEW: The comedian announced on Twitter last night that Scaramucci would be joining him on Monday. "This is just a heads up for our censors to get ready! #themooch," the CBS late night host tweeted. Scaramucci teased a post-exit presser the week after his firing, but cancelled just prior to it, making the appearance this Sunday and Monday one of his first public outings since his fall from grace.

-- Bonus: 5 times Colbert roasted "The Mooch" ahead of their late-night next Monday. Read the list here.

BUT HE'S STILL NOT OVER THAT NEW YORKER INTERVIEW featuring numerous expletive-laden attacks on fellow White House staffers that ensnared the Trump administration in controversy just days after his official unveiling as communications director. Scaramucci took to Twitter late Wednesday to blast New Yorker writer Ryan Lizza: ".@RyanLizza is the Linda Tripp of 2017. People know. And he is up at night not being able to live with himself." Asked

online if he was accusing Lizza of taping their interview without permission, Scaramucci responded, "Yes. He absolutely taped the call without my permission. #lowlife" The problem is, The New Yorker and Lizza say that Scaramucci at one point requested the conversation go off-the-record, which Lizza accepted, meaning the rest of the conversation was on. And assuming Lizza and Scaramucci were within Washington D.C. when they held their phone conversation, Lizza was legally within his right to record even if he did not notify Scaramucci - Washington D.C. adheres to "one-party consent" recordings.

THIS IS QUITE THE NEW YORK TIMES CORRECTION to their big story about scientists purposely leaking a climate change report out of fear the Trump administration would suppress the report. The article explains how a "draft report by scientists from 13 federal agencies concludes that Americans are feeling the effects of climate change right now" and that "it directly contradicts claims by President Trump and members of his cabinet who say that the human contribution to climate change is uncertain, and that the ability to predict the effects is limited." The idea that the report was leaked to the Times by concerned scientists before the Trump administration approved it for release was given a lot of play. But it turns out, according to the correction, the report was actually uploaded by the nonprofit Internet Archive in January.

-- New York Times Washington bureau chief Elisabeth Bumiller told the Washington Post's Erik Wemple "We were just not aware that somebody involved in the report had put a draft on this nonprofit Internet site ... it was not a well-known site to us and the point is that the people who shared the draft with us were not aware of it either. That doesn't change the larger point that scientists were worried that the government wouldn't approve the report or release it through normal channels."

AMID LEGAL THREAT, TECHDIRT MOUNTS FREE SPEECH REPORTING PUSH: The news organization, currently the target of a $15 million lawsuit spearheaded by the same law firm that took down Gawker, announced a boost to its free speech reporting program Wednesday, including a $250,000 investment from outside groups. The initiative , launched in partnership with the Freedom of Press Foundation, the Charles Koch Foundation and Craigslist founder Craig Newmark's CraigConnects, among others, is will look to "draw attention to the threats news organizations face when reporting on powerful individuals who attempt to stifle criticism," the group wrote in a statement. You can read the full release here.

DISNEY TO PAY MORE THAN $177 MILLION TO SETTLE 'PINK SLIME' SUIT, by Alex Weprin: In what is the largest settlement of its kind, Disney paid at least $177 million to settle the "pink slime" defamation suit filed against its ABC News division. Disney settled the case in June, partway through the high-profile court case. The figure was revealed in regulatory filings on Wednesday. That figure is the most ever paid by a media organization in a defamation case, according to CNN Money.

FACEBOOK IS LAUNCHING A VIDEO CONTENT PLATFORM today called "Watch," in what many see as an opening salvo in its plan to compete with television providers for original content and viewers. The social media giant says the redesigned video tab, previously released as the "Video" tab last year, "will be home to a wide range of shows, from reality to comedy to live sports." A spate of roughly 40 shows on "Watch" is set to launch on Aug, 28, Business Insider

reports.

BUZZFEED MAKES STRIDES IN NEWSROOM DIVERSITY. Over the past few years BuzzFeed's newsroom has become increasingly less white and male, a report from Splinter's David Uberti shows , as the outlet moves towards a more accurate representation of the communities it seeks to cover. The percentage of non-white staffers at the viral news outlet has risen by roughly six percent since this time last year and over the past year the the percentage of women in the newsroom has risen from 50 to over 60 percent. BuzzFeed's diversity gain, and its somewhat rare decision to publish of internal demographic breakdowns, highlights a larger push in the industry to diversity. But while homogeneity has decreased, BuzzFeed still has work to do in terms of retaining minority employees, particularly Hispanics and Latinos, EIC Ben Smith concedes: "We need to do better on this front, especially in leadership roles."

Subject: Morning Energy, presented by the U.S. Chamber's Global Energy Institute: More Pruitt non-commercial travel emerges — Trump biofuel moves spook backers — Zinke abandons planned mining industry address

By Anthony Adragna | 09/28/2017 05:40 AM EDT

With help from Esther Whieldon and Ben Lefebvre

NOT FLYING SOLO: EPA chartered a plane for Administrator Scott Pruitt to visit the Gold King mine because he otherwise would not have been able to travel with a member of his security detail, according to documents obtained by ME. EPA officials have said Pruitt had to take the charger flight from Denver to Durango, Colo., because his commercial flight had been delayed and no other arrangements were available. However, Pruitt apparently could have taken another commercial flight or caught a ride with Gov. John Hickenlooper on a state-owned plane, but neither option would have allowed Pruitt to be accompanied by a member of his around-the-clock security detail. Instead, EPA booked a charter plane, which cost taxpayers more than $5,000.

"**While there was one potential alternative identified** that had only one seat available (and the airline may have gone as far as to reserve that seat in case we determined it would meet the travel needs requirements), [chief of staff Ryan Jackson]'s understanding from the security detail was that there was not any additional seat for a Special Agent to accompany the Administrator and, therefore, that flight did not meet the travel and security needs," wrote Kevin Minoli, EPA's acting general counsel, in an Aug. 4 detailing his decision to approve the commercial travel. "Similarly, there was only one seat available on the plane with the Governor, so without the Governor removing someone else from the trip that was not an option either." The email was included with an Aug. 24 memo from Minoli formally authorizing the flight, copies of which EPA shared with ME.

EPA has spent at least $58,000 for Pruitt and his entourage to fly on private or government-owned planes this year, according to reports in the Washington Post and CBS News Wednesday, citing records provided to Sen. Sheldon Whitehouse . The Washington Post also noted that Pruitt "flies either in business or first class when those seats are available on commercial flights. Multiple EPA travel documents state that Pruitt 'is entitled to business class accommodation due to security concerns.'" His non-commercial flights also included:

—An early June flight from Cincinnati to New York on an Air Force plane so he could make his flight to an international energy ministers meeting in Italy. That trip cost $36,068.50. Approval here.
—A July 27 trip on an Interior plane from Tulsa to the tiny outpost of Guymon, Okla. to discuss water regulations with farmers that cost $14,434.50. The agency argued "time constraints" prevented Pruitt from making the five-hour drive. Approval here.
—An Aug. 9 trip on North Dakota's state aircraft so Pruitt could participate in a roundtable at the University of North Dakota's Environmental Research Center at a cost of $2,144.40.

Any other non-commercial flights? "This is it," a spokesman told ME on Wednesday, adding he believed Pruitt had only flown by helicopter once to survey hurricane damage.

Expanded IG probe sought: Three senior House Energy and Commerce Democrats — Frank Pallone, Diana DeGette and Paul Tonko — asked EPA's inspector general to expand its ongoing probe into Pruitt's travel habits to include his use of private and military aircraft. Letter here.

REMINDER: President Donald Trump suggested Wednesday he might fire HHS Secretary Tom Price for spending $300,000 on private flights. This isn't going away.

WELCOME TO THURSDAY! I'm your host Anthony Adragna, and API's Khary Cauthen was first up to identify Charlton Heston as the actor-turned-NRA president. GUIDE TO TAX REFORM — Easily understand and explain tax reform. Tax reform is complicated, to say the least. Download POLITICO Pro's Guide to Tax Reform and become an expert. Includes six tax-related infographics. **GET YOUR GUIDE TO TAX REFORM.**

MEXICO, U.S. SIGN NEW WATER DEAL: Officials with the U.S. and Mexico announced an agreement at a Santa Fe, N.M. water conference to help preserve the Colorado River, the Associated Press reports. Under the agreement, the U.S. will spend $31.5 million in water conservation projects in Mexico and any water saved would then be split between the two countries and environmental projects. Pro's Annie Snider took an in-depth look at the backstory and negotiations last November. The river supplies water to about 40 million people and 6,300 square miles of farmland in the U.S. alone.

BIOFUEL BACKERS FEAR TRUMP BETRAYAL: Biofuels producers and their farm-state backers in Congress fear the Trump administration is wavering in its commitment to Renewable Fuel Standard, Pro's Eric Wolff reports. Sen. Joni Ernst on Wednesday slammed EPA's notice seeking input on whether to reduce the already set 2018 biomass-based biodiesel requirement and shrink the mandate in 2019. In a letter to Trump, Ernst said she hoped "that your EPA has not forgotten about the pledges that were made to my constituents and to farmers across the country." More from Eric here.

What's more, EPA is considering a policy shift within the next few months that would allow all domestically produced biofuel to count toward annual biofuel compliance quotas, Bloomberg reports, citing people familiar with the discussions. That would lower costs for refiners but come at the expense of corn farmers.

CLIMATE NOW CONSIDERED IN PIPELINE CASE: FERC announced Wednesday it added a new 5-page analysis of the Southeast Market Pipelines Project to ensure it complied with a federal court's requirement that it include an assessment of greenhouse gas emissions from the Florida power plants that may use the fuel, Pro's Darius Dixon

reports . FERC has until Oct. 6 to decide whether it will appeal the D.C. Circuit's Aug. 22 ruling, though the move to issue a supplemental EIS on greenhouse gas emissions suggests an appeal is less likely. The analysis found that the pipeline would increase Florida's annual greenhouse gas emissions between 3.7 percent and 9.7 percent compared to 2014 levels for the state.

MIXED SIGNALS ON JONES ACT WAIVER: Several House Democrats introduced legislation Wednesday permitting Jones Act waivers for humanitarian relief. That came after Trump said he was "thinking about" granting a waiver to help deliver fuel and other goods to Puerto Rico, but noted "we have a lot of shippers and a lot of people and a lot of people who work in the shipping industry that don't want the Jones Act lifted." DHS previously said it was unlikely to grant the request, arguing the problem wasn't the number of ships with supplies but the lack of delivery logistics on the island.

Status update: All of Puerto Rico remained without electricity and 44 percent of the island's residents still lacked drinking water, according to status reports. "Right now we are in emergency mode," Gov. Ricardo Rosselló told CNN on Wednesday. "Our focus is not necessarily restoring energy. The energy grid has been destroyed. ... And we need to rebuild it. That does not get rebuilt in days."

IN OTHER PRUITT NEWS: His agency has threatened to cut off support for a program within Justice Department's Environment and Natural Resources Division that reimburses DOJ for Superfund litigation seeking to force polluting entities to pay to clean up toxic contamination they caused, The New York Times reports, citing budget documents. EPA payments accounted for 27 percent of the division's budget — amounting to $810 million — between 1987 and 2016.

ENERGY GROUPS WEIGH IN ON TAX PLAN: The oil and gas industry are among the early fans of the Republican tax proposal released Wednesday, Pro's Eric Wolff reports. One principle in the plan, allowing companies to fully expense their spending, is of particular interest to the sector, which says it pours an average of $232 billion a year in capital expenditures in the U.S. "The right pro-growth tax policies can accelerate these economic investments and create more jobs while keeping energy affordable for consumers," American Petroleum Institute President Jack Gerard said.

Utility and renewables industries are withholding their verdicts for now. The Edison Electric Institute is concerned about the potential loss of the interest tax deduction. "For us, the interest deduction is how we raise capital," Eric Grey, EEI's director of government affairs, told Eric. "Our companies are in the debt and equity markets every single day trying to build the necessary financing for the large [capital expenditure] we do." The Solar Energy Industries Association and the American Wind Energy Association both said they were still studying the proposal.

** **A message from the U.S. Chamber's Global Energy Institute:** Energy security is a top priority. For decades, we lacked a tool to measure our progress and assess the impact of policy decisions. Our *Index of Energy Security Risk* changed all that and gives us an objective, quantitative way to track it. See our Index here: http://bit.ly/2xGeOvL **

PENCILS DOWN ON WOTUS REPEAL: More than 190,000 comments had already flooded the government's inboxes on the last day to submit comments on the Trump administration's proposal to replace the Obama-era Waters of the U.S. rule with an earlier version while EPA and the Army Corps of Engineers write a new one. Everyone seems to have stuck to well-worn talking points, but a couple of highlights here:

—**Agricultural groups:** They argued in separate letters the Obama-era EPA regulation "ignores the limits and structure that Congress put in place" for the Clean Water Act and urge the agencies to "move quickly" on a new regulation after rescinding the 2015 version.

—**Environmental groups:** The Southern Environmental Law Center, on behalf of dozens of other groups, vehemently opposed the proposal and said reviving "an under-protective, case-by-case regime would result in renewed uncertainty and an unlawful abdication of the agencies' responsibility for protecting clean water." The Natural Resources Defense Council said in its own comments the proposal represents "woefully misguided and unlawful environmental policy" without adequate public input opportunities.

—**Senate EPW Republicans:** Lawmakers commended the administration for pulling the earlier rule, which they said in a letter stemmed from "the erroneous premise that federal jurisdiction over water is whatever the federal wants it to be" and unlikely to survive legal challenges. They asked for a new regulation that "respects the intent of Congress" ASAP.

GREENS GIVE GREEN: The League of Conservation Voters Action Fund, NRDC Action Fund PAC and NextGen America today are announcing they've raised or contributed $3 million to state and federal candidates so far the 2017-2018 cycle. The groups hit the mark after a 48-hour fundraising push, GreenStorm, meant to boost priority candidates like New Jersey's Phil Murphy, Virginia's Ralph Northam and Oregon Gov. Kate Brown.

SECRETARIES IN PENNSYLVANIA — PERRY VISITING COAL COMPANY: Energy Secretary Rick Perry, along with Rep. Lou Barletta, visits the Jeddo Coal Mine in Wilkes-Barre, Pa. today at 1 p.m. He'll view rare earth elements extraction site, take questions from employees and observe anthracite mining operations.

About two hours away, Interior Secretary Ryan Zinke visits the Valley Forge National Historic Park in King of Prussia for an update on the park and to visit with National Park Service employees.

ZINKE WON'T SPEAK TO MINING GROUP: Zinke dropped out of addressing the National Mining Association's annual fall meeting at the Trump Hotel next week, the group tells ME. "He was scheduled, but is not speaking now," NMA spokesman Luke Popovich said. "He will not be attending." NMA did not give the reason for the cancellation, and Interior did not respond to questions. The meeting, first reported in The Intercept, drew criticism for NMA money flowing into a business of which Trump is

still a majority owner. Zinke has also come under fire from public watchdog Citizens for Responsibility and Ethics in Washington for addressing the American Petroleum Institute at the hotel and conducting at least one lunch there.

INTERIOR TO SEEK COMMENT ON SAGE GROUSE PLANS: The Interior Department could as early as today issue a request for public comment on potential changes to how it manages sage grouse populations in the West, including to make it easier for fossil fuel development and livestock grazing, according to sources familiar with the situation. Zinke in August ordered staff to move forward on internal staff recommendations to change BLM's land-use conservation plans for the bird, revise guidelines for fossil fuel leases and allow states to set population targets.

EPW NOMINATION HEARING SET FOR OCT. 4: The Senate EPW Committee plans to hold a confirmation hearing for four EPA and one NRC nomination on Oct. 4, your ME host reports. For EPA, lawmakers will consider the selections of Matthew Leopold to be general counsel, William Wehrum to run the air office, Michael Dourson to run the Office of Chemical Safety and Pollution Prevention and David Ross to run the water office. They'll also consider Jeff Baran's renomination to the NRC.

MAIL CALL! E&C LEADERS ASK GAO TO PROBE DOE CONTRACTORS: Eight bipartisan Energy and Commerce Committee members asked GAO in a Wednesday letter to examine so-called data calls from DOE contractors, requests for various information from the contractors running the national labs and performing other projects for the agency.

CBD SEEKS RECORDS ON BLM DECISION LINKED TO CADIZ: The Center for Biological Diversity has filed a public records request with the Interior to figure out why the agency earlier this month reversed a legal interpretation it made under the Obama administration that would have required Cadiz Inc. to go through an environmental review process to use a railroad right of way for its controversial water pipeline in California. Interior's second in command, David Bernhardt, was a lobbyist for Cadiz before joining the agency but an Interior spokesman in an emailed statement said Bernhardt was not involved in the decision to revoke the legal finding.

COAL ASH DEBATE, DELAYED: Arguments over EPA's 2015 coal ash rule will now take place on Nov. 20 rather than Oct. 17 after the D.C. Circuit Court of Appeals granted a one-month delay, Pro's Alex Guillén reports.

GINA SPEAKS OUT! If you happen to be anywhere near Columbia Law School tonight in New York, former EPA Administrator Gina McCarthy delivers what's sure to be an interesting lecture entitled "The President and Future of EPA." Details here.

TAKE A GLANCE! The American Bar Association and the Environmental Law Institute released a primer Wednesday on the Trump administration's environmental actions since January. Read it here.

I'M ALL FERC-AKE: Commissioners Cheryl LaFleur and Robert Powelson served up some mighty tasty looking cake in honor of FERC's 40th anniversary. Pic.

MOVER, SHAKER: Former U.S. Ambassador Laura Holgate is joining Third Way as a non-resident expert focusing on the intersection of climate change, advanced nuclear energy, and security. She was previously U.S. representative to the Vienna Offices of the United Nations and International Atomic Energy Agency.

4:00 p.m. — International Trade Administration holds a meeting by teleconference of the Renewable Energy and Energy Efficiency Advisory Committee, RSVP: Victoria.Gunderson@trade.gov

THAT'S ALL FOR ME!

A message from the U.S. Chamber's Global Energy Institute: Pipelines Power America. America has over 2.6 million miles of pipelines that safely deliver natural gas and petroleum products throughout our nation. It would take over 750 tanker trucks a day to transport the same amount of energy as a single pipeline. While our analysis shows that certain regions like the Northeast face a critical lack of pipeline infrastructure that is contributing to higher prices and negative economic impacts, pipeline projects are under attack across the nation. It's time to end delays and allow for energy that is essential for our daily lives to move around our nation. Find out more about how Pipelines Power America here: http://bit.ly/2wG6lj9 **

Stories from POLITICO Pro

Price traveled by private plane at least 24 times Back

By Rachana Pradhan and Dan Diamond | 09/21/2017 05:58 PM EDT

Health and Human Services Secretary Tom Price has taken at least 24 flights on private charter planes at taxpayers' expense since early May, according to people with knowledge of his travel plans and a review of HHS documents.

The frequency of the trips underscores how private travel has become the norm — rather than the exception — for the Georgia Republican during his tenure atop the federal health agency, which began in February. The cost of the trips identified by POLITICO exceeds $300,000, according to a review of federal contracts and similar trip itineraries.

Price's use of private jets represents a sharp departure from his two immediate predecessors, Sylvia Mathews Burwell and Kathleen Sebelius, who flew commercially in the continental United States. HHS officials have said Price uses private jets only when commercial travel is not feasible.

But many of the flights are between large cities with frequent, low-cost airline traffic, such as a trip from Washington to Nashville that the secretary took on June 6 to make a morning event at a medication distributor and an afternoon speech. There are four regular nonstop flights that leave Washington-area airports between 6:59 a.m. and 8:50 a.m. and arrive in Nashville by 9:46 a.m. CT. Sample round-trip fares for those flights were as low as $202, when booked in advance on Orbitz.com. Price's charter, according to HHS' contract with Classic Air Charter, cost $17,760.

HHS spokespeople did not respond to questions about specific aspects of Price's travels, including how many charter trips he has taken. Charmaine Yoest, the agency's top spokesperson, said Price's travel for official business "comes from the HHS budget."

In a statement, Yoest said, "The Secretary has taken commercial flights for official business after

his confirmation. He has used charter aircraft for official business in order to accommodate his demanding schedule. The week of September 13 was one of those times, as the Secretary was directing the recovery effort for Irma, which had just devastated Florida, while simultaneously directing the ongoing recovery for Hurricane Harvey . . . Some believe the HHS Secretary should be Washington-focused. Dr. Price is focused on hearing from Americans across the country."

Nonetheless, POLITICO identified at least 17 charter flights that took place before the first storm — Hurricane Harvey — hit in late August, and included flights that did not appear to be for urgent HHS public health priorities.

For example, Price took a Learjet-60 from San Diego to the Aspen Ideas Festival — a glamorous conference at the Colorado resort town — that arrived at 3:33 p.m. on Saturday afternoon, June 24, nearly 19 hours before his scheduled panel. That flight likely cost more than $7,100, according to one charter jet agency estimate.

"If you're going to a conference, you have some [advance] flexibility to book travel" and shouldn't need last-minute charters, said Walter Shaub, who was the Barack Obama-appointed director of the United States Office of Government Ethics until July. "This shows a complete disregard for the expense to the taxpayer."

Since being confirmed in early February, Price has developed a reputation inside the agency for flying on private charters rather than taking other means of transportation, people inside and outside the Trump administration said.

After a POLITICO investigation identified five private flights that Price took up and down the East Coast last week, Price took a charter jet to Oklahoma on Tuesday of this week, Sept. 19, where he met with Native American tribes and toured health care facilities by car — although HHS initially explored flying him by charter around the state, two people with knowledge of Price's travels said. "There was a push from political [staff] at HHS to fly him and not drive him to these small communities," said one of the people.

Price's staff cut short his news conference in Oklahoma on Wednesday when reporters raised questions about his use of taxpayer funds, an attendee said.

Price's frequent trips around the country have rankled staff inside the White House, with a senior official saying many trips aren't related to priorities like Obamacare repeal and other items on the president's agenda. While Price has flown to Maine, New Hampshire, Oklahoma and Pennsylvania since last Wednesday, President Donald Trump and Senate Republicans have been frantically rallying support to pass an Obamacare repeal bill by Sept. 30. After that date, the GOP will need 60 Senate votes, not 50, to overturn the 2010 health law.

"No one is quite sure what [Price] is doing," a senior White House official said. "You look at this week, we're doing a last final push trying to get this over the finish line, and he's nowhere to be found."

Many of Price's trips have centered on making announcements related to the use of opioids and holding listening sessions about the epidemic, which Trump labeled a national emergency and continues to contribute to rising death rates from drug abuse. Price has labeled fighting the opioid epidemic one of his top priorities.

But rather than fly commercially to these events, which are scheduled well in advance, Price tends to rent corporate-style jets. Sometimes, he ferries big-name guests along with him. In May, Price and Kellyanne Conway — the White House counselor and former Trump campaign manager who traveled with Price to Philadelphia last week to tour an addiction treatment center — made stops in four different states in the span of two days.

The pair traveled to Lansing, Michigan, and Charleston, West Virginia, for opioid-related meetings in the morning and early afternoon on May 9. That happened to be the same day Trump abruptly fired FBI Director James Comey. On May 10, Conway and Price were in Augusta, Maine, and Concord, New Hampshire, for more opioid-related events.

On July 6, Price again made an opioid-related visit to Chattanooga, Tennessee, where he took a private plane, according to two sources with knowledge of the situation. According to records, HHS signed a $14,570 charter plane contract for Washington to Tennessee travel with a July 6 effective date.

In June, Price spoke at a physicians association conference in San Diego, where he vowed to wring out wasteful spending in the government's health care programs. Getting "value" for spending "is incredibly important," he said.

Price took a private plane to get to the meeting, which was one stop on a five-state sprint of charter travel that cost $50,420.

Josh Dawsey and Josh Gerstein contributed to this report.

Trump win churns U.S.-Mexico water talks Back

By Annie Snider | 11/26/2016 07:41 AM EDT

Negotiations between the U.S. and Mexico to seal a water-sharing deal over the dwindling supplies on the Colorado River are confronting a new deadline: the inauguration of Donald Trump.

A 16-year drought has sent water levels at the river's most important reservoir, Lake Mead, to their lowest point since it was first filled in the 1930s, threatening supply cuts for 40 million people across seven U.S. states and two Mexican states. It's also raising the stakes for the two

countries as they try to hammer out an extension of a four-year-old agreement on how to share the water.

That agreement expires at the end of 2017, but negotiators who have worked for years are pressing to finish a new pact before President Barack Obama leaves office — or put at risk years of fruitful collaboration on the sharing of cross-border water supplies that are vital to both countries.

The fear is not only that Trump — who has called Mexicans criminals and vowed to erect a massive border wall — could derail any potential deal, but that even turning the talks over to new negotiators would stall the process at a critical moment, since it would take them months to get up to speed.

The issue is just one of dozens of crucial international topics, from relationships with NATO and Russia to Asian trade deals, that may take a dramatic shift under a Trump team that campaigned on an "America First" platform.

Farmers and cities in Arizona and Nevada could face their first cuts in water supplies a year from now, just as the existing agreement ends. Without a new agreement with Mexico, it is unclear whether or how those cuts could be shared across the border, raising the prospect of either deeper, swifter cuts to U.S. states or a bitter cross-border dispute.

Water policy experts say that even before Trump's election, the Obama administration had been pressing to tie up a new deal for the Colorado River and avoid any delays caused by the change in administrations.

"There's pressure to finish off any type of arrangement that you start with one administration," said Carlos de la Parra, a Mexican water analyst who advised his country's lead negotiator on the previous water sharing deal. "Now there's this surprise, and there's a President-elect Trump, and obviously that becomes a little more acute given his discourse."

The Colorado River provides the lifeblood of much of the American Southwest, feeding desert metropolises including Phoenix, San Diego and Las Vegas, and supplying farmers who grow 15 percent of the nation's food. The river rises on the Continental Divide in Rocky Mountain National Park, and snakes 1,450 miles before finally draining into the Gulf of California on the Mexican side of the border — although most of the time there's barely a trickle left by the time the river reaches its delta.

Experts say the arrival of a potentially hostile new U.S. president doesn't necessarily mean Mexico will settle for less than it wants. Mexico holds significant leverage since its water is the most protected as a treaty obligation. It also has the right to take the U.S. to international arbitration, and controls the delivery of Rio Grande water to American farmers in Texas.

While Mexico has been "very fair to the U.S. — more than it had to be" in previous negotiations, the water treaty is a sovereignty issue that "gets down to the raw material of Mexican nationalism," said Stephen Mumme, a political science professor at Colorado State University.

"There are big incentives on both sides to get this done, and done in a way that's sustainable," he said. "But it's not going to come at Mexican expense and Mexico cannot be bullied or pressured in this. I think that's one of those things that's going to be a little bit of a wake-up call for the Trump administration."

Negotiators are focusing on the technical aspects of crafting a water-sharing deal and hoping to keep politics out of the talks. Sally Spener, foreign affairs officer at the International Boundary and Water Commission, the U.S.-Mexican agency that negotiates and applies the treaties, said the American commissioner "has instructed his staff to continue with our work and we continue to do that."

Roberto Salmon, the lead Mexican negotiator, told POLITICO the primary urgency to sign a new deal comes from the ongoing drought and dire predictions for the basin, rather than "political issues or political aspects or the political life of either country." But keeping calm heads only stands to get harder as flows on the river continue to dwindle.

Under a 1944 treaty with Mexico, the U.S. must send 1.5 million acre-feet of water — nearly half a trillion gallons —across the border each year, an amount that's roughly enough to supply 3 million homes. But the treaty's provisions laying out rules on what happens during a drought are vague and undefined.

Moreover, hydrologists now realize that the period in the early 20th century when the Colorado River's water supply was divvied up was unusually wet. And as temperatures rise and climate change shrinks the winter snow pack that feeds the Colorado, the river is likely to carry even less water in the future.

The strain is already being felt: Water levels behind the Hoover Dam at Lake Mead this year plummeted to the lowest level since the reservoir was built. Under existing law, Arizona and Nevada must start taking cuts when water levels reach 1,075 feet above sea level in late summer. The Bureau of Reclamation estimates a 50-50 chance that the lake will hit that level next year, triggering the first supply cuts for the U.S. — and potentially Mexico — in 2018.

In fact, if the existing compacts and treaties had been strictly followed, the cuts would already have begun. But after years of battling each other in court and across the negotiating table, the U.S. and Mexican governments and the seven U.S. states in the Colorado River basin decided to stop fighting and start working together, ultimately staving off water delivery cuts for several years.

In the U.S., the lower basin states of Arizona, Nevada and California have struck several deals to undertake and fund aggressive water conservation programs. The U.S. and Mexico struck a similar deal as part of the water sharing agreement signed in 2012 that is set to expire next year. Under that deal, called Minute 319, the states and the U.S. government are investing $21 million in water conservation programs in Mexico like lining canals to reduce leaks and improving water efficiency at farms.

That deal also takes steps to restore the parched river delta south of the border, and allows Mexico to store some of its Colorado River water supplies in Lake Mead to make up for capacity that was lost in Mexico after a 2010 earthquake damaged its dams. That helped Mexico solve its shortage problem while bolstering water levels at the critical reservoir.

But that history of collaboration may be tested if the negotiations drag on into the new Trump administration, which has focused much of its most bombastic rhetoric on international trade agreements and immigration from Mexico.

"All this blustering, all of these insults being hurled around just doesn't help, because we depend on Mexico in so many ways," Mumme said.

Trump hasn't spoken about the Colorado River's issues, and his transition team did not respond to a request for comment. But during the campaign he championed the plight of farmers in the Central Valley of California, who have had their water deliveries cut because of a five-year drought combined with endangered species protections that restrict pumping from the Sacramento-San Joaquin delta in the northern part of the state. In a May campaign stop in Fresno, Trump vowed to fix the state's "insane" water problem to "bring jobs back."

And in what could be signal of the type of polices to expect, David Bernhardt, a former Interior Department solicitor who is now the top lobbyist for a powerhouse Central Valley water district, was tapped to lead Trump's initial transition for the Interior Department.

Getting a Colorado River deal done before Trump's inauguration will be a heavy lift. Mexico has indicated it doesn't want to sign the deal until a separate but related agreement is in place on the U.S. side of the border. That deal, a drought contingency plan among California, Arizona and Nevada, calls for the states to conserve additional water above and beyond mandatory cuts in order to increase reservoir levels and stave off the most severe scenarios. Although the states have agreed to top-line numbers, they've haven't yet worked out with their farmers, cities and other users how to share the cuts. And in Arizona, the state legislature must give its approval to any pact.

Water experts agree it's only a matter of time until a shortage declaration is declared on the river, and without a new U.S.-Mexico deal in place, what would happen then is anyone's guess.

The U.S. could simply implement the delivery cuts agreed to under the 2012 deal, hoping that Mexico wouldn't object to extending those provision under the expired deal. But it's not clear whether those cuts would still be acceptable to Mexico.

"Without a U.S.-Mexico agreement, it's entirely possible that Mexico asserts that it does not have to take a shortage," said Jennifer Pitt, Colorado River project director for the National Audubon Society.

Moreover, whatever the U.S. does on the Colorado River could have knock-on effects elsewhere. In particular, the same treaty that governs the Colorado River also covers the Rio Grande, where Mexico is obliged to deliver water to the U.S.

It was Mexico's failure to deliver agreed-upon water volumes from the Rio Grande to the U.S. that last raised U.S.-Mexico water issues to the presidential level. That was in 2005 under President George W. Bush, who was acutely aware of the importance of that water to farmers in his home state of Texas.

Cross border tensions were also high in the mid-2000s, when some of the United States' Colorado River water was seeping into the ground and over the border and being pumped by Mexican farmers. The two countries also feuded during the late 1960s over salinity levels in the water that the U.S. was sending south, a dispute still fresh in the minds of water experts on both sides of the border. Mexico repeatedly threatened to sue the U.S. over that issue, and ultimately President Richard Nixon appointed a special ambassador to deal with the problem.

Key players on the Colorado River hope that relations won't get that bad anytime soon, even as they acknowledge that Trump's fiery campaign rhetoric presents a major wild card.

"On the merits, having Mexico conserve more water to improve the reliability of the Colorado River water supply for 36 million users in the U.S., for 15 percent of U.S. agricultural output, that seems to me to have enormous value," Pitt said.

"On that basis, I have confidence. But on the basis of how rhetoric can sometimes get detached from those merits — I don't know," she said.

Biofuel producers unite against potential EPA biodiesel cuts Back

By Eric Wolff | 09/27/2017 06:57 PM EDT

Biofuels producers and their farm-state backers in Congress are keeping the pressure on EPA, accusing the agency of betraying President Donald Trump's promises to back the Renewable Fuel Standard after the agency signaled it would cut its biodiesel volume mandates.

EPA's Tuesday notice seeking input on whether to reduce the already set 2018 biomass-based biodiesel requirement and shrink the mandate in 2019 is drawing opposition from both biodiesel and ethanol producers, who say EPA's move marks its second attempt to undermine the program this year.

The new EPA notice has already driven down prices for biofuel credits, which are used by refiners to meet the obligations under the RFS. That's a boon to refiners like CVR Energy, the company owned by former Trump adviser Carl Icahn who had joined with other fuel processors like Valero Energy earlier this year in an unsuccessful effort to shift the compliance burden of the RFS away from their companies.

Trump has repeatedly offered public support for ethanol producers and the RFS, and just last month, he told Sen. Chuck Grassley (R-Iowa) to assure Iowans he had their backs on the RFS — a position Trump staked out early in his presidential campaign and which helped him carry Iowa and other Midwestern states.

On Wednesday, Sen. Joni Ernst (R-Iowa) blasted the new EPA move, saying in a letter to Trump that the biodiesel cut would be "bad for American farmers, American manufacturing and American rural communities," adding that she hoped "that your EPA has not forgotten about the pledges that were made to my constituents and to farmers across the country."

That letter came a day after Grassely said the proposal "seems like a bait-and-switch from the EPA's prior proposal and from assurances from President Trump himself and Cabinet secretaries in my office. ... This all gives me a strong suspicion that Big Oil and oil refineries are prevailing, despite assurances to the contrary."

And biodiesel makers are drawing strong support from the ethanol industry, who see the EPA's move as a step toward undercutting the RFS.

"This would undermine renewable fuel production in the U.S. and cause severe harm to our friends in the biodiesel industry," Robert Walther, vice president of federal advocacy for ethanol producer POET, told POLITICO. "That harm would radiate throughout the entire biofuel value chain from starch biofuel plants, to cellulosic facilities now scaling up, to the corn and soybean farmers who voted overwhelmingly for Trump."

In its Tuesday notice, EPA relied on letters from Valero, the American Petroleum Institute, and the American Fuel and Petrochemical Manufacturers to argue the agency expects biodiesel prices to climb because of the expiration of a tax credit last year — as well as the new tariffs the administration is putting on biodiesel imports from Argentina and Indonesia.

As a result, the agency asked for comment on revising down the amount of biodiesel to be used in 2018 by 15 percent, and on setting 2019 biodiesel requirements possibly as low as the 1 billion gallon floor laid out in the law, less than half the original 2018 level of 2.1 billion gallons.

Biodiesel credits are linked to the ethanol credits — called Renewable Identification Numbers — since U.S. ethanol producers typically fall short of supplying the volumes required under the RFS program. Oil refiners then must buy biodiesel RINs to meet requirements, according to research by University of Illinois economist Scott Irwin.

While corn ethanol credit prices are cheaper than biodiesel RINs, the two tend to move in tandem, so the effect of EPA's notice on RIN prices for ethanol, advanced biofuel and biodiesel was immediate: a 20 percent decline in prices for credits of biodiesel and ethanol after EPA's notice, according to the fuel price tracking service OPIS.

The proposal to cut the biomass-based fuel shocked the biodiesel makers such as Gene Gebolys, CEO of World Energy, who said the industry "froze" as soon as the notice came out.

"The more baffling part is Trump has been consistently supportive of the RFS, over and over and over and over again, he has been supportive of the RFS," he said. "This has been a frontal assault on the RFS. You have to ask yourself, is EPA taking direction from the White House or the oil industry?"

EPA also did not respond to a request for comment. Nor did API or Valero, both of whom EPA cited in its notice, although the AFPM trade association was pleased by the action.

"EPA is on the right track in adjusting renewable fuel requirements," AFPM CEO Chet Thompson said in a statement. "This proposal more appropriately advances Congress's stated purpose of bolstering America's energy independence. American drivers shouldn't have to shoulder more costs to help foreign biofuel producers."

But ethanol producers think EPA may be putting key states in play if it follows through and makes cuts to biodiesel.

"If I am a Democrat thinking of taking Trump on in Iowa and Wisconsin in 2020, I am licking my chops," Walther from POET said.

FERC amends pipeline study to add climate impact Back

By Darius Dixon | 09/27/2017 04:31 PM EDT

FERC announced today that it is amending an environmental study for a natural gas pipeline to meet a federal court's requirement that it include an assessment of greenhouse gas emissions from the power plants that may use the fuel.

The new 5-page analysis of the Southeast Market Pipelines Project, which consists of three natural gas pipelines under construction in Alabama, Georgia and Florida, conducted by FERC staff says they "would not result in a significant impact on the environment" so long as the developer followed the mitigation measures mentioned in the final 2015 environmental impact statement.

The original EIS didn't include an assessment of carbon dioxide, methane and nitrous oxide emissions associated with use and combustion of the natural gas that would be transported by the project when it was done. Last month, the D.C. Circuit Court of Appeals sided with the Sierra Club and vacated FERC's approval of the project, saying the agency must redo the EIS it used in its decision.

FERC's move to issue a supplemental EIS on greenhouse gas emissions suggests that it may not

appeal the court's decision.

The analysis also states that using the social cost of carbon in its greenhouse gas analysis "is not appropriate for use in any project-level NEPA review."

WHAT'S NEXT: FERC has until Oct. 6 to decide whether it will appeal the D.C. Circuit's Aug. 22 ruling, which could require the agency to revisit the EISs it conducted for several pipelines.

Trump: Shipping industry doesn't want Jones Act waiver for Puerto Rico recovery Back

By Ben Lefebvre | 09/27/2017 03:40 PM EDT

President Donald Trump cited objections from the shipping industry when asked today why his administration has not waived the Jones Act to help deliver fuel and other goods to hurricane-ravaged Puerto Rico.

"We're thinking about that, but we have a lot of shippers and a lot of people and a lot of people who work in the shipping industry that don't want the Jones Act lifted," Trump told reporters outside the White House today. "And we have a lot of ships out there right now."

The Jones Act stipulates that only U.S.-flagged vessels can ship goods between domestic ports.

DHS said earlier today that it was not likely to grant a Jones Act waiver to Puerto Rico, where water, fuel and other necessities are in short supply since Hurricane Maria hit the island last week. Enough ships are available to deliver goods to the U.S. territory, with the problem being the lack of delivery logistics on the island itself, a department spokesman said.

DHS waived the Jones Act for fuel deliveries to Texas and Florida after hurricanes hit those states earlier this year.

WHAT'S NEXT: Congress has promised to ramp up aid to Puerto Rico.

DHS says it hasn't denied Jones Act waiver for Puerto Rico — yet Back

By Tanya Snyder | 09/27/2017 11:35 AM EDT

DHS officials said today that they have not yet decided how to act on the Jones Act waiver request sent Monday from eight members of Congress.

However, senior DHS officials made it clear that a waiver is unlikely and that an official determination could take days or weeks, as it requires coordination with other federal agencies.

Under statute, the Jones Act, which requires that goods moved between U.S. ports must be carried on U.S.-owned and -operated vessels, can only be waived for reasons of "national defense" or if there aren't enough U.S.-flag vessels to meet demand. In the wake of Hurricanes Harvey and Irma, the Department of Defense requested a Jones Act waiver for Texas and Florida, which was issued quickly. In the absence of a Pentagon request, DHS needs to make those determinations itself, consulting with MARAD on vessel availability.

DHS officials also told reporters that the department had "not received a formal waiver request," since Congress is not a traditional pathway for these kinds of requests. Still, the officials said they are evaluating the request and working as quickly as possible to make a determination.

The officials also reiterated that a Jones Act waiver would not help move goods within the island, which is the real problem Puerto Rico is facing right now.

The U.S. Virgin Islands are statutorily exempt from the Jones Act.

Oil industry backs GOP tax proposal, but utilities, renewables industries wary Back

By Eric Wolff | 09/27/2017 04:02 PM EDT

The oil and gas industry praised the tax proposal released Wednesday by Republican leaders, though the utility and renewables industries withheld their verdicts for now.

The "Big Six" Republican tax writers — consisting of Treasury Secretary Steven Mnuchin, National Economic Council Director Gary Cohn and key congressional leaders — called for lowering the corporate tax rate for businesses to 20 percent, and allowing companies to write off the full value of capital investments. But they left many details out of the plan, including how to pay for their tax cuts. The proposal would partially curb the interest tax deduction for businesses, and it would alter how overseas profits would be taxed.

Allowing companies to fully expense their spending would benefit the oil and gas sector, which says it pours an average of $232 billion a year in capital expenditures in the U.S. The proposal also shifts international taxes to a territorial system, under which profits from overseas subsidiaries would not be taxed, and it allows profits currently held overseas to be repatriated without being taxed.

"The right pro-growth tax policies can accelerate these economic investments and create more jobs while keeping energy affordable for consumers. This includes strong cost-recovery provisions, which are a critical part of any pro-growth tax code to allow new investment and help fuel the U.S. economy," American Petroleum Institute President Jack Gerard said.

Wednesday's tax proposal was vague on the fate of the interest tax deduction, saying it would be "partially limited" but leaving tax-writing committees to work out the details.

The Edison Electric Institute, which represents Investor-owned utilities, said it was still reviewing the proposal; but in an interview earlier this week, Eric Grey, EEI's director of government affairs, said the group was concerned about the loss of the interest tax deduction. EEI says utilities spend $125 billion a year on capital investments, and they depend on debt and equity markets to fund transmission lines, substations and wires. Grey said utilities wouldn't get an immediate benefit from 100 percent expensing.

"For us, the interest deduction is how we raise capital," Grey said. "Our companies are in the debt and equity markets every single day trying to build the necessary financing for the large [capital expenditure] we do."

The Solar Energy Industries Association and the American Wind Energy Association both said they were still studying the proposal. SEIA CEO Abigail Ross Hopper told POLITICO last week that the industry was concerned about the interaction between the investment tax credit and full expensing.

EPW to host EPA, NRC nomination hearing Oct. 4 Back

By Anthony Adragna | 09/27/2017 04:25 PM EDT

The Senate Environment and Public Works Committee will hold a confirmation hearing Oct. 4 on a host of President Donald Trump's picks for posts at EPA and the Nuclear Regulatory Commission.

The session will include four EPA nominees: Matthew Leopold to be general counsel, William Wehrum to run the air office, Michael Dourson to run the Office of Chemical Safety and Pollution Prevention and David Ross to run the water office. Lawmakers will also consider Jeff Baran's re-nomination to the NRC.

The committee shelved a hearing planned for last week on the picks after the Senate adjourned earlier than expected for Rosh Hashanah. Wehrum's and Dourson's nominations have attracted the most controversy from Democrats and the environmental community.

WHAT'S NEXT: The full EPW Committee will consider the nominees at the Oct. 4 hearing.

Court delays coal ash arguments to November Back

By Alex Guillén | 09/27/2017 04:54 PM EDT

The D.C. Circuit Court of Appeals today granted a one-month delay in arguments over EPA's 2015 coal ash rule following Administrator Scott Pruitt's decision to reconsider key parts of the regulation.

Arguments had been scheduled for Oct. 17, but a three-judge panel ordered them delayed until Nov. 20.

The judges ordered EPA to reveal by Nov. 15 which portions of the rule will be reconsidered "and setting forth with specificity the timeline for reconsideration." In addition, all sides, including industry and environmental challengers, are supposed to file new briefs by Oct. 11 addressing whether the new state-based coal ash permitting program that passed Congress as part of the Water Infrastructure Improvements for the Nation Act at the end of 2016 affect the broader lawsuit at all. And the court told attorneys to be ready at arguments to discuss whether a longer delay in the lawsuit is appropriate, opening up the possibility of further delay.

The court set 90 minutes' worth of arguments in total, split into four sections: Three dealing with various legal and technical challenges to the rule and one on whether the case should be delayed longer.

The case will be heard by Judges Karen LeCraft Henderson, a George H.W. Bush appointee, and two Obama appointees, Judges Patricia Millett and Cornelia Pillard.

WHAT'S NEXT: The parties must submit briefs regarding the permitting program by Oct. 11. Oral argument is scheduled for Nov. 20.

Driving the Day

Good Wednesday morning. PRESIDENT DONALD TRUMP is again in the hot seat after veering off course and reiterating that there was blame on "both sides" of the protests in Charlottesville. Remember all the bluster that recently named chief of staff John Kelly was going to install order and help get Trump's presidency back on track so Republicans could make good on their promises to pass tax reform and an infrastructure package, not to mention fund the government and raise the country's borrowing limit? No dice. White House aides we talk to were surprised this happened, but have grown immune to the president's unpredictability. Many are dispirited. This was a news conference aimed at boosting an infrastructure bill -- Trump's best chance of bipartisan legislating for the year. Instead, he did this. Remember that there are just four-and-a-half months left in this year, and there's a lot the president wants to get done.

RUBBER MEETS THE ROAD: How much sway is the president going to have with lawmakers as he is saddled with a 34-percent approval rating coming off playing footsie with neo-Nazi and white-supremacist groups?

WAPO OP-ED: "The nation can only weep": "TUESDAY WAS a great day for David Duke and racists everywhere. The president of the United States all but declared that he has their backs. ...

"Yes, there are good and moral Americans who oppose the removal of statues of Confederate generals. Yes, there are reasonable Americans who fear that slaveholding Founding Fathers will be the next target. Notwithstanding Mr. Trump's comments Tuesday, we don't find it difficult to distinguish between a monument to George Washington, say, and statues to Confederate generals that were erected in the 20th

century with the goal of maintaining white supremacy. ...

"There may be a time to debate such questions -- but not, as any national leader with a sense of decency would understand, now. Not in a time of mourning, with the wounds so fresh. Not when Mr. Trump has not even bothered to call the family of Heather Heyer, the young woman mowed down on Saturday. Not when Americans are looking for a clear and unequivocal condemnation of the hatred that brought those 700 marchers to Charlottesville." http://wapo.st/2w03xGG

WHAT TRUMP WILL WAKE UP TO -- N.Y. POST COVER: "Trump back at it: Hey, some white nationalists are 'very fine people' ... THEY WEREN'T *ALL* NAZIS" http://nyp.st/2wdMtwB ... **N.Y. DAILY NEWS:** "SYMPATHY FOR THE DEVILS" http://bit.ly/2v0yw0S ... **NYT:** "TRUMP AGAIN SAYS TWO SIDES AT FAULT IN RALLY VIOLENCE" http://nyti.ms/2v0FAKN ... **WSJ:** "Trump Adds Fuel to Race Furor" ... **WaPo:** "Trump again blames 'both sides'"

REPUBLICANS roundly criticized Trump.

-- SPEAKER PAUL RYAN (@SpeakerRyan): "We must be clear. White supremacy is repulsive. This bigotry is counter to all this country stands for. There can be no moral ambiguity." ... **SEN. MARCO RUBIO (R-FLA.) (@marcorubio):** "Mr. President, you can't allow #WhiteSupremacists to share only part of blame.They support idea which cost nation & world so much pain 5/6" ... "The #WhiteSupremacy groups will see being assigned only 50% of blame as a win. We can not allow this old evil to be resurrected 6/6" ... **MITT ROMNEY (@MittRomney):** "No, not the same. One side is racist, bigoted, Nazi. The other opposes racism and bigotry. Morally different universes." ...

... NRCC CHAIRMAN STEVE STIVERS (@RepSteveStivers): "I don't understand what's so hard about this. White supremacists and Neo-Nazis are evil and shouldn't be defended." ... **KEVIN MCCARTHY (@GOPLeader)** : "Saturday's violence and tragic loss of life was a direct consequence of the hateful rhetoric & action from white supremacists demonstrating." ... **JUSTIN AMASH (@justinamash):** "'Very fine people' do not participate in rallies with groups chanting racist and anti-Semitic slogans and displaying vile symbols of hate."

-- SENATE MAJORITY LEADER MITCH MCCONNELL (R-KY.) has not publicly commented about Trump's press conference.

THE REACTION -- "'Wow': Stunned TV Hosts Reacted in Real Time to Trump," by NYT's Mike Grynbaum: "'What I just saw gave me the wrong kind of chills,' a visibly stunned Chuck Todd said on MSNBC. 'Honestly, I'm a bit shaken by what I just heard.' Unable to disguise her disgust, the Fox News host Kat Timpf said: 'I'm still in the phase where I'm wondering if it was actually real life. I have too much eye makeup on to start crying right now.' And on CNN, as the network cut away from President Trump's extraordinary 23-minute news conference at Trump Tower, the anchor Jake Tapper could not contain his astonishment. 'Wow,' he said. That was something else.'"

http://nyti.ms/2vCFYCJ

-- TV THIS MORNING -- JOE SCARBOROUGH was supposed to be off until Thursday, but he will be live this morning on "Morning Joe" from 6 a.m. to 7:30 to address Trump's press conference.

THE FALLOUT -- "Trump Gives White Supremacists an Unequivocal Boost," by NYT's Glenn Thrush and Maggie Haberman: "President Trump buoyed the white nationalist movement on Tuesday as no president has done in generations - equating activists protesting racism with the neo-Nazis and white supremacists who rampaged in Charlottesville, Va., over the weekend. Never has he gone as far in defending their actions as he did during a wild, street-corner shouting match of a news conference in the gilded lobby of Trump Tower, angrily asserting that so-called alt-left activists were just as responsible for the bloody confrontation as marchers brandishing swastikas, Confederate battle flags, anti-Semitic banners and 'Trump/Pence' signs.

"'Thank you President Trump for your honesty & courage to tell the truth,' David Duke, a former Ku Klux Klan leader, wrote in a Twitter post shortly after Mr. Trump spoke. Richard B. Spencer, a white nationalist leader who participated in the weekend's demonstrations and vowed to flood Charlottesville with similar protests in the coming weeks, was equally encouraged. 'Trump's statement was fair and down to earth,' Mr. Spencer tweeted. ... No word in the Trump lexicon is as tread-worn as 'unprecedented.' But members of the president's staff, stunned and disheartened, said they never expected to hear such a voluble articulation of opinions that the president had long expressed in private." http://nyti.ms/2vHSBL6

-- ANNIE KARNI, ELIANA JOHNSON AND NOLAN MCCASKILL: "[John] Kelly stood off to the side while Trump spoke, staring down at the marble floor as the president doubled down on his widely criticized 'many sides' rhetoric. Kelly's stiff body language appeared to reflect the feeling among many Trump aides. 'My head is spinning,' texted one White House aide watching the president unleash himself on television. When asked whether he and other officials supported the president's views on the protest, [National Economic Council chairman Gary] Cohn hedged. 'We share the president's view that infrastructure is really important to America, and our infrastructure is crumbling,' he said.

"Jared Kushner and Ivanka Trump, the two family members who serve in Trump's administration, were absent from Trump Tower on Tuesday -- they were on a two-day, pre-scheduled trip to Vermont, a White House official said, and were planning to rejoin the president at his Bedminster, N.J. golf club on Thursday." http://politi.co/2i3g9H8

-- @NBCNews: "WATCH: White House chief of staff John Kelly reacts to President Trump's latest remarks on violence in Charlottesville, Virginia." http://bit.ly/2vHIlgN

ALI WATKINS and **JOSH MEYER: "Domestic hate groups elude feds:** American white supremacists enjoy legal protections that blunt sweeping powers used to

prosecute groups like ISIS and Al Qaeda": "U.S. law enforcement officials, who enjoy sweeping powers to investigate and prosecute suspected foreign terrorists on U.S. soil, face obstacles to charging the man, James Alex Fields Jr., as a terrorist. The Justice Department's civil rights division is currently focused on whether Fields committed a hate crime. Beyond Fields' case is the urgent question of how law enforcement can prevent further violence at a time when radical white supremacist groups appear emboldened. U.S. officials are severely limited in their ability to crack down on domestic extremist groups-even those who spew hate-filled rhetoric, acquire arms and advocate violence." http://politi.co/2fKyecg

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : If you know only one fact about rising drug costs, know this one: drug makers set prices for prescription drugs. To help manage nearly double-digit price increases, employers, unions and government programs use PBMs to negotiate lower net prices to help curb costs for employers and patients. Learn more at affordableprescriptiondrugs.org ******

THE BROADER NARRATIVE -- "Racial politics haunt GOP in the Trump era," by AP's Steve Peoples and Bill Barrow: "[T]he fight over 'traditional America' is throwing a spotlight on the Republican Party's struggle with race in the age of Trump. The deadly white supremacist rally against removal of the Lee statue served as a painful example of the uncomfortable alignment between some in the party's base and the far-right fringe. But despite the party's talk of inclusiveness and minority outreach, it's clear white fears continue to resonate with many in the GOP base. Politicians willing to exploit those issues are often rewarded with support. One big beneficiary, critics say, has been the president himself." http://bit.ly/2w9u3xA

DON'T EXPECT HILL ACTION -- "GOP chairmen resist hearings on white supremacy," by Kyle Cheney and Rachael Bade: "Days after neo-Nazis and white nationalists led a deadly march through Charlottesville - and are beginning to organize again - Republican leaders in Congress appear to be in no hurry to tackle the issue beyond statements of condemnation. Many GOP lawmakers called Saturday's march and the killing of a 32-year-old woman an act of 'domestic terrorism.' ... But there was little urgency for congressional action among committee leaders and top GOP brass. Despite House Democrats' calls for hearings on the rise of white supremacy, the House Judiciary Committee, which oversees the Department of Justice's handling of domestic terrorism, has no immediate plans to schedule one, aides say." http://politi.co/2ul1MxQ

-- "Confederate statues in U.S. Capitol likely going nowhere," by Elana Schor: "Some of the most famous Confederate statues sit smack dab in the U.S. Capitol - and there are no plans to remove them. ... Robert E. Lee, leader of the Confederate army during the Civil War ... is among the 10 Confederates whose statues remain in the Capitol, lionizing a slaveholding era and sparking calls this week from some House Democrats to rid the building of their likenesses. The Capitol's Confederate statues are part of the National Statuary Hall Collection, created more than 150 years ago as a means to represent two citizens of each state under the dome. Even as multiple other cities follow Charlottesville in pursuing removal of their Confederate monuments,

however, only a handful of Democrats have so far called for the statues' replacement after the violent rally in the Virginia town left one woman dead and injured more than a dozen others." http://politi.co/2i3VVx3

SARAH ELLISON, a UVA alum, in Vanity Fair, **"Why Charlottesville, Liberal College Town, Became Ground Zero for White Supremacy":** "The university, in many ways, represents a sort of antebellum fantasy of the South. From its founder to its sororities and fraternities, to its public face as a Southern Ivy, the image that Charlottesville and U.V.A. occupies is a kind of Southern masquerade. It matches perfectly with the fantasy of the aggrieved Trump supporters' vision of themselves as a group under siege-one representing a way of life that is falling away and that must be made great again." http://bit.ly/2vCEuZf

-- NORTH CAROLINA GOV. ROY COOPER in Medium on the Confederate monuments: "Some people cling to the belief that the Civil War was fought over states' rights. But history is not on their side. We cannot continue to glorify a war against the United States of America fought in the defense of slavery. These monuments should come down." http://bit.ly/2wOXIcL

ADDING FUEL TO THE FIRE -- "Trump pours gasoline on feud with CEOs," by Dan Diamond: "The businessman president is bleeding support from business leaders he once called allies - and his latest comments cost him another adviser. 'I cannot sit on a council for a President that tolerates bigotry and domestic terrorism,' Richard Trumka, the head of the AFL-CIO, said in a statement on Tuesday, an hour after President Donald Trump defended protesters in Charlottesville at a free-wheeling news conference. 'His comments today were the last straw.'

"Since Monday morning Trumka and four other business leaders have dropped out of Trump's manufacturing council, citing his inadequate response to the Virginia protests or suggesting that their companies shouldn't be involved in politics. Trump on Tuesday escalated his feud with those leaders, accusing them of failing to do their jobs and rebuffing criticism from Wal-Mart's CEO that his comments about Charlottesville were insufficient." http://politi.co/2ul3gZ1

-- WSJ EDITORIAL BOARD: "Trump and the CEOs: A GOP President who loses the business class has a big problem": "Their decision to quit now in such public fashion shows the growing political and cultural pressure that CEOs and others in public life are under to distance themselves from Mr. Trump. The disdain for the President in the media and Hollywood isn't surprising, and Mr. Trump wears it like a badge of honor. But the business community is, or ought to be, a natural part of a Republican President's governing coalition.

"Mr. Trump began his Presidency amid unprecedented hostility from those who didn't vote for him. This is all the more reason to govern in a way that seeks to broaden his coalition with new allies. Yet Mr. Trump has seemingly taken every opportunity to escalate feuds and attack even allies in Congress like Senate Majority Leader Mitch

McConnell. ... Mr. Trump's ego won't allow him to concede error and he broods over criticism until he ends up hurting himself, as he showed again Tuesday by relitigating his response to the Charlottesville violence. This is how he has achieved a 34% approval rating, as even allies flee and his Presidency shrinks in on itself." http://on.wsj.com/2vCuwan

WAPO's Danielle Paquette in Indianapolis: **"Trump tried to save their jobs. These workers are quitting anyway":** "Kipp Glenn grew tired of standing for eight-hour shifts, assembling steel furnace doors. His knees ached from 25 years on the concrete factory floor. So even after President Trump made his job at Carrier a symbol of American prosperity and vowed to save it, the Indiana native took a buyout. 'What we want to call "blue-collar jobs" are on the way out,' he said." http://wapo.st/2wP2oPR

-- THE PRESIDENT at 6:12 a.m.: "Amazon is doing great damage to tax paying retailers. Towns, cities and states throughout the U.S. are being hurt - many jobs being lost!"

NEW POLITICO/MORNING CONSULT POLL -- STEVEN SHEPARD: "Poll: GOP voters side with Trump over McConnell": "Republican voters are taking President Donald Trump's side in his war with Senate Majority Leader Mitch McConnell, according to a new POLITICO/Morning Consult poll that also shows a bump in Trump's approval rating after last week's all-time low. The poll shows more GOP voters think Trump is looking out for the party's best interests than think McConnell (R-Ky.) is. By a more than three-to-one margin, they say that Trump is more in touch with Republican voters and that Trump is more honest. More evidence Trump has the upper hand, at least among Republicans: McConnell's favorability rating among GOP voters is down over the past three weeks, and half of Republicans say Trump's attacks against him were appropriate." http://politi.co/2fKJLZg

-- More Shepard: **"Poll: No increase in support for military action in North Korea":** http://politi.co/2fK4YT5

TRUMP'S WEDNESDAY -- THE PRESIDENT heads back to Bedminster, New Jersey, at 2 p.m. today. At 4 p.m., he'll sign the Harry W. Colmery Veterans Educational Assistance Act of 2017. (***Today show spot on the bill*** http://on.today.com/2v1djDI)

ABOUT LAST NIGHT -- "Trump, McConnell will try to avoid Alabama embarrassment," by Alex Isenstadt and Seung Min Kim: "President Donald Trump and Senate Majority Leader Mitch McConnell went all in for their man Luther Strange in the Alabama Senate race -- but the two GOP leaders will need a lot more to put him over the top after Strange's second-place finish in Tuesday's opening round of balloting. Strange starts the six-week runoff in the hole against former state Supreme Court Justice Roy Moore, whose fervent base of evangelical supporters helped him clinch nearly 40 percent of the vote in a field of 10 candidates.

"The outcome puts enormous pressure on Trump and McConnell, both of whom

have put their political capital in the line: They now must find a way to get Strange a majority of support when the Republican nomination is decided on Sept. 26. Senior Republicans conceded that Tuesday's results weren't what they'd hoped for. But they argued that Strange, who in February was appointed to the Senate seat that Attorney General Jeff Sessions held for two decades, still has a path to victory.

"One option being considered by McConnell allies, who have already spent around $4 million in support of Strange, is a scorched-earth campaign targeting Moore. In a possible preview of what's to come, the pro-McConnell Senate Leadership Fund began airing TV commercials in the days leading up to Tuesday's primary accusing Moore of taking funds from a charity he ran. Those involved with Senate Leadership Fund insist they have not yet decided on what approach to take." http://politi.co/2w0hTqr

-- THE PRESIDENT at 6:18 a.m.: "Congratulation to Roy Moore and Luther Strange for being the final two and heading into a September runoff in Alabama. Exciting race!" ***As CNN's John Berman said on Twitter this morning: "rooting for both the Red Sox and Yankees."***

-- WAPO: "John Curtis, mayor of Provo, Utah, wins GOP nomination for House seat formerly held by Jason Chaffetz," by Mike DeBonis: "Curtis faced hundreds of thousands of dollars in negative super PAC ads that sought to portray him as insufficiently committed to lowering taxes and cutting government spending. Many of them highlighted his 2000 run as a Democrat for a state legislative seat." http://wapo.st/2v0U1yp

FIRST IN PLAYBOOK: WHAT HOUSE WAYS AND MEANS CHAIRMAN KEVIN BRADY (R-TEXAS) WILL SAY ABOUT TAX REFORM TODAY IN CALIFORNIA: The House's top tax writer will talk tax reform today at a replica of Ronald Reagan's White House tax-cut table at the Reagan Ranch. Reps. Peter Roskam (R-Ill.), Carlos Curbelo (R-Fla.) and David Schweikert (R-Ariz.) will all be with him. **WHAT BRADY WILL SAY:** "Thirty-one years ago today, a conference committee of 10 Members of Congress - five tax-writers from the House and five from the Senate - reached agreement on the most sweeping overhaul of the U.S. tax code in American history. ... As we stand here 31 years later, we face a monumental challenge of our own - coming together to fix a U.S. tax code that has become just as broken as the one President Reagan and Congress overhauled in the 1980s. ... Today Americans are watching good-paying jobs, manufacturing plants, and our research and development move overseas to countries with more competitive tax systems. ...

"It begs the question: Why are we standing idly by while this happens? When did this nation start shrinking from challenges? At what point did we give up on the principles of fairness, simplicity, free enterprise, and - most of all - faith in each American's individual talents? ... And when did we decide that it was better to give in to Washington special interests at the expense of all the hardworking Americans who truly contribute to our economy? ... For the first time in over three decades we have a president, a House, and a Senate who are all committed to overhauling this broken tax

code and unleashing the growth of jobs and paychecks nationwide. And whether you're a Democrat or a Republican, if you're serious about getting real pro-growth tax reform done for the American people this year, we are serious about working with you."

HAPPENING TODAY - ATTORNEY GENERAL JEFF SESSIONS and ICE acting director Tom Homan are speaking today at 3 p.m. at PortMiami about how they believe jurisdictions like Miami-Dade are sharing more information with federal immigration authorities. The speech is meant as a contrast to cities like Chicago. Earlier this month, Chicago Mayor Rahm Emanuel sued Sessions over his threat to withhold federal money for cities that don't cooperate with Trump's policies on illegal immigrants.

WHAT SESSIONS WILL SAY: "Miami-Dade is an example of what is possible through hard work and a rededication to the rule of law. It is proof that the entire nation can do better. ... The most fundamental duty of government is to ensure the safety and liberty of its people. ... Respect for the rule of law has broken down. In Chicago, their so-called 'sanctuary' policies are just one sad example. ... That makes a sanctuary city a trafficker, smuggler, or predator's best friend. ... I know that Miami-Dade will be an example of the good that comes from following the law. We have already seen that: the same Independence Day weekend when Chicago suffered more than 100 shootings and 15 homicides, Miami-Dade also had an historic number of shooting deaths - zero."

THE JUICE ...

-- FORMER PRESIDENT BARACK OBAMA set the record for the most liked Tweet ever at 10:07 p.m. last night, according to Twitter. His tweet (http://bit.ly/2wdRGEr), which has over 3 million likes, "No one is born hating another person because of the color of his skin or his background or his religion..." is also currently the fifth most retweeted in the company's history with over 1.2 million retweets.

PHOTO DU JOUR: President Donald Trump reaches into his suit jacket to read a statement regarding the events in Charlottesville, Va., while addressing the media at Trump Tower in New York on Aug. 15. | Pablo Martinez Monsivais/AP Photo

SNEAK PEEK -- NYT MAGAZINE COVER - "Breitbart Goes to the White House -- Inside the paranoia-inducing, rage-channeling, conspiracy-fanning media company at the nerve center of Donald Trump's America," by Wil S. Hylton (online headline: "**Down the Breitbart Hole --** Steve Bannon once said it was the platform for the alt-right. Its current editors disagree. Is the incendiary media company at the nerve center of Donald

Trump's America simply provocative - or dangerous?"): "In the short annals of journalism, there's no real precursor for Breitbart. I don't mean to suggest that this is because of the site's political agenda - the history of journalism is a cacophony of strident writing as far back as you want to look. ... What makes Breitbart distinct ... [is] the way the site appeared to materialize overnight, from the outermost periphery of the media, and to dominate the political conversation in a pivotal election.

"Maybe it's hard to remember anymore what you thought of Breitbart two years ago, but if you were like most people, you didn't think about Breitbart at all. The average voter had no idea the site existed, and by the time its stories slipped into the mainline arteries of public discourse, most people were already hearing more about Breitbart than they would ever hear from Breitbart. Take a quick survey of your friends and see how many visited Breitbart last week or can name two articles that appeared on the site in the past three months. Then ask the same people what they think of Breitbart's influence on the election, and watch how loud the room becomes.

"It's startling the way the word 'Breitbart' has become iconographic, referring not really to the website or the company but to an amorphous mass of revanchist opinions for which Breitbart receives credit or blame. We're all so certain that Breitbart is spewing a fountain of bigotry every day - denigrating women and riling up anti-Semitism, wailing about 'black crime' and 'trannies' - that few of us devote much time to observing it for ourselves. As a result, we haven't done a great job of figuring out what exactly Breitbart is or what Steve Bannon meant when he described it as a 'platform for the alt-right.'" http://nyti.ms/2fJtFzb ... ***The cover*** http://bit.ly/2i4TVEL

FOR YOUR RADAR -- "Israel Seeks UN's Respect in Campaign for Security Council Seat," by Bloomberg's Kambiz Foroohar: "Outreach to Africa, educational trips for foreign diplomats and a more conciliatory Prime Minister Benjamin Netanyahu make it clear: Israel is campaigning to overcome its acrimonious relationship with the United Nations in time to win a coveted spot on the Security Council next year. Israel is working to rally enough votes in the 193-member General Assembly to defeat either Germany or Belgium in a three-way race for two spots on the UN's most powerful body. ... [C]ampaigning ... sometimes resembles a cross between the campaign to win an Oscar and a high school student council election. Germany and Belgium kicked off their campaigns in 2015 with colorful posters, notebooks and little packets of candy bearing their country's campaign logos." https://bloom.bg/2v0Qxfd

THIS IS A BIG DEAL -- TEXAS TRIBUNE: "Federal court invalidates part of Texas congressional map: Federal judges have invalidated two of Texas' 36 congressional districts, setting up a scramble to redraw them ahead of the 2018 elections," by Alexa Ura and Jim Malewitz: "A three-judge panel in San Antonio unanimously ruled that Congressional Districts 27 and 35 violate the U.S. Constitution and the federal Voting Rights Act. The judges found that Hispanic voters in Congressional District 27, represented by U.S. Rep. Blake Farenthold, R-Corpus Christi, were 'intentionally deprived of their opportunity to elect a candidate of their choice.' Congressional District 35 -- a Central Texas district represented by Democrat Lloyd Doggett of Austin -- was

deemed 'an impermissible racial gerrymander' because lawmakers illegally used race as the predominant factor in drawing it, the judges wrote.

"The 107-page ruling ... sets up a scramble to redraw the districts in time for the 2018 elections. The court ruled only on the current congressional map, leaving legal challenges to the state House map unanswered. The court ordered the Texas Attorney General's Office to indicate within three business days whether the Texas Legislature would take up redistricting to fix those violations. Otherwise, the state and its legal foes will head back to court on Sept. 5 to begin re-drawing the congressional map." http://bit.ly/2w9rc7T

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers and other health care purchasers; however, the list price - the important starting point for those negotiations -- continues to rise, at a rate of nearly ten percent in 2016 alone. Increased competition, faster reviews of generics and biosimilars and ending anti-competitive practices can also bring down the cost of medications for patients. Learn more at affordableprescriptiondrugs.org ******

TOWN HALL HEAT -- "Colorado's Gardner faces blowback at home over Obamacare repeal," by Rachana Pradhan in Lakewood, Colorado: "Sen. Cory Gardner was hammered for supporting Obamacare repeal during a series of raucous town halls on Tuesday, where constituents repeatedly criticized his role in a closed-door partisan process to draft the failed GOP health bill. Gardner, who's responsible for protecting the GOP majority in the Senate in 2018, faced heated criticism over the repeal effort that collapsed just a few weeks ago, even as congressional leaders try to pivot to tax reform when they return from the lengthy recess next month.

"While Gardner's constituents in this purple state applauded him for his swift and strong condemnation of white supremacist groups this weekend, he was interrupted by boos and jeers of 'shame' and was called a 'liar' as he defended his support for health care legislation that would have significantly scaled back Obamacare and Medicaid. One attendee at the town hall here, held at Colorado Christian University in a Denver-area suburb, was escorted out by police after repeatedly shouting, 'Why are you taking away health care?'" http://politi.co/2i4aFfw

-- "Trump Threat to Obamacare Would Send Premiums and Deficits Higher," by NYT's Robert Pear and Tom Kaplan: "Premiums for the most popular health insurance plans would shoot up 20 percent next year, and federal budget deficits would increase by $194 billion in the coming decade, if President Trump carried out his threat to end certain subsidies paid to insurance companies under the Affordable Care Act, the Congressional Budget Office said Tuesday. ... Those threats continue, though the Trump administration has paid the subsidies each month. The nonpartisan budget office has now quantified the cost of the threats and potentially handed Democrats a weapon to force Congress and the administration to keep the money flowing." http://nyti.ms/2fKwFv7

NAFTA TALKS START TODAY -- "5 big questions about the NAFTA talks," by Doug Palmer: http://politi.co/2w9w0Ks

BACK HOME -- "N.H. neighbors say Corey Lewandowski threatened them in land dispute" - AP: "Glenn and Irene Schwartz countersued Lewandowski this month after he filed a $5 million lawsuit in July over access to a pond-front property in Windham, New Hampshire. Lewandowski accused the couple of blocking an easement granted to him so he could reach the tract. Court documents indicate Lewandowski is building a garage at the property. In the countersuit, the Schwartzes accuse Lewandowski of repeatedly intimidating them, once coming out of his house with a baseball bat and another time yelling on the phone that he would 'use his political connections and clout to shut down all building and work and make your life a nightmare with an expensive and extended lawsuit.'" http://bit.ly/2x3lUYb

AT THE PENTAGON -- "In a meeting with sailors, Mattis lauds their service and vulgarly criticizes people 'sitting on the sidelines," by WaPo's Dan Lamothe: "Defense Secretary Jim Mattis met with sailors serving on the submarine USS Kentucky last week in his home state of Washington, praising them for their sacrifices and expressing concern that he has 'grown remote from those of you who matter.' Then he noted the up-and-down nature of military life, told the sailors that they'll miss being in the Navy after they leave -- and issued an off-color compliment.

"'You'll miss it like the dickens, and you'll be changed for the better for the rest of your life,' said Mattis, who retired as a four-star Marine general in 2013. 'So you'll never regret, but you will have some of the best days of your life and some of the worst days of your life in the U.S. Navy, you know what I mean? That says -- that means you're living. That means you're living. That means you're not some p-- sitting on the sidelines, you know what I mean, kind of sitting there saying, 'Well, I should have done something with my life." He continued: 'Because of what you're doing now, you're not going to be laying on a shrink's couch when you're 45 years old, say[ing] 'What the hell did I do with my life?' Why? Because you served others; you served something bigger than you.'" http://wapo.st/2i5ymUL

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : The high prices that drug makers set for prescription drugs can put financial strain on patients, employers, unions and others who provide health care coverage to more than 50 percent of Americans. Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers, unions and government programs. But, as list prices - the starting point for those negotiations -- continue their nearly double-digit increases, the effects ripple throughout the system. The key to ensuring greater access and affordability lies in fostering greater competition. Facilitating faster reviews of generics and biosimilars, identifying off-patent drugs with little or no generic competition, and ending anti-competitive practices that keep safe, effective alternatives out of the market are also key to abating rising drug costs for patients. Learn more at affordableprescriptiondrugs.org ******

December 5, 2017

Today on Climate Beat . . .

. . . we went to court, where the Natural Resources Defense Council has filed a lawsuit alleging EPA is violating the Freedom of Information Act for failing to disclose records relating to Administrator Scott Pruitt's plans to have a "red team/blue team" style climate change science debate.

In personnel news, Clint Woods, executive director of the Association of Air Pollution Control Agencies, will join EPA on Dec. 8 as the deputy assistant administrator in the Office of Air & Radiation (OAR), where he will work with OAR chief William Wehrum on rollbacks of Obama-era climate and air rules.

And our daily news roundup offered an early look at a new voluntary program from the oil and gas group American Petroleum Institute to reduce methane emissions from the sector.

Subject: The New York Times & Chlorpyrifos

Good Morning -

After a monumental mistake where the New York Times was caught peddling false information, they're at it again.

Last night, the New York Times' Eric Lipton and Roni Rabin reported on false facts about the EPA's decision not to ban the pesticide Chlorpyrifos and the decision to continue the review regarding the pesticide.

Specifically speaking, they left out that the EPA's decision was upheld by the 9th Circuit Court of Appeals in San Francisco.

They also took the drastic decision of omitting words from the EPA's one-sentence statement in response to their story that reminded Americans that the USDA had scientific concerns about banning this pesticide. Additionally, three days before President Trump's inauguration, the Obama Administration's USDA strongly opposed banning this pesticide.

Given that the New York Times never lets the truth get in the way of a good story, below is our official statement that was provided to them, along with some inconvenient facts that their story left out.

"Taking emails out of context doesn't change the fact that we continue to examine the science surrounding chlorpyifos, while taking into account USDA's scientific concerns with methodology used by the previous administration." - EPA spokesman, Amy Graham

BACKGROUND …

Despite having 8 years to review the petition on chlorpyrifos, the Obama Administration never banned Chlorpyrifos. "The EPA considered whether to ban it for roughly a decade before Trump appointed EPA Administrator Scott Pruitt, a Republican from Oklahoma, to lead the agency." (Reuters, 07/25/17)

The EPA is still reviewing Chlorpyrifos. "The agency said it was still reviewing the chemical's registration." (Reuters, 07/25/17)

San Francisco-based 9th Circuit Court of Appeals rejects greens' appeal of EPA decision not to ban pesticide. "A federal appeals court rejected a request from environmental groups to overturn the Environmental Protection Agency's (EPA) decision not to restrict the controversial pesticide chlorpyrifos." (The Hill, 07/18/17)

The U.S. Department of Agriculture supported the EPA's action. "'This is a welcome decision grounded in evidence and science,' said Sheryl Kunickis, director of the Office of Pest Management Policy at USDA. 'It means that this important pest management tool will remain available to growers, helping to ensure an abundant and affordable food supply for this nation and the world. This frees American farmers from significant trade disruptions that could have been caused by an

unnecessary, unilateral revocation of chlorpyrifos tolerances in the United States. It is also great news for consumers, who will continue to have access to a full range of both domestic and imported fruits and vegetables. We thank our colleagues at EPA for their hard work.'" (Food Safety News, 03/31/17)

National Association of State Departments of Agriculture also objected to Obama's EPA methodology. "Similarly, the National Association of State Departments of Agriculture also objected to EPA's methodology. The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Scientific Advisory Panel (SAP) also expressed concerns with regard to EPA's previous reliance on certain data the agency had used to support its proposal to ban the pesticide." (Food Safety News, 03/31/17)

The Washington Post: New York Times guilty of large screw-up on climate-change story. "The New York Times on Wednesday appended a correction to a story about a climate change study: Correction: August 9, 2017 -- An article on Tuesday about a sweeping federal climate change report referred incorrectly to the availability of the report. While it was not widely publicized, the report was uploaded by the nonprofit Internet Archive in January; it was not first made public by The New York Times. That correction, which sits at the foot of the story, dutifully straightens out the record. Yet given the magnitude of the screw-up, it should sit atop the story, surrounded by red flashing lights and perhaps an audio track to instruct readers: Warning: This story once peddled a faulty and damaging premise." (The Washington Post, 08/09/17)

Subject: Today on Climate Beat

September 12, 2017

Today on Climate Beat . . .

. . . we checked the costs, reporting that White House regulatory affairs chief Neomi Rao is urging EPA and other agencies to propose regulatory cost budgets for fiscal year 2018, as required by a Trump administration executive order, that will indicate how agencies plan to reduce regulatory costs in the coming year.

In personnel news, Todd Parfitt, Wyoming's environment chief who was just elected to lead the Environmental Council of the States, the group that represents state environmental commissioners, is not ruling out the possibility of leading EPA Region 8 if offered the job.

In court, EPA and the landfill sector are asking an appellate court to extend a current pause of litigation that the sector brought against the agency's methane standards for new and existing landfills, with the agency saying it has not yet completed its formal reconsideration of several aspects of the rules.

And our daily news roundup highlighted a statement from the White House homeland security adviser that administration officials "take seriously" climate change – "not the cause of it, but the things that we observe."

AIR
Emissions Standard for Lead
California Regions AIR

Notice of the South Coast Air Quality Management District announces a hearing and comment due date for a proposed rule to amend regulations under Rule 1420 regarding lead emissions from stationary sources. The rule includes an initial ambient lead air concentration limit of 0.150 micrograms per cubic meter (µg/m3) averaged over 30 consecutive days that will be lowered to 0.100 µg/m3 Jan. 1, 2021. The rule also establishes provisions concerning lead point source emission control requirements, total enclosures where lead processing occurs, periodic source testing, air pollution control device monitoring, recordkeeping requirements, and conditional ambient air monitoring. The hearing is scheduled for Nov. 3, 2017, in Diamond Bar. Comments are due Oct. 24, 2017. Contact: Kennard Ellis; South Coast AQMD; 909-396-2457; kellis@aqmd.gov

AIR
Odors from Animal Rendering Facilities
California Regions AIR

Notice of the South Coast Air Quality Management District announces a hearing and comment due date for a proposed rule to adopt regulations under Rule 415 regarding control of odors from facilities rendering animals and animal parts. The rule requires implementation of odor best management practices, permanent enclosure or operation in a closed system and ventilation to odor control equipment, and compliance with wastewater treatment limitations. The rule also requires the installation of odor complaint contact signage near facility entrances and compliance with an odor mitigation plan if three or more confirmed odor events occur within 180 days. In addition, the rule establishes recordkeeping requirements for facilities and specifies facilities that are exempt from requirements. The hearing is scheduled for Nov. 3, 2017, in

Diamond Bar. Comments are due Oct. 24, 2017. Contact: Tracy Goss; South Coast AQMD; 909-396-3106; tgoss@aqmd.gov

WATER
General Waste Discharge Requirements/Wineries
California Regions WATER

Notice of the Central Coast Regional Water Quality Control Board announces the adoption of an order concerning general waste discharge requirements for discharges of winery waste (Order No. R3-2017-0020). The order establishes a categorical waiver of waste discharge requirements and monitoring and reporting requirements. The order also waives the requirement to submit a report of waste discharges for certain small wineries. The requirements under the order are identical to those of a 2008 order, and existing dischargers enrolled under the previous order will remain active and be automatically enrolled under the new order. The order was adopted Sept. 21, 2017. Contact: Howard Kolb; Central Coast RWQCB; 805-549-3332; howard.kolb@waterboards.ca.gov

Particulate Matter Emissions, Preconstruction Permitting/Lane Regional Air Protection Agency

Oregon AIR

Proposed rule of the Department of Environmental Quality amends regulations under OAR 340-200-0040 to incorporate the Lane Regional Air Protection Agency's revised particulate matter emission standards and the preconstruction permitting program into the state implementation plan. The rule deletes certain greenhouse gas permitting requirements, increases preconstruction permitting flexibility for small facilities, and specifies small source permitting

exemptions. The rule also updates air quality provisions and particulate matter emission standards, revises permitting requirements for emergency generators and small natural gas or oil-fired equipment, and establishes the "sustainment" and "reattainment" new state air quality area designations. In addition, the rule designates Oakridge as a state reattainment area while retaining its federal nonattainment designation, revises the new source review preconstruction permitting program, and revises industrial and commercial activity levels below which certain categories of sources are exempt from permitting. Finally, the rule deletes an unused category, increases air contaminant discharge permit fees by 10 percent, and revises the annual increase from the consumer price index to 4 percent. A hearing is scheduled for Nov. 9, 2017, in Springfield. Comments are due Nov. 9, 2017. Contact: Meyer Goldstein; DEQ; 503-229-6478

Regulatory Update

WATER
Maintenance, Repair, and Deepening of Water Supply Wells/Back-Siphon Prevention Devices
Oregon WATER

Final rule of the Water Resources Department amends regulations under OAR 690-215-0017 regarding back-siphon prevention devices. The rule clarifies requirements for installation of down well water treatment systems and for back-siphon prevention device testing, adds information regarding other agencies that also have backflow assembly requirements, and specifies the department's authority to require back-siphon prevention devices on any water supply well. The rule also clarifies back-siphon prevention device options for irrigation wells when a mainline diameter is less than, or larger than, four inches when used to apply chemicals or fertilizers through an irrigation system, and specifies options for using other methods to prevent backflow when using chemigation or fertigation. In addition, the rule establishes requirements for bypass piping installed around approved back-siphon prevention devices. The rule is effective Aug. 25, 2017. Contact: Diana Enright; WRD; 503-986-0874

—Oregon Bulletin (10/01/2017)

Regulatory Update

WATER
Well Supply Well Construction Bonds and Permits
Oregon WATER

Proposed rule of the Water Resources Department amends regulations under OAR 690-205-0005, -205-0175, -240-0035, -240-0055, and -240-0340 regarding water supply well construction. The rule increases the bond to $20,000 for water well constructors and to $10,000 for landowner water well construction. The rule also increases the well construction permit application fee to $500 for landowners who are not licensed to construct wells and clarifies when a landowner well construction permit is required. A hearing is scheduled for Oct. 27, 2017, in Salem. Comments are due Nov. 3, 2017. Contact: Diana Enright; WRD; 503-986-0874

August 17, 2017

Today on Climate Beat . . .

. . . we looked on the bright side, reporting on a paper from a prominent clean energy group arguing there is still time to transition to a low-carbon economy and reduce global temperature increases in line with the goals of the United Nations Paris Agreement, which President Donald Trump abandoned earlier this summer.

Regarding environmental reviews, Cass Sunstein, the White House regulatory czar during President Barack Obama's first term, is praising President Donald Trump's new executive order seeking to speed infrastructure development by streamlining environmental review under the National Environmental Policy Act.

In personnel updates, Elbert Lin, the West Virginia solicitor general who argued the case against the Obama EPA's Clean Power Plan last fall on behalf of states challenging the climate rule, is leaving for the private sector beginning next month.

In transition news, Myron Ebell, the free-market advocate who led the Trump EPA's transition team, is calling for an overhaul at the agency that would eliminate regional and enforcement offices, the environmental justice program and others, while placing new controls on research and risk assessments.

And our daily news roundup brought word that state attorneys general fighting Trump's climate and environmental rollbacks have a new resource in the form of a new center at New York University Law School.

Subject: BREAKING NEWS: Corker to retire after 2018

Sen. Bob Corker (R-Tenn.) will not seek reelection to a third term in the Senate, he announced Tuesday.

"When I ran for the Senate in 2006, I told people that I couldn't imagine serving for more than two terms," Corker, who faced a potential primary challenge in 2018, said in a statement. "Understandably, as we have gained influence, that decision has become more difficult. But I have always been drawn to the citizen legislator model, and while I realize it is not for everyone, I believe with the kind of service I provide, it is the right one for me."

AIR

Nevada SIP/Regional Haze Progress Report

AIR

Final rule of the EPA approves a revision to the Nevada regional haze SIP regarding the five-year progress report toward achieving visibility goals by 2018 in Class I federal areas within the state and nearby states. The revision addresses the state's determination that the regional haze requirements in the existing SIP do not require any substantive revision at this time and that existing control measures are adequate to make progress towards reasonable progress goals. The EPA plans to rescind the federal implementation plan for the Reid Gardner Generating Station units 1, 2, and 3 in a separate action. The rule is effective Sept. 7, 2017. The Tulsa World

Heaven Forfend! Scott Pruitt Is Going Home On Weekends!

NOTE 1: The Washington press corps and the environmental lobby might prefer that the EPA boss be held captive on the East Coast and that he hear nothing but the opinions of "green" lobbyists, but the people out in fly-over country like it when we're being heard, too.

NOTE 2: It's apparent to us, and we suspect to Pruitt, that environmental extremists are determined to find anything they can use against him, including this not-so-damning evidence that he hasn't abandoned his family

Editorial
July 30, 2017
http://www.tulsaworld.com/opinion/editorials/tulsa-world-editorial-heaven-forfend-scott-pruitt-is-going-home/article_d54095df-4a88-5e5f-910b-34fa0944d8d4.html

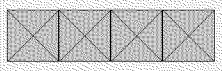
If we were supposed to shocked to learn that EPA Administrator Scott Pruitt is going home on weekends, we're not.

A fishing expedition request for Pruitt's EPA expense accounts by an environmentalist advocacy group pretty much discovered just that, and that he was spending some public money along the way and met with people that the advocates don't approve of.

The New York Times first reported the results of a Freedom of Information request for Pruitt's expense accounts filed by the Environmental Integrity Project, which has a history of blocking development and encouraging regulation. The findings: Pruitt returned to his Tulsa home at least 10 times in his first three months in office, costing taxpayers more than $15,000.

During his trips home, Pruitt made some stops, including an informational meeting at the Brainerd Chemical Company in Tulsa and a speech to the Heritage Foundation in Colorado.

As outrages go, it's not worth much.



The Washington press corps and the environmental lobby might prefer that the EPA boss be held captive on the East Coast and that he hear nothing but the opinions of "green" lobbyists, but the people out in fly-over country like it when we're being heard, too.

We prefer it when the people at the top of the nation's bureaucratic pyramid get out of the Beltway once in a while to talk to ordinary Americans. If Pruitt is coming home to see his friends, family, neighbors and some of the people he regulates, then good for him. That sounds like the acts of a balanced man who wants to know the thinking of the public, not just the pro-regulation lobbyists.

It's apparent to us, and we suspect to Pruitt, that environmental extremists are determined to find anything they can use against him, including this not-so-damning evidence that he hasn't abandoned his family.

Subject: Murkowski says committee may vote on Interior, FERC nominees late next week

By Esther Whieldon

09/07/2017 01:19 PM EDT

Senate Energy and Natural Resources Chairwoman Lisa Murkowski aims to hold a vote on four FERC and Interior Department nominees late next week.

"My hope is that we might be able to get them out ... maybe a week from now, which would be great," Murkowski told reporters today after a confirmation hearing.

The nominees are Joseph Balash, to be Interior assistant secretary for land and minerals management; Ryan Nelson, to be Interior solicitor; and Richard Glick and Kevin McIntyre, to be FERC commissioners.

Murkowski at the hearing said she will urge her colleagues to submit their questions for the record quickly and asked the nominees to be "rapid with your responses ... so that you can get to work. We can't get you there fast enough," she said.

WHAT'S NEXT: The committee will vote on the nominees as soon as next week.

Subject: Green groups sue EPA over TSCA rules

By Annie Snider

08/14/2017 01:21 PM EDT

Environmental groups have filed a suite of lawsuits challenging a pair of chemical safety rules finalized by the Trump administration last month.

The suits, filed Friday by Earthjustice in the 9th Circuit Court of Appeals in San Francisco, and Environmental Defense Fund in the 2nd Circuit Court of Appeals in New York, contest the two "framework rules" for implementing last year's bipartisan overhaul of the Toxic Substances Control Act. The rules govern how EPA will prioritize and conduct evaluations of tens of thousands of chemicals that are already on the market in the U.S.

In particular, the suits challenge the rules' approach to excluding certain uses of chemicals from EPA's evaluation of the substance's safety. Green groups argue that, under the law, EPA must analyze all of a substance's likely uses.

"Unfortunately, in straying from the letter and intent of that law, the EPA's framework rules leave the public at risk from chemicals commonly found in our homes, schools and workplaces," Richard Denison, lead senior scientist for Environmental Defense Fund, said in a statement. "Our legal challenges seek to hold EPA to the law and ensure that the public is protected as Congress intended."

EPA did not immediately respond to a request for comment on the lawsuits.

WHAT'S NEXT: The two appellate courts will decide whether to allow the lawsuits to proceed.

Justice Department Environment Pick a Step Closer to New Role

Posted August 03, 2017, 11:04 A.M. ET

By Renee Schoof

The Senate Judiciary Committee approved Jeffrey Bossert Clark to lead the Justice Department's environment division Aug. 3 over objections by Democrats that Clark doesn't accept the scientific consensus on climate change.

Clark's nomination was sent to the Senate on an 11-9 vote, with all Republicans in favor and all Democrats against. Sen. John Cornyn (R-Texas), a member of the Senate leadership, told Bloomberg BNA afterward he didn't know when the full Senate would vote on Clark's nomination.

Sen. Charles Grassley (R-Iowa), the committee chairman, said before the committee's executive meeting that he was under pressure from Attorney General Jeff Sessions to complete votes on nominees.

Clark, as a private attorney, wrote about his opposition to the Environmental Protection Agency's action on climate change. He told senators at his confirmation hearing that those views on climate change and defense of BP PLC in the 2010 oil spill case would be irrelevant to how he would lead the Environment and Natural Resources Division.

Sen. Dianne Feinstein of California, the ranking Democrat on the committee, said during the hearing that Clark's views on climate change did matter, and that they were the reason for her vote against him.

If the Senate confirms him as assistant attorney general in charge of the division, Clark will lead Justice Department attorneys who enforce environmental laws and defend the EPA and other federal clients in court. He is a trial and appellate lawyer and partner at Kirkland & Ellis LLP.

Clark served as deputy attorney general leading the appellate work in the Environment and Natural Resources Division during the George W. Bush administration.

Methane Hot Spot in West Troubles Regulators and Industry

Posted August 03, 2017, 7:01 A.M. ET

By Alan Kovski

The Four Corners area of northwestern New Mexico and southwestern Colorado has been described as an especially prominent hot spot for methane leaking and venting—and illustrates why the Obama administration issued tougher federal regulations in 2016 to govern oil and gas operations on federal and Indian lands.

Emissions of natural gas—mostly methane—contribute to climate change. Some of the hydrocarbon molecules in the mix of gases also add to ground-level ozone, which is linked to respiratory and cardiovascular effects at high levels of exposure. From a business perspective, the emissions are a waste of natural resources.

The Bureau of Land Management's 2016 Methane and Waste Prevention Rule, commonly called the venting and flaring rule, put oil and gas companies and some state officials on the defensive. They argued that it would add significant costs; that existing regulations were adequate; and that companies already had an economic incentive to capture the gas and sell it for a profit.

Companies in the Four Corners areas produce natural gas from layers of coal and separate gas deposits. ConocoPhillips Co. was for years the the largest operator in the region but on July 31 completed the sale of its assets there to Hilcorp Energy Co. Other notable producers in the area include BP Plc and WPX Energy Inc. Chevron Corp. sold its assets in the area in the second quarter.

It's not necessarily easy to say why the Four Corners area may be worse for methane emissions than other areas. Geology, weather, local infrastructure, state regulations, and the limitations of methane detection systems all play a role.

Charged Political Issue

Some states have taken action to varying degrees and report declining emissions. More federal action awaits Interior Department decisions on how the Trump administration will change the venting and flaring regulations.

The Bureau of Land Management, an Interior Department agency, didn't criticize any state when it issued the venting and flaring rule. But the Four Corners' methane plume became a charged political issue, nevertheless.

Sens. Maria Cantwell (D-Wash.) and Michael Bennet (D-Colo.) singled out the New Mexico portion of the methane plume when they participated in a Washington press conference May 9. One day later, they helped defeat a congressional attempt to rescind the BLM rule.

In June, the Interior Department suspended compliance with those parts of the rule not already in effect and said it will either rescind or revise the rule. The suspension of the regulations pending judicial review was quickly challenged in court by the attorneys general of California and New Mexico.

"Believe me, this was not done without some serious discussions with the lawyers at the Department of Interior," attorney Vincent DeVito, counselor to the Interior secretary on energy policy, said July 27 at an annual meeting of the U.S. Energy Association.

Satellite and Airborne Detection

A 2014 NASA report turned the spotlight on the Four Corners, when satellite detection of methane plumes found the largest single plume over that area.

A later study, led by a scientist at NASA's Jet Propulsion Laboratory at the California Institute of Technology, used two airborne spectrometers in April 2015 for infrared measurements that identified 250 methane point sources in the Four Corners area.

"This finding confirms earlier assumptions that most of the enhanced methane is related to natural gas extraction, as well as coal mining but also that there is not a single source explaining most enhancements," the 2016 report said, referring to enhanced emissions. It was published in the Aug. 30, 2016, issue of the Proceedings of the National Academy of Sciences.

The most prominent identified leaks came from gas processing facilities, storage tanks, a couple of gas pipelines, and a venting coal mine. The spectrometers could detect individual plumes, but not measure volumes, which were inferred from the plume sizes.

All of which doesn't mean the states were sitting by idly while methane leaked.

Colorado Takes Action

Colorado and New Mexico have tightened their emissions regulations during the past three years, as have other states. For Colorado, 2015 was the first full year of new regulations requiring, among other things, hydrocarbon leak detection, which includes methane detection.

Although the regulations don't specify infrared cameras, in practice that has been what companies use, according to Jeremy Neustifter, a planner in the Air Pollution Control Division of the Colorado Department of Public Health and Environment.

"It's still early to tell what effects we have seen" from the relatively new regulations, especially given that 2016 results have not been fully vetted yet, Neustifter told Bloomberg BNA July 27. And the program gets good marks from an industry group.

"The leak detection and repair program has been working fairly well," according to Scott Prestidge, spokesman for the Colorado Oil & Gas Association.

Colorado has seen declines in methane and ethane emissions and ozone concentrations, but specifying the exact reasons for the declines isn't so simple, Neustifter said.

The drop in emissions of volatile organic compounds in Colorado from 2011 to the present, not just under the latest regulations, have been significant, "and the oil and gas industry is responsible for three-quarters of that reduction," Prestidge said.

Individual companies didn't respond to requests for information on methane control strategies.

New Mexico Acts

New Mexico has for several years required operators to obtain special permission for venting or flaring after 60 days of drilling operations. Starting May 1, 2016, the state also requires a gas capture plan for all new applications for permits to drill.

But the New Mexico gas capture plan doesn't require leak detection, according to Jon Goldstein, director of regulatory and legislative affairs for the conservation group Environmental Defense Fund. That leaves New Mexico behind both Colorado and Wyoming, Goldstein said.

Venting and flaring in the state have gone down, David Catanach, director of the Oil Conservation Division within the New Mexico Energy, Minerals and Natural Resources Department, said. The percentage of total gas production in New Mexico was almost 1.5 percent in January 2016 and down to 0.89 percent in January 2017, he said.

The 2016 BLM regulations would have gone beyond New Mexico's by requiring leak detection that would have resulted in infrared camera use, said Dave Mankiewicz, assistant field manager for minerals in the BLM Farmington, N.M., field office.

Why Worse in Four Corners?

Mankiewicz, a geologist with much industry and government experience, offered some details on why the Four Corners area—also known to geologists as the San Juan Basin—might appear to have more methane leakage than other areas.

First there are topography and meteorology. The area has a bowl shape where atmospheric inversions often occur, trapping gases longer near the surface of the Earth, where satellites can spot them. By contrast, oil and gas production areas like the oil-rich Permian Basin of western Texas and eastern New Mexico are in flatter lands, where gases quickly disperse via air currents, he said.

Goldstein agreed that topography and air inversions were a basic problem for the area.

Neustifter in Colorado said inversions also trouble Wyoming, where winter inversions trap volatile organic compounds (a broad category including natural gas) and nitrogen oxides. Wyoming requires quarterly leak inspections on new and existing wells.

Then there's the oil and gas companies' heavy reliance in the Four Corners area on gas-driven equipment, such as pumps and compressors, rather than electrically powered equipment—meaning more opportunities for gas leaks.

The gas to drive the equipment comes from the leases in the San Juan Basin, amounting to 38 percent of all on-lease use of gas in the U.S., Mankiewicz said.

Another problem is the large number of gas seeps. The Four Corners area includes the Fruitland Formation, one of the most gas-rich coal outcrops, Mankiewicz said. And while gas operations appear to dominate the leaks, there also is coal mine venting and leaking.

'Market Failure'

Two industry groups, the American Petroleum Institute and Western Energy Alliance, said operators faced the prospect of significant expenditures to comply with provisions of the BLM rule that were

scheduled to start operating in January 2018. Those now are suspended pending review.

Western Energy Alliance specifically noted that the requirement for leak detection and repair programs, and the standards for storage tanks and pneumatic devices would require operators to begin purchasing and installing tens of thousands of replacement parts in the near future.

Companies have an economic incentive to capture gas and sell it, but the incentive is not strong enough, especially with gas prices low, Environmental Defense Fund's Goldstein told Bloomberg BNA.

"It's just not a strong enough driver," Goldstein said. "It's a market failure."

If the BLM chooses to revise rather than simply rescind the rule, it could retain the leak detection and repair requirements while jettisoning much else, but the agency has not revealed its plan. It's very likely that whatever the agency does will be tested in court for compliance with the National Environmental Policy Act, Administrative Procedure Act, Mineral Leasing Act, and Federal Land Policy and Management Act.

EPA's Pruitt to Visit Gold King Mine Spill Site in Colorado

Posted August 03, 2017, 7:53 A.M. ET

By Tripp Baltz

EPA Administrator Scott Pruitt is planning an Aug. 4 visit to the area of the Gold King Mine spill in Colorado that occurred two years ago.

Joining Pruitt will be Sen. Cory Gardner (R-Colo.) and Sen. Michael Bennet (D-Colo.), as well as Colorado Gov. John Hickenlooper (D) and other other state and federal officials.

Pruitt should meet with the affected communities "on the lasting consequences of the Gold King Mine spill and work with them to identify solutions," Bennet said in an Aug. 3 statement.

Employees of the Environmental Protection Agency and an agency contractor on Aug. 5, 2015, triggered the release at the mine, which spilled some 3 million gallons of mining wastewater and sediment loaded with heavy metals into Upper Cement Creek in a high-altitude region near Silverton, Colo.

The plume of waste flowed into the Animas River, passing through three states and American Indian lands, before flowing into the Colorado River at Lake Powell.

The EPA said in January the spill did not cause long-term harm to the water quality of the Animas and San Juan rivers. Within days of the incident, then-Administrator Gina McCarthy said no harm to human health was reported. The EPA later gave a Superfund designation to the region around the mine, a historic hard-rock mining district.

The EPA press office said it was unable to share details of Pruitt's schedule.

Nuclear Plant Closure Quashes Tax Credit Need, Graham Says

Posted August 03, 2017, 02:05 P.M. ET

By Brian Dabbs

An early extension of a high-profile nuclear tax credit is no longer needed following the closure of a nuclear plant in South Carolina, Sen. Lindsey Graham (R-S.C.) told Bloomberg BNA Aug. 3.

The statement marks a reversal of the senator's position on the production tax credit, which currently sunsets at the beginning of 2021. Graham previously spearheaded the early extension effort in the Senate.

But the July 31 decision by Scana Corp. to abandon an expansion project at the V.C. Summer plant in South Carolina shows that a tax credit won't prop up the industry, Graham said.

"That's probably the end of a nuclear renaissance," he told Bloomberg BNA. "Why do you need production tax credits if you're not building reactors?"

Scana said the move would save utility customers $7 billion.

Brouillette Heads to Energy Department Following Heller Sign-Off

Posted August 03, 2017, 12:42 P.M. ET

By Brian Dabbs

The Energy Department is set to add a deputy for Secretary Rick Perry following the Senate's confirmation of Dan Brouillette Aug. 3.

The chamber, on a vote of 79-17, approved Brouillette after Sen. Dean Heller (R-Nev.) lifted a hold on his nomination. Brouillette formerly served at the Energy Department during the George W. Bush administration.

As recently as Aug. 1, Heller said he was blocking the nomination because Brouillette hadn't responded to his inquiry over the nominee's position on the Yucca Mountain nuclear waste repository. A spokeswoman for Heller said the senator made "progress" on resolving the standoff with Brouillette.

Heller sent the inquiry, which focused on the nominee's support for consent-based siting of a waste repository, nearly two months ago. The spokeswoman didn't respond to a followup request by Bloomberg BNA to obtain more details. Heller was the lone Republican to vote no on the nomination.

A hold is an informal Senate tactic that typically signals a senator will force full debate on a nomination or legislation. The Brouillette nomination received only 15 minutes of debate prior to the vote, an indication that the hold had been lifted.

The Nevada congressional delegation largely opposes the permanent repository at Yucca Mountain, arguing the project presents risks to the environment and surrounding communities. A bill sponsored by Heller (S. 95) would require any such facility to first receive consent from the state's governor, Indian tribes and local governments. Gov. Brian Sandoval (R-Nev.) opposes a repository at Yucca.

Brouillette has been senior vice president of the United Services Automobile Association, an organization providing financial services to military personnel, veterans, and their families. Before that he was a vice president at Ford Motor Co. He served as an assistant secretary of energy for congressional and intergovernmental affairs from 2001 to 2003.

Brouillette previously worked in Congress for the House Energy and Commerce Committee and for lobbying firms, including FleishmanHillard Inc. His clients at that firm included Entergy Corp., Allegheny Energy Inc., and Peabody Energy Corp., according to OpenSecrets.org, a project of the Center for Responsive Politics that tracks money in politics.

Electric-Car Revolution Shakes Up Biggest Metals Markets

Posted August 03, 2017, 7:35 A.M. ET

By Mark Burton and Eddie van der Walt

The revolution in electric vehicles set to upturn industries from energy to infrastructure also is creating winners and losers within the world's biggest metals markets.

While some of the largest diversified miners like Glencore Plc argue that fossil fuels such as coal and oil still play a crucial role supplying energy needs, they also will benefit the most from a move to electric cars, requiring more cobalt, lithium, copper, aluminum, and nickel.

The outlook for greener transportation got a boost this year as the U.K. joined France and Norway in saying it would ban fossil-fuel car sales in coming decades. That's as Volvo AB announced plans to abandon the combustion engine and Tesla Inc. unveiled its latest, cheaper Model 3. Such vehicles will outsell their petroleum-driven equivalents within two decades, Bloomberg New Energy Finance estimates.

"For some of the metals, it's a complete game-changer," said Simona Gambarini, a commodities economist at Capital Economics Ltd. in London. "We've already seen a big impact on some metals like cobalt and lithium, which have soared over the past couple of years."

Electric cars contain about three times more copper than a regular vehicle, according to Glencore. Even more is needed for charging stations, with Exane BNP Paribas seeing such infrastructure adding about 5 percent to demand by 2025. Lithium, cobalt, graphite, and manganese used in batteries also will see more demand.

Copper and Cobalt

Glencore will get a boost as rising electric-vehicle sales lend support to copper prices, as well as from its position as the world's largest cobalt producer, according to Jefferies Group LLC. Freeport-McMoRan Inc. and First Quantum Minerals Ltd. are also top picks for long-term investors looking to benefit from the trend, the brokerage said in a note Aug. 2.

Markets are responding. Cobalt has surged 70 percent on the London Metal Exchange this year, after jumping 37 percent in 2016. Lithium prices have extended gains in recent years. Copper is also up 14 percent in 2017 on signs of resurgent economic growth, particularly in China.

On the flip side, lead producers such as Recylex SA and Campine SA may have to adapt operations to the new era. The main end-use for lead is in starter batteries for petrol and diesel engines. Electric vehicles, by contrast, are powered by lithium-ion units.

"It's a serious risk for lead demand, unless you find different applications to make up for the decline," said Michael Widmer, head of metals market research at Bank of America Merrill Lynch in London.

Lithium vs. Lead

Yet with lead prices up 17 percent this year, the best of any major industrial metal traded in London, investors see only distant risks. "I'm not so sure things will turn out" so badly for lead, as cheap oil prices will help keep conventional cars competitive, said Herwig Schmidt, head of sales at metals brokerage Triland Metals Ltd. If demand for lead does drop, it will do so gradually, he said. "Maybe that will be the case in 10 years or so."

In the meantime, stricter emissions rules could raise demand for hybrid cars that rely on advanced lead-intensive batteries to cope with frequent engine stops and starts, according to the International Lead and Zinc Study Group.

It's not just shifts in use of batteries and wires that are forcing change.

Lightweight metals like aluminum are replacing steel to allow cars to travel further on less power. That already expanded demand by about 1.6 million metric tons, or 2.7 percent of global output, from 2013 to 2016 in a trend that's likely to accelerate, Widmer said.

Aluminum vs Steel

Aluminum is up 14 percent this year as rising use by automakers has run into supply curbs in China, pushing the market into deficit.

Steelmakers are fighting back. AK Steel Holding Corp. has teamed up with General Motors Co. to try to use nanotechnology to make lightweight vehicle bodies. ArcelorMittal and Tata Steel Europe also are among those developing lighter, stronger alloys to fend off the competition.

"The development of ultra-high–strength steel is meant to address that," said Sylvain Brunet, an analyst at Exane BNP Paribas. There's been "some success in Europe."

Platinum also could struggle to cope with the end of petroleum.

Almost half the precious metal used last year was sold to the auto industry for use in catalytic converters to curb diesel pollution, according to research from Johnson Matthey Plc, one of its top refiners.

"A lot of commodities that are in demand right now, like oil and platinum, may not be in demand in the future," said Bernard Dahdah, a commodities analyst at Natixis SA in London. "It's not that commodities overall will become less relevant, but we will see a reshuffling in terms of what is important in the next 15 years."

The platinum industry sees a continued need for converters in diesel-hybrid engines. Umicore SA, a maker of raw materials for batteries and engine catalysts, expects hybrids to still outnumber full-electric cars in 2025, Chief Executive Officer Marc Grynberg said Aug. 1.

"Given the expected evolution of battery costs, there may still be an advantage to buying a hybrid,"

he said.

Fuel-cell vehicles being developed by Toyota Motor Corp. and Hyundai Motor Co. that rely on platinum as a catalyst to generate energy from hydrogen promise the greatest opportunity for demand growth in the next 10 years, according to the World Platinum Investment Council lobby.

Yet, until such technology has been proven commercially, the industry is at risk from the shift away from fossil fuels.

"Diesel looks set to be the clear loser out of this substitution towards electric vehicles," said Brunet at Exane BNP Paribas.

German automakers, fighting for diesel's future, faced a setback last month after a Stuttgart court ruled in favor of banning the technology in the home city of Mercedes-Benz and Porsche.

Perhaps the most immediate danger from electric vehicles, though, is to analysts' predictions. Given the tectonic shift away from oil and the competing technologies to replace the fossil fuel, the outlook for demand from the auto industry has never been so clouded.

"What it comes down to is the extent to which electric vehicles gain popularity," said Bank of America's Widmer. "For metals like copper and nickel, if you underestimate electric vehicle sales by one percentage point, you can add one percentage point to global demand."

U.K. Policy Change Seen Too Frequent for Smooth Energy Shift

Posted August 03, 2017, 8:51 A.M. ET

By Mathew Carr

The U.K.'s energy policies are confusing markets and limiting investment needed to spur a transition away from fossil fuels, according to a pro-business environmental group.

The government's willingness to move by itself in Europe to set a carbon-price floor and its threat to cap household energy tariffs is undermining the country's ability to win spending on clean energy and smart networks, said Volker Beckers, former chief executive officer of RWE AG's U.K. unit. Beckers was speaking in an interview before a report Aug. 3 by Forum for the Future, a pro-business environmental group, for which he was consulted.

"It's absolutely paramount we get this sorted," Beckers said by telephone. "The more political intervention we have in the markets, it'll undermine the ability of markets to deliver a true wholesale price of electricity—governments need to decide whether they believe in a fully competitive and free market, or they want to intervene more, as they're already doing."

The report concludes that governments, including Britain's, have been caught off guard by the pace and scale of the transition away from fossil fuels. European utilities have lost more than 100 billion euros ($119 billion) of value since 2008 and new companies are beginning to gain traction, it said.

The Department for Business, Energy and Industrial Strategy didn't immediately comment on the criticism contained in the report, when contacted by email.

The report draws on interviews with six former executives and policy makers: Beckers, Ed Davey, energy secretary in 2012–2015; Charles Hendry, U.K. energy secretary in 2010–2012, Steve Holliday, CEO of National Grid Plc in 2007–2016; Joan MacNaughton, director general of energy at the former Department of Trade and Industry in 2002–2006; and Ian Marchant, CEO of SSE Plc in 2002–2013.

The U.K. carbon price floor has made both coal and cleaner natural gas generation less profitable. With doubt about future carbon and wholesale power prices, there's a risk that free markets may not recover to levels high enough to sustain a cleaner system, Beckers said. Two gas plants commissioned by him before 2010 were needing prices of 70 pounds per megawatt-hour to break even, he said. That's about 56 percent more than average prices since then.

"You can easily work out that the economics of these power stations do not stack up," Beckers said. "Hence, we've seen massive impairments of generation assets across Europe."

Governments need to boost the EU carbon price, which will help lift power contracts, and they probably will do so after about a decade of trying, Beckers forecast. European policy makers are seeking to install a market reserve in 2019 to deal with a glut in their emissions program, while the U.K. is consulting how to price or tax its emissions after it exits the European Union.

Plunging costs for wind and solar technology have complicated policy making, MacNaughton said by phone. Still, the U.K. government had made it more difficult to meet its emissions targets cheaply by having an aversion to onshore windfarms and by favoring the EDF SA nuclear project at Hinkley Point, which was encouraged in an "expensive" fashion, she said. EDF is guaranteed to earn 92.50 pounds a megawatt-hour for the power it generates at the nuclear site over 35 years.

"We've had a very strong signal from the Climate Change Act and the carbon budgets, but it's not quite strong enough," she said.

Arsenal Soccer Club Tackles Climate Change With Clean Energy

Posted August 03, 2017, 12:15 P.M. ET

By Jessica Shankleman

Arsenal Football Club plans to power its stadium with renewable energy produced from wasted food and solar panels in a bid to reduce greenhouse gas pollution.

The North London club signed a contract with Octopus Energy Ltd. to source energy from anaerobic digestion plants and solar farms. It will offset carbon dioxide emissions from fossil fuels.

The contract was signed Aug. 3 for an undisclosed value followed a yearlong trial by Arsenal, a spokeswoman for the utility said by phone. Wasted food from the club will be sent to the plants that break down organic waste to create biogas and electricity.

Octopus was started in April 2016, backed by renewable energy investors at Octopus Capital Ltd. In the first year the switch helped Arsenal save 2.32 million kilograms (5.1 million pounds) of carbon dioxide, according to the statement.

Arsenal isn't the only soccer club to use green energy. Forest Green Rovers, a vegan team based in Gloucestershire that's owned by the clean-energy supplier Ecotricity Group Ltd. Chairman Dale Vince, already uses a solar-powered robot lawnmower. Vince also wants his club to be the greenest in the world and is building a new stadium made almost entirely of wood.

Other companies like Apple Inc., Facebook Inc. and Google parent company Alphabet Inc. all plan to run only on green energy over the next few years, marking a growing drive by corporations to buy renewable energy.

Germany Giving Gigafactory a Home in Latest Challenge to Tesla

Posted August 03, 2017, 8:34 A.M. ET

By Brian Parkin

German executives are preparing to announce a new home for a lithium-ion battery plant designed to rival the output at Tesla Inc.'s Gigafactory.

Terra E Holding GmbH will choose one of five candidate sites in Germany or a neighboring country next month to build its 34 gigawatt-hour battery factory, Frankfurt-based Chief Executive Officer Holger Gritzka said in an interview. The former ThyssenKrupp AG manager has helped to assemble a consortium of 17 German companies and won government support for the project, which will break ground in the fourth quarter of 2019 and reach full capacity in 2028, he said.

The battery factory is the latest sign that German industry, the motor behind the world's fourth-biggest economy, is gearing up for a new stage in the energy revolution. Lithium-ion batteries can help stabilize intermittent flows of wind and solar power on electricity networks. They're also projected to power millions of plug-in cars expected to roll off German production lines beginning early next decade.

"We have to be better in process technology than competitors, a constant step ahead," said Gritzka, who emphasized that Terra E will be counting on Germany's competitive edge in manufacturing robotics and automated production to make money.

Global battery-making capacity is set to more than double by 2021, reaching 278 gigawatt-hours, up from about 103 gigawatt-hours in the second quarter, according to Bloomberg New Energy Finance. Asia electronics makers including South Korea's LG Ltd. and Samsung SDI Co. currently control the market. Tesla will become the world's No. 2 battery maker once it finishes building its $5 billion, 35 gigawatt-hour Gigafactory in Nevada, according to the London-based researcher.

Merkel's Endorsement

Some of Terra E's consortium members also may become its clients, according to Gritzka, who declined to name companies participating. The project, which won 5.2 million euros ($6.2 million) in subsidies from Germany's Ministry of Education and Research, expects to need upwards of a billion euros before completion, the CEO said.

Terra E will be seeking strategic investors that are attracted by the government-paid research

embedded in Terra's technology and German Chancellor Angela Merkel's endorsement of the company, said Gritzka. In May, Merkel broke ground at another 500 million-euro plant to assemble lithium-ion energy-storage units for Daimler AG, which produces Mercedes-Benz and Maybach luxury cars.

The company will focus its batteries on stationary units, according to Gritzka. The project aims to tap an emerging market for mobile and non-automotive power and storage, he said. The bet rests on projected faster demand for lithium storage in the next decade.

Turkey Awards First Wind-Power Contract to Siemens Gamesa

Posted August 03, 2017, 01:24 P.M. ET

By Onur Ant and Anna Hirtenstein

A consortium led by Siemens Gamesa Renewable Energy SA won the right to build 1 gigawatt of wind power in Turkey, outbidding competitors from China to the U.S. in the country's first wind auction.

The group won with a low bid of 3.48 U.S. cents a kilowatt-hour to sell electricity to Turkey's government, according results distributed Aug. 3 at the auction in Ankara. Siemens Gamesa partnered with Turkey's Turkerler and Kalyon at the auction, which needed 29 rounds to find a price.

"The aggressive bidding at 50 percent below the ceiling price shows that Siemens Gamesa really wanted to get into this market," said Keegan Kruger, wind analyst at Bloomberg New Energy Finance. "This tender also shows there's a shift in mentality among the turbine makers away from just being suppliers."

Eight groups participated in the auction, which set out rules requiring the winning bidder to build a turbine factory in Turkey and agree to employ a mostly local workforce. Energy Minister Berat Albayrak estimated that development costs for the wind projects will be more than $1 billion.

Capacity will be spread throughout Turkey. Before the auction, the government had selected seven regions for developers to choose from, including Eastern Thrace near Bulgaria, an area close to Ankara, and the city of Sivas in central Turkey.

German Investors

The participation of Siemens Gamesa, a Vizcaya, Spain-based company majority owned by Germany's Siemens AG, should improve ties with Berlin's government, Albayrak said after the tender, an apparent reference to months of diplomatic discord between Turkey and Europe's biggest economy.

The win by a German firm is "really important in showing bilateral problems between the Turkish and German governments is not getting in the way of German business interests in Turkey," Tim Ash, an emerging-market strategist at BlueBay Asset Management in London, said in an e-mailed note. "The Turkish government has been really keen to demonstrate this and re-assure German business."

Invenergy Issues Green Bond to Finance Wind Park in Uruguay

Posted August 03, 2017, 01:01 P.M. ET

By Vanessa Dezem

Invenergy Wind LLC, a Chicago-based energy company, issued a $137 million green bond to finance a wind park in Uruguay.

It is the first green bond in Uruguay, according to Emilio Fabbrizzi, head of project finance Latin America at DNB Markets, who structured the transaction. The deal was backed by the Inter-American Investment Corporation, known as IIC.

"It is an innovative way to issue a bond," said Fabbrizzi. "Issuing it together with a multilateral bank is more comfortable for investors as a country such as Uruguay is not big for the capital market. It is an investment grade country, attractive for this type of transaction."

The 70-megawatt Campo Palomas Wind Farm in the Salto Department of Uruguay was acquired by Invenergy last year from an Uruguayan subsidiary of Abengoa SA. Project financing was provided by the IIC, with DNB acting as the mandated lead arranger.

The goal of the bond issuance is to refinance the wind park, which is already operating. The state-owned utility Administracion Nacional de Usinas & Trasmisiones Electricas, known as UTE, will buy the plant's output under a long-term lease agreement.

"You can get more interest from investors when the bond is certified as green," said Salvatore Santoro, head of investment banking Sweden at DNB. "Demand for green bonds is increasing as insurance companies, asset managements, pension funds, among other players, are chasing opportunities to comply with requirements of allocating a portion of the money for sustainable activities."

Invenergy and its affiliates have more than 12,000 megawatts of projects in operation, construction or advanced development, including wind, solar, natural gas fueled power generation and energy storage.

Summaries

AIR
Indiana SIP/Cincinnati-Hamilton PM-2.5 Nonattainment Area
AIR

Final rule of the EPA redesignates the Indiana portion of the tri-state Cincinnati-Hamilton, Ohio-Ind.-Ky., nonattainment area to attainment for the 1997 fine particulate matter (PM-2.5) NAAQS. The rule also approves the state's plan for maintaining the 1997 annual PM-2.5 NAAQS through 2027 and the state's updated emission inventory, which includes inventories for volatile organic compounds and ammonia. In addition, the rule approves and updates the budget for the mobile source contribution of PM-2.5 and nitrogen oxides to the area for transportation conformity purposes. The rule is effective Sept. 1, 2017. Contact: Michelle Becker; EPA Region 5, Air Programs Branch; 312-886-3901; becker.michelle@epa.gov. Citations: 40 CFR 52.776, 81.315

Regulatory Update

AIR
NOx Budget Trading Program
AIR

Notice of the EPA announces the submission of a continuing information collection request to the OMB regarding the NOx Budget Trading Program to reduce the regional transport of ozone. The program has been replaced by ozone-season NOx trading programs under the Cross-State Air Pollution Rule. The collection addresses emissions monitoring and reporting requirements for industrial sources in certain states that continue to report emissions data to the EPA under a NOx SIP call. Comments are due Oct. 2, 2017. Contact: Karen VanSickle; EPA, Office of Air and Radiation; 202-343-9220; vansickle.karen@epa.gov. Citations: 40 CFR 75

AIR

Rhode Island SIP/VOC Emissions from Fiberglass Processing

AIR

Notice of the EPA announces the withdrawal of a July 3, 2017, direct final rule (82 FR 30747) that would have approved revisions to the Rhode Island SIP regarding volatile organic compound (VOC) emissions from fiberglass process areas operated by US Watercraft LLC, of Warren, R.I. The revisions include a closed molding process and VOC limits on gel coats and resins used to limit emissions from the facility. The revisions prohibit the use of VOC solvents for cleanup, and restrict US Watercraft to using the Seemann Composite Resin Infusion Molding Process or a roller when applying vinyl ester resin, except when applying vinyl ester resin by spray layup for corrosion proof laminate. The revisions also require tracking of VOC emissions and remove the previously approved consent agreement for the facility. The withdrawal is in response to receipt of an adverse comment. The agency will instead proceed with a final rule based on the related proposed rule (82 FR 30815; 07/03/2017). The withdrawal is effective Sept. 1, 2017. Contact: David Mackintosh; EPA Region 1, New England Regional Office; 617-918-1584; Mackintosh.David@epa.gov. Citations: 40 CFR 52.070

FOOD SAFETY

Inspection Coverage at Siluriformes Fish Establishments

FOOD SAFETY

Notice of the Food Safety and Inspection Service confirms that on Sept. 1, 2017, the agency will adjust inspection coverage at official establishments that slaughter Siluriformes fish, including catfish, from all hours of operation to once per production shift. The change reduces the initial frequency of inspection coverage provided for in the Dec. 2, 2015, final rule (80 FR 75590) that established a mandatory inspection program for Siluriformes fish. The agency also provides responses to eight comments received on the May 17, 2017, notice (82 FR 22609) proposing the change and the June 16, 2017, notice (82 FR 27679) extending the comment period. Illinois/Brandon Road Lock and Dam Aquatic Nuisance Species Controls

GENERAL ENVIRONMENT AND SAFETY

Notice of the U.S. Army Corps of Engineers announces meetings regarding the draft integrated feasibility study and environmental impact statement for the plan to prevent the spread of aquatic nuisance species between the Great Lakes and Mississippi River basins through the Chicago Sanitary and Ship Canal and other aquatic pathways. The study and EIS evaluate structural and nonstructural options and technologies near the Brandon Road Lock and Dam, in Will County, Ill., to prevent the upstream transfer of aquatic nuisance species. The study and EIS also identify potential adverse impacts that alternatives may have on existing uses and users of the waterways. The meetings are scheduled for Sept. 11, 14, and 18, 2017, in Chicago, Muskegon, and Joliet, Ill., respectively. The meetings also will be held via web conference and teleconference. Comments are due Oct. 2, 2017. Contact: Andrew Leichty; USACE, Rock Island District; 309-794-5399; Andrew.L.Leichty@usace.army.mil

GENERAL ENVIRONMENT AND SAFETY

Mandatory Reliability Standard CIP-014/Transmission Station Physical Attacks

GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of FERC to seek OMB approval for a continuing information collection request regarding the reporting requirement under Mandatory Reliability Standard CIP-014 for transmission owners and operators concerning stations, substations, and primary control centers that, if rendered inoperable or damaged as a result of a physical attack, could result in instability, uncontrolled separation, or cascading within an interconnection (Form FERC-725U). The collection requires such owners and operators to retain data or evidence to show compliance with the standard for three years unless directed by its compliance enforcement authority. Entities that are found noncompliant with the standard must retain related information until mitigation is completed or for the three years, whichever is longer. Comments are due Oct. 31, 2017. Medical Devices Advisory Committee Meeting Procedures

GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the availability of a final guidance for industry that provides additional information regarding the processes for meetings of the Medical Devices Advisory Committee panels, other than the Dispute Resolution Panel. The guidance describes the general circumstances when the Center for Devices and Radiological Health (CDRH) consults with a panel; the process for exchange of information between the CDRH, panel members, industry, and the public; and the conduct of panel meetings. The guidance supplements and replaces existing FDA agencywide guidance on the conduct of advisory committee meetings. Comments may be submitted at any time. Contact: James Swink; CDRH; 301-796-6313

GENERAL ENVIRONMENT AND SAFETY
Nevada/Greater Phoenix Mine Project
GENERAL ENVIRONMENT AND SAFETY

Notice of the Bureau of Land Management announces the availability of a draft environmental impact statement for the proposed Greater Phoenix Mine Project in Lander County, Nev. The project, proposed by Newmont Mining Corp., of Greenwood Village, Colo., involves the expansion of the life of the mine until 2063; expansion of the mine boundary; and increasing surface disturbances to 11,871 acres, of which 5,896 acres involves public lands. In addition to the proposal submitted by Newmont, the agency has analyzed an enhanced/mechanical evaporation cell alternative, a treat water for agricultural cropping on private land alternative, and a no action alternative. Comments are due 45 days after the EPA publishes a notice of availability of the DEIS in the Federal Register. GENERAL ENVIRONMENT AND SAFETY
TVA/Freedom of Information Act
GENERAL ENVIRONMENT AND SAFETY

Final rule of the Tennessee Valley Authority amends its Freedom of Information Act (FOIA) regulations to align with the FOIA Improvement Act of 2016. The rule incorporates statutory changes that require agencies to make available for public inspection in an electronic format records that have become or are likely to become the subject of subsequent requests for substantially the same records, or that have been requested three or more times. The rule also provides a minimum of 90 days for requesters to file an administrative appeal, includes dispute

resolution procedures, and codifies the Justice Department's forseeable harm standard. In addition, the rule includes provisions to consider whether partial disclosure is possible if full disclosure is not and to take reasonable steps to separate and release nonexempt information. Finally, the rule specifies that the deliberative process privilege does not apply to records created 25 years or more before the date of the request and that such records must be released if requested. The rule is effective Sept. 1, 2017. Contact: Denise Smith; TVA; 865-632-6945; dsmith@tva.gov. Citations: 18 CFR 1301.1 through 1301.12

Driving the Day

HOW ABOUT THAT! -- @realDonaldTrump at 8:35 a.m.: "Subject to the receipt of further information, I will be allowing, as President, the long blocked and classified JFK FILES to be opened."

Good Saturday morning. WEST WING BUZZ -- Don't be surprised if you begin hearing **VETERANS AFFAIRS SECRETARY DAVID SHULKIN** is in the mix for Health and Human Services secretary. Shulkin is a doctor.

IMPORTANT RE TAX REFORM -- UPDATE ON FREEDOM CAUCUS: The House Freedom Caucus had a conference call yesterday about supporting the Senate budget. Here's what **FREEDOM CAUCUS CHAIRMAN MARK MEADOWS (R-N.C.)** told us after the call: "No official positions but the general consensus would be to support the Senate budget without going to conference, provided we can get an accelerated timetable to pass tax reform out of the House by the middle of November."

-- AMBITIOUS TIMELINE, but it's possible.

WSJ'S RICH RUBIN: "In the frenzied days ahead, the GOP will seesaw between the political necessity of obtaining a legislative win to tout in the 2018 elections and the immense difficulty of the task they've set for themselves." http://on.wsj.com/2xaA0Hs

-- "Republicans Consider Sharp Cut in 401(k) Contribution Limits," by NYT's Jim Tankersley: http://nyti.ms/2l52r8j

SNEAK PEEK -- PRESIDENT DONALD TRUMP to **MARIA BARTIROMO** on tomorrow morning's "Sunday Morning Futures":

-- ON THE TIMING FOR TAX REFORM: "[I] will say this, I want to get it by the end of the year but I'd be very disappointed if it took that long."

-- ON THE FED: BARTIROMO: "Isn't there a way that you can get Taylor and Powell in there? Because you've got a vice chairman opening as well, you can actually put them both in there. Is that in your thinking?" **TRUMP:** "It is in my thinking. And I have a couple of other things in my thinking. But I like talent. And they are both very talented people. And it's a hard decision. It's actually a very important decision. People have no -- most people have no idea how important that position is."

BANNON ON BUSH -- "Bannon faults George W. Bush for 'destructive' presidency," by AP's Michael Blood in Anaheim, California: "Former White House adviser Steve Bannon depicted former President George W. Bush as bumbling and inept, faulting him for presiding over a 'destructive' presidency during his time in the White House. Bannon's scathing remarks on Friday night amounted to a retort to a Bush speech in New York earlier this week, in which the 43rd president denounced bigotry in Trump-era American politics and warned that the rise of 'nativism,' isolationism and conspiracy theories have clouded the nation's true identity." http://bit.ly/2xcLDOd

-- CARLA MARINUCCI and **DAVID SIDERS:** "Issuing a defiant call to arms to grassroots Republicans, former White House chief strategist Steve Bannon railed Friday against dangerous 'global elites' and the Silicon Valley 'lords of technology' whom he said are robbing U.S. citizens of jobs, wealth and opportunity. 'They want all the benefits of a free society ... all the benefits of this rules based international order,' including lucrative trade deals and capital markets, he said, while 'we the citizens of the United States...underwrite the whole thing.'" http://politi.co/2yz6wXY

ON THE WORLD STAGE -- "Trump administration considers pausing U.S. refugee family reunification program," by Reuters' Yeganeh Torbati and Mica Rosenberg: "President Trump's administration has drafted a plan to pause a program that allows family members join refugees already settled in the United States until they can undergo increased security checks, two sources with knowledge of the situation told Reuters. The measure is one of several being considered for refugees ... The administration also may expand the use of intensive security checks by multiple federal agencies, called 'security advisory opinions' (SAO) to apply to women from countries designated as high-risk by the U.S. government. Currently there are usually only mandatory SAOs, as they are called, for men from those countries." http://reut.rs/2yDP6qv

COMING ATTRACTIONS -- "Niger attack fuels new push for war vote," by Connor O'Brien: "Some lawmakers, citing the deaths of four U.S. soldiers ambushed by terrorists in Niger, called on Congress on Friday to reconsider the broad war authority it granted in 2001 - as the Pentagon telegraphed that more such missions in more places are likely in the offing. The Senate Foreign Relations Committee announced it will hear testimony next week from Secretary of Defense Jim Mattis and Secretary of State Rex Tillerson on the 16-year-old Authorization for Use of Military Force that is now being

used to justify military operations in numerous countries.

"Committee Chairman Bob Corker (R-Tenn.) said in a statement that current threats make it 'perhaps more important than ever that we have a sober national conversation about Congress' constitutional role in authorizing the use of military force.' For some on Capitol Hill, the attack in Niger highlights the need for updated legislation that takes into account the myriad operations against the Islamic State in Iraq and Syria, Al Qaeda and other terrorist groups on several continents." http://politi.co/2gypuXJ

-- "Conflicting Accounts in Niger Ambush Are Subject of Pentagon Investigation," by NYT's Dionne Searcey, Helene Cooper and Eric Schmitt: "The Pentagon is trying to determine whether American forces involved in a deadly ambush in Niger this month diverted from their routine patrol to embark on an unapproved mission, military officials said on Friday. The questions have come up because the American and Nigerien soldiers on the patrol have given conflicting accounts about whether they were simply ambushed or were attacked after trying to chase Islamic insurgents, according to military officials from both countries. The episode has engulfed the White House in crisis and prompted demands from members of Congress for answers about what the soldiers were doing before the attack on Oct. 4." http://nyti.ms/2zqtgpD

-- @realDonaldTrump at 8:07 a.m.: "I hope the Fake News Media keeps talking about Wacky Congresswoman Wilson in that she, as a representative, is killing the Democrat Party!" ... **@philiprucker:** "Trump fuels this story into its sixth straight day".

****** **A message from JPMorgan Chase & Co.: 30 Years in the Waiting** It's been more than three decades since America reformed its tax system. As the world became more competitive, our tax code remained the same, putting America at a disadvantage when it comes to creating new jobs. Learn how tax reform can jump-start our economy: http://politi.co/2gBVNBD ******

MARC CAPUTO: "'Trump is messing with the wrong woman'": "Of President Trump's many opponents in Congress, none looks or sounds remotely like Rep. Frederica Wilson, the Miami Democrat known for her bedazzled, sequined-blinged hats, her vibrant matching outfits and her reputation in Florida for never backing down from a fight. But Wilson has never had an foe like Trump or a fight this personal, which began with the president's condolence call to the widow of a young soldier the congresswoman helped steer away from Miami's mean streets - only to see him die in a mysterious ambush in sub-Saharan Niger.

"Despite tough criticism and insults from the president and his allies - a top African-American Trump surrogate, former Milwaukee County Sheriff David A. Clarke, characterized Wilson as 'a buffoon' while White House Chief of Staff John Kelly teed off on her from a White House lectern - the 74-year-old Democrat hasn't flinched, firing back with caustic responses honed by years of full-contact Miami politics.

"The president is a 'jerk' and a 'liar' who 'doesn't know how to be a president,' Wilson

said. She then mocked him for raising her profile. 'You mean to tell me that I have become so important that the White House is following me and my words? Wilson laughed. 'This is amazing. That's amazing. That is absolutely phenomenal. I'll have to tell my kids that I'm a rock star now.'" http://politi.co/2yFPNzJ

-- "Video shows Kelly made inaccurate claims about lawmaker in feud over Trump's condolence call," by WaPo's David Nakamura: http://wapo.st/2yXDcLc

-- NYT: "Ms. Wilson, in an interview on Friday, called Mr. Kelly a liar and hinted strongly that the altercation, prompted by a call from President Trump to the widow of a fallen black soldier, was racially charged. 'The White House itself is full of white supremacists,' she said. 'I feel very sorry for him because he feels such a need to lie on me and I'm not even his enemy,' Ms. Wilson said of Mr. Kelly. 'I just can't even imagine why he would fabricate something like that. That is absolutely insane. I'm just flabbergasted because it's very easy to trace.'" http://nyti.ms/2iphSam

-- @ABCPolitics: "Press Sec. Sanders: 'If you want to get into a debate with a 4-star Marine general, I think that that's something highly inappropriate.'" http://bit.ly/2zrCq5v

REALITY CHECK -- "Trump stokes hopes of Obamacare repeal - setting up Senate for another failure," by Jen Haberkorn: "President Donald Trump says the Senate has the votes to repeal Obamacare. That's news to the Senate. 'I think that's aspirational,' said Majority Whip John Cornyn, who counts votes for the GOP. 'If there were 50 votes, we'd be voting,' added John Thune (R-S.D.), another member of Republican leadership.

"Repeatedly claiming that Republicans have the votes to repeal major parts of Obamacare early next year, Trump is stoking expectations that the GOP can fulfill its seven-year pledge before the 2018 midterm elections - a promise that Republicans once again might not be able to keep. The Senate, Trump says, will have the 50 votes needed to enact the bill known as Graham-Cassidy, the last of a series of repeal bids that went down in flames this summer and fall.

"The reality is that no matter what the president says at the White House or how often he says it, nothing has changed at the other end of Pennsylvania Avenue. Not a single 'no' vote has flipped to a 'yes.' When senators talk about repeal after months of failure, they are talking about hopes and dreams - not about 50 votes to pass it. 'I think eventually, I may be speaking aspirationally, eventually we'll have 50 votes for Graham-Cassidy or something like that,' Thune said." http://politi.co/2yZ2SXR

-- "ACA enrollment schedule may lock millions into unwanted health plans," by WaPo's Amy Goldstein: "Millions of Americans with insurance through the Affordable Care Act could find themselves locked into health plans they do not want for the coming year because of the Trump administration's schedule for the enrollment season that starts in less than two weeks. The complication arises when people who already have health plans under the law are automatically re-enrolled in the same plan. In the past, a few million consumers each year have been auto-enrolled and then were sent

government notices encouraging them to check whether they could find better or more affordable coverage.

"This time, according to a federal document obtained by The Washington Post, the automatic enrollment will take place after it is too late to make any changes. Auto-enrollment will occur immediately after the last day of the ACA sign-up season, which the Trump administration has shortened, leaving the vast majority of such consumers stranded without any way to switch to a plan they might prefer." http://wapo.st/2gVgmcr

PENCE WORLD -- "Financial disclosure shows unusual campaign setup for Pence chief of staff," by Matt Nussbaum and Maggie Severns: "Vice President Mike Pence's chief of staff had a lucrative 2016 campaign season even as his high-profile work on the Trump-Pence campaign was classified as unpaid volunteer work. Nick Ayers, a senior adviser to Pence during the presidential race and now his chief of staff, joined the 2016 team as a volunteer and never took a dime in salary from the Trump-Pence campaign even as he crisscrossed the country with Pence, then the Indiana governor. He served as one of Pence's top aides and prepared him for critical events, including his debate with Sen. Tim Kaine (D-Va.), the Democratic vice presidential nominee.

"But Ayers' Georgia-based political consulting firm, C5 Creative Consulting, did receive a payment of nearly $75,000 on Aug. 25 from Pence's gubernatorial re-election campaign, 40 days after Pence had been selected as Trump's running mate and withdrawn from the governor's race. In addition to the compensation from Pence's gubernatorial campaign, Ayers received significant payments from the campaign of Eric Holcomb, Pence's lieutenant governor, who sought and won the Indiana governorship after Pence joined the national ticket. Holcomb's campaign paid Ayers' firm nearly $40,000 between August 2016 and March 2017. Ayers also received payments of more than $30,000 from Missouri Gov. Eric Greitens' campaign.

"His work for multiple campaigns raises questions whether Pence's gubernatorial re-election campaign was subsidizing, in part or in full, Ayers' work for Trump - though the arrangement may have been perfectly legal, experts told POLITICO. Any payments from different campaigns for Ayers' work on the Trump-Pence campaign would qualify as an illegal in-kind contribution, but there is no indication that this took place." http://politi.co/2iqDB1U

-- "VP Mike Pence in Brown County this weekend for wedding celebration," by Mary Shown in the Herald-Times of Bloomington, Indiana: "A white 757 airplane emblazoned with 'United States of America' across the side was parked on a tarmac at Columbus Municipal Airport at noon Friday. According to Columbus Municipal Airport officials, this is the second time Pence has landed at the airport in Air Force Two since becoming vice president. Officials also said Secret Service personnel arrived at the airport Monday and have been in the area ever since. ...

"The celebration Saturday at Brown County State Park is for Michael Pence Jr. and

his wife, Sarah. The two were married in December 2016 at the Governor's Mansion in Indianapolis just before the January inauguration of Pence and President Donald Trump." http://bit.ly/2yyq7rk

WORTH THE CLICK - "10 Minutes. 12 Gunfire Bursts. 30 Videos. Mapping the Las Vegas Massacre," by NYT's Malachy Browne, Drew Jordan, Nicole Fineman and Chris Cirillo: "The shots began at 10:05. Twelve bursts of gunfire later, police broke down Stephen Paddock's door at the Mandalay Bay. Using forensic analysis, The Times mapped 30 videos that show a vivid picture of what happened that night." http://nyti.ms/2yErOCx

FOR YOUR RADAR -- "Spanish PM seeks Senate backing to take over Catalonia govt," by AP's Aritz Parra in Barcelona: "The Spanish government moved decisively Saturday to use a previously untapped constitutional power so it can take control of Catalonia and derail the independence movement led by separatist politicians in the prosperous industrial region. ... [T]he country ... faces its most grave institutional crisis in decades." http://bit.ly/2xVhlJO

AT THE COURTS-- "Appeals court looks for compromise on abortion for undocumented minor," by Renuka Rayasam and Josh Gerstein: "A federal appeals court is seeking to defuse a high-profile abortion standoff by giving the Trump administration until the end of the month to find a sponsor for an undocumented pregnant minor being held in a federally-funded shelter in Texas. In the decision issued late Friday, a three-judge panel split 2-1, overturning a decision from a federal judge issued earlier this week that would have allowed the 17-year old girl to have the abortion immediately.

"Instead the D.C. Circuit Court of Appeals ruling, apparently devised by Judge Brett Kavanaugh, opted to find a path that would dispose of the case without making any precedent-setting decisions. The ruling stated that once federal authorities could find a suitable sponsor for the girl, the administration would have to allow her to follow state law to receive the abortion. If the administration can't find a sponsor, a federal district court judge would again have the chance to step in and re-issue the order requiring the administration to permit the teen to leave the shelter for an abortion." http://politi.co/2gs6beS

VALLEY TALK - MAUREEN DOWD in the **NYT, "Uber's Whistle-Blower Is Developing a Movie and Having a Baby":** "In her first interview since the essay that

started a wave of sexual-harassment revelations, Susan Fowler tells her life story and looks to the future." http://nyti.ms/2I7kkn2

MEDIAWATCH -- FIRST PERSON -- "I interviewed an executive in his underwear to get the job done," by USA Today's Joanne Lipman: "In my first job, as a 22-year-old newspaper reporter, I went to interview a businessman. He ushered me into his office. He locked the door. Then he stripped to his underwear. This was in the 1980s, at a time when women didn't call behavior like his 'sexual harassment.' We called it ... going to work. So I did what other women in my place would have done. I interviewed him in his underwear. Then I got out as fast as I could." https://usat.ly/2zrs8Ck

****** **A message from JPMorgan Chase & Co.: Keeping Jobs at Home** America is falling behind when it comes to a tax system that helps spur job growth and expand economic opportunity. A 2017 EY report found that the existing tax structure has put job creators here at home at a disadvantage: updating the outdated tax system could have kept nearly 4,700 companies in the United States. That could mean more products made here in America, more parts sourced from American companies and billions of dollars spent here at home. As JPMorgan Chase Chairman and CEO Jamie Dimon put it, "Reforming the tax code is the single most important thing that Congress could do to jump-start our economy, create jobs, and raise wages for American workers." GREAT WEEKEND READS, curated by Daniel Lippman:

-- "Rigged: How Voter Suppression Threw Wisconsin to Trump," by Ari Berman in the Nov./Dec. issue of Mother Jones - per Longreads.com's description: "Berman investigates how increasingly restrictive voting laws in states like Wisconsin had an impact on the 2016 presidential election - and most likely tipped it in favor of Donald Trump." http://bit.ly/2zGSUaO

-- "The Dirty Secret of War: It Can be As Compelling As it is Ugly," by Philip Caputo (Marc Caputo's father) on Lit Hub: "Everyone accepts that war is ugly and horrible.

Civilized people, however, don't accept that it is also alarmingly attractive. This is another truth as old as war itself, and one that Homer was aware of. The phrase, 'the joy of battle' occurs frequently in his verses." http://bit.ly/2l4hOhb

-- **"The Boomtown That Shouldn't Exist,"** by Mike Grunwald in the Friday cover of POLITICO Magazine: "Cape Coral, Florida, was built on total lies. One big storm could wipe it off the map. Oh, and it's also the fastest-growing city in the United States." http://politi.co/2yXDEJo

-- **"The science of spying: how the CIA secretly recruits academics,"** by Daniel Golden in The Guardian: "In order to tempt nuclear scientists from countries such as Iran or North Korea to defect, U.S. spy agencies routinely send agents to academic conferences - or even host their own fake ones." http://bit.ly/2gW29w7

-- **"A Fire's First, Fatal Hours"** - San Francisco Chronicle: "A monster firestorm became unstoppable almost as soon as it started." http://bit.ly/2irYtpb (h/t Longform.org)

-- **"What Facebook Did to American Democracy,"** by Alexis C. Madrigal in The Atlantic: "The very roots of the electoral system - the news people see, the events they think happened, the information they digest - has been destabilized." http://theatln.tc/2l5SMyc

-- **"Going 'Instagram official' is the new way to declare your relationship status,"** by Taylor Lorenz, whose birthday is today, in Medium: "[I]n 2017, the Facebook relationship status is dead and if you really want the world to know someone has stolen your heart there's only one way to go: make it Instagram official. [That] means posting a photo of you and your significant other, generally looking casual yet cute, to your Instagram page accompanied by a somewhat ambiguous caption or series of emoji." http://bit.ly/2yxUJJm

-- **"'We Need to Develop Political Heroism,'"** by Klaus Brinkbäumer, Julia Amalia Heyer and Britta Sandberg in Der Spiegel -- French president Emmanuel Macron tells the publication in an interview: "France is a country of regicidal monarchists. It is a paradox: The French want to elect a king, but they would like to be able to overthrow him whenever they want. The office of president is not a normal office." http://bit.ly/2zrDXIz

-- **"A Catfishing With a Happy Ending,"** by Jeff Maysh in The Atlantic - per Longform.org's description: "Emma Perrier was deceived by an older man on the internet-and then she found love with the model whose photographs he had stolen." http://theatln.tc/2zFwNIc

-- **"Welcoming Our New Robot Overlords,"** by Sheelah Kolhatkar in The New Yorker: "Once, robots assisted human workers. Now it's the other way around." http://bit.ly/2yY38pV

-- **"The scientists persuading terrorists to spill their secrets,"** by Ian Leslie in The Guardian: "Expert interrogators know torture doesn't work - but until now, nobody could prove it. By analysing hundreds of top-secret interviews with terror suspects, two British scientists have revolutionised the art of extracting the truth." http://bit.ly/2xd2rF2

-- **"Everest at the Bottom of the Sea,"** by Bucky McMahon in Esquire: "When the ocean liner Andrea Doria sank south of Cape Cod, she took fifty-one with her. Since then she's taken twelve more, five in the last two summers alone. On this very day, a man is strapping on two hundred pounds of scuba gear to make the descent, to bring back a little souvenir from the boat's gift shop, to possibly never return." http://bit.ly/2l5SwiO

-- **"Thinking Like a Mountain: On Nature Writing,"** by Jedediah Purdy in n+1 magazine: "Every inhabited continent has been denuded of ecosystems and species. Most North American places have shed wolves, elk, moose, brown bears, panthers, bison, and a variety of fish and wild plants, which were all abundant four hundred years ago. Before those species were driven out, there was the slaughter of the mammoth, the ground sloth, the wild horse." http://bit.ly/2xbUPCv (h/t TheBrowser.com)

Playbookers

SPOTTED: David Letterman at Commissary yesterday at lunch. He's is in town for the Mark Twain Prize for American Humor on Sunday night at the Kennedy Center and bought our tipster lunch.

-- C-SPAN: "The Communicators": A look at how Russia used Facebook to send political ads to Americans in the 2016 election with ProPublica's Julia Angwin and Axios' David McCabe ... **"Newsmakers":** National Counterterrorism Center director Nicholas Rasmussen, questioned by AP's Deb Reichmann and the LA Times' Brian Bennett ... **"Q&A":** Paralyzed Veterans of America executive director Sherman Gillums, Jr.

-- Washington Times' "Mack on Politics" weekly politics podcast with Matt Mackowiak (download on iTunes, Google Play, or Stitcher or listen at http://bit.ly/2omgw1D): Former CIA analyst and radio host Buck Sexton.

****** **A message from JPMorgan Chase & Co.: Investing in America** The American economy powers the world, but our tax system is holding us back. A 2017 EY report found that reforming the tax system could have brought an additional $195 billion of foreign direct investment into the United States, an increase of 14 percent. That investment can help companies expand, explore new strategies and grow. What does that mean for America? It can help jumpstart our economy, make our country stronger in an increasingly competitive world, and can mean more jobs and higher wages for the American workers. Learn more about what tax reform can mean for our country: http://politi.co/2ghszvf ******

Subject: POLITICO's Morning Score: Northam wins Virginia governors race — Murphy wins in New Jersey — LoBiondo to retire from Congress

By Maggie Severns | 11/08/2017 10:00 AM EDT

With Zach Montellaro, Elena Schneider

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

ELECTION RESULTS - Ralph Northam (D) 54 percent, Ed Gillespie (R) 45 percent in Virginia's governor's race; Phil Murphy (D) 56 percent, Kim Guadagno (R) 42 percent in New Jersey's governor's race.

- "Northam beats Gillespie in Virginia governor's race," by POLITICO's Gabriel Debenedetti: "Democrat Ralph Northam was elected governor of Virginia on Tuesday in a sweeping victory that defied the conventional wisdom of a tightening race. The lieutenant governor's victory joins Democrat Phil Murphy's win in New Jersey's gubernatorial race to hand Democrats new hope in the Donald Trump era. After a bruising race against former Republican National Committee chairman Ed Gillespie, Northam outran Hillary Clinton in a state she carried by 5 points while losing the presidency in November 2016. A series of late-campaign controversies hitting Northam had Republicans cautiously optimistic that Gillespie could close the gap and pull off an upset, but Democrats rode a wave of anti-Trump backlash and satisfaction with outgoing Gov. Terry McAuliffe's administration."

- "'It was said that the eyes of the nation are now on the commonwealth,' Northam said in his victory speech. 'Today, Virginians have answered and spoken. Virginians have told us to end the divisiveness, that we will not condone hatred and bigotry, and to end the politics that have torn this country apart.' ... Gillespie sought to strike a balance between engaging moderates with talk of jobs and taxes and firing up his base by running ads on illegal immigration and sanctuary cities - which don't exist in Virginia - and cultural touchstones like Confederate monuments and NFL anthem protests. Gillespie did not initially home in on those subjects, but they became a bigger part of his campaign after he nearly lost the June Republican primary to Trump's former Virginia campaign chairman." **Full story.**

- UT-03 also elected Republican Provo Mayor John Curtis to former Rep. Jason Chaffetz's seat Tuesday night by a wide margin. Read more from the Salt Lake Tribune.

DEPARTURE LOUNGE - "LoBiondo to retire from Congress," by Campaign Pro's Elena Schneider: "New Jersey Rep. Frank LoBiondo, a senior Republican on the Armed Services Committee, will not run for reelection in 2018, according to a GOP operative familiar with the decision. The decision will open up a battleground district in southern New Jersey that LoBiondo

has held easily since 1994. New Jersey's 2nd District backed President Donald Trump with 50.6 percent of the vote to Hillary Clinton's 46 percent in 2016. But former President Barack Obama also won the seat twice with between 53 and 54 percent of the vote." **Full story.**

- "Van Drew 'seriously considering' running for LoBiondo's seat, with Norcross' support," by POLITICO New Jersey reporter Matt Friedman: "State Sen. Jeff Van Drew is 'seriously' considering running for retiring Republican Rep. Frank LoBiondo's seat, and South Jersey's most powerful Democrat is encouraging him to do so. 'I'm going to consider it very seriously. I'm going to look at all the issues and certainly talk to advisers and friends and colleagues, but it is something I'm seriously considering,' Van Drew said in a phone interview." **Full story here.**

- Other names floated: Retired judge Ray Batten as potential candidates. Democrat Tanzie Youngblood, a retired teacher, is already in the race. Republicans, meanwhile, named state Assemblyman Chris Brown and former Atlantic County Sheriff Frank Balles.

- "Poe won't seek reelection in 2018," by POLITICO's Cristiano Lima: "Seven-term Rep. Ted Poe (R-Texas) said today he will not seek reelection in 2018, the latest in a string of GOP lawmakers to announce their retirements recently. Poe, a former prosecutor and judge, won reelection in 2016 in the solidly conservative 2nd Congressional District by nearly 30 points, but said he was ready to move on." Full story here.

- KEEP AN EYE ON - More safe Republican retirements expected: Another senior Republican member, Virginia Rep. Bob Goodlatte, is also eying retirement, according to a Republican operative familiar with those conversations. (The same operative flagged Poe hours before he announced his retirement.) Goodlatte didn't immediately respond to requests for comment.

- SHAKEUP COMING IN AZ-SEN - McSally tells colleagues she's in: "Congresswoman Martha McSally is planning to enter Arizona's 2018 Senate race, giving Republican Kelli Ward new competition in the GOP primary," The Arizona Republic reports. "The lawmaker has told her Republican colleagues in Arizona's delegation that she intends to enter the Senate race, but didn't indicate when she would formally announce her bid, according to two people with knowledge of the conversations." **Full story here.**

Days until the 2018 election: 363.

Thanks for joining us! You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com, dstrauss@politico.com and mseverns@politico.com.

You can also follow us on Twitter: @politicoscott, @ec_schneider, @politicokevin, @danielstrauss4 and @maggieseverns.

AND YET... BRAND PROBLEMS - "Poll: Views of Democratic Party hit lowest mark in 25 years," by CNN's Ryan Struyk: "Favorable views of the Democratic Party have dropped to their lowest mark in more than a quarter century of polling, according to new numbers from a

CNN poll conducted by SSRS. Only 37% of Americans have a favorable opinion of Democrats, down from 44% in March of this year. A majority, 54%, have an unfavorable view, matching their highest mark in polls from CNN and SSRS, CNN/ORC and CNN/USA Today/Gallup stretching back to 1992." **Full story here.**

FLASHBACK - "Democratic brand still suffering despite GOP woes," by POLITICO's Elena Schneider.

AIR WARS - "Moore reserves first TV ads since Alabama primary," by POLITICO's Daniel Strauss: "Former Alabama Supreme Court judge Roy Moore has started reserving TV advertising for the special general election for Senate against Democrat Doug Jones. Moore, the Republican nominee, has reserved broadcast TV advertising time between Thursday and Dec. 11, a day before the election, according to Advertising Analytics. Advertising Analytics has seen $111,000 in reservations so far, with more spending likely. Jones had the airwaves to himself for weeks since the September primary runoff, when Moore defeated Sen. Luther Strange for the GOP nomination." Full story here.

- "Jones ad hits Moore's 'extreme views' on health care," by Strauss: Former U.S. Attorney Doug Jones, the Democratic nominee for U.S. Senate in Alabama, started running a new TV ad today warning that Republican Roy Moore would damage the American health care system if elected. 'If it's broken, fix it. Health care, it's broken. You know it, and I know it. But Roy Moore's grandstanding and extreme views will do nothing to fix it,' Jones says in the new 30-second ad. 'And his policies will take us back to the past.'" Full story here.

- "Blunt, Cassidy, Ernst listed as Moore fundraiser attendees," by Strauss: "Alabama Republican Roy Moore's recent Capitol Hill fundraiser attracted senators from across the party's ideological spectrum, yet another sign of the GOP coalescing around its controversial nominee in the state's special Senate election ahead of the Dec. 12 vote. Sens. Rand Paul and Mike Lee and former Sen. Jim DeMint, who have all been involved in past anti-establishment primary fights, headlined the event for Moore. But a briefing memo obtained by POLITICO also listed Sens. Roy Blunt, Bill Cassidy and Joni Ernst as attendees, as well as Senate Majority Whip John Cornyn, Sen. Roger Wicker (a former NRSC chairman) and Alabama's entire Republican House delegation. The memo also said that prior to the event $50,000 had already been raised. Campaign officials have not said how much the fundraiser brought in overall." **Full story.**

- Sen. Steve Daines endorsed Roy Moore for Senate, per a campaign release.

- "DeWine to air his first TV ads in Ohio governor's race," also by Strauss: "Ohio Attorney General Mike DeWine's campaign for governor has reserved its first TV advertising time, starting later this week. Advertising Analytics reported seeing $25,290 reserved on Fox News so far (the total could grow). The flight runs from Wednesday through Nov. 14, next Tuesday." **Full story here.**

NEVER TOO EARLY - "The 2020 Glossy Primary Is Underway," by National Journal's Hanna Trudo: "Less than 10 months into the new administration and a year out from the midterms, Democrats thought to be eyeing national bids have sounded off in outlets like

Cosmopolitan with striking frequency, drawing attention to steps being taken to target women voters outraged by the country's top leadership. ... 'It's the women's equivalent of what Trump does in terms of tweeting,' said Celinda Lake, a longtime Democratic pollster who focuses on framing issues to female voters. 'It's a way to have a direct communication with your base.'" **Full story.**

FIRST IN SCORE - Former Navy SEAL Robert O'Neill endorses Republican John James, candidate for U.S. Senate in Michigan. Per a forthcoming press release:"I am proud to endorse John James for Senate. John James represents the epitome of what we should all strive to be as citizens of this great nation," O'Neill said. "Whether it was defending freedom over Baghdad or creating jobs in Michigan, John has demonstrated a passion for service and commitment to excellence that makes him the best choice for Senate."...Robert O'Neill is one of the most highly decorated combat veterans in modern American history with 52 honors including two Silver Stars and four Bronze Stars with Valor."

DEEP IN THE HEART... - "GOP fears Trump slump for North Texas women ahead of 2018 races," by McClatchy's Andrea Drusch: "Texas Republicans badly need the grassroots efforts of North Texas women to win local and congressional races next year. But getting their support - and enthusiasm - could be a challenge. ... But women were not overly enthusiastic about Donald Trump in 2016, who won Texas by 9 percentage points, the smallest margin of any GOP presidential nominee in decades." **Full story.**

CODA - QUOTE OF THE DAY: "My donors are basically saying, 'Get it done or don't ever call me again,'" Rep. Chris Collins on tax reform.

Driving the Day

Good Sunday morning. THE NEXT FEW WEEKS -- @mkraju: "On Trump's first full day of vacation, WH does not disclose any of his activities, per pool report". **THE PRESIDENT** also tweeted **at 6:36 p.m.:** "Working in Bedminster, N.J., as long planned construction is being done at the White House. This is not a vacation - meetings and calls!" But according to pictures posted on Instagram, he did play golf Saturday. http://bit.ly/2vDTw1W

SOMEONE WATCHED SESSIONS' PRESS CONFERENCE! -- @realDonaldTrump at 6:58 p.m.: "After many years of LEAKS going on in Washington, it is great to see the A.G. taking action! For National Security, the tougher the better!"

SPOTTED: GOV. CHRIS and **MARY PAT CHRISTIE** yesterday at the Pro Football Hall of Fame in Canton, Ohio, watching Cowboys owner Jerry Jones get enshrined. ***Pic via the @DallasCowboys Twitter account*** http://bit.ly/2udoNom ... **KELLYANNE CONWAY** last night at the Tropicana Hotel in Atlantic City. She was hanging with friends in the Boogie Nights nightclub after a long dinner at the Palm. ... **FORMER PRESIDENT BARACK OBAMA** and his wife Michelle celebrated his birthday Friday night at Rasika West End. The pair dined in the private dining room and stayed for a couple of hours. This is the second time the president has celebrated his birthday at the restaurant.

L.A. TIMES: "President Trump is tasked with governing, but he keeps harping on these 7 things," by Kurtis Lee http://lat.ms/2vuirVr

ARTICLE OF THE DAY - NYT A1, "Republican Shadow Campaign for 2020 Takes

Shape as Trump Doubts Grow," by Jonathan Martin and Alex Burns (print headline: "President Aside, G.O.P. Stars Move Toward 2020 Bids"): "Senators Tom Cotton and Ben Sasse have already been to Iowa this year, Gov. John Kasich is eyeing a return visit to New Hampshire, and Mike Pence's schedule is so full of political events that Republicans joke that he is acting more like a second-term vice president hoping to clear the field than a No. 2 sworn in a little over six months ago. President Trump's first term is ostensibly just warming up, but luminaries in his own party have begun what amounts to a shadow campaign for 2020 - as if the current occupant of 1600 Pennsylvania Avenue weren't involved. The would-be candidates are cultivating some of the party's most prominent donors, courting conservative interest groups and carefully enhancing their profiles. Mr. Trump has given no indication that he will decline to seek a second term.

"But the sheer disarray surrounding this presidency -- the intensifying investigation by the special counsel Robert S. Mueller III and the plain uncertainty about what Mr. Trump will do in the next week, let alone in the next election -- have prompted Republican officeholders to take political steps unheard-of so soon into a new administration. ... But in interviews with more than 75 Republicans at every level of the party, elected officials, donors and strategists expressed widespread uncertainty about whether Mr. Trump would be on the ballot in 2020 and little doubt that others in the party are engaged in barely veiled contingency planning. ... Mr. Pence has made no overt efforts to separate himself from the beleaguered president. He has kept up his relentless public praise and even in private is careful to bow to the president. Mr. Pence's aides, however, have been less restrained in private, according to two people briefed on the conversations.

"In a June meeting with Al Hubbard, an Indiana Republican who was a top economic official in Mr. Bush's White House, an aide to the vice president, Marty Obst, said that they wanted to be prepared to run in case there was an opening in 2020 and that Mr. Pence would need Mr. Hubbard's help, according to a Republican briefed on the meeting. Reached on the phone, Mr. Hubbard declined to comment. Mr. Ayers has signaled to multiple major Republican donors that Mr. Pence wants to be ready. Mr. Obst denied that he and Mr. Ayers had made any private insinuations and called suggestions that the vice president was positioning himself for 2020 'beyond ridiculous.' ...

"Nikki Haley, the ambassador to the United Nations and a former governor of South Carolina, put her longtime pollster on the payroll, has gotten better acquainted with some of New York's financiers and carved out a far more muscular foreign policy niche than Mr. Trump. 'She sounds more like me than Trump,' said Senator Lindsey Graham, a hawkish Republican from South Carolina." http://nyti.ms/2vC1ckK

VP MIKE PENCE RESPONDS -- "Today's article in the New York Times is disgraceful and offensive to me, my family, and our entire team. The allegations in this article are categorically false and represent just the latest attempt by the media to divide this Administration. Thanks to the President's leadership, we are rebuilding the military, ISIS is on the run, and we've seen more than 1 million jobs created while the stock market

hits all-time highs.

"The American people know that I could not be more honored to be working side by side with a president who is making America great again. Whatever fake news may come our way, my entire team will continue to focus all our efforts to advance the President's agenda and see him re-elected in 2020. Any suggestion otherwise is both laughable and absurd."

KELLYANNE CONWAY talking with **GEORGE STEPHANOPOULOS** on ABC's "This Week" about whether Pence is setting up a shadow campaign: "That is complete fiction. That is complete fabrication. And I know that his advisers who had comments attributed to them have pushed back strongly, as has the vice president. And as am I right now unequivocally. Vice President Pence is a very loyal, very dutiful, but also incredibly effective vice president, and active vice president, with this president. He is a peer to the president in the West Wing. ...

"But let me make very clear, people meet -- Republican consultants, as always, people trying to play the parlor game, they're not on the - they're in the I would say Trump inside -- inner circle because they did not believe in him. They totally missed what was happening in America. ... I would tell my Republican brethren: get onboard. Help us with tax reform and health reform and stop looking at 2020."

-- ALSO IN JMART and ALEX's story: "In the wider world of conservative Trump opponents, William Kristol, editor at large of The Weekly Standard, said he had begun informal conversations about creating a 'Committee Not to Renominate the President.'" Kristol told us this morning that the proposed name is a dig at Trump being like Nixon in his opinion. He also said he hasn't set up the group yet but so far only talked about doing so with "people you'd expect in GOP anti-Trump circles."

-- FROM KRISTOL's weekly newsletter, "Kristol Clear" last Monday: "Mike Murphy and I had lunch Friday at a suitably obscure Chinese restaurant in an L.A. strip mall, Hu's Szechwan Restaurant, where we ended up in a long session plotting the salvation of the GOP and conservatism from Donald Trump. We'll see whether anything comes of it."

ON THE WORLD STAGE -- "North Korea Shrugs Off Sanctions Despite China's Push to End Missile Tests," by WSJ's Ben Otto in Manila: "The U.S. praised China for backing new economic sanctions by the U.N. Security Council against Pyongyang over the regime's weapons program, but North Korea indicated to its most important economic partner that there would be no change in policy. 'The fact that the Chinese were helpful and instrumental in setting up this really sweeping set of international sanctions shows they realize that this is a huge problem they need to take on, that it's a threat to them and their region,' Susan Thornton, the U.S. State Department's acting assistant secretary for East Asian and Pacific affairs, told journalists on the sidelines of regional security meetings in the Philippines on Sunday. U.S. Secretary of State Rex Tillerson, who is attending the forum bringing together 27 nations, including China, Russia, South Korea and North Korea, described the sanctions as 'a good outcome' as

he works to curb Pyongyang's nuclear-weapons program.

"The Security Council on Saturday unanimously passed a resolution that would slash about $1 billion from North Korea's annual foreign revenue. Ms. Thornton called the sanctions the strongest against the regime in a generation. China and Russia, two permanent council members who had previously resisted fresh sanctions against Pyongyang, said the rogue nation's recent provocations were unacceptable." http://on.wsj.com/2uvMUhl

REVIVING HEALTH CARE? -- "McConnell to consider bipartisan plan to pay health insurers," by AP's Adam Beam at Fancy Farm, Ky.: "A week after an attempt to repeal the Affordable Care Act failed, Senate Majority Leader Mitch McConnell says he'd consider a bipartisan effort to continue payments to insurers to avert a costly rattling of health insurance markets. McConnell told reporters Saturday there is 'still a chance' the Senate could revive the measure to repeal and replace 'Obamacare,' but he acknowledged the window for that is rapidly closing. The Kentucky senator noted Republican Sen. Lamar Alexander of Tennessee is working on 'some kind of bipartisan approach' that would involve subsidies for insurance companies.

"Alexander recently said he will work with the committee's top Democrat, Sen. Patty Murray of Washington state, on a bill next month that would pay insurers through 2018. In exchange, Alexander wants Democrats to agree to make it easier for states to choose their own health coverage standards that insurers must provide rather than abiding by former President Barack Obama's law. 'If the Democrats are willing to support some real reforms rather than just an insurance company bailout, I would be willing to take a look at it,' McConnell said, hours before he was expected to speak at the famously raucous Fancy Farm picnic in western Kentucky." http://bit.ly/2fjCUpx

THE RESISTANCE -- "Obama's army takes on Trump," by Isaac Dovere in Chicago: "Walk into Organizing for Action's new hipster downtown hardwood space here, and there's no big picture of Barack Obama, just a deep blue wall with a giant 'OFA' painted in white. Look down the street from the front door, though, and Chicago's Trump skyscraper looms directly in the line of sight, a perpetual reminder of the group's new purpose.

"Fresh off a huge win for anti-Trump forces in the Obamacare repeal fight , the Democratic activist group is gearing up for its next showdown this fall-battling President Donald Trump's proposed budget cuts with the same state- and district-focused strategy it employed on health care. The organization inspired by Obama hasn't heard from him in months, though a person close to the former president said he's likely to lend his support later this year to OFA as well as the [DNC] and the National Democratic Redistricting Committee. That could include fundraising and other help, but not a direct

leadership role.

"In the meantime, OFA isn't sitting still. It's already looking at plans to go into 2018 with a massive voter registration drive that could become its main project ahead of the midterms. First, though, OFA will spend Congress' August recess sending organizers to town halls and district offices. It has a calendar of 'accountability' (read: protest) and 'appreciation' (read: drop-ins like the one to deliver cupcakes to Sen. Joe Manchin's West Virginia office last week) events, based on senators' votes on repealing Obamacare. They're showing up to cheer for John McCain, Susan Collins and Lisa Murkowski, and yell at people like Jeff Flake and Dean Heller." http://politi.co/2vbzfhs

-- DAN BALZ: "The future of the Democratic Party could be written in upcoming gubernatorial races": http://wapo.st/2vuq7qK

STEPHEN MILLER'S NEW GIG? -- "Trump eyes top policy aide for communications director role: official," by Reuters' Stephen Holland: "The White House may appoint a senior policy adviser with hardline views on immigration, who recently sparred with reporters in a televised briefing, as its new communications director, a senior administration official said on Saturday. Stephen Miller, a top aide and speechwriter for President Donald Trump, is a candidate to lead the White House's communications team after a series of personnel changes in the more than six months that Trump has been president." http://reut.rs/2ufFhjQ

THE TWEETER IN CHIEF -- "New Chief of Staff Reins in White House Aides-and Trump's Tweets," by Bloomberg's Jen Jacobs and Margaret Talev: "Perhaps even more important, Kelly is testing his authority to tame Trump's sometimes reckless tweeting habits. While Kelly isn't vetting every presidential tweet, Trump has shown a willingness to consult with his chief of staff before hitting 'send' on certain missives that might cause an international uproar or lead to unwelcome distractions, according to three people familiar with the interactions. Kelly has been 'offering a different way to say the same thing,' the person said." https://bloom.bg/2vbfpTg

SUNDAY BEST -- CHRIS WALLACE interviews **DEPUTY ATTORNEY GENERAL ROD ROSENSTEIN** on "Fox News Sunday," by Zach Warmbrodt: "Rosenstein said Sunday that President Donald Trump has not directed the Justice Department to investigate 'particular people,' after Trump said at a rally Thursday that prosecutors should look at Hillary Clinton's '33,000 deleted emails.' Asked on 'Fox News Sunday' if he viewed Trump's comment as an order, Rosenstein said, 'If the president wants to give orders to us ... he does that privately and then if we have any feedback we provide it to him.' 'The president has not directed us to investigate particular people,' he said. 'That wouldn't be right. That's not the way we operate.' ...

"Responding to a question about special counsel Robert Mueller expanding the investigation to Trump's finances, Rosenstein said the Justice Department doesn't engage in 'fishing expeditions.' (Mueller is answering to Rosenstein since Attorney General Jeff Sessions has recused himself from the Russia investigation.) If Mueller

finds something outside the scope of the investigation as outlined in an agreement with Rosenstein, 'he needs to come to the acting attorney general, at this time me, for permission to expand his investigation.' 'But we don't talk about that publicly,' he said." http://politi.co/2vCeDkq

-- **SEN. JEFF FLAKE (R-ARIZ.)** talks with **NBC'S CHUCK TODD** on "Meet the Press": **TODD:** And I am just curious did you think about leaving the party? **FLAKE:** "No. No. Not at all. I'm a proud Republican. Lifelong Republican. And I'm from Arizona. Arizona tends to elect independent minded people and people who stand on principles. So I'm doing what I think my voters expect of me. But I think, for example, in 2006 when the party in particular had given way to inappropriate spending, earmarked spending, a couple of our colleagues ended up in jail, if you remember, the mantra, 'Drain the swamp,' was employed very effectively by the Democrats in describing the Republican Party at that time. And I think had we stood up at that time then we wouldn't have lost those majorities in the House and the Senate. And I fear that we might do the same again."

-- CHRIS CHRISTIE talks with **CNN'S JAKE TAPPER** on "State of the Union": **TAPPER:** "You're a former U.S. attorney. You know Bob Mueller and James Comey, for that matter. Doesn't it trouble you to hear the president denigrate their integrity and the work that they're doing?" **CHRISTIE:** "Listen, I don't think he was talking about Bob Mueller and Jim Comey there. I think he was talking about the coverage that he thinks has been unfair. But let's make clear, Jake, this is a normal step taken by a careful prosecutor who is doing a thorough investigation. And I think that's exactly what Bob Mueller is doing. You can't issue subpoenas without a grand jury. It's the grand jury that actually issues the subpoenas.

"And so I think Bob Mueller wanted a grand jury that was focused on this, so he could issue subpoenas and then review the evidence. That's a typical thing to be done in any investigation. I did literally thousands of these as U.S. attorney in seven years in New Jersey. And so I thought that the coverage about how monumental this was is just a fundamental misunderstanding of the way this process works. This is what a careful prosecutor does to do a thorough review of the case. I assume that what Mr. Mueller is doing, based on my experience with him. And let him do his work."

-- ON TRUMP'S NEW JERSEY VACATION -- CHRISTIE: "The president is welcome at the gubernatorial beach house any time he wants. We would welcome him with open arms for him to come and take some time at the Jersey Shore. ... Now, I would be happy to welcome him. But we're just happy that the president has decided, of all the places he could go for some relaxation, at least a little bit, during August, that he's coming to the state of New Jersey. And we recommend that to lots of other people who are watching. Four weeks to go in the summer, come to the Jersey Shore. We're ready to take you."

FRESH HOT MUELLER TAKES -- MAUREEN DOWD in the NYT, **"Bobby Sticks It to Trump":** "We are in for an epic clash between two septuagenarians who both came from wealthy New York families and attended Ivy League schools but couldn't be more different - the flamboyant flimflam man and the buttoned-down, buttoned-up boy scout. (And we know the president has no idea how to talk to scouts appropriately.) One has been called America's straightest arrow. One disdains self-promotion and avoids the press. One married his sweetheart from school days. One was a decorated Marine in Vietnam. One counts patience, humility and honesty as the virtues he lives by and likes to say 'You're only as good as your word.'

"And one's president. Trump biographer Michael D'Antonio says the president has been lying reflexively since he was a kid bragging about home runs he didn't hit. He gets warped satisfaction from making up stuff, like those calls from the head of the Boy Scouts and the president of Mexico that the White House just admitted never happened." http://nyti.ms/2v9amEJ

- JACK SHAFER, "Gone Fishing for Donald Trump: Robert Mueller's grand jury has a big hole to fill": "The Constitution plus decades of judicial precedent have endowed grand juries with legal superpowers. ... Think of a grand jury as an insatiable maw and you begin to understand Mueller's task and Trump's terror. Mountains of phone records, business records, emails, and all manner of paperwork are likely to be subpoenaed by Mueller. ... Like Bill Clinton before him, Trump will be compelled to give testimony. He might want to start working on that honesty thing so the special counsel doesn't nail him on that perjury thing, like independent counsel Kenneth W. Starr did Clinton." http://politi.co/2v9jOI7

TRUMP'S WASHINGTON -- "How Trump's FCC aided Sinclair's expansion," by Margaret Harding McGill and John Hendel: "Sinclair Broadcast Group is expanding its conservative-leaning television empire into nearly three-quarters of American households - but its aggressive takeover of the airwaves wouldn't have been possible without help from President Donald Trump's chief at the Federal Communications Commission. Sinclair, already the nation's largest TV broadcaster, plans to buy 42 stations from Tribune Media in cities like New York, Chicago and Los Angeles, on top of the more than 170 stations it already owns.

"It got a critical assist this spring from Republican FCC Chairman Ajit Pai, who revived a decades-old regulatory loophole that will keep Sinclair from vastly exceeding federal limits on media ownership. The change will allow Sinclair - a company known for injecting 'must run' conservative segments into its local programming - to reach 72 percent of U.S. households after buying Tribune's stations. That's nearly double the

congressionally imposed nationwide audience cap of 39 percent.

"The FCC and the company both say the agency wasn't giving Sinclair any special favors by reviving the loophole, known as the 'UHF discount,' which has long been considered technologically obsolete. But the Tribune deal would not have been viable if not for Pai's intervention: Sinclair already reaches an estimated 38 percent of U.S. households without the discount, leaving it almost no room for growth." http://politi.co/2wwXHci

MEDIAWATCH -- "New Sexual Harassment Allegations Leveled Against Fox News' Eric Bolling," by Yashar Ali in HuffPost: "Three hours after Fox News announced it had suspended host Eric Bolling following allegations that he had sexually harassed female colleagues, a former Fox News guest leveled new accusations against him. Caroline Heldman, who appeared on the network frequently between 2008 and 2011, said Saturday that Bolling was one of three Fox News/Fox Business employees to subject her to sexual harassment. Fox News announced Bolling's suspension less than 24 hours after an exclusive HuffPost report revealed that the host had sent lewd text messages to female colleagues." http://bit.ly/2ufSqJx

--YASHAR ALI further notes on Twitter that "an investigation will be conducted by law firm Paul, Weiss."

--"**Top journalist sues Time magazine for 'sex and age discrimination,'"** by The Guardian's Emma Graham-Harrison: "The co-founder of the Women's Equality party, Catherine Mayer, is suing her former employer, Time magazine, for gender and age discrimination, making the weekly ... the latest major media company to be embroiled in accusations of institutional sexism. The case ... pits one of Britain's most prominent journalists, who wrote a controversial biography of Prince Charles and was shortlisted for the Orwell prize, against one of America's most famous magazines, nearly a century old and with millions of readers. ...

"Mayer's suit ... covers the final three years of her employment at the title, and her dismissal in 2015. The problems began soon after she was appointed Europe regional editor, after eight years of outstanding performance and appraisals, court documents allege. The suit alleges that Time's foreign editor appointed Matt McAllester, a younger

male colleague, as her deputy, without an open selection process and in violation of promises that she could choose her team. Mayer says McAllester began a campaign to undermine and supplant her, even though she repeatedly raised complaints. Ultimately, Mayer claims, the company took away her responsibilities as Europe editor the year after she took on the position, then forced her to relinquish the title, which the company gave to McAllester. In April 2015 she was fired." http://bit.ly/2vtLyrZ

BONUS GREAT WEEKEND READS, curated by Daniel Lippman:

--"Bill Browder's Testimony to the Senate Judiciary Committee" - The Atlantic: "'After Khodorkovsky's conviction, the other oligarchs went to Putin and asked him what they needed to do to avoid sitting in the same cage as Khodorkovsky. Putin's answer was, 'Fifty percent'. Not for the Russian government, but for Vladimir Putin personally. From that moment on, Putin became the biggest oligarch in Russia and the richest man in the world.'" http://theatln.tc/2udKKYt

--"Inside Iran's Mission To Dominate The Middle East," by BuzzFeed's Borzou Daragahi: "Iran has enlisted tens of thousands of young Shiite men into an armed network that is challenging the U.S. across the Middle East. The Trump administration is not prepared." http://bzfd.it/2hxC09u

--"Is Hungary the EU's first rogue state? Viktor Orban and the long march from freedom," by Martin Fletcher in the New Statesman: "As a student activist, Orban helped free Hungary from communism. Subject: AEI Today: How did we get here with North Korea?

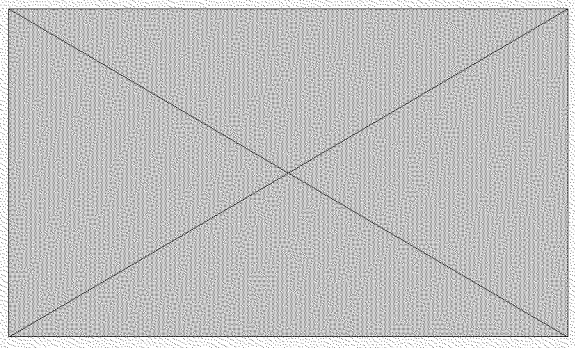
The Korean War never ended. The 1953 Armistice merely ended the most active phase of the conflict

AEI's daily publication of independent research, insightful analysis, and scholarly debate

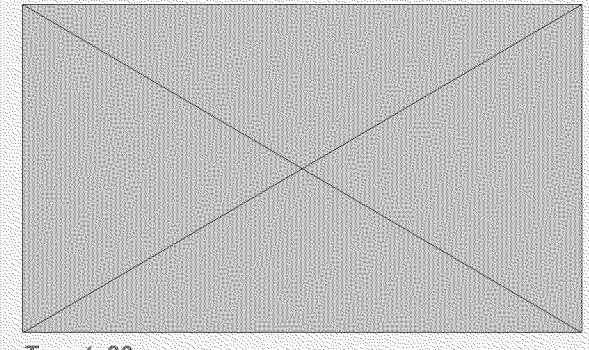


Reuters

How did we get here with North Korea?

Michael Rubin | AEIdeas

The Korean War never ended. The 1953 armistice merely ended the most active phase of the conflict, but more than a million troops still face each other across a demilitarized zone less than three miles wide. As tensions between Washington and Pyongyang escalate, Michael Rubin offers the abridged history of US diplomacy with North Korea — including how we got where we are today.

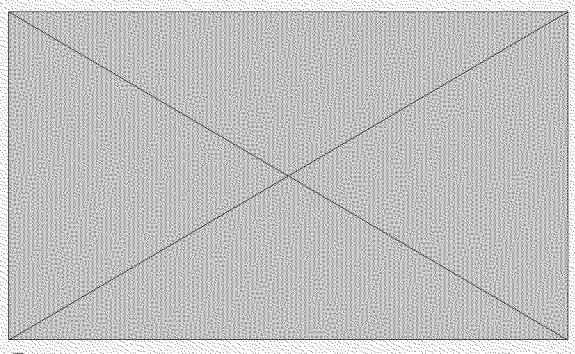


Twenty20

Our two-party system is stuck

Jonah Goldberg | National Review

In the 1990s and 2000s, Donald Trump had political ambitions. But the traditional two-party system and the media landscape served as impenetrable barriers for him. It was the breakdown of the old ways that opened a path for someone interested in breaking them down even more. Crucially, Republicans have been steadily losing market share in important suburban districts for decades now.



Twenty20

Miss brick-and-mortar? Internet

retailers have a big, unfair tax break

Alan D. Viard and Alex Brill | The Hill

In recent years, internet sales have grown by nearly 15 percent per year, compared to 4 percent for brick-and-mortar retail sales. Following a 1992 court decision, sellers without a physical presence in a state cannot be required to remit that state's sales tax. As a result, online sellers have an artificial advantage over local brick-and-mortar sellers, who must collect sales tax from their customers.

Reuters

What ties election meddling to Syria? Russia's Soviet nostalgia

Leon Aron | The Wall Street Journal

As the Russian hacking and "collusion" sagas consume Washington elites and the media, a more important question has gone unanswered: Why is Vladimir Putin engaging in such activity, and what should Americans expect next? By temperament and KGB training, Putin is not an easy man to read. What seems to explain his policies most is an emerging identity as an ardent Soviet patriot.

Subject: Morning Media: Marty Baron hasn't reached 'the lying point' -- Jemele Hill speaks -- Zuckerberg regrets -- Carville's new gig

By Michael Calderone | 09/28/2017 05:38 AM EDT

THE WASHINGTON POST ISN'T #RESISTING: Executive editor Marty Baron told The Atlantic's Jeffrey Goldberg at Wednesday's Washington Ideas forum that "we don't view ourselves as part of the resistance" and instead offered what's becoming a Post newsroom mantra: "We're not at war. We're at work."

-- Hours earlier, President Trump accused the Post of being "anti-Trump" and suggested the paper joined The New York Times, TV networks, and Facebook in colluding against him. "I think he went through a process of initially condemning us," Baron said of Trump's media attacks, "and then trying to delegitimize us, and then even dehumanizing us, saying we were the lowest form of humanity, and then when that wasn't enough, saying we were the lowest form of life itself."

-- Unlike The New York Times, The Post has refrained from characterizing any of Trump's false claims as "lies" in headlines or news stories. "I think you have to actually have documentation, proof, that whoever you're saying lied actually knew that what he or she was saying was in fact false," Baron told Goldberg.

-- It's true journalists can't read minds and so are understandably hesitant to assert someone is knowingly making a false claim. And the White House, at times, has exploited this journalistic convention by resorting to the George Costanza defense: "It's not a lie if you believe it." That's how the White House handled evidence-free claims about voter fraud.

-- Goldberg pressed, "You don't believe that the president has knowingly articulated a falsehood?" Baron said he thinks "we're getting to the lying point." What could tip The Post over the edge is unclear. When I asked Baron later about reaching the "lying point," he said he did "not have a particular story in mind."

RIP: HUGH HEFNER, the legendary Playboy founder, died Wednesday at his home. He was 91. The Times: "Hefner the man and Playboy the brand were inseparable. Both advertised themselves as emblems of the sexual revolution, an escape from American priggishness and wider social intolerance. Both were derided over the years - as vulgar, as adolescent, as exploitative, and finally as anachronistic. But Mr. Hefner was a stunning success from his emergence in the early 1950s. His timing was perfect.'

TUNE-IN: President Trump will appear on his favorite morning show, "Fox & Friends," for an interview with Pete Hegseth from Indiana. And at 9 p.m.: Rush Limbaugh heads to "Hannity."

IS THE MEDIA GIVING BREITBART TOO MUCH CREDIT? Washingtonian's Elaina Plott argues that factors predating Breitbart's weeks-long crusade for Roy Moore led to his victory in Alabama. They just don't make for as good copy. "By this point, every political reporter knows how to punch out a story on the so-called GOP civil war...In our perpetuation of that narrative, especially after elections that prove it's not even half the story, reporters continue to give folks like Bannon ample, if undefined, evidence of Breitbart's clout," she writes. "The result is that Breitbart, a site that touts its extra-Beltway bona fides, owes Washington for its ever-growing mythos."

JEMELE HILL OPENS UP on ESPN's "The Undefeated": "Since my tweets criticizing President Donald Trump exploded into a national story, the most difficult part for me has been watching ESPN become a punching bag and seeing a dumb narrative kept alive about the company's political leanings....But this isn't about that. It's simply indicative of just how complex things get for people in OUR position - especially if you're a woman and a person of color."

BUZZFEED WANTS COMEY, CLAPPER TESTIMONY -- POLITICO'S Josh Gerstein : "BuzzFeed is escalating its legal battle for details on how the federal government handled a dossier containing salacious allegations about President Donald Trump. Lawyers for the online news outlet are asking a federal court in Washington to force the Justice Department, the FBI and the director of national intelligence, as well as former FBI Director James Comey and former director of national intelligence James Clapper to answer a series of questions about what officials had done in connection with the dossier as of the time BuzzFeed published it Jan. 10."

CHRIS HAYES SURVIVED rumors years back that he'd lose his MSNBC primetime slot. And now he tells The Hollywood Reporter's Jeremy Barr: "I want to be No. 1. We want to be the most-watched show in our time slot. That's the goal."

SPOTTED: Melania Trump yesterday at 1 World Trade Center. But contrary to rumors, she wasn't visiting Condé Nast.

REVOLVING DOOR:

Megan Liberman, a former New York Times editor and most recently Yahoo News editor-in-chief, is joining SiriusXM as senior vice president for News, Talk & Entertainment.

James Carville is joining the faculty of LSU's Manship School of Mass Communication in January. Dean Jerry Ceppos said the veteran Democratic strategist "epitomizes the mission of the Manship School...to teach and conduct research at the intersection of media and public affairs."

Susan Glasser, the former editor of POLITICO and currently our chief international affairs columnist, will also turn domestically in a new twice-monthly column for The New Yorker's site. Editor David Remnick and NewYorker.com editor Michael Luo wrote in a memo that Glasser is "particularly interested in exploring how the villagers are responding to the disruption of the

Trump Presidency."

Erica Grieder next month is moving to Houston, where she'll be joining the Houston Chronicle as a metro columnist. She is an alum of Texas Monthly and The Economist.

Jill Jackson is moving to Seattle, where she will rejoin KUOW Public Radio as its news director. She was an intern for the station in 2003 and most recently a senior producer in the D.C. bureau.

Siddhartha Mukherjee, a physician and scientist at Columbia University, has been named "On Medicine columnist" columnist for The New York Times Magazine.

Dawn Bridges, a veteran public relations executive, has joined Fusion Media Group as executive vice president of communications.

ZUCKERBERG REGRETS: On his Facebook page, on course: "After the election, I made a comment that I thought the idea misinformation on Facebook changed the outcome of the election was a crazy idea. Calling that crazy was dismissive and I regret it. This is too important an issue to be dismissive. But the data we have has always shown that our broader impact -- from giving people a voice to enabling candidates to communicate directly to helping millions of people vote -- played a far bigger role in this election."

AND TWITTER'S ROLE? From the NYT's Daisuke Wakabayashi and Scott Shane: "There is evidence that Twitter may have been used even more extensively than Facebook in the Russian influence campaign last year. In addition to Russia-linked Twitter accounts that posed as Americans, the platform was also used for large-scale automated messaging, using "bot" accounts to spread false stories and promote news articles about emails from Democratic operatives that had been obtained by Russian hackers."

"LET TRUMP HAVE 280 CHARACTERS" -- POLITICO'S Jack Shafer: "How will the new order affect Trump? Will he continue to abide the space constraints that have served him so well, or will he stretch into the new space the way he often does during hour two of his public addresses, when the drama stalls and the throng turns restless?"

SOUND BITES:

-- "The whole concept of a paid @CNN contributor who is paid because he's pro-Trump makes no sense - journalistically. Sit com logic: yes." [Jay Rosen]

-- "I remain astonished/dumfounded as to the lack of collective anger toward Russia's clear intentions to screw with our democracy. Anyone else?' [Richard Deitsch]

EXTRAS:

-- John Legend fears a Sinclair-Tribune merger would hurt independent and local media. He cites WGN America, the Tribune-owned cable channel that Sinclair could soon acquire. WGN also

airs Legend's drama series "Underground."

-- New pro-Trump CNN contributor Ed Martin has in the past called CNN "fake news," "state-run media," and claimed the network had not "been credible for a long time," before joining the channel.

-- Breitbart tries to capitalize off of readers opposition to athletes protesting racial injustice.

-- The case against those long glamorous profiles of peddlers of "fake news."

-- Anthony Scaramucci plans to launch his new Scaramucci Post media venture... whatever it is... on Oct. 2.

-- "60 Minutes" lands the first interview with House Majority Whip Steve Scalise since he was shot in June.

KICKER:

"We are not the enemies of the people. We are the eyes and the ears of the people," *NBC News' Andrea Mitchell at IRTS Foundation's "Giants of Broadcasting" luncheon on Wednesday.*

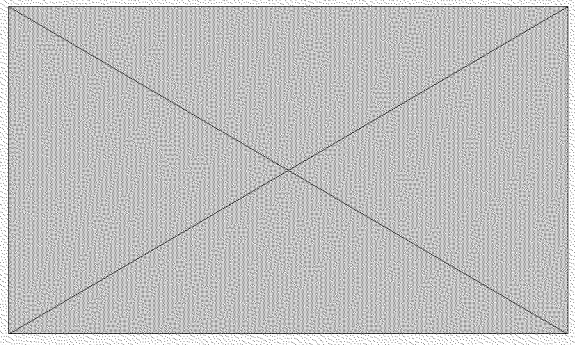
Subject: AEI Today: If Democrats play ball on poverty, Congress can get back on track

Congress is very unpopular right now, with a job approval rating of just 15.7% according to the RealClearPolitics average.

AEI's daily publication of independent research, insightful analysis, and scholarly debate



Reuters

If Democrats play ball on poverty, Congress can get back on track

Angela Rachidi | AEIdeas

To say that Congress is unpopular is the understatement of the year, with a current job approval rating of just 15.7 percent. With so little getting done in Washington in recent years, the lack of faith is unsurprising. Looming controversies over health care and the debt ceiling won't help. What could move the needle, on the other hand, is a bipartisan attack on poverty. Yet in the toxic

environment of Capitol Hill, the latest Republican effort is already a "nonstarter."

Reuters

Standing up to the president looks to be good for business

Michael R. Strain | Bloomberg View

Corporate leaders tend to be reluctant to enter public debates. Their reluctance is often appropriate. The decision to resign from a presidential commission — including giving up the ability to influence an administration from the inside — represents a real trade-off. Going on TV to criticize an administration carries with it significant potential costs. But companies want stability and virtue by association. This week, the president provided neither.

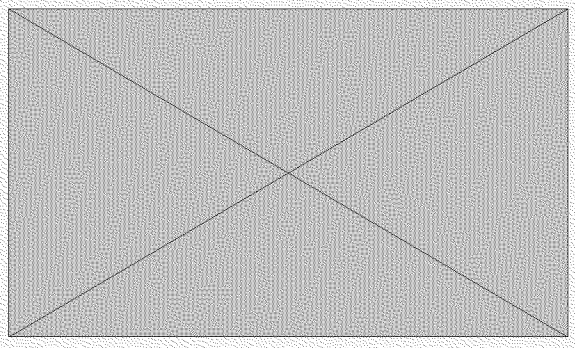
Subject: AEI Today: What happened to the Trump military buildup?

Donald Trump made a lot of promises when campaigning for president.

AEI's daily publication of independent research, insightful analysis, and scholarly debate

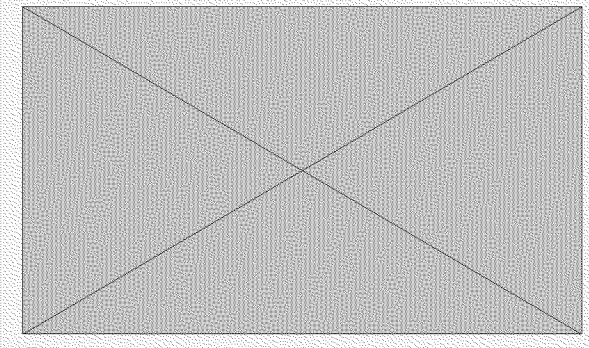


Reuters

What happened to the Trump military buildup?

Gary J. Schmitt | The Weekly Standard

Donald Trump made a lot of promises when campaigning for president. That included a promise to rebuild the American military to such a size and extent that the country's "military dominance" would "be unquestioned, and I mean unquestioned, by anybody and everybody." Yet when President Trump put forward his first budget in March for the 2018 fiscal year, that priority was not apparent.

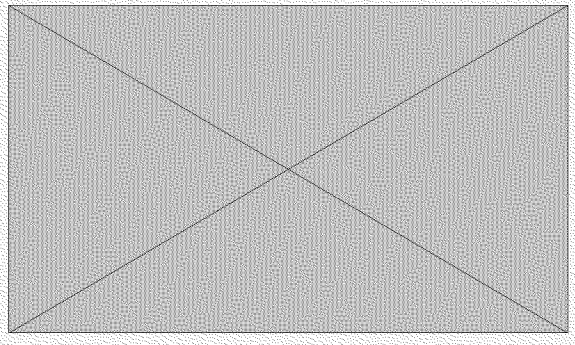


Reuters

How we can protect the future of Social Security

Ramesh Ponnuru | Bloomberg View

If Social Security checks should be adjusted each year for inflation, they ought to be adjusted by the best measure we have. That's the best argument for what Republicans are doing on taxes and what Obama suggested doing on Social Security with the Consumer Price Index. But maybe inflation is not a sufficiently generous index in either case. It might be better to let Social Security payments rise with wages instead.



Reuters

The Anglosphere can

teach us a lot about fiscal reform

Alex Brill and Sean Speer | Real Clear Policy

Congress is deeply entrenched in an effort to reform the federal tax code. Central to this effort is a desire to lower the US corporate tax rate from 35 percent to 20 percent — a level on par with the rest of the developed world. Policymakers are keenly aware of the competitive advantages this change could bring based on similar rate changes across Europe and around the globe. But the lesson of corporate tax reform that the US has learned from its peers may be an exception rather than the rule.

Reuters

Investing in the next generation of cellular infrastructure

Shane Tews | AEIdeas

Consumers continue to “cut the cord,” replacing home cable with their mobile devices and internet-only applications to access their favorite content. However, these smartphones, smart TVs, and other devices need network access to support the delivery of video streaming and web-based content. Rising demand for faster, more efficient network connections is pushing network operators to move toward 5th generation or

"5G" mobile networks, the next generation of internet connectivity.

Summaries

AIR
Alabama SIP/Cross-State Air Pollution Rule
AIR

Final rule of the EPA approves portions of revisions to the Alabama SIP that replace the Cross-State Air Pollution Rule (CSAPR) federal implementation plan with a state trading program for ozone season nitrogen oxides (NOx) emissions. The state program is integrated with the CSAPR federal trading programs and is substantively identical to the federal trading program except for provisions allocating emission allowances among state units. The revisions eliminate state units' requirements to participate in the federal allowance trading program for ozone season NOx emissions and satisfy the state's good neighbor obligation to prohibit emissions that significantly contribute to nonattainment or interfere with maintenance of the 1997 eight-hour ozone NAAQS. The revisions also partially satisfy the good neighbor obligation regarding the 2008 eight-hour ozone NAAQS. The rule is effective Nov. 6, 2017. Contact: Ashten Bailey; EPA Region 4, Air Regulatory Management Section; 404-562-9164; bailey.ashten@epa.gov. Citations: 40 CFR 52.38, 52.50

82 FR 46674 (10/06/2017)

Regulatory Update

AIR
Florida SIP/Air Permitting, Compliance Assurance Program
AIR

Final rule of the EPA approves portions of revisions to the Florida SIP that update non-Title V air permitting and compliance assurance program requirements. The revisions add 17 air general permits available to owners or operators of air emission sources as long as certain requirements are satisfied. The revisions also address new source preconstruction permitting requirements, stationary source control strategy programs, and emissions monitoring at stationary sources. In addition, the revisions add a definition of North American Industry Classification System, address public notice requirements, update test methods, and remove references to ozone

nonattainment areas and an outdated form. The rule is effective Nov. 6, 2017. Contact: Michele Notarianni; EPA Region 4, Air Planning and Implementation Branch; 404-562-9031; notarianni.michele@epa.gov. Citations: 40 CFR 52.520

Regulatory Update

AIR
Missouri SIP/2008 Ozone NAAQS Infrastructure Requirements
AIR

Direct final rule of the EPA approves portions of revisions to the Missouri SIP regarding infrastructure requirements for the 2008 ozone NAAQS. The revisions address prevention of significant deterioration of air quality (prong 3). The agency takes no action on significant contribution to nonattainment (prong 1) or interference with maintenance of the NAAQS (prong 2) because those elements were not addressed in the SIP revision submittal. The agency will act separately on proposed revisions concerning protection of visibility (prong 4). The rule is effective Dec. 5, 2017, unless adverse comments are received by Nov. 6, 2017. Contact: Tracey Casburn; EPA Region 7, Air Planning and Development Branch; 913-551-7016; casburn.tracey@epa.gov. Citations: 40 CFR 52.1320

Regulatory Update

AIR
Missouri SIP/2008 Ozone NAAQS Infrastructure Requirements
AIR

Proposed rule of the EPA would approve portions of revisions to the Missouri SIP regarding infrastructure requirements for the 2008 ozone NAAQS. The revisions address prevention of significant deterioration of air quality (prong 3). The agency would take no action on significant contribution to nonattainment (prong 1) or interference with maintenance of the NAAQS (prong 2) because those elements were not addressed in the SIP revision submittal. The agency would act separately on proposed revisions concerning protection of visibility (prong 4). A concurrent direct final rule adopts the changes, effective Dec. 5, 2017. Comments are due Nov. 6, 2017. Contact: Tracey Casburn; EPA Region 7, Air Planning and Development Branch; 913-551-7016; casburn.tracey@epa.gov. Citations: 40 CFR 52.1320

Regulatory Update

AIR
Missouri SIP/2010 SO2 NAAQS Infrastructure Requirements
AIR

Direct final rule of the EPA approves portions of revisions to the Missouri SIP regarding infrastructure requirements for the 2010 sulfur dioxide (SO2) NAAQS. The rule approves revisions concerning prevention of significant deterioration of air quality (prong 3). The agency

takes no action on revisions concerning significant contribution to nonattainment (prong 1), interference with maintenance of the NAAQS (prong 2), or certain requirements for designated nonattainment areas. Revisions concerning protection of visibility (prong 4) will be addressed in a separate rulemaking. The rule is effective Dec. 5, 2017, unless adverse comments are received by Nov. 6, 2017. Contact: Tracey Casburn; EPA Region 7, Air Planning and Development Branch; 913-551-7016; casburn.tracey@epa.gov. Citations: 40 CFR 52.1320

82 FR 46672 (10/06/2017)

Regulatory Update

AIR
Missouri SIP/2010 SO2 NAAQS Infrastructure Requirements
AIR

Proposed rule of the EPA would approve portions of revisions to the Missouri SIP regarding infrastructure requirements for the 2010 sulfur dioxide (SO2) NAAQS. The rule would approve revisions concerning prevention of significant deterioration of air quality (prong 3). The agency is not proposing to take action on revisions concerning significant contribution to nonattainment (prong 1), interference with maintenance of the NAAQS (prong 2), or certain requirements for designated nonattainment areas. Revisions concerning protection of visibility (prong 4) will be addressed in a separate rulemaking. A concurrent direct final rule adopts the revisions, effective Dec. 5, 2017. Comments are due Nov. 6, 2017. Contact: Tracey Casburn; EPA Region 7, Air Planning and Development Branch; 913-551-7016; casburn.tracey@epa.gov. Citations: 40 CFR 52.1320

Regulatory Update

AIR
North Dakota SIP/SO2 and PM-2.5 NAAQS Infrastructure Requirements
AIR

Final rule of the EPA approves portions of revisions to the North Dakota SIP to demonstrate that

the state meets infrastructure requirements for the 2010 sulfur dioxide (SO2) and 2012 fine particulate matter (PM-2.5) NAAQS. The EPA will address portions of the revisions concerning interstate transport prongs 1 and 2 in a separate action. The rule is effective Nov. 6, 2017. Contact: Kate Gregory; EPA Region 8, Air Program; 303-312-6175; gregory.kate@epa.gov. Citations: 40 CFR 52.1833

82 FR 46681 (10/06/2017)

Regulatory Update

ENDANGERED SPECIES
Florida/Endangered and Threatened Plants
ENDANGERED SPECIES

Final rule of the U.S. Fish and Wildlife Service lists the Florida prairie-clover as endangered and the Everglades bully, Florida pineland crabgrass, and pineland sandmat as threatened. The four plant species are endemic to south Florida. The listings are based on threats to the species, including habitat loss and modification through urban and agricultural development, lack of adequate fire management, the proliferation of non-native invasive plants, stochastic events, maintenance practices used on roadsides and disturbed sites, and sea level rise. The agency intends to publish a critical habitat designation for the species within one year. The rule is effective Nov. 6, 2017. Driving the Day

Good Monday morning and happy Labor Day! **LONDON CALLING --** You may already have seen it, but the first edition of London Playbook went out early this morning. Our new London-based reporter Jack Blanchard is at the helm. London Playbook will bring you up to speed on the day ahead in Westminster. The launch edition featured a scoop on the progress of the Brexit talks, plus an interview with U.K. International Trade Secretary Liam Fox. ***Sign up for free*** http://politi.co/2txnK5S ... ***The first edition*** http://politi.co/2gEkK2p

BUZZ -- IF TRUMP ENDS DACA, which it seems like he will in some form, Republicans on Capitol Hill are already considering a push for immigration reform, according to people we've spoken to in recent hours. There is no finalized plan yet about what the GOP will do, but there are already quiet conversations in Republican ranks. There will be tremendous pressure from companies and outside groups to prevent the full repeal of DACA. Congress already has a full plate, and this is just another issue they'll have to confront.

TOP STORY -- "Trump has decided to end DACA, with 6-month delay," by Eliana Johnson: "Senior White House aides huddled Sunday afternoon to discuss the rollout of a decision likely to ignite a political firestorm -- and fulfill one of the president's core campaign promises. The administration's deliberations on the issue have been fluid and fast moving, and the president has faced strong warnings from members of his own party not to scrap the program. ... [C]onversations with Attorney General Jeff Sessions, who argued that Congress - rather than the executive branch - is responsible for writing immigration law, helped persuade the president to terminate the program and kick the issue to Congress, the two sources said.

"In a nod to reservations held by many lawmakers, the White House plans to delay the enforcement of the president's decision for six months, giving Congress a window to act, according to one White House official. But a senior White House aide said that chief of staff John Kelly, who has been running the West Wing policy process on the issue, 'thinks Congress should've gotten its act together a lot longer ago.' White House aides caution that -- as with everything in the Trump White House -- nothing is set in stone until an official announcement has been made." http://politi.co/2examFe

-- NYT's Maggie Haberman and **Glenn Thrush:** "[S]ome key details had not yet been resolved. Among them: whether beneficiaries of the program, known as Deferred Action for Childhood Arrivals, or DACA, would be allowed to renew their protected status during the six-month period. ... The temporary solution has been the subject of quiet negotiations between Mr. Trump's legislative staff and members of Mr. Ryan's staff, according to an administration official familiar with the talks. ... The president's daughter Ivanka Trump and his son-in-law, Jared Kushner, who are both advisers to the president, back extending the DACA protections." http://nyti.ms/2xIuPPZ

SCOOP -- "Obama to speak out if Trump ends DACA," by Michael Grunwald: "Obama used executive actions to launch the program in June 2012, providing assurances before his re-election that he would protect the so-called 'Dreamers.' Trump had suggested in the past that he didn't want to deport Dreamers, saying in April that they should 'rest easy,' but the immigration hawks in his administration have argued that DACA is an illegal program. Obama's current plan is to post a statement on Facebook and link to it on Twitter, where the former president has more than 94 million followers." http://politi.co/2wxBjCx

-- BuzzFeed's Zoe Tillman and Adrian Carrasquillo: "There have been some efforts from within Trump's White House to save DACA in recent days, but there has been limited support for keeping the Obama program among senior staff. White House counselor Kellyanne Conway recruited Hispanic Trump supporters to reach out to the president in a behind-the-scenes bid to get him to keep the program, according to a source. As it became clearer that Trump is leaning towards ending it, a source said Conway supports 'POTUS outcomes on this. Period.'" http://bzfd.it/2gDuY36

THE TWO ENDS OF THE HOUSE REPUBLICAN CONFERENCE -- FLORIDA REP. ILEANA ROS-LEHTINEN (@RosLehtinen), who's retiring after this term: "After teasing #Dreamers for months with talk of his 'great heart,' @POTUS slams door on them. Some 'heart'..." ... **IOWA REP. STEVE KING (@SteveKingIA):** "Ending DACA now gives chance 2 restore Rule of Law. Delaying so R Leadership can push Amnesty is Republican suicide."

PIC DU JOUR -- NPR's **@adrianflorido:** "I just spotted @CBP immigration agents outside the main flood shelter in downtown Houston. This is why immigrants don't want to come." http://bit.ly/2eUkYi6

HOUSTON CHRONICLE's SUSAN CARROLL and **LOMI KRIEL:** "Nearly four days

after Harvey's record flooding slammed a rescue boat into an Interstate 45 frontage road bridge, family members of the final, missing volunteer pulled his body from Cypress Creek in Spring. Alonso Guillen, a 31-year-old disc jockey from Lufkin ... was a recipient of the Deferred Action for Childhood Arrivals program ... His father is a lawful permanent, but his mother is still in the application process for legal status.

"Reached at her home in Piedras Negras, Mexico, across the border from Eagle Pass, Rita Ruiz de Guillen, 62, said ... she hoped U.S. Customs and Border Protection officials would take pity and grant her a humanitarian visa so that she could come to Houston and bury her son, but she was turned back at the border. 'When we are with God, there are no borders,' she said. 'Man made borders on this earth.'" http://bit.ly/2exrrPe

TRUMP'S LABOR DAY MESSAGE -- His op-ed for the Milwaukee Journal-Sentinel: **"We must fix our self-destructive tax code"** http://bit.ly/2gyIcKJ

BULLETIN at 2:17 a.m. -- "SEOUL, South Korea (AP) - S. Korea media: Seoul military says N. Korea appears to be readying launch of a ballistic missile, possibly an ICBM."

WHAT THIS MEANS -- "North Korea defies predictions - again - with early grasp of weapons milestone," by WaPo's Joby Warrick: "The device that shook the mountains over the Punggye-ri test site on Sunday represented a quantum leap for North Korea's nuclear capability, producing an explosion at least five times greater than the country's previous tests and easily powerful enough to devastate a large city. And if studies confirm that the bomb was a thermonuclear weapon -- as North Korea claims -- it would be a triumph of a different scale: a major technical milestone reached well ahead of predictions, putting the world's most destructive force in the hands of the country's 33-year-old autocrat.

"The feat instantly erased lingering skepticism about Pyongyang's technical capabilities and brought the prospect of nuclear-tipped North Korean intercontinental ballistic missiles a step closer to reality, U.S. analysts and weapons experts said. Many predicted that a miniaturized version of the presumed thermonuclear bomb would soon be in North Korea's grasp, and that it probably already exists." http://wapo.st/2iVBkvt

-- "South Korea simulates attack on North's nuke site after test," by AP's Foster Klug and Youkyung Lee in Seoul: "Following U.S. warnings to North Korea of a 'massive military response,' South Korea on Monday fired missiles into the sea to simulate an attack on the North's main nuclear test site a day after Pyongyang detonated its largest ever nuclear test explosion. South Korea's Defense Ministry also said Monday that North Korea appeared to be planning a future missile launch, possibly of an ICBM, to show off its claimed ability to target the United States with nuclear weapons, though it was unclear when this might happen." http://bit.ly/2gxs38r

-- "Seoul tries to ignore Trump's criticism: 'They worry he's kind of nuts,' one observer says," by WaPo's Anna Fifield in Tokyo: "Moon Jae-in's office said that his government would continue to work towards peaceful denuclearization after tweets and actions from Trump that have left South Koreans scratching their heads at why the American president is attacking an ally at such a sensitive time. ...

"'It's strange to see Trump going after South Korea more aggressively than he's going after China, especially since China also thinks that dialogue is central to solving this problem,' said John Delury, a professor of international relations at Yonsei University in Seoul." http://wapo.st/2eCOpsh

-- "Mattis warns of 'massive military response' to NK nuclear threat," by CNN's Angela Dewan, Taehoon Lee and Eli Watkins: http://cnn.it/2eBJFD2

TRANSLATING TRUMP -- "Trump Can't Stop Trade With North Korea. But He Does Have Options," by NYT's Paul Mozur in Shanghai: "President Trump said on Sunday that the United States could consider stopping all trade with countries doing business in North Korea, in a move that could spell economic catastrophe for the pugnacious country. One problem: It would mean economic disaster for the United States as well. Despite years of economic sanctions and international condemnation, North Korea still conducts modest trade with a host of United States allies, including Brazil, Germany and Mexico.

"But the North's biggest partner by far is China, which accounts for about four-fifths of its trade and helps the country with its fuel, food and machinery needs. China is also the largest trading partner of the United States, in a relationship worth nearly $650 billion a year in goods and services covering a range of items, like auto parts, apple juice and Apple's widely anticipated new iPhone. ...

"The United States has limited options . It could more broadly target Chinese companies that do business in North Korea. But that could prove ineffective against a Chinese government that worries that trade limits could worsen conditions in the North, making the situation there even more unpredictable." http://nyti.ms/2vYQYHE

FOR YOUR RADAR -- REUTERS/Xiamen, China -- "Russian Deputy Foreign Minister Sergei Ryabkov said on Monday that Washington's actions towards Russian diplomatic facilities in the United States could be described as 'state hooliganism'. 'I am inclined to call what is happening state hooliganism,' he told reporters at a BRICS summit in China."

-- SPEAKING OF "STATE HOOLIGANISM" -- WaPo's Josh Rogin last year: "In a series of secret memos sent back to Washington ... diplomats reported that Russian intruders had broken into their homes late at night, only to rearrange the furniture or turn

on all the lights and televisions, and then leave. One diplomat reported that an intruder had defecated on his living room carpet. ... [I]n the first term of the Obama administration, Russian intelligence personnel broke into the house of the U.S. defense attache in Moscow and killed his dog." http://wapo.st/2931Wof

ABC'S MARY BRUCE speaks to **MATT MIKA --** Mika, a lobbyist for Tyson Foods, was shot during the congressional baseball practice in June. **MIKA:** "We all yelled gun. I don't know who yelled it first and we started running. That's when I turned like this and ran that way. That might have been when I got hit or when I was over there." **BRUCE:** "You still don't know when you got hit?" **MIKA:** "All I know is when I got around to the gate I had blood all over my chest, on my pants." http://abcn.ws/2gEgNdY

COMING ATTRACTIONS -- "Russia probes kick into high gear," by Austin Wright and Ali Watkins: "The congressional Russia investigations are entering a new and more serious phase as lawmakers return from the August recess amid fresh revelations about contacts between the Trump campaign and Russia. In the coming weeks, both intelligence committees are expected to conduct closed-door interviews with high-ranking members of the Trump campaign, and potential witnesses could include Michael Cohen, Paul Manafort and Donald Trump Jr. The two panels are also looking at possibly holding public hearings this fall. In addition, Trump Jr. is set to appear before the Senate Judiciary Committee, which is conducting its own parallel investigation into President Donald Trump and his associates' alleged ties to Moscow." http://politi.co/2eCOVpS

JOIN US! -- We are heading to Georgetown University for our next "Playbook University" Thursday at 4:15 p.m. Jake and Anna, a spring 2017 fellow, will head to the Institute of Politics and Public Service at Georgetown's McCourt School of Public Policy to talk news of the day and introduce GU Politics' newly-minted fellows class to Georgetown Hoyas at their annual open house. ***The fellows*** http://bit.ly/2v384IE ... ***Event details*** http://bit.ly/2g6HHel

Playbook Reads

DAILY MAIL - "A new royal baby is on the way as thrilled Kate and William announce she is expecting their third child -- but she is suffering from severe morning sickness again" http://dailym.ai/2eUmH74

HMM -- "The Same Agency That Runs Obamacare Is Using Taxpayer Money to Undermine It," by NYT's Audrey Carlsen and Haeyoun Park: "Instead of using its outreach budget to promote the Affordable Care Act, the department made videos critical of the law. In June, the health department posted 23 video testimonials on YouTube from people who said they had been 'burdened by Obamacare,' including families, health care professionals and small business owners. ... While it's not certain where the money for the videos came from, several former health officials who worked

in the Obama administration said that they suspect it came from the budget meant to promote Affordable Care Act. ...

"In addition to the YouTube videos, the department has used Twitter and news releases to try to discredit the health law. Since being sworn in as health secretary on February 10, Tom Price has posted on Twitter 48 infographics advocating against Obamacare, all of which bear the health department's logo." http://nyti.ms/2vYe2pZ

SUSAN GLASSER in the latest "Global POLITICO" podcast interviews former **DHS SECRETARY JEH JOHNSON:** "[M]ore than a month after naming John Kelly ... Trump has yet to name a replacement as secretary of Homeland Security. Not only that, he appears nowhere close to doing so and has not even interviewed any candidates for the job. Big mistake, argues Jeh Johnson, who served as the Obama administration's DHS chief until Trump's inauguration in January.

"[J]ohnson says, 'We need to have a Senate-confirmed secretary of Homeland Security; we need to have somebody occupying that office full time, 24/7, to keep his or her eye on aviation security, border security, cybersecurity, maritime security, FEMA, the Secret Service, and all the other things that DHS covers.' In particular, he cited the Secret Service's empty coffers and Trump's failure to address America's vulnerable election infrastructure a full year after the Russian tampering with the 2016 U.S. presidential election as crises where having a permanent secretary in place really matters." http://politi.co/2eCJCah ... ***Listen to the full podcast*** http://apple.co/2kAoZfH

SPEAKING OF ELECTIONS -- "Cash-strapped states brace for Russian hacking fight," by Cory Bennett, Eric Geller, Martin Matishak, and Tim Starks: "The U.S. needs hundreds of millions of dollars to protect future elections from hackers - but neither the states nor Congress is rushing to fill the gap. Instead, a nation still squabbling over the role Russian cyberattacks played in the 2016 presidential campaign is fractured about how to pay for the steps needed to prevent repeats in 2018 and 2020, according to interviews with dozens of state election officials, federal lawmakers, current and former [DHS] staffers and leading election security experts.

"These people agree that digital meddlers threaten the public's confidence in America's democratic process. And nearly everyone believes that the danger calls for collective action - from replacing the voting equipment at tens of thousands of polling places to strengthening state voter databases, training election workers and systematically conducting post-election audits. But those steps would require major spending, and only a handful of states' legislatures are boosting their election security budgets, according to a POLITICO survey of state election agencies.

"And leaders in Congress are showing no eagerness to help them out. 'States ought to get their own money up,' said Sen. Richard Shelby (R-Ala.), who chairs the Senate Committee on Rules and Administration, which oversees federal elections. 'We're borrowing money. We got a big debt limit coming up.'" http://politi.co/2eUQJHE

BUSINESS BURST -- "Investors Hedge Their Bets Entering Choppiest Season for Markets," by WSJ's Gunjan Banerji: "U.S. stock investors have been unfazed this year by everything from North Korean missile launches to the congressional debt ceiling deadline. Now, as the most turbulent season for equities looms, hedging activity and money flows indicate that investors are starting to doubt that markets can only climb higher." http://on.wsj.com/2wxZyQV

WEST COAST WATCH -- "After Bay Area violence, California debates classifying 'antifa' as a street gang," by L.A. Times' James Queally, Ben Oreskes and Richard Winton: "As forces on the extremes of the nation's ever-widening political divide continue to battle with fists and weapons on the streets of California, law enforcement officials and politicians have started debating whether these extremist groups should be classified as street gangs. Such a designation could give law enforcement new tools to combat the groups. Numerous laws on the books give authorities the power to restrict the movements of gang members and enhance criminal charges against them. But such a move raises legal issues because unlike with traditional street gangs, the underlying motive of these extremist groups is political expression rather than criminal enterprise." http://lat.ms/2gxLwFU

MEDIAWATCH - "Trump's EPA attacks AP reporter in personal terms," by Matt Nussbaum: "President Donald Trump's habit of singling out reporters for attacks is being adopted by his federal agencies, with the [EPA] excoriating an Associated Press reporter in unusually personal terms on Sunday after the reporter wrote a story that cast the agency in an unfavorable light. ... '[T]he Associated Press' Michael Biesecker wrote an incredibly misleading story about toxic land sites that are under water,' the statement began. 'Despite reporting from the comfort of Washington, Biesecker had the audacity to imply that agencies aren't being responsive to the devastating effects of Hurricane Harvey.' ... It then continued the attacks on Biesecker, saying he 'has a history of not letting the facts get in the way of his story' and noting that a July story he wrote inaccurately characterized an interaction between EPA Administrator Scott Pruitt and Dow Chemical CEO Andrew Liveris." http://politi.co/2eUXNUI ... ***The original AP story*** http://bit.ly/2eD7tGx

BONUS GREAT HOLIDAY WEEKEND READS, curated by Daniel Lippman, filing from

Great Barrington, Mass.:

--"The Exile," by Khaled Almilaji in Toronto Life: "I worked as a doctor during the Syrian Civil War, treating wounded protesters and vaccinating children. When I moved to the U.S. to get my master's, my future seemed clear. Then Trump's travel ban left me stranded in Turkey, 5,000 miles away from my pregnant wife." http://bit.ly/2wYu4VR (h/t Longreads.com)

--"Snow Fall: The Plane Went Down With His Wife, His Kid... and a Secret," by Andrew Dubbins in The Daily Beast: "Tony Mink was an experienced pilot, but as he flew his family to a Rocky Mountain Christmas vacation, he may have cut one corner too many. And then the blizzard hit." http://thebea.st/2vETTd3 (h/t Matt Brooks)

--"Dick Jokes, Drunk Takes, and Best Friends: How 'Superbad' Was Born," by Andrew Gruttadaro in The Ringer: "The 2007 teen comedy still resonates. Ten years later, the cast and crew explain how it all came together." http://bit.ly/2gzdEvY ... ***The original trailer*** http://bit.ly/2iVmMMm

--"The Once and Future Liberalism," by Walter Russell Mead in the Jan. 2012 edition of the American Interest: "The core institutions, ideas and expectations that shaped American life for the sixty years after the New Deal don't work anymore. The gaps between the social system we inhabit and the one we now need are becoming so wide that we can no longer paper over them. But even as the failures of the old system become more inescapable and more damaging, our national discourse remains stuck in a bygone age." http://bit.ly/2wvTSaW

--"The Search For Aaron Rodgers," by Mina Kimes in ESPN the Magazine: "Winning isn't everything. After Super Bowl XLV, Green Bay's hero QB has been on a journey to find out what is." http://es.pn/2gpE9QI (h/t Longform.org)

Playbookers

SPOTTED: Supreme Court Justice Ruth Bader Ginsburg at the Sunday night performance of "A Little Night Music" at the Signature Theatre ... Eric Schultz at the U.S. Open on Saturday where he saw CoCo Vandeweghe and then Rafael Nadal play

WEEKEND WEDDINGS - OBAMA ALUMNI -- Matt Lehrich and **Stephanie Beechem** "were married at sunset yesterday in Seattle's Olympic Sculpture Park, five years after meeting while working together in the Obama White House as members of the WH communications and research operations. Matt's brother Jesse officiated and the crowd danced into the night. The couple is now based in San Francisco, where the groom is a communications consultant and the bride works for the University of California." ***Pic*** http://politi.co/2wBI71A

SPOTTED: David Axelrod, Dan and Howli Pfeiffer, Amy Brundage, Rachel Racusen and Max Gleischman, Cody Keenan, Kristen Bartoloni, Bobby Whithorne, Ellen Canale, Sean Smith, Pat Cunnane, Hannah Hankins, Lauren Thorbjornsen, Marie Aberger, Andrew Nesi, Lauren Hickey, Kyle O'Connor, Tim Skoczek, Allison Kelly, Peter Velz, Ezra Mechaber, Jess Allen, Bart Jackson, Emily Cain.

-- Sameer Punyani, an associate at Booz Allen Hamilton and a former Obama appointee at the Pentagon and White House and a 2008 OFA campaign alum, and **Bhavna Changrani,** a DOJ trial attorney, were married on Sunday evening by the beach in Fort Lauderdale, Florida. "Friends and family came from as far as London, India, and Australia to celebrate with the DC couple. The couple met through a dating app in December 2015. They had their first date in mid-January 2016 right before the 'Snowpocalypse' snowstorm. The couple went on five separate dates during the storm and the rest was history." ***Pics*** http://politi.co/2wApytB ... http://politi.co/2eUBiPU

--SPOTTED: Rohit Punyani and Dipali Amin, Nick Lombardo and Rachel Goodman, Andrew and Alexandra Dawson, Dan Austell and Lynn Langton Austell, Vinisha Patel, Dan Kastner, Mike Abbate and Erica Woodward, Ursula Zeydler.

--Zach Cikanek, managing director at FP1 Strategies, and **Jolyn Lorenzetti,** government relations and PAC manager at Genworth Financial and an alum of Jeb 2016 and Romney 2012, got married on Saturday at St. Isaac Jogues in Hinsdale, Illinois, with an evening reception at Drury Lane Theatre in Oakbrook Terrace, Illinois. The couple met while working for former Rep. Judy Biggert (R-Ill.). Their honeymoon is an 11-night south Caribbean cruise. ***Pics*** http://politi.co/2gy76tN ... http://politi.co/2iWhOPf
SPOTTED: Charlie and Lisa Spies, Dave Kochel, Marisa Tank, Duane and Caroline Duncan, Keith Gardner and Jennifer Bogart-Gardner, Brian and Sarah Colgan, James and Iris Miller, James and Katie Christophersen, Uriel and Maya Dabby, Erin Kelly.

-- Caitlin Poling, national security adviser to Sen. David Perdue (R-Ga.) and **Andrew McLennand**, who works at the State Department, got married on Saturday with a ceremony and reception at the Arts Club of Washington, the former home of President James Monroe. ***Pic*** http://politi.co/2exKWHB

TRANSITIONS -- MICHAEL SHORT, who formerly worked in communications for the Trump White House, is now at the National Association of Manufacturing. ... **KAIVAN SHROFF** has joined the Institute for Education as COO and director of strategy. He most recently was a civic tech fellow at Microsoft in New York City.

BIRTHDAY OF THE DAY: Anu Rangappa, principal at Kolar Strategy Group and a DNC alum. **How the Trump presidency is going:** "Dishearteningly. I am a Democrat, but my patriotism far outweighs any sense of partisanship. My dad was the only of his siblings to learn to read and would cry himself to sleep from hunger as a child growing up in India. Within one generation, he became a celebrated professor in botany with a daughter who has flown aboard Air Force One. That kind of potential for a meteoric life-

trajectory does not exist - so consistently for millions of people - anywhere else in the world. The President's chaotic messaging and inconsistent, short-sighted policy prescriptions have dampened hopes that many more Americans, potential immigrants and citizens around the world can achieve such an unimaginable quality-of-life like the one my family has worked to have." **Read her Playbook Plus Q&A:** http://politi.co/2wy6duG

BIRTHDAYS: Blake Hounshell, Politico magazine editor-in-chief (@blakehounshell) (hat tip: Ben Chang) ... Jared Weinstein, a partner at Thrive Capital and a Bush W.H. alum ... Harold Ickes ... Anthony Weiner ... Uber's Keith Hensley, a Bush WH and Robert Gates alum ... Jocelyn Pickford ... William Hildebrandt Surgner ... Wash Examiner's Susan Ferrechio ... Sophie VandeHei is 15 (h/t Autumn) ... Brian Schweitzer, former Montana governor ... Jared Allen, senior director for media relations at the National Automobile Dealers Association ... Bernard Kerik ... Michael McAuliff ... The Economist's Alex Travelli ... Lynn Stinson ... Bob Kenney ... Politico's Jeffrey Ahn ... Laura Schlapp of Sen. Roberts' office ... Tom McInerney ... Al Fish ...

... Bernard Coleman III, global head of diversity and inclusion at Uber ... Shira Kramer ... Sean O'Hollaren, SVP of gov't and public affairs at Nike and a Bush WH alum ... Devin McBrayer ... Estephania Gongora ... Matthew Groves ... Victoria Cram ... Dana Gartzke ... Glynnis MacNicol ... Hannah Lerner ... Kali Murphy ... Brock McCleary ... Chad Horrell, director at DCI Group ... Chase Clymer ... Graham Weinschenk ... Matt Modell ... Ashley Harvard ... Jamie Moore ... Jordan Fischer ... Bernie Bennett ... Jerry Huang ... Daniel Pablo Pinto ... Tyler Jones ... Bailey Cultice ... World Golf Hall of Famer Tom Watson ... Beyonce Knowles (h/ts AP)

Arkansas

HAZARDOUS WASTE MANAGEMENT
Storage Tanks
Arkansas HAZARDOUS WASTE MANAGEMENT

Proposed rule of the Department of Environmental Quality, Pollution Control and Ecology Commission, amends Regulation 12 regarding storage tanks. The rule removes the 1,000-foot limitation for secondary containment and monitoring for all new or replaced underground storage tanks (USTs), secondary containment, and monitoring and for all new or replaced piping connected to any UST and for under-dispenser spill containment for all new or replacement motor fuel dispenser systems. The rule also makes registration of aboveground storage tanks (ASTs) optional and allows the owner or operator of an AST containing petroleum to be potentially eligible for reimbursement under the Petroleum Storage Tank Trust Fund Act if the tank is registered and all required fees are paid. In addition, the rule incorporates by reference federal standards under 40 CFR 280 and 281 relating to airport hydrant fuel distribution systems and field construction tanks. A hearing is scheduled for Sept. 6, 2017, in North Little Rock. Comments are due Sept. 20, 2017. Contact: Kelly Robinson; DEQ; 501-682-0916; reg-comment@adeq.state.ar.us

Regulatory Update

California

GENERAL ENVIRONMENT AND SAFETY
Automotive Repair Dealers/Electronic Documentation and Authorization
California GENERAL ENVIRONMENT AND SAFETY

Proposed rule of the Department of Consumer Affairs, Bureau of Automotive Repair, amends

regulations under 16 CCR 3303 through 3371 (nonconsecutive), adopts regulations under 16 CCR 3353.1 and 3353.2, and repeals regulations under 16 CCR 3356.1 and 3359 regarding automotive repair dealers. The rule allows the use of electronic technologies in disclosing information to and obtaining information from consumers before, during, and after repair transactions. The rule also clarifies that estimates must be provided to and authorized by customers before diagnosis or repair begins and specifies content requirements for estimates. In addition, the rule addresses requirements for recording initial authorization in the context of unusual circumstances, authorization of work that exceeds or changes what was originally estimated, and the return of replaced parts. Finally, the rule addresses sublet disclosures, updates recordkeeping requirements, and revises and adds definitions. A hearing is scheduled for Sept. 26, 2017, in Rancho Cordova. Comments are due Sept. 18, 2017. Contact: Brian Clark; DCA, Bureau of Automotive Repair; 916-403-8560; Brian.Clark@dca.ca.gov

—California Regulatory Notice Register (08/04/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Pollution Control Financing Authority/Seismic Safety Capital Access Loan Program
California GENERAL ENVIRONMENT AND SAFETY

Final rule of the Pollution Control Financing Authority adopts regulations under 4 CCR 8078.15 through 8078.21 regarding the Seismic Safety Capital Access Loan Program. The rule establishes an alternate procedure for qualified residential properties and small business owners to obtain loans to finance the costs of seismically retrofitting residences and small businesses. The rule also provides a credit enhancement to support private bank loans to qualified residential and commercial property owners to make improvements to mitigate seismic damage. The rule is effective July 26, 2017. Contact: Elena Miller; PCFA; 916-654-5951; elena.miller@treasurer.ca.gov

Regulatory Update

HAZARDOUS WASTE MANAGEMENT
Human Health Toxicity Criteria for Cleanup
California HAZARDOUS WASTE MANAGEMENT

Proposed rule of the Department of Toxic Substances Control adopts regulations under 22 CCR 68400.5, 69020, 69021, and 69022 to establish a narrative cleanup performance standard and toxicity criteria for use in human health risk assessments and to set risk-based screening levels and remediation goals. The rule establishes toxicity criteria that are more protective than federal requirements and sets forth requirements for environmental justice and children's health-protection goals. The rule also defines the protective risk-based screening level as one in a million for cancer risk and a hazard quotient of one for noncancer risk for all screening level risk assessments and requires use of best available science. In addition, the rule applies toxicity criteria to risk-based cleanups at all hazardous substances release sites and requires use of the risk-based cleanup screening levels and remediation goals at federal hazardous substance cleanup sites in the state. The criteria will be used in corrective actions under the Hazardous Waste Control Law, response actions under the Hazardous Substances Account Act, and actions under the California Land Reuse and Revitalization Act. Workshops are scheduled for Aug. 28 and 31, 2017, in Sacramento and Cypress, respectively, and via webcast. A hearing is scheduled for Sept. 20, 2017, in Sacramento and via webcast. Comments are due Sept. 20, 2017. Contact:

Regulatory Update

SOLID WASTE
Electronic Waste Recovery and Recycling/Cathode Ray Tube Glass
California SOLID WASTE

Notice of the Department of Resources Recycling and Recovery announces the readoption of a Sept. 4, 2015, emergency rule that amended regulations under 14 CCR 18660.5 through 18660.24 (nonconsecutive) to revise criteria and conditions regarding the disposition of cathode ray tube (CRT) glass derived from the processing of certain covered electronic waste. The rule removes existing prohibitions on the disposal of treatment residual CRT glass and allows for all otherwise legal dispositions. The rule also revises documentation requirements and sets forth time limits on the ultimate disposition of treatment residual CRT glass. The rule is effective Aug. 21, 2017, and expires Aug. 21, 2019. Contact: Meagan Wilson; DRRR; 916-341-6077; meagan.wilson@calrecycle.ca.gov

Regulatory Update

WATER
Contaminants in Drinking Water
California WATER

Notice of the Office of Environmental Health Hazard Assessment announces the availability of a draft technical support document and a workshop concerning updates to the public health goals for cis-1,2-dichloroethylene and trans-1,2-dichloroethylene in drinking water. An updated public health goal of 13 parts per billion (ppb) is proposed for cis-1,2-dichloroethylene, and an updated public health goal of 50 ppb is proposed for trans-1,2-dichloroethylene. After the workshop, the agency will submit a draft risk assessment for external scientific peer review, revise the technical support document to address comments, and provide an additional comment period. The workshop is scheduled for Sept. 18, 2017, in Sacramento. Comments are due Sept. 18, 2017. Contact: Hermelinda Jimenez; OEHHA; 916-324-7572; PHG.Program@oehha.ca.gov

Subject: Today on Climate Beat

August 24, 2017

Today on Climate Beat . . .

. . . we walked the beat, reporting that Public Employees for Environmental Responsibility is charging that cuts to EPA staffing and enforcement begun during the Obama administration and continued by current agency Administrator Scott Pruitt have led to a major drop in criminal enforcement cases, especially against white-collar defendants.

In litigation news, environmentalists are suing EPA in a bid to force the agency to release documents detailing how it is complying with President Donald Trump's sweeping executive order (EO) on regulatory reform, testing the extent to which EPA can keep private its work deciding which rules to overhaul in order to comply with the EO.

And our daily news roundup offered an early look at the much-anticipated Energy Department grid study, which confirms that cheap natural gas is the main cause behind early coal and nuclear plant closures, while also urging federal grid regulators to devise new payments for reliability services.

Subject: Playbook Power Briefing, presented by Hewlett Packard Enterprise: What DON JR. said on the Hill about his meeting -- TRUMP floated axing debt ceiling votes -- RYAN throws cold water on POTUS' tax cut goal -- GRAYDON CARTER to step down from VANITY FAIR

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Hewlett Packard Enterprise

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

BIG N.Y.T. SCOOP -- "Graydon Carter to End 25-Year Run as Vanity Fair's Editor," by NYT's Michael M. Grynbaum: "Graydon Carter, the editor of Vanity Fair, plans to step down from the magazine in December after a 25-year tenure, leaving the role that established him as a ringmaster of the glittery spheres of Hollywood, Washington and Manhattan media. ... 'I want to leave while the magazine is on top,' Mr. Carter, 68, said in an interview on Wednesday at the kitchen table of his West Village townhouse. 'I want to leave while it's in vibrant shape, both in the digital realm and the print realm. And I wanted to have a third act -- and I thought, time is precious.'

"For now, he said, his post-Vanity Fair plans involve a six-month 'garden leave' (his phrase; Mr. Carter is fond of Britishisms) and a rented home in Provence. He has 'the rough architecture' of a future project in mind, perhaps involving new forms of storytelling, but he demurred on the details. 'I'm not a big announcer,' Mr. Carter said, tortoiseshell glasses in hand. 'Best to fail quietly at the beginning of something rather than make grand pronouncements.'" http://nyti.ms/2xdykkl

--VANITY FAIR'S DAVID KAMP -- "The Years With Graydon: 'This is the best job you're ever going to have'": "Oh, bittersweet day: the Grexit is upon us. Among those of us who have worked with Graydon Carter for a long time, the thought has lingered uncomfortably in the back of our minds that he might someday snap shut his laptop, pull on his Anderson & Sheppard overcoat, and get on with the rest of his life, leaving Vanity Fair behind." http://bit.ly/2xRdKDi

Happy Thursday afternoon. Don't forget to join us tonight at Georgetown, where Jake and Anna moderate a panel with GU's 2017 fellows class. The event starts at 4:15 p.m. http://bit.ly/2xcK5Y8

AT THIS POINT, you have to imagine that the House will have to stay in session late Friday or Saturday to pass the debt limit/Harvey/government funding bill. **PRESIDENT TRUMP** spoke to **PAUL RYAN**, **MITCH MCCONNELL, CHUCK SCHUMER** and **NANCY PELOSI.**

TRUMP TAKES TO THE PHONES -- "Upbeat Trump raves to Schumer, Pelosi about news coverage of their deal," by Josh Dawsey: "[I]n calls with Senate Minority Leader Chuck Schumer and House Minority Leader Nancy Pelosi Thursday morning, Trump raved about the positive news coverage it had received, according to people familiar with the calls, and he seemed very pleased with his decision. Trump specifically mentioned TV segments praising the deal and indicated he'd been watching in a call with Schumer, two people said. And he was jovial in a call with Pelosi and agreed to send a tweet she asked for about the Deferred Action for Childhood Arrivals program, these people said, while also mentioning the attention the deal had gotten. He indicated to both leaders he would be willing to work together again.

"'He seemed super upbeat,' one person familiar with the calls said. Another person familiar with the calls said Trump told Pelosi and Schumer their coverage was great, too. Pelosi herself bragged that she had gotten results after asking him to tweet reassurances that Dreamers shouldn't worry about being deported over the next six months while lawmakers try to secure a DACA fix. 'I was telling my colleagues, 'This is what I asked the president to do,' and boom boom boom, the tweet appeared,' she said at a news conference Thursday." http://politi.co/2xdBrca

-- @realDonaldTrump: "For all of those (DACA) that are concerned about your status during the 6 month period, you have nothing to worry about - No action!"

FOR THE RECORD -- A memo released by the Department of Homeland Security on Monday says that DHS is not accepting any new applications and that renewal requests must be received by October 5, both within the "6 month period." ***The memo*** http://bit.ly/2xduGXK

HMM... -- "Trump suggested scrapping future debt ceiling votes to congressional leaders," by Josh Dawsey and Burgess Everett: "President Donald Trump suggested to congressional leaders on Wednesday morning that votes to raise the debt ceiling could be done away with altogether, according to three people familiar with the conversation. In a meeting with GOP and Democratic leaders, in which Trump sided with the Democrats on a fiscal deal to raise the debt ceiling, the president said he believes the votes are unproductive, those people said. Many lawmakers dread the vote, particularly Republicans, some of whom disagree with attempts to raise the debt ceiling without major fiscal reforms." http://politi.co/2xdiaav

-- **WAPO: "Trump, Schumer agree to pursue plan to repeal the debt ceiling,"** by Damian Paletta and Ashley Parker: Trump and Schumer discussed the idea Wednesday during an Oval Office meeting. Schumer, Trump, and House Minority Leader Nancy Pelosi (D.-Calif.) agreed to work together over the next several months to see if they can finalize a plan, which would need to be approved by Congress. One of the people familiar described it as a 'gentlemen's agreement.' ...

"'The President encouraged Congressional leaders to find a more permanent

solution to the debt ceiling so the vote is not so frequently politicized,' said White House press secretary Sarah Huckabee Sanders." http://wapo.st/2gO6IeK

FLASHBACK: **ONE OF THE BIG PROPONENTS FOR DEBT CEILING FIGHTS:** VP -- then Congressman -- Mike Pence. ***Some examples:***

-- PENCE on 4/8/11 on Fox News' "Hannity": "I think this little battle does have implications for the major battles over the budget, over the debt ceiling, over all the dramatic reforms of federal programs that are being contemplated today and are necessary to restore fiscal sanity to Washington, D.C."

-- PENCE on 4/10/11: "I will not support an increase in the debt ceiling without real and meaningful changes in spending in the short-term and in the long-term. We've got to change the way we spend the people's money.

-- PENCE on "Morning Joe" on 6/1/11: "I voted against it, Joe. The American people are tired of this era of runaway federal spending in Washington, D.C. I was glad to see an overwhelming and bipartisan majority reject what the White House had originally called for which was a clean vote on the debt ceiling."

-- PENCE on 7/8/11: "We've got an opportunity to cut spending now in real meaningful ways, perhaps even cut taxes and cap spending going forward, and I also believe and I'm going to take a stand, that we should not increase the debt ceiling unless we make such an increase contingent on sending a Balanced Budget Amendment to the states for ratification."

-- PENCE on 7/12/11: "If President Obama wants to raise the debt ceiling, he should recognize that it's his responsibility, it's his problem and come to the Congress and ask us to step forward and help him solve that problem by cutting spending now, capping spending and sending a Balanced Budget Amendment to the states."

CANCELING THE DEBT LIMIT WOULD have to be part of a large-scale agreement. It's hard to see this passing as a standalone. **OH YEAH**: Paul Ryan is opposed to this.

ONE TAKEAWAY FROM THIS WEEK, from Republicans directly involved the debt limit negotiations ...**NOBODY SPEAKS FOR TRUMP BUT TRUMP.** This is a big problem, because dozens and dozens of conversations happen every week between leaders in both parties and the president. In the case of the debt limit, Trump's aides and Cabinet members were aware of the Hill's plan for an 18-month lift. The president did what he wanted.

FOR YOUR RADAR -- "Freedom Caucus Members Frustrated With GOP Leaders on Agenda," by Bloomberg's Billy House and Erik Wasson: https://bloom.bg/2xdEMaW

****** **A message from Hewlett Packard Enterprise**: How are Hewlett Packard Enterprise's supercomputers helping create the future in science, medicine and national

security? Learn more: hpe.com/supercomputing ******

WHAT DON JR. SAID ON THE HILL -- NYT's **MAGGIE HABERMAN** and **MATT APUZZO -- "Trump Jr. Says He Wanted Russian Dirt to Determine Clinton's 'Fitness' for Office":** "Donald Trump Jr. told Senate investigators on Thursday that he set up a June 2016 meeting with a Russian lawyer because he was intrigued that she might have damaging information about Hillary Clinton, saying it was important to learn about Mrs. Clinton's 'fitness' to be president. But nothing came of the Trump Tower meeting, he said, and he was adamant that he never colluded with the Russian government's campaign to disrupt last year's presidential election.

"In a prepared statement during an interview with Senate Judiciary Committee investigators, the younger Mr. Trump said he was initially conflicted when he heard that the lawyer, Natalia Veselnitskaya, might have damaging information about Mrs. Clinton. Despite his interest, he said, he always intended to consult with his own lawyers about the propriety of using any information that Ms. Veselnitskaya, who has ties to the Kremlin, gave him at the meeting. A copy of Mr. Trump's statement was obtained by The New York Times.

"The acknowledgment by the president's eldest son that he intended to seek legal counsel after the meeting suggests that he knew, or at least suspected, that accepting potentially damaging information about a rival campaign from a foreign country raised thorny legal issues. 'To the extent they had information concerning the fitness, character or qualifications of a presidential candidate, I believed that I should at least hear them out,' he said. 'Depending on what, if any, information they had, I could then consult with counsel to make an informed decision as to whether to give it further consideration.'" http://nyti.ms/2wLII5h

THE SPEAKER SPEAKS -- "Ryan Said Trump Wanted to Avoid Partisan Fight in Wake of Hurricanes," by NYT's Alan Rappeport: "Speaker Paul D. Ryan on Thursday said that he understood President Trump's motivation for reaching a deal with Democrats over Hurricane Harvey aid, the budget and the debt ceiling but acknowledged that he continues to think it could be risky for the economy. 'What the president didn't want to do is have some partisan fight in the middle of the response to this,' Mr. Ryan said, referring to the hurricane, during a live interview with The New York Times. 'He wanted to make sure we had a bipartisan moment.' ...

"It was not the only difference of opinion between Mr. Ryan and Mr. Trump. Mr. Ryan also suggested that Mr. Trump's proposed corporate tax rate of 15 percent was unrealistic. He said that getting the corporate tax rate to the mid to low 20 percent range was more likely and would make American businesses more competitive with those around the world. 'He obviously wants to push that as low as possible,' Mr. Ryan said. 'At the end of the day we have to make these numbers work.'" http://nyti.ms/2xdfd9R

ON COLLEGE CAMPUSES -- "DeVos to ramp Obama-era schools sexual assault policy," by Benjamin Wermund: "The Trump administration will rewrite an Obama-era

schools directive on sexual assault in an effort to balance the rights of victims and the accused, Education Secretary Betsy DeVos announced Thursday. The Obama guidance for the first time pushed school district, college and university leaders to combat sexual harassment, including sexual violence, saying they were required to do so under Title IX, a federal law that prohibits sex discrimination. ...

"The Trump administration will revamp the guidance through a rule-making process that likely will take months, DeVos said during a speech at George Mason University in which she blasted the current guidance for undermining the due process rights of those accused of sexual assault or harassment. She said the administration will give all sides a chance to deliver their opinions on how it should move forward." http://politi.co/2xe6e8v

INTERESTING DETAIL from Elise Labott's profile of **NIKKI HALEY** in CNN's State magazine: "Nikki Haley was under consideration to become Donald Trump's secretary of state when she flew to New York to meet the President-elect for the first time since his election victory. The South Carolina governor was torn. The baggage from the 2016 campaign -- she supported Marco Rubio in her state's all-important presidential primary and later backed Ted Cruz -- didn't suddenly evaporate for Trump, who never forgets a slight.

"But there was something more fundamental that bothered her: Her resume. Yes, Haley traveled abroad as governor and she was successful in bringing business into the state. But none of that could prepare her to lead American diplomacy in a world where North Korea was becoming more aggressive, the crisis in Syria was deepening, Venezuela was succumbing to a dictator and the war in Afghanistan showed no sign of easing. She told Trump no. 'I'm very aware of when things are right and when they are not,' she told me during an extensive interview recently. 'I just thought he could find someone better.'" http://cnn.it/2xdG1am

BANNON'S BIG CBS INTERVIEW -- "Bannon breaks with Trump on DACA: Conservatives 'are not happy with this'," by Louis Nelson: "Former White House chief strategist Steve Bannon said he doesn't agree with President Donald Trump's decision to end the DACA program and blasted the Catholic Church's support for undocumented immigrants because 'they need illegal aliens to fill the churches.'

"'The Catholic Church has been terrible about this. The bishops have been terrible about this. By the way, you know why. You know why. Because [they're] unable to really - to come to grips with the problems in the church, they need illegal aliens,' Bannon told CBS' Charlie Rose in an interview, excerpts of which were broadcast Thursday on 'CBS This Morning.' ... Bannon told Rose that he disagreed with Trump's decision this week to rescind the Deferred Action for Childhood Arrivals program, which grants work permits to undocumented immigrants who were brought to the U.S. as minors. But he also expressed empathy for the president, who said he struggled with what to do about the so-called Dreamers who enrolled in DACA and whom Trump had pledged to treat with 'great heart.'

"'Look what he did on DACA the other day. OK, I don't agree with that DACA decision, but I understand how he struggled with it. I understand how he's giving a possibility of a legislative thing,' Bannon said in his interview, which will be broadcast Sunday night on CBS' '60 Minutes.' 'And he said even last night in a tweet, even a tweet, he would rethink it. Trust me, the guys on the far right, the guys on the conservative side, are not happy with this.'" http://politi.co/2xe0hso ... ***Video from CBS*** http://cbsn.ws/2xd8w85

-- "Bannon to Gary Cohn: Resign if you don't like what Trump is doing," by Louis Nelson http://politi.co/2xdT5MR

GREAT QUOTE -- ROSE: "So how do you want to be perceived, you today? Because you have a media image." **BANNON:** "The media image, I think, is pretty accurate. I'm a street fighter."

AT FOGGY BOTTOM -- M.I.A. -- "Where's Rex? U.N. Ambassador Nikki Haley steps in as America's de facto diplomat-in-chief," by Foreign Policy's Robbie Gramer and Dan De Luce: "Haley's high profile on pressing international issues, including Iran and North Korea, [has] raised fresh questions about the influence and political future of the secretary of state. Tillerson has been strangely absent from the public spotlight, even amid mounting tensions with North Korea, and Haley has stepped in to fill the void." http://atfp.co/2j4yKDa

FIRST IN PLAYBOOK -- A new DACA letter from former education secretaries is getting sent to Hill leadership today. It's a bipartisan letter and has two former Bush education secretaries joining the Democrats. http://politi.co/2xduXK9

PLAYBOOK INTERVIEW: London Playbook Author Jack Blanchard

Jack Blanchard, the former political editor of the Daily Mirror, launched the newest Playbook this week -- our London edition. Blanchard gained fame at the Daily Mirror for a report investigating 25 former cabinet ministers who now worked in sectors they used to oversee. He's also a regular contributor to Sky News and the BBC -- and a Liverpool fan. "As you'd expect people working in Westminster are extremely busy, and they need a quick and digestible read in the morning that instantly brings them up to speed on the day ahead - along with some insider knowledge that only we can provide," he told us.

HOW THERESA MAY IS DOING: "Rarely has any prime minister's stock fallen so far so quickly. When May called the general election in April she did so because she was 25% ahead in the polls could do no wrong. Seven weeks and one disastrous campaign later, she had lost her majority in Parliament and now cuts a very diminished figure. Since the vote she has started to build up a new team in Downing Street which is slowly improving her position - but it's hard to find anyone who doesn't think she has been fatally weakened. Most MPs and observers think she will be gone within two years."

TRUMP AND THE U.K.: "Generally the U.K. is utterly bemused by President Trump. Clearly he is a very different type of figure to anyone we have seen as president before. His somewhat erratic nature is making diplomacy quite difficult for Downing Street and the Foreign Office, as it is hard to predict how he will react to any given situation. But there is a strong feeling that whoever is president, America is and will always remain our very closest ally. The priority for any prime minister is to maintain that positive relationship -- regardless of who is in the White House. I don't think that will change."

HOW BREXIT IS GOING: "The most interesting thing about Brexit from a domestic point of view is the way it is tearing down old political boundaries in a way we haven't seen here for a long time. Both main parties are very divided on the issue, and so new alliances are being built between politicians who previously would have been sworn enemies. The referendum has triggered something of a realignment in British politics from the old left/right division, and we don't yet know where it will end up."

HOW THE U.K.-EU RELATIONSHIP HAS CHANGED SINCE BREXIT:"Dramatically. We have gone from being close partners to adversaries around the negotiating table. Relations are definitely strained and as the Brexit talks continue there seems to be a huge chasm between how the two sides perceive the situation. One would expect that eventually the differences will be ironed out and a new relationship will emerge but right now it is not great." ***Today's edition*** http://politi.co/2gP5tvl ... ***Subscribe to London Playbook*** http://politi.co/2xfDPuK

TA-NEHISI COATES' latest in **THE ATLANTIC -- "The First White President:** The foundation of Donald Trump's presidency is the negation of Barack Obama's legacy": "To Trump, whiteness is neither notional nor symbolic but is the very core of his power. In this, Trump is not singular. But whereas his forebears carried whiteness like an ancestral talisman, Trump cracked the glowing amulet open, releasing its eldritch energies. The repercussions are striking: Trump is the first president to have served in no public capacity before ascending to his perch. But more telling, Trump is also the first president to have publicly affirmed that his daughter is a 'piece of ass.' The mind seizes trying to imagine a black man extolling the virtues of sexual assault on tape ('When you're a star, they let you do it'), fending off multiple accusations of such assaults, immersed in multiple lawsuits for allegedly fraudulent business dealings, exhorting his followers to violence, and then strolling into the White House. ... Trump truly is something new -- the first president whose entire political existence hinges on the fact of a black president. And so it will not suffice to say that Trump is a white man like all the others who rose to become president. He must be called by his rightful honorific -- America's first white president." http://theatln.tc/2xd55OJ

BUSINESS BURST -- BILL COHAN in Vanity Fair, "Jamie Dimon's $13 Billion Secret -- Revealed": "Four years ago, JPMorgan Chase reached a then-record settlement with the Department of Justice after, among other things, the bank received a copy of a U.S. attorney's draft complaint documenting its alleged role in underwriting fraudulent securities in the years leading up to the 2008 financial crisis. Following the bank's $13 billion financial agreement, the draft complaint was never filed. Then the

bank paid another settlement to prevent a separate legal case from potentially unearthing it. The contents of the draft complaint have long been a financial-crisis mystery, a Great White Whale of a document. At least until now." http://bit.ly/2wat5N7

2020 PREVIEW? -- "Emails show clash between Trump appointees and Facebook over Zuckerberg glacier visit," by WaPo's Lisa Rein: "When Facebook's communications chief approached the National Park Service to ask the agency to show company founder Mark Zuckerberg how the warming climate is melting ice sheets at Glacier National Park, scientists, park rangers and public affairs staff were giddy with excitement. ... But their eagerness to accommodate Zuckerberg on his high-profile tour quickly turned into a high-wire scramble for Park Service staffers, as political appointees at the Interior Department, the Park Service's parent agency, demanded that they walk back their generosity, according to documents The Washington Post obtained through a Freedom of Information Act request.

"The Trump administration was far less keen on Zuckerberg -- who has been increasingly vocal in his criticism of the president -- and apparently balked at giving him the red-carpet treatment that national parks often roll out for lawmakers, potential donors and dignitaries. ... Negotiations between political appointees and the Park Service and Geological Survey unfolded over weeks, with the discussions reaching senior officials at each agency. Interior officials told the Park Service to minimize its planning and moved at one point to cancel the Facebook chief executive's July 15 tour altogether, the newly released emails show." http://wapo.st/2wLrW0G

AFTERNOON READ -- "Why Jeff Sessions' Recycled Crime-Fighting Strategy Is Doomed to Fail," by Mark Obbie in POLITICO Magazine: "The Trump Justice Department has pushed a variety of strategies for reducing violent crime. But the tool that Sessions prefers, the one he calls the 'excellent model,' is to steer more gun-crime cases to federal court, where offenders face an average of six years in prison, compared with the lighter punishments that can result from state convictions -- in Missouri, for instance, gun offenders charged under state laws generally get probation. Sessions has instructed his U.S. attorneys to step up their gun-case loads, and they are heeding his mandate: In the second quarter of this year, federal firearms prosecutions jumped 23 percent over the same period in 2016. ...

"But Sessions is dramatically overselling the effectiveness of his prosecution-heavy prescription, those who study gun violence say. Researchers, in fact, long ago concluded that the long prison sentences and elevated incarceration rates that result from increasing federal prosecutions have scant influence on violent crime rates. And St. Louis is a signal example of why Sessions' strategy does not work as he promises." http://politi.co/2wLySuE

MEDIAWATCH -- EMILY CADEI to McClatchy's D.C. bureau -- Kristin Roberts to email the staff this afternoon: "Emily Cadei is our new Washington Correspondent for the Sacramento Bee. Emily comes to the Bee and McClatchy from Newsweek ... Emily [previously] worked at CQ Roll Call and has been published by CNN, Foreign Policy,

Fortune and The New Republic."

WELCOME TO THE WORLD - Mallary Tenore Tarpley, assistant director of the Knight Center for Journalism in the Americas at UT Austin and a Poynter alum, and Troy **Troy Tarpley,** a certified anesthesiologist assistant at Baylor Scott & White Hospital in Round Rock, Texas, post on Facebook: "Meet Tucker William Tarpley, born at 1:25 p.m. [Wednesday], exactly 19 months after Madelyn. He's a healthy 7 pounds, 2 ounces and 20 inches long. Troy and I are already so in love with him!" *Pics* http://politi.co/2wM9d55 ... http://politi.co/2gOBSlZ

Subject: Playbook Power Briefing, presented by the Coalition for Affordable Prescription Drugs (CAPD): TRUMP condemns KKK, white nationalists days later -- Pharmaceutical CEO quits presidential advisory panel over Charlottesville

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by the Coalition for Affordable Prescription Drugs (CAPD)

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Monday afternoon. TRUMP SPEAKS! -- THE PRESIDENT: "To anyone who acted criminally in this weekend's racist violence, you will be held fully accountable. Justice will be delivered. As I said on Saturday, we condemn in the strongest possible terms this egregious display of hatred, bigotry and violence. It has no place in America. ... Racism is evil and those who cause violence in its name are criminals and thugs, including the KKK, neo-Nazis, white supremacists and other hate groups that are repugnant to everything we hold dear as Americans."

THE PRESIDENT tied his response to his campaign theme of law and order saying "as a candidate, I promised to restore law and order to our country, and our federal law enforcement agencies are following through on that pledge. We will spare no resource in fighting so that every American child can grow up free from violence and fear."

HE DID NOT call it terrorism.

WHAT EVERYONE IS TALKING ABOUT -- KENNETH FRAZIER, the CEO of pharmaceutical company Merck, quit Trump's advisory panel following the president's response to the violence from neo-Nazi and white supremacists in Charlottesville. Frazier, in a statement: "America's leaders must honor our fundamental values by clearly rejecting expressions of hatred, bigotry, and group supremacy, which run counter to the American ideal that all people are created equal."

-- **Less than an hour later,** the president angrily responded, tweeting "Now that Ken Frazier of Merck Pharma has resigned from President's Manufacturing Council,he will have more time to LOWER RIPOFF DRUG PRICES!" ***More from STAT's Damian Garde*** http://bit.ly/2uCIL1d ... ***Frazier's full statement*** http://bit.ly/2uCFrBO

TRUMP'S DEFENDERS -- "White House defends Trump as criticism mounts over Charlottesville response," by Louis Nelson: "Administration officials rushed to defend President Donald Trump's response to deadly violence over the weekend at a white

supremacist rally in Virginia, with his attorney general and vice president trying to deflect criticism that Trump should have been more forceful in denouncing the hate groups that marched in Charlottesville on Saturday.

"Attorney General Jeff Sessions, who appeared on all three network TV morning shows Monday, told 'CBS This Morning' that Trump's initial statement - which did not specifically mention white supremacists but blamed 'many sides' for violence - had actually 'condemned roundly' the ideology of hate groups. Vice President Mike Pence told NBC's 'Today' show that the president's remarks 'spoke into a national moment' with 'words that the American people needed to hear.'" http://politi.co/2vTPUsl

THE LATEST ON JAMES FIELDS -- "Charlottesville Suspect James Alex Fields Jr. Denied Bond at First Court Appearance," by NBC News' Marianna Sotomayor and Corky Siemaszko: "Dressed in a black and white prison jumpsuit, James Alex Fields Jr. appeared in a Charlottesville court room via video conference from the local jail and did not enter a plea in connection with the death of 32-year-old Heather Heyer at a 'Unite The Right' march Saturday.

'No sir,' Fields answered when Chief Judge Robert H. Downer Jr. asked him if he could afford a lawyer. The 20-year-old was assigned court-appointed attorney Charles Webber and given a August 25 return court date.

"Fields told the court he earns $600 a week working for a private security company in Maumee, Ohio. During the 10-minute appearance, he mostly kept his head down and avoided looking directly into the camera. 'Yes sir,' Fields answered when Downer asked him if he understood everything that was said during the proceeding. Then Fields was marched back to his cell at the Albemarle-Charlottesville Regional Jail." http://bit.ly/2uCKq5H

THIS ISN'T GOING AWAY -- "Virginia receives request for a September rally at the Robert E. Lee monument in Richmond," by the Richmond Times-Dispatch's Patrick Wilson and Michael O'Connor: "A Confederate heritage organization has asked the state for permission to gather Sept. 16 at Richmond's Robert E. Lee monument. The rally would come roughly a month after Saturday's white nationalist protest descended into violence in Charlottesville.

"The Department of General Services has received a request from Americans for Richmond Monument Preservation for a permit to hold an event at the Lee Monument on Monument Avenue, according to Dena Potter, an agency spokeswoman, who said the application is under review and has not been approved. Potter said the request was submitted by Bragdon Bowling - a former commander of the Virginia Division, Sons of Confederate Veterans." http://bit.ly/2uCPBma

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: If you know only one fact about rising drug costs, know this one: drug makers set prices for prescription drugs. To help manage nearly double-digit price increases, employers,

unions and government programs use PBMs to negotiate lower net prices to help curb costs for employers and patients. Learn more at affordableprescriptiondrugs.org ******

RAMPED UP SECURITY -- "Powerful Venezuelan lawmaker may have issued death order against Rubio," by the Miami Herald's Patricia Mazzei: "One of Venezuela's most powerful leaders may have put out an order to kill Florida Sen. Marco Rubio, a fervent critic of the South American country's government, according to intelligence obtained by the U.S. last month.

"Though federal authorities couldn't be sure at the time if the uncorroborated threat was real, they took it seriously enough that Rubio has been guarded by a security detail for several weeks in both Washington and Miami. Believed to be behind the order: Diosdado Cabello, the influential former military chief and lawmaker from the ruling socialist party who has publicly feuded with Rubio." http://hrld.us/2uV33Nt

-- RUBIO has been spotted with a Capitol Police detail recently.

RUSSIA UPDATE -- "Obama team was warned in 2014 about Russian interference," by Ali Watkins: "The Obama administration received multiple warnings from national security officials between 2014 and 2016 that the Kremlin was ramping up its intelligence operations and building disinformation networks it could use to disrupt the U.S. political system, according to more than half a dozen current and former officials.

"As early as 2014, the administration received a report that quoted a well-connected Russian source as saying that the Kremlin was building a disinformation arm that could be used to interfere in Western democracies. The report, according to an official familiar with it, included a quote from the Russian source telling U.S. officials in Moscow, 'You have no idea how extensive these networks are in Europe ... and in the U.S., Russia has penetrated media organizations, lobbying firms, political parties, governments and militaries in all of these places.'

"That report was circulated among the National Security Council, intelligence agencies and the State Department via secure email and cable in the spring of 2014 as part of a larger assessment of Russian intentions in Ukraine, the official said. There was no explicit warning of a threat to U.S. elections, but the official said some diplomats and national-security officials in Moscow felt the administration was too quick to dismiss the possibility that the Kremlin incursions could reach the United States." http://politi.co/2uCR9MM

SUSAN GLASSER'S LATEST -- "The GOP's Civil War Over Trump," in POLITICO Magazine: "For this week's Global Politico, we convened eight prominent Republicans to answer the rapidly proliferating questions about a GOP that seems increasingly at war with itself-and heard two starkly different stories about a party that might have won the White House and both houses of Congress but sounds at times like it's more on the verge of a nervous breakdown than a national takeover. From five top Washington

insiders like Heritage Action CEO Michael Needham, Republican Main Street Partnership chief Sarah Chamberlain, and former top advisers to 2016 candidates Marco Rubio and Jeb Bush, came increasingly pointed laments about Trump's 'lack of presidential leadership,' his bombastic party-bashing tweets, absence of a governing philosophy and political compass ruled by a 'collection of impulses' rather than a coherent strategy. ...

"It is just such thinking that infuriates Trump himself and his diehard backers, as was abundantly clear when I later interviewed for The Global Politico a second group that included strategist Roger Stone, a Trump friend and adviser of decades; Kansas Secretary of State Kris Kobach, an anti-immigration activist now heading a controversial national electoral commission for Trump; and Kentucky-based commentator Scottie Nell Hughes. Not only were they not chagrined by Trump's contentious first six months of his presidency, they urged him to get even more combative-against enemies within the GOP perhaps above all." http://politi.co/2uCx8WG

TODAY'S BEYOND THE BELTWAY -- Boston braces for Free Speech Rally -- Cuomo discusses congestion prices http://politi.co/2uCFzl0

-- "Fluor Enterprises, Lane Construction on track to design, build Texas' proposed bullet train," by The Dallas Morning News' Claire Cardona http://bit.ly/2uCrwf6

TRANSITIONS -- Meghan Rae Mitchum has joined WeWork as project manager for global security operations. She previously was a senior associate at Catalyst Partners and is an alum of the W.H. Council on Environmental Quality.

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : The high prices that drug makers set for prescription drugs can put financial strain on patients, employers, unions and others who provide health care coverage to more than 50 percent of Americans. Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers, unions and government programs. But, as list prices - the starting point for those negotiations -- continue their nearly double-digit increases, the effects ripple throughout the system. The key to ensuring greater access and affordability lies in fostering greater competition. Facilitating faster reviews of generics and biosimilars, identifying off-patent drugs with little or no generic competition, and ending anti-competitive practices that keep safe, effective alternatives out of the market are also key to abating rising drug costs for patients. Learn more at affordableprescriptiondrugs.org ******

Subject: Green groups ask court to issue Clean Power Plan ruling

By Alex Guillén

08/03/2017 02:49 PM EDT

Environmental groups today asked the D.C. Circuit Court of Appeals to issue its ruling on the Obama administration's Clean Power Plan because it remains unclear when the Trump administration will propose its repeal of that rule.

The groups cite the White House's Unified Agenda, which was released last month. The document provided no deadline for proposing or finalizing the CPP repeal, which it classified as a "long-term action," those for which the agency does not expect to act for at least 12 months.

That classification "demonstrates that even the preliminary step of a *proposed* rule may be delayed for at least another year," the green groups wrote.

"These facts further underscore that this Court should not continue to postpone a decision in this fully briefed case, which was argued en banc on September 27, 2016, for a period far longer than the Supreme Court presumed when it issued its stay pending this Court's disposition of the merits," the groups wrote. "The Court should decide the case on the merits, or terminate it by remanding the case to EPA."

WHAT'S NEXT: If the court decides to consider the request, it likely will ask EPA and the CPP's challengers to weigh in first.

Testing of Certain Motor Vehicles Powered by Diesel Engines
Nevada AIR

Notice of the Department of Motor Vehicles announces the withdrawal of an Aug. 23, 2017, notice of intent to amend regulations under NAC 445B.589 concerning testing of certain motor vehicles powered by diesel engines. The rule would have required reinspection of vehicles that have failed an inspection for an improper gas or fuel cap. A concurrent proposal incorporates the action into a consolidated action. Contact: DMV; 775-684-4549

Regulatory Update

HAZARDOUS WASTE MANAGEMENT
Cleanup of Discharged Petroleum/Grant Program
Nevada HAZARDOUS WASTE MANAGEMENT

Proposed rule of the Department of Conservation and Natural Resources, Board to Review Petroleum Claims, amends regulations under NAC 590.700 and adopts regulations under NAC 590 to establish a grant program to assist petroleum storage tank owners and operators with compliance with state and federal requirements for prevention of discharges. The rule provides for funding of the purchase and installation of release prevention equipment and establishes requirements for eligibility, applications, monitoring, records maintenance, and records inspection. The rule also authorizes the department to enter into agreements with third parties to provide technical assistance to owners and operators of storage tanks. A comment due date is not specified. Driving the Day

HOW ABOUT THAT! -- @realDonaldTrump at 8:35 a.m.: "Subject to the receipt of further information, I will be allowing, as President, the long blocked and classified JFK FILES to be opened."

Good Saturday morning. WEST WING BUZZ -- Don't be surprised if you begin hearing **VETERANS AFFAIRS SECRETARY DAVID SHULKIN** is in the mix for Health and Human Services secretary. Shulkin is a doctor.

IMPORTANT RE TAX REFORM -- UPDATE ON FREEDOM CAUCUS: The House Freedom Caucus had a conference call yesterday about supporting the Senate budget. Here's what **FREEDOM CAUCUS CHAIRMAN MARK MEADOWS (R-N.C.)** told us after the call: "No official positions but the general consensus would be to support the Senate budget without going to conference, provided we can get an accelerated timetable to pass tax reform out of the House by the middle of November."

-- AMBITIOUS TIMELINE, but it's possible.

WSJ'S RICH RUBIN: "In the frenzied days ahead, the GOP will seesaw between the political necessity of obtaining a legislative win to tout in the 2018 elections and the immense difficulty of the task they've set for themselves." http://on.wsj.com/2xaA0Hs

-- "Republicans Consider Sharp Cut in 401(k) Contribution Limits," by NYT's Jim Tankersley: http://nyti.ms/2l52r8j

SNEAK PEEK -- PRESIDENT DONALD TRUMP to **MARIA BARTIROMO** on tomorrow morning's "Sunday Morning Futures":

-- ON THE TIMING FOR TAX REFORM: "[I] will say this, I want to get it by the end of the year but I'd be very disappointed if it took that long."

-- ON THE FED: BARTIROMO: "Isn't there a way that you can get Taylor and Powell in there? Because you've got a vice chairman opening as well, you can actually put them both in there. Is that in your thinking?" **TRUMP:** "It is in my thinking. And I have a couple of other things in my thinking. But I like talent. And they are both very talented people. And it's a hard decision. It's actually a very important decision. People have no -- most people have no idea how important that position is."

BANNON ON BUSH -- "Bannon faults George W. Bush for 'destructive' presidency," by AP's Michael Blood in Anaheim, California: "Former White House adviser Steve Bannon depicted former President George W. Bush as bumbling and inept, faulting him for presiding over a 'destructive' presidency during his time in the White House. Bannon's scathing remarks on Friday night amounted to a retort to a Bush speech in New York earlier this week, in which the 43rd president denounced bigotry in Trump-era American politics and warned that the rise of 'nativism,' isolationism and conspiracy theories have clouded the nation's true identity." http://bit.ly/2xcLDOd

-- CARLA MARINUCCI and **DAVID SIDERS:** "Issuing a defiant call to arms to grassroots Republicans, former White House chief strategist Steve Bannon railed Friday against dangerous 'global elites' and the Silicon Valley 'lords of technology' whom he said are robbing U.S. citizens of jobs, wealth and opportunity. 'They want all the benefits of a free society ... all the benefits of this rules based international order,' including lucrative trade deals and capital markets, he said, while 'we the citizens of the United States...underwrite the whole thing.'" http://politi.co/2yz6wXY

ON THE WORLD STAGE -- "Trump administration considers pausing U.S. refugee family reunification program," by Reuters' Yeganeh Torbati and Mica Rosenberg: "President Trump's administration has drafted a plan to pause a program that allows family members join refugees already settled in the United States until they can undergo increased security checks, two sources with knowledge of the situation told Reuters. The measure is one of several being considered for refugees ... The administration also may expand the use of intensive security checks by multiple federal agencies, called 'security advisory opinions' (SAO) to apply to women from countries designated as high-risk by the U.S. government. Currently there are usually only mandatory SAOs, as they are called, for men from those countries." http://reut.rs/2yDP6qv

COMING ATTRACTIONS -- "Niger attack fuels new push for war vote," by Connor O'Brien: "Some lawmakers, citing the deaths of four U.S. soldiers ambushed by terrorists in Niger, called on Congress on Friday to reconsider the broad war authority it granted in 2001 - as the Pentagon telegraphed that more such missions in more places are likely in the offing. The Senate Foreign Relations Committee announced it will hear testimony next week from Secretary of Defense Jim Mattis and Secretary of State Rex Tillerson on the 16-year-old Authorization for Use of Military Force that is now being

used to justify military operations in numerous countries.

"Committee Chairman Bob Corker (R-Tenn.) said in a statement that current threats make it 'perhaps more important than ever that we have a sober national conversation about Congress' constitutional role in authorizing the use of military force.' For some on Capitol Hill, the attack in Niger highlights the need for updated legislation that takes into account the myriad operations against the Islamic State in Iraq and Syria, Al Qaeda and other terrorist groups on several continents." http://politi.co/2gypuXJ

-- "Conflicting Accounts in Niger Ambush Are Subject of Pentagon Investigation," by NYT's Dionne Searcey, Helene Cooper and Eric Schmitt: "The Pentagon is trying to determine whether American forces involved in a deadly ambush in Niger this month diverted from their routine patrol to embark on an unapproved mission, military officials said on Friday. The questions have come up because the American and Nigerien soldiers on the patrol have given conflicting accounts about whether they were simply ambushed or were attacked after trying to chase Islamic insurgents, according to military officials from both countries. The episode has engulfed the White House in crisis and prompted demands from members of Congress for answers about what the soldiers were doing before the attack on Oct. 4." http://nyti.ms/2zqtgpD

-- @realDonaldTrump at 8:07 a.m.: "I hope the Fake News Media keeps talking about Wacky Congresswoman Wilson in that she, as a representative, is killing the Democrat Party!" ... **@philiprucker:** "Trump fuels this story into its sixth straight day".

****** **A message from JPMorgan Chase & Co.: 30 Years in the Waiting** It's been more than three decades since America reformed its tax system. As the world became more competitive, our tax code remained the same, putting America at a disadvantage when it comes to creating new jobs. Learn how tax reform can jump-start our economy: http://politi.co/2gBVNBD ******

MARC CAPUTO: "'Trump is messing with the wrong woman'": "Of President Trump's many opponents in Congress, none looks or sounds remotely like Rep. Frederica Wilson, the Miami Democrat known for her bedazzled, sequined-blinged hats, her vibrant matching outfits and her reputation in Florida for never backing down from a fight. But Wilson has never had an foe like Trump or a fight this personal, which began with the president's condolence call to the widow of a young soldier the congresswoman helped steer away from Miami's mean streets - only to see him die in a mysterious ambush in sub-Saharan Niger.

"Despite tough criticism and insults from the president and his allies - a top African-American Trump surrogate, former Milwaukee County Sheriff David A. Clarke, characterized Wilson as 'a buffoon' while White House Chief of Staff John Kelly teed off on her from a White House lectern - the 74-year-old Democrat hasn't flinched, firing back with caustic responses honed by years of full-contact Miami politics.

"The president is a 'jerk' and a 'liar' who 'doesn't know how to be a president,' Wilson

said. She then mocked him for raising her profile. 'You mean to tell me that I have become so important that the White House is following me and my words? Wilson laughed. 'This is amazing. That's amazing. That is absolutely phenomenal. I'll have to tell my kids that I'm a rock star now.'" http://politi.co/2yFPNzJ

-- "Video shows Kelly made inaccurate claims about lawmaker in feud over Trump's condolence call," by WaPo's David Nakamura: http://wapo.st/2yXDcLc

-- NYT: "Ms. Wilson, in an interview on Friday, called Mr. Kelly a liar and hinted strongly that the altercation, prompted by a call from President Trump to the widow of a fallen black soldier, was racially charged. 'The White House itself is full of white supremacists,' she said. 'I feel very sorry for him because he feels such a need to lie on me and I'm not even his enemy,' Ms. Wilson said of Mr. Kelly. 'I just can't even imagine why he would fabricate something like that. That is absolutely insane. I'm just flabbergasted because it's very easy to trace.'" http://nyti.ms/2iphSam

-- @ABCPolitics: "Press Sec. Sanders: 'If you want to get into a debate with a 4-star Marine general, I think that that's something highly inappropriate.'" http://bit.ly/2zrCq5v

REALITY CHECK -- "Trump stokes hopes of Obamacare repeal - setting up Senate for another failure," by Jen Haberkorn: "President Donald Trump says the Senate has the votes to repeal Obamacare. That's news to the Senate. 'I think that's aspirational,' said Majority Whip John Cornyn, who counts votes for the GOP. 'If there were 50 votes, we'd be voting,' added John Thune (R-S.D.), another member of Republican leadership.

"Repeatedly claiming that Republicans have the votes to repeal major parts of Obamacare early next year, Trump is stoking expectations that the GOP can fulfill its seven-year pledge before the 2018 midterm elections - a promise that Republicans once again might not be able to keep. The Senate, Trump says, will have the 50 votes needed to enact the bill known as Graham-Cassidy, the last of a series of repeal bids that went down in flames this summer and fall.

"The reality is that no matter what the president says at the White House or how often he says it, nothing has changed at the other end of Pennsylvania Avenue. Not a single 'no' vote has flipped to a 'yes.' When senators talk about repeal after months of failure, they are talking about hopes and dreams - not about 50 votes to pass it. 'I think eventually, I may be speaking aspirationally, eventually we'll have 50 votes for Graham-Cassidy or something like that,' Thune said." http://politi.co/2yZ2SXR

-- "ACA enrollment schedule may lock millions into unwanted health plans," by WaPo's Amy Goldstein: "Millions of Americans with insurance through the Affordable Care Act could find themselves locked into health plans they do not want for the coming year because of the Trump administration's schedule for the enrollment season that starts in less than two weeks. The complication arises when people who already have health plans under the law are automatically re-enrolled in the same plan. In the past, a few million consumers each year have been auto-enrolled and then were sent

government notices encouraging them to check whether they could find better or more affordable coverage.

"This time, according to a federal document obtained by The Washington Post, the automatic enrollment will take place after it is too late to make any changes. Auto-enrollment will occur immediately after the last day of the ACA sign-up season, which the Trump administration has shortened, leaving the vast majority of such consumers stranded without any way to switch to a plan they might prefer." http://wapo.st/2gVgmcr

PENCE WORLD -- "Financial disclosure shows unusual campaign setup for Pence chief of staff," by Matt Nussbaum and Maggie Severns: "Vice President Mike Pence's chief of staff had a lucrative 2016 campaign season even as his high-profile work on the Trump-Pence campaign was classified as unpaid volunteer work. Nick Ayers, a senior adviser to Pence during the presidential race and now his chief of staff, joined the 2016 team as a volunteer and never took a dime in salary from the Trump-Pence campaign even as he crisscrossed the country with Pence, then the Indiana governor. He served as one of Pence's top aides and prepared him for critical events, including his debate with Sen. Tim Kaine (D-Va.), the Democratic vice presidential nominee.

"But Ayers' Georgia-based political consulting firm, C5 Creative Consulting, did receive a payment of nearly $75,000 on Aug. 25 from Pence's gubernatorial re-election campaign, 40 days after Pence had been selected as Trump's running mate and withdrawn from the governor's race. In addition to the compensation from Pence's gubernatorial campaign, Ayers received significant payments from the campaign of Eric Holcomb, Pence's lieutenant governor, who sought and won the Indiana governorship after Pence joined the national ticket. Holcomb's campaign paid Ayers' firm nearly $40,000 between August 2016 and March 2017. Ayers also received payments of more than $30,000 from Missouri Gov. Eric Greitens' campaign.

"His work for multiple campaigns raises questions whether Pence's gubernatorial re-election campaign was subsidizing, in part or in full, Ayers' work for Trump - though the arrangement may have been perfectly legal, experts told POLITICO. Any payments from different campaigns for Ayers' work on the Trump-Pence campaign would qualify as an illegal in-kind contribution, but there is no indication that this took place." http://politi.co/2iqDB1U

-- "VP Mike Pence in Brown County this weekend for wedding celebration," by Mary Shown in the Herald-Times of Bloomington, Indiana: "A white 757 airplane emblazoned with 'United States of America' across the side was parked on a tarmac at Columbus Municipal Airport at noon Friday. According to Columbus Municipal Airport officials, this is the second time Pence has landed at the airport in Air Force Two since becoming vice president. Officials also said Secret Service personnel arrived at the airport Monday and have been in the area ever since. ...

"The celebration Saturday at Brown County State Park is for Michael Pence Jr. and

his wife, Sarah. The two were married in December 2016 at the Governor's Mansion in Indianapolis just before the January inauguration of Pence and President Donald Trump." http://bit.ly/2yyq7rk

WORTH THE CLICK - "10 Minutes. 12 Gunfire Bursts. 30 Videos. Mapping the Las Vegas Massacre," by NYT's Malachy Browne, Drew Jordan, Nicole Fineman and Chris Cirillo: "The shots began at 10:05. Twelve bursts of gunfire later, police broke down Stephen Paddock's door at the Mandalay Bay. Using forensic analysis, The Times mapped 30 videos that show a vivid picture of what happened that night." http://nyti.ms/2yErOCx

FOR YOUR RADAR -- "Spanish PM seeks Senate backing to take over Catalonia govt," by AP's Aritz Parra in Barcelona: "The Spanish government moved decisively Saturday to use a previously untapped constitutional power so it can take control of Catalonia and derail the independence movement led by separatist politicians in the prosperous industrial region. ... [T]he country ... faces its most grave institutional crisis in decades." http://bit.ly/2xVhlJO

AT THE COURTS-- "Appeals court looks for compromise on abortion for undocumented minor," by Renuka Rayasam and Josh Gerstein: "A federal appeals court is seeking to defuse a high-profile abortion standoff by giving the Trump administration until the end of the month to find a sponsor for an undocumented pregnant minor being held in a federally-funded shelter in Texas. In the decision issued late Friday, a three-judge panel split 2-1, overturning a decision from a federal judge issued earlier this week that would have allowed the 17-year old girl to have the abortion immediately.

"Instead the D.C. Circuit Court of Appeals ruling, apparently devised by Judge Brett Kavanaugh, opted to find a path that would dispose of the case without making any precedent-setting decisions. The ruling stated that once federal authorities could find a suitable sponsor for the girl, the administration would have to allow her to follow state law to receive the abortion. If the administration can't find a sponsor, a federal district court judge would again have the chance to step in and re-issue the order requiring the administration to permit the teen to leave the shelter for an abortion." http://politi.co/2gs6beS

VALLEY TALK - MAUREEN DOWD in the **NYT, "Uber's Whistle-Blower Is Developing a Movie and Having a Baby":** "In her first interview since the essay that

started a wave of sexual-harassment revelations, Susan Fowler tells her life story and looks to the future." http://nyti.ms/2I7kkn2

MEDIAWATCH -- FIRST PERSON -- "I interviewed an executive in his underwear to get the job done," by USA Today's Joanne Lipman: "In my first job, as a 22-year-old newspaper reporter, I went to interview a businessman. He ushered me into his office. He locked the door. Then he stripped to his underwear. This was in the 1980s, at a time when women didn't call behavior like his 'sexual harassment.' We called it ... going to work. So I did what other women in my place would have done. I interviewed him in his underwear. Then I got out as fast as I could." https://usat.ly/2zrs8Ck

MARK PRESTON interviews **ADMIRAL KIRBY --** Retired Rear Admiral John Kirby discussed military and political issues on Mark Preston's SiriusXM show "Full Stop with Mark Preston." The show airs Saturday at noon and Sunday at 5 p.m. on SiriusXM channel 124. **Clips for Playbookers: *Gen. John Kelly's WH briefing room appearance*** http://bit.ly/2zErPVx ... ***Trump's performance so far as commander-in-chief*** http://bit.ly/2gyfEF3... ***Morale in the military*** http://bit.ly/2yY4kKd ... ***Concern about the growing gap between the military and American society*** http://bit.ly/2gVDKGN

****** **A message from JPMorgan Chase & Co.: Keeping Jobs at Home** America is falling behind when it comes to a tax system that helps spur job growth and expand economic opportunity. A 2017 EY report found that the existing tax structure has put job creators here at home at a disadvantage: updating the outdated tax system could have kept nearly 4,700 companies in the United States. That could mean more products made here in America, more parts sourced from American companies and billions of dollars spent here at home. As JPMorgan Chase Chairman and CEO Jamie Dimon put it, "Reforming the tax code is the single most important thing that Congress could do to jump-start our economy, create jobs, and raise wages for American workers." GREAT WEEKEND READS, curated by Daniel Lippman:

-- "Rigged: How Voter Suppression Threw Wisconsin to Trump," by Ari Berman in the Nov./Dec. issue of Mother Jones - per Longreads.com's description: "Berman investigates how increasingly restrictive voting laws in states like Wisconsin had an impact on the 2016 presidential election - and most likely tipped it in favor of Donald Trump." http://bit.ly/2zGSUaO

-- "The Dirty Secret of War: It Can be As Compelling As it is Ugly," by Philip Caputo (Marc Caputo's father) on Lit Hub: "Everyone accepts that war is ugly and horrible.

Civilized people, however, don't accept that it is also alarmingly attractive. This is another truth as old as war itself, and one that Homer was aware of. The phrase, 'the joy of battle' occurs frequently in his verses." http://bit.ly/2l4hOhb

-- **"The Boomtown That Shouldn't Exist,"** by Mike Grunwald in the Friday cover of POLITICO Magazine: "Cape Coral, Florida, was built on total lies. One big storm could wipe it off the map. Oh, and it's also the fastest-growing city in the United States." http://politi.co/2yXDEJo

-- **"The science of spying: how the CIA secretly recruits academics,"** by Daniel Golden in The Guardian: "In order to tempt nuclear scientists from countries such as Iran or North Korea to defect, U.S. spy agencies routinely send agents to academic conferences - or even host their own fake ones." http://bit.ly/2gW29w7

-- **"A Fire's First, Fatal Hours"** - San Francisco Chronicle: "A monster firestorm became unstoppable almost as soon as it started." http://bit.ly/2irYtpb (h/t Longform.org)

-- **"What Facebook Did to American Democracy,"** by Alexis C. Madrigal in The Atlantic: "The very roots of the electoral system - the news people see, the events they think happened, the information they digest - has been destabilized." http://theatln.tc/2l5SMyc

-- **"Going 'Instagram official' is the new way to declare your relationship status,"** by Taylor Lorenz, whose birthday is today, in Medium: "[I]n 2017, the Facebook relationship status is dead and if you really want the world to know someone has stolen your heart there's only one way to go: make it Instagram official. [That] means posting a photo of you and your significant other, generally looking casual yet cute, to your Instagram page accompanied by a somewhat ambiguous caption or series of emoji." http://bit.ly/2yxUJJm

-- **"'We Need to Develop Political Heroism,'"** by Klaus Brinkbäumer, Julia Amalia Heyer and Britta Sandberg in Der Spiegel -- French president Emmanuel Macron tells the publication in an interview: "France is a country of regicidal monarchists. It is a paradox: The French want to elect a king, but they would like to be able to overthrow him whenever they want. The office of president is not a normal office." http://bit.ly/2zrDXIz

-- **"A Catfishing With a Happy Ending,"** by Jeff Maysh in The Atlantic - per Longform.org's description: "Emma Perrier was deceived by an older man on the internet-and then she found love with the model whose photographs he had stolen." http://theatln.tc/2zFwNIc

-- **"Welcoming Our New Robot Overlords,"** by Sheelah Kolhatkar in The New Yorker: "Once, robots assisted human workers. Now it's the other way around." http://bit.ly/2yY38pV

-- **"The scientists persuading terrorists to spill their secrets,"** by Ian Leslie in The Guardian: "Expert interrogators know torture doesn't work - but until now, nobody could prove it. By analysing hundreds of top-secret interviews with terror suspects, two British scientists have revolutionised the art of extracting the truth." http://bit.ly/2xd2rF2

-- **"Everest at the Bottom of the Sea,"** by Bucky McMahon in Esquire: "When the ocean liner Andrea Doria sank south of Cape Cod, she took fifty-one with her. Since then she's taken twelve more, five in the last two summers alone. On this very day, a man is strapping on two hundred pounds of scuba gear to make the descent, to bring back a little souvenir from the boat's gift shop, to possibly never return." http://bit.ly/2l5SwiO

-- **"Thinking Like a Mountain: On Nature Writing,"** by Jedediah Purdy in n+1 magazine: "Every inhabited continent has been denuded of ecosystems and species. Most North American places have shed wolves, elk, moose, brown bears, panthers, bison, and a variety of fish and wild plants, which were all abundant four hundred years ago. Before those species were driven out, there was the slaughter of the mammoth, the ground sloth, the wild horse." http://bit.ly/2xbUPCv (h/t TheBrowser.com)

SPOTTED IN NYC at a birthday party last night for Jonathan Prince, thrown by his wife, Jennifer Swanson at Red Hook last night: Stephen Prince, John Heilemann and Diana Rhoten, Karen Avrich, Danny Strong, Brian Steel and Eileen Libutti, Mike Feldman, Jake Siewert and Christine Anderson, Evan Ryan and Tony Blinken, Jordan Tamagni and Michael Schlein, Giovanna Gray and Joe Lockhart, Nicole Elkon and Neal Wolin, Josh King and Amy Theobald.

WELCOME TO THE WORLD - MATT DAVID, senior strategist at Edelman and Huntsman, Schwarzenegger, and McCain alum, and **MAGGIE DAVID,** a public affairs consultant, email friends and family: "Magdalene (Lena) Alexandra Sue David was born [Thursday] night at 10:44 p.m. PDT. Her first name comes from her maternal grandmother; Alexandra is after her maternal great grandmother; and, Sue is after her paternal great grandmother. ... Mom and baby are healthy and resting." ***Pic*** http://politi.co/2yJ4Ri7

BIRTHDAYS: Hope Hicks is 29 (***see Sarah Sanders' birthday shout-out to Hope yesterday at the briefing:*** http://bit.ly/2hUNHE9) ... Megan Smith, former U.S. C.T.O. who recently got inducted into the National Academy of Engineering (hat tip: Hilary Rosen) ... Tina Andreadis ... Israeli Prime Minister Benjamin Netanyahu is 68 ... Vikrum Aiyer, public policy and strategic comms at Postmates and an Obama alum ... Edith Gregson (h/ts Tim and Kiki Burger) ... NYT's Mikayla Bouchard (h/t Grant Rumley) ... Cate Martel, national political reporter at the Hill ... Brian Doory ... Ron Litman ... Axios' Kim Hart ... Lindsay Curren ... Max Goetschel ... Rep. Pat Tiberi (R-Ohio) is 55 ... former Rep. Jerry Lewis (R-Calif.) is 83 ... Politico's Ben Lefebvre, Hannah Edwards, Alyssa Fields, and Rachel Jongerius ... CTV's Will Dugan ...

... Taylor Lorenz of The Hill ... FEMA chief of staff Eric Heighberger (h/t Ed Cash) ... Charlie Joughin ... Mark Glaze ... Jon Rawlson ... Steve Odland, CEO of the Committee for Economic Development ... Jason Czerwiec ... Edelman's Alex Abrahamson, Charlotte Stewart and Kia Seals ... Gyan Parida ... Alison Baker (h/t Jon Haber) ...

Stavros Drakoularakos ... Lauren Waldron ... Sam Hiersteiner ... Clare Pritchett Lorimer ... Linda Nguyen ... Whitey Ford ... Mike Fazzino ... Jamie Novogrod ... Jonathan Poe ... Lorraine Kuchmy ... Gyan Parida ... Mandy Fletcher Fraher ... Courtney Lukitsch, principal at Gotham PR ... Anna Schecter Zigler ... David Brunton (h/t Teresa Vilmain)

THE SHOWS, by @MattMackowiak, filing from Austin:

-- CBS's "Face the Nation": OMB Director Mick Mulvaney ... Sen. James Lankford (R-Okla.) ... Khizr Khan. Panel: Jamelle Bouie, Michael Duffy, Susan Glasser and Rich Lowry ... former NFL player and Green Beret Nate Boyer (U.S. Army, Ret.)

-- CNN's "State of the Union": Senate Majority Leader Mitch McConnell (R-Ky.) ... Sen. Sherrod Brown (D-Ohio). Panel: Jen Psaki, Rick Santorum, Bakari Sellers and Evan McMullin (substitute anchor: CNN's Dana Bash)

-- NBC's "Meet the Press": Interviews with female U.S. senators about sexual harassment, including Sens. Claire McCaskill (D-Mo), Mazie Hirono (D-Hawaii), Elizabeth Warren (D-Mass.) and Heidi Heitkamp (D-N.D.) ... Senate Minority Leader Chuck Schumer (D-N.Y.) ... Sen. Lindsey Graham (R-S.C.). Panel: Bob Costa, Danielle Pletka, Helene Cooper and Tom Friedman

-- ABC's "This Week": David Petraeus ... 'Long Road Home' panel with SFC Eric Bourquin (U.S. Army, Ret.), U.S. Army wife Gina Denomy and "The Long Road Home" actor Michael Kelly. Panel: Matthew Dowd, Cokie Roberts, Perry Bacon, Jr. and Eliana Johnson

-- "Fox News Sunday": White House Press Secretary Sarah Huckabee Sanders ... OMB Director Mick Mulvaney ... Attorney General Xavier Becerra (D-Calif.) ... Senate Majority Leader Mitch McConnell (R-Ky.). Panel: Jason Chaffetz, Julie Pace, Matthew Continetti and Juan Williams (substitute anchor: Fox News' Dana Perino)

-- Fox News' "Sunday Morning Futures": President Donald Trump ... Newt Gingrich. Panel: Brad Blakeman and Jon Hilsenrath

-- Fox News' "MediaBuzz": Harris Faulkner ... Kimberly Guilfoyle ... Jessica Tarlov ... Trish Regan ... Shelby Holliday ... Carley Shimkus

-- CNN's "Inside Politics" with John King: Julie Hirschfield Davis, Jeff Zeleny, Kimberly Atkins and Phil Mattingly

-- CNN's "Fareed Zakaria GPS": Panel: Norman Roule, David Sanger and Anne-Marie Slaughter ... Jiayang Fan ... Canadian Foreign Affairs Minister Chrystia Freeland

-- CNN's "Reliable Sources": Olivia Nuzzi, Brian Karem and John Kirby ... Don Shipley and Geoff Ziezulewicz ... Eve Burton ... Gretchen Carlson ... Noah Rothman

-- Univision's "Al Punto": Former U.S. Treasurer Rosario Marin Lydia Cacho ... Puerto Rico resident commissioner Jenniffer González-Colón ... Richard Spencer ... Sen. Cory Booker (D-N.J.) ... John Leguizamo ... International Commission Against Impunity in Guatemala (CICG) head Ivan Velásquez

-- C-SPAN: "The Communicators": A look at how Russia used Facebook to send political ads to Americans in the 2016 election with ProPublica's Julia Angwin and Axios' David McCabe ... **"Newsmakers":** National Counterterrorism Center director Nicholas Rasmussen, questioned by AP's Deb Reichmann and the LA Times' Brian Bennett ... **"Q&A":** Paralyzed Veterans of America executive director Sherman Gillums, Jr.

****** **A message from JPMorgan Chase & Co.: Investing in America** The American economy powers the world, but our tax system is holding us back. A 2017 EY report found that reforming the tax system could have brought an additional $195 billion of foreign direct investment into the United States, an increase of 14 percent. That investment can help companies expand, explore new strategies and grow. What does that mean for America? It can help jumpstart our economy, make our country stronger in an increasingly competitive world, and can mean more jobs and higher wages for the American workers. Learn more about what tax reform can mean for our country: http://politi.co/2ghszvf ******

Subject: POLITICO's Morning Energy, presented by ExxonMobil: Fireworks expected as White, Wheeler head to EPW — Democrats demand EPA officials testify — Reading the leaves on FERC comments

By Anthony Adragna | 11/08/2017 09:58 AM EDT

With help from Alex Guillén, Esther Whieldon, Darius Dixon and Eric Wolff

EPW TAKES UP WHEELER, WHITE NOMS: The Senate Environment and Public Works Committee will hear from two high-profile environmental nominees today: Andrew Wheeler for deputy EPA administrator and Kathleen Hartnett White to lead the White House's Council on Environmental Quality. White has a long history of controversial statements for Democrats to pull from, including her belief that "carbon dioxide is not a pollutant," her declaration that those who believe in climate change subscribe to a "kind of paganism " for "secular elites," and her 2014 blog post arguing fossil fuels helped end slavery in America.

But White's biggest liability may prove to be her position on the Renewable Fuel Standard. As ME wrote last week, Republican Sens. Deb Fischer and Joni Ernst are wary of White, who in 2013 called for repeal of the "counterproductive and ethically dubious" RFS. A single EPW defection could tank White's nomination, and Ernst proved last month with EPA air nominee William Wehrum that she's willing to walk the walk when defending ethanol.

Ranking member Tom Carper summed up his questions for White to ME: "I just want to ask her, 'Did you really say those things?' And there's a lot of them." Ahead of the hearing, nearly 50 environmental advocates sent a letter urging the committee to oppose her nomination. "Ms. White is unfit to hold the highest environmental post in the government to advise the president on the most pressing environmental issues our nation faces," the letter, signed by groups such as 350.org, the Natural Resources Defense Council and the Sierra Club, said.

More familiar face: Wheeler, meanwhile, is a known quantity for lawmakers who have been around for a while. He worked for Sen. Jim Inhofe in various capacities until 2009, when he departed as EPW staff director. He's been an attorney and lobbyist at Faegre Baker Daniels ever since, with his most notable client being Murray Energy, whose owner has proven adept at influencing the Trump administration. ME will be watching to see whether lawmakers delve into Wheeler's work with the ethanol group Growth Energy, which was first reported by POLITICO last month.

If you go: The hearing is at 10 a.m. in Dirksen 406.

BRIDENSTINE GETS COMMITTEE VOTE: The Senate Commerce Committee votes on Oklahoma Republican Rep. Jim Bridenstine's nomination to run NASA at 9:45 a.m. along with several other nominations. He's faced sharp criticism from Democrats, including ranking member Bill Nelson who slammed him in the nomination during his confirmation hearing: "NASA is not political. The leader should not be political." The panel also votes on Neil Jacobs'

selection for another top NOAA post.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and the American Chemistry Council's Jonathan Corley was first to identify Sen. John Hoeven as the past president of North Dakota's state bank. For today: The father of which senator served three terms of governor of their state before corruption convictions ended their career? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

[GUIDE TO TAX REFORM] Easily understand and explain tax reform. Tax reform is complicated, to say the least. Download POLITICO Pro's Guide to Tax Reform and become an expert. Includes six tax-related infographics. GET YOUR GUIDE TO TAX REFORM.

BIG NIGHT FOR DEMOCRATS: The League of Conservation Voters' $4 million investment in Virginia races paid off handsomely as Lt. Gov. Ralph Northam trounced Republican Ed Gillespie to become the commonwealth's next governor. In New Jersey, Democrat Phil Murphy (also backed by green groups) decisively beat Lt. Gov. Kim Guadagno for the governorship. In Flint, Mich., Mayor Karen Weaver survived a recall attempt by a wide margin. And Democrat Manka Dhingra appeared poised to win a Washington state Senate seat, effectively handing control of the entire state government to her party in a special election that drew millions in outside spending.

DEMOCRATS: IT'S TIME! More than 10 months after his confirmation, Senate and House Democrats are officially fed up with EPA Administrator Scott Pruitt's absence from congressional oversight hearings. After calling the lack of agency witnesses "unacceptable" during a Tuesday hearing, Energy and Commerce ranking member Frank Pallone demanded Chairman Greg Walden hold oversight hearings on EPA's review and management of chemicals under the revised Toxic Substances Control Act. "The Committee bears a responsibility to the American public to make sure EPA is protecting human health and the environment," he wrote, joined by senior committee Democrats Paul Tonko and Diana DeGette.

Not alone: All 16 Democrats on the House Science Committee sent their own letter to Chairman Lamar Smith demanding Pruitt come testify "as soon as possible," pointing out Gina McCarthy came before the full panel just four months after confirmation. "Not only is such oversight routine, but as a public official Administrator Pruitt has an obligation to address his conduct and management of EPA," they wrote.

And Carper too: "I wonder what my friend John Barrasso would have said if Gina McCarthy had refused to come before our committee for months? I wonder what my Republican EPW colleagues would have said if our committee hadn't held a single oversight hearing after a Democratic administration had issued multiple environmental executive orders and was the subject of several ongoing investigations? I heard them push for transparency for eight years, but suddenly there's silence over the last eight months."

TELL ME HOW YOU REALLY FEEL ABOUT THE DOE RULE (AGAIN!): Reply comments were due at FERC Tuesday night, and there was no less passion in this set of filings

than in the first round two weeks ago. But ME was hard-pressed to see if anyone had really budged from their positions. FirstEnergy's comments started with a refrain that was almost poetic. "This proceeding is not about picking fuel supply winners and losers. This proceeding is not about the reliability of natural gas pipelines... This proceeding is not about the Polar Vortex...," former FERC general counsel Bill Scherman wrote on the company's behalf. Instead, the company pressed for its own resiliency tariffs that would serve as a Band-Aid until new market rules were crafted. "Simply put, the imminent closure of resilient generation presents a clear and present danger to the Nation," Scherman wrote, echoing the call of Energy Secretary Rick Perry. "If the Commission does not act now, our national security will be put at risk."

Where FirstEnergy downplayed the usefulness of the 2014 "polar vortex," Murray Energy argued the critics just don't get it. "During the Polar Vortex, the country was relying on an unacceptably high percentage of interruptible gas-fired generation," the company said. There's been too much talk as it is, Murray said, and "FERC appears to have lost its moorings." Murray's filing even refers to an article by House Science Chairman Lamar Smith to tally how the federal government has repeatedly created energy subsidies with everything from tax policy to R&D funding.

Among those who tried to find middle ground was PJM itself, a critic and central target of Perry's plan, arguing that FERC should approve an alternative proposal that instructs all the grid operators to report back with new pricing or tariff proposals within 180 days. It also suggests creating a new docket aimed at defining resilience.

SOLAR FOR PUERTO RICO: The Solar Foundation, along with a host of companies and the Clinton Foundation, is launching an industry-wide push to get the lights back on in Puerto Rico and the U.S. Virgin Islands. Initial priorities will be restoring electricity to two food markets in San Juan and 62 rural medical clinics around the island. More on the project, Solar Saves Lives, available here.

** **Presented by ExxonMobil:** We're collaborating with FuelCell Energy on a novel idea to use fuel cells to capture carbon at natural gas power plants, and in the process reduce emissions and increase electrical output. This technology could be a game changer in addressing the world's growing need for energy, while also reducing the impact on the environment. Learn more. **

HYDROPOWER BILL STREAMS ONTO FLOOR: House lawmakers are expected today to consider H.R. 3043 (115), which would revamp the licensing process for hydropower projects. Ahead of the vote, utility and labor groups sent a letter encouraging support for what they called "a moderate proposal developed with bipartisan input" and warned "the current regulatory environment is placing hydropower at risk."

MODERATE CLIMATE REPUBLICAN HEADS FOR THE EXITS: South Jersey Republican Rep. Frank LoBiondo, one of the few congressional GOPers to land environmental group endorsements in recent years, will retire from Congress. With LoBiondo and Rep. Dave Reichert departing at the end of this Congress, Reps. Chris Smith and Leonard Lance will be the two remaining House Republicans that backed cap and trade legislation in 2009.

LET'S KICK AGAIN? Chatter's already getting louder that Congress may have to consider another kick-the-can extension of government funding by Dec. 8 to keep the lights on, but top Appropriators aren't throwing in the towel yet, Pro Budget & Appropriations Jennifer Scholtes and Sarah Ferris report. "So, hopefully, if we consider one, it will be very, very short," Appropriations Chairman Rodney Frelinghuysen told them. Others say it's too early to give up. "I don't think we even need to be thinking about a CR," says Hal Rogers, who endured tough spending negotiations many times in his six years of chairing the House Appropriations panel.

TRUMP RELATIVE MOVES UP AT DOE: Kyle Yunaska, brother-in-law to Eric Trump, seems to be climbing the ladder at the Energy Department's Energy Policy and Systems Analysis office recently, adding the title of chief of staff to his resume, in addition to his senior adviser role. A DOE source told ME that Sean Cunningham, the head of EPSA, made the announcement in a staff email last week. Yunaska joined DOE early this year as a member of the "beachhead" team. His sister, Lara, married the president's son in 2014. (Greenwire first reported the move.)

ZINKE HIRES FORMER NAVY SEALS TO KEY ROLES: Interior Secretary Ryan Zinke has hired former Navy Seal Mike Argo as deputy chief of staff and former SEAL Captain Rick May to head up the agency's focus on increasing recreation opportunities on public land. Speaking at a webcast honoring veterans event in Interior's Washington headquarters, Zinke, who is himself a former SEAL, said "we're bringing recreation back."

MARKING ON UP: Nine bills are on the House Natural Resources Committee mark up agenda today, but most of the attention will be on the SECURE American Energy Act H.R. 4239 (115). Among other provisions, the bill would give more oil and gas permitting power to the states, create an offshore oil and gas revenue program for East Coast drilling and roll back Obama-era offshore drilling rules. ME hears the measure may be fast-tracked to the floor as quickly as next week. Also of note: H.R. 2907 (115) from Rep. Scott Tipton, which would require an all-of-the-above quadrennial federal onshore energy production strategy.

PANELS LOOKS AT GEOENGINEERING LATEST: Two House Science subcommittees today take a look at the latest technologies and possibilities concerning geoengineering, in which humans attempt to alter the worldwide climate system in effort to avoid human-caused climate change. The committee will hear from experts on reducing the total sunlight hitting the earth and pulling carbon from atmosphere. But ahead of the session, nearly two dozen leading proponents warn the committee in a letter that geoengineering should not be viewed as a substitute for swift action to curb greenhouse gases that are fueling climate change. "Geoengineering is not a silver bullet, and treating it as one could greatly increase already severe climate change risks," they wrote. The hearing kicks off at 10 a.m. in Rayburn 2318.

MAIL CALL! DON'T EXPAND CCS CREDITS: More than 40 environmental groups released a letter Tuesday urging lawmakers not to include an expansion and extension of the Section 45Q tax credit for carbon capture and sequestration in an emerging tax package. A second letter warned efforts to subsidize CCS technologies are "false solutions" to climate change and impose significant burdens on communities on the front lines.

CHANGE COURSE! Sixty-two members of Congress, led by Rep. Bill Foster, asked Pruitt to

reverse a policy instituted last week barring any scientists receiving agency funds from serving on scientific advisory boards. Letter here.

NOT TO BE LEFT OUT: Representatives from the hydropower, biomass power, waste-to-energy and biogas industries sent a letter to the top Republican tax writers asking them to "provide parity and a level playing field for all renewable energy technologies" as they work on the tax package. HR1 "would extend the same tax treatment to fiber-optic solar energy, fuel cells and small wind energy property that is afforded solar technology under current law," they write. "However, the bill fails to provide equal treatment for hydropower, biomass power, waste-to-energy and biogas."

COMMERCE SET TO DO ITS BIODIESEL DUTY: The Commerce Department is expected to announce a final decision on its countervailing duties and anti-dumping cases against Argentine and Indonesian imports of biodiesel. Commerce has already started collecting the duty after making a preliminary determination that both countries were undercutting U.S. biodiesel.

EPA SEEKS REMAND OF PARTS OF COAL ASH RULE AHEAD OF ARGUMENTS: EPA on Tuesday asked the D.C. Circuit Court of Appeals to remand key parts of the coal ash rule to the agency for reconsideration ahead of Nov. 20 oral arguments that could see the case put on ice. The court in September said it would not put the case on hold indefinitely while EPA reconsiders the rule, though it did order attorneys for all sides to be prepared to discuss abeyance at arguments. In a new motion, EPA asks that five specific parts of the rule be remanded without being vacated, meaning they would remain in place while EPA reworks them. Because it is reconsidering the rule, EPA argued, its attorneys "will likely be unable to represent EPA's present position on these issues at oral argument."

Four of the provisions are related to challenges brought by industry groups: rules for temporary coal ash piles; EPA's rules for inactive ponds; a lack of a risk-based compliance option; and a provision dealing with large piles of coal ash intended for "beneficial use" in products like wallboard. The fifth provision, dealing with regulation of legacy ponds, was raised by environmental groups. The industry challengers had no problem with the remand request, but greens plan to object to their provision being remanded.

APPROVED: The California State Water Resources Control Board green lighted a 10-year plan for adding new wildlife habitat and curbing toxic dust from the Salton Sea lake in Southern California, Pro's Esther Whieldon reports.

PERRY SPEAKS... ON TAX OVERHAUL: Even as he attends meetings this week in Paris, Energy Secretary Rick Perry released an op-ed in Syracuse, N.Y.'s local paper Tuesday strongly backing Republican tax overhaul efforts. "Americans deserve a low tax climate and responsible regulation to spur the economic and energy revolution we have been waiting for," the former Texas governor wrote.

NOT MINCING WORDS: Actor Alec Baldwin didn't hold back on his dislike of Pruitt during an interview with *Entertainment Weekly*. "He's done more damage to one department than anyone in American history," Baldwin, who plays Trump on SNL, said. "It's like being in a

vegetarian restaurant and the chef decides he's only gonna cook steak, to insist everyone eat a meal that's abhorrent to them."

QUICK HITS

- Severe air pollution declared public health emergency in Delhi, India. ABC News.

Subject: ICYMI: EPA Administrator Scott Pruitt Visits Gold King

In Case You Missed It ...

EPA Administrator Scott Pruitt Visits Gold King

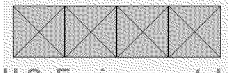
The Durango Herald: EPA chief tours Gold King Mine. "[Durango City Councilors Dean] Brookie told the Herald afterward that Pruitt seemed to have a good understanding of the reality and expanse of the Bonita Peak Mining District Superfund area, which spans 48 mining-related sites in the Animas watershed. Brookie said Pruitt repeatedly expressed 'total commitment' to continue to fund the cleanup and reassured the group that the area is atop his list of priorities. 'It seemed they were here to express their desire to do this comprehensively and expeditiously,' Brookie said. 'And I don't think it was a token visit for political purposes of any kind.'" (The Durango Herald, 08/04/17)

The Denver Post: Scott Pruitt says EPA "walked away" from Colorado after Gold King spill, commits to making Silverton clean-up a priority. "Environmental Protection Agency chief Scott Pruitt says his agency "walked away" from Colorado after the Gold King Mine spill under the Obama administration, vowing Friday to make a federal cleanup of the Gold King and other abandoned mines around Silverton a priority." (The Denver Post, 08/04/17)

Reuters: EPA to review previously denied claims from Colorado mine spill. "The Obama administration 'failed' the public when it rejected damages sought by local governments, businesses and others affected by the spill at the Gold King Mine, Pruitt said in a statement. 'EPA should be held to the same standard as those we regulate,' he said. 'A new review is paramount to ensure that those who have, in fact, suffered losses have a fair opportunity to have their claims heard.'" (Reuters, 08/04/17)

The Colorado Springs Gazette: EPA chief Pruitt blasts predecessor as he visits Gold King Mine spill site. "Two years after the Las Animas River was turned a bright yellow from the Gold King Mine spill, Colorado politicians remain confident the federal Environmental Protection Agency will eventually address the contamination. EPA Administrator Scott Pruitt toured the mine Friday accompanied by Colorado's U.S. Sens. Cory Gardner and Michael Bennet, Gov. John Hickenlooper and 3rd Congressional District Rep. Scott Tipton. … Durango Mayor Dick White applauded Pruitt for recognizing the Gold King Mine spill cleanup as an environmental priority and vowing to reconsider 79 claimants whose requests were rejected under his predecessor, Gina McCarthy. 'The cleanup is a long process. It won't be done tomorrow. But like the administrator said today during our tour, it is a priority,' White said." (The Colorado Springs Gazette, 08/05/17)

The Salt Lake Tribune: EPA chief to reconsider paying claims over mine waste spill in Utah, Colorado and New Mexico. "EPA Administrator Scott Pruitt, who toured Gold King Mine with Colorado lawmakers on the eve of the disaster's second anniversary, said he told people to resubmit claims rejected under the Obama administration. It's not clear if the agency could pay on its own or how much of the potential payouts would need to be approved by Congress. The spill sent 3 million



gallons of tainted wastewater from the old gold mine into rivers in Colorado, New Mexico and Utah, causing an estimated $420 million in economic damages. The EPA has designated the area a Superfund site to pay for a broad cleanup." (The Salt Lake Tribune, 08/04/17)

The Washington Examiner: EPA's Scott Pruitt scolds Obama on Gold King Mine spill's two-year anniversary. "Environmental Protection Agency Administrator Scott Pruitt marked the two-year anniversary of the Gold King Mine disaster in Colorado on Friday by pointing out how the Obama administration erred in causing the massive 3 million gallons toxic spill. 'We want to make sure things are done right,' Pruitt told local news ahead of touring the mine site. 'If anyone else would have done what the EPA had done under Obama, with respect to this spill, they would have likely been put in jail.'" (The Washington Examiner, 08/04/17)

The Daily Caller: On Gold King Mine Spill Anniversary, EPA's Pruitt Says Obama 'Failed' To Protect The Environment. "The Obama administration and Congress investigated the mine spill, but no employees or contractors have been punished or charged. In fact, The Daily Caller News Foundation's Investigative Group recently learned federal investigators were keeping information on the Gold King Mine probe secret." (The Daily Caller, 08/05/17)

Subject: Morning Energy: Trump's 2-for-1 reg order gets day in court — A detour on the road from Montreal to Kigali — Heartland backing Pruitt's uphill climate fight

By Esther Whieldon | 08/10/2017 05:40 AM EDT

With help from Emily Holden and Alex Guillén

TRUMP'S 2-FOR-1 REG ORDER GOES TO COURT : A federal judge will hold a hearing this morning on President Donald Trump's "2-for-1" regulatory executive order that directed agencies to identify two rules for revision or repeal for every one they finalized. Three groups — the Natural Resources Defense Council, Public Citizen and the Communications Workers of America — will argue Trump's order is unlawful and endangers public welfare by threatening health and safety rules. The administration says Trump's order is a valid exercise of presidential authority and doesn't require agencies to do more than identify potential rules to cut. The White House also argues it is too early to challenge the order, and the groups must wait for an agency to act on it before going to court. The 10 a.m. hearing at the U.S. District Court will be held before Judge Randolph D. Moss, an Obama appointee.

A DETOUR ON THE ROAD FROM MONTREAL TO KIGALI: Finding ways to get the U.S. to comply with an international treaty to limit the use of a heat-trapping chemical got more difficult this week, Pro's Eric Wolff reports. The D.C. Circuit Court's decision to block EPA from using a key section of the Clean Air Act to rein in hydrofluorocarbons means there won't be a simple way for the U.S. to implement the Kigali amendment to the Montreal Protocol.

The way is long, and uncertain: Treaty backers now must not only sell the Senate on ratification, they must persuade both chambers of Congress to write implementing legislation if the treaty is affirmed. Either that or they'll have to persuade EPA Administrator Scott Pruitt to use the agency's power to regulation chemicals under the Toxic Substances Control Act. And even though the move is backed by business interests, getting Pruitt to write a new climate regulation would be no small feat. Treaty proponents must still convince a skeptical Trump administration, which has been dismissive of both multi-party treaties and climate science, on bringing the treaty to Congress.

Green groups are looking for a short cut: NRDC's David Doniger says they group is exploring an en banc appeal of Tuesday's court ruling. If that were to succeed, the rule would go back into effect, and treaty backers can go back to focusing on the Senate.

HEARTLAND BACKING PRUITT'S UPHILL CLIMATE FIGHT: The Heartland Institute, a group that rejects climate science, is voicing its support for EPA's Pruitt to challenge a finding that EPA must limit greenhouse gas emissions. The group's comments follow POLITICO's reporting that other conservative allies of the administration haven't endorsed that strategy. "A lot of resources will be expended in fighting this," H. Sterling Burnett, a Heartland research fellow, told ME. "Ultimately if you don't overturn the endangerment finding, Trump or whoever comes after him will have to impose their own carbon restrictions. ... You can't get around it."

Burnett argues climate models are often wrong and can't show with certainty that humans are causing climate change. A draft report from federal climate scientists that emerged on Tuesday contradicts that view. Burnett says Pruitt could challenge the endangerment finding on procedural or scientific grounds and should pursue both, although EPA might not finish the fight before the end of the Trump administration.

FALSE ALARM AT EPA: D.C. Police and Federal Protective Service officers responded to reports of gunshots inside EPA's Pennsylvania Ave. headquarters around 5 p.m. Wednesday, but authorities said the reports of gunshots were "unfounded," no one was injured and the building was secure."

Welcome to Thursday! I'm your guest host, Esther Whieldon. Joe McClelland of FERC was the first to answer that Abigail Fillmore was the first First Lady to keep her day job as a teacher for more than a year after she married Millard Fillmore, the future 13th U.S. president. Joe also knew that Abigail met her husband in 1819 when she was his teacher at New Hope Academy in New York. Today's trivia question: Name the first female artist to be commissioned by the U.S. government to sculpt a statue (Hint, the statue is in the Capitol). Bonus points if you can name the statue, where the artist is buried today and what sculpture marks her grave. Send me your guesses, tips, energy gossip and comments at ewhieldon@politico.com and follow us on Twitter @esthernow, @aadragna, @bjlefebvre, @Morning_Energy, and @POLITICOPro.

ONE IN FIVE MINE INSPECTORS MEDICALLY UNFIT: As many as one in five federal mine inspectors doesn't meet the physical requirements necessary to do the job, Ian Kullgren reports. The Labor Department said on Wednesday it would create individualized assessment plans for employees who do not pass routine physical exams.

CALL IT THE REVERSE CARBON TAX: West Virginia Governor and new Republican Jim Justice, who made billions as a coal magnate, says President Donald Trump is "really interested" in his plan to subsidize Appalachian coal production, according to news reports. The subsidy would involve the Department of Homeland Security paying eastern utilities $15 per ton of Appalachian coal burned, according to Bloomberg . Justice says he has discussed the plan, which analysts peg at costing more than $1.6 billion annually, with Vice President Mike Pence, Jared Kushner and Energy Secretary Rick Perry. The subsidy likely would face opposition from Western coal producers, the natural gas industry, and the wind and solar sectors.

Why DHS? Justice says a healthy reliance on coal for electricity is the best protection against terror attacks on energy infrastructure, echoing an argument made frequently by EPA Administrator Scott Pruitt. "Can you imagine what would happen if we lost the power in the east for a month, or two months, or three months?" Justice said. "It would be like a nuclear blast went off. You would lose hundreds of thousands of people. It would be just absolute chaos beyond belief.'

COMMISSION REJECTS CALL TO CLOSE SUNIVA TRADE HEARING: The US International Trade Commission on Wednesday rejected a request by the Solar Energy Industries Association and SunPower Inc. to close a portion of the agency's Aug. 15 hearing to the public.

The commission ruled it has already obtained enough confidential information from solar companies and SEIA to consider all of the group's arguments "without resorting to the extraordinary measure" of closing part of the hearing.

INTERIOR AIMS TO EXPAND HUNTING, FISHING IN WILDLIFE REFUGES: Following up on Secretary Ryan Zinke's pledge to create more opportunities for sportsmen to use public lands, the Interior Department's Fish and Wildlife Service is proposing to allow more hunting and fishing in 10 wildlife refuges in Georgia, South Carolina, Indiana, Minnesota, North Dakota, Oklahoma, Oregon and Wisconsin. The agency will accept comments on the proposed rule for 30 days after publication in the Federal Register, which is expected this morning. For the 2017-2018 season, FWS is also adding refuge-specific regulations on topics such as hunting dog use, ATV riding and minimum age requirements.

ZINKE OKS LAND DONATION NEAR ELK STOMPING GROUNDS: Zinke on Wednesday gave BLM the thumbs to accept the donation of about 4,000 acres of a former ranch that would for the first time allow public access to prime elk hunting grounds in the Sabinoso Wilderness in Northeastern New Mexico. The public has been cut off from the 16,000-acre area because it is surrounded by private land. But the Wilderness Land Trust bought a closed down ranch bordering Sabinoso and has offered to donate it. New Mexico Sens. Tom Udall, Martin Heinrich and Zinke toured the Sabinoso by horseback in late July.

CERES REPORT SAYS AUTOMAKERS NEED TO EVOLVE FASTER: A new report out today by Ceres that says that the increasing importance of operating costs and synergy between autonomous vehicles and electrification, fuel efficiency and electrification are key to automakers succeeding in the fast changing marketplace. The report argues that automakers are blaming their financial woes on fuel economy standards but that the standards are actually stimulating investment in advanced technologies "that are necessary for automakers' long-term financial health, especially given oil price volatility."

NOAA CLIMATE REPORT DUE OUT TODAY: The National Oceanic and Atmospheric Administration and American Meteorological Society are slated to release their annual check up on the state of the planet's climate this afternoon. More than 450 scientists from over 60 countries contributed to the report, which will highlight such indicators as greenhouse gases, temperature, sea level rise and glacier sizes. The report comes just days after the controversy over an earlier report that US scientists feared could be altered by the Trump administration.

Stories from POLITICO Pro

Court ruling leaves HFC future in hands of EPA, Congress Back

By Eric Wolff | 08/09/2017 05:09 PM EDT

The effort to get the U.S. to comply with a treaty eliminating a heat-trapping chemical now faces a grueling path after a major courtroom setback this week — and it may depend on EPA using its power to regulate chemicals.

The D.C. Circuit Court's ruling Tuesday forced EPA to abandon its plan to use the Clean Air Act to limit use of hydrofluorocarbons, a refrigerant that would be phased down under recent changes to the Montreal Protocol. Proponents of the effort, including environmentalists and the air conditioning industry, will now need the Senate to approve the treaty and Congress to pass a new law authorizing EPA to implement it, or they will have to persuade EPA Administrator Scott Pruitt to act — no small feat considering the EPA chief's disdain for both climate change initiatives and regulations.

The changes to the Montreal Protocol agreed to in Kigali, Rwanda, last year would curtail global use of HFCs, a move that scientists say could prevent up to 0.5 degrees Celsius — 0.9 degrees Fahrenheit — of warming by the end of the century. U.S. industry groups have supported the Kigali agreement and had backed EPA's plan to implement it under the Clean Air Act's Section 612. That section, put in place nearly 30 years ago as authorizing language to implement the initial Montreal Protocol, established a market mechanism that was designed to reduce ozone-damaging chemicals.

But the court's rejection of using Section 612 may require new legal authority to empower EPA to act if the U.S. eventually ratifies the Kigali amendment.

"You'll have a treaty and have Congress look at it and pass implementing legislation," said Stephen Yurek, CEO of the Air Conditioning, Heating, and Refrigeration Institute, whose members are the world's biggest makers of HFCs — and will produce most of the next generation chemicals.

In its ruling, the D.C. court suggested a slew of laws EPA could use to regulate HFCs: The Toxic Substances Control Act, the National Ambient Air Quality Standards, regulating as a hazardous air pollutant, and regulating HFCs in cars and trucks. But several lawyers said TSCA was the only credible alternative.

"There's a lot of authority under TSCA to regulate chemicals and chemical uses," said Jane Montgomery, a partner with Schiff Hardin who works with power companies. "It's not as straightforward as what they intended to under 612, but there's an environmental harm portion of TSCA. ... For managing the sale and manufacturing and use, TSCA is the most appropriate statute we have."

Yurek said AHRI was still reviewing TSCA as an option, but he feared that it would be a blunt instrument, requiring EPA to issue a rule that immediately limited or banned HFCs, in contrast to the phase-down approach created under Section 612 of the Clean Air Act.

"I'm concerned that it's much more of a command-and-control-type regime, you have different categories, and potentially banning," he said.

Under the TSCA update Congress passed last year, EPA must assess HFCs before regulating them, and then issue a rule, a process that could take about five years, legal experts said. The agency would ultimately have the authority to limit or even prohibit them, Montgomery said. And in its ruling, the D.C. Circuit upheld several of EPA's tools used to assess the global warming impact of HFCs, bolstering the case for a potential TSCA rule.

AHRI and environmental attorneys largely dismissed the court's other suggestions for EPA to comply with the Kigali goals. The NAAQS program focuses on just six pollutants, none of which are HFCs, they said. Congress similarly created a fixed list of pollutants under the hazardous air pollutants rules, limiting that program's broader application, attorneys said. And refrigerants used in car and truck air conditioners make up only a small part of the refrigerants market.

"These authorities are even less congruent with the authority the EPA invoked in this rulemaking to regulate ozone-depleting chemicals and their substitutes down the road," said Brendan Collins, a partner with law firm Ballard Spahr who represents power companies and oil and gas companies.

EPA says it is still reviewing the court decision, but it's not clear whether Pruitt would advance another rule to govern HFCs, even though it is backed by business interests. Proponents of the Kigali treaty could draw a skeptical reception from the Trump administration, which has been dismissive of both multi-party treaties and climate science — though the administration did defend the rule in court in February. The White House would need to submit the treaty amendment to the Senate for ratification.

Kigali advocates have long aimed to keep a low profile and quietly persuade staffers to support the effort as the administration got up to speed. AHRI is now trying to determine whether the court decision will require a change in its strategy, or if it can apply the same pro-U.S. business approach to the more conservative House.

"We have to decide [if] we do a more public push or keep the schedule," Yurek said. "Right now, the plan is that we continue to wait until the end of this year, and continue to educate both House

and Senate."

Green groups who back the ban on HFCs may try a more direct route by appealing to the D.C. Circuit for en banc review. There are seven D.C. Circuit judges appointed by Democrats, versus four appointed by Republicans, potentially giving the appeal an edge — though that advantage flips at the Supreme Court, should the case go that far.

"We are exploring the options," said David Doniger, director of climate programs for the Natural Resources Defense Council. "Including rehearing based on the dissent."

Pruitt climate science challenge splits conservative allies Back

By Emily Holden | 08/09/2017 05:38 AM EDT

EPA chief Scott Pruitt's attacks on mainstream climate science are causing discomfort in a surprising corner — among many of the conservative and industry groups that have cheered his efforts to dismantle Barack Obama's environmental regulations.

The U.S. Chamber of Commerce, political groups backed by the Koch brothers and the top lobbying organizations for the coal, oil, natural gas and power industries are among those so far declining to back Pruitt's efforts to undermine the scientific consensus on human-caused climate change, according to more than a dozen interviews by POLITICO. Some advocates privately worry that the debate would politically harm moderate Republicans, while wasting time and effort that's better spent on the Environmental Protection Agency's regulatory rollback.

Nevertheless, the former Oklahoma attorney general is persisting — a stance that could enhance his future political prospects in his deep-red home state.

As with immigration, trade and health care, climate change is one of numerous issues on which President Donald Trump's administration must decide how aggressively to attack the established consensus. And some of Pruitt's allies worry about the dangers of going too far.

"Policy risks could arise from playing politics," said Chrissy Harbin, vice president of external affairs for Americans for Prosperity, a major conservative group backed by the industrialist brothers Charles and David Koch. "If done incorrectly, efforts that are more politically motivated than policy-focused could unintentionally undermine conservatives' ability to roll back overreaching Obama-era regulations."

Pruitt drew widespread criticism in late June after EPA revealed that he was pushing for government-chosen experts to hold a public "red team, blue team" debate about climate science — a move that environmentalists say would place fringe views on an even playing field with

established, peer-reviewed research.

He also hasn't ruled out trying to overturn EPA's science-based conclusion that climate change threatens human health and welfare, a 2009 decision that legally requires the agency to take action to limit greenhouse gas emissions.

Pruitt is also weighing a crucial policy decision in which science could play a major role — whether EPA should craft a replacement for Obama's landmark 2015 greenhouse gas regulations for power plants, which Pruitt and Trump have vowed to repeal. Most power companies want the agency to replace Obama's climate standards with a far laxer regulation that would require few changes for coal plants, but doing that would mean acknowledging EPA's legal authority on climate change.

A riskier alternative would be for EPA to revoke its 2009 scientific conclusions in hopes of forgoing climate regulations altogether.

Pruitt's decision could be influenced by people like West Virginia Attorney General Patrick Morrisey, who is challenging Sen. Joe Manchin (D-W.Va.) in 2018 and was involved in lawsuits against Obama's regulations. Morrisey recently pitched options to "permanently kill the Obama Power Plan" to his state's coal lobby, and he plans to talk to through those possibilities with other Republican attorneys general soon.

Pruitt has publicly scoffed at the idea that carbon dioxide is a "primary contributor" to global warming — not too unlike Trump himself, who has dismissed human-caused climate change as a "hoax."

But not all Republicans support reopening that debate. And the top fossil-fuel trade groups have not asked the agency to reexamine its 2009 conclusion about climate science, commonly known as the "endangerment finding."

"We have neither taken a position on it nor have we been terribly interested in that debate," said Luke Popovich, a spokesman for the National Mining Association, which has preferred to attack Obama-era regulations as government overreach and threats to jobs and the economy. "We're not debating the 'accept or deny climate science.' We approach it as a policy issue: how do we deal with this issue, what is the most prudent and rational course for that ... we have much more pressing issues, as you can imagine."

AFP and the Chamber also have not asked Pruitt to dispute climate science or the legal finding, and neither have the Koch-backed American Legislative Exchange Council, the American Petroleum Institute, the American Coalition for Clean Coal Electricity, the Edison Electric Institute or the National Rural Electric Cooperative Association, a major political donor whose members include coal-burning power utilities in rural states. Most of those groups haven't taken a public stance, but others have privately argued against the effort.

On the other hand, some conservative groups do want Pruitt to contest the endangerment finding — among them, the Heritage Foundation, the Cato Institute, the American Energy Alliance, the

Competitive Enterprise Institute and the Heartland Institute. Bob Murray, CEO of the coal company Murray Energy CEO, has also argued that his industry needs Pruitt to rescind the finding, although other coal producers have disagreed with him. Other coal companies are still discussing their positions.

Steve Milloy, a well-known climate change critic who is a fellow for the conservative E&E Legal Institute, maintained that "all of the climate skeptics are in favor of this whole thing." But he added that he thinks the idea for challenging climate science "all came from Scott Pruitt himself."

"Industry guys are all over the map," Milloy said. "They're all very confused and don't know what's good for them."

Disputing the endangerment finding would be tough, triggering a legal fight from environmental groups that EPA could easily lose given the vast amount of evidence from scientists that shows man-made greenhouse gas emissions harm the environment. And it could last through the end of the Trump administration.

"The downsides are considerable," said David Bookbinder, chief counsel for the libertarian Niskanen Center, which believes Pruitt has a legal duty to regulate greenhouse gases. "It would take an enormous amount of work to do it, and then [Pruitt] would get laughed out of court."

Bookbinder argues Pruitt's climate debate is a "a political exercise entirely."

"This is nothing more than to give people a show," Bookbinder said. "The man's running for Senate next year. Everything he says is calculated toward securing the Republican nomination in Oklahoma and then winning the general election there."

Pruitt has not disclosed any plans for a Senate run, although Sen. Jim Inhofe's term is up in 2020. Democrats and watchdog groups have similarly accused Pruitt of using his EPA post and the climate debate to launch a campaign for Congress. Pruitt has helped fuel those accusations by making frequent trips home — based on a review of travel records, Reuters reported that Pruitt spent almost half his days in Oklahoma this past spring.

Pruitt recently told The Oklahoman that he was not interested in jumping into the state's open gubernatorial race next year. But he declined to speculate on a possible run for Senate if Inhofe retires before Election Day in 2020, at which point Inhofe would be 85.

EPA did not comment for this story.

Climate change typically doesn't drive voters to the polls. Still, Oklahomans are more skeptical of the science than most Americans, according to the Yale Program on Climate Change Communication. Inhofe has repeatedly won reelection as one of the chamber's most vocal critics of climate science, including writing a book on the topic called "The Greatest Hoax."

Republicans who accept that humans cause climate change but have questions about the best

policy response say Pruitt's enterprise could be helpful but risks becoming overly politicized.

Eli Lehrer, president of the R Street Institute, a free-market think tank that has argued for a congressionally mandated carbon price, said a debate "could be very helpful in clarifying what conservatives should be doing and how conservatives should and should not worry about it."

"If Republicans, on the other hand, end up going down the rabbit hole of saying that an overwhelming scientific consensus is a hoax or a fraud, then it becomes a problem," he added.

GOP politicians in swing districts would be forced to defend or denounce the administration, he said.

But that's inevitable, some of the people pushing for a review of the science say.

"The whole, 'I'm not a scientist' thing went over like a lead balloon,'" said one conservative familiar with polling on the issue — alluding to one recent GOP talking point on climate change. "You're not a doctor either, but you vote on health care. [Addressing] the science in unavoidable."

In addition to potentially stressing moderate Republicans, Pruitt's plans put industry in a tough spot.

Power companies in particular are against debating the science or reviewing the endangerment finding, but they don't want to fight Pruitt publicly.

"In the utility world, I couldn't name anyone who is advocating for that right now," said one power-sector source who spoke anonymously because he didn't want to draw attention to his company.

Some want the finding intact because they are continuing to lower their carbon emissions by shutting down coal plants and building more natural gas-fired and renewable electricity. They assume they will face carbon limits in the future, regardless of the Trump administration's plans. Others don't think the fight is worth the time and money, the source said.

The source added that most aren't making their position known because it's "not worth the risk of being out in front of something like this like this," including because they might come under pressure from shareholders for any public comments.

DOL: 20 percent of mine inspectors could be medically unfit Back

By Ian Kullgren | 08/09/2017 06:31 PM EDT

As many as one in five federal mine inspectors doesn't meet the physical requirements necessary to do the job, the Labor Department said today.

A recent review of Mine Safety and Health Administration records found that between 15 percent and 20 percent of inspectors did not pass routine physical examinations, "and that the problem had been growing over the past several years," DOL said in a statement.

DOL said it would create individualized assessment plans for employees who don't meet medical standards. "The process will incorporate requirements for reasonable accommodation, resolve issues efficiently and effectively, and be conducted in a consistent and fair manner," DOL said.

Inspectors are required to have periodic exams, including vision and hearing tests, to ensure they meet Office of Personnel Management physical standards.

Subject: Report: Pruitt spent $14K on private flight in Oklahoma

By POLITICO Pro Staff

09/27/2017 08:02 PM EDT

EPA Administrator Scott Pruitt spent more than $14,000 on a previously undisclosed flight in Oklahoma, CBS News reported tonight.

Pruitt took the eight-seat LearJet from Tusla to Guymon, Okla., because commercial flights were not available and it would have otherwise been a five-hour drive, an EPA spokesman told CBS. He then flew to Oklahoma City after an event on water policy in Guymon. The plane was chartered by the Interior Department.

Pruitt also flew on an Air Force plane from Cincinnati to New York and onto Andrews Air Force Base to catch a connecting flight to Italy for a G-7 meeting. The total price tag for those flights was $36,069.50, according to CBS. And he took a charter flight between Denver and Durango, Colo., in August, at a cost of more than $5,700, according to CBS.

Pruitt has spent $58,219.19 on non-commercial flights, CBS reported, citing information EPA shared with Sen. Sheldon Whitehouse (D-R.I.).

In addition, Pruitt flew on a North Dakota state government plane for an Aug. 9 event at the University of North Dakota's Environmental Research Center, at a cost to taxpayers of $2,144.40, according to CBS.

"Administrator Pruitt took one charter flight and three government flights," said spokesperson Liz Bowman.

Subject: Morning Energy: Trump launches new salvo to speed project permitting — Another twist in Sumner nuclear saga — LCV campaign targets monument review

By Anthony Adragna | 08/16/2017 05:41 AM EDT

With help from Alex Guillén, Darius Dixon, Doug Palmer and Emily Holden

ANOTHER ENVIRONMENTAL REVIEW PUSH THUDS: Before he veered off-message by arguing there were "very fine" people among the neo-Nazis and KKK members in Charlottesville, President Donald Trump actually signed an executive order Tuesday that aims to hit a two-year goal for completing federal environmental permitting for infrastructure projects by designating a lead federal agency for each major project. "It's going to be a very streamlined process," he said at a Trump Tower press conference. "And, by the way, if it doesn't meet environmental safeguards, we're not going to approve it." The order tasks the White House Council on Environmental Quality (still without a nominee to lead it) with developing a government-wide action plan to speed environmental permitting reviews and with sorting out any disputes between agencies.

Most controversial among the order's provisions was the revocation of an Obama-era flood standard requiring new federally funded projects be built to withstand the stronger storms likely fueled by climate change — a move that earned broad condemnation. R.J. Lehmann, a senior fellow with the conservative R St. Institute, called the revocation "shortsighted and ill-considered." Republican Rep. Carlos Curbelo , whose South Florida district sees frequent flooding, called Trump's decision "irresponsible and it will lead to taxpayer dollars being wasted on projects that may not be built to endure the flooding we are already seeing and know is only going to get worse." And Sierra Club Executive Director Michael Brune said axing the standard was "actively wasting taxpayer dollars, endangering schools and hospitals, and threatening the lives of people around the country for no other reason than his apparent contempt for the public."

Supporters of Trump's reversal of the Obama-era initiative were limited mainly to home builders and some Republicans in Congress. "President Trump made the correct decision to repeal this onerous regulation that was written to make a political statement on climate change rather than for practicality," Louisiana Rep. Ralph Abraham , whose state has been ravaged by more frequent flooding, said in a statement. And National Association of Home Builders Chairman Granger MacDonald praised Trump's action to kill the standard that would "needlessly hurt housing affordability" and said it would "provide much-needed regulatory relief for the housing community and help American home buyers."

What about infrastructure? Trump attempted to call attention to his $1 trillion initiative to rebuild the nation's roads, tunnels and bridges — but provided hardly any detail about what that forthcoming proposal may actually contain, Pro Transportation's Lauren Gardner reports. National Economic Council Chairman Gary Cohn said the White House continued to hope action on infrastructure would come this year but told reporters it would "come on the heels of taxes," another complex issue without a firm proposal ready for congressional consideration.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and the American Chemistry Council's Andrew Fasoli was first to name Liechtenstein as the country Snoop Dogg tried to rent out. For today: What iconic rock n' roller died 40 years ago today? (No Googling, as always; h/t reader Craig Meyers.) Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @A nthonyAdragna, @Morning_Energy and @POLITICOPro.

SCANA PULLS ABANDONMENT APP FOR SUMMER (FOR THE MOMENT): After markets closed on Tuesday, SCANA announced that it is yanking the paperwork it filed with regulators to abandon the V.C. Summer nuclear project. Nuclear supporters shouldn't get too excited just yet. Since it decided to pull out of the project two weeks ago, the company brass have met with state lawmakers concerned about the political and financial fallout of Summer's undoing—and the billions of dollars SCANA intends to pass onto its customers. "The purpose of these ongoing meetings is to discuss their concerns and to explain the path that led us to the abandonment decision," SCANA CEO Kevin Marsh said in a statement. Terminating the project, he reiterated, was their "least desired option" but still "the prudent decision."

South Carolina's 2007 Base Load Review Act established a six-month clock for regulators to review the abandonment plan, while the state's governor and legislators are scrambling for options to minimize the impact on consumers or rescue the project. Marsh is holding a conference call with analysts at 8:30 a.m. today.

ME FIRST — GREENS LAUNCH 'FINAL PUSH' AGAINST MONUMENT REVIEW: The League of Conservation Voters is launching a final $100,000 push today across multiple platforms against the Trump administration's review of nearly two dozen previously-designated national monuments. The campaign will urge people to urge Interior Secretary Ryan Zinke against making changes to the designations and promote videos highlighting support of public lands. LCV also plans to use Facebook and Instagram to push Reps. Paul Gosar, Steve Pearce, Doug LaMalfa and Doug Lamborn to stop their support of the review.

BRING ON THE LOBBYING MUSCLE: Five European natural gas companies hoping to build a controversial pipeline to deliver Russian gas to Germany hired a U.S. lobbying firm this month, Pro's Ben Lefebvre reports, citing disclosure forms. The five European companies — Shell International, Engie, Uniper SE, OMV Aktiengesellschaft and Wintershall Nederland — will be represented by McLarty Inbound lobbyists including Richard Burt, a former ambassador to Germany. Edward Chow, a senior fellow at the Center for Strategic and International Studies' Energy and National Security Program, said the companies could be reacting to the combination of a more aggressive U.S. energy policy under Trump and Congress' tougher line on Russia.

COAL VERSUS THE WORLD: The coal lobby has taken some offense to an initial draft of the Department of Energy's upcoming grid study. The American Coalition for Clean Coal Electricity wants the report to pin losses in coal and nuclear generation on natural gas and Obama-era regulations on fossil fuels, not renewable power. The group wants DOE to look at how increasing reliance on natural gas might cause grid reliability problems when gas is not available, according to a new paper . ACCCE also counters the draft study's findings that EPA

regulations played only a minor role in coal retirements and that coal has been one of "the largest energy subsidy beneficiaries."

COURT STOPS MONTANA COAL MINE EXPANSION: A U.S. District Court judge in Montana this week tossed out the Interior Department's 2015 approval of a coal mine's expansion in the state, ruling that the agency failed to study the climate change-related effects of transporting and burning that coal. Environmental groups argued that Interior had calculated the economic benefits of expanding Signal Peak Energy's Bull Mountain mine (including local employment and state tax revenue) without also considering the costs of burning that coal. Judge Donald W. Molloy ag reed, and was especially critical of Interior for concluding that the effect of the expansion's emissions would be "too uncertain to predict" while also concluding that the expansion would have no effect "because other coal would be burned in its stead."

"This conclusion is illogical, and places the Enforcement Office's thumb on the scale by inflating the benefits of the action while minimizing its impacts," he wrote in his Monday ruling. Molloy, a Clinton appointee, vacated Interior's previous environmental assessment, ordered a halt to any mining in that area. Interior must revisit these issues and likely conduct a full environmental impact statement if mining is to resume. Environmentalists quickly cheered the ruling. "The company and a government agency tried to cut corners once again. Thankfully the court didn't let that happen," said Anne Hedges of the Montana Environmental Information Center.

ITC HEARS SOLAR TRADE TESTIMONY: Industry groups led by the Solar Energy Industries Association, state government officials and representatives of foreign governments all urged the International Trade Commission at a hearing Tuesday not to grant petitions from U.S. solar manufacturers Suniva and SolarWorld Americas for steep tariffs on imported solar cells and modules, Pro Trade's Luis Sanchez reports . Some like Sibylle Zitko, a representative for the European Commission, argued "'inefficiencies" and "bad investments" were more to blame for the U.S. manufacturers' struggles rather than cheap solar imports. ITC has until Sept. 22 to make an injury determination and if the commission sides with Suniva and SolarWorld then Trump would have until Jan. 12, 2018, to make a decision on a remedy and present his plan to Congress.

WHAT A CRAZY STORY: Did you know EPA has a fugitive website? ME neither, but it now boasts a new member thanks to a case involving radioactive waste and a prison escape. James Kenneth Ward illegally dumped radioactive waste at several spots throughout North Dakota but then escaped while on prison transport in Wyoming. He's considered violent and dangerous. More here.

OIL SECTOR: ISDS MUST STAY IN NAFTA: The American Petroleum Institute is insisting that access to investor-state dispute settlements remain a part of NAFTA, which is the subject of trade talks happening this week. "ISDS is a neutral, international arbitration procedure," the group said in a new brief on its website. "ISDS is necessary to ensure that, when US oil and natural companies invest abroad, they can seek protection for their investments if they do not have access to developed and independent court systems."

On the other side, Sen. Sherrod Brown came out hard against the provision, writing in an op-ed that the new NAFTA must "do away with special courts that allow multinational corporations to

undermine U.S. laws and take advantage of American workers. These corporate courts are called investor-state dispute settlement and they've got to go."

NEW EFFORT TO BOOST CORPORATE SUSTAINABILITY: The Harvard Business Review, along with top corporate leaders, is today launching a new effort called the Future Economy Project to help companies lay out blueprints for improving their sustainability efforts. Partners in the effort include: Virgin's Richard Branson; Instagram COO Marne Levine; Dow Chemical's Andrew Liveris; PepsiCo's Indra Nooyi; former Treasury Secretary Hank Paulson; Unilever's Paul Polman and Alphabet's Eric Schmidt. The effort will result in a list of principles.

PENCE CONFIDENT ABOUT VENEZUELA SOLUTION: Vice President Mike Pence expressed confidence economic and diplomatic pressure would resolve Venezuela's ongoing woes during a Tuesday speech in Buenos Aires, Argentina. "We will continue to act until the Maduro regime restores democracy, holds free and fair elections, releases all of its political prisoners, and ends the repression of the Venezuelan people," he said.

REPORT: HFC DECISION COULD BOOST POLLUTION: A new research note from Energy Innovation concludes a federal appeals court ruling striking down an effort from EPA to ban hydrofluorocarbons could lead to the equivalent of between 3.6 billion and 9.5 billion metric tons of carbon dioxide in the atmosphere in 2050, compared to emissions that would have been avoided with the rule in place. It also warns the court's decision, which is likely to be appealed, could hamper U.S. options for upholding its international commitments made last year to reduce HFC emissions.

ANOTHER AD HITS VIRGINIA PIPELINE: The Natural Resources Defense Council released an ad Tuesday opposing construction of Dominion Energy's Atlantic Coast natural gas pipeline and urging Virginia to conduct a far more thorough environmental review of the proposed project. The ad argues that the company has a history of water pollution violations associated with their pipelines and asks "how can we trust them to build an unnecessary 600-mile pipeline?" It's backed with a six-figure ad buy and encourages Virginians to weigh in during the public comment period.

NEW CLIMATE TOOL FOR CITIES UNVEILED: Quantified Ventures and Neighborly, backed with financial support from the Rockefeller Foundation, are unveiling a challenge today to have two U.S. cities issue the first publicly marketed environmental impact bonds. Proceeds from the bonds will go toward green infrastructure projects like stormwater management or other resilience efforts aimed at protecting vulnerable or low-income communities.

MOVER, SHAKER: Connecticut's John Betkoski III has assumed the role of president of the National Association of Regulatory Utility Commissioners; he replaces Robert Powelson, who recently became a FERC commissioner.

TWEETED: Former New Jersey GOP Gov. and EPA Administrator Christine Todd Whitman on Tuesday in response to a retweet of a train running over someone with a CNN logo for a head. "Have you no shame @realDonaldTrump? Retweeting a Trump train running over a reporter isn't even acting like an adult, much less a president."

Stories from POLITICO Pro

Trump to roll back climate-focused flood standard Back

By Annie Snider | 08/15/2017 12:41 PM EDT

President Donald Trump will roll back a flood standard designed to protect federal investments from stronger storms as part of an executive order set to be signed this afternoon, according to a White House source.

The Federal Flood Risk Management Standard was established under an executive order issued by President Barack Obama in 2015. It requires that new federally funded projects — from government buildings like Veterans Administrations hospitals to bridges and schools funded by federal grants — be built to withstand the stronger storms and additional flooding projected to occur as the climate changes. It does not apply to the National Flood Insurance Program.

The Obama administration's standard offers multiple options for achieving greater flood protection, but generally requires construction to withstand a 500-year storm. The previous standard, on the books for more than four decades, required construction to take place outside of the 100-year floodplain. The new standard has not actually taken effect yet; each federal agency

is tasked with developing its own regulation for implementing the standard, and none have yet been finalized.

Industry groups objected to the standard, arguing it was developed behind closed doors and could greatly increase costs.

Environmental groups have objected to efforts to repeal the standard.

"Ninety percent of all natural disasters in the United States involve flooding. These events claim lives and strain the capacity of government agencies and local communities to adequately respond and provide relief," Laura Lightbody with the Pew Charitable Trusts said in a statement.

WHAT'S NEXT: Trump is slated to sign an executive order on infrastructure containing the roll back of the Federal Flood Risk Management standard at 3 p.m. today.

Trump talks infrastructure, but $1 trillion plan is as elusive as ever Back

By Lauren Gardner | 08/15/2017 05:59 PM EDT

President Donald Trump on Tuesday rolled out yet another executive order aimed at speeding up approvals for infrastructure projects — the latest in a string of efforts to call attention to his languishing proposal for a $1 trillion initiative to rebuild the nation's roads, tunnels and bridges.

Tuesday's order aims to shrink the environmental permitting process to as little as two years, down from an average of seven years for "complex" highway projects, and ensure that just one federal agency serves as the point of contact for each project's paperwork. It also nixes an Obama-era flood standard that would have required federally funded projects to be built to withstand the stronger storms projected to occur as the planet warms.

"My administration is working every day to deliver the world-class infrastructure that our people deserve and, frankly, that our country deserves," the president said in the lobby of Trump Tower. He was flanked by Transportation Secretary Elaine Chao, National Economic Council Director Gary Cohn and Treasury Secretary Steven Mnuchin.

The executive order is another drip in the trickle of actions Trump has taken to highlight his interest in bolstering the nation's infrastructure, relying on existing authorities granted by Congress in its 2015 surface transportation law. He made a similar announcement in June at DOT headquarters, when he dropped thick binders full of permit paperwork on stage and vowed to end the "painfully slow, costly and time-consuming" review process.

But Tuesday's announcement did little to flesh out exactly how his administration plans to boost

public and private investment in those projects. The most detail the White House has provided to date was a six-page fact sheet released with little fanfare along with Trump's fiscal 2018 budget proposal in May.

While infrastructure boosters have largely cheered the administration's posture on speeding up permit approvals, they're also eager to see the president put some substance into a policy priority that they hope can notch a rare bipartisan win for Trump's first year in the West Wing.

Even so, administration officials and their allies said Trump's latest order is a significant step toward smoothing out what they've decried as a long, confusing federal permitting process that allows a multitude of agencies to approve or reject projects.

"We're pleased that the Trump administration is continuing its effort to slice through burdensome, duplicative processes across government," said Christine Harbin, Americans for Prosperity's vice president of external affairs, in a statement. "Particularly in the federal infrastructure space, permitting holdups can add years to projects that would otherwise be improving our infrastructure and contributing to our economy."

Just days into his presidency, Trump signed an executive order directing federal officials to expedite environmental reviews for infrastructure projects deemed "high priority." And he visited DOT headquarters in June at the end of the White House's "infrastructure week" to announce he was standing up a council previously created by Congress to guide project sponsors through the federal permitting process. He also said in June that he would revamp an Obama-era online "dashboard" to allow the public to track projects and see when deadlines are blown.

"The over-regulated permitting process is a massive, self-inflicted wound on our country. It's disgraceful," Trump said Tuesday.

But Trump is just the most recent president eager to hasten the federal permit process. President Barack Obama signed orders of his own to speed up those environmental review proceedings, and President George W. Bush before him formed a task force with the goal of "modernizing" the National Environmental Policy Act, the 1970 law that requires federal agencies to evaluate the environmental impacts of proposals affecting anything from construction to land management before endorsing them.

Environmental groups blasted the administration's latest permitting order, calling it a giveaway to big business that skirts long-standing safeguards for communities.

"Arbitrary decisions and artificial deadlines can lead to costly mistakes we'll all pay for down the line," said Rhea Suh, president of the Natural Resources Defense Council.

Trump's news conference following his meeting with administration officials on infrastructure quickly devolved into a back-and-forth with reporters about the statements he'd made after last weekend's deadly protests in Charlottesville, Va.

Before he left the lobby, though, he maintained that he still expects Democrats "will go along

with" an infrastructure bill that his administration hopes lawmakers will consider later this year.

Russian pipeline backers add U.S. lobbyists Back

By Ben Lefebvre | 08/15/2017 06:32 PM EDT

Companies hoping to build a controversial pipeline to deliver Russian gas to Germany are adding new lobbyists in the U.S., according to recently released disclosure forms.

Five European natural gas companies with ties to the Russian-led Nord Stream 2 pipeline project hired a U.S. lobbying firm earlier this month. And a subsidiary of Russian gas company Gazprom hired two lobbying firms in July, according to the records.

The pipeline became enmeshed in the debate earlier this summer over strengthening sanctions against Russia, after German and Austrian leaders warned they could hurt European companies involved in building the pipeline. President Donald Trump signed the sanctions bill into law on Aug. 2. Trump has also cheered U.S. LNG exports into Europe as a way for countries there to wean themselves off of Russian gas.

Shell International, Engie, Uniper SE, OMV Aktiengesellschaft and Wintershall Nederland hired McLarty Inbound as of Aug. 1 to push an agenda "to protect and further" their "interests in the debate over natural gas as an element of European energy security," according to language included in each of their lobbying disclosures.

Neither the companies nor the lobbying firms replied to questions. But the companies could be reacting to the combination of a more aggressive U.S. energy policy under Trump and Congress' tougher line on Russia, according to Edward Chow, a senior fellow at the Center for Strategic and International Studies' Energy and National Security Program.

"I suspect the combination of 'energy dominance' talk plus the strong sanctions vote in Congress made investor/partners more sensitized to the real and potential impacts on their investments with Russian partners," Chow wrote in an email. "It's ironic that after years of asking the U.S. government for help with gas exports to help Europe diversify their gas supply, the reaction to the various iterations of the sanctions bills was to ascribe the sanctions motives to forcing U.S. gas into their system."

The five companies are partners in Nord Stream 2, which Gazprom hopes will deliver natural gas to northeast Germany starting in 2019.

A month earlier, Nord Stream 2 AG, the Gazprom subsidiary, hired lobbyists with Capitol Counsel and Roberti Global to represent the company in issues related to Russian sanctions

legislation. Among the hires was Lydia Strunk, a former top aide to House Republican leaders.

The five European companies will be represented by McLarty lobbyists including Richard Burt, a former ambassador to Germany.

Engie has also been represented since October by Mike McKenna of MWR Strategies, according to disclosure forms. McKenna briefly led the Trump administration's transition team for the Energy Department. Shell International has not had registered lobbyists since 2008, and the other three companies have never had formal representation, according to disclosure records.

Former German Chancellor Gerhard Schröder last year joined the board of Nord Stream 2 AG. Earlier this month, he was also nominated to the board of Rosneft, Russia's largest oil company.

States, foreign governments press ITC to reject solar petition Back

By Luis Sanchez | 08/15/2017 05:48 PM EDT

Several industry leaders, state government officials and representatives of foreign governments pressed the U.S. International Trade Commission at a hearing Tuesday to reject a petition from two domestic solar manufacturers asking for steep tariffs on imported solar cells and modules.

U.S. solar manufacturer Suniva and SolarWorld Americas have asked the commission to declare that solar cell and module imports from predominantly Asian nations have caused "significant injury" to their domestic business.

"U.S. module manufacturers suffered net losses exceeding a billion dollars over a five-year period," Matthew J. McConkey, a spokesperson for Suniva, said at Tuesday's hearing. "As U.S. demand for solar products increased from 2005 to 2016, foreign suppliers, including those from China, Korea, Canada and Malaysia, began capturing an even larger share of the U.S. market."

If the ITC agrees with the two companies that a "deluge" of solar imports had distorted the U.S. market, it could have huge impact on the renewable energy source that has grown rapidly over the past decade as costs for the panels that turn sunlight into electricity have plunged.

Chinese companies dominate the global production of solar cells and modules, and they have built extensive supply chains and manufacturing operations across Asia. President Donald Trump had often criticized China for its trade practices, and on Monday he issued an executive memorandum calling for U.S. trade officials to "consider all available options" to get China to stop coercing U.S. companies to hand over valuable technology.

Suniva, which is based in Georgia and is majority-owned by China's Shunfeng International,

filed its section 201 petition with the ITC in April, just eight days after it filed for Chapter 11 bankruptcy protection. SolarWorld later joined the petition.

The commission has until Sept. 22 to make an injury determination and would submit its report on a proposed remedy to the president by Nov. 13. Trump then has until Jan. 12, 2018, to make a decision on a remedy and present his plan to Congress.

Suniva and SolarWorld are seeking an initial tariff of 40 cents per watt of capacity on all imported solar cells and a 78 cents per watt minimum price for modules, roughly twice the current domestic price for solar modules. Suniva alleges that wages for industry workers dropped by 27 percent and 1,200 U.S. manufacturing jobs were lost between 2012 and 2016 because of imports.

The two companies, the two largest surviving domestic manufacturers of solar cells and modules, are seeking the protections to keep cheaper solar modules from being sold on the U.S. market and further hurting the U.S. industry.

However, opponents of the petition said that manufacturing the equipment is only a small part of the U.S. solar industry. Out of the 260,000 people working in the U.S. solar industry, only about 38,000 people work in manufacturing.

The Solar Energy Industries Association argues that tariffs and price floors would damage the whole solar industry, eliminating 88,000 jobs.

"One out of every 50 new jobs created last year in the U.S. was a solar job. Solar is an American success story whose future remains bright," said Matthew Nicely, a spokesperson for SEIA. "Its continued success could be destroyed by the misguided actions of the two petitioners and their small group of supporters whose workers represent less than one percent of all those that work for this dynamic American industry."

Government officials from several U.S. states also expressed their opposition to the petition at Tuesday's hearing, citing potential job and investment losses.

"If this petition is granted, it may save a few hundred cell or module manufacturing jobs, but there are many thousands of good manufacturing installation jobs that will be lost," Jason Saine, a North Carolina state representative said. "A remedy will do more harm than good here with the only benefit going to a small number of companies that frankly don't deserve it."

Al Christopher, director of the Virginia Department of Mines, Minerals and Energy, said that solar projects were not just helping the economy in his state; they also act as "a vital marketing tool in attracting the growing number of companies seeking renewable energy options when deciding where to make investments."

Several representatives of foreign governments also argued the tariffs weren't justified and they urged the commission to exclude their nations from possible tariffs.

"The value of imports from Korea was quite low for most of the period investigated," Korean Minister Counsellor for Trade, Industry and Energy Chang K. Kim said. When the shipments from his country increased in 2016, the imports went to the "utility segment of the market and were part of the share the domestic industry could not supply."

Sibylle Zitko, a representative for the European Commission, went a step further, contending "'inefficiencies" and "bad investments" were more to blame for Suniva and SolarWorld's woes rather than imports.

"The criteria for the inquisition for safeguard measures are clearly not met in this case and thus the investigation should be terminated," Zitko said.

McConkey said the argument that Suniva and SolarWorld brought their financial problems on themselves was both false and offensive, and the petitioners only needed to show at Tuesday's hearing that they had suffered because of the imports. "We'll get to remedy later this fall," he said,

Court strikes down EPA limits on HFCs Back

By Eric Wolff | 08/08/2017 11:35 AM EDT

A federal court today struck down EPA's attempt to ban a powerful heat-trapping gas under its authority to regulate substances that deplete the ozone layer.

The D.C. Circuit said EPA could not force manufacturers that had replaced ozone-depleting chemicals with hydrofluorocarbons to stop producing them. The Obama administration in 2015 said the high global warming potential of HFCs justified removing them from a list of acceptable replacements for chlorofluorocarbons, which are being phased out to protect the ozone layer in conjunction with the 1992 Montreal Protocol.

The court, in a 2-1 decision, said EPA too broadly interpreted its authority under the Clean Air Act in trying to ban HFC production altogether. However, Judges Janice Rogers Brown and Brett Kavanaugh said EPA could still bar the use of HFCs by companies that had not yet replaced their ozone-destroying coolants and that EPA could still potentially regulate HFCs under the Toxic Substances Control Act.

Judge Robert Wilkins, an Obama appointee, dissented from the decision, saying EPA's interpretation of its authority was reasonable.

The decision is a victory for French chemical manufacturer Arkema and Mexico-based Mexichem, both of whom make HFCs. It's a blow to U.S. manufacturers of coolants who

dominate the market in next-generation chemicals that have much lower global heating potential. It also raises questions about the U.S. ability to implement an amendment to the Montreal Protocol that would curtail worldwide use of HFCs.

WHAT'S NEXT: The court remanded the rule back to EPA for reconsideration.

Trump retweets then deletes post calling him a fascist Back

By Louis Nelson | 08/15/2017 07:39 AM EDT

President Donald Trump on Tuesday shared a Twitter post with his followers that called him a "fascist."

The Twitter exchange began Tuesday morning when Trump retweeted a post from the account of Fox News' morning show "Fox & Friends" linking to a story about the possibility of the president pardoning former Maricopa County, Arizona, Sheriff Joe Arpaio, who was recently convicted of criminal contempt by a judge in Arizona. Arpaio, a controversial figure for, among other practices, his aggressive enforcement of immigration law, was a vocal Trump supporter during last year's election.

A Twitter user named Mike Holden responded to the "Fox & Friends" post by writing "he's a fascist, so not unusual," which Trump then retweeted from his own account. Holden later clarified that his "fascist" label had been directed at Trump.

Minutes later, the president undid his retweet without explanation.

> I'm announcing my retirement from Twitter. I'll never top this RT.
> pic.twitter.com/HuGHkiPoyR
>
> — Mike Holden (@MikeHolden42) August 15, 2017

The president also retweeted a post from another user featuring a cartoon depicting a train with "Trump" written on the side running over an individual with a CNN logo for its head. The post was similar to one that landed Trump in hot water earlier this summer, when the president posted an animated image of himself from a professional wrestling appearance tackling an individual with a CNN logo for a head. Trump's Tuesday morning CNN cartoon was quickly removed from Trump's feed.

One retweet that remained on the president's feed came Monday night from alt-right figure Jack Posobiec, who complained online that violent crime in Chicago had not received the same media attention as a deadly white supremacist rally in Charlottesville, Virginia. Posobiec is active in alt-right social media circles and has posted tweets promoting baseless conspiracy theories alleging that prominent Democrats had run a child sex ring out of a Washington, D.C., pizzeria.

Driving the Day

BREAKING -- PRESIDENT DONALD TRUMP and **MELANIA TRUMP** are skipping the Kennedy Center honors this year. Statement from the White House: "The President and First Lady have decided not to participate in this year's activities to allow the honorees to celebrate without any political distraction." ***The Kennedy Center honors take place in December.***

-- THREE OF THE FIVE honorees said they would not attend the White House reception that goes along with the honors. http://wapo.st/2vMreBg

TEXT MESSAGE from a House Republican lawmaker Friday night, reacting to Steve Bannon's departure: "Now the real circus begins. ... This is the tea party coming full circle."

Good Saturday morning. WHAT BANNON'S DEPARTURE MEANS FOR TRUMP AND WASHINGTON ...

-- HOUSE CONSERVATIVES NEED A NEW WHITE HOUSE ALLY ... It was an open secret that Steve Bannon was close with House Freedom Caucus leaders like Jim Jordan of Ohio and Mark Meadows of North Carolina. They shared some of the same off-brand conservative ideals and all saw Trump as a vessel to move those ideals into law. They chatted in the White House, and swapped text messages and phone calls. Part of the Freedom Caucus's strength in the Trump era was that no matter what happened between Reince Priebus, Donald Trump and Paul Ryan, Meadows always had a sounding board in the White House who could relay a message to the president. That's gone -- for now. They still have Trump's ear, but no backchannel to get their

message into the White House.

-- THE WHITE HOUSE NEEDS SOMEONE WHO CAN LIAISE WITH THE RIGHT ... The Freedom Caucus has just enough juice to be a pain to Republican leaders and Trump. It was Bannon who could keep them from going too far. There is no other principal in Trump's administration who speaks their language. Mick Mulvaney and Mike Pence are loyal Trump soldiers who are looking to bend the Hill to Trump's will, not the other way around. They don't know John Kelly. So the White House needs to tap someone with power and clout who can deal with conservatives.

-- REPUBLICAN LEADERS ARE NOT BREATHING EASIER. The secret about Steve Bannon is he's actually pretty pleasant in personal interactions. He's solicitous and gracious in one-on-one interactions. Republican leaders were surprised when they learned that. GOP leaders never had a real blow up with Bannon. In fact, on many occasions, they found themselves talking the same language. The fear that is now rippling through Republican leadership is that Steve Bannon's departure actually meant very little for Trump's day-to-day style of governing. He's still going to be impulsive. He's still going to want to pick fights. Plus, Bannon's outside role now means that Paul Ryan and Mitch McConnell are squarely in the crosshairs. That means that conservative Republicans in red districts are now incentivized to oppose GOP leadership.

-- NEW CONCERNS ABOUT DEBT CEILING, GOVERNMENT FUNDING. The debt ceiling needs to be lifted this fall, and government funding runs dry at the end of September. In his interview with the Weekly Standard, Bannon was more publicly clear-eyed about White House-Capitol Hill dynamics than anyone who works in the Trump administration. He said Trump will "sign a clean debt ceiling" and will do a "very standard Republican version of taxes" -- the "standard marginal tax cut." Bannon is voicing what many Republicans tell us behind the scenes. Needless to say, Bannon thinks this is a cop out. And it seems painfully obvious Breitbart will rally against this, causing serious headaches for Republican leaders with a lot on the line.

JUST TO BE CLEAR ... -- Breitbart truly is a powerful voice on Capitol Hill. Not because lawmakers pay attention -- most say they don't -- but many of their constituents do. We hear it all the time. The primary political hurdle for most Hill Republicans is a primary, and Breitbart drags the conversation and rank-and-file thinking to the right.

-- DON'T EXPECT Bannon's departure to create a radical shift in how the White House operates. The chaos that has enveloped Trump's administration comes from the top. John Kelly and others are trying to limit that, but unless Trump makes a strategic decision to change his modus operandi, nothing is going to change. Bannon being on the outside could have more influence than ever. We've seen Trump time and again react to conservative news coverage, something Bannon will have a lot more direct influence over at Breitbart.

TRUMP ON BANNON: @realDonaldTrump at 7:33 a.m.: "I want to thank Steve Bannon for his service. He came to the campaign during my run against Crooked Hillary

Clinton - it was great! Thanks S".

THE BEST OF BANNON ...

THE PIECE EVERYONE IS TALKING ABOUT -- "Bannon: 'The Trump Presidency That We Fought For, and Won, Is Over,'" by The Weekly Standard's Peter J. Boyer: "With the departure from the White House of strategist Stephen K. Bannon, who helped shape the so-called nationalist-populist program embraced by Donald Trump in his unlikely path to election, a new phase of the Trump presidency begins. Given Trump's nature, what comes next will hardly be conventional, but it may well be less willfully disruptive-which, to Bannon, had been the point of winning the White House. 'The Trump presidency that we fought for, and won, is over,' Bannon said Friday, shortly after confirming his departure. 'We still have a huge movement, and we will make something of this Trump presidency. But that presidency is over. It'll be something else. And there'll be all kinds of fights, and there'll be good days and bad days, but that presidency is over.' ...

"'I feel jacked up,' he says. 'Now I'm free. I've got my hands back on my weapons. Someone said, 'it's Bannon the Barbarian.' I am definitely going to crush the opposition. There's no doubt. I built a f***ing machine at Breitbart. And now I'm about to go back, knowing what I know, and we're about to rev that machine up. And rev it up we will do.' Bannon tells The Weekly Standard that he can be more effective without the constraints of the White House. 'I can fight better on the outside. I can't fight too many Democrats on the inside like I can on the outside.' And, he says, Trump encouraged him to take on the Republican establishment. 'I said, "look, I'll focus on going after the establishment." He said, "good, I need that." I said, "look, I'll always be here covering for you.'" http://tws.io/2vaCmo0 ... ***22 pix of Bannon's White House tenure*** http://politi.co/2wq88Sg

-- NYT A1: "Steve Bannon, Back on the Outside, Prepares His Enemies List," by Jeremy Peters and Mike Grynbaum: "'In many ways, I think I can be more effective fighting from the outside for the agenda President Trump ran on,' he said Friday. 'And anyone who stands in our way, we will go to war with.' Among those already in Mr. Bannon's sights: Speaker Paul D. Ryan; Senator Mitch McConnell, the majority leader; the president's daughter Ivanka Trump and son-in-law, Jared Kushner; and Gary D. Cohn, the former president of Goldman Sachs who now directs the White House's National Economic Council. ...

"Most immediately, he has told associates that he wants to ensure that any spending resolution approved next month by Congress includes money to begin construction on the wall that Mr. Trump has promised to build on the southern border. If Congress balks, Mr. Bannon has advised the president to issue a veto, which would trigger a government shutdown." http://nyti.ms/2xdC4OS

-- BLOOMBERG: "Bannon Says He's 'Going to War for Trump' After White House Exit," by Josh Green, Justin Sink, and Margaret Talev: "'If there's any confusion out

there, let me clear it up: I'm leaving the White House and going to war for Trump against his opponents -- on Capitol Hill, in the media, and in corporate America,' Bannon told Bloomberg News Friday in his first public comments after his departure was announced." https://bloom.bg/2uRNURR

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: If you know only one fact about rising drug costs, know this one: drug makers set prices for prescription drugs. To help manage nearly double-digit price increases, employers, unions and government programs use PBMs to negotiate lower net prices to help curb costs for employers and patients. Learn more at affordableprescriptiondrugs.org ******

TICK TOCK -- "Inside the rise and fall of Steve Bannon: Trump's chief strategist had become increasingly isolated in the West Wing," by Josh Dawsey, Annie Karni, and Matt Nussbaum: "Kelly didn't understand what Bannon did, why he had a PR portfolio, why he seemed to cause so much trouble with colleagues and why he was so widely disliked. He asked many questions about Bannon in his early days at the White House and found widespread disdain. ... He has told colleagues he is looking forward to not having to wear a blazer and long pants." http://politi.co/2vMXtk0

FROM BREITBART -- "'Populist Hero' Stephen K. Bannon Returns Home to Breitbart": "Former White House Chief Strategist Stephen K. Bannon returned as Executive Chairman of Breitbart News Friday afternoon and chaired the company's evening editorial meeting. ... 'The populist-nationalist movement got a lot stronger today,' said Breitbart News Editor-in-Chief Alex Marlow. 'Breitbart gained an executive chairman with his finger on the pulse of the Trump agenda.' Breitbart News CEO and President Larry Solov agreed. 'Breitbart's pace of global expansion will only accelerate with Steve back,' said Solov. 'The sky's the limit.'" http://bit.ly/2uQQxn3

-- MATTHEW CONTINETTI in the NYT: **"Steve Bannon Is Overrated":** "Mr. Bannon is the latest in a long line of political advisers whose reputations are inflated after an election victory. Mr. Bannon may have given much thought to traditionalism and populism, may have publicized its themes as chairman of Breitbart.com, may be able to name drop René Guénon, Julius Evola, Jean Raspail, Neil Howe and William Strauss. But President Trump's inflammatory response to the clashes and killing last week in Charlottesville, Va., made it clear that it is he, and not Mr. Bannon, who maintains a gut connection with his most die-hard supporters. The most important culture warrior in this administration sits at the Resolute Desk. Mr. Bannon's reputation is overrated. Yes, he transformed Breitbart from an irreverent blog into the iconoclastic tribune of nation-state populism, the anti-elitist ideology of border walls, travel bans and political incorrectness." http://nyti.ms/2uRHzpG

JOSH GREEN , who wrote the book on Steve Bannon, emails us: "I thought Bannon might last a little longer because he's been the rare White House official willing to publicly defend a president engulfed in crisis in the wake of his Charlottesville response (#1 and #3, more than #2). But getting rubbed out suddenly like he did is an occupational hazard for senior Trump advisers: It's a job with a high mortality rate.

Bannon will do the same outside the White House that he was trying to do from the inside, and that's to lead a nationalist movement."

MEANWHILE -- "Sources: Pence, McMaster team up to push more troops in Afghanistan," by Nahal Toosi and Eliana Johnson: "Top administration officials in favor of sending more troops to Afghanistan teamed up ahead of a high-level meeting on Friday to persuade President Donald Trump to step up American military involvement in the 16-year-old war, two sources told POLITICO. Vice President Mike Pence and national security adviser H.R. McMaster rehearsed their pitch heading into the Camp David strategy session in an effort to persuade Trump to accept commanders' proposals to beef up the 8,400 American troops in the country, the sources said.

"But as of Friday evening, the president had not announced a decision on his plans for Afghanistan, where the Taliban have grown in strength and Al Qaeda and the Islamic State terrorist groups have a foothold. And no announcement appeared imminent. The two sources - an administration official and a senior White House aide - also confirmed that Erik Prince, founder of the former Blackwater private security firm, had been scheduled to attend the session but that he was blocked at the last minute. The administration official said McMaster was the one who blocked Prince." http://politi.co/2wqaVLI

MICHAEL CROWLEY -- "Hawks soaring after Bannon's departure": http://politi.co/2uRoaVX

CHOOSE YOUR NEWS -- @realDonaldTrump at 7:47 a.m.: "Important day spent at Camp David with our very talented Generals and military leaders. Many decisions made, including on Afghanistan."

--"Trump makes no decision on Afghanistan strategy," by Reuters' Steve Holland and Jonathan Landay: http://reut.rs/2igMLh1

THE LATEST IN SPAIN -- "Spain, France press manhunt for ringleader in dual attacks," by AP's Alex Oller, Joseph Wilson and Lori Hinnant in Barcelona: "Authorities in Spain and France pressed the search Saturday for the supposed ringleader of an Islamic extremist cell that carried out vehicle attacks in Barcelona and a seaside resort, as the investigation focused on links among the Moroccan members and the house where they plotted the carnage. Early Saturday, police searched two buses in northwest Catalonia in the hunt for any remaining members of the cell. Nothing was found in the searches in Girona and Garrigas, police tweeted.

"Across the Pyrenees, French police carried out extra border checks on people coming from Spain - a routine beefing-up of patrols anytime a neighboring country flags a potential risk, a French security official said, speaking on condition of anonymity. No arrests were made. Police also announced a series of controlled explosions Saturday in the town of Alcanar, south of Barcelona, where the attacks were planned in a rental house destroyed Wednesday by an apparently accidental blast. Authorities had initially

written off the incident as a household gas accident, but took another look on Friday and returned on Saturday." http://bit.ly/2wqW5UJ

NOT TAKING ANY CHANCES -- "After Charlottesville, Boston aims to avert violence at 'Free Speech' rally," by Reuters' Scott Malone and Nate Raymond: "Hundreds of police officers will hit the streets of Boston on Saturday to deter violence at a 'Free Speech' rally with right-wing speakers a week after a woman was killed at a Virginia white-supremacist protest. At least 500 police officers, many on bicycles, aim to keep the expected crowd of a few hundred people at the 'Free Speech' rally separate from thousands attending a counter-protest by people who believe the event could become a platform for racist propaganda.

"Authorities will close streets to avert car attacks like the deadly one carried out in Charlottesville, Virginia, by a man said to have neo-Nazi sympathies against counter-protesters and a similar spate of attacks by Islamist extremists in Europe, most recently Barcelona. After Charlottesville's bloody street battles, Boston outlawed weapons of any kind -- including sticks used to hold signs -- in the protest area and ordered food vendors out of Boston Common, the nation's oldest park." http://reut.rs/2x01aBr

-- "Lawmakers urge removal of Robert E. Lee statue at Antietam," by Austin Wright: "Amid the national firestorm over Civil War monuments, Maryland lawmakers are pressing the National Park Service to remove a statue of Robert E. Lee that some view as an egregious attempt to sanitize Confederate history. And key House Democrats are threatening legislation if the Park Service won't act on its own to take down the statue at Antietam National Battlefield, site of the bloodiest single-day battle in U.S. history." http://politi.co/2vaSfe8

MOOCH UPDATE -- "Scaramucci hires 'Fifteen Minutes,' Hollywood PR firm," by Isaac Dovere: "Anthony Scaramucci ... has signed with Hollywood publicist Howard Bragman ... [whose] company is ... called Fifteen Minutes. One of his specialties is crisis communications for celebrities. His client list includes Barry Manilow and the JetBlue flight attendant who took two beers and jumped down an exit chute slide. He also handled Monica Lewinsky. Scaramucci ... is said to be looking for more media appearances." http://politi.co/2wpWcjj

WILLIAM COHAN in Vanity Fair, **"Please, God, Save Gary Cohn from Himself":** "He should resign for his own dignity and so that the reputation he worked so hard to build

on Wall Street during the last 30 years doesn't get further destroyed by the monster that is Donald Trump. ... I am told Cohn 'is dying' inside the Trump lunatic asylum, and that 'this is a real inflection point for him.' ... The right thing for Cohn to do is resign. He has no business any longer in a Trump administration. By staying, he is allowing Trump 'to borrow his credibility,' in the words of Thomas Ricks, the Pulitzer Prize-winning journalist, and ruin it.

"Can he put aside his personal ambition to be Fed chair in order to save his dignity and do what is clearly the right thing? No doubt this is what Cohn and his family are discussing during his respite in the Hamptons. 'Do you want to have a boss like Donald Trump?' [Larry] Summers said on Bloomberg, after being asked whether Cohn should resign. 'How do you face your children?' It's the right question, Gary." http://bit.ly/2uZZSol

THE ROADSHOW -- "Vice President Mike Pence is heading to California to raise money with Kevin McCarthy," by the L.A. Times' Seema Mehta: "Pence and McCarthy will headline a reception and dinner in Beverly Hills on Sept. 14. The following day, the pair will raise money at a breakfast in Bakersfield, a luncheon in Newport Beach and a reception and dinner in Sacramento. ... The fundraisers benefit California Victory 2018, a joint fundraising committee that benefits Pence's and McCarthy's political action committees, the [NRCC] and the congressional campaign accounts of McCarthy, Darrell Issa of Vista, Dana Rohrabacher of Costa Mesa, Mimi Walters of Irvine, Ed Royce of Fullerton, Steve Knight of Palmdale, David Valadao of Hanford, [and] Jeff Denham of Turlock." http://lat.ms/2xdEPQd

DEEP DIVE -- PATRICK RADDEN KEEFE in The New Yorker, **"Carl Icahn's Failed Raid on Washington:** Was President Trump's richest adviser focused on helping the country-or his own bottom line?": Keefe "profiles the financier Carl Icahn, and investigates his controversial (and potentially illegal) role as special adviser to President Trump-up until Icahn publicly stepped down from his position, on August 18th, as this piece was going to press. Icahn and Trump have known each other for decades. Keefe writes, 'Among Trump's panoply of wealthy boosters, Icahn is distinctive, if not unique, because of the President's willingness to play the beta role and genu???ect before him.' During the 2016 Presidential campaign, Icahn repeatedly raised the issue of renewable-fuel credits, speaking of the 'insane' per???dy of the E.P.A., which administers the credits system, and the plight of his re???ner, CVR Energy.

"He believed that Trump would slash regulation and would make the change that Icahn wanted on biofuel credits-shifting the so-called 'point of obligation' so that other parties would be compelled to purchase the credits, instead of merchant re???ners like CVR. Several weeks after Trump's victory, Icahn tweeted, 'I've agreed to serve as a special advisor to the president on issues relating to regulatory reform.' Keefe writes, 'Icahn's role was novel. He would be an adviser with a formal title, but he would not receive a salary, and he would not be required to divest himself of any of his holdings, or to make any disclosures about potential con???icts of interest.' In the months after the election, the stock price of CVR, Icahn's re???ner, nearly doubled. The rally meant a

personal bene???t for Icahn, at least on paper, of half a billion dollars." http://bit.ly/2wZt6p6

TRUMP INC. -- "5 more charities drop Mar-a-Lago fundraisers," by Cristiano Lima: "Five more charities announced Friday they were dropping plans for fundraising events at President Donald Trump's Mar-a-Lago resort in Florida, as the administration continues to feel the backlash from business groups after the president's handling of the violent clashes in Charlottesville, Virginia, last weekend. Susan G. Komen, a multimillion-dollar nonprofit that raises money for breast cancer research; the International Red Cross; The Salvation Army; the Autism Association of Palm Beach County; and Big Dog Ranch Rescue in Loxahatchee Groves, Florida, all said they were pulling events from Mar-a-Lago's upcoming winter fundraising schedule, according to local reports." http://politi.co/2uZUlyk

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers and other health care purchasers; however, the list price - the important starting point for those negotiations -- continues to rise, at a rate of nearly ten percent in 2016 alone. Increased competition, faster reviews of generics and biosimilars and ending anti-competitive practices can also bring down the cost of medications for patients. Learn more at affordableprescriptiondrugs.org ******

CLIMATE WATCH -- "More GOP lawmakers bucking their party on climate change," by David Siders in Los Angeles: "While President Donald Trump continues to dismantle Obama-era climate policies, an unlikely surge of Republican lawmakers has begun taking steps to distance themselves from the GOP's hard line on climate change. The House Climate Solutions Caucus, a bipartisan backwater when it formed early last year, has more than tripled in size since January, driven in part by Trump's decision in June to withdraw the United States from the Paris climate accord.

"And last month, 46 Republicans joined Democrats to defeat an amendment to the annual defense authorization bill that would have deleted a requirement that the Defense Department prepare for the effects of climate change. The willingness of some Republicans to buck their party on climate change could help burnish their moderate credentials ahead of the 2018 elections. Of the 26 Republican caucus members, all but five represent districts targeted by the [DCC] next year." http://politi.co/2uS6SYt

SCOOP -- "Trans Surgical Care in Military Is on Hold, Leaked Emails Say," by Vice's Diana Tourjee and Lindsay Schrupp: "A transgender member of the U.S. military ... was scheduled to undergo a surgical procedure next week. However, according to the service member, the transition-related surgery-which they had been planning for several months-was abruptly canceled on Tuesday. A recent email sent to medical officials in the US military, a photograph of which was obtained by Broadly, explains why: 'Surgery related to gender transition is to be held at this time, effective now, pending further guidance.' In addition to the hold on new surgeries, the email mandates that 'any planned surgeries for gender transition must be cancelled at this time.'"

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : The high prices that drug makers set for prescription drugs can put financial strain on patients, employers, unions and others who provide health care coverage to more than 50 percent of Americans. Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers, unions and government programs. But, as list prices - the starting point for those negotiations -- continue their nearly double-digit increases, the effects ripple throughout the system. The key to ensuring greater access and affordability lies in fostering greater competition. Facilitating faster reviews of generics and biosimilars, identifying off-patent drugs with little or no generic competition, and ending anti-competitive practices that keep safe, effective alternatives out of the market are also key to abating rising drug costs for patients. Learn more at affordableprescriptiondrugs.org ******

Scientific Integrity Committee Clears Pruitt Against Sierra Club's 'Climate Denier' Charge

Scientific Integrity Committee Clears Pruitt Against Sierra Club's 'Climate Denier' Charge
August 1, 2017
Elizabeth Harrington
http://freebeacon.com/issues/scientific-integrity-committee-clears-pruitt-against-sierra-clubs-climate-denier-charge/

The Sierra Club has failed in its attempt to label Scott Pruitt a violator of the Environmental Protection Agency's Scientific Integrity Policy.

Pruitt is off the hook for expressing an opinion about global warming, as a scientific review panel ruled that it is within EPA policy to call for rigorous debate on the issue, according to a letter obtained by the Washington Free Beacon.

"The freedom to express one's opinion about science is fundamental to EPA's Scientific Integrity Policy even (and especially) when that point of view might be controversial," wrote Dr. Thomas Sinks, the director of the EPA's Office of the Science Advisor.

The Sierra Club filed a complaint to the inspector general against Pruitt in March, alleging Pruitt violated the Scientific Integrity Policy by saying during an interview that there is disagreement among scientists about whether CO2 is the primary driver of global warming.

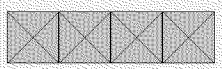
The inspector general referred the allegation to Dr. Francesca Grifo, the EPA's Scientific Integrity Official, who then passed along the Sierra Club's complaint to the EPA Scientific Integrity Committee.

The committee cleared Pruitt of the charge, and, in fact, defended the EPA administrator for expressing his opinion and encouraging "vigorous debate."

"In his response, the Administrator expressed his opinion regarding contributions to global warming and called for more debate, review, and analysis as a precursor to any future EPA policy decision on the matter," the Scientific Integrity Review Panel said. "This expression of opinion, which was not made in a decisional context, is fully within the protections of EPA's Scientific Integrity Policy and does not violate that Policy. We also note that, in his remarks, the Administrator did not suppress or alter Agency scientific findings."

The EPA panel went further in refuting the Sierra Club's interpretation of the Scientific Integrity Policy. The liberal environmentalist group had branded Pruitt a "climate denier" in its complaint.

"Expressing an opinion about science is not a violation of the EPA Scientific Integrity Policy," the EPA panel said. "Indeed, the Scientific Integrity Policy—in the spirit of promoting vigorous debate and inquiry—specifically encourages employees to express their opinion should the employee disagree with scientific data, scientific interpretations, or scientific conclusions."



The Sierra Club did not immediately respond to a request for comment.

The group's complaint was spurred by an interview Pruitt gave to CNBC, where he was asked, "Do you believe that it's been proven that carbon dioxide is the primary control knob for climate?"

Pruitt responded: "No. I think that measuring with precision human activity on the climate is something very challenging to do and there's tremendous disagreement about the degree of impact. So no, I would not agree that it's a primary contributor to the global warming that we see. But we don't know that yet… We need to continue the debate and continue the review and the analysis."

The letter was signed by Dr. Sinks, and sent to Elena Saxonhouse, a senior attorney for the Sierra Club, and Joanne Spalding, the group's chief climate counsel.

Subject: Morning Energy: Trump visits Utah for monument announcement today — Energy world reacts to Senate tax bill passage — EPA axes mining cleanup rule

By Anthony Adragna | 12/04/2017 05:40 AM EDT

With help from Alex Guillén

TRUMP'S MONUMENTAL DECISION: The news spotlight will shift to Salt Lake City today, where President Donald Trump is expected to unveil his decision to drastically trim Utah's Bears Ears and Grand Staircase-Escalante national monuments after deciding the designations under the Antiquities Act were overreach. The moment marks a huge victory for the state's congressional delegation, which fought hard to undo the designation. "Every elected official from the mayors to the commissioners, every single elected representative, got engaged in it. It was the real, Utah cumulative, everybody-pull-together kind of thing," Boyd Matheson, president of the Sutherland Institute, told the Salt Lake Tribune. Look for a whole bunch of VIPs, including Interior Secretary Ryan Zinke, Sen. Orrin Hatch and House Natural Resources Chairman Rob Bishop, to be on hand for the Trump's announcement.

But expect the pushback to be instantaneous and lengthy legal battles to follow. Some 5,000 people protested the anticipated decision outside the Utah State Capitol over the weekend (picture via League of Conservation Voters here). Look for Native American, public lands and environmental groups to lodge lawsuits arguing the Antiquities Act doesn't provide the president authority to change a prior designation. Representatives from the Navajo, Ute, and Hopi Tribes will hold a telephone press conference tomorrow at 5 p.m. EST responding to announcement.

Trump is due to speak at 2:40 p.m. EST in Salt Lake City. One thing to watch for is whether his comments touch on the other national monument designations that Zinke recommended shrinking such as Cascade-Siskiyou, Organ Mountain-Desert Peaks, Rio Grande del Norte and Katahdin Woods and Waters.

Also, look for Trump to use the trappings of a presidential trip — and a roundtrip flight on Air Force One — to heap praise on Hatch as he tries to persuade the seven-term Utahn to seek reelection and block Mitt Romney's path to the Senate, POLITICO's Alex Isenstadt reports.

ANWR IN AS HOUSE-SENATE MOVE TO TAX CONFERENCE: House lawmakers vote today on whether to go to conference on their tax plans H.R. 1 (115) after senators voted 51 to 49 early Saturday morning to pass their massive tax overhaul. Sen. Maria Cantwell 's push to block language opening ANWR to oil and gas drilling fell short on largely party lines 48 to 52 during the debate. Here's what the energy and environment world had to say following the vote:

—**Clean energy groups:** "We applaud the reduction in the corporate tax rate and preserving frameworks that support the clean energy sector. However, we are concerned about provisions that will have a negative impact on clean energy investments, including Base Erosion Anti-Abuse Tax (BEAT) provision and the impact of the corporate Alternative Minimum Tax (AMT)

on investment tools that have been critical to the growth of the clean energy sector," a statement, signed by six groups including American Wind Energy Association and Citizens for Responsible Energy Solutions, reads.

—**Oil, gas and utility industry groups liked what they saw** and encouraged the chambers to iron out their differences ASAP. "We are encouraged that both the House and Senate agree that reducing the corporate tax rate is vital to modernizing the tax code, and urge Congress to quickly finalize legislation for the President to sign into law," American Fuel & Petrochemical Manufacturers said in a statement.

—**Environmental groups warned the bill** would undermine public health and environment: "The bill would threaten the climate by leaving billions of dollars of fossil fuel subsidies intact while changing the tax code in ways that would jeopardize the financing of numerous clean energy projects under construction and discourage future clean energy investments in wind and solar," Ken Kimmell, president of the Union of Concerned Scientists, said in one such statement.

Someone's not happy: Coal magnate Bob Murray bashed the Senate's plan as a "mockery" of the tax reform process and warned it might put him out of business, according to the Wall Street Journal. "This is not job creation. This is not stimulating income. This is driving a whole sector of our community into nonexistence," he said.

Speaking of ANWR, two-thirds of voters (including 43 percent of Republicans) don't think Congress should make ANWR drilling a major priority, according to a new poll conducted by Harvard T.H. Chan School of Public Health and POLITICO, Pro's Ben Lefebvre reports.

What's next on taxes? Pro Tax's Brian Faler has an excellent rundown.

THE PLAYBOOK POWER LIST: 18 TO WATCH IN 2018: The final Playbook Power List of the year highlights 18 politicians, activists and operatives across the country who are poised to make waves in 2018. From the anti-Trump "Resistance" on the left to the far right Bannonite wing trying to remake the GOP, keep an eye on these people over the next 12 months. Click HERE to find out who made the list.

Please welcome to the stage: The Pro Energy team's Darius Dixon and his wife recently expanded their family. Marcus Inali Dixon was born at 3:06 a.m. Friday at a healthy 8lbs. 10oz. All is well with the Dixon clan but it's not yet clear whether Marcus will share Dad's interest in FERC and nuclear waste. Here's a pic!

EPA SAYS NEVERMIND ON MINE BONDING RULE: EPA on Friday evening backtracked on the Obama administration's proposal to require hardrock miners to prove they have the money to clean up their mines, saying that it's actually "not appropriate" to regulate. The issue has been brewing for years following an environmentalist lawsuit that said EPA had never fulfilled part of the Superfund law requiring it to write financial assurance regulations for industries that could leave behind toxic messes. The Obama administration's proposed rule required hardrock miners to obtain some type of bonding or collateral would have cost $171 million annually and was projected to save taxpayers $527 million in Superfund clean-ups over 34 years. It was strongly opposed by industry and Republicans.

On Friday, at the court-ordered deadline to finalize a rule, EPA said no regulation was necessary . "EPA is confident that modern industry practices, along with existing state and federal requirements address risks from operating hardrock mining facilities," Administrator Scott Pruitt said in a statement. "Additional financial assurance requirements are unnecessary and would impose an undue burden on this important sector of the American economy and rural America, where most of these mining jobs are based." The final rule noted especially that the savings for taxpayers would have been "relatively small" and that miners would have faced costs "an order of magnitude greater" than the government's savings.

Industry, Republicans celebrate: Supportive statements flooded in Friday night from the National Mining Association, Senate Energy and Natural Resources Chairwoman Lisa Murkowski, Senate Environment and Public Works Chairman John Barrasso, and Bishop. EPA's own release included praise from three Republican governors and Sen. Steve Daines , who chairs the Senate Western Caucus. Earthjustice, which represented a coalition of green groups in the lawsuit, vowed to sue over the decision in a statement over the weekend.

Two more points: 1) The Obama administration's plans to write similar rules for chemical makers, electric utilities and petroleum and coal products manufacturers are looking unlikely to happen following this decision. 2) Coal mines are regulated differently and are required to obtain financial assurance, a practice regulated by the states. Hardrock mining covers a variety of non-fuel resources, including gold, copper, silver, iron, gypsum and sulfur.

TAKE A PASS? Ahead of a Thursday meeting between Trump, Sen. Ted Cruz and other senior officials about biofuels policy, Texas Gov. Greg Abbott formally asked for a Renewable Fuel Standard waiver from Pruitt. "The time is ripe for EPA to grant substantive relief from the unique, adverse impacts the RFS program is having on the state of Texas," he wrote in a Friday letter . "The extreme, detrimental impacts on large portions of the refining sector have now placed unacceptable burdens on the Texas economy and the economy and security of the nation as a whole." Abbott, in particular, cited high RIN prices as causing hardship to refiners across the state.

SHUTDOWN? WHAT SHUTDOWN? Senior Republicans projected strong confidence Sunday they'd be able to avoid a government shutdown by passing a short-term funding package before the Friday deadline, POLITICO's Kevin Robillard reports. "There's not going to be a government shutdown," Majority Leader Mitch McConnell said on ABC's "This Week." "It's just

not going to happen." House Appropriations Chairman Rodney Frelinghuysen on Friday released a two-week CR that would keep the lights on through Dec. 22.

But disaster aid will wait: House Republicans are tentatively planning to package the next installment of disaster aid with the Dec. 22 stopgap funding bill, Pro Budget & Appropriations Brief reports. "There's working agreement to that model," Texas Rep. Pete Sessions said Friday. "I think some of these things all collide together." No word yet on how much bigger that package will be compared to the White House's $44 billion request.

WHITEFISH HIRES MORE LOBBYISTS: Whitefish Energy, the tiny Montana-based company that drew controversy for its now-canceled $300 million grid repair contract in Puerto Rico, hired the Tallahassee office of Foley & Lardner to lobby on its behalf, POLITICO's Matt Dixon reports. Lead lobbyists will be Robert Hosay, a former Gov. Jeb Bush administration official, and Jason Allison, who once led the Scott administration's Agency for State Technology. The hiring comes as the company filed a lawsuit Friday alleging a subcontractor interfered with tens of millions in payments, the Associated Press reports.

Speaking of which, Senate Homeland Security ranking member Claire McCaskill sent a letter Friday seeking additional information about a $200 million contract inked by Puerto Rico's utility with Cobra Acquisitions LLC, another newly-formed company, for grid restoration work. Link here.

OBAMA LAMENTS CLIMATE LEADERSHIP PAUSE: Speaking in France on Sunday, former President Barack Obama said U.S. states and cities were making up for what he called "a temporary absence of American leadership" on climate action, Reuters reports. Obama also met with French President Emmanuel Macron, his predecessor Francois Hollande and Paris Mayor Anne Hidalgo.

CALLING ALL COMMENTERS! EPA convenes a public hearing this morning at 10 a.m. at agency headquarters on its plan to repeal the Obama-era Phase 2 emissions rule for heavy-duty trucks that classified "glider kits" as new vehicles or engines that are subject to more stringent requirements. More information here.

PERRY'S IN THE MIDDLE EAST: Energy Secretary Rick Perry continues his Middle East swing this week. Among this weekend highlights: Meeting with His Royal Highness Crown Prince Mohammed bin Salman in Saudi Arabia and touring Aramco's facilities in Dhahran. ME readers will of course remember that Trump asked the oil giant to make its hugely anticipated stock offering on the New York Stock Exchange.

GETTING IN THE FAST LANE: Zinke used a trip to Louisiana over the weekend to pledge to remove regulatory barriers slowing down coastal restoration projects, The Advocate reports. "Louisiana and the coastline are important, and we're losing too much of it. ... There's a lot of things that Interior can do," Zinke said. Photos from his visit here and here.

CLARIFYING: ME wrote last week that coal magnate Robert Murray said at a conservative energy conference that he had met with Pruitt seven times. A spokesman clarified that Murray

was referring to all meetings with anyone from the Trump administration, not just Pruitt, including "before and after the election." It was previously reported Murray has met several times this year with President Trump himself to discuss strategies to boost the coal industry, including his ultimately unsuccessful proposal to use the Energy Department's emergency authority to keep coal plants operating.

HAPPENING THIS WEEK

MONDAY

10:00 a.m. — EPA holds hearings on proposed repeal of emission requirements for glider vehicles, glider engines, and glider kits, 1201 Constitution Avenue NW

5:00 p.m. — Representatives from the Navajo, Ute, and Hopi Tribes will hold a telephone press conference tomorrow on national monuments, RSVP: BearsEars@fenton.com

TUESDAY

9:30 a.m. — U.S. International Trade Commission holds meeting and vote on "Biodiesel from Argentina and Indonesia," 500 E Street SW

10:00 a.m. — Senate Energy and Natural Resources Committee holds a hearing on nominations, Dirksen 366

2:30 p.m. — Senate Energy and Natural Resources Energy Subcommittee holds a hearing on a series of bills, Dirksen 366

5:30 p.m. — "Subnational Climate Diplomacy: New Roles Post-Paris," German Marshall Fund, 1744 R Street NW

WEDNESDAY

9:30 a.m. — USTR hearing on crystalline silicon photovoltaic cells, 1724 F Street NW, Rooms 1 and 2

10:00 a.m. — Hearing on "Endangered Fish Recovery Programs Extension Act of 2017," House Natural Resources Water Subcommittee, Longworth 1324

10:00 a.m. — Senate Environment and Public Works holds a hearing on the nomination of R.D. James to be assistant secretary of the Army for civil works, Dirksen 406

12:00 p.m. — "The Role of Natural Gas in the US Economy," Women's Council on Energy and the Environment, Denton's, 1900 K Street NW

12:30 p.m. — "Agriculture and the environment in 2018: Conservation programs, the waters of the United States, and the Renewable Fuel Standard," American Enterprise Institute, 1789 Massachusetts Avenue NW

1:00 p.m. — "Fleeing Change: Relocating the Village of Newtok, Alaska," Wilson Center, Ronald Reagan Building and International Trade Center, 1300 Pennsylvania Ave. NW

2:30 p.m. — "Challenges Facing Superfund and Waste Cleanup Efforts Following Natural Disasters," Senate Environment and Public Works Superfund and Waste Management Subcommittee, Dirksen 406

2:45 p.m. — Senate Indian Affairs Committee hearing on water rights, Dirksen 628

THURSDAY

9:00 a.m. — The Washington International Trade Association holds an event as part of its NAFTA series: "Energy and the NAFTA," Ronald Reagan Building and International Trade Center, 1300 Pennsylvania Ave. NW

10:00 a.m. — EPA Administrator Scott Pruitt appears before the House Energy and Commerce Environment Subcommittee, Rayburn 2123

10:00 a.m. — "Transforming the Department of the Interior for the 21st Century," House Natural Resources Oversight and Investigations Subcommittee, Longworth 1324

11:00 a.m. — The World Bank conference call briefing on the One Planet Summit, RSVP: himtiaz@worldbankgroup.org

12:00 p.m. — "The Business Case for Tax Incentives Promoting Energy Efficiency," Alliance to Save Energy, Rayburn 2203

2:00 p.m. — The House Natural Resources Federal Lands Subcommittee holds a hearing on

various bills, Longworth 1324

2:00 p.m. — "OPEC's World Oil Outlook 2017," Center for Strategic and International Studies, 1616 Rhode Island Avenue, NW

FRIDAY

9:00 a.m. — "Examining the Role of the Department of Energy in Energy Sector Cybersecurity," House Energy and Commerce Energy Subcommittee, Rayburn 2123

THAT'S ALL FOR ME!

Stories from POLITICO Pro

Trump moves to block Romney from the Senate Back

By Alex Isenstadt | 12/03/2017 08:23 PM EDT

Donald Trump is going all out to persuade seven-term Utah Sen. Orrin Hatch to seek reelection — a push aimed in no small part at keeping the president's longtime nemesis, Mitt Romney, out of the Senate.

Romney has been preparing to run for Hatch's seat on the long-held assumption that the 83-year-old would retire. Yet Hatch, the longest-serving Republican senator in history, is now refusing to rule out another campaign — a circumstance Romney's infuriated inner circle blames squarely on the president. Their suspicions are warranted: Trump has sounded off to friends about how he doesn't like the idea of a Senator Romney.

The president's mostly behind-the-scenes campaign to sway Hatch will burst into public view on Monday, when he arrives in Salt Lake City to hold a well-choreographed event designed to showcase his affection for the powerful Senate Finance Committee chairman.

Trump's appearance is ostensibly official in purpose: He will announce his decision to reduce the size of Utah's Bears Ears and Grand-Staircase Escalante national monuments, a cause that Hatch has championed. But it's also undeniably political: To use the trappings of presidential power to get a veteran lawmaker to rethink his long anticipated plans to leave the Senate.

Trump is slated to ride with Hatch both ways on Air Force One — a total of roughly nine hours round-trip. After descending from the plane together, the two will meet with Mormon leaders and then head to the state capitol for the signing of the executive order, according to three White House officials. Hatch will introduce Trump, who in turn is expected to lavish praise on the senator. After the order is signed, Hatch is expected to receive the president's pen.

The public display of affection isn't just about blocking Romney, senior administration officials say. Trump has felt loyal to Hatch since the senator defended him in the wake of the "Access Hollywood" tape episode late in the 2016 campaign. Hatch stuck by Trump even as other members of Utah's Republican delegation withdrew their support.

More recently, Hatch has played a key role in moving Trump's prized tax reform bill through the Senate.

Trump aides say the president's bond with Hatch began long before Romney emerged as a potential successor. Hatch visited Trump in the Oval Office during the first week of his presidency for a lengthy discussion about the then-vacant Supreme Court seat and Utah's national monuments.

Yet people close to Romney are convinced that Trump's main motivation is to keep the 2012 GOP presidential nominee out of the Senate. Romney himself has expressed frustration with the ongoing uncertainty about Hatch's plans, said three Republicans who've spoken with him recently. The former Massachusetts governor has pointed out that it was Hatch who urged him to consider running in the first place, but now appears to be wavering on whether to step aside.

"Hatch is a known entity for Trump and has been really good for the president for the most part," said Kirk Jowers, a friend of Romney who formerly served as the chairman and general counsel of his political action committee. "He knows for a fact he's not going to get that with Romney. I don't know that he knows what he's going to get with Romney, but it's not going to be what he's got with Hatch."

Indeed, there's widespread concern within the White House that Romney in the Senate could make Trump's life difficult. During the 2016 campaign, the former Massachusetts governor emerged as the de-facto leader of the GOP establishment's "Never Trump" campaign, delivering a nationally-watched speech in which he blasted candidate Trump as a "phony, a fraud" and implored the party to stop him.

Hatch, by contrast, went all-in for Trump in Utah, where Trump received just 46 percent of the vote but still carried the state because of a third-party candidate. Before the election, the senator also campaigned for Trump in four states, hitting the trail with the candidate's son, Donald Trump Jr. While many Republicans air their issues with Trump publicly, Hatch has usually chosen to telegraph his concerns in private discussions with the president.

"I'll just put it this way. Sen. Hatch was one of the leading voices for the president during the entire campaign," said Don Peay, a Trump family friend who led his Utah campaign. "Hatch clearly was a strong supporter of Trump from the beginning," said Peay, who helped to organize Monday's event.

Trump's push to get Hatch to run for an eighth term has taken place in furtive phone calls and West Wing visits. In early October, the senator called the president to invite him to Utah to announce his monument plan, said one person briefed on the discussion.

Near the end of the call, the president conveyed a request. "Orrin," he said, "I really hope you will consider running again."

Hatch told Trump he hadn't made up his mind.

Their mutual endearment has at time been public. When Hatch was asked last week by reporters about Trump's decision to retweet several anti-Muslim videos, the senator said he wasn't "aware" of the firestorm — and then praised Trump.

"I'll say this for ya.' He's been one of the best presidents I've served under, and the reason is he's not afraid to make decisions. He's not afraid to take on the big boss around here," Hatch said.

Trump responded by tweeting out a video of the remark. "Thank you @SenOrrinHatch," he added. "Let's continue MAKING AMERICA GREAT AGAIN!"

Romney's post-election relationship with Trump has been far more ... complicated.

During the transition, Trump considered appointing Romney as secretary of state. Trump was expecting not to like Romney but was surprised by how well they gelled during the interview process, something he told aides repeatedly at the time. Trump ultimately decided against Romney.

As the year wore on, the former governor praised the new president for some of his personnel choices. But he also made his differences known.

During an appearance in Park City, Utah, in June, Romney told a group of prominent Republican donors that Trump's White House was too consumed by palace intrigue. He also offered an implicit critique of the president's "America First" approach to foreign policy, growing emotional as he outlined the country's humanitarian responsibilities overseas.

Then, in August, Romney struck again — this time to implore the president to apologize for equating white supremacists who sowed violence in Charlottesville, Va. with their counter-protesters.

"Mr. President," Romney wrote in a Facebook message, "act now for the good of the country."

Romney has been making the rounds in Utah amid speculation that Hatch is nearing retirement, huddling with an array of Republican figures including state House Speaker Greg Hughes. Romney has told people that while he wouldn't be reflexively anti-Trump as a senator, he would be more than willing to let his criticisms be known.

Some Trump allies contend that Utah would be better served by having a presidential loyalist in the seat.

"I think he could be a great ally of the president but, as you well know, they're very different

people and have very different personalities," said Hughes, who recently met with Romney in his office in the state capitol. "Sen. Hatch," he added, "understands the president very well."

Asked who the president would rather have in the seat, Hughes, who was once mentioned as a candidate for a position in the Trump administration, said he had little doubt: "I think the president enjoys having a strong ally."

Romney, for his part, won't be at Monday event. He was invited but, several people close to him said, will be out of town.

Over the weekend, Romney wrote a tweet that underscored his respect for Hatch but also, perhaps, hinted at a belief that the senator had now accomplished what he needed to before moving on.

"A very big week for Utah's own Senator @OrrinHatch," he wrote, "with tax reform, Bears Ears reversion, and a presidential visit."

Trump to meet with Cruz over biofuel policy Back

By Ben Lefebvre and Andrew Restuccia | 12/01/2017 04:04 PM EDT

President Donald Trump will meet with Sen. Ted Cruz (R-Texas) and several Cabinet members next week to discuss U.S. biofuel policy and fuel efficiency standards, an administration official told POLITICO on Friday.

The Thursday meeting is an attempt by the White House to reach a compromise between Cruz, who has held up a Trump nominee to the Agriculture Department nominee over the administration's support for the Renewable Fuel Standard, and the farm-state lawmakers who pressured EPA to back down from potential changes to the regulations for biofuels.

The White House had until now ignored Cruz's requests for a meeting. Cruz and eight other senators sent a letter in October requesting changes to the program overseen by EPA, which sets the minimum volumes of ethanol and biodiesel to be used in the fuel market. Refiners must either purchase the biofuels to blend with their gasoline or diesel fuel, or buy credits to show their compliance — credits the refiners say are too expensive and threaten to push some refiners out of business.

Cruz retains a hold on Trump's nomination of Bill Northey to a senior USDA post, a move seen as payback after EPA backed down from considering changes in how the biofuels program is implemented amid an outcry from farm-state lawmakers.

"The key here is they need to get Cruz something to get rid of that hold," said one industry representative familiar with the meeting.

The meeting will include Agriculture Secretary Sonny Perdue, Energy Secretary Rick Perry, EPA Administrator Scott Pruitt and National Economic Council Director Gary Cohn, the administration official said, though the person added that the attendee list could change. No industry representatives are expected to attend.

While biofuels will most likely be the first topic discussed, attendees will also delve into the higher CAFE standards the Obama administration put into place, as well as octane requirements. The Trump administration has delayed implementing an increase in civil fines for automakers who violate the fuel economy standards, a move that triggered a lawsuit from environmentalists.

Cruz and Trump have had a rocky relationship in the past, including after Trump linked Cruz's father to the assassination of President John F. Kennedy during the 2016 campaign, though they have been on better terms in in recent months.

Cruz's office did not reply to a request for comment, and the White House declined to comment.

McConnell: 'There's not going to be a government shutdown' Back

By Kevin Robillard | 12/03/2017 10:16 AM EDT

Senate Majority Leader Mitch McConnell said Sunday he was confident there wouldn't be a government shutdown when funding runs out at the end of the week.

"There's not going to be a government shutdown," he said on ABC's "This Week" when asked whether the Republican-controlled Congress could keep the government running. "It's just not going to happen."

Democrats have threatened to withhold their votes for government funding unless Congress acts to provide legal relief to tens of thousands of children of undocumented immigrants who are protected by an Obama-era program that is set to end in March.

McConnell argued there is no "crisis" that would justify tying saving the so-called Dreamers to government funding.

"That's a ridiculous position. There is no crisis," McConnell said. "There's no emergency. The president has given us until March to address it. I don't think the Democrats would be very smart to say they want to shut down the government over a non-emergency."

Government funding is expected to run out on Friday.

OMB Director Mick Mulvaney, appearing on CBS' "Face The Nation," was slightly less confident, but predicted Republicans would be able to avoid a shutdown despite a "broken' system of government spending.

"I think there's a group of right-wingers in the House who say they want to shut the government down," he said. "There's a group of Democrats who want to shut the government down over DACA. And there's a group of lawmakers from some of the hurricane states who want to shut the government down until they get what they want. This just sheds light on the fact that the appropriations, the spending system is broken when any little group can sort of hold the government hostage. We need to get beyond that. I think that we will, I don't think you'll see a government shutdown."

When host John Dickerson noted Mulvaney was once a fiscal hardliner in the House, the OMB director replied: "All the more reason the system should be fixed. We don't spend money properly in Washington, D.C."

EPA proposes repealing 'glider kit' part of truck rule Back

By Alex Guillén | 11/09/2017 12:48 PM EDT

EPA today proposed repealing part of the Obama-era Phase 2 emissions rule for heavy-duty trucks that classified "glider kits" as new vehicles or engines that are subject to more stringent requirements.

Glider kits are new truck chassis with rebuilt engines and can cost significantly less than a new truck with a new engine. The proposal argues that EPA does not have the authority to regulate glider kits under the Clean Air Act.

In a statement, EPA Administrator Scott Pruitt said the Obama administration unlawfully tried to expand the Clean Air Act's reach. "Gliders not only provide a more affordable option for smaller owners and operators, but also serve as a key economic driver to numerous rural communities," he said.

Pruitt announced plans to revisit that part of the rule in August following a May meeting with and a July petition from Fitzgerald Truck Sales, the biggest U.S. manufacturer of glider kits.

WHAT'S NEXT: EPA will take public comment through Jan. 5 and hold a hearing on Dec. 4 at EPA headquarters in Washington.

Trump Climate Confusion Is the New Brexit, Top UN Official Says

Posted September 22, 2017, 8:38 A.M. ET

By Jessica Shankleman and Brian Eckhouse

When U.K. Prime Minister Theresa May criticized President Donald Trump for taking the U.S. out of the landmark Paris climate change deal this week, she might as well have been talking about another kind of exit closer to home.

The similarities and between Brexit and Trump leaving the Paris Agreement are stark, says Rachel Kyte, a special representative of the United Nations secretary-general for the Sustainable Energy for All program, of which she is chief executive officer.

Both involve inconsistencies, questions over whether it will ever actually happen and prominent dissenters trying to resist leaving or find a back door to nullify the effects of leaving.

"The U.K.: we're leaving, details to be worked out," Kyte said in an interview in New York Sept. 21. "Trump: we're leaving, details to be worked out. The U.K. is in the club, but not in the club. The U.S. is in the club, but not in the club."

The U.S. remains in the Paris deal for now because it can't legally exit until 2020. Entrance to the club was voluntary, as were the pollution targets it wrote and accepted in 2015. Similarly, the U.K. can't formally quit the European Union for two years after it officially gave notice to leave.

In her veiled rebuke to Trump at the U.N. General Assembly this week, May said the climate change agreement is a sign of "the fundamental values that we share, values of fairness, justice and human rights, that have created the common cause between nations to act together."

Those opposed to Brexit could perhaps use the same description for the EU to make their case.

California Sets Demands for Talking Emissions Targets with Trump

Posted September 22, 2017, 12:51 P.M. ET

By John Lippert and Ryan Beene

California could be willing to re-open discussions on its greenhouse gas limits for cars and trucks for 2025—so long as automakers and the Trump administration embrace the significantly tougher targets it's contemplating for later years.

Automakers have "a whole laundry list of things they've asked for" to ease the state's standards leading up to 2025, and California is willing to at least discuss reviving talks, Mary Nichols, chair of the California Air Resources Board, said in a Sept. 22 interview at Bloomberg headquarters in New York. Michael Catanzaro, a Trump special assistant, called her recently to get conversations with the administration started, she said.

"The price of getting us to the table is talking about post-2025," she said. "California remains convinced that there was no need to initiate this new review of the review and that the technical work was fully adequate to justify going ahead with the existing program, but we're willing to talk about specific areas if there were legitimate concerns the companies raised—in the context of a bigger discussion about where we're going post-2025."

Talk of a possible three-way negotiation between California, carmakers and the federal government comes after President Trump's administration reinstated in March a review of national greenhouse-gas rules that run through 2025, which he said "would have destroyed" the auto industry. California could choose to keep its rules unchanged even if the federal targets are loosened. But doing so would create headaches for carmakers dealing with a patchwork of legislation, and it would risk raising the ire of Trump and the industry as California tries to push through tougher targets for 2030.

Federal Backpedaling

So far, Trump hasn't launched what could be his most potent weapon—a court challenge to California's special authority to write its own pollution rules, which dates back to the 1970 Clean Air Act. A compromise today could help prevent a court showdown later.

"If there's a way they can keep us all united without having to roll over California, they'd like that," Nichols said of her impressions of the White House's position.

The federal government in 2011 originally agreed to greenhouse gas targets that mirror California's, boosting fuel economy to an average of more than 50 miles per gallon by 2025. When Trump overturned an Obama EPA decision to uphold the standards on the books earlier this year, automakers praised Trump's move.

But carmakers don't want changes at the federal level to create a rift with California and the handful of states who've adopted the same targets, fearing costly discrepancies if emissions standards diverge. Pressure for a compromise is also building because, even in California, zero-emission vehicle sales have been stuck at about three percent since 2014.

"I really feel like if the industry folks are as ready as I think they are to talk about future standards, it shouldn't be all that hard," Nichols said. "But there are differences in the kind of relief they want."

Nichols said that while the state is willing to at least discuss compromise in the short term, California has no intention of retreating from its legislative mandate to cut carbon dioxide emissions to 40 percent below 1990 levels by 2030. California Governor Jerry Brown and the state's Air Resources Board have vowed to remain a bulwark against the president's push for environmental deregulation,

and Nichols said long-term goals haven't changed.

Automakers can't abandon the cleaner-car goals entirely either, since major car markets China and the European Union are now contemplating their own zero-emission vehicle mandates modeled after California's. China said this month it will set a deadline for automakers to end sales of fossil-fuel-powered vehicles, becoming the biggest market to do so and driving global demand for battery-operated autos.

California, Quebec, Ontario Ink Deal to Join Carbon Markets

Posted September 22, 2017, 03:45 P.M. ET

By Carolyn Whetzel

California, Quebec, and Ontario cemented plans to launch North America's largest carbon allowance market next year, under a pact signed Sept. 22.

The agreement officially links three individual cap-and-trade programs, creating "an expanded and dynamic carbon market, which will drive down greenhouse gas emissions," California Gov. Jerry Brown (D) said in a written statement.

Ontario's integration with the existing California-Quebec market has been planned for some time. The agreement establishes the framework and terms for the new larger market.

"The linkage expands the allowance market significantly," California Air Resources Board spokesman Stanley Young told Bloomberg BNA in an email. "Ontario's market is roughly 40 percent to 50 percent the size of California's carbon market. Quebec's is 15 percent of California's."

Are Hurricanes Winds of Change for Insurers' Climate Risk?

Posted September 22, 2017, 7:45 A.M. ET

By Abby Smith

The insurance industry faces a dilemma when it comes to climate change: fundamentally, companies understand the risk natural disasters intensified by climate change can pose, but they see relatively little risk to their business in the near future.

However, the industry faces a long-term challenge to maintain market share in areas that could become increasingly harder to insure as climate change makes natural disasters more severe and more frequent. And the Trump administration's push to ax some of the tools insurers need to prepare for disasters could force companies to take a more public position on climate change.

"We look at it from all those perspectives, what a changing climate and environment does to either increase the frequency and severity of those kinds of events or decrease them ... and then putting that into our models to make sure we're delivering products that are priced appropriately," David Robinson, general counsel for the major property and casualty insurer the Hartford Group, told Bloomberg BNA.

Insurance companies are rooted in actuarial science research and analytics. Their job is to assess and comprehend risk, and that includes a scientific understanding of the effects of climate change. The federal research President Donald Trump has proposed ending is vital for insurance companies and underpins adaptation policies such as federal flood risk standards that help to mitigate risk in areas that could become uninsurable.

If Congress were to consider adopting the Trump administration's proposed cuts to climate science research, "my organization would be very vocal in terms of talking with appropriators about the value that these programs bring," Frank Nutter, president of the Reinsurance Association of America, which represents major reinsurance companies such as Munich Re America and QBE Reinsurance Corp., told Bloomberg BNA.

But in the short-term, insurance companies can ultimately recoup any losses by re-pricing their policies annually—meaning it is not as urgent that they take a proactive stance on climate. And while the recent storms in Texas, Louisiana, and Florida will cost billions in total economic losses, they may not be big events for the insurance industry.

Insurance Industry Insulated from Harvey

Take Hurricane Harvey, for example.

Total economic losses from the Category 5 storm that ravaged the coastline of Texas and Louisiana late last month are estimated to range from $200 billion to $300 billion. But insured losses are expected to come in around $20 billion to $30 billion, according to estimates from AIR Worldwide—a modeling firm that specializes in catastrophic events and works closely with insurance companies.

The insurance industry is "really not going to play a big role in terms of financing the rebuilding of Harvey," Cynthia McHale, director of insurance for the business sustainability group Ceres, told Bloomberg BNA.

But, she added, the losses are "real. They get picked up by federal, state, and municipal coffers or individuals who have homes and businesses that are damaged."

Advocates such as McHale say many insurance companies have been "sitting on the sidelines," rather than proactively addressing climate change. The recent hurricanes may not shift the dynamic, she said.

An uptick in public conversation on climate change from the insurance industry followed Hurricane Sandy in 2012, but "it didn't stick," McHale said.

"I'd love to say that it will, that at this point the switch will flip and everyone will understand climate risk needs a really concerted effort … but I'm not sure that it will at the end of the day," she said.

For the insurance companies that are out in front on this issue, these storms don't change the game.

"We are the same company after these two storms," Louis Gritzo, vice president and manager of research for mutual insurer FM Global, told Bloomberg BNA. "We'll continue to do the things we've been doing, to work with [our clients] to reduce their risk."

Storms Could Blow Away Coverage

But the insurance industry faces risk from climate change on both sides of its balance sheet.

On the underwriting side—where insurers evaluate risk and offer coverage—the industry is seeing a "widening protection gap," Tom Herbstein, program coordinator for ClimateWise, told Bloomberg BNA. That means economic losses attributed to climate change are increasing, but insurers' coverage of those losses is declining.

Herbstein said his group—facilitated by the University of Cambridge Institute for Sustainability Leadership—consists of nearly 30 global insurance companies that are pushing a proactive approach to climate change that would close that protection gap.

If the gap continues to widen, areas across the country will become uninsurable, meaning companies will pull out of those markets. McHale pointed to the mid-2000s, when several major insurance companies, including State Farm and Allstate, pulled out of the Florida market following Hurricanes Wilma and Rita.

"Companies can do that, but only so much. The strategy of retreat is not a winning business model," McHale said.

But Herbstein said the widening protection gap is a medium- to long-term risk for the industry. "If the industry continues to focus on the short term … they will eventually price themselves out of the market. That's akin to burying your head in the sand."

Insurers Investments Under Microsope

Insurance companies are also big investors, meaning they face the risk of stranded assets as the world transitions to lower-carbon energy. According to a June 2016 report from Ceres, the top 40 U.S. insurance groups owned nearly half a trillion dollars of investments in oil and gas, coal, and electric utilities at the end of 2014.

McHale said a "bright light" is insurers are increasing investments in low-carbon infrastructure. Previewing a new Ceres survey of 16 of the largest U.S. insurers to be released in January, McHale said 70 percent of that group increased investments in infrastructure and 85 percent were considering more clean energy investments.

Over half of those surveyed by Ceres also suggested investments in renewable energy could help mitigate transition risks they face from fossil fuel investments.

While insurers rely on the scientific research the Trump administration wants to halt, some in the industry are also cheering efforts to roll back requirements that they disclose investments in fossil fuel companies. However, in California, which licenses 77 percent of the U.S. insurance market, Insurance Commissioner Dave Jones required just those sorts of disclosures, despite threats of lawsuits from a dozen attorneys general.

Jones' Climate Risk Carbon Initiative, established in early 2016, required insurance companies licensed in California to divest from thermal coal and to disclose investments in coal, oil, and natural gas companies and utilities that generate electricity from more than 50 percent fossil fuels.

While the Trump administration may want to "stick their head in the sand," California will continue to play a leadership role, Jones told Bloomberg BNA. "Most other industrialized nations and their

financial regulators are working on this issue," Jones said.

Disclosure Could Drive Policy

Despite some pushback, the initiative has seen 100 percent compliance. By the numbers, that means the fossil fuel investments of around 1,300 insurance companies are now publicly available, Jones said.

For advocates such as Ceres and ClimateWise, a proactive approach from insurers is two-fold: sharing risk management expertise with the public and investing in climate resilience. And insurers such as the Hartford and FM Global that are leading on this issue are already heading in that direction.

"The key message, in addition to just making sure we understand and are tracking how hazards are changing, is there's a lot of progress that can be made to reduce risk and build resilience to the climate that we face today," Gritzo said. "We need to make sure that we're really focusing on reducing that hazard and not dismissing it."

"We face a resilience challenge in this country, a challenge we need to step up and address."

SolarCity to Pay $29.5M After Inflating Recovery Act Claims

Posted September 22, 2017, 03:38 P.M. ET

By Vishal Persaud (Bloomberg News)

SolarCity will pay $29.5 million to resolve allegations that it submitted inflated claims for itself and affiliated investment funds for grants under the Obama administration's stimulus plan, the Justice Department said Sept. 22

The settlement payment represents about 5 percent of the cash grants that the government gave the company under Section 1603 of the American Recovery and Reinvestment Act of 2009, which subsidized renewable energy projects, according to a spokesperson for SolarCity. Tesla Motors Inc. bought SolarCity in November 2016.

"This program expired, but this settlement demonstrates that the government will still hold accountable those who sought to take improper advantage of government programs at the expense of American taxpayers," Chad A. Readler, acting assistant attorney general of the Justice Department's Civil Division said in a statement.

The government alleged that SolarCity overstated the cost bases of its solar energy properties and as a result the company and its affiliated investment funds received inflated grant payments from the Treasury.

The Section 1603 program provided for cash grants equal to 30 percent of the eligible cost basis to construct or acquire qualified renewable solar energy systems placed in service before Dec. 31, 2016.

SolarCity "accurately valued the solar energy systems in the applications it submitted for cash grants under the Treasury's program, and it was entitled to the full amounts that Treasury ultimately approved and paid to the company after reviewing its applications," the company spokesperson told

Bloomberg BNA by email.

As part of the agreement, SolarCity is to release all pending and future claims against the U.S. for additional payments under Section 1603 of the American Recovery and Reinvestment Act of 2009.

The company also agreed to dismiss a lawsuit filed by two investment funds alleging the Treasury underpaid some Recovery Act grants.

Twice-Rejected LNG Exporter Gives Project Another Shot

Posted September 22, 2017, 10:38 A.M. ET

By Ryan Collins

The developer of a liquefied natural gas export terminal in Oregon that has already twice been denied permits by U.S. regulators is giving it another shot.

Veresen Inc. said late Sept. 21 that it filed another application with the Federal Energy Regulatory Commission for the $10 billion Jordan Cove LNG project that would ship gas to Asia. The agency denied the Calgary-based company approval last year, saying it failed to prove the terminal was needed. As part of its latest request, the company proposed route changes for a pipeline that would feed the terminal and eliminated plans for a power plant.

Veresen is making a third attempt just as the Trump administration promotes LNG exports as a means of establishing America's dominance in global energy markets and creating jobs. Gary Cohn, the director of the White House's National Economic Council, referenced the Northwest terminal during a talk in April, saying the government would step up approvals for such projects. It's among the dozens proposed along the coasts of the U.S. to send shale gas overseas.

Veresen said the project would create more than 200 permanent jobs and has said it would lower the U.S. current account deficit with Japan, one that President Donald Trump has complained about. In February, the company said it was in "advanced" negotiations with a third LNG buyer in Japan and that preliminary agreements with Jera Co., a joint venture between Tokyo Electric Power Co. Holdings Inc. and Chubu Electric Power Co., and Itochu Corp. were being finalized.

The application for Jordan Cove comes just weeks after Trump filled seats on the Federal Energy Regulatory Commission, restoring the quorum the agency needs to approve LNG projects and major natural gas pipelines.

A $21 Billion Failed Nuclear Project is Still Haunting Scana

Posted September 22, 2017, 9:55 A.M. ET

By Mark Chediak

Scana Corp. may have dropped a $21 billion plan to build a nuclear power plant in South Carolina, but washing its hands of the project altogether won't be so easy.

On Thursday, the utility disclosed that it received a federal subpoena for documents related to the canceled reactors. Earlier this month, South Carolina's governor made public a report suggesting Scana was aware of challenges plaguing the project since early last year. And the state legislature is carrying out a probe of how plans for the two reactors at the V.C. Summer plant fell apart.

The backlash does not bode well for Scana as the utility owner seeks to recoup billions of dollars it spent on the project from South Carolina's utility customers. The company's battle to recover costs may become a flash point in the debate over who should pay for nuclear power projects that have failed to be built across the U.S. in the past decade.

"It's become an endless supply of negative headlines," said Shahriar Pourreza, a power analyst for Guggenheim Securities who has rated Scana's stock a "sell". He warned that the outcry could make it harder for Scana to recover costs and hurt its earnings growth.

Scana spokesman Eric Boomhower said by email Thursday that there are legislative and regulatory review processes that the company must go through regarding the project.

"We will not speculate on the outcomes of those processes," he said.

While South Carolina Governor Henry McMaster is still pushing to get the V.C. Summer plant finished, state legislators are already grilling Scana and project partner Santee Cooper executives in special hearings about how plans for the reactors unraveled. They've asked South Carolina's attorney general to look into whether the law that would allow Scana to recoup costs is constitutional.

"Political fallout from the V.C. Summer new nuclear construction termination has opened Pandora's box," Christopher Ellinghaus, a utilities analyst for the Williams Capital Group, in a research note Monday.

Even if regulators allow Scana to recover the reactors' costs, Pourreza said, they could end up clawing back the money in other ways, such as denying the company's future requests to recoup the expenses of other projects.

Last Project Standing

Scana's decision to halt construction has rattled both the state and the entire U.S. nuclear industry. The company called it quits after lead project contractor Westinghouse Electric Co. filed for bankruptcy and Santee Cooper pulled out. That left Southern Co. in Georgia as the only utility building a nuclear power plant in the U.S.

U.S. utility customers have ended up on the hook for more than $2.5 billion for nuclear power plants proposed and never built -- excluding the costs of Scana's V.C. Summer plant. Duke Energy Corp. and Dominion Energy Inc. are among the companies that have faced backlash for charging customers for yet-to-be-built reactors. Under state law, Scana may be allowed to recover $4.9 billion in expenses for its abandoned reactors so long as the spending is deemed prudent. But the report made public by McMaster's office this month could undermine its case.

'Significant Issues'

The February 2016 study drafted by contractor Bechtel found "significant issues" with the project's construction, including unrealistic schedules and a lack of project management. Regulators could use it to block Scana from recovering costs, Scott Elliott, special counsel for the state House committee investigating the project, told legislators last week.

The U.S. Attorney's office in South Carolina asked for a copy of the report from McMaster after it was made public, said Brian Symmes, a spokesman for the governor. Scana said the subpoena from the U.S. Attorney required the company to "produce a broad range of documents related to the project" and that it would cooperate with the investigation.

South Carolina Attorney General Alan Wilson is meanwhile expected to issue an opinion next week on the law that would allow Scana to recoup costs.

At stake is Scana's balance sheet, said Kit Konolige, a utility analyst for Bloomberg Intelligence. "They are dependent on having a smooth recovery of the capital they've invested in the project," he said.

How Electric Cars Can Create the Biggest Disruption Since iPhone

Posted September 22, 2017, 8:02 A.M. ET

By Jessica Shankleman

It's 10 years since Apple Inc. unleashed a surge of innovation that upended the mobile phone industry. Electric cars, with a little help from ride-hailing and self-driving technology, could be about to pull the same trick on Big Oil.

The rise of Tesla Inc. and its rivals could be turbo charged by complementary services from Uber Technologies Inc. and Alphabet Inc.'s Waymo unit, just as the iPhone rode the app economy and fast mobile internet to decimate mobile phone giants like Nokia Oyj.

The culmination of these technologies—autonomous electric cars available on demand—could transform how people travel and confound predictions that battery-powered vehicles will have a limited impact on oil demand in the coming decades.

"Electric cars on their own may not add up to much," David Eyton, head of technology at London-based oil giant BP Plc, said in an interview. "But when you add in car sharing, ride pooling, the numbers can get significantly greater."

Most forecasters see the shift away from oil in transport as an incremental process guided by slow improvements in the cost and capacity of batteries and progressive tightening of emissions standards. But big economic shifts are rarely that straightforward, said Tim Harford, the economist behind a book and BBC radio series on historic innovations that disrupted the economy.

Systemic Change

"These things are a lot more complicated," he said. Rather than electric motors gradually replacing internal combustion engines within the existing model, there's probably going to be "some degree of

systemic change."

That's what happened 10 years ago. The iPhone didn't just offer people a new way to make phone calls; it created an entirely new economy for multibillion-dollar companies like Angry Birds maker Rovio Entertainment Oy or WhatsApp Inc. The fundamental nature of the mobile phone business changed and incumbents like Nokia and BlackBerry Ltd. were replaced by Apple and makers of Android handsets like Samsung Electronics Co. Ltd.

Today, as Elon Musk's Tesla and established automakers like General Motors Co. are striving to make their electric cars desirable consumer products, companies like Uber and Lyft Inc. are turning transport into an on-demand service and Waymo is testing fully autonomous vehicles on the streets of California and Arizona.

Combine all three, for example through an Alphabet investment in Lyft, and you have a new model of transport as a service that would be a cheap compelling alternative to traditional car ownership, according to RethinkX, a think tank that analyzes technology-driven disruption.

One key advantage of electric cars is the lack of mechanical complexity, which makes them more suitable for the heavy use allowed by driverless technology, Francesco Starace, chief executive officer of Enel SpA, Italy's largest utility, said in an interview.

After disassembling General Motors' Chevrolet Bolt, UBS Group AG concluded it required almost no maintenance, with the electric motor having just three moving parts compared with 133 in a four-cylinder internal combustion engine.

"Competitiveness very much depends on the utilization of the car," Laszlo Varro, chief economist at the International Energy Agency, said in an interview. The average Uber vehicle covers a third more distance than the typical middle-class family car in Europe, amplifying the benefit of lower running costs to the point that "the oil price at which it makes sense to switch to electric is $30 per barrel lower," he said.

Uber on Steroids

The total cost of ownership of electric and oil-fueled vehicles will reach parity in 2020 for shared-mobility fleets, five years earlier than for individually-owned vehicles, according to Bloomberg New Energy Finance.

Already in London, Uber plans for its UberX service to be hybrid or fully electric by the end of 2019. Its rival Lyft aims to provide at least 1 billion rides a year in autonomous electric vehicles by 2025, saying they can be used much more efficiently than gasoline-powered cars.

This combination would be "the Uber model on steroids," Steven Martin, chief digital officer and vice president of General Electric Co.'s Energy Connections unit, said in an interview. "Once you have complete autonomous operation of a vehicle, then my desire to own one is going to go down and I'll be more willing to sign up to a subscription service."

Autonomous Hurdles

The transition to fully autonomous fleets may not match the speed of the smartphone revolution because of the many regulatory, legal, ethical and behavioral hurdles. Self-driving technology should become available in the 2020s, but won't be widely adopted until 2030, BNEF says.

Even so, the shift to electric cars could displace about 8 million barrels a day of oil demand by 2040, more than the 7 million barrels a day Saudi Arabia exports today, the London-based researcher says. That could have a significant impact on oil prices—a drop of 1.7 million barrels a day in global consumption during the 2008-2009 financial crisis caused prices to slump from $146 a barrel to $36.

That doesn't mean oil giants like BP or Exxon Mobil Corp. are heading for an inevitable Nokia-style downfall. While transport fuels account for the majority of their sales, they also have huge businesses turning crude into chemicals used for everything from plastics to fertilizer. They also pump large volumes of natural gas and generate renewable energy, both of which could benefit from increased electricity demand.

Even if electric vehicles do grow as rapidly as BNEF forecasts, the world currently consumes 95 million barrels a day and other sources of demand will keep growing, said Spencer Dale, BP's chief economist. The London-based energy giant expects battery-powered cars to reduce oil demand by just 1 million barrels a day by 2035, while also acknowledging the potential for a much larger impact if the industry has an iPhone moment.

The sheer breadth of the potential disruption makes it hard to predict what will happen. When Steve Jobs unveiled the iPhone, few people anticipated that it meant trouble for makers of everything from cameras to chewing gum.

"The smartphone and its apps made new business models possible," said Tony Seba, a Stanford University economist and one of the founders of RethinkX. "The mix of sharing, electric and driverless cars could disrupt everything from parking to insurance, oil demand and retail."

The Most Expensive Teslas and the Policy 'Paradox' Behind Them

Posted September 22, 2017, 10:46 A.M. ET

By Nick Rigillo

Fun fact: A poster child of green energy policies has cemented its place in Europe as the most expensive place to own a Tesla.

The ruling bloc in Denmark, home of wind-power giant Vestas Wind Systems A/S, has just agreed to cut car registration taxes. But even after the adjustment, Tesla's Model S will still cost more than $115,000. The same car costs $81,200 in Germany and $69,500 in the U.S.

The Danish Electric Car Alliance, an industry association, calls the tax cut "paradoxical," because it makes polluting diesel and petrol cars cheaper, in relative terms.

"This increases the divide between fossil-fueled and electric cars," said its head, Laerke Flader. The association estimates an Audi A6 will cost as much as $9,700 less, compared with a $1,700 saving for people buying the Tesla Model S.

Denmark, where car taxes were recently as high as 180 percent, has already decided to phase out electric-vehicle subsidies such as those offered in Norway and Germany. The fallout for Tesla and its peers has been severe.

According to latest figures from the European Automobile Manufacturers Association, sales in Denmark of battery electric vehicles were down 33 percent in the second quarter of this year from a year earlier.

Italy's Enel Group Starts Latin America's Two Largest Solar Parks

Posted September 22, 2017, 11:17 A.M. ET

By Michael Kepp

Latin America's two largest solar parks, which can provide enough power to meet the annual demand of more than half a million homes, are now online in Brazil.

The projects, operated by Italy's Enel Green Power, are the $300 million, 292-megawatt (MW) Nova Olinda park, in Piaui state and the $400 million, 254-MW Ituverava park in Bahia state.

Enel, the biggest solar photovoltaic producer in Brazil, announced Sept. 18 that the farms were operating. An Enel official touted their launch as a big development for Brazil, as well as the company's long-term goal to eliminate its carbon dioxide emissions.

"The start of operations of Nova Olinda and Ituverava marks an important step forward for large-scale solar energy generation in Brazil, tapping into the great potential that the country can harness with this technology thanks to the high level of solar irradiation and land availability," Carlo Zorzoli, Enel's country manager in Brazil, said. "These two new solar parks, which together will avoid the emission of 668,000 metric tons of carbon dioxide each year, will contribute to making Brazil's energy generation more green and to Enel's commitment to become CO2-free by 2050."

Brazil's government projects that solar power will account for 4.5 percent of the nation's electricity matrix in 2026.

The Nova Olinda park has the capacity to generate 600 gigawatt hours (GWh) of solar power per year, enough to meet the annual consumption needs of 300,000 households, while the Ituverava park can generate 550 GWh per year, enough to supply the annual needs of 268,000 households.

Land of the Sun

EGP sold the parks' future energy to distributors via 20-year contracts at Brazil's first and second solar auctions, in October 2014 and August 2015, respectively.

In Brazil, EGP, through its local subsidiary, has 2,276 MW of installed renewable capacity, of which 716 MW comes from solar power, 670 MW from wind power, and 890 MW from hydropower. The company has 275 MW of renewable capacity under construction in Brazil, of which 172 MW from wind and 103 MW from solar power.

The government's latest 10-year energy expansion plan, announced in July, projects that large-scale (non-rooftop) solar power, which accounted for just 0.01 percent of the electricity matrix in 2016 would account for 4.5 percent of the matrix in 2026, about 9,660 MW of generating capacity.

Rodrigo Lopes Sauaia, the CEO of the Brazilian Photovoltaic Solar Energy Association (Absolar), called the government's projections "conservative", telling Bloomberg BNA that large-scale solar power should have an installed capacity of 14,000 MW by 2026.

Subject: BREAKING NEWS: Economy lost 33,000 jobs in September

The economy lost 33,000 jobs in September, the Labor Department reported Friday, a significant decline from 169,000 jobs added in August.

Average hourly private-sector earnings were up 2.9 percent over the previous year. In August, they were up 2.7 percent. The unemployment rate was 4.2 percent, down from August.

Analysts surveyed by Bloomberg had predicted the creation of 100,000 jobs, an increase in over-the-year hourly earnings of 2.6 percent, and an unemployment rate of 4.4 percent.

Subject: EPA will review parts of Phase 2 truck emissions rule

By Alex Guillén

08/17/2017 04:47 PM EDT

EPA will revisit certain parts of the Obama administration's 2016 Phase 2 emissions rule for heavy-duty trucks, the agency announced today.

The rule set new standards for model years 2021-2027 of tractor-trailers, school buses, delivery vans and other large workhorse vehicles. The Truck Trailer Manufacturers Association sued to block EPA's novel aerodynamic requirements for trailers, arguing the agency cannot set vehicle standards for a product without an actual engine.

The Trump administration is considering revisions to the trailer standards, but it will leave in place separate requirements for tractor engines.

The final 2027 trailer standards by themselves would have secured as much as a 9 percent drop in carbon dioxide emissions and fuel consumption compared to a 2017 trailer, and the separate standards for tractor engines would achieve up to 25 percent emissions reductions by 2027, according to Obama administration estimates.

EPA said it will also reconsider part of the rule that classifies gliders — refurbished engines installed into a new tractor chassis — as a new motor vehicle. House appropriators last month voted to have EPA report to Congress on the glider issue, although that language may not survive the ultimate spending package that clears Congress.

"We intend to initiate a rulemaking process that incorporates the latest technical data and is wholly consistent with our authority under the Clean Air Act," EPA Administrator Scott Pruitt said in a statement.

WHAT'S NEXT: EPA will begin a rulemaking process to revise or completely rescind those parts of the rule. The earliest compliance deadlines are in 2018. The trailer association unsuccessfully sought relief in court, but EPA may now offer administrative delays in light of its new rulemaking.

Twenty20

The grand bargain we need on health care

Michael R. Strain | Bloomberg View

President Obama's health care legacy is that he won the fight over whether universal coverage is the right goal for America. Obama was correct that it is, and conservatives should agree. But that's just where the debate begins. A major problem with the Affordable Care Act is the way it was passed: a party-line vote without support from a single Republican. Both conservatives and progressives are going to have to give ideological ground this time.

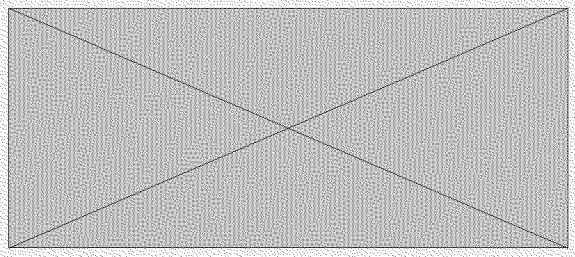
Twenty20

It's OK charter leaders are making big bucks

Frederick M. Hess | US News & World Report

Last week, The Boston Globe ran a front-page story on the pay of Boston's 16 charter-school leaders. It reported that most of these leaders earned total compensation of $150,000 to $200,000, with three topping $200,000. The Globe pointedly noted that Boston's superintendent earned $272,000 last year for leading an entire 55,000-student district. So are Boston's charter leaders wildly overpaid? Hardly. Perhaps something else is going on.



AEI

60-second take: Does it pay for leaders to be nice?

Arthur C. Brooks | AEI video

We aren't exactly living in the age of politeness. According to a July poll from NPR, "PBS NewsHour," and Marist College,

70 percent of Americans say civility in Washington has gotten worse during the past six months. (Cheer up: 6 percent say things are getting better.) While popular culture might tell us otherwise, AEI President Arthur Brooks thinks that niceness makes for more effective leaders — and he has the data to back it up.

Reuters

The world must bring democracy back to Venezuela

Roger F. Noriega | US News & World Report

This week in Venezuela, the corrupt regime of Nicolas Maduro is unveiling a "constituent assembly" of 545 of the leader's fanatical followers, which will dissolve all the country's institutions and write a constitution establishing one-party rule. President Trump has promised "strong and swift economic actions" to counter Maduro's antidemocratic measures. But sanctions are only a tactic. It's time for the international community to send a message.

From: Morning Energy
Sent: Tue 10/17/2017 2:05:19 PM
Subject: POLITICO's Morning Energy, presented by the National Biodiesel Board: Tensions elevated as Pruitt meets corn-state senators on biofuels — BLM clears way for controversial Cadiz project — Carper bashes inadequate responses from EPA nominees

By Anthony Adragna | 10/17/2017 10:00 AM EDT

With help from Eric Wolff, Tim Starks and Esther Whieldon

BIOFUEL FIGHT HEATS UP TODAY: Iowa Sen. Chuck Grassley, joined by home-state colleague Joni Ernst, Nebraska's Deb Fischer and possibly others, will meet with EPA Administrator Scott Pruitt today amid growing concern that President Donald Trump is reneging on a campaign promise and undermining the biofuels industry, Pro's Eric Wolff reports . EPA's recent proposal to cut biomass-based biodiesel quotas for 2018 and 2019, as well as recent reports the agency was considering allowing the use of credits from ethanol shipped overseas, has drawn multiple Senate letters in recent weeks, including a bipartisan letter from 38 senators and another with 29 signatures.

The recent moves have proven a huge financial boon for the oil refiners and rattled the market for biofuel credits known as RINs. Pruitt, who had immensely close ties to the oil industry as Oklahoma attorney general, is looking for ways to help them out, according to an administration official and oil industry sources who have spoken with EPA. "The administrator wants to drive down RIN prices," said one oil refining source who recently spoke to multiple EPA career and political officials. "The reason he wants to do that, he's going to screw them on point of obligation. He's willing to [push] any crazy idea that accomplishes that goal in the short term. It doesn't matter what the litigation risk is."

Remember Trump made his support for the Renewable Fuel Standard a rare policy-heavy portion of his campaign in Iowa, and Grassley, in particular, took Pruitt's proposed changes personally. He recently called them a "bait and switch" from what the administrator had told him before his nomination. Separately, four Republican governors - Kim Reynolds (Iowa), Sam Brownback (Kan.), Eric Greitens (Mo.) and Dennis Daugaard (S.D.) - sent a letter to Trump Monday voicing concern over EPA's recent RFS moves. "Cutting the biomass-based diesel volume set a year ago is not only unnecessary, it's highly disruptive, unprecedented and potentially catastrophic," they wrote.

Another refining industry source sums up the administration's dilemma to Eric: "The administration faces a conundrum on this issue. On the one hand guys are really leaning on them and talking about how they made a promise to rural America. On the other hand, the president made a promise to protect manufacturing jobs.... Politically what they're facing is a lot of heat."

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and NEI's Robert Powers was first out of the gate to identify Mark Neumann as the previous holder of Speaker Paul Ryan's House seat. For today: Who defeated a sitting party leader to win the Senate seat they currently hold? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on

Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

BRINGING INDUSTRY TO THE TABLE: In his Monday move to end what he terms EPA's sue and settle practice, Pruitt vowed to seek the consent of the companies the agency regulates before agreeing to any deadlines for environmental action, Pro's Alex Guillén reports. "EPA shall seek to receive the concurrence of any affected states and/or regulated entities before entering into a consent decree or settlement agreement," he said. EPA noted the directive does not outright require industry consent on any agreement, while adding it applied to lawsuits from both environmental and industry groups.

But critics argue his action targets a non-existent problem that will empower the entities Pruitt is supposed to be regulating. "His targeting of legal settlements, especially where EPA has no defense to breaking the law, will just allow violations to persist, along with harms to Americans," NRDC's John Walke said. During the Obama administration, EPA frequently entered into settlements with environmental groups after missing statutory deadlines. But the subsequent regulations still went through the lengthy rulemaking process, and a 2014 GAO study concluded the "effect of settlements in deadline suits on EPA's rulemaking priorities is limited."

BLM CLEARS WAY FOR CONTROVERSIAL CALIFORNIA WATER PROJECT: Regulators cleared the biggest remaining federal obstacle for Cadiz Inc. water pipeline in California's Mojave Desert when ruled the project can move forward without additional BLM approval, Pro's Esther Whieldon reports, citing a letter released Monday. Acting Director Mike Nedd axed an Obama-era 2015 finding that the project could not use an existing railroad right of way and would need to apply for its own. Cadiz in a statement said it will begin working on final engineering designs, contracts and obtaining a conveyance agreement with the Metropolitan Water District of Southern California.

Opponents slammed the move: Sen. Dianne Feinstein, a longtime opponent of the project, said Cadiz's pipeline would draw more water than the aquifer can recharge naturally and expose residents to potentially harmful levels of chemicals. "The Trump administration might be willing to let Cadiz profit by harming our public lands but California shouldn't give up," she said in a statement. "Our state can still require a stronger review of Cadiz's plans. The fight to protect our desert isn't over."

The Bernhardt question: A spokeswoman said Interior Deputy Secretary David Bernhardt "has absolutely no role in anything related to Cadiz." The agency's number two did legal work for Cadiz before joining the agency, and his former firm stands to benefit if it's completed.

CARPER BASHES EPA NOMINEE RESPONSES: Sen. Tom Carper, top Democrat on the Environment and Public Works Committee, released responses to questions from four nominees to senior EPA roles that he told ME were "shocking" in their lack of substance. He was in particular critical of the responses of the agency's chemicals pick, Michael Dourson, who didn't provide specific answers on a host of questions related to the agency's implementation of the Toxic Substances Control Act and air chief, Bill Wehrum, who provided vague answers on topics like the Paris Climate Accord and how he would approach various air regulations. But ME didn't get a sense from Carper or aides that committee Democrats were likely to boycott a

Wednesday vote on the nominations of Dourson and Wehrum, as well the picks of David Ross to head the water office, Matthew Leopold to be general counsel and Jeff Baran's re-nomination to the NRC.

Read the responses to Carper's questions for the record here.

EPA OFFICIAL LANDS IN PUERTO RICO : Newly sworn in EPA Region 2 Administrator Peter Lopez landed in Puerto Rico Monday to meet with local officials "to make sure my team at the EPA continues to help lift these communities up." Army Lt. Gen. Jeffrey Buchanan, leading the administration's response to the disaster, said in a statement it would be "months" before the electric grid could be rebuilt: "FEMA asked the Army Corps of Engineers to take the lead in that, not necessarily with military power guys, but with contracts with local workers," he said. A short-term priority is getting water treatment plants back up and running through generators followed by the longer-term goal of getting other critical infrastructure back on the electric grid.

Sign of the times: NBC News correspondent Gabe Gutierrez tweeted a picture of a drinking water well on a Superfund site with protective fencing ripped off. "People are desperate," Lopez told Gutierrez, adding people are breaking into sealed-off wells.

Trump critical of island again: Once again casting the island's struggles as partially self-inflicted, Trump said the military "shouldn't have to be" distributing food and water on the island, POLITICO's Cristiano Lima reports. Meanwhile, the Senate is likely to take up a House-passed relief package H.R. 2266 (115) once it passes its budget.

ALASKAN PICKED FOR INTERIOR ROLE: Trump late Monday announced his intent to nominate Tara Sweeney, executive vice president of external affairs for Arctic Slope Regional Corporation, as assistant Interior secretary of for Indian Affairs. She chaired the Arctic Economic Council from 2015 to 2017. "Secretary Zinke could not have chosen a better leader to help him fulfill the federal government's trust responsibility," Senate Energy Chairman Lisa Murkowski said in a statement.

** **Presented by the National Biodiesel Board:** More than 64,000 jobs are supported by clean-burning biodiesel. But the EPA is threatening to reduce biodiesel use and weaken the Renewable Fuel Standard (RFS). We must protect those biodiesel jobs with a strong RFS program. Watch the president promise to protect the RFS here: http://bit.ly/2xn5Sgm **

HOLD YOUR HORSES: Senate Majority Leader Mitch McConnell used a lunch with the president Monday to stress that Steve Bannon was going after some staunch supporters of Trump's agenda, such as John Barrasso and Deb Fischer, with his pledge to recruit primary challengers for sitting Republican senators, POLITICO's Matthew Nussbaum and Cristiano Lima report . That point apparently resonated with Trump, who later told reporters: "Some of the people he may be looking at, I'm going to see if we talk him out of that."

UNITED WE STAND? Even as Trump and McConnell projected a united front Monday, White House officials behind-the-scenes are increasingly wondering what's going on in the Senate and afraid the chamber won't be able to pass Republican tax overhaul, POLITICO's Burgess Everett

and Josh Dawsey report. "You ask me if the Republican-controlled Senate is an impediment to the administration's agenda: All I can tell you is so far, the answer's yes," OMB Director Mick Mulvaney, a former member of the House Freedom Caucus, said.

RALLYING AGAINST ANWR LANGUAGE: Six Senate Democrats - Ed Markey, Michael Bennet, Tom Udall, Maria Cantwell, Al Franken and Jeff Merkley - are joining environmental groups at 11:15 a.m. in the Senate swamp to urge the removal of language opening ANWR to drilling from the fiscal 2018 budget resolution.

DOE WATCHDOG: CLOSE, BUT NOT QUITE: The Department of Energy needs to improve control over who can access systems, the security of its web applications and mitigation of vulnerabilities, according to a recently released inspector general report. The IG had pointed out those flaws and others in a prior report. "The weaknesses identified occurred, in part, because department officials had not fully developed and/or implemented policies and procedures related to the issues identified in our report," the IG concluded. "Without improvements to its cybersecurity program in areas such as enhanced controls over vulnerability management and access controls, the department's systems and information may be at a higher-than-necessary risk of compromise, loss, and/or modification." Overall, however, DOE had addressed 13 of the 16 weaknesses the IG previously identified.

TAKE A GLANCE! NUTRIENT CREDIT PROGRAM USE LIMITED: Despite 11 states having 19 nutrient credit trading programs meant to help hit discharge limits, use has been limited, according to a report released by GAO Monday. Programs in Connecticut, Pennsylvania and Virginia saw the bulk of credit trading.

GTM: HIGHER TARIFFS MEAN LESS SOLAR: A 40 cents per watt tariff would cut solar demand in half, GTM Research says in a study out today. The research group found that lower tariffs had less of an impact: For example, adding 10 cents per watt would drive down sales 9 percent. The study also found that utility scale solar would be hardest hit, as utilities are more sensitive to cost than the residential market.

REPORT: LET'S COMMISSION A COASTAL COMMISSION: The Regional Plan Association released a report Monday calling for New York, New Jersey and Connecticut to form a new coastal commission as the region prepares for the impacts of climate change over the next decades.

HOT DOC: The Environmental Defense Fund released a new document called "Pruitt's Playbook" chronicling what it says is Pruitt's assault on EPA's mission.

WINTER IS COMING: The American Gas Association today predicts cooler temperatures this winter will mean a five percent increase, on average, on heating bills as consumers are likely to use three percent more natural gas.

MAIL CALL! MORE CRITICISM OF MONUMENT REVIEW: More than 350 National Park Service employees sent Zinke a letter today saying they are "extremely disappointed" in his review of national monuments designated under the Antiquities Act.

- Separately, more than 350 companies largely from the outdoor recreation retail industry in a Monday letter to Trump urged the president to "embrace the conservation ethic of your predecessors and keep current protections in place for our public lands and waters." The letter also asks Trump not to roll back protections on monuments. The Commerce Department has until Oct. 25 to send the White House a report on marine monuments and Trump is mulling Interior Secretary Ryan Zinke's recommendations to shrink and/or allow mining, commercial fishing and logging in 10 existing monuments.

MOVER, SHAKER: Bryan Rice, an Interior veteran and member of the Cherokee Nation of Oklahoma, started as director of the Bureau of Indian Affairs on Monday. He most recently led the agency's Office of Wildland Fire as the latest stop on a federal career spanning more than 20 years.

Trump Coal Push May Be Disaster Insurance the Grid Doesn't Need

Posted August 24, 2017, 11:42 A.M. ET

By Tim Loh and Mark Chediak

If all hell breaks loose on the U.S. power grid—a terrorist blows up a key natural gas pipeline, say, in the midst of a frigid winter—how will Americans keep the lights on?

The answer is coal, according to a growing collection of the industry's leaders and lobbyists. Their pitch conveys an image of a nation plunged into darkness as solar farms, wind turbines and plants fueled by gas fail to make up for the loss of coal-fired generation. Though it's a view at least partly supported by a Department of Energy study released late Wednesday, the reality isn't so dire.

Coal companies' pleas for protection come as President Donald Trump vows to make good on campaign promises to support an industry hit by low-cost renewable energy and abundant gas from shale reservoirs. Energy Secretary Rick Perry called in April for his department to investigate whether rising supplies of wind and solar energy are threatening the grid's reliability. The resulting report recommends less stringent environmental rules for coal plants; changes in electricity trading; and easier permitting for coal, nuclear, and hydropower.

Coal plants "play an important role," said David Sandalow, inaugural fellow at Columbia University's Center on Global Energy Policy and a former Energy Department official. "But it would be costly in many ways to get locked into old notions of operating the grid when new technologies are out there."

Grid operators have already been coping with a decline in power from coal-fired plants—most of which are designed to operate around the clock to meet electricity demand—without any major mishaps. Since 2005, 14 percent of America's coal-burning capacity has closed, and 5 percent of the remaining 294 gigawatts is scheduled to shut, according to Bloomberg New Energy Finance. In May, coal generated just 29 percent of America's electricity, about half the share it had when George W. Bush was president.

The Aug. 21 solar eclipse in the U.S. was a litmus test for grid operators. Though the California Independent System Operator said 3,400 megawatts of large-scale solar came off the state's system during the event, that was less than forecast, and there were no significant disruptions to electricity service.

As more wind and solar energy is added to the power mix, new tools including battery storage are helping to smooth the transition. In March, there were 21 states with at least 20 megawatts each of storage projects in service, under construction or proposed, according to GTM Research.

Another approach is "demand response," in which customers are compensated for altering their power use at various times to bolster a region's grid reliability. California, which generated 24 percent of its power from wind and solar in May on a net basis, had no major blackouts last year during the shutdown of the Aliso Canyon gas storage field following a leak.

Better Technology

Improved technology, including more sophisticated weather models that can help grid operators predict how much wind and solar supply will be available, also has aided the growth in renewables. And new gas-fired plants that can be ramped up or down quickly to respond to demand changes are being added to the nation's electricity network. The result is an emerging fleet of smaller power sources that can actually make the grid more stable by reducing the chance of a single massive plant failing, Sandalow said.

"You're putting all your eggs in one basket," Sandalow said of relying on a few big generators.

Coal supporters, meanwhile, said America's growing use of gas and renewables is putting the electricity grid in peril. Gas plants can't store enough of the fuel on site to guarantee power if trouble strikes, while coal-fired plants can stockpile months of supply, they argued. Coal and nuclear should be "properly compensated to recognize the value they provide to the system," said Neil Chatterjee, the new chairman of the Federal Energy Regulatory Commission, which helps monitor the nation's electricity supply.

"Where we're going with natural gas right now and coal retirements is clearly unprecedented," said Paul Bailey, chief executive officer of lobby group American Coalition for Clean Coal Electricity. "Solar and wind, we like them, but they're not going to help maintain a resilient grid right now."

Coal isn't immune to supply snags, however. Stockpiles can freeze together in extreme cold, and rail delays can prevent the fuel from reaching plants at all.

While existing technology may allow renewables to account for as much as 50 percent of U.S. power generation, changes to regulation and policy are still needed to make that happen, said Prajit Ghosh, head of Americas power and renewables research at Wood Mackenzie Ltd. in Houston.

Coal's Push

Coal lobbyists said it's impossible to predict when the country will be ready to accommodate that much wind and solar energy and, in the meantime, it's vital to preserve coal-fired power plants. That's part of the industry's push to market coal plants as the energy source of last resort, a grid-scale equivalent to the candles people pull out of their closets when the power fails at home.

"The U.S. ought not to mortgage itself up to the hilt by making rash decisions that could very well harm the economy of the U.S. in 10 years," said Luke Popovich, spokesman for the National Mining Association.

Still, developments in technology and policy are paving the way for wind and solar to gain a larger

share of U.S. power generation in the coming years, Wood Mackenzie's Ghosh said.

"There should be concerns about reliability, how renewables can impact reliability, but it's an optimistic concern," he said. "There are enough solutions which are being currently tested and which in all likelihood could pan out perfectly."

U.S. Lays Groundwork for Rescuing Coal Plants With Grid Report

Posted August 24, 2017, 7:24 A.M. ET

By Catherine Traywick and Jim Polson

The Energy Department, in a long-anticipated report on the security of the U.S. electric grid, makes the case for rescuing the nation's coal industry from widespread plant shutdowns, but stops short of an assault on renewable power that environmentalists had feared.

The study, commissioned by Energy Secretary Rick Perry who has warned that policies favoring solar and wind may be forcing shut plants and threatening the grid, recommends that the Environmental Protection Agency ease rules on coal plants. It also calls for changes to how wholesale electricity is traded and easier permitting for resources such as coal, nuclear, and hydropower.

The report hands President Donald Trump a plan for fulfilling his campaign promise to revive America's ailing coal industry and put miners back to work. It paints a somewhat grimmer picture of grid security than an earlier draft that concluded the nation's power system is more reliable than ever, in spite of coal plant shutdowns. By contrast, the final report cautions that "market designs may be inadequate" to keep "traditional" power generation online.

"It is apparent that in today's competitive markets certain regulations and subsidies are having a large impact on the functioning of markets, and thereby challenging our power generation mix," Perry said in a statement. "Customers should know that a resilient electric grid does come with a price."

The U.S. power industry has been waiting for the Energy Department to release the study for months. Power generator FirstEnergy Corp. said in April that it wanted to see the results before pressing ahead with a plan to divest money-losing coal and nuclear plants. Rival Exelon Corp., the largest operator of reactors in the U.S., told investors this month that it expected the report to highlight the "critical role" that nuclear plays.

Cheap Gas

The sweeping 181-page report concludes that coal-fired and nuclear power plants are being forced out of business primarily because they can't compete against cheap and abundant natural gas, which is flowing out of U.S. shale formations at a record pace. Policies favoring solar and wind energy also have played a role, the study shows.

It stresses the critical need to preserve coal, nuclear and other baseload plants that continue to produce power when the wind isn't blowing and sun isn't shining. The report argued that even natural gas-fired generators, which rely on pipelines to receive fuel, may be less resilient.

"The more we rely on natural gas, the more we're relying on fuel that arrives just in time" at a power plant, said Joseph Dominguez, Exelon's vice president of governmental and regulatory affairs and public policy.

'Warped View'

Federal regulators are "going to have to value these resilience attributes" of dependable resources, especially coal plants that can store enough fuel on-site to last months, said Paul Bailey, chief executive officer of American Coalition for Clean Coal Electricity. "Coal stacks up really well. Natural gas does OK. Nuclear does pretty well. Renewables don't do well in some respects and do OK in others.

"You need a coal fleet in order to have a resilient and reliable grid," Bailey said.

John Shelk, president of the Washington-based Electric Power Supply Association, said ensuring the resilience of the U.S. power grid doesn't simply mean handing out subsidies for coal and nuclear plants.

"Coal and nuclear want resilience to be a code word to subsidize them when they can't compete," said Shelk, whose group represents power generators such as NRG Energy Inc. and Dynegy Inc. that sell their supplies into wholesale markets. "That's a warped view of resilience. All fuels, technologies and attributes should be considered together."

Advanced Energy Economy, a group that promotes solar and wind, said the report "seriously overstates" the challenges associated with new energy resources. The American Petroleum Institute meanwhile noted that natural gas is now the source of more electricity in the U.S. than any other fuel and has cut consumers' energy costs "without government mandates and subsidies."

One way that the federal government can assist uneconomic coal plants is to compensate baseload plants for the resilience they offer the power grid, according to the report. The authors recommend that the Federal Energy Regulatory Commission, which oversees power markets, study ways in which those reliability attributes can be appropriately valued. That could include the creation of new pricing mechanisms or changing the agency's approach to energy price formation, the report says.

That recommendation echoes comments recently made by Neil Chatterjee, who was tapped by Trump to temporarily lead the energy commission. Chatterjee said coal-fired plants are a crucial part of America's energy mix that needed to be "properly compensated to recognize the value they provide."

The commission is already weighing whether it should redesign market rules to better account for state policies encouraging the use of zero-emissions power. New York and Illinois recently established subsidies for nuclear power and others are considering doing the same.

The "study reaffirms our view that nuclear energy is a key and necessary contributor to a clean, reliable and resilient electric grid, which now is more important than ever," Nuclear Energy Institute Chief Executive Officer Maria Korsnick said in a statement.

One regulation cited by the report requires coal plant operators to apply for a permit before making substantial upgrades. That requirement "creates an unnecessary burden that discourages rather than encourages" investments, the report says.

Since ordering the study in April, Perry has taken a deliberately hands-off approach and was only briefed on its findings on the morning of Aug. 22, agency officials said. The report was overseen by Travis Fisher, a senior adviser at the department, and Brian McCormack, Perry's chief of staff.

Trump Helps Spark Biofuel Trade Wars as U.S., Brazil Slap Duties

Posted August 24, 2017, 7:55 A.M. ET

By Mario Parker

A trade war has erupted in the global biofuels market, threatening to send shockwaves through commodity markets from petroleum to soybean oil.

The latest salvo came from Brazil on August 23 when it decided to institute a 20 percent tax on ethanol imports that exceed an annual cap of 600 million liters (159 million gallons), according to two cabinet members who asked not to be named before the decision was made public. The move came a day after the U.S. Commerce Department proposed duties on biodiesel producers from Indonesia and Argentina, saying they benefit from domestic subsidies.

Shots are being fired amid escalating protectionism from President Donald Trump. The U.S. Commerce Department's action on Argentinian and Indonesian biodiesel may have given Brazil cover to take action on U.S. ethanol, said Jerrod Kitt, an analyst at Linn Associates in Chicago.

Even as the U.S. is trying to act to benefit its own industry, American producers could end up as victims since they ship a significant portion of their product overseas, including to Brazil, their No. 1 customer. China already slapped tariffs on U.S.-made ethanol and an animal feed byproduct earlier this year.

"It could get ugly," Scott Irwin, an agricultural economist at the University of Illinois in Urbana, said in a phone interview. "Everybody intervenes heavily in biofuels."

Crop Markets

The rising tensions are likely to spark a ripple effect in the agriculture markets that underpin biofuels. The U.S. is the world's biggest producer of corn and soybeans, the primary feedstocks for ethanol and biodiesel. Brazil is the largest grower of sugarcane and uses the sweetener to make ethanol. Argentina is the No. 1 soybean oil exporter.

Soybean oil futures traded in Chicago jumped to the highest in more than three weeks on Aug. 23 on speculation the duties on Argentinian biofuel shipments will squeeze domestic supplies. Biofuel credits, used for compliance in a U.S. renewable-fuel quota system, also surged following the Commerce Department's decision.

Brazil's move to tax ethanol imports will probably fall hard on U.S. producers, who sold 255 million gallons to the South American nation this year through May, according to U.S. Energy Information Administration data. That is equal to 42 percent of total exports.

The Renewable Fuels Association, Growth Energy and the U.S. Grains Council—Washington-based trade groups—expressed disappointment on the Brazilian action in an Aug. 23 joint statement.

'Politics Prevailed'

"Given the tremendous volume of information we provided to Brazil that demonstrated how misguided a tariff would be, it seemed politics prevailed today and Brazilian consumers lost," the groups said.

Tensions may escalate further from here. Trump has repeatedly scrutinized trade pacts. In an Aug. 22 speech in Phoenix, the president said he thinks the U.S. will pull out of the North American Free Trade Agreement. The U.S. biofuel industry is heavily concentrated in the Midwest, an area Trump has touted as helping to propel him to the White House.

"If this was a normal administration that didn't focus on" trade as much, it wouldn't be as impactful, Kitt of Linn Associates said. "I can see him playing to that base."

Green Power's Need for Copper Boosts New Mines in Australia

Posted August 24, 2017, 8:42 A.M. ET

By David Stringer and Rishaad Salamat

Copper is shifting to an era of technology-fueled demand growth, according to OZ Minerals Ltd., which will begin work next month on a A$916 million ($724 million) mine development in Australia.

The Adelaide-based producer, announced board approval Aug. 24 for the Carrapateena underground mine in South Australia, sees renewable energy, including batteries and solar power projects, overtaking capital equipment and building as the key engine for global demand.

"I like the fact that demand is shifting," Chief Executive Officer Andrew Cole said in an Aug. 24 Bloomberg Television interview. "It's being driven as much now by technology as basic infrastructure, and the barrier to entry on new copper mines is very high—it's just hard to find them."

Copper markets are poised to benefit as demand expands from renewable power and electric vehicles from the mid-2020s, according to BHP Billiton Ltd., which controls the world's biggest mine. The electric vehicle market alone could require about 8.5 million metric tons of copper through 2035, the company said in October 2016.

Carrapateena, about 160 kilometers (99 miles) north of Port Augusta, will begin commissioning in the final quarter of 2019, and the site has significant potential for expansion, OZ Minerals said. It will have average annual output of about 65,000 metric tons of copper and 67,000 ounces of gold over about two decades.

Copper faces a persistent deficit from late 2018 to early 2019 on a lack of new projects and depletion of existing mines, according to Jefferies LLC, and miner Antofagasta Plc said this month that the metal's outlook is being boosted by rising demand, including for electric vehicles. Prices are headed for a second annual gain and this week rallied to the highest level in London since late 2014.

"The technological age that we are moving into, the ramp up of batteries, energy storage, electric vehicles, green energy production through solar and wind—all of those things will drive copper pricing," Cole said in the interview.

The producer, which forecasts 2017 copper output of as much as 115,000 tons at its Prominent Hill mine, plans to fund Carrapateena's development from cash, Cole told analysts earlier on a conference call. It previously reported underlying profit rose to A$80.6 million in the six months to June 30, from A$55 million a year earlier.

Philippines Inaugurates 800-Megawatt Solar Manufacturing Plant

Posted August 24, 2017, 8:28 A.M. ET

By Bloomberg News

Filipino President Rodrigo Duterte inaugurated a manufacturing plant with enough capacity to produce 800 megawatts of solar panels a year.

The factory, expected to reach full production next year, will create 50,000 jobs, its owner, Solar Philippines, said in an Aug. 23 emailed statement.

"The establishment of this state-of-the-art facility in Sto. Tomas, Batangas, is timely and relevant as we address increasing demand for renewable energy," Duterte said in his speech. "It is high time that we begin to establish local solar power."

Although a relative newcomer to solar, the Philippines is getting more serious about the technology. Total installed capacity in the country surged more than fivefold in 2016 from a year earlier and is expected to grow by 14 percent this year, Bloomberg New Energy Finance estimates.

The Batangas factory came online in March with an initial capacity of 200 megawatts, Leandro Leviste, chief executive officer of the company, said by phone Aug. 24.

Solar Philippines entered solar manufacturing after SunPower Corp. shut down two of its factories in the Philippines. The company is partnering with Chinese companies to make solar panels for export to the U.S. and Europe and has begun selling panels to local distributors, it said.

Driving the Day

Good Saturday morning from Los Angeles! Jake and Anna are going to Politicon today in Pasadena, where we're hosting a panel called Trump and the media. We'll be chatting with Bill Kristol, Jason Miller, Symone Sanders and Jon Lovett.

MILWAUKEE JOURNAL SENTINEL FRONT-PAGE BANNER HEADLINE -- "PRIEBUS IS OUT" http://bit.ly/2uHH5QZ

THE END -- THE REINCE POST-MORTEMS...

-- POLITICO: "Inside the end of the Priebus era: Trump's chief of staff struggled to assert his authority starting on his first day in the West Wing," by Josh Dawsey and Eliana Johnson: "The unpredictable nature of the information flow in the White House made him uneasy, several administration officials say. He lost his cool when other West Wing staffers knew things that he didn't, and he would call people who had spoken to the president to ask them what Trump had told them. He would run from meeting to meeting trying not to miss anything. He would corner people who criticized him publicly and ask them to stop - but admit the criticisms were close to accurate. ... Trump never seemed to fully trust Priebus ... And he never fully empowered him, softly undermining him by calling him 'Reince-y' and making strange asides, officials said.

"At one point, he told associates that Priebus would make a good car salesman. At another, he mocked him for expressing excitement when he spotted his house from Air Force One, flying over Wisconsin. Trump exacerbated Priebus' status by frequently complaining about him to other staffers and outside advisers ... His press shop was criticized for fighting for protecting Priebus in the press over other staffers and the

president. For some, defending him was just an old habit. One senior administration official even called the communications office's fixation with defending Priebus an 'inappropriate use of government funds.'" http://politi.co/2uGDjaA

-- WASHINGTON POST: Phil Rucker, Abby Phillip, Bob Costa and Ashley Parker: "Trump first tried to offer the chief of staff job to Kelly in mid-May, according to two people familiar with their discussions. Kelly told the president that he was flattered, but declined, saying he still had more to accomplish beefing up national security and improving immigration enforcement. ...

"Allies to Priebus said he told them he had resigned because the internal chaos had become 'unsustainable,' and that he felt demeaned by the president's treatment of him. One friend said Priebus told him he was frustrated that he could not assert control over basic White House functions, such as policy development, communications and even formal announcements ... His exit was described by one Republican strategist as 'the red wedding,' a reference to a mass-murder blood bath episode of HBO's 'Game of Thrones.' ...

"'It reached a fever pitch of the president complaining about Reince to all of us,' said one senior White House official ... 'If we heard it once, we heard it 20 times in the last week -- this erosion of confidence. The word was 'weak' -- 'weak,' 'weak,' 'weak.' 'Can't get it done.' ... Trump's demeaning of Priebus came through in other ways, too. At one point, during a meeting in the Oval Office, a fly began buzzing overhead, distracting the president. As the fly continued to circle, Trump summoned his chief of staff and tasked him with killing the insect, according to someone familiar with the incident. (The West Wing has a regular fly problem.) ...

"Inside the White House, Priebus' rivals tried to sow doubts about Priebus' loyalty. Any negative mention of Priebus in a news story -- even a single sentence or mere clause -- would often elicit frantic phone calls from more junior staffers, the sort of vigorous defense in the media the president came to believe was not afforded to him. The impression within the White House -- that Priebus was most concerned with defending his own image -- further undercut his standing with Trump and the president's family." http://wapo.st/2tLf7Bi

TOP TWEETS -- @JohnJHarwood: "Ryan-Priebus ally tells me Trump is moving toward 'an independent WH' untethered from the Republican Party" ...**@codykeenan:** "'Hello, Reince? Hey, it's Bob Mueller.'" ... **@maggieNYT:**"Metaphor - Priebus does exit interview w Hannity, who attended dinner w Potus where Priebus was savaged a few nights ago".

NEW SHERIFF IN TOWN -- JOSH DAWSEY and **BEN WHITE, "West Wing waits to see if real change is coming":** "After months of chaos, President Donald Trump's aides wonder whether Priebus' replacement, Gen. John Kelly, can calm the famously mercurial president and defuse the rivalries among staff": "Senior West Wing officials said they believe Kelly would be far better at imposing some discipline on Trump, who

never much listened to Priebus and even mocked him as 'not a five-star general' to the New York Times. ... Officials said late Friday they hoped Kelly would also have more respect from Trump because of his military background. And they say Trump behaves differently when he's around people he trusts. But they also feared that Kelly possesses limited political instincts-but 'he's now in a very political job,' one White House official said. ...

"White House aides are trying to decide to resuscitate the health care fight later this year, senior officials said. ... What is most frustrating, West Wing officials and advisers say, is that there never seems to be a week that goes without major hiccups or controversies. Hill aides say it is perplexing how much drama the White House can create. 'So much drama every day,' one person said. 'Can you even imagine them having an on-topic press conference and making the headlines they wanted?'" http://politi.co/2eULgnq

-- "John Kelly, New Chief of Staff, Is Seen as Beacon of Discipline," by NYT's Ron Nixon and Mike Shear: "President Trump frequently referred to John F. Kelly as one of 'my generals,' the three senior military leaders he recruited for his team. On Friday, Mr. Trump decided to see whether Mr. Kelly, a retired four-star Marine Corps general, could impose a new sense of discipline on an unruly and chaotic West Wing. Mr. Kelly, who became a star in Mr. Trump's eyes for overseeing immigration policy as secretary of homeland security, will become the president's second chief of staff. ... The square-jawed Mr. Kelly, the first general to hold the chief of staff position since Alexander M. Haig during the Nixon administration, will be an imposing and strait-laced figure in a West Wing filled with constantly warring aides and advisers, most of whom came to Washington with virtually no experience in federal government before Mr. Trump's victory last year." http://nyti.ms/2uLYWog

****** **A message from BP: We sell enough natural gas to meet the daily needs of every home in the U.S.** *Check out what else we're doing across the country.* ******

THE BIG QUESTION -- Will Trump give Kelly the authority to impose discipline on the West Wing, or is this just a rearranging of the deck chairs? Typically, the chief of staff is the sole gatekeeper to the president. So far, Trump has chosen a very different leadership style. Anthony Scaramucci's recent comments that he answers directly to Trump undercut the argument that Kelly will be able to bring order and a chain of command to the administration. Is Kelly really going to be able to put limits on Ivanka Trump and Jared Kushner's interactions with or limit their influence on the president? Will "walk in privileges" to President Trump's office go away?

-- ALSO many members of Congress had Priebus as their chief contact in the administration. If they needed something, they went to Reince. At DHS, Kelly was a principal. Now he's an aide. It will be interesting to see how he adapts to that -- and how the Hill adapts to him.

****** **A message from BP: Over the past 10 years, no energy company has**

invested more in the U.S. than BP - $90 billion in total. *Take 60 seconds to see what we're doing to help keep America moving forward.* ******

MUSICAL CHAIRS -- "Who will replace Kelly at Homeland Security?" by Ted Hesson and Andrew Restuccia with Daniel Lippman: "Several White House and former DHS officials proffered a slate of names of possible replacements for Kelly, with Texas Rep. Michael McCaul, the Republican chairman of the House Homeland Security Committee, emerging as a leading candidate. Other potential picks include Thomas Homan, acting director of U.S. Immigration and Customs Enforcement, who accompanied Trump on Air Force One on Friday, and Kansas Secretary of State Kris Kobach ... Separately, rumors have been circulating that Trump could nominate Attorney General Jeff Sessions for the Homeland Security role." http://politi.co/2tR59Cv

TRUMP FUMES -- at 7:20 a.m.: "Republican Senate must get rid of 60 vote NOW! It is killing the R Party, allows 8 Dems to control country. 200 Bills sit in Senate. A JOKE!" ... **at 7:28 a.m.:** "The very outdated filibuster rule must go. Budget reconciliation is killing R's in Senate. Mitch M, go to 51 Votes NOW and WIN. IT'S TIME!" ... **at 7:32:** "Republicans in the Senate will NEVER win if they don't go to a 51 vote majority NOW. They look like fools and are just wasting time....." ... **7:39 a.m.:** "....8 Dems totally control the U.S. Senate. Many great Republican bills will never pass, like Kate's Law and complete Healthcare. Get smart!" ... **at 7:47 a.m.:** "If the Senate Democrats ever got the chance, they would switch to a 51 majority vote in first minute. They are laughing at R's. MAKE CHANGE!"

-- SENATE MAJORITY LEADER MITCH MCCONNELL and about a dozen other Senate Republicans have been pretty clear that they aren't going to kill the filibuster for bills (***Read Seung Min Kim in April*** http://politi.co/2eWvJ6m). It's unclear why he's hammering this now -- the House health care bill, skinny repeal and clean repeal failed but only needed 51 votes. McConnell -- and other Hill leaders -- never appreciate this kind of advice from the White House. **ALSO**: Democrats have controlled the Senate for much of the last decade and never did this.

-- HuffPost banner, "THE WILDEST WEEK" ... **Drudge banner,** "WH SHAKEUP -- PRIEBUS OUT -- GENERAL IN".

THE BIG TIMES TICK TOCK, A1 -- "Behind Legislative Collapse: An Angry Vow Fizzles for Lack of a Viable Plan," by Matt Flegenheimer, Jonathan Martin and Jennifer Steinhauer. http://nyti.ms/2v9rY3t

BOSTON GLOBE'S MATT VISER -- "Congressional Republicans promised action. By the numbers, they haven't delivered": "The Republican-controlled Congress is in a tailspin of unproductivity, and that's even before the Senate GOP's failure last week to pass a long-promised repeal of the Affordable Care Act. By almost every objective measure -- especially compared with 2009, the last time one party had control of the

White House and both congressional chambers -- it is off to a dismal start.

"Not only have lawmakers been unable to notch major accomplishments on health care or tax reform, but there are also fewer votes, fewer nominees confirmed, and fewer bills passed, according to a Globe review of congressional records of previous eras when the same party controlled the House, Senate, and White House.

"Today's members of Congress are generally just not as active as their predecessors, according to another key measure. Through June, there were 9,247 pages of proceedings, which are the recordings of the daily business of Congress. That was almost 40 percent less than it was in 2009 and lower than any comparable period in recent history." http://bit.ly/2w9hmPD

BRUTAL -- PEGGY NOONAN in the **WSJ: "Trump Is Woody Allen Without the Humor:** Half his tweets show utter weakness. They are plaintive, shrill little cries, usually just after dawn":"The president's primary problem as a leader is not that he is impetuous, brash or naive. It's not that he is inexperienced, crude, an outsider. It is that he is weak and sniveling. It is that he undermines himself almost daily by ignoring traditional norms and forms of American masculinity, skinny.

"He's not strong and self-controlled, not cool and tough, not low-key and determined; he's whiny, weepy and self-pitying. He throws himself, sobbing, on the body politic. He's a drama queen. It was once said, sarcastically, of George H.W. Bush that he reminded everyone of her first husband. Trump must remind people of their first wife. Actually his wife, Melania, is tougher than he is with her stoicism and grace, her self-discipline and desire to show the world respect by presenting herself with dignity." http://on.wsj.com/2v6FiGh

FOR YOUR RADAR -- "Trump swallows a bitter pill on Russia," by Michael Crowley: "President Donald Trump plans to sign a ... law restricting his ability to lift sanctions on Russia, the White House said Friday night, in a severe blow to his budding relationship with Russian President Vladimir Putin." http://politi.co/2u6I2in

-- "North Korea says 2nd ICBM test puts 'entire' U.S. in range," by AP's Eric Talmadge in Pyongyang and Mari Yamaguchi in Tokyo: "North Korean leader Kim Jong Un said Saturday the second flight test of an intercontinental ballistic missile demonstrated his country can hit the U.S. mainland, hours after the launch left analysts concluding that a wide swath of the United States, including Los Angeles and Chicago, is now in range of North Korean weapons. ... Immediately after the launch, U.S. and South Korean forces conducted live-fire exercises." http://bit.ly/2uLgMrO ... ***Instapic*** *of POTUS on a conference call about North Korea yesterday afternoon with Gen. Joseph Dunford, Rex Tillerson and Jim Mattis (H.R. McMaster, Dina Powell and Matt Pottinger were with him in the Indian Treaty Room and are in the pic)* http://bit.ly/2hb1E3H

Playbook Reads

TODD PURDUM on **"Why Priebus was destined to fail":** "On paper, Reince Priebus was a logical chief of staff for Donald Trump, an experienced inside player who could help the biggest outsider who ever won the presidency navigate the complex byways of Washington, Congress and national politics. But their teaming only made sense if the new president was willing to listen - and learn. ...

"It is a truism of White House management that presidents get the chiefs of staff they want, at least as often as the ones they need. Early in his first term, Bill Clinton chose his boyhood friend Thomas 'Mack' McLarty, a pliable figurehead, because he wanted to function as his own chief of staff. Richard Nixon chose the crew-cut enforcer H.R. Haldeman to instill fear and deliver the bad news that Nixon himself often shrank from imparting.

"In Priebus, Trump first tried the kind of low-key, steady hand that what's left of the GOP establishment thought he needed as a novice politician. Surely the longest-serving national chairman in the Republican Party's history, who had held the Republican Party together through fractious years and helped it reclaim the presidency, could be a calming, rational manager in the White House." http://politi.co/2tM6LsP

VALLEY WATCH -- "Tesla's Model 3 rolls down the red carpet as new details revealed," by the San Jose Mercury News' Louis Hansen in Fremont: "The Tesla Model 3 -- fast, electric and available in the dreams and budgets of more common car owners -- left the Fremont factory lot for the California streets Friday evening.

"CEO Elon Musk drove on stage in a red Model 3 and handed over 30 new electric vehicles to employees at a factory gala, while offering new details about the lower-cost sedan and rallying his troops for challenges ahead. ... 'The final step in the master plan,' Musk said as he stood on stage then, before an image of a curtain-draped Model 3. 'A mass-market, affordable car.' Reservations opened and swelled quickly to almost 400,000 customers." http://bayareane.ws/2tSe1l0

BUSINESS BURST -- "Sprint Proposes Merger With Charter Communications," by WSJ's Ryan Knutson and Dana Cimilluca: "Sprint Corp. has proposed a merger with Charter Communications Inc. that would create a media and communications giant, upending industries that are already in the throes of dramatic change. Since the end of May, Charter and Comcast Corp.had been in exclusive talks with Sprint over possible deals, including one that would allow the cable companies to resell wireless service under their own brands. Though the exclusivity window ended this week, Sprint Chairman Masayoshi Son continues to pursue a much larger deal with Charter, according to people familiar with the matter: a full-blown merger of the two companies." http://on.wsj.com/2uKLbGp

CLIP AND SAVE -- ED ROGERS in WaPo, "The quest to prove collusion is crumbling": "As the date of the Kushner testimony approached, the media thought it

was going to advance and refresh the story. But Kushner's clear, precise and convincing account of what really occurred during the campaign and after the election has left many of President Trump's loudest enemies trying to quietly back out of the room unnoticed. Cable news airtime and in-print word count dedicated to the nonexistent collusion story appear to be dwindling. Democrats and their allies in the media seem less eager to talk about it, and when they do, they say something to the effect of 'but, but, but ... Kushner didn't answer every question ... He wasn't under oath ... There are still more witnesses ... What about this or that new gadfly?' They are stammering. And it hasn't taken long for news producers and editors to realize that the story is fading." http://wapo.st/2vg1Vsj

MEDIA WATCH -- KATIE COURIC leaving Yahoo - AP: "A representative for Couric said Friday she turned down an opportunity for a short-term contract extension at Oath [formerly Yahoo]. Couric is working with National Geographic on a documentary to follow up her project on gender revolution with the network. She's producing a scripted series for Netflix, hosts a podcast where she interviews figures in news and pop culture, and produces 'Scraps' a cooking and travel series for the FYI network." http://bit.ly/2w7Xc8y

-- "Choire Sicha Wins Times Styles Section Bake-Off," by Vanity Fair's Joe Pompeo: "The appointment [as editor] caps months of speculation about who would succeed Stuart Emmrich in the high-profile gig, a post that involves lording over one of the Times's more lucrative sections in terms of advertising. ... Sicha ... is an executive at Vox Media, co-founder of The Awl, and former writer and editor at Gawker, Radar, and The New York Observer." http://bit.ly/2vSbqv0

Subject: BREAKING NEWS: Trump declares that 'racism is evil' amid pressure over Charlottesville

President Donald Trump on Monday forcefully condemned a violent white supremacist rally that occurred over the weekend, singling out hate groups and declaring racism "evil" after previously failing to do so in his initial response.

"Racism is evil," Trump said in a statement from the White House. "And those who cause violence in its name are criminal and thugs, including the KKK, neo-Nazis, white supremacists and other hate groups that are repugnant to everything we hold dear as Americans."

The president's new rhetoric comes days after violence occurred in Charlottesville, Virginia, where a group of white supremacists gathered to protest the removal of a statue of Confederate Gen. Robert E. Lee and clashed with counter-protesters. At least one person died when a car plowed through a crowd Saturday, injuring more than a dozen others. Two Virginia state troopers were also killed in a helicopter crash Saturday that was responding to the protest.

California Regions

AIR
Operational Development Fee/CEQA Air Quality Handbook
California Regions AIR

Proposed rule of the Imperial County Air Pollution Control District amends regulations under Rule 310 and the CEQA Air Quality Handbook. The rule revises the operational development fee, which is intended to mitigate emissions produced from the operation of new commercial and residential development projects. The rule establishes three mitigation alternatives for project proponents and sets fees for level 1 and 2 projects. The rule also removes provisions concerning review committees for proposed mitigation projects and specifies that the district will evaluate and recommend proposed mitigation projects based on the cost effectiveness of each project. In addition, the rule revises the CEQA handbook by increasing the significance threshold for nitrogen oxide and reactive organic gases, increasing the screening criteria project size thresholds, and revising the emissions evaluation model. A hearing is scheduled for Dec. 12, 2017, in El Centro. Comments are due Dec. 6, 2017. Contact: Reyes Romero; Imperial County APCD; 442-265-1800

Regulatory Update

WATER
Emergency Disposal of Disaster-Related Wastes/Conditional Waiver of Waste Discharge Requirements
California Regions WATER

Notice of the San Francisco Bay Regional Water Quality Control Board announces a tentative resolution to adopt a conditional waiver of waste discharge requirements for discharges of certain disaster-related wastes from emergency-declared disaster areas. Requirements for coverage under the waiver are established for disaster-related wastes generally, temporary waste piles and regulated and nonregulated facilities, temporary surface impoundments, and discharges of mass animal mortality wastes to emergency landfills. A hearing is scheduled for

Dec. 13, 2017, in Oakland. Comments are due Dec. 12, 2017. Contact: Keith Roberson; San Francisco Bay RWQCB; 510-622-2404; Keith.Roberson@waterboards.ca.gov

OCCUPATIONAL SAFETY AND HEALTH
Elevator and Escalator Safety Code
Connecticut OCCUPATIONAL SAFETY AND HEALTH

Notice of the Department of Administrative Services announces an additional change to a Nov. 28, 2016, proposed rule to adopt regulations under RCSA 29-192-1e through -6e regarding safety standards for the installation, construction, operation, maintenance, inspection, repair, and use of elevators and escalators. The rule incorporates updated editions of American Society of Mechanical Engineers and American National Standards Institute model codes and standards to be consistent with new technology concerning usage, products, materials, and methods of construction for elevators and escalators in commercial and residential occupancies. The change makes a technical revision. Contact: Jenna Padula; DAS; 860-713-5868; Jenna.Padula@ct.gov

AIR
Air Quality Standards
Illinois AIR

Final rule of the Pollution Control Board amends regulations under 35 IAC 243.101, .105, .108, and .120 and repeals regulations under 35 IAC 243, Table A, to incorporate national ambient air quality standards (NAAQS) under 40 CFR 50, as of June 16, 2017. The rule implements the 2012 primary annual NAAQS for particulate matter (PM-2.5) and revises requirements for handling monitoring data influenced by exceptional events. The rule also incorporates an updated equation used for calculating compliance with the PM-2.5 NAAQS. In addition, the rule incorporates the updated list of designated reference and equivalent methods, which includes a designated federal equivalent method for nitrogen dioxide in ambient air. Finally, the rule deletes the schedule for submission of data influenced by exceptional events for use in initial area designations. The rule is effective Oct. 23, 2017. AIR
Air Pollution Control/Particulate Matter and Sulfur
New Jersey AIR

Final rule of the Department of Environmental Protection, Division of Air Quality, amends regulations under NJAC 7:27-7.2 through -22.8 (nonconsecutive) and Appendix Table A concerning air pollution control and emission offset. The rule incorporates national ambient air quality standards for new source review for fine particulate matter (PM-2.5) and makes related changes to preconstruction and operating permit requirements. The rule also removes an exemption from sulfur requirements for emergency releases from pressure-relieving stacks and requires the reporting of PM-2.5 and ammonia emissions at the source level as opposed to the facilitywide level to comply with federal requirements. In addition, the rule eliminates the option for permittees to submit emission statements via e-mail and requires submissions through an internet portal. The rule will be submitted to the EPA as a revision to the state implementation plan. The rule is effective Nov. 6, 2017. Contact: Alice Previte; DEP; 609-292-9398

Driving the Day

Good Saturday morning. **WELCOME TO THE LULL,** hopefully. Congress is gone. The president is in Bedminster. The sleepy D.C. August is in full swing. Enjoy.

BREAKING - AP at 8:56 a.m.: "OKINAWA, Japan (AP) - U.S. Marine officials say a search is underway for service members after the 'mishap' of an aircraft off Australia coast."

INCOMING! -- NYT A1, "Mueller Seeks White House Documents on Flynn," by Matt Rosenberg, Matt Apuzzo and Mike Schmidt: "Investigators working for the special counsel, Robert S. Mueller III, recently asked the White House for documents related to the former national security adviser Michael T. Flynn, and have questioned witnesses about whether he was secretly paid by the Turkish government during the final months of the presidential campaign, according to people close to the investigation. Though not a formal subpoena, the document request is the first known instance of Mr. Mueller's team asking the White House to hand over records. In interviews with potential witnesses in recent weeks, prosecutors and F.B.I. agents have spent hours poring over the details of Mr. Flynn's business dealings with a Turkish-American businessman who worked last year with Mr. Flynn and his consulting business, the Flynn Intel Group.

"The company was paid $530,000 to run a campaign to discredit an opponent of the Turkish government who has been accused of orchestrating last year's failed coup in the country. Investigators want to know if the Turkish government was behind those payments - and if the Flynn Intel Group made kickbacks to the businessman, Ekim Alptekin, for helping conceal the source of the money. The line of questioning shows that Mr. Mueller's inquiry has expanded into a full-fledged examination of Mr. Flynn's

financial dealings, beyond the relatively narrow question of whether he failed to register as a foreign agent or lied about his conversations and business arrangements with Russian officials." http://nyti.ms/2ubct7K

JOSH GERSTEIN with a **REALITY CHECK -- "Sessions' broad attack on leaks aimed at an audience of one: Trump":** "Dozens of reporters and a horde of photographers turned out for Attorney General Jeff Sessions' news conference Friday to announce a crackdown on leaks, but the most important target for his message wasn't in the room: President Donald Trump. Sessions' eight-minute broadside against leaks and his stern warning to leakers seemed to be aimed at trying to repair his badly frayed relationship with Trump, who has expressed regret for selecting Sessions and who has specifically complained that he was doing too little to fight the tidal wave of leaks that have swamped the Trump White House. ...

"Friday's event at Justice Department headquarters was carefully structured to ensure that Sessions' message reached Trump with the fewest distractions possible. If reporters had the chance to question the attorney general about the Russia investigation, he might have demurred because he has recused from the probe. But with the recusal at the core of Trump's complaints about Sessions, any televised scene of the attorney general broaching the subject could send the president into a blue rage. So, Sessions filed out after he spoke. Cameras were then shut off at Justice officials' insistence before Deputy Attorney General Rod Rosenstein returned to take reporters' questions about the nitty-gritty of the leak crackdown." http://politi.co/2wuqqys

-- "Leak Investigations Triple Under Trump, Sessions Says," by NYT's Charlie Savage and Eileen Sullivan: "[T]he Justice Department is pursuing about three times as many leak investigations as were open at the end of the Obama era, a significant devotion of resources to hunt down disclosures that have plagued the Trump administration." http://nyti.ms/2utCMpc

-- @chucktodd: "If DoJ media source threat is real (I assume it's not; just a show presser to please WH) then I look forward to ignoring that subpoena".

SHORING UP MCMASTER -- PETER BAKER in the **NYT, "Trump Defends McMaster as Conservatives Seek His Dismissal":** "President Trump defended Lt. Gen. H. R. McMaster, his embattled national security adviser, on Friday in the face of a full-bore campaign by the nationalist wing of his political coalition accusing him of undermining the president's agenda and calling for his dismissal. General McMaster has angered the political right by pushing out several conservatives on the national security staff and cautioning against ripping up the nuclear agreement with Iran negotiated by President Barack Obama without a strategy for what comes next. ... [A]fter two days of unrelenting attacks on General McMaster by conservative activists and news sites, complete with the Twitter hashtag #FireMcMaster, the president weighed in to quash such talk. 'General McMaster and I are working very well together,' he said in a statement emailed to The New York Times. 'He is a good man and very pro-Israel. I am grateful for the work he continues to do serving our country.' ...

"At one point on Friday, Breitbart News ... had close to a dozen headlines on its home page about General McMaster, like 'McMaster "Deeply Hostile to Israel and to Trump."' The #FireMcMaster hashtag was tweeted more than 50,000 times since Wednesday." http://nyti.ms/2vBxtsV

BELOW THE SURFACE -- "National security adviser attempts to reconcile Trump's competing impulses on Afghanistan," by WaPo's Greg Jaffe and Phil Rucker: "In a disorderly West Wing in which decisions are evaluated not by ideology but by their impact on the Trump brand and their fealty to the president's campaign-trail promises, McMaster has struggled to become a dominant foreign policy force. ... Among his biggest challenges was holding the attention of the president. ... Trump had little time for in-depth briefings on Afghanistan's history, its complicated politics or its seemingly endless civil war.

"Even a single page of bullet points on the country seemed to tax the president's attention span on the subject, said senior White House officials. 'I call the president the two-minute man,' said one Trump confidant. 'The president has patience for a half-page.' ... The fight over the Afghanistan strategy points to a larger problem with the relationship between McMaster's NSC and the West Wing." http://wapo.st/2vBY88O

--REVEALING NUGGET: "A Pentagon strategy aimed at defeating the Islamic State was completed in early March but still has not been approved by the president, officials said."

****** **A message from Morgan Stanley:** The Path After Paris: President Trump moved to pull the U.S. out of the Paris Agreement. Now what? Read more. *******

THE NEW REGIME -- "Kelly's Rules for Trump's West Wing: Stop Bickering, Get in Early, Make an Appointment," by WSJ's Mike Bender and Rebecca Ballhaus: "Staffers no longer loiter outside an open Oval Office door, hoping to catch the president's eye to be waved in for a chat or the chance to pitch a new idea. That door is now closed. Aides can't linger outside the chief of staff's office, either. White House staff waiting to see Mr. Kelly -- or other senior advisers in nearby suites -- are asked to remain in the lobby, where White House visitors sit on couches and can read a selection of daily newspapers. ... 'The problem here is that he won't have anyone to talk to, and he'll get frustrated,' said one person who regularly speaks with Mr. Trump. 'I give General Kelly four months.' ...

"Mr. Trump was impressed by Mr. Kelly's presentations at DHS, at times describing him as 'a killer.' He is also taken, said one official, by the 'presence' of his chief of staff, who stands about 6-foot-2 and tends to dominate the room. ... Mr. Trump kept Mr. Priebus on a shorter leash, expressing his irritation when his former chief of staff would hover in Oval Office meetings. At times, Mr. Trump charged him with menial tasks such as organizing small groups of reporters to glimpse the first few moments of a meeting with the president. ... People who have known Mr. Kelly for years describe his style as

no-nonsense. He introduces himself on phone calls and in emails to people he knows simply as 'Kelly.' 'If you're in a 10-minute meeting with him, he'll be quiet for the first nine minutes,' listening before making a decision or a pronouncement, said one person close to him. ...

"Running one of his first senior staff meetings, Mr. Kelly laid down clear lines of authority and ordered aides to stick to their assigned areas. Discussions with senators, U.S. House members or others on Capitol Hill must be reported to the White House's legislative affairs director, Marc Short. Secretary of State Rex Tillerson, Mr. Kelly said, must know about meetings with foreign diplomats. ... Mr. Kelly moved senior staff meetings to 8 a.m., instead of 8:45, and holds them around the long mahogany table of the Roosevelt Room. His predecessor, Mr. Priebus, held the meetings in his office, where the television was often turned on and where staff could often redirect the discussion away from the agenda." http://on.wsj.com/2wurimF

-- JOSH DAWSEY, "John Kelly's big challenge: Controlling the tweeter in chief": "[K]elly has said he would like to know what Trump is planning to tweet before he does so and would prefer that big decisions not be announced on Twitter -- but has privately conceded there will be late-night or early-morning missives he cannot review. Kelly is trying to put together a system in which top aides don't learn of decisions on Twitter, one where policy and personnel decisions are not first tweeted without having procedures in place to make them happen. ... Ironically, the announcement of Kelly's new role foreshadowed the challenges he faces. Kelly knew he was going to be named chief of staff, officials said. But he didn't know that Trump, sitting on the tarmac aboard Air Force One on July 28, would announce it on Twitter. Other senior administration officials first learned of the news through a buzzing phone, several officials said." http://politi.co/2uaX47H

-- STEP BACK AND THINK ABOUT THIS: The White House chief of staff has to develop a system to try to ensure his own senior White House aides don't learn about decisions through Twitter.

DELAYED -- "Trump's attack on Chinese trade gets sidelined over North Korea," by Andrew Restuccia, Eliana Johnson, Josh Dawsey and Nahal Toosi: "The White House had been preparing for a Friday announcement in which Trump planned to urge his administration to open a trade investigation into China's alleged violations of U.S. intellectual property rights and forced technology transfers, three administration officials said. But on Thursday afternoon, senior administration aides postponed the announcement at the urging of United Nations and State Department officials, who are in the sensitive final stages of convincing China to sign on to a U.N. resolution that would impose new sanctions on North Korea. U.N. and State Department officials warned that the trade announcement could kill their chances of winning Beijing's buy-in." http://politi.co/2vzJCxz

COMING ATTRACTIONS -- "Trump may host visiting leaders at his N.J. golf club during upcoming U.N. gathering," by WaPo's Anne Gearan: "President Trump is

planning to host foreign leaders at his New Jersey golf club when he attends the annual U.N. General Assembly session next month, breaking decades of precedent for U.S. presidents, said people familiar with preparations for the gathering. The State Department is getting ready for an unspecified number of foreign meetings at the Bedminster, N.J., golf club over several days during the week of Sept. 18. ... Trump is expected to make his first presidential address to the General Assembly on Tuesday, Sept. 19. He is also likely to meet U.N. Secretary General António Guterres at the U.N. headquarters." http://wapo.st/2v8qhBu

-- "Trump's trip to Bedminster prompts protesters to get creative," by Jake Lahut: "One idea is to go beyond the golf course, town to town, with vehicles blasting sound from speakers, such as former FBI director James Comey's Senate testimony or Trump's recent Boy Scout speech. 'There are literally too many soundbites to choose from,' said Dominae Leveille, an organizer with We the People." http://politi.co/2utXCVp

RYAN AGAINST TRUMP'S IMMIGRATION PLAN ... -- "House Speaker Paul Ryan casts doubt on President Donald Trump's plan to cut legal immigration," by the Milwaukee Journal Sentinel's Mary Spicuzza and Jason Stein: "'I just think arbitrary cuts to legal immigration don't take into effect the economy's needs as the boomers are retiring,' Ryan said in an interview with the Milwaukee Journal Sentinel. 'With baby boomers leaving the workforce, we're still going to have labor shortages in certain areas and that is where a well-reformed legal immigration system should be able to make up the difference.'

"Ryan cautioned he has yet to fully review the proposal and said he does want to overhaul the immigration system to focus on economic needs like dairy farms and research and engineering work. But he questioned the wisdom of actually cutting the number of immigrants entering the United States. 'I think legal immigration is good for our country. I'm a supporter of legal immigration,' Ryan said." http://bit.ly/2uaCULb

FLAGGING FOR STEPHEN MILLER -- Craig Romney, one of Mitt's sons, posted on Instagram yesterday (he has the handle @crackyenmor): "Grateful to the immigrants who spoke many languages, worshipped many ways, and made this country great. #ellisisland". ***Instapic*** http://bit.ly/2utDVNq

RNC DEPARTURE LOUNGE -- "Three more RNC staffers set to exit," by Alex Isenstadt: "Less than a year into the midterm campaign season, the [RNC] is experiencing a wave of staff-level departures. Over the next several weeks, three RNC aides -- deputy chief data officer Liam O'Rourke, director of political data support Ashley Burns, and director of business intelligence Patrick Stewart -- are expected to leave. The exits, confirmed by three RNC officials, have surprised the tight-knit world of Republican operatives and signaled a broader upheaval within the committee's data department." http://politi.co/2vrBPSR

CLINTON WORLD -- "Hillary Clinton Hires Two Former Campaign Aides For 'Resistance' PAC," by BuzzFeed's Ruby Cramer: "Hillary Clinton has hired two political

operatives from her 2016 presidential campaign to help manage Onward Together, the project she founded this spring with former governor Howard Dean to fund and support a coalition of Democratic groups led by activists and organizers. The new additions, Emmy Ruiz and Adam Parkhomenko, held central roles on Clinton's campaign ... Clinton's new group, registered in May as a 501c4 organization with an affiliated super PAC, is working to establish a small but diverse cooperative of about 10 to 12 grassroots efforts, each one focused on a different area of the energy and activism set off by Donald Trump's election and presidency." http://bzfd.it/2wuyPlz

CNN'S BRIAN STELTER: "Other presidents paused to meet the press before going on vacation -- not Trump": "Trump will reach the 200-day mark in his presidency on Monday. He has held just one solo press conference, back on February 16, when he was less than one month into his presidency. ... At this point in 2009, President Obama had held 9 solo pressers, many of them about the country's economic recovery. At the same point in their respective presidencies, George W. Bush had held 3 solo pressers; Bill Clinton had held 8; George H.W. Bush had held 18; Ronald Reagan had held 3; and Jimmy Carter had held 12." http://cnnmon.ie/2v8jGH7

HOLLYWOODLAND - "Norman Lear plans to boycott Kennedy Center Honors reception hosted by Trump," by LATimes' Greg Braxton: "Legendary producer Norman Lear, one of the honorees of the upcoming Kennedy Center Honors, said he will not attend the pre-awards reception hosted by President Donald Trump and First Lady Melania Trump in protest of some of the president's policies. Lear said he will attend the award ceremony at the Kennedy Center on Dec. 3 but won't go to the reception beforehand." http://lat.ms/2hwUkzN

Playbook Reads

PHOTO DU JOUR -- President Donald Trump reacts on seeing visitors to the White House before boarding Marine One en route to Bedminster, N.J., for vacation Aug. 4, 2017, in Washington, D.C. | Jacquelyn Martin/AP Photo.

SHOVEL READY HOLD UP -- "Why are these billions in pipeline projects stalled?," by Eric Wolff and Darius Dixon: "Billions of dollars' worth of shovel-ready infrastructure projects have been held up by a bureaucratic morass that President Donald Trump helped to create. Trump's slowness to fill vacancies at the Federal Energy Regulatory Commission is one reason for a growing backlog of natural gas pipelines and a gas export terminal awaiting approval from the agency, which has been unable to conduct major business since February. The waiting list has grown to at least $13 billion worth of projects expected to generate more than 23,000 construction jobs, according to a POLITICO analysis - largely in states Trump won in November."

http://politi.co/2utBOcB

FOR YOUR RADAR -- "Martin Shkreli Found Guilty on Three Counts in Securities-Fraud Trial: Jury acquits 34-year-old former pharmaceutical executive on five counts, including conspiracy to commit wire fraud," by WSJ's Rebecca Davis O'Brien: "The 34-year-old Mr. Shkreli -- dubbed the Pharma Bro after his brash defense of the 2015 drug-price increase -- had taunted prosecutors during the trial as 'junior varsity' in comments to reporters and on his social-media accounts. As the verdict was read, Mr. Shkreli, dressed in a black polo shirt and khaki pants, twisted in his chair with his arms crossed. Mr. Shrkeli was convicted of three counts related to securities fraud but acquitted of five other charges." http://on.wsj.com/2vrAiMF

HIGH TIMES -- "Huff, puff, pass? AG's pot fury not echoed by task force," by AP's Sadie Gurman: "The betting was that law-and-order Attorney General Jeff Sessions would come out against the legalized marijuana industry with guns blazing. But the task force Sessions assembled to find the best legal strategy is giving him no ammunition, according to documents obtained by The Associated Press. The Task Force on Crime Reduction and Public Safety, a group of prosecutors and federal law enforcement officials, has come up with no new policy recommendations to advance the attorney general's aggressively anti-marijuana views. The group's report largely reiterates the current Justice Department policy on marijuana." http://bit.ly/2ub5GuP

FUTURE OF MEDIA - "Google Is Developing Technology for Snapchat-Like Media Content," by WSJ's Amol Sharma and Jack Marshall: "Google is developing technology to let publishers create visual-oriented media content along the lines of Snapchat's 'Discover,' according to people familiar with the situation, upping the ante in a race among tech giants to dominate news dissemination on smartphones. Alphabet Inc.'s Google has been in discussions with several publishers, including Vox Media, CNN, Mic, the Washington Post and Time Inc., to participate in the project, which is dubbed 'Stamp' ... It could be announced as early as next week, one of the people said. Google is building the service around its 'AMP' mobile webpages, which are designed to load faster than regular webpages. The 'St' in Stamp stands for 'stories.'" http://on.wsj.com/2v6mvu0

MEDIAWATCH - "Fox News Host Sent Unsolicited Lewd Text Messages To Colleagues, Sources Say," by Yashar Ali in HuffPost: "Eric Bolling, a longtime Fox News host, sent an unsolicited photo of male genitalia via text message to at least two colleagues at Fox Business and one colleague at Fox News, a dozen sources told HuffPost. ... The women, who are Bolling's current and former Fox colleagues, concluded the message was from him because they recognized his number from previous work-related and informal interactions. The messages were sent several years ago, on separate occasions. The women did not solicit the messages, which they told colleagues were deeply upsetting and offensive. One of the recipients said that when she replied to Bolling via text, telling him never to send her such photos again, he did not respond.

"Reached Friday by HuffPost about the accusations against Bolling, a Fox spokesperson said, 'We were just informed of this and plan to investigate the matter.' When asked whether Bolling at any point had sent unsolicited lewd or inappropriate text messages or emails (including an image of a man's genitalia) to Fox News or Fox Business colleagues, his attorney Michael J. Bowe responded, 'Mr. Bolling recalls no such inappropriate communications, does not believe he sent any such communications, and will vigorously pursue his legal remedies for any false and defamatory accusations that are made.'" http://bit.ly/2wuE4St

--"AT&T Mulling Sell-Off Of Major Assets Under Turner After Time Warner Merger," by Deadline's Anita Busch and David Lieberman: "There are rumblings at the highest executive levels that AT&T's top executives are considering divesting some Time Warner assets -- including news organization CNN and celebrity gossip site TMZ -- after they merge. AT&T expects the Justice Department to approve its $85 billion acquisition of Time Warner, and for the deal to close, by year end. ... CBS has long had its eye on CNN. The broadcast company's CEO, Les Moonves, said at Herb Allen's Sun Valley retreat last month that he would be interested if the cable news network became available. ... For TMZ, Deadline was told that AT&T is considering a sale to a private equity company." http://bit.ly/2v8yAgy

****** **A message from Morgan Stanley:** Now that President Trump has announced his intention to withdraw the U.S. from the 2015 Paris Agreement, what does it mean for the stated goals of the accord, and what might be the impact on markets and investors? Read more from Morgan Stanley. *******

CLICKER - "The nation's cartoonists on the week in politics," edited by Matt Wuerker -- ***12 keepers*** http://politi.co/2vzK7HV

GREAT WEEKEND READS, curated by Daniel Lippman:

-- "The New Yuppies: How the aspirational class expresses its status in an age of inequality," by J.C. Pan in TNR: "This new elite is typified by the brownstone-dweller traipsing through Whole Foods with a yoga mat peeping from the top of her NPR tote; the new Prospect Heights mother who stops in at the lactation consultant before her Y7 class; the tech startup employee with the neatly trimmed beard and Everlane button-down who announces on Facebook that he's 'bumping the new Kendrick.'" http://bit.ly/2vzL3Mw (h/t ALDaily.com)

-- "Have Smartphones Destroyed a Generation?" by Jean Twenge in the September issue of The Atlantic: "More comfortable online than out partying, post-Millennials are safer, physically, than adolescents have ever been. But they're on the brink of a mental-health crisis." http://theatln.tc/2v6O9Hd

"'The Big Sick,' South Asian Identity and Me," by NYT's Sopan Deb: "I never told my Bengali parents about my first kiss. ... They never knew about my high school crushes, my dates at Applebee's, or my first couple of girlfriends. I hid all this because I knew my

parents wouldn't approve. They had an arranged marriage. In India, where they grew up, choosing your life partner was uncommon." http://nyti.ms/2v8shcK
... ***Trailer*** http://bit.ly/2vC36lX

-- "The Secret Life of the City Banana," by NYT's Annie Correal: "Millions of bananas arrive every week in New York City. It takes a lot to get them from the boat to the bodega." http://nyti.ms/2vrDCaB

-- "The Secret Economic Lives of Animals," by Ben Crair in Bloomberg Businessweek: "If Adam Smith had strapped on a bee suit - or a safari jacket, or a scuba mask - he could have discovered that the animal kingdom is, in fact, a chamber of commerce." https://bloom.bg/2wuiOfi

-- "She Was Convicted of Killing Her Mother. Prosecutors Withheld the Evidence That Would Have Freed Her," by Emily Bazelon in the N.Y. Times Magazine: "By the time Noura Jackson's conviction was overturned, she had spent nine years in prison. This type of prosecutorial error is almost never punished." http://nyti.ms/2v8tj8X

-- "A Baccarat Binge Helped Launder the World's Biggest Cyberheist," by Alan Katz and Wenxin Fan in Bloomberg Businessweek: "How do you make $81 million stolen from the Bangladesh central bank disappear? Run it through an Asian laundromat." https://bloom.bg/2v8l4bT

-- "Notes from a Baby-Names Obsessive: My son was almost due. What would I call him?" by Lauren Collins in The New Yorker: "[W]e were going to call him Louis, but Louis turned out to be the tenth most popular boys' name in France, and the seventh most popular in Paris, where we live, and, even in this age of nominative nonconformity, we worried that he might enter school and find it crawling with more Louises than a chart of Bourbon monarchs." http://bit.ly/2vrzKpZ

-- "After the Shooting: A year in the life of Gwen Woods," by Jaeah Lee in California Sunday Magazine: "Mario Woods was the 906th person in the United States to be shot and killed by police in 2015 - 228 of whom were black men - according to a count maintained by The Washington Post." http://bit.ly/2hw5q7U (h/t Longform.org)

-- "Finding Darko," by Sam Borden in ESPN The Magazine - per Longform.org's description: "The NBA's greatest draft bust. Darko Milicic is now an enthusiastic farmer of cherries in his native Serbia." http://es.pn/2ud7tDH

-- "All the Greedy Young Abigail Fishers and Me," by Jia Tolentino in Jezebel: "This job-writing college essays for Abigail Fishers-was the only job I have ever been truly ashamed of, and I am so ashamed of it now that it hurts." http://bit.ly/29i2vdy

-- "Losing It in the Anti-Dieting Age," by Taffy Brodesser-Akner on the cover of the NYT Magazine: "The agonies of being overweight - or running a diet company - in a culture that likes to pretend it only cares about health, not size." http://nyti.ms/2vrzeJ1 ...

The cover http://politi.co/2hlUV78

-- "How Two Brothers Turned Seven Lines of Code Into a $9.2 Billion Startup," by Bloomberg Businessweek's Ashlee Vance: "Now, Stripe's Patrick and John Collison are teaming with Amazon to grab even more control over the global flow of commerce." https://bloom.bg/2fhQGcd

-- "When Should a Child Be Taken from His Parents?" by The New Yorker's Larissa MacFarquhar: "In family court, judges must decide whether the risks at home outweigh the risks of separating a family." http://bit.ly/2wutCtW

-- "Shot in the Dark," by Patrick Blanchfield in Esquire: "Spending six days in a cave without any light means hallucinations, hypothermia, and the potential for fatal falls. Why would anyone volunteer for one of the most extreme reality shows ever?" http://bit.ly/2vCaHB3 (h/t Longreads.com)

Playbookers

SPOTTED: Marc Lotter at the bar at Fiola Mare last night. Sally Quinn was also seen with son Quinn Bradlee eating lobster and oysters on the outside deck of the restaurant (her favorite in D.C.) ... Sen. Roy Blunt (R-Mo.) dining at Millie's yesterday in Spring Valley.

BUSH ALUMNI -- JOEL KAPLAN has been named to the board of directors of the George W. Bush Presidential Center. **Henry Hager,** Jenna Bush Hager's husband, also joined the board.

ENGAGED -- Amanda Gonzalez, communications director for Rep. Trey Gowdy (R-S.C.) and House Oversight and Government Reform, got engaged Friday afternoon to **William Thompson** , policy analyst at the Charles Group, a small boutique firm. "We met through mutual friends in D.C. He proposed at Ambar where we had our first date." She posts on Instagram: "Completely overwhelmed with love and joy. We're engaged!" ***Instapic*** http://bit.ly/2v6MvWg

WELCOME TO THE WORLD -- Blair Latoff Holmes, VP of media and external comms at the U.S. Chamber, and **Josh Holmes,** president and founding partner of Cavalry and longtime aide and adviser to Senate Majority Leader Mitch McConnell, posts on Facebook: "We are overjoyed to announce the birth of our son, William Wade Holmes. He was born [Thursday morning] at 9:42 weighing in at a healthy 8 lbs 3 oz. and a rangy 21 inches. P.S. In case anyone wondered whether the grandchild of William S. Latoff had a full head of hair, as you suspected, he does." ***Pics*** http://politi.co/2urxPNI ... http://politi.co/2uqRugG

OUT AND ABOUT -- IRAQI AMBASSADOR FAREED YASSEEN hosted a cocktail

party on Thursday night to honor Amb. Stuart Jones who retires at the end of August. Canapés and mostly Iraqi-inspired finger food, including slices of Mosul kibbeh, were served. **SPOTTED:** Robin Wright, Kim Dozier, Ben Kesling, Ken Pollack and Andrea Koppel, Oman Amb. Hunaina al-Mughairy, Yemen Amb. Ahmed Bin Mubarak, Palestinian Amb. Dr. Husam Zomlot, Brig. Gen. Joseph Rank, Will Bohlen, Nahal Toosi, Trudy Rubin, Laura Rozen, Glen Howard, Caryle Murphy, Dr. Zuhair Humadi, Gina Chon, Margaret Warner, Dr. Mike Bell, Tony Pfaff, Joel Rayburn, Derek Harvey, Brett McGurk, Doug Ollivant, Ken and Elizabeth Close, Yael Lempert, Terry Wolff, Timothy Lenderking, Richard Albright, Jonathan Cohen, Rochdi Younsi, Alison Hills, Karan Bhatia and cellist Karim Wasfi, head of the Iraqi symphony orchestra.

BIRTHWEEK (was yesterday): Sean Cox, aspiring political pundit and eventual CA politician someday, turned 18 (hat tip: Joe Brettell)

BIRTHDAYS: Ryan Wrasse, comms director for Sen. Thune ... Taylor Griffin ... Blackstone spokesman Matt Anderson ... Sharon Weber, DSCC Midwest finance director and a Duckworth and Durbin alum ... Jeremy Flantzer ... Matt Mandel ... Heidi Nel, principal at the Raben Group and partner at the Truman Project (h/t Jen Nedeau) ... Rufus Gifford, former U.S. Ambassador to Denmark, is 43 ... Bloomberg congressional reporter James Rowley ... Kris Eisenla ... Nicolas Boullet, founder and managing director of First Growth Capital Management ... Nev. Gov. Brian Sandoval is 54 ... Rep. Mike Doyle (D-Pa.) is 64 ... POLITICO alum Lila Cohn, now getting her masters at UPenn ... CBS News' Alicia Amling ... Cary Gibson, VP at Farragut Square Group ... RNC national deputy political director Molly Donlin O'Driscoll ...

... Pete Snyder is 45 ... Cicely Simpson ... Colleen Fisher ... WaPo's Michael Chandler ... Donte Donald ... James Franklin Blue III ... Christine Forester ... LATimes' Jim Puzzanghera ... Jenniffer González is 41 ... Ashley Pitts ... Kathy Rust ... Obama WH alum Monique Dorsainvil ... Monica Thompson ... Dana Ferreira ... Nicholas Rodman ... Steven Leraris ... Scott Vance ... Kristy Huxhold ... Jeff Kupfer ... Mary Beth Bakke ... POLITICO alum Abby Milberg ... ABC News' Luis Martinez ... Patrick Ewing ... Julie Hughes ... Corey Johnson ... Katie Vlietstra Wonnenberg ... Jason Pollock is 36 ... Ron Bouchard is 51 ... Topf Wells ... Dennis Lonergan ... Tom Healy ... Miguel and Alejandro Balkin (h/ts Teresa Vilmain)

THE SHOWS, by @MattMackowiak, filing from Austin:

-- NBC's "Meet the Press": Sen. Jeff Flake (R-Ariz.) ... Gov. Jerry Brown. Panel: Dan Balz, David French, Heather McGhee and Andrea Mitchell

-- ABC's "This Week": HHS Secretary Tom Price ... John Podesta ... Sergei Ryabkov. Panel: Mary Bruce, Alex Castellanos, Matthew Dowd and Julie Pace

-- CBS's "Face the Nation": Sen. Tom Cotton (R-Ark.) ... Gov. John Kasich and Gov. John Hickenlooper... Jeh Johnson. Panel: Jamelle Bouie, Jennifer Jacobs, Susan Page and Reihan Salam

-- "Fox News Sunday": Sen. Thom Tillis (R-N.C.). Panel: Jason Riley, Rachel Bade, Rich Lowry and Charles Lane

-- Fox News' "Sunday Morning Futures": Leon Panetta ... Ayaan Hirsi Ali ... Sen. Orrin Hatch (R-Utah). Panel: Brad Blakeman and Democratic strategist Jessica Tarlov

-- Fox News' "MediaBuzz": Ellison Barber ... Mollie Hemingway ... Joe Trippi

-- CNN's "Inside Politics": Perry Bacon, Karoun Demirjian, Julie Hirschfeld Davis and Michael Shear (substitute anchor: CNN's Dana Bash)

-- CNN's "State of the Union": Rep. Adam Schiff (D-Calif.) ... Sen. Ron Johnson (R-Wisc) ... Gov. Chris Christie (R-N.J.). Panel: Nina Turner, Rick Santorum, Amanda Carpenter and Rep. Ro Khanna (D-Calif.)

-- CNN's "Fareed Zakaria GPS": Al Gore. Panel: Julia Ioffe, Gideon Rose and Dan Senor

-- CNN's "Reliable Sources": Richard Tofel, Jeff Greenfield and Kathleen Hall Jamieson ... Matt Schlapp and Trevor Timm ... Margaret Talev ... Oliver Darcy

--Univision's "Al Punto": Carlos Diaz-Rosillo ... Antonio Ledezma's daughter Oriette Ledezma ... Al Gore ... actor Cristián de la Fuente

-- C-SPAN: "The Communicators": Jeff Moulton ... **"Newsmakers":** Rep. Richard Neal (D-Mass.), questioned by Richard Rubin and Rachel Bade ... **"Q&A":** Cate Lineberry

-- Hearst / Sony's "Matter of Fact" with Soledad O'Brien: Rep. Jim Himes (D-Conn.) and Rep. Charlie Dent (R-Pa.) ... former HUD Assistant Secretary and the Urban Institute's Erika Poethig ... Silver State Health Insurance Exchange's Heather Korbulic ... report on the Presidential Commission on Election Integrity ... a reflection from Justice Ruth Bader Ginsburg on her friendship with the late Justice Antonin Scalia

-- Washington Times' "Mack on Politics" weekly politics podcast with Matt Mackowiak (download on iTunes, Google Play, or Stitcher or listen at http://bit.ly/2r37J6h): Reagan Legacy Foundation president Michael Reagan

****** **A message from Morgan Stanley:** What's the real impact of President Trump's move to pull the U.S. out of the global accords to combat climate change? Current country commitments are insufficient to hold global warming to under 2° Celsius from preindustrial levels, the stated goal of the accords, so little changes in the immediate future. Meanwhile, countries abroad in Europe and China have doubled down on their investments to combat climate change. Trump's decision diverges from what many companies and investors have been signaling lately, and Morgan Stanley's view is that

most sectors are currently driven by economics and technology rather than policy. Read more from Morgan Stanley. *******

Highlights

Leading the News

Brexit Could Send U.K. Carbon Allowances Up in Smoke

By *Stephen Gardner*

The U.K. will abandon the European Union just before the deadline for companies to show compliance with the world's largest greenhouse gas trading system, leaving many businesses in doubt about their obligations.

Interior Aims for Fewer and Quicker Steps for Land Decisions

By *Alan Kovski*

How long should it take, and how many layers of bureaucracy should be involved, to get to a yes or a no on a proposed oil exploration plan or a natural gas pipeline right-of-way on federal land?

Practitioner Insights

Practitioner Insights: What California Could Learn From Its Peers About Groundwater Management

California is often considered a leader in progressive environmental regulation. However, compared to some of its peers, such as Colorado and Texas, its groundwater management has lagged and is only now catching up. As California

prepares for uncertain climate conditions and growing populations, the effects of water shortages on farming, land subsidence, and the economy will become an unavoidable concern. Spencer Williams, Samantha Fox, and Mark Ziman, of the web-based mapping and research platform Water Sage, look at what Colorado and Texas are doing and some of the ideas that might be useful in California.

Today's News

UN Calls for Global Action to Curb Fishing Bycatch

By *Adam Allington*

A United Nation's wildlife summit is calling for steps to reduce on a global scale the incidental capture of sea birds, sea turtles, sharks and other nontarget species that get caught in fishing gear, often killing them.

Deaths Spur South Korea to Offer Chemical Registration Help

By *Elaine Ramirez*

Small- and medium-sized companies in South Korea will get government help registering the chemicals they import or produce as part of a response to the more than 100 deaths linked to an unsafe humidifier disinfectant.

Carbon Pollution Touched 800,000-Year Record in 2016, WMO Says

By *Jessica Shankleman*

Carbon dioxide levels surged to their highest level in at least 800,000 years because of pollution caused by humans and a strong El Nino event, according to the World Meteorological Organization.

Coal Mining Near Streams Would Be No Panacea, Analysts Say

By *Amena H. Saiyid*

Allowing for coal mining activities in and around streams as suggested by the Trump administration won't be enough to boost the industry amid an overabundance of cheap natural gas, analysts said.

RCA Employees in Taiwan Awarded $23.8M for Chemical Exposure

By *Yu-Tzu Chiu*

Additional compensation has become an issue in a case that's been described as one of Taiwan's worst-ever work-related health incidents.

World's Tiniest Power Market to Leverage Big Data for Solar

By *Christopher Martin*

It will be the world's smallest electricity market. In mid-December, National Grid Plc will flip the switch on an automated trading system that pays hospitals and research facilities at the Buffalo Niagara Medical Campus to sell electricity from

their onsite solar panels, batteries or other generators to doctors' offices and businesses.

Daimler Steps Up Electric-Truck Rollout as Tesla Rivalry Looms

By *Joao Lima*

Daimler AG is stepping up plans to roll out electric-powered trucks as the world's

largest maker of commercial vehicles seeks to fend off newcomers like Tesla Inc. and Deutsche Post AG.

Mallinckrodt Wins Dismissal of Radioactive Nuisance Claims

By *Peter Hayes*

Mallinckrodt Pharmaceuticals won dismissal of state law nuisance claims brought by St. Louis home owners alleging radioactive material migrated to their property from a landfill.

Exxon's Not Afraid of Tesla: Trucks, Chemicals to Carry Demand

By Joe Carroll

Exxon Mobil Corp. says the existential threat to oil producers from electric cars is overblown.

Russia Signs Agreement with Nigeria to Build Nuclear Power Plant

By Paul Burkhardt

Russia has signed agreements with Nigeria to build and operate a nuclear power plant in the oil-rich West African nation that has a deficit of reliable power and faces security challenges by Islamist militants in the far northeast.

Friday Night Wrapup

Argentina Strides to Cut Costs in Emerging Clean Power Industry

By *Jonathan Gilbert*

Argentina took strides on Oct. 27 to lower costs in its incipient renewable energy sector.

Exxon Mobil Is Said Set to Settle Air Pollution Violations

By *Jennifer A. Dlouhy* and *David McLaughlin*

The U.S. government is close to resolving air pollution allegations against Exxon Mobil Corp. and may announce an agreement in coming days, according to people familiar with the situation.

Enbridge Hid Pipeline Sealant Issues, Michigan Regulators Say

By *Alex Ebert*

Enbridge Energy Partners concealed information for three years about damage to a pipeline's protective coating, Michigan regulators charge, but an official with the Canadian energy giant said the company did not intentionally mislead regulators.

Trump Appears Set to Scale Back Size of Two National Monuments

By *Alan Kovski*

President Donald Trump apparently will revise—and possibly downsize—at least two national monuments, the Bears Ears and Grand Staircase-Escalante monuments in Utah.

Leading the News

Climate Science
Climate Reports May Slow Trump's Push to Undo Obama-Era Rules
A pair of highly anticipated government studies, one of them due to be released this week, could complicate President Donald Trump's effort to roll back federal climate regulations, according to people on both sides of the debate over global warming.

Mining
Samarco Executives' Homicide Charges Suspended in Brazil Spill
A Brazilian judge suspended and could potentially dismiss homicide charges against 21 officials of Samarco mining company, Vale SA and BHP Billiton Ltd., in connection with the rupture of an iron-ore tailings dam two years ago that killed 19 people.

Regulatory Policy
Wisconsin Enacts First-in-Nation Regulatory Revamp Law
Wisconsin became the first state to enact a regulatory overhaul process touted by corporate interests frustrated with the cost and scope of environmental and workplace safety rules.

News

Biodiversity
Pearl-Diving Licenses Introduced in Bahrain to Protect Heritage
Bahrain introduced a new licensing system for pearl diving beginning Aug. 9 in the oyster-rich waters of the Gulf archipelago.

Enforcement
Poor Erosion Control Costs San Diego $3.2 Million

San Diego will spend $3.2 million to restore waterways and fund other water pollution control programs under a settlement with regional regulators.

Motor Vehicles

BMW, Nissan Dangle Electric Car Rebates for San Diego Sales

Automakers are willing to foot a chunk of the bill to get more San Diego-area consumers interested in battery-powered vehicles.

Motor Vehicles

Tesla Talks Autonomous Truck Testing With California, Nevada

Tesla Inc. has met with California and Nevada agencies about testing an autonomous semi truck ahead of Chief Executive Officer Elon Musk's unveiling of the next addition to the electric-car maker's lineup.

Motor Vehicles

VW, Mercedes Diesel Trade-Ins May Lure 1.3 Million Germans

Germany's effort to clean up diesel's dirty image by getting older, more polluting models off the road is likely to spur a rush for trade-in deals from the country's automakers.

Natural Gas

In Eclipse, Natural Gas Sees Its Future as Solar's Backstop

Natural gas is about to get a glimpse of its future role in the U.S. power mix as solar energy's backup.

Natural Gas

Shale Drillers Spend Less, Produce More in Glut-Gorging Push

Shale drillers are greeting the fourth year of a historic oil-market slump in a curious fashion, promising to generate even more price-killing production as 2017 progresses.

Oil & Gas

Gas Sellers Warn Hard-Bargaining Buyers: Market Is Turning

A worldwide glut of natural gas has buyers of the fuel driving hard bargains and pushing for shorter supply contracts. The only problem with that, according to their sellers: The market's about to turn against them.

Radioactive Materials

Mallinckrodt, Cotter Can't Shake Widows' Radioactive Waste Claims

Mallinckrodt Inc. and Cotter Corp. can't shake wrongful death claims filed by the spouses of men allegedly exposed to radioactive waste stored at St. Louis sites, the Eastern District of Missouri ruled (McClurg v. MI Holdings, Inc., E.D. Mo., No. 12-cv-00361, 8/8/17).

Toxic Chemicals

BNSF Sidetracked in Bid for Early Proof in Toxics Case

BNSF Railway Co. isn't entitled to an extraordinary court order requiring pre-discovery proof that a worker's toxic exposure claims are credible, the District of Colorado ruled Aug. 8 (Marquez v. BNSF Ry., 2017 BL 275828, D. Colo., No. 17-cv-01153, 8/8/17).

Subject: Playbook Power Briefing, presented by Chevron: MCCONNELL aligned super PAC slams 'Chemtrail Kelli' -- NIKKI HALEY said she had 'personal talk' with TRUMP after Charlottesville -- FIRST IN PLAYBOOK: KEVIN BRADY on tax reform

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Chevron

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Tuesday afternoon. THE SENATE LEADERSHIP FUND has cut a video branding Kelli Ward as "not conservative, just crazy ideas." **REMEMBER:** This is the Mitch McConnell aligned super PAC going after the candidate boosted by President Donald Trump. http://bit.ly/2wv6VKb

TALKER -- TONY FABRIZIO (@TonyFabrizioGOP) -- who did polling work for Donald Trump, tweets: "For all the D.C. beltway types wringing their hands about @POTUS and the GOP base. Republicans in Congress are the ones losing the base." ***Poll image*** http://bit.ly/2w0gVbk

-- @akarl_smith: "Hmmm. The DNC is going after Trump for his 'empty promises on border wall.'" http://bit.ly/2inq5eZ

THE SMARTEST MAN IN WASHINGTON -- "Abbe Lowell faces his toughest challenge yet in Menendez trial: The veteran defense attorney, who successfully defended John Edwards on campaign finance violations, is looking to help a sitting U.S. senator beat a slew of federal bribery charges," by Josh Gerstein: "Defense attorney Abbe Lowell, who has emerged as a fixture in criminal cases involving high-profile Washington politicians, is staring down one of his toughest challenges yet: helping a sitting United States senator beat a slew of federal bribery charges.

"The veteran white-collar Washington lawyer will travel to a Newark courtroom this week to helm the defense of New Jersey Sen. Robert Menendez. The 63-year-old Democrat faces corruption charges over his repeated interventions with the federal government on behalf of a Florida donor. It's familiar terrain for Lowell, who has successfully represented a roster of clients including Republican lobbyist Jack Abramoff, former Nevada Republican Sen. John Ensign, and New York state Senate Majority Leader Joe Bruno, and recently took on President Donald Trump's son-in-law and adviser Jared Kushner as a client in the ongoing Russia probe." http://politi.co/2vVtJl6

WHAT KEVIN BRADY, PAUL RYAN AND STEVEN MNUCHIN DON'T WANT TO

READ -- @RepPeteKing: "I agree with @newtgingrich that GOP must go first with tax cuts and not get bogged down in tax reform."

WHAT KEVIN BRADY WANTS YOU TO WATCH INSTEAD -- http://bit.ly/2vaRFy1

PREVIEWING TONIGHT'S RALLY -- "Trump to tout border wall -- well, fence -- in Yuma visit," by Ted Hesson: "President Donald Trump will travel Tuesday afternoon to Yuma, Ariz., which he'll say demonstrates the benefits of a border wall -- or, at least, border fencing. The visit could set the table for a legislative battle next month over whether to include border wall money in a spending bill that Congress must pass by Sept. 30 to keep the federal government funded. ... Trump will visit a Marine base in Yuma, where he'll get a tour of U.S. Customs and Border Protection equipment, including a Predator drone and a Border Patrol boat and surveillance truck. The president will then head into a closed-door briefing and later meet with Marines, according to an administration official." http://nyti.ms/2vl5Dwz

BEHIND THE SCENES -- "Nikki Haley says she had 'personal' talk with Trump about Charlottesville," by Diamond Naga Siu: "Nikki Haley, the U.S. ambassador to the United Nations, said Tuesday that she had a 'personal conversation' with President Donald Trump about his response to the violent clashes at a white supremacist rally in Charlottesville, stating matter-of-factly that she would 'leave it at that.' 'Well, I had a personal conversation with the president about Charlottesville, and I will leave it at that,' Haley said on CNN. 'But I will tell you that there is no hate in this country. I know the pain that hate can cause, and we need to isolate haters, and we need to make sure that they know there is no place for them.'" http://politi.co/2vlPVBe

ANNIE KARNI SCOOP -- "Kushner in Middle East for peace talks": "While everyone was busy gazing into the solar eclipse on Monday, White House adviser Jared Kushner quietly snuck away to the Middle East for a trip that will take him to the Persian Gulf and Israel. Accompanying Kushner on Monday in the Gulf states were deputy National Security Adviser Dina Powell, and Middle East envoy Jason Greenblatt, a White House official said. ...

"[A] White House aide and an outside adviser familiar with the trip planning said Kushner departed on Sunday and is set to arrive in Israel Wednesday night for meetings on Thursday. The traveling American delegation was meeting with leaders from the United Arab Emirates, Jordan, Qatar and Saudi Arabia in the days before." http://politi.co/2wkuo09

TRUMP V. WASHINGTON -- **"Is Anybody Home at HUD?:** A long-harbored conservative dream - the 'dismantling of the administrative state' - is taking place under Secretary Ben Carson," by Alec MacGillis in New York Magazine: "To the extent that the

new leadership was providing any guidance at all, it was often actively discouraging initiative on the part of employees. Shortly after the inauguration, a directive came down requiring employees to get tenth-floor approval for any contacts outside the building - professional conferences, or even just meetings with other departments. Ann Marie Oliva, a highly regarded HUD veteran who'd been hired during the George W. Bush administration and was in charge of homeless and HIV programs, was barred from attending a big annual conference on housing and homelessness in Ohio because, she inferred, some of the other speakers there leaned left.

"The department leadership was also actively slowing down new initiatives simply by taking a very long time to give the necessary supervisory approvals for the development of surveys or program guidance. In some cases, this appeared to be the result of mere negligence and delay. In other cases, it appeared more willful. For one thing, there was the leadership's strong hang-up about all matters transgender-related. ...

"More upsetting for many ambitious civil servants than the scattered nays coming from the tenth floor, though, was the lack of direction, period. Virtually all the top political jobs below Carson remained vacant. Carson himself was barely to be seen - he never made the walk-through of the building customary of past new secretaries. 'It was just nothing,' said one career employee. 'I've never been so bored in my life. No agenda, nothing to move forward or push back against. Just nothing.'" http://nym.ag/2vlnmE7

-- "'You're Fired' may be harder than Trump thinks when it comes to federal workers," by WaPo's Lisa Rein: "[T]he new political leadership in Washington is meeting resistance from powerful federal employee unions and finding that maneuvering around long-guaranteed civil service protections is not easy. This month an administrative board ordered a stay of the firing of the former director of the VA Medical Center in Washington, who had been removed from his post to an administrative job in April. An inspector general's probe found that patient health was endangered by managerial dysfunction. ...

"A case now playing out at the Patent and Trademark Office shows the complexities of carrying out Trump's mandate. After a three-year investigation, the office has moved recently to fire or suspend 18 of about two dozen employees in a clerical support unit that dockets trademark applications, according to current and former agency staff and other government officials familiar with the case. One worker has been fired." http://wapo.st/2vlJY78

AFTER CHARLOTTESVILLE -- "Growing Up in the Shadow of the Confederacy," by The Atlantic's Vann Newkirk II: "Indeed, as the legends behind the statues revealed themselves to me, so another truth was revealed: that I lived in occupied territory. I did not belong in the society represented by the statues, even though my ancestors had tilled the land for centuries. I was at once, somehow, a thrall and an invader. It occurred to me that it is not possible to both worship at the altar of the Confederacy and fight for the liberation of people like me. That fact may seem obvious now, but for my white classmates who wore Confederate flag shirts to class, even as they assured me that 'I'm

not racist,' the idea that one could celebrate the heritage without the hate held currency. And I believe that even today, many of those old friends tell themselves just that." http://theatln.tc/2vIzaWB

-- "Post Bail: America's justice system runs on the exchange of money for freedom. Some say that's unfair. But can data fix it?" by NBC News' Jon Schuppe: "[A]llowing people to pay for their release has proved unfair to people who don't have much money. The poor are far more likely to get stuck in jail, which makes them far more likely to get fired from jobs, lose custody of children, plead guilty to something they didn't do, serve time in prison and suffer the lifelong consequences of a criminal conviction. Those who borrow from a bail bondsman often fall into crippling debt. At the same time, the wealthy can buy their way out of pretrial detention on just about any offense, including murder.

"The bald inequity of this system has triggered a national movement to eliminate bail altogether. But what to replace it with? In New Jersey, the answer is an algorithm, a mathematical formula to determine whether someone is likely to return to court for trial or get arrested again. ... Six months into this venture, New Jersey jails are already starting to empty, and the number of people locked up while awaiting trial has dropped.

"But it's also become clear that data is no wonder drug. The new system - driven by years of research involving hundreds of thousands of cases and requiring multimillion-dollar technology upgrades and the hiring of more judges, prosecutors and court workers - still produces contentious decisions about who deserves freedom and who does not." http://nbcnews.to/2vl3n8z

-- RICH LOWRY, whose birthday is today (http://politi.co/2vlGzW7), in **NATIONAL REVIEW -- "Yes, Work for Trump":** "Among the nation's elite, Trump is now a walking, talking version of the North Carolina transgender bathroom bill, which caused corporate America to boycott and shame the state into submission. CEOs increasingly don't want anything to do with Trump. Hollywood and representatives of the arts loathe him. And sports figures are leery. Trump is as personally radioactive as any president since Richard Nixon during his final descent.

"This can't be what a high-flying financier and movie producer like Steve Mnuchin signed up for. But any Trump official who doesn't think he is being forced to violate his personal conscience should stick it out. The presidency is an important institution, and whatever fantasies his enemies may have of a rapid ending to his tenure, Trump is president. He needs good advice and competent help. There are obviously limits to how

much he can be controlled, but he is susceptible to advice." http://bit.ly/2vlA0Ts

CORRECTION

The Aug. 16 story "EPA to Rewrite Toxic Wastewater Limits Rule, No Deadline Set" mischaracterized Duke Energy's petition to seek alternative wastewater limits for its Edwardsport Integrated Gasification Combined Cycle plant in Indiana. The story has been corrected.

Practitioner Insights

Enforcement

Practitioner Insights: Defending Environmental Criminal Cases

Federal environmental crimes cases can appear similar to other types of criminal or environmental cases because they comprise a hybrid of criminal prosecutions and environmental enforcement actions. Most federal environmental laws provide for criminal enforcement in addition to administrative and civil remedies. Criminal prosecutions allow agencies to bring enforcement against individuals—not just the companies they work for—and the ability to seek jail time.

Exxon Mobil Terminal Can't Withstand Climate Impacts, Judge Told

Posted September 12, 2017, 03:27 P.M. ET

By Adrianne Appel

An Exxon Mobil terminal in Massachusetts can't withstand heavy rains and storms resulting from climate change, environmentalists argued Tuesday in federal court.

The Conservation Law Foundation filed the first-in-the-nation suit in 2016, alleging an Exxon Mobil oil and gas storage facility on the banks of the Mystic and Island End rivers in Everett, Mass., has not been sufficiently upgraded to handle climate change's impacts.

"This is about rainwater runoff" as a result of storms that could send byproducts of fuel oil, gasoline and other chemicals from Exxon's facility into the Mystic River, Allan Kanner, attorney with Kanner & Whitely, told U.S. District Judge Mark Wolf in arguing on the foundation's behalf.

Wolf said he hopes to decide whether to dismiss the case by Tuesday's close of arguments.

Exxon's lawyer, Daniel Toal of Paul|Weiss, told Wolf the foundation's claims lack merit.

"We engineer all our facilities to withstand extreme weather events, regardless of the cause," Toal said.

Energy Industries Team Up to Fight Proposed Offshore Wind Ban

Posted September 12, 2017, 02:28 P.M. ET

By Brian Dabbs

Big oil representatives are banding together to protect offshore wind leaseholders in Maryland from a proposed ban on projects off its coast.

The House Environmental Protection Agency and Interior Department spending bill, which is part of a sprawling package of spending bills, is being debated on the House floor with language to ban offshore wind projects within 25 nautical miles (27.6 miles) off the Maryland coast.

Groups that represent the oil and wind industries, including the National Ocean Industries Association and the U.S. Chamber of Commerce, are pushing back, arguing the bill would jeopardize investment and ding regulatory certainty.

The legislation poses a threat to the fledgling U.S. offshore wind industry.

"All oil members are concerned about the precedent set," Tim Charters, chief lobbyist at the National Ocean Industries Association, told Bloomberg BNA. "If you want to drive investment in the United States in our energy sectors, you have to give those investors who are putting billions of dollars on the line the confidence that they have a good partner in the U.S. government."

The Maryland Public Service Commission approved and subsidized offshore projects by U.S. Wind Inc. and Skipjack Offshore Energy LLC in May. Both projects fall within the proposed 24-mile ban. The Interior Department still has to approve the projects. The appropriations language—offered by Rep. Andy Harris (R-Md.)—would prohibit that.

Christopher Guith, a senior vice president for policy at the U.S. Chamber of Commerce's Energy Institute, told Bloomberg BNA that his group opposes the language in the ban as it restricts the development of a certain technology.

But the fate of the larger package so far is unclear. President Donald Trump has vowed to support a short-term continuing resolution, as federal funding expires at the end of the month.

Utility-Scale Solar Hits Cost Goal, Focus Turns to Reliability

Posted September 12, 2017, 02:25 P.M. ET

By Rebecca Kern

The solar industry has met the Energy Department's goal to reduce the average price of utility-scale solar to 6 cents per kilowatt-hour—three years ahead of the agency's 2020 target.

The solar industry also has made heavy gains in reducing the costs for residential and commercial solar, according to a Sept. 12 report from the Energy Department's National Renewable Energy Laboratory on its SunShot Initiative. The industry is 86 percent of the way toward the target reduction of the average cost of residential PV and 89 percent toward the cost of commercial solar PV, the report said. The Energy Department continues to aim for further price reduction while also focusing efforts on solar's reliability and resiliency, offering $82 million in funding for research and development into new technologies.

The SunShot Initiative was launched in 2011 with the aim of making solar cost-competitive with fossil fuels. It was an ambition intended to be reminiscent of President John F. Kennedy's 1961"Moon Shot" program to put a man on the moon.

Utility-scale solar dropped from 28 cents per kilowatt-hour in 2010 to 6 cents in 2017, which was the 2020 goal. Residential and commercial solar costs dropped from 52 cents and 40 cents per kilowatt-hour in 2010 to 16 and 11 cents, respectively, in 2017. The goal is to drop to 10 cents and 8 cents, respectively, by 2020.

The next challenge is to cut prices in half again, from the 2020 goal, for utility, residential, and

commercial PV systems by 2030.

"It is of tremendous significance because it really shows that, with government and with industry holding hands, they're able to make solar highly competitive with traditional fossil-fuel-based electricity generation. And not only competitive, but competitive earlier than anyone forecasted," Ben Gallagher, a solar analyst at GTM Research, told Bloomberg BNA Sept. 12.

Improved Technology, Material

Technology innovation in solar modules and increased efficiency due to better material quality and design have been the primary drivers of the dramatic cost reductions in solar photovoltaic systems.

SunShot has awarded $1 billion in funding to corporations such as General Electric Corp., academic institutions such as the Massachusetts Institute of Technology, and national laboratories. The money has been used to devise ways to lower the costs of hardware and costs associated with the integration of solar panels to the electric grid.

"The point of these goals is to further the overall focus on affordable and reliable energy," Daniel Simmons, the acting assistant secretary of the Energy Department's Office of Energy Efficiency and Renewable Energy, told Bloomberg BNA in a phone interview Sept. 11. "We want to be focused on devoting our resources to early stage research and development."

Continuing to lower the costs of PV solar systems is like facing a limbo bar and "it gets progressively more difficult to slide under that limbo bar without falling backwards," Charlie Gay, director of the Energy Department's solar energy technologies office and leader of the Sunshot Initiative, told Bloomberg BNA. But he's optimistic. "I have been working in solar for 43 years, and I continue to see a lot of opportunities that will enable us to keep moving and lowering that limbo bar."

$82 Million to Improve Reliability, Resiliency

As part of the early stage research and development push, the department is offering $82 million in new funding opportunities from the Solar Energy Technologies Office, where the SunShot Initiative is housed, according to a Sept. 12 announcement at Solar Power International in Las Vegas, the largest solar industry event in North America. The funding includes up to $62 million focused on Concentrating Solar Power technologies, which can store solar energy to be used to produce electricity when the sun isn't shining, and up to $20 million to advance power electronics technologies, which can protect against physical and cyber threats to the grid. The awardees will have to contribute 20 percent of their own funding to the overall project budget. Dan Whitten, vice president of communications for the Solar Energy Industries Association, the trade group that represents the solar industry, told Bloomberg BNA that SunShot has advanced "all manner of innovations along with industry that have improved the solar value proposition dramatically."

Technology Costs Driving Reductions

James Evans, renewable energy analyst at Bloomberg Intelligencesaid that reaching the utility-scale solar cost goal was "not entirely unexpected given the dramatic cost declines in equipment over recent years with average benchmark silicon solar panel costs declining by 35 percent just in 2016 with industrial inverter prices falling around 26 percent in the same period." However, he told Bloomberg BNA in a Sept. 11 interview, hitting the 2030 SunShot goals would be harder if the U.S. applies trade tariffs on imported solar technologies, which would increase import costs of solar panels. A petition before the U.S. International Trade Commission by Suniva and SolarWorld would apply a trade tariff on certain imported solar technologies.

Addressing 'Soft' Costs

While the hardware costs are being lowered significantly, a remaining challenge for continuing to reduce costs of solar systems are the "soft" costs, like labor, permitting, interconnection, customer acquisition, financing and grid integration. These soft costs are more associated with rooftop solar systems that occur in the residential and commerical solar sectors. SunShot Director Gay said that SunShot will continue to work with industry to help lower these costs. Efforts include helping to standardize and harmonize local building codes and funding for solar worker training. "We definitely want to reduce red tape to promote economic growth," EERE's Simmons said.

EU Said to Mull Marking U.K. Carbon Permits in Contingency Plan

Posted September 12, 2017, 12:25 P.M. ET

By Ewa Krukowska

The European Commission will propose marking carbon allowances issued by the U.K. as of January 2018 as part of Brexit-related rules to make the world's biggest emissions market resistant to potential supply turmoil.

The commission, the European Union's regulatory arm, will put forward an update to the bloc's regulation on the carbon registry to make distinguishable permits sold by the British government at auctions or given to companies for free from January 2018, according to a person with knowledge of the matter. That regulation will detail how to enact a broad law currently being drafted by EU lawmakers to put limits on the use of U.K. allowances in case Brexit talks fail and the country finds itself out of the bloc's market in 2019.

EU carbon prices lost 6.3 percent in the past two days on concerns the draft Brexit-related law will reduce the willingness of participants to trade with U.K. entities given that the place of issue of emission permits cannot be identified under existing rules. The registry regulation revision planned by the commission would make for easy electronic identification of U.K. carbon permits issued from next year, according to the person, who declined to be identified, citing policy.

The EU carbon market imposes emission quotas on around 12,000 facilities owned by manufacturers and utilities, and forces those that exceed their caps to buy permits from businesses that emit less. It also includes airlines.

Government Auctions

Benchmark contracts in the European cap-and-trade program fell almost 70 percent over the past nine years as an economic crisis cut industrial output and imports of United Nations carbon credits aggravated a surplus of permits. Emitters must hand in allowances to match the previous year's emissions by the end of each April. Allowances are sold at government auctions throughout the year and permits given for free are handed to emitters usually around February each year.

The Brexit-related law currently under discussion in the European Parliament would prevent companies in the EU Emissions Trading System from using for compliance allowances issued by the U.K. from 2018 if the country falls out of the market. It is a contingency plan to avoid a massive sale of allowances originating in the country which would otherwise remain valid even if the nation's emission-reduction obligations under the ETS expire.

The deadline for the EU and the U.K. to iron out a Brexit deal is March 29, 2019, a date that can be extended only if there is unanimous backing by member states. In practice, an agreement would need to be in place three or four months before then to give the EU Parliament enough time to approve it.

Compliance Deadline

There are currently no provisions to safeguard the ETS in case negotiators fail to reach a deal on time and the U.K. suddenly finds itself out of the market, becoming a so-called third country to the EU. With the compliance deadline for 2018 emissions falling in April 2019, in the worst-case scenario the market could be flooded by permits issued or sold by the British government while the country's obligations lapse.

The planned proposal on marking British permits would enable market participants to choose whether they want to include or exclude U.K.-issued allowances in their contracts, according to the person with knowledge of the matter. The date of tabling the proposal is not yet known. Under the EU legal system, implementing measures are proposed after the broad law that requires them has been approved.

China Solar-Cell Maker Explores Electric Cars With World No. 2

Posted September 12, 2017, 9:21 A.M. ET

By Bloomberg News

Golden Concord Group Ltd., a Chinese energy conglomerate, said it's seeking opportunities in electric vehicles, joining investors like billionaire Li Ka-shing who are pushing into the sector as the government works on a plan to phase out internal-combustion autos.

The company plans to cooperate with Jiangling Motors Group to help reduce risks when entering the industry, President Kou Bingen told Tom Mackenzie in a Bloomberg Television interview in Nanchang, eastern China, on Sept. 9. Jiangling is ranked No. 2 in Bloomberg New Energy Finance's global index of electric vehicle manufacturers.

"New-energy vehicles will definitely be a direction for development in the future," Kou said. Golden Concord is still in discussions with Jiangling Motors and the two can bring their own advantages together for innovation, he said, without elaborating on the specifics.

China, home to the largest car market in the world, is making the most concerted push among major auto-manufacturing nations for the adoption of electric vehicles. The country this month announced it's working on a timeline to phase out combustion-engine vehicles, and is set to unveil a cap-and-trade system for vehicle emissions and fuel economy that will compel automakers to introduce cleaner and more efficient models or pay fines.

The suite of measures come seven years after the government first identified EVs as an emerging industry of strategic importance and codified its importance in the 13th Five-Year Plan in 2016. China surpassed the U.S. in 2015 to become the world's biggest market for new-energy vehicles.

The rising demand for cleaner cars has attracted a raft of startups and established companies to try their hand at auto making. Hong Kong tycoon Li Ka-shing this week agreed to buy an indirect stake

in a Japanese maker of electric cars that has plans to license its technology to manufacturers including those in China. He bought a stake in a Chinese electric-van and bus maker in 2015.

For Golden Concord, a push into new-energy vehicles represents an investment in a still-small but growing demand for electricity. The company owns 30 percent of GCL-Poly Energy Holdings Ltd., the world's biggest polysilicon maker. Unit GCL System Integration Technology Co. said in January that it plans to begin making batteries for electric vehicles.

Calls to representatives at Nanchang-based Jiangling Motors weren't answered.

German Coastal States Urge Merkel to Raise Offshore Wind Targets

Posted September 12, 2017, 8:34 A.M. ET

By Brian Parkin

Germany's coastal states and cities urged Chancellor Angela Merkel to raise the nation's offshore wind power target to take advantage of the technology's plummeting costs.

Officials from states and cities including Lower Saxony and Hamburg called on Merkel to raise offshore wind capacity in 2030 by at least a third over the 15-gigawatt government cap set in 2014, according to the Cuxhavener Declaration, issued Sept. 11 from the North Sea port located about 380 kilometers (236 miles) northwest of Berlin.

"We are calling for an expansion goal of at least 20 gigawatts in the North Sea and Baltic Sea by 2030 and at least 30 gigawatts by 2035," read the declaration. "In order to avoid impairing further expansion of renewable energy, grid development planning and grid connection capacities have to be adapted accordingly."

Falling offshore wind prices were on display Monday in the U.K., when the government announced winning bids dropped below the cost of building new nuclear power plants. Germany's maiden offshore wind auction in April, in which Dong Energy A/S and EnBW AG bid to build 1.45 gigawatts of capacity without subsidies, underlined how competitive the technology has become, according to the the declaration.

Germany is auctioning just 3 gigawatts of offshore to 2020. Just 1 percent of the North Sea's offshore potential has been tapped to date, Siemens Gamesa Renewable Energy said earlier this year.

North Sea nations need to add the equivalent of one turbine a day in the sea to achieve cost savings from economies of scale and to foster turbine efficiency gains, Siemens Gamesa's Chief Executive Markus Tacke said that month.

The U.K. leads Europe in offshore capacity, installing over 5 gigawatts to date. Germany had installed about 4.1 gigawatts of offshore power by the end of last year and expects the capacity to grow to about 7 gigawatts by 2020. Capacity auctioned this year and in 2018 won't be built before 2025, the Bnetza power regulator said.

Evian Aims to Deflect Water Criticism by Going Carbon Neutral

Posted September 12, 2017, 8:33 A.M. ET

By Corinne Gretler

Evian aims to become the first major spring water brand to go carbon neutral amid criticism that packaging water from the French Alps and transporting it around the world in plastic bottles causes unnecessary environmental damage.

Danone, the brand's owner, is spending 280 million euros ($336 million) on the project, according to Chief Executive Officer Emmanuel Faber, who reinaugurated the Evian factory Sept. 12. The site itself is now carbon neutral and is fully powered by renewable sources. Danone aims to offset the pollution caused by transporting Evian water by 2020 as it expands rail transport and promotes biogas.

"I'm aware, and more and more consumers are aware, that transporting water is not ideally what you'd like to do," Faber said in a telephone interview. "If you want to build a model that's sustainable, you need to deal with this reality."

Danone plans to start advertising the carbon-neutral efforts on Evian bottles in the U.S. next year, according to the brand's head, Veronique Penchienati. A few smaller producers such as Icelandic Glacial and Norway's Isklar have claimed the distinction years ago, though they're tiny compared with Evian, which sold 1.8 billion bottles last year.

While so-called sustainable products are increasingly popular, Consumers International, a federation of consumer groups, has criticized the water industry's initiatives, saying they do nothing to provide safe and affordable water to millions of people in developing countries that lack it. Environmental groups say bottling spring water wastes precious resources and creates disincentives for governments to improve tap water.

Faber countered that Evian doesn't do any harm because it's taking water that flows naturally from the mountains near Lake Geneva, rather than underground aquifers. "When it comes to Evian and the water, I don't think there's anything to redeem," he said.

Danone has annual sales of 4.6 billion euros from bottled water, a fifth of its total. Evian is its biggest brand in the product category and its revenue is increasing by a mid- to high-single-digit percentage each year, Faber said. The Evian site has reduced the amount of energy needed to produce 1 liter of water by 23 percent over the past eight years.

The move toward carbon-neutral certification in bottled water follows industry shifts in other products such as chocolate, where Nestle SA, Cadbury and Mars raced each other to switch to sustainably sourced cocoa and damp concerns of child labor in their products.

Danone's move will put pressure on other water brands to follow suit, according to Mathis Wackernagel, CEO of Global Footprint Network, an Oakland, California-based think tank. Still, he questioned whether companies should be emitting carbon to package and ship the product in the first place.

"Often it is environmentally absurd to sell bottled water when tap water is cheaper, better, and far

less energy-intensive," Wackernagel said.

To offset transport, one of the biggest issues for the bottled-water business, Danone is switching from roads to rails, operating its own private terminal with trains departing every four hours. Some 60 percent of Evian's production is shipped by train, with Danone seeking to increase that to 80 percent because it reduces carbon emissions by 75 percent, according to Faber.

The yogurt maker also aims to offset carbon emissions by working with farmers in the region of Evian to collect waste for biogas energy. Evian's biggest markets by sales are France, the U.K. and the U.S. To get to its farthest markets, it ships by sea, which Faber said pollutes less than by land.

Solar Developers Hoard Panels as U.S. Tariff Threat Looms

Posted September 12, 2017, 04:12 P.M. ET

By Joe Ryan and Christopher Martin

Solar developers are suspending construction as the looming threat of U.S. import tariffs has driven up prices and spurred hoarding, crimping panel supplies.

"We've had roughly $500 million worth of work that we've had to put on hold," said Scott Canada, who oversees renewable energy projects for McCarthy Building Cos. of St. Louis. "The supply of panels has just evaporated as everybody is grabbing what they can."

The disruptions date to about May, after bankrupt panel manufacturer Suniva Inc. filed a trade complaint asking for protection from cheap imports. As the case gained steam, developers rushed to stockpile every available panel. The case is currently before the U.S. International Trade Commission and may eventually reach the Oval Office, where President Donald Trump has the authority to impose tariffs.

The crunch is an abrupt reversal for the U.S solar industry, which six months ago was awash in inexpensive panels. Developers say prices have swelled by about 40 percent in the past four months, making some projects uneconomical to build. And that's if they're lucky enough to have a supplier at all.

"If you don't have panels lined up for '17 than you aren't going to get them," said Laura Stern, president and co-founder of Nautilus Solar Energy LLC in Summit, New Jersey. "The market is really tight."

Solar manufacturing is dominated by companies in China and elsewhere in Asia, where intense competition and booming output helped drag down global prices more than 50 percent in five years. While those declines have been a boon for companies that build solar farms, they've squeezed panel makers in markets with higher labor costs, including the U.S.

Georgia-based Suniva, which filed its trade case in April, is asking for tariffs that may double the price of panels in the U.S. The trade commission has until Sept. 22 to investigate the case and send its findings to Trump, who gets final say.

"We've got our fingers crossed that smarter minds will prevail and we won't wind up with tariffs,"

said Andrew Giraldo, president of engineering, procurement and construction at National Renewable Energy Corp. of Charlotte, North Carolina.

Chinese Demand

Panels account for about 40 percent of the cost of solar farms, and even modest price swings can drag a project underwater. Before the Suniva complaint, panels were selling for about 32 cents a watt in the U.S. Now developers say they are paying as much as 45 cents. That drove up the global average price last month by the most in more than two years.

Suniva's trade case isn't the only reason for the shortage. China, the world's largest solar market, caught analysts by surprise this year by announcing plans to more than double the nation's total solar capacity by the end of 2020. That's boosted demand in the backyard of the largest panels makers, including JinkoSolar Holding Co., JA Solar Holdings Co. and Trina Solar Ltd.

Supplies are so thin in the U.S. that companies are reselling panel contracts on the secondary market, said Duncan Frederick of Rosendin Electric Inc., a San Jose, California-based solar contractor that's built more than 2.2 gigawatts.

Project Delays

Still, the current shortage is apt to be short lived, analysts said. U.S. installations are forecast to decline next year, and manufacturers aren't cutting production capacity. Once the Suniva case is resolved, no matter the outcome, panel prices will stabilize.

"This should be behind the industry by the end of the year," said Credit Suisse Group AG analyst Maheep Mandloi.

But for now, the case has roiled the industry and even long-term supply agreements are no guarantee that developers can get panels. Borrego Solar Systems Inc. has been forced to delay projects for months because its suppliers can't deliver equipment on time, said its president, Aaron Hall. In other cases, panel makers have pushed to renegotiate contracts to secure higher prices.

"We are struggling hard," Hall said. "We are having to take fewer panels than promised and at higher prices."

Subject: Morning Media: Trump's 'Flynn' tweet speaks for itself — Brian Ross suspended — Billy Bush speaks — 'Fake news' attacks go global — Remembering Les Whitten

By Michael Calderone | 12/04/2017 05:35 AM EDT

"THE TWEET SPEAKS FOR ITSELF." White House press secretary Sarah Huckabee Sanders and her predecessor, Sean Spicer, have provided that explanation to reporters a number of times in response to some of President Trump's outrageous or unsubstantiated claims on Twitter. But after Trump admitted Saturday in a tweet that he knew former national security adviser Michael Flynn had lied to the FBI at the time Trump had allegedly urged former FBI director James Comey to back off his investigation of Flynn - a revelation that could help make the case for obstruction of justice - the press is told that the president's tweets may not be his voice after all.

- The Washington Post and CBS News, citing unnamed sources, reported Saturday that lawyer John Dowd actually wrote the tweet (which was notably composed in the first person and ended with an exclamation point, a typically Trumpian flourish). Such reports were understandably met with skepticism. "I'm genuinely curious why many news orgs are taking at face value the claim that Dowd wrote that tweet," Talking Points Memo editor Josh Marshall tweeted , noting it was written "in Trump's tone."

- On Sunday, Dowd told several news outlets, beginning with ABC News, that he had drafted the tweet. On NBC's "Meet the Press," Chuck Todd said Dowd confirmed that he'd written the tweet and said it was the only time he'd composed one in the president's name. Dowd told CNN he'd drafted the tweet but believed that White House social media director Dan Scavino had posted it - and declined to answer questions about whether Trump reviewed it before it was posted. "The tweet, and this explanation, are just plain suspicious and weird," wrote Axios' Mike Allen after also speaking to Dowd.

- So much of the news cycle these days is propelled by Trump's Twitter feed because, as president of the United States, his words carry enormous weight regardless of the forum - whether uttered at a rally, in a prepared speech, or in an early-morning tweetstorm. But after a potentially self-incriminating tweet, the standard explanation was dropped and Trump was conveniently cut out of the equation. Trump's tweeted statements can have repercussions worldwide, yet, if this explanation is believed he may not have a role in writing some of them or even aware of the contents before someone hits send. But regardless of the supposed backstory, the Flynn tweet, like others, was a statement in the president's voice, on his account, has been liked or retweeted more than 100,000 times, and notably has not been taken down. Some might say it speaks for itself.

Good morning and welcome to Morning Media. Please send tips to mcalderone@politico.com and @mlcalderone. Jason Schwartz (@JasonSchwartz) and Daniel Lippman (@dlippman) contributed to the newsletter. Archives. Subscribe.

"YES, DONALD TRUMP, YOU SAID THAT," wrote Billy Bush in a New York Times op-ed Sunday night, a day before he sits down with CBS's Stephen Colbert for his first late-night appearance since the infamous "Access Hollywood" tape broke in October 2016.

- "President Trump is currently indulging in some revisionist history, reportedly telling allies, including at least one United States senator, that the voice on the tape is not his. This has hit a raw nerve in me," Bush writes. "I can only imagine how it has reopened the wounds of the women who came forward with their stories about him, and did not receive enough attention. This country is currently trying to reconcile itself to years of power abuse and sexual misconduct. Its leader is wantonly poking the bear."

- Bush recalled another off-camera conversation with Trump after calling out the then-"Apprentice" star for inflating his ratings: "People will just believe you. You just tell them and they believe you," he said.

BRIAN ROSS SUSPENDED: ABC News suspended veteran ABC News reporter Brian Ross for four weeks on Saturday and apologized for his inaccurate bombshell a day earlier that Trump, as a candidate, directed Flynn to make contact with the Russians.

- "We deeply regret and apologize for the serious error we made yesterday," the network said in a statement. "The reporting conveyed by Brian Ross during the special report had not been fully vetted through our editorial standards process." Still, ABC News - which faced criticism for initially issuing a "clarification" to Ross's report rather than a correction - didn't explain in detail how Ross got on air with such an explosive story based on a single source and who else was involved in the editing process.

- "My job is to hold people accountable and that's why I agree with being held accountable myself," Ross tweeted. The episode brings more scrutiny on Ross, who has broken many stories but also has a history of high-profile errors. Ross reported in 2001 that there may be link between late Iraqi leader Saddam Hussein and anthrax attacks in the United States, which there wasn't, and he suggested in 2012 that the mass shooter in Aurora, Colorado was connected to the Tea Party.

- Ross's major blunder also gives ammunition to the president, who is already quick to dismiss critical and credible news stories as "fake news." "People who lost money when the Stock Market went down 350 points based on the False and Dishonest reporting of Brian Ross of @ABC News (he has been suspended), should consider hiring a lawyer and suing ABC for the damages this bad reporting has caused - many millions of dollars!" the president tweeted.

PRESIDENT'S "FAKE NEWS" ATTACKS GO GLOBAL. Authoritarians have taken note of Trump's strategy for delegitimizing the news media. The government of Myanmar, accused of ethnically cleansing the Rohingya, a Muslim minority group, is now employing the go-to insult. "There is no such thing as Rohingya," said U Kyaw San Hla, an officer in Rakhine's state security ministry, according to the New York Times. "It is fake news."

- "The gravity of an American president's favorite catch phrase being used to justify ethnic

cleansing will probably be lost in the noise this weekend, but it shouldn't be," tweeted journalist Sulome Anderson. "The truth has a big, red target on it now." CNN's Jake Tapper noted it's "just the latest example of despots and authoritarians using President Trump's attacks on the press/truth to pretend they are not engaging in horrors."

- Press freedom advocates have long feared that Trump's anti-press rhetoric would spread globally and make it more difficult to fight repression and censorship abroad. Following Trump's attack the previous weekend on CNN International as "fake" news, a spokesman for the Egyptian Ministry of Foreign Affairs tweeted that CNN's coverage on his country was "deplorable." A small Libyan media outlet later cited the swipe at CNN International to dismiss the network's remarkable report on that country's migrant slave trade.

AN UPSIDE?: The New Yorker's Steve Coll also expresses concern in a new piece that Trump's "fake news" jab "inevitably gives cover to foreign despots who threaten reporters in order to protect their own power." But on the plus side, he writes: "Fortunately, in attacking the media Trump has in many ways strengthened it. This year, the Times, the Washington Post, and many other independent, professional enterprises have reminded the country why the Founders enshrined a free press as a defense against abusive power. Among other achievements, the media's coverage of Special Counsel Robert Mueller's investigation has made transparent the seriousness of its findings so far, and constrained the President's transparent desire to interfere."

TODAY: The Poynter Journalism Ethics Summit in Washington aims to strengthen "political journalism and public trust in a polarized era" and will feature veteran political reporters, White House correspondents, ethics experts, academics, and top editors from the Washington Post and POLITICO.

HOW SMALL-TOWN ALABAMA PAPER TAKING STAND ON ROY MOORE: The Washington Post's Margaret Sullivan editor visits Troy Moore Opelika-Auburn News. "This 12,000-circulation paper, which has won numerous statewide awards for excellence, has not ignored the issue," she writes. "Instead, mindful of how people feel throughout conservative Lee County (named after the Confederate general), it has taken a cautious approach. Turner wrote an editorial last month calling for Moore to step down as a candidate, concluding that he could not be an effective senator. Its headline, too, was bold: "It's time for Roy Moore to step aside for Alabama."

AS MEDIA HOLIDAY PARTY SEASON KICKS OFF, newsroom managers will surely be thinking about how to handle the often boozy affairs in light of the ongoing sexual harassment scandal. Vox Media, which has been site of one sexual misconduct case and has covered those at other news outlets, will be limiting staffers to two drinks a piece instead of providing an open bar.

REEVALUATING 2016 AFTER SEXUAL HARASSMENT SCANDALS: I mentioned Thursday that the presidential election coverage of now-disgraced media men, like Matt Lauer, Bill O'Reilly Charlie Rose, Mark Halperin, Michael Oreskes, and Leon Wieseltier, is prompting a second look at how such influential voices have shaped politics. Here are two more perspectives:

- **"A look back through the work** of some powerful men accused of harassment reveals double standards, demeaning stereotypes, and dismissive attitudes about sexual assault that, together, add up to a skewed portrayal of men and women, politics and power," Vox's Anna North wrote Friday. "Zeroing in on three men in particular - Lauer, Wieseltier, and Halperin - shows how that portrayal has the potential to influence many areas of news and American life, including and beyond the presidential election."

- **"A pervasive theme of all of these men's coverage** of Mrs. Clinton was that she was dishonest and unlikable," Jill Filipovic wrote in a New York Times op-ed, "The Men Who Cost Clinton the Election." "These recent harassment allegations suggest that perhaps the problem wasn't that Mrs. Clinton was untruthful or inherently hard to connect with, but that these particular men hold deep biases against women who seek power instead of sticking to acquiescent sex-object status."

- **In one sign on waning influence**, "60 Minutes" noticeably didn't mention now-former contributing correspondent Charlie Rose in its intro Sunday night for the show's 50th anniversary special.

SPEAKING OF 2016 MEDIA FAILURES, Donald Trump was able to break with four decades of precedent in not releasing his tax returns. Yes, journalists asked Trump on several occasions about releasing his tax returns, which he had promised to do before running, but he never faced sustained scrutiny. "For 15 months, he's punted on the tax return question in interviews and now, he appears to be trying to run out the clock," I wrote in May 2016. In the end, Trump did.

- **While it can be assumed Trump** and his family will do well under the Republican tax bill, which was hastily passed in the wee hours Saturday morning and expected to greatly benefit wealthy Americans, ProPublica's Alec MacGillis pointed out Friday that the public won't know exactly how. "The challenge for the media in covering Trump's smashing of norms on releasing tax returns was that it became 'old news,'" he wrote. "It all but vanished as a fact during the campaign. And here we are. About to pass a huge tax bill w/ no idea how it benefits the president. It's astonishing."

SOUND BITES

"The press tends to excoriate politicians' personal lies, because non-ideological, but too often fails to denote politicians' lies about public policy, because seen as ideological--even though the latter is far more objectively measured." [David Grann]

"Yes, there's obvious image-rehab happening here. But of the two ppl in that interview, one was fired in disgrace, the other was elected president." [Maggie Haberman]

"Hipster journo yawns at the President's lawyer's claim that he wrote that tweet confessing to obstruction of justice... Call me a rube, but some things should stay shocking." [Emily Nussbaum]

"Worth remembering right about now that @FoxNews never announced any disciplinary action for its retracted Seth Rich report." [Oliver Darcy]

THE PLAYBOOK POWER LIST: 18 TO WATCH IN 2018: The final Playbook Power List of the year highlights 18 politicians, activists and operatives across the country who are poised to make waves in 2018. From the anti-Trump "Resistance" on the left to the far right Bannonite wing trying to remake the GOP, keep an eye on these people over the next 12 months. Click HERE to find out who made the list.

- HuffPost editor-in-chief Lydia Polgreen, one of the 18 to watch, told Playbook's Daniel Lippman she wants her site's journalists to "fan across the country" to cover 2018 midterms. "To that end, earlier this year she and some other HuffPost journalists went on a bus tour called 'Listen to America.' They traveled to 26 cities over seven weeks, interviewing 1,500 people," wrote Lippman. "One thing we heard almost nothing about was Donald Trump," she told Playbook. "Lots of people wanted to talk about the problems in their own communities but didn't necessarily have a lot to say about the president."

JAMES O'KEEFE GROUP GOT $1.7 MILLION FROM KOCH-BACKED CHARITY, The Washington Post reports : "The $1.7 million came through Donors Trust, a type of tax-exempt charity called a donor-advised fund (DAF). Billionaire industrialists Charles and David Koch and other wealthy conservatives rely on Donors Trust and similar groups to finance numerous charities and other nonprofit organizations to promote libertarian, small-government and free-market policies and candidate." O'Keefe's group is known for trying to discredit and embarrass journalists, so the Koch connection is notable given the Koch brothers' investment fund last week backed the sale of magazine giant Time Inc.

REMEMBERING LES WHITTEN, an "investigative reporter arrested by FBI and spied on by CIA." From the Washington Post obit : "As [famed columnist Jack] Anderson's chief deputy - or 'senior ferret,' as New York Times journalist Tom Buckley once dubbed him - Mr. Whitten was handed assignments that included spying on the private lives of FBI Director J. Edgar Hoover and his top aide, Clyde Tolson... Just as often, however, Mr. Whitten and Anderson were on the receiving end of spying efforts, targeted by the Nixon administration for their critical coverage of the White House and leaks of government documents. The duo were trailed by the CIA, and at one point, Nixon associates G. Gordon Liddy and E. Howard Hunt plotted to assassinate Anderson using LSD or what Liddy later described as 'Aspirin Roulette.'"

EXTRAS

- MSNBC's Joy Reid apologizes for past comments about gays on her old blog, The Wrap reports.

- Jason Schwartz reports on the scene at Friday's White House media Christmas Party. More from the Times' Michael Grynbaum.

- The staffs of "Megyn Kelly Today" and "Full Frontal with Samantha Bee" had a "chilly

encounter," according to New York magazine.

California Sets Demands for Talking Emissions Targets with Trump

Posted September 22, 2017, 12:51 P.M. ET

By John Lippert and Ryan Beene

California could be willing to re-open discussions on its greenhouse gas limits for cars and trucks for 2025—so long as automakers and the Trump administration embrace the significantly tougher targets it's contemplating for later years.

Automakers have "a whole laundry list of things they've asked for" to ease the state's standards leading up to 2025, and California is willing to at least discuss reviving talks, Mary Nichols, chair of the California Air Resources Board, said in a Sept. 22 interview at Bloomberg headquarters in New York. Michael Catanzaro, a Trump special assistant, called her recently to get conversations with the administration started, she said.

"The price of getting us to the table is talking about post-2025," she said. "California remains convinced that there was no need to initiate this new review of the review and that the technical work was fully adequate to justify going ahead with the existing program, but we're willing to talk about specific areas if there were legitimate concerns the companies raised—in the context of a bigger discussion about where we're going post-2025."

Talk of a possible three-way negotiation between California, carmakers and the federal government comes after President Trump's administration reinstated in March a review of national greenhouse-gas rules that run through 2025, which he said "would have destroyed" the auto industry. California could choose to keep its rules unchanged even if the federal targets are loosened. But doing so would create headaches for carmakers dealing with a patchwork of legislation, and it would risk raising the ire of Trump and the industry as California tries to push through tougher targets for 2030.

Federal Backpedaling

So far, Trump hasn't launched what could be his most potent weapon—a court challenge to California's special authority to write its own pollution rules, which dates back to the 1970 Clean Air Act. A compromise today could help prevent a court showdown later.

"If there's a way they can keep us all united without having to roll over California, they'd like that," Nichols said of her impressions of the White House's position.

The federal government in 2011 originally agreed to greenhouse gas targets that mirror California's, boosting fuel economy to an average of more than 50 miles per gallon by 2025. When Trump overturned an Obama EPA decision to uphold the standards on the books earlier this year, automakers praised Trump's move.

But carmakers don't want changes at the federal level to create a rift with California and the handful of states who've adopted the same targets, fearing costly discrepancies if emissions standards diverge. Pressure for a compromise is also building because, even in California, zero-emission vehicle sales have been stuck at about three percent since 2014.

"I really feel like if the industry folks are as ready as I think they are to talk about future standards, it shouldn't be all that hard," Nichols said. "But there are differences in the kind of relief they want."

Nichols said that while the state is willing to at least discuss compromise in the short term, California has no intention of retreating from its legislative mandate to cut carbon dioxide emissions to 40 percent below 1990 levels by 2030. California Governor Jerry Brown and the state's Air Resources Board have vowed to remain a bulwark against the president's push for environmental deregulation, and Nichols said long-term goals haven't changed.

Automakers can't abandon the cleaner-car goals entirely either, since major car markets China and the European Union are now contemplating their own zero-emission vehicle mandates modeled after California's. China said this month it will set a deadline for automakers to end sales of fossil-fuel-powered vehicles, becoming the biggest market to do so and driving global demand for battery-operated autos.

Trump Climate Confusion Is the New Brexit, Top UN Official Says

Posted September 22, 2017, 8:38 A.M. ET

By Jessica Shankleman and Brian Eckhouse

When U.K. Prime Minister Theresa May criticized President Donald Trump for taking the U.S. out of the landmark Paris climate change deal this week, she might as well have been talking about another kind of exit closer to home.

The similarities and between Brexit and Trump leaving the Paris Agreement are stark, says Rachel Kyte, a special representative of the United Nations secretary-general for the Sustainable Energy for All program, of which she is chief executive officer.

Both involve inconsistencies, questions over whether it will ever actually happen and prominent dissenters trying to resist leaving or find a back door to nullify the effects of leaving.

"The U.K.: we're leaving, details to be worked out," Kyte said in an interview in New York Sept. 21. "Trump: we're leaving, details to be worked out. The U.K. is in the club, but not in the club. The U.S. is in the club, but not in the club."

The U.S. remains in the Paris deal for now because it can't legally exit until 2020. Entrance to the club was voluntary, as were the pollution targets it wrote and accepted in 2015. Similarly, the U.K. can't formally quit the European Union for two years after it officially gave notice to leave.

In her veiled rebuke to Trump at the U.N. General Assembly this week, May said the climate change agreement is a sign of "the fundamental values that we share, values of fairness, justice and human rights, that have created the common cause between nations to act together."

Those opposed to Brexit could perhaps use the same description for the EU to make their case.

EPA's Hazardous Waste Reporting System on Track

Posted September 22, 2017, 10:38 A.M. ET

By Sylvia Carignan

States and regulated industries would have less of a burden reporting on hazardous waste shipments through a new electronic tracking system the EPA plans to test release this winter.

The Environmental Protection Agency says it expects the system to create more accurate records of hazardous waste shipments, including what the waste is, how much is being shipped, where it came from, and where it's going.

While hazardous waste generators and recipients will not have to pay to use the system yet, the agency says it's on track to release a final version with fees in June 2018.

The test version will allow the public to view waste tracking data and will accommodate paper manifests.

EPA's advisory board for the e-manifest system will hold a public meeting Sept. 26 through Sept. 28 in Arlington, Va., to discuss how users will register, activate, and maintain accounts for the system.

The system had a partial release at the end of June that currently allows the facilities that receive waste to sign manifests electronically. Both receivers and generators can upload manifests to the system.

The 2012 Hazardous Waste Electronic Manifest Establishment Act, which is part of the Solid Waste Disposal Act, defines the system's voluntary users as hazardous waste generators, transporters and owners and operators of storage, treatment, recycling or disposal facilities. The electronic manifest act intends for the system to sustain itself via user fees.

California, Quebec, Ontario Ink Deal to Join Carbon Markets

Posted September 22, 2017, 03:45 P.M. ET

By Carolyn Whetzel

California, Quebec, and Ontario cemented plans to launch North America's largest carbon

allowance market next year, under a pact signed Sept. 22.

The agreement officially links three individual cap-and-trade programs, creating "an expanded and dynamic carbon market, which will drive down greenhouse gas emissions," California Gov. Jerry Brown (D) said in a written statement.

Ontario's integration with the existing California-Quebec market has been planned for some time. The agreement establishes the framework and terms for the new larger market.

"The linkage expands the allowance market significantly," California Air Resources Board spokesman Stanley Young told Bloomberg BNA in an email. "Ontario's market is roughly 40 percent to 50 percent the size of California's carbon market. Quebec's is 15 percent of California's."

Storm Resiliency Enters Senate Debate on Flood Insurance

Posted September 22, 2017, 8:30 A.M. ET

By Dean Scott

Senate Democrats who have shied away from talking about whether climate change helped fuel hurricanes Harvey and Irma now say they're likely to raise a related issue—the need for more resilient infrastructure—in an upcoming debate on the federal flood insurance program.

The National Flood Insurance Program underwrites the vast majority of U.S. flood policies and has been under scrutiny for years. It was set to expire Sept. 30, but a congressional deal extended it into December. That sets the stage for a debate over such issues as how to dissuade home owners from rebuilding on sites continually threatened by storms, whether to expand coverage for business interruption for smaller firms, and whether flood maps can be updated more often.

Democrats, itching to highlight how climate change may be worsening storms, say this debate may be a good place to start with talk about how to ensure new and rebuilt structures are more resilient to hurricanes.

"I certainly hope and expect there to be an open-minded conversation about resilience, in order to protect taxpayer dollars," Sen. Chris Van Hollen (D-Md.), who is introducing legislation to revamp the program, told Bloomberg BNA. "If you want to save taxpayer dollars then you've got to invest in resilience because it just doesn't make sense for taxpayers to be paying for the same thing over and over."

Which Brand?

Sen. John Thune (R-S.D.), who serves in Republican leadership, said the short-term deal only staved off the inevitable need to provide long-term stability for the flood insurance program, which hasn't gotten a multiyear reauthorization since 2012.

"We need to deal with flood insurance reauthorization for sure, and these [storms] obviously, I think, give additional sense of urgency to that," Thune told reporters Sept. 19.

Sen. Brian Schatz (D-Hawaii) said he and other Democrats see an opening to debate the role of climate change in severe weather, an issue that has gained little traction with the Republican majority in Congress. Some rebranding may be needed, he said.

"The one thing I'm wondering about is, what if we call it severe weather, because climate change has become a brand only Democrats feel comfortable with," Schatz told Bloomberg BNA. "I don't care what you call it. But it's there for all to see."

Banking Panel

Republican and Democratic members of the Senate Banking, Housing, and Urban Affairs Committee have been laying the groundwork for a long-term reauthorization for months or even years in some cases.

The program was approaching its $30 billion borrowing limit when Congress agreed to a short-term extension signed by President Donald Trump Sept. 8, ensuring continued funding through Dec. 8.

Climate resilience is front and center in what is likely to be a push to reinstate President Barack Obama's Federal Flood Risk Management Standard, an executive order that Trump revoked in August. Obama's 2015 order—one of a series of actions he took to address climate issues in the absence of congressional action—called on federal agencies to consider current and future risk for federally funded projects in floodplains such as roads, bridges, and hospitals.

Trump reversed the order, citing the need to streamline infrastructure permitting. But a coalition of insurance representatives and environmental and housing groups called SmarterSafer is backing efforts by Van Hollen and Schatz to reinstate it.

"When federal funds are being used to build or rebuild structures or to subsidize structures, the government should ensure the taxpayer investments are being made in safe, resilient ways," the SmartSafer group said in a Sept. 14 letter.

Flood Mitigation Savings

Ceres—an alliance of investor, public interest, and environmental groups—also is urging Trump to reverse his August order.

"Models show that extreme weather events will increase in frequency and severity in the coming decades," the group wrote Trump Sept. 13. The letter cited Federal Emergency Management Agency figures that suggest every dollar invested in flood mitigation saves an average of four dollars during rebuilding.

The top Democrat on the Senate Environment and Public Works Committee, Sen. Tom Carper (D-Del.), said Congress needs to debate the need for more resilient residential and commercial construction in regions likely to be damaged by severe flooding.

"If I was the chairman of the banking committee, I would be scheduling a hearing on this like next week," Carper told Bloomberg BNA. "It's an issue that belongs in that committee, and they should claim jurisdiction."

The banking panel's chairman, Sen. Mike Crapo (R-Idaho), told Bloomberg BNA he has made no decision on holding hearings.

Crapo and Sen. Sherrod Brown (D-Ohio), the banking committee's top Democrat, have backed a six-year reauthorization of the NFIP. The bill they introduced July 17 (S. 1571) seeks to improve the

program through better mapping and risk mitigation.

Others on the committee such as Sen. John Kennedy (R-La.) back a competing bill but say they're open to other approaches to get a multiyear flood insurance extension. Kennedy is cosponsoring a bill offered by fellow committee member Sen. Bob Menendez (D-N.J.)—the Sustainable, Affordable, Fair, and Efficient (SAFE) National Flood Insurance Program Reauthorization Act (S. 1368)—cosponsored by banking panel Democrats Van Hollen and Sen. Jack Reed (R.I).

"I'm ready to do it now," Kennedy told Bloomberg BNA. "I have a bill that has bipartisan support. [But] if they don't want to do my bill and want to do something better, then let's go do it."

SolarCity to Pay $29.5M After Inflating Recovery Act Claims

Posted September 22, 2017, 03:38 P.M. ET

By Vishal Persaud (Bloomberg News)

SolarCity will pay $29.5 million to resolve allegations that it submitted inflated claims for itself and affiliated investment funds for grants under the Obama administration's stimulus plan, the Justice Department said Sept. 22

The settlement payment represents about 5 percent of the cash grants that the government gave the company under Section 1603 of the American Recovery and Reinvestment Act of 2009, which subsidized renewable energy projects, according to a spokesperson for SolarCity. Tesla Motors Inc. bought SolarCity in November 2016.

"This program expired, but this settlement demonstrates that the government will still hold accountable those who sought to take improper advantage of government programs at the expense of American taxpayers," Chad A. Readler, acting assistant attorney general of the Justice Department's Civil Division said in a statement.

The government alleged that SolarCity overstated the cost bases of its solar energy properties and as a result the company and its affiliated investment funds received inflated grant payments from the Treasury.

The Section 1603 program provided for cash grants equal to 30 percent of the eligible cost basis to construct or acquire qualified renewable solar energy systems placed in service before Dec. 31, 2016.

SolarCity "accurately valued the solar energy systems in the applications it submitted for cash grants under the Treasury's program, and it was entitled to the full amounts that Treasury ultimately approved and paid to the company after reviewing its applications," the company spokesperson told Bloomberg BNA by email.

As part of the agreement, SolarCity is to release all pending and future claims against the U.S. for additional payments under Section 1603 of the American Recovery and Reinvestment Act of 2009.

The company also agreed to dismiss a lawsuit filed by two investment funds alleging the Treasury underpaid some Recovery Act grants.

Seasonal Ban on Popular Weedkiller Proposed in Arkansas

Posted September 22, 2017, 11:39 A.M. ET

By Paul Stinson and Tiffany Stecker

Arkansas is proposing a six-month ban on the use of a new type of weedkiller manufactured by Monsanto Co. and BASF Corp., hoping to resolve complaints that the pesticide is damaging thousands of acres of soybean crops.

The proposal, if finalized, could further a divide between farmers whose soybeans have been damaged from dicamba—an old herbicide reformulated to help farmers battle tough weeds—and growers who rely on the technology to protect their crops from invasive plants.

The State Plant Board voted late Sept. 21 to approve the proposal to prohibit the use of dicamba for the 2018 growing season, between April 16 and Oct. 31, with an exemption for use in pastures, rangeland, turf, and home use.

Board members unanimously approved the proposal, which will be subject to a 30-day public comment period and a Nov. 8 public hearing, Arkansas Agriculture Department spokeswoman Adriane Barnes told Bloomberg BNA.

The proposed restrictions follow recommendations from the Arkansas Dicamba Task Force, a 19-member panel of producers and crop association representatives assembled at Gov. Asa Hutchinson's (R) request. Hutchinson endorsed the proposed prohibition, Barnes added.

Arkansas has received 969 complaints so far this year from farmers alleging their soybean crops were damaged by dicamba, an herbicide first developed in the 1940s. Other states including Missouri, Tennessee, Illinois, and Mississippi also have reported hundreds of thousands of acres of soybean crops allegedly damaged by dicamba.

University of Arkansas scientists have said Monsanto and BASF's products are volatile, meaning they quickly evaporate when sprayed and can travel miles to other fields, where the chemicals settle and damage crops.

Some Farmers, Monsanto, Oppose Restrictions

An April 16 cut-off date would preclude on-crop spraying for many soybean growers in Arkansas, who start planting the seeds in May.

Manufacturers of the dicamba herbicide, notably Monsanto and BASF, have strongly opposed the prohibitions. More than 300 farmers in the state also have asked the plant board not to impose the April 16 cut-off date on the herbicides, which has helped many deal with invasive weeds that no longer respond to traditional weedkillers.

"It takes dicamba as a tool out of our herbicide arsenal," Becton Bell, a Northeastern Arkansas farmer told Bloomberg BNA. Bell was one of the farmers who signed the petition to the plant board.

"We've still got a long fight ahead to try to retain this technology; were not giving up yet," he said.

The companies said their new versions of dicamba were designed not to be volatile, and that the problems with crop damage are likely the result of farmers misusing the pesticides.

Monsanto's dicamba formulation was not approved for use this year in Arkansas, although it is allowed in other states. But the company sells the soybean and cotton seeds that are genetically engineered to withstand dicamba, and are meant to be used with the dicamba weedkiller.

Ty Vaughn, Monsanto's vice president of global regulatory affairs, said the company is "keeping all of our options on the table." he said it was too early to discuss the next steps, but did not rule out litigation if the proposal becomes final.

BASF did not immediately respond to Bloomberg BNA's request for comment.

The Environmental Protection Agency declined to comment on whether the proposal would affect its plans for regulating the products. But the agency said it is considering changing the current use restrictions on the labels for the dicamba formulations to help protect neighboring fields from damage.

Are Hurricanes Winds of Change for Insurers' Climate Risk?

Posted September 22, 2017, 7:45 A.M. ET

By Abby Smith

The insurance industry faces a dilemma when it comes to climate change: fundamentally, companies understand the risk natural disasters intensified by climate change can pose, but they see relatively little risk to their business in the near future.

However, the industry faces a long-term challenge to maintain market share in areas that could become increasingly harder to insure as climate change makes natural disasters more severe and more frequent. And the Trump administration's push to ax some of the tools insurers need to prepare for disasters could force companies to take a more public position on climate change.

"We look at it from all those perspectives, what a changing climate and environment does to either increase the frequency and severity of those kinds of events or decrease them ... and then putting that into our models to make sure we're delivering products that are priced appropriately," David Robinson, general counsel for the major property and casualty insurer the Hartford Group, told Bloomberg BNA.

Insurance companies are rooted in actuarial science research and analytics. Their job is to assess and comprehend risk, and that includes a scientific understanding of the effects of climate change. The federal research President Donald Trump has proposed ending is vital for insurance companies and underpins adaptation policies such as federal flood risk standards that help to mitigate risk in areas that could become uninsurable.

If Congress were to consider adopting the Trump administration's proposed cuts to climate science research, "my organization would be very vocal in terms of talking with appropriators about the value that these programs bring," Frank Nutter, president of the Reinsurance Association of America, which represents major reinsurance companies such as Munich Re America and QBE

Reinsurance Corp., told Bloomberg BNA.

But in the short-term, insurance companies can ultimately recoup any losses by re-pricing their policies annually—meaning it is not as urgent that they take a proactive stance on climate. And while the recent storms in Texas, Louisiana, and Florida will cost billions in total economic losses, they may not be big events for the insurance industry.

Insurance Industry Insulated from Harvey

Take Hurricane Harvey, for example.

Total economic losses from the Category 5 storm that ravaged the coastline of Texas and Louisiana late last month are estimated to range from $200 billion to $300 billion. But insured losses are expected to come in around $20 billion to $30 billion, according to estimates from AIR Worldwide—a modeling firm that specializes in catastrophic events and works closely with insurance companies.

The insurance industry is "really not going to play a big role in terms of financing the rebuilding of Harvey," Cynthia McHale, director of insurance for the business sustainability group Ceres, told Bloomberg BNA.

But, she added, the losses are "real. They get picked up by federal, state, and municipal coffers or individuals who have homes and businesses that are damaged."

Advocates such as McHale say many insurance companies have been "sitting on the sidelines," rather than proactively addressing climate change. The recent hurricanes may not shift the dynamic, she said.

An uptick in public conversation on climate change from the insurance industry followed Hurricane Sandy in 2012, but "it didn't stick," McHale said.

"I'd love to say that it will, that at this point the switch will flip and everyone will understand climate risk needs a really concerted effort … but I'm not sure that it will at the end of the day," she said.

For the insurance companies that are out in front on this issue, these storms don't change the game.

"We are the same company after these two storms," Louis Gritzo, vice president and manager of research for mutual insurer FM Global, told Bloomberg BNA. "We'll continue to do the things we've been doing, to work with [our clients] to reduce their risk."

Storms Could Blow Away Coverage

But the insurance industry faces risk from climate change on both sides of its balance sheet.

On the underwriting side—where insurers evaluate risk and offer coverage—the industry is seeing a "widening protection gap," Tom Herbstein, program coordinator for ClimateWise, told Bloomberg BNA. That means economic losses attributed to climate change are increasing, but insurers' coverage of those losses is declining.

Herbstein said his group—facilitated by the University of Cambridge Institute for Sustainability Leadership—consists of nearly 30 global insurance companies that are pushing a proactive

approach to climate change that would close that protection gap.

If the gap continues to widen, areas across the country will become uninsurable, meaning companies will pull out of those markets. McHale pointed to the mid-2000s, when several major insurance companies, including State Farm and Allstate, pulled out of the Florida market following Hurricanes Wilma and Rita.

"Companies can do that, but only so much. The strategy of retreat is not a winning business model," McHale said.

But Herbstein said the widening protection gap is a medium- to long-term risk for the industry. "If the industry continues to focus on the short term … they will eventually price themselves out of the market. That's akin to burying your head in the sand."

Insurers Investments Under Microscope

Insurance companies are also big investors, meaning they face the risk of stranded assets as the world transitions to lower-carbon energy. According to a June 2016 report from Ceres, the top 40 U.S. insurance groups owned nearly half a trillion dollars of investments in oil and gas, coal, and electric utilities at the end of 2014.

McHale said a "bright light" is insurers are increasing investments in low-carbon infrastructure. Previewing a new Ceres survey of 16 of the largest U.S. insurers to be released in January, McHale said 70 percent of that group increased investments in infrastructure and 85 percent were considering more clean energy investments.

Over half of those surveyed by Ceres also suggested investments in renewable energy could help mitigate transition risks they face from fossil fuel investments.

While insurers rely on the scientific research the Trump administration wants to halt, some in the industry are also cheering efforts to roll back requirements that they disclose investments in fossil fuel companies. However, in California, which licenses 77 percent of the U.S. insurance market, Insurance Commissioner Dave Jones required just those sorts of disclosures, despite threats of lawsuits from a dozen attorneys general.

Jones' Climate Risk Carbon Initiative, established in early 2016, required insurance companies licensed in California to divest from thermal coal and to disclose investments in coal, oil, and natural gas companies and utilities that generate electricity from more than 50 percent fossil fuels.

While the Trump administration may want to "stick their head in the sand," California will continue to play a leadership role, Jones told Bloomberg BNA. "Most other industrialized nations and their financial regulators are working on this issue," Jones said.

Disclosure Could Drive Policy

Despite some pushback, the initiative has seen 100 percent compliance. By the numbers, that means the fossil fuel investments of around 1,300 insurance companies are now publicly available, Jones said.

For advocates such as Ceres and ClimateWise, a proactive approach from insurers is two-fold: sharing risk management expertise with the public and investing in climate resilience. And insurers

such as the Hartford and FM Global that are leading on this issue are already heading in that direction.

"The key message, in addition to just making sure we understand and are tracking how hazards are changing, is there's a lot of progress that can be made to reduce risk and build resilience to the climate that we face today," Gritzo said. "We need to make sure that we're really focusing on reducing that hazard and not dismissing it."

"We face a resilience challenge in this country, a challenge we need to step up and address."

A $21 Billion Failed Nuclear Project is Still Haunting Scana

Posted September 22, 2017, 9:55 A.M. ET

By Mark Chediak

Scana Corp. may have dropped a $21 billion plan to build a nuclear power plant in South Carolina, but washing its hands of the project altogether won't be so easy.

On Thursday, the utility disclosed that it received a federal subpoena for documents related to the canceled reactors. Earlier this month, South Carolina's governor made public a report suggesting Scana was aware of challenges plaguing the project since early last year. And the state legislature is carrying out a probe of how plans for the two reactors at the V.C. Summer plant fell apart.

The backlash does not bode well for Scana as the utility owner seeks to recoup billions of dollars it spent on the project from South Carolina's utility customers. The company's battle to recover costs may become a flash point in the debate over who should pay for nuclear power projects that have failed to be built across the U.S. in the past decade.

"It's become an endless supply of negative headlines," said Shahriar Pourreza, a power analyst for Guggenheim Securities who has rated Scana's stock a "sell". He warned that the outcry could make it harder for Scana to recover costs and hurt its earnings growth.

Scana spokesman Eric Boomhower said by email Thursday that there are legislative and regulatory review processes that the company must go through regarding the project.

"We will not speculate on the outcomes of those processes," he said.

While South Carolina Governor Henry McMaster is still pushing to get the V.C. Summer plant finished, state legislators are already grilling Scana and project partner Santee Cooper executives in special hearings about how plans for the reactors unraveled. They've asked South Carolina's attorney general to look into whether the law that would allow Scana to recoup costs is constitutional.

"Political fallout from the V.C. Summer new nuclear construction termination has opened Pandora's box," Christopher Ellinghaus, a utilities analyst for the Williams Capital Group, in a research note Monday.

Even if regulators allow Scana to recover the reactors' costs, Pourreza said, they could end up clawing back the money in other ways, such as denying the company's future requests to recoup the expenses of other projects.

Last Project Standing

Scana's decision to halt construction has rattled both the state and the entire U.S. nuclear industry. The company called it quits after lead project contractor Westinghouse Electric Co. filed for bankruptcy and Santee Cooper pulled out. That left Southern Co. in Georgia as the only utility building a nuclear power plant in the U.S.

U.S. utility customers have ended up on the hook for more than $2.5 billion for nuclear power plants proposed and never built -- excluding the costs of Scana's V.C. Summer plant. Duke Energy Corp. and Dominion Energy Inc. are among the companies that have faced backlash for charging customers for yet-to-be-built reactors. Under state law, Scana may be allowed to recover $4.9 billion in expenses for its abandoned reactors so long as the spending is deemed prudent. But the report made public by McMaster's office this month could undermine its case.

'Significant Issues'

The February 2016 study drafted by contractor Bechtel found "significant issues" with the project's construction, including unrealistic schedules and a lack of project management. Regulators could use it to block Scana from recovering costs, Scott Elliott, special counsel for the state House committee investigating the project, told legislators last week.

The U.S. Attorney's office in South Carolina asked for a copy of the report from McMaster after it was made public, said Brian Symmes, a spokesman for the governor. Scana said the subpoena from the U.S. Attorney required the company to "produce a broad range of documents related to the project" and that it would cooperate with the investigation.

South Carolina Attorney General Alan Wilson is meanwhile expected to issue an opinion next week on the law that would allow Scana to recoup costs.

At stake is Scana's balance sheet, said Kit Konolige, a utility analyst for Bloomberg Intelligence. "They are dependent on having a smooth recovery of the capital they've invested in the project," he said.

How Electric Cars Can Create the Biggest Disruption Since iPhone

Posted September 22, 2017, 8:02 A.M. ET

By Jessica Shankleman

It's 10 years since Apple Inc. unleashed a surge of innovation that upended the mobile phone industry. Electric cars, with a little help from ride-hailing and self-driving technology, could be about to pull the same trick on Big Oil.

The rise of Tesla Inc. and its rivals could be turbo charged by complementary services from Uber Technologies Inc. and Alphabet Inc.'s Waymo unit, just as the iPhone rode the app economy and fast mobile internet to decimate mobile phone giants like Nokia Oyj.

The culmination of these technologies—autonomous electric cars available on demand—could

transform how people travel and confound predictions that battery-powered vehicles will have a limited impact on oil demand in the coming decades.

"Electric cars on their own may not add up to much," David Eyton, head of technology at London-based oil giant BP Plc, said in an interview. "But when you add in car sharing, ride pooling, the numbers can get significantly greater."

Most forecasters see the shift away from oil in transport as an incremental process guided by slow improvements in the cost and capacity of batteries and progressive tightening of emissions standards. But big economic shifts are rarely that straightforward, said Tim Harford, the economist behind a book and BBC radio series on historic innovations that disrupted the economy.

Systemic Change

"These things are a lot more complicated," he said. Rather than electric motors gradually replacing internal combustion engines within the existing model, there's probably going to be "some degree of systemic change."

That's what happened 10 years ago. The iPhone didn't just offer people a new way to make phone calls; it created an entirely new economy for multibillion-dollar companies like Angry Birds maker Rovio Entertainment Oy or WhatsApp Inc. The fundamental nature of the mobile phone business changed and incumbents like Nokia and BlackBerry Ltd. were replaced by Apple and makers of Android handsets like Samsung Electronics Co. Ltd.

Today, as Elon Musk's Tesla and established automakers like General Motors Co. are striving to make their electric cars desirable consumer products, companies like Uber and Lyft Inc. are turning transport into an on-demand service and Waymo is testing fully autonomous vehicles on the streets of California and Arizona.

Combine all three, for example through an Alphabet investment in Lyft, and you have a new model of transport as a service that would be a cheap compelling alternative to traditional car ownership, according to RethinkX, a think tank that analyzes technology-driven disruption.

One key advantage of electric cars is the lack of mechanical complexity, which makes them more suitable for the heavy use allowed by driverless technology, Francesco Starace, chief executive officer of Enel SpA, Italy's largest utility, said in an interview.

After disassembling General Motors' Chevrolet Bolt, UBS Group AG concluded it required almost no maintenance, with the electric motor having just three moving parts compared with 133 in a four-cylinder internal combustion engine.

"Competitiveness very much depends on the utilization of the car," Laszlo Varro, chief economist at the International Energy Agency, said in an interview. The average Uber vehicle covers a third more distance than the typical middle-class family car in Europe, amplifying the benefit of lower running costs to the point that "the oil price at which it makes sense to switch to electric is $30 per barrel lower," he said.

Uber on Steroids

The total cost of ownership of electric and oil-fueled vehicles will reach parity in 2020 for shared-mobility fleets, five years earlier than for individually-owned vehicles, according to Bloomberg New Energy Finance.

Already in London, Uber plans for its UberX service to be hybrid or fully electric by the end of 2019. Its rival Lyft aims to provide at least 1 billion rides a year in autonomous electric vehicles by 2025, saying they can be used much more efficiently than gasoline-powered cars.

This combination would be "the Uber model on steroids," Steven Martin, chief digital officer and vice president of General Electric Co.'s Energy Connections unit, said in an interview. "Once you have complete autonomous operation of a vehicle, then my desire to own one is going to go down and I'll be more willing to sign up to a subscription service."

Autonomous Hurdles

The transition to fully autonomous fleets may not match the speed of the smartphone revolution because of the many regulatory, legal, ethical and behavioral hurdles. Self-driving technology should become available in the 2020s, but won't be widely adopted until 2030, BNEF says.

Even so, the shift to electric cars could displace about 8 million barrels a day of oil demand by 2040, more than the 7 million barrels a day Saudi Arabia exports today, the London-based researcher says. That could have a significant impact on oil prices—a drop of 1.7 million barrels a day in global consumption during the 2008-2009 financial crisis caused prices to slump from $146 a barrel to $36.

That doesn't mean oil giants like BP or Exxon Mobil Corp. are heading for an inevitable Nokia-style downfall. While transport fuels account for the majority of their sales, they also have huge businesses turning crude into chemicals used for everything from plastics to fertilizer. They also pump large volumes of natural gas and generate renewable energy, both of which could benefit from increased electricity demand.

Even if electric vehicles do grow as rapidly as BNEF forecasts, the world currently consumes 95 million barrels a day and other sources of demand will keep growing, said Spencer Dale, BP's chief economist. The London-based energy giant expects battery-powered cars to reduce oil demand by just 1 million barrels a day by 2035, while also acknowledging the potential for a much larger impact if the industry has an iPhone moment.

The sheer breadth of the potential disruption makes it hard to predict what will happen. When Steve Jobs unveiled the iPhone, few people anticipated that it meant trouble for makers of everything from cameras to chewing gum.

"The smartphone and its apps made new business models possible," said Tony Seba, a Stanford University economist and one of the founders of RethinkX. "The mix of sharing, electric and driverless cars could disrupt everything from parking to insurance, oil demand and retail."

The Most Expensive Teslas and the Policy 'Paradox' Behind Them

Posted September 22, 2017, 10:46 A.M. ET

By Nick Rigillo

Fun fact: A poster child of green energy policies has cemented its place in Europe as the most expensive place to own a Tesla.

The ruling bloc in Denmark, home of wind-power giant Vestas Wind Systems A/S, has just agreed to cut car registration taxes. But even after the adjustment, Tesla's Model S will still cost more than $115,000. The same car costs $81,200 in Germany and $69,500 in the U.S.

The Danish Electric Car Alliance, an industry association, calls the tax cut "paradoxical," because it makes polluting diesel and petrol cars cheaper, in relative terms.

"This increases the divide between fossil-fueled and electric cars," said its head, Laerke Flader. The association estimates an Audi A6 will cost as much as $9,700 less, compared with a $1,700 saving for people buying the Tesla Model S.

Denmark, where car taxes were recently as high as 180 percent, has already decided to phase out electric-vehicle subsidies such as those offered in Norway and Germany. The fallout for Tesla and its peers has been severe.

According to latest figures from the European Automobile Manufacturers Association, sales in Denmark of battery electric vehicles were down 33 percent in the second quarter of this year from a year earlier.

Twice-Rejected LNG Exporter Gives Project Another Shot

Posted September 22, 2017, 10:38 A.M. ET

By Ryan Collins

The developer of a liquefied natural gas export terminal in Oregon that has already twice been denied permits by U.S. regulators is giving it another shot.

Veresen Inc. said late Sept. 21 that it filed another application with the Federal Energy Regulatory Commission for the $10 billion Jordan Cove LNG project that would ship gas to Asia. The agency denied the Calgary-based company approval last year, saying it failed to prove the terminal was needed. As part of its latest request, the company proposed route changes for a pipeline that would feed the terminal and eliminated plans for a power plant.

Veresen is making a third attempt just as the Trump administration promotes LNG exports as a means of establishing America's dominance in global energy markets and creating jobs. Gary Cohn, the director of the White House's National Economic Council, referenced the Northwest terminal during a talk in April, saying the government would step up approvals for such projects. It's among the dozens proposed along the coasts of the U.S. to send shale gas overseas.

Veresen said the project would create more than 200 permanent jobs and has said it would lower the U.S. current account deficit with Japan, one that President Donald Trump has complained about. In February, the company said it was in "advanced" negotiations with a third LNG buyer in Japan and that preliminary agreements with Jera Co., a joint venture between Tokyo Electric Power Co. Holdings Inc. and Chubu Electric Power Co., and Itochu Corp. were being finalized.

The application for Jordan Cove comes just weeks after Trump filled seats on the Federal Energy Regulatory Commission, restoring the quorum the agency needs to approve LNG projects and

major natural gas pipelines.

Diesel Becomes Campaign Issue for Merkel in German Elections

Posted September 22, 2017, 7:14 A.M. ET

By Jabeen Bhatti

Germans head the polls Sept. 24, and an unexpected issue has wedged itself into the campaign along with the usual themes of jobs and refugees: diesel.

Almost every night on the talk-show circuit, questions arise about the future of the country's beloved auto industry and the diesel-engine vehicles driven by one in three Germans in the wake of an emissions cheating scandal among the country's largest automakers.

Chancellor Angela Merkel is expected to be easily elected to her fourth term, but questions linger about her government's coziness with the auto industry that's been brought to its knees because of the Volkswagen scandal and has been forced to pay billions in fines and fixes for millions of cars worldwide that had been outfitted with devices to game emissions tests.

Moreover, the government has ambitious goals of reducing greenhouse gas emissions 40 percent by 2020 and by at least 80 percent by 2050, benchmarks set in law and widely supported by voters.

Not wanting to disrupt an industry responsible for roughly one-fourth of her nation's economy, Merkel has employed a long-term strategy for handling the emissions scandal and allegations that several auto manufacturers colluded on developing technology to cheat pollution tests before voters go to the polls. She's been trying to get out in front of the scandal by speaking about it publicly and expressing her disappointment while at the same time encouraging the industry to make a greater push on electric vehicles.

Germany's automobile manufacturers employ some 790,000 people with an annual turnover of some 404 billion euros ($482 billion), according to a January 2017 report on the topic by the lower house of the German Parliament, the Bundestag. Those figures don't include the many small- and medium-size companies that make up the backbone of the German economy and supply and deliver parts for the industry.

While opening the 2017 International Motor Show in Frankfurt Sept. 14, Merkel—unusually—criticized the industry, accusing car manufacturers of "heavily exploiting regulatory gaps," adding that "everything possible needs to be done now to regain credibility and trust as quickly as possible."

Later in her speech, however, she consoled a worried, diesel-focused industry. "Combustion engines plus electromobility, that's how we can avoid driving bans being imposed on diesel vehicles," the chancellor said.

Germany's Social Democrats, Green Party, and the Free Democratic Party, which hope to pick up seats and challenge Merkel and her Christian Democratic Union, have used the scandal to advance their own plans.

"Beginning in 2030, only emissions-free cars should be permitted," Cem Özdemir, co-chairman of Germany's Green Party, said Sept. 10 on the political talk show Anne Will. "The era of dirty combustion engines is over."

Such sentiments are to be expected from the Greens. But now, those views are echoed by other politicians in direct reaction to an issue affecting the nexus of cherished institutions in German society, analysts said.

"Voters are outraged—that's forced politicians to directly address the issue," Ferdinand Dudenhoeffer, director of the Center for Automotive Research at the University of Duisberg, told Bloomberg BNA. "Issues of the environment and climate, as well as the economic viability of the automobile industry, are all wrapped up in this issue. It affects some 15 million voters."

Family Affair

For decades, diesel has been taxed at lower rates than regular gasoline in Germany amid evidence that it's more fuel efficient and releases 15 percent less carbon dioxide, according to information the German Association of the Automotive Industry provided to Bloomberg BNA. That led to a huge boom in diesel-powered cars during the past three decades, according to a February 2016 report by Germany's University of Trier.

Then came the announcement by the U.S. Environmental Protection Agency in September 2015 that German auto manufacturer Volkswagen had installed so-called defeat devices in 11 million of its diesel vehicles to mask actual emissions levels during increasingly more stringent lab tests.

Two years later, the German government realized that Daimler and BMW, as well as Volkswagen subsidiaries Audi and Porsche, had colluded to strategize the best ways to cheat through software manipulation, according to a Transportation Ministry study.

"People see this like a spreading disease of incompetence almost to the point of corruption that they didn't see coming," Jackson Janes, president of the American Institute for Contemporary German Studies at the Johns Hopkins University in Washington, told Bloomberg BNA. "It carved away at the sense of trust people had in the government and the structures surrounding it."

"Especially in Germany, that's an impact that really counts," he added.

Amid mounting evidence of cartel-like practices, a history of the German government lobbying on behalf of the auto industry, revolving doors between government officials and those of the auto industry, and misinformation about the cleanliness of diesels, antitrust investigations have begun at the European level to investigate wrongdoing, analysts said.

Tip of the Iceberg

Despite hefty criticism of her actions regarding the auto industry, Merkel will likely cruise to victor. Her Christian Democrats have an insurmountable lead in the polls and about half of Germans are against targeted diesel bans in cities, according to poll by German broadcaster ARD.

Still, analysts predict that the market for diesel will collapse in due time. Since 2015, the number of new diesel registrations in Germany has decreased by almost 10 percent, according to Germany's Federal Motor Vehicles Office, and the market for reselling diesels has plummeted, according to Dudenhoeffer.

"The diesel scandal in Germany isn't over yet—it hasn't even reached its peak," he said. "As soon as the first driving bans roll out, it will get really serious."

Meanwhile, the U.K. and France pledged earlier this year to ban diesel and gasoline-powered engines by 2040. In spite of how important the car industry is to Germany, it's not unthinkable that the country eventually moves in this direction, too.

After all, Merkel's government did an about-face six years ago, doing away with nuclear energy just after extending its use—that was also once unthinkable, said Matthias Lang, an energy attorney and Bird & Bird's Dusseldorf office.

"The car guys watched as Germany began to change," he said. "They said in a country like this, we can't do electric cars. But people said this about photovoltaics and we've done it. The car industry is well-aware of how quickly and dramatically things changed there—and clearly do not want to suffer the same fate as the big German utilities."

Environmentalists wholeheartedly reject the government's protection of the industry, noting the pollution in German cities. "When you visit people in these cities, you truly realize how backwards the argument is for keeping these vehicles on the road," Friedrich told Bloomberg BNA. "We need to think about people's health, not the economic consequences."

Still, analysts like Dudenhoeffer have faith in German automakers to clean up their act and invest more heavily in e-cars and other technologies. At the IAA in Frankfurt, Volkswagen announced a massive 20 billion euro investment ($24 billion) to manufacture 80 new e-car models by 2025. As of 2016, there were only about 200,000 electric and hybrid vehicles on German roads, according to the country's Federal Motor Transport Authority. The transition, however, still will be problematic, said Lang. "There may well be a political decision to do away with diesel—it's easy to say so politically but then what do you do with millions of cars in Germany and around the world? I don't think everyone going to buy a Tesla tomorrow," he said. "I don't think it's just diesel—we'll do away with the combustion engine eventually. The problem is, no one has a clue how to do that in a commercially acceptable way today. Even a country like Germany cannot match the 24-billion euro current annual transfer payments in support of renewable power, to replace combustion engines next year or in five years," Lang added.

Italy's Enel Group Starts Latin America's Two Largest Solar Parks

Posted September 22, 2017, 11:17 A.M. ET

By Michael Kepp

Latin America's two largest solar parks, which can provide enough power to meet the annual demand of more than half a million homes, are now online in Brazil.

The projects, operated by Italy's Enel Green Power, are the $300 million, 292-megawatt (MW) Nova Olinda park, in Piaui state and the $400 million, 254-MW Ituverava park in Bahia state.

Enel, the biggest solar photovoltaic producer in Brazil, announced Sept. 18 that the farms were operating. An Enel official touted their launch as a big development for Brazil, as well as the company's long-term goal to eliminate its carbon dioxide emissions.

"The start of operations of Nova Olinda and Ituverava marks an important step forward for large-scale solar energy generation in Brazil, tapping into the great potential that the country can harness with this technology thanks to the high level of solar irradiation and land availability," Carlo Zorzoli, Enel's country manager in Brazil, said. "These two new solar parks, which together will avoid the emission of 668,000 metric tons of carbon dioxide each year, will contribute to making Brazil's energy generation more green and to Enel's commitment to become CO2-free by 2050."

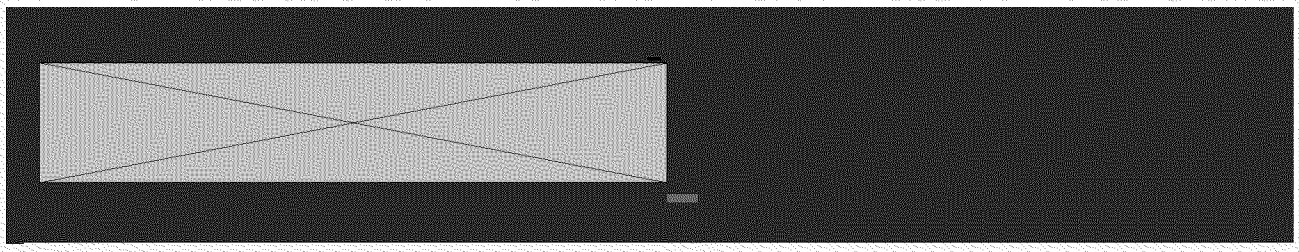
Brazil's government projects that solar power will account for 4.5 percent of the nation's electricity matrix in 2026.

The Nova Olinda park has the capacity to generate 600 gigawatt hours (GWh) of solar power per year, enough to meet the annual consumption needs of 300,000 households, while the Ituverava park can generate 550 GWh per year, enough to supply the annual needs of 268,000 households.

Land of the Sun

EGP sold the parks' future energy to distributors via 20-year contracts at Brazil's first and second solar auctions, in October 2014 and August 2015, respectively.

In Brazil, EGP, through its local subsidiary, has 2,276 MW of installed renewable capacity, of which 716 MW comes from solar power, 670 MW from wind power, and 890 MW from hydropower. The company has 275 MW of renewable capacity under construction in Brazil, of which 172 MW from wind and 103 MW from solar power.



The government's latest 10-year energy expansion plan, announced in July, projects that large-scale (non-rooftop) solar power, which accounted for just 0.01 percent of the electricity matrix in 2016 would account for 4.5 percent of the matrix in 2026, about 9,660 MW of generating capacity.

Rodrigo Lopes Sauaia, the CEO of the Brazilian Photovoltaic Solar Energy Association (Absolar), called the government's projections "conservative", telling Bloomberg BNA that large-scale solar power should have an installed capacity of 14,000 MW by 2026.

How big is the federal workforce? Much bigger than you think.

By Joe Davidson

How big is the federal workforce?

Much bigger than you think.

A new study on "The True Size of Government," by Paul C. Light, professor of public service at New York University, says the government's "blended" workforce is 7 to 9 million strong — including contractors and grantees.

Grantees include a range of folks, such as the Ohio State University team that studied "Swedish massages for rascally rabbits," as former senator Tom Coburn (R-Okla.) described in his "Wastebook 2014."

That example was not in Light's paper, and he does not diminish the work of anyone serving the government. But Light does raise a serious issue about the impact of so many non-employees.

"Although Washington's blended workforce has an imperative role in the nation's success, it may have grown so large and poorly sorted that it has become a threat to the very liberty it protects," Light wrote. "With 7 to 9 million employees, the federal government's blended workforce may have become too complicated and codependent to control."

ADVERTISEMENT

"I think we've gotten close to it," he said later, adding the use of private security forces by the military as an example.

The threat to liberty, he explained, "comes from the pressure to maintain and expand missions that are primarily for the benefit of one or more parts of the blended workforce and not necessarily for the benefit of the public."

Think private prisons. Commercial prison operators have a financial incentive to get and keep people locked up, deprived of their liberty.

Tony Reardon, president of the National Treasury Employees Union, pointed to the IRS mandate to use private debt-collection agencies. "Twice this program has failed because of high cost and poor quality," Reardon said, "yet Congress ignored the history and ordered a third attempt, knowing that highly trained federal employees are better equipped to collect the debts and uniquely authorized to provide assistance and options to low-income taxpayers."

Broken down, the 9 million included about 2 million employees, 3.7 million contractors, 1.6 million grant employees, 1.3 million active duty military personnel and 500,000 Postal Service employees in 2015. The 7 million excludes the Postal Service, which does not receive congressional appropriations for its operations, and the military. The grantee and contractor numbers are estimates based on a Bureau of Economic Analysis model that considers money spent on projects and the labor needed to produce products.

"I suspect many taxpayers have no understanding that their tax dollars pay for 3.7 million private sector employees," Reardon said. "The work of federal employees, on the other hand, is transparent and accountable."

An important takeaway is "the study reminds us that the nation depends on a very large blended workforce that includes many more contract and grant employees than federal civil servants. It is easy to say the civil service is too big, but it is only part of the workforce needed to faithfully execute the laws," Light said.

"The question is not whether we have too many government employees, but [do] we have the right blend to deliver the mission at the best price, value, and performance. … This means we should be counting all the heads when we get into debates about cutting workforces."

Even if an individual contractor earns less than a comparable federal employee, the government also must pay for the contractor's overhead costs, such as benefits, office space, equipment, materials, and other costs of doing business — enter the equation," he wrote. "Add overhead to the totals, and contractor employees can cost twice as much as federal employees."

Max Stier, president and chief executive of the Partnership for Public Service, agreed with the thrust of Light's point about the need for the right blend, "Previous administrations have not similarly invested in the internal resources needed to understand when contractor help is needed, what external resources are required and how best to use those resources effectively," Stier said. "In the end, we often wind up wasting taxpayer dollars and failing to achieve our intended results."

In Light's view, however, cost is not the only factor.

That raises the debate over the cost of using contractors instead of feds. In a "We are not going to have this blended workforce and should be celebrating its performance as a whole ... we ask tough questions about who can provide the best price, etc.," he said. Rather than pretending that only feds can do the job or contractors are always less expensive, "what I want to know is whether the blend is working for the public interest."

Subject: AEI Today: The Meaning of Labor Day

Just as Memorial Day has become embedded in American culture as the day marking the beginning of summer, so too Labor Day, celebrated annually on the first Monday of September, has come to signify summer's end.

A special edition of AEI Today on this Labor Day holiday

FEATURED STORY

Labor Day: Origins, traditions, and today's labor crisis

Various scholars

—

Just as Memorial Day has become embedded in American culture as the day marking the beginning of summer, so too Labor Day, celebrated annually on the first Monday of September, has come to signify summer's end. Although it may seem strange to celebrate the value of labor by taking time off from work, these leisurely pursuits have long been regarded as fitting for a holiday meant to honor the "contributions workers have made to the strength, prosperity, and well-being of our country."

What We're Reading

—

Do workers feel threatened by robots?

Policymakers know that advancing technology and automation will present challenges and opportunities for them. But how do Americans feel about it, particularly as it relates to their jobs?

The state of the American worker in 2017

For nearly a decade, AEI has released a yearly poll compilation on workers' attitudes about their jobs to coincide with Labor Day. This year's study shows concerns about salary growth, but most workers express strong satisfaction with their jobs.

An Eclipse Is What the U.S. Power Sector's Been Waiting For

Posted August 17, 2017, 01:23 P.M. ET

By Naureen S. Malik, Christopher Martin and Mark Chediak

Turns out the solar eclipse, set to plunge parts of the U.S. into total darkness on Aug. 21, will offer exactly what the power sector's been looking for: a completely predictable stage for experiments.

It's not often that power grid operators, utilities and electricity generators get such precise and advance notice about more than 12,000 megawatts of solar power supplies set to suddenly drop off their systems. And some are looking forward to it—as a means of testing plants, software and markets refined in recent years in anticipation of the day when renewable energy becomes the world's dominant source of power.

The way David Shepheard, managing director at consultant Accenture Plc, sees it: The eclipse is the "forecastable dress rehearsal" for the grid of the future. It'll be the perfect test, he says, "for operating the grid when the sun doesn't shine and the wind doesn't blow."

Here's a closer look at what utilities, power generators and grid operators will be watching as the eclipse plays out:

Perfecting Forecasting

Charlie Gay, director of the U.S. Energy Department's SunShot Initiative, expects the eclipse to provide instant validation for power forecasting models being developed. The department is working with the National Renewable Energy Laboratory and grid operators to improve software controls that balance supply and demand as the continent goes dark.

"It gives us a test for the models," he said. Using satellite data and maps of solar plant locations, the group expects to be able to match forecasts with what actually occurs before, during and after the eclipse.

Grid operators including PJM Interconnection LLC and Southwest Power Pool are similarly using the eclipse to measure exactly how much rooftop solar is on their systems and improve their supply models for the next eclipse in 2024.

Sizing Up Software

The proliferation of so-called smart meters, energy management equipment and software has helped provide power-line operators better data on the homes and businesses they supply. Some utilities can now control their customers' air conditioners using remote devices, helping them curb demand during extreme weather.

The need for such software and technology has only grown as rooftop solar panels increasingly turn consumers into mini-generators. "Smart" inverters can now help balance the voltage and frequency coming from solar panels.

Grids and utilities "are quite frankly becoming tech companies" in their need to crunch big data to operate more efficiently, and this eclipse "is a little bit like Y2K," said Austin Whitman, director of regulatory affairs at FirstFuel Software Inc. in Boston.

The event is going to give grid operators a chance to fine-tune their toolkit for dealing with big wind and solar fluctuations, the Energy Department's Gay said. Battery storage may end up playing a bigger role because it offers more flexibility, Accenture's Shepheard said.

Backing Up Solar

Utilities including PG&E Corp. and Edison International will also be relying on natural gas-fired power plants and hydropower resources to pick up the slack when the moon blocks the sun and solar power's wiped out.

The event is coming at an opportune time for California to flex its hydropower muscle. Snow is melting and hydro is plentiful. The flood of quick supplies is what the state is hoping to dispatch to fill a 6,000-megawatt void of solar energy.

In North Carolina, a part of which will see total darkness during the eclipse, Duke Energy Corp. expects about 2,000 megawatts, or 80 percent, of utility-scale solar farms to go offline. The utility will treat it like a "gradual sunset," said spokeswoman Tammie McGee, estimating that as much as 1,200 megawatts of gas generation will help pick up the slack. The so-called energy imbalance market, formed by a group of utilities and California's grid operator to trade power in real-time across much of the western U.S., will also be put to the test. Berkshire Hathaway Energy's NV Energy utility in Nevada said it'll rely on this regional system, capable of dispatching power every five minutes, to help balance supply swings and set aside 400 megawatts in reserves.

Power Surge?

Power bulls could meanwhile enjoy a rally in wholesale electricity prices due to solar's sudden slide. The eclipse will start curbing solar a little after 9 a.m., just when the work week is ramping up and demand is taking off. According to energy data provider Genscape Inc., the event may extend the typical period of high power prices in California by about two hours.

Prices will probably retreat as soon as the moon starts moving past the sun and solar farms return, Genscape said. And the market impact in Texas, the Midwest and the East Coast will be limited because the region's home to smaller concentrations of solar.

Those within the path of the shadow may feel a 10-degree Fahrenheit drop in temperatures, probably not enough to affect gas demand, according to WTRG Economics. "But power companies will be busy for a half hour or so trying to balance the load," the energy research firm said in a report.

Voltage Swings

Transmission operators have spent years adapting to growing volumes of renewable power coursing through U.S. power lines. So they're not anticipating outages as a result of voltage fluctuations. Utilities from California to North Carolina have also been preparing for months to avoid sudden voltage losses.

"One of the advantages of being a national leader in the amount of solar energy connected to the grid is that our operators are experienced with dealing with fluctuations in solar power production due to weather conditions," said Paul Grigaux, vice president of transmission substations and operations for Edison's Southern California Edison utility.

And solar's decline doesn't just affect high-voltage transmission lines. Utilities in California and New Jersey, where large concentrations of households have installed solar panels on their rooftops, will have to deal with fluctuating voltage levels on local power lines.

While Duke plans to follow the same procedures it always follows during sudden outages, McGee noted that the magnitude of this event "is fairly unprecedented."

GE, Tesla to Outfit 50 Home Depot Stores with Solar Panels

Posted August 17, 2017, 02:01 P.M. ET

By Christopher Martin

General Electric Co.'s Current unit and Tesla Inc. will install solar systems on 50 Home Depot Inc. stores and sell the power output to the retailer.

The solar rooftops will generate enough electricity to reduce each store's demand from local utility grids by about one third, Atlanta-based Home Depot said in a statement Thursday. It's part of a company plan to get 135 megawatts of clean energy at its stores by 2020.

Home Depot will buy the output from each of the systems under power purchase agreements in New York, New Jersey, Connecticut, California and Washington, D.C. Six locations will also get battery storage from Tesla. Terms weren't disclosed.

Blackstone's New Pipeline Asset Is Wreaking Environmental Havoc

Posted August 17, 2017, 9:36 A.M. ET

By Naureen S. Malik and Catherine Traywick

In the energy business, it's one of the biggest projects going today: construction of a 710-mile pipeline to transport natural gas from America's most prolific shale deposit in the eastern U.S. to consumers in the Midwest and Canada. Even Blackstone Group LP has agreed to take a sizable stake.

But it holds another, more dubious, distinction. The Energy Transfer Partners LP pipeline has racked up more environmental violations than other major interstate natural gas pipelines built in the past two years, according to a Bloomberg analysis of regulatory filings during that period. And that's all since U.S. regulators approved the $4.2 billion project in February.

"Not only is it a situation where there are probably more incidents and more headlines than any other pipeline, on a project basis it's a magnitude that we haven't seen in years," said Kyle Cooper, director of research with IAF Advisors in Houston.

In Ohio, Energy Transfer has been cited for damaging protected wetlands and improperly disposing of wastewater, among other things. In West Virginia, a state regulator temporarily ordered the company last month to cease and desist activities after it inadvertently polluted streams.

And in Washington, the Federal Energy Regulatory Commission halted horizontal drilling on certain segments of the pipeline, following a massive 50,000-barrel spill of diesel-tainted drilling fluid.

The Rover pipeline, running from the Marcellus shale deposit, is Energy Transfer's biggest project since its controversial Dakota Access oil pipeline. Chief Executive Officer Kelcy Warren said July 31 that he was "baffled" by regulators' allegations. That same day, his company reached a deal to sell a 32 percent stake in the Rover unit to Blackstone for about $1.57 billion in cash. It's expected to close in the fourth quarter. Blackstone spokeswoman Paula Chirhart said the firm declined to comment.

"Rover will be built in compliance with all safety and environmental regulations, and in some instances we will exceed those requirements," Energy Transfer spokeswoman Alexis Daniel said in response to Bloomberg's violation tally.

China's Blue Skies Target May Make for Winter Gas Crunch

Posted August 17, 2017, 10:02 A.M. ET

By Aibing Guo, Jing Yang, and Dan Murtaugh

Chinese President Xi Jinping's government beat expectations in its drive to help clear the nation's notoriously smoggy skies by burning less coal and oil in favor of cleaner natural gas.

Now that success may be too much, too soon.

Gas consumption rose 15 percent in the first half of the year, including a 27 percent jump in June,

as industrial customers shift toward the fuel and as distributors add more residential users. That surge during the traditionally low-demand part of the year raises the possibility that the country may find itself short of gas when winter hits, according analysts at Jefferies Group LLC and SCI International.

"China could be setting itself up for a nasty winter gas shortage," Laban Yu, a Hong Kong-based analyst at Jefferies, said this month in a research note. "We believe gas prices will have to increase, especially in winter months, to balance supply and China's regulation-induced demand surge."

China's drive to use more natural gas and renewables has seen coal's share of the energy mix drop to just below 60 percent during the first half of the year, according to the National Energy Administration. It accounted for 64 percent in 2015, and the government is aiming for 58 percent by 2020.

China's natural gas demand will rise to 620 billion cubic meters a year by 2030, China National Petroleum Corp. said in an Aug. 16 report. The country used 206 billion cubic meters last year, according to the National Development and Reform Commission.

Natural gas use tends to fall into two categories: recurring demand from activities like power generation and industrial plants, and seasonal demand for powering air conditioners in summer and heating homes in winter. For China, which has hundreds of millions of people living in colder northern cities like Beijing, Tianjin, and Harbin, consumption peaks in the winter.

But demand this year is booming in the middle of summer. Imports in July jumped by 55 percent over the previous year and are up by almost 21 percent for the entire year, according to the General Administration of Customs. That's on top of a 8.8 percent increase in domestic output during the first seven months of the year, according to the National Bureau of Statistics.

'Big' Increase

In 2015 and 2016, seasonal demand meant December consumption was double that during July. China Petrochemical Corp., one of the country's leading liquefied natural gas importers and known as Sinopec Group, is expecting "big" year-on-year increases in the winter and spring, Shanghai Securities News reported last week, citing comments from the company after its midyear work conference.

The government will likely push energy companies to ramp up imports and production and ensure that new terminals are online to meet winter demand, said Liu Guangbin, a gas analyst at Shandong based SCI International. Energy firms may use the surge in buying to bolster requests to the government to raise regulated domestic prices, he said.

"I expect the gas supply shortage this winter to be more severe than the situation in the previous two years due to sharp increase in demand from industrial users amid the government's coal-to-gas switching policy," he said.

Neither the National Development and Reform Commission, the nation's top economic planner, nor the NEA responded to faxed requests for comment.

More LNG

The growing global LNG market will help the country meet any surge in demand this winter, said Liu Ming Hui, executive chairman of China Gas Holdings Ltd., which distributes natural gas to homes

and businesses. Other distributors, such as ENN Energy Holdings Ltd. and Guanghui Energy Co., have started importing LNG themselves to supplement supplies they typically bought from China's big state-owned energy firms.

LNG has made up almost 51 percent of China's natural gas import supply during the first half of the year, up from 48 percent last year and 44 percent in 2015, according to Bloomberg calculations using data from the General Administration of Customs.

China's gas prices are set by regulators, and they're among the highest in the world by a major gas consumer. The main city-gate price in June was 1,876.1 yuan per thousand cubic meters, which equated to about $7.73 per million British thermal units.

LNG Surge

A surge in LNG production, led by new facilities in Australia, boosted global output to a record in July, according to JP Morgan Chase & Co. New plants will ensure that there's ample supply for Chinese buyers, even as they are expected to increase imports this winter by 30 percent from last year, said Zhi Xin Chong, a Singapore-based analyst with Wood Mackenzie Ltd. Prices for spot LNG will probably only rise to the $7-to-$8 per million British thermal units level this year, compared to a peak near $10 last year, he said.

"We probably won't see the same sort of spike like last year," he said. "The new supply coming on to the market is already beginning to affect prices."

China's Menswear Maker Swaps Stitching for Lithium Batteries

Posted August 17, 2017, 9:30 A.M. ET

By Bloomberg News

Ten years ago, Ningbo Shanshan Co. was primarily a maker of menswear turning out shirts, casual wear and business suits from its base of Ningbo, an industrial hub in China's Zhejiang province. Not anymore.

This week, the company announced that it will spend 3.81 billion yuan ($570 million) on a new energy-storage project in China's northern city of Baotou, bolstering its growing interest in the research, development and manufacture of lithium-ion batteries.

The move is the latest by the Chinese company to become a bigger player in the market for storing electricity for everything from electronic vehicles to laptop computers. It underscores an accelerating shift for a company that got almost all its sales from apparel in 2006.

Shanshan is "a serious player in the battery material business, so it's not a surprise" to see its new plan, said I-Chun Hsiao, a Tokyo-based analyst from Bloomberg New Energy Finance. "There's an oversupply in batteries in the short term."

The industry, he said, will see enough demand to boost manufacturing capacity by more than fourfold from 2021 to 2030. Chinese companies have about 57 gigawatt-hours of lithium-ion manufacturing capacity, with another 78 gigawatt-hours announced, according to Bloomberg New

Energy Finance data.

The shift has been good for Shanshan investors. Its shares have gained about 45 percent in Shanghai trading this year, outpacing the Shanghai Stock Exchange Composite Index's 5 percent increase. Citic Securities Co.initiated coverage of the stock with a buy recommendation on Wednesday, predicting Shanshan will trade at 26.5 yuan within a year, a 25 percent increase from the close on Aug. 15.

Shanshan fell as much as 1.9 percent on Thursday in Shanghai.

Shanshan's newest project each year will be able to produce 100,000 metric tons of anodes—a component in lithium-ion batteries, according to a statement on the Shanghai stock exchange on Tuesday. Construction will begin in October and is expected to be completed by June 2019.

The new investment adds to Shanshan's purchase last month of 1.8 billion yuan of shares in China Molybdenum Co. in a private placement as part of its push to secure the raw materials use to produce cathodes.

Battery materials accounted for almost 75 percent of Shanshan's revenue last year. That's up from 39 percent in 2011 and a far cry from virtually nothing in 2006 when it got 93 percent of its sales from making apparel, according to company filings.

Company Transformation

The transformation to battery material manufacturing has helped rejuvenate the company's earnings. Net income rose about 51 percent in the first half from the same period a year earlier to 339 million yuan mainly because of its battery materials business, the company said on Tuesday. Annual revenue has more than tripled in the past 10 years.

Besides anodes, Shanshan also produces other battery components such as cathodes and electrolytes. The company is expanding into more aspects of electric vehicle manufacturing, including battery system integration, vehicle design, research and development and charging pole construction.

Saudi Arabia Calls for Pollution Monitors on Industrial Chimneys

Posted August 17, 2017, 03:32 P.M. ET

By Matthew Kalman

Saudi Arabia has ordered about 7,000 industrial plants to install networked monitoring systems to measure greenhouse gas emissions in real-time as part of its effort to reduce air pollution and improve public health, according to the Ministry of Environment, Water and Agriculture.

Emissions sensors installed in chimneys will broadcast air quality data to a network of nationwide monitoring stations connected to a central control unit and database linked to the ministry's Center for Environmental Information, Meteorology & Early Warning for Weather & Pollution. The center then will issue daily reports and an electronic map showing real-time air quality data, according to the center.

Saudi Arabia has the highest recorded air pollution in the world, due mostly to its heavy fossil fuel emissions from the oil industry, and is closely followed by Gulf neighbors Kuwait, Qatar, Bahrain, and the United Arab Emirates, according to data from the World Health Organization and International Energy Agency.

"Being an intensively industrialized region, monitoring air emissions from the various industries is very vital for the protection of the human's health and the surrounding environment," said Abdulaziz Al-Shaibani, chairman of the Department of Geosciences at King Fahd University of Petroleum and Minerals in Dhahran. "The main goal of the initiative is to restrict the volume of gas emissions for the industrial stacks in the major industrial cities within the Kingdom. We are not aware of monitoring efforts that are enforced on any industrial sector within the kingdom."

The monitoring network, which will be enforced through legislation, will be a crucial first step toward achieving the vision of the government's $72 billion National Transformation Program, Khalil bin Mosleh Al-Thaqafi, president of the Saudi General Authority for Meteorology and Environmental Protection, a unit of the Environment Ministry, said . The program aims to end Saudi Arabia's dependence on hydrocarbon revenues by 2030.

"We are not sure exactly of the cost [of installing and maintaining the monitors], but it will probably be on the range of a few hundred thousand to a million Saudi riyals per industry for the installation and maintenance of the monitoring units," Al-Shaibani said.

While all industry sectors will have to adhere to the networked monitoring systems order, Saudi Arabia's oil industry generates a large part of the country's carbon emissions.

Aramco, BP PLC, Royal Dutch Shell, and Exxon Mobil, which all have large petrochemical plants in Saudi Arabia, did not respond to requests for comment from Bloomberg BNA. Chevron referred inquiries to the Saudi authorities.

The head of a large sustainable energy company, as well as environmental researchers, welcomed the monitoring plan.

"Really pleased to see this initiative as the impact of unacceptable levels of carbon and other particulates not only contributes to climate change, but also to harmful health impacts on the people who live in the area of these industrial facilities," Paddy Padmanathan, president and chief executive officer of ACWA Power International, told Bloomberg BNA in an Aug. 15 email.

"It's very positive to see this initiative, which will help characterize and monitor emissions from industrial facilities, and determine their role in air pollution," said Isobel Simpson, an environmental researcher at the University of California, Irvine, who has studied Saudi air quality.

Blackout Could Pressure Taiwan Leader to Reconsider Energy Policy

Posted August 17, 2017, 11:24 A.M. ET

By Stephen Stapczynski

A blackout in Taiwan Aug. 15 that struck about 6 million households may force President Tsai Ing-wen to reconsider her anti-nuclear stance and open the country's electrical grid to outside investment.

The island's energy security and the feasibility of Tsai's plan to phase-out atomic reactors by 2025 and reduce coal-fired generation is coming under greater scrutiny, BMI Research said in an Aug. 16 note. So far Tsai hasn't backed down on promises to shut the country's remaining nuclear power stations, but public pressure could determine the extent to which policies change, according to Gloria Hsu, a professor at National Taiwan University.

While the disruption was caused by human error that resulted in about 9 percent of Taiwan's generation capacity going offline, the outage highlighted the country's limited number of power plants. The reliability of that supply, generated and distributed by state-run companies, is crucial to the success of Taiwan's semiconductor industry that had sales of about $71 billion in 2015 and supplies companies including Apple Inc.

"The government may be forced to reconsider its anti-nuclear stance," said Joseph Jacobelli, an analyst at Bloomberg Intelligence. "Market liberalization could be seriously advanced as Taiwan desperately needs private investment in its power infrastructure."

Taiwan plans to separate Taiwan Power Co., known as Taipower, into separate entities to handle power generation and transmission and distribution, according to electricity act amendments passed in January. But that effort is far too little and the government should should focus on more "rational and less populist" energy policies, said Jacobelli.

Tsai posted an apology on Facebook and included a reiteration of her determination to push forward with phasing out nuclear power in favor of renewable energy.

—With assistance from Yu-Huay Sun, Chinmei Sung, and Dan Murtaugh.

Leading the News

Air Pollution

Shippers Prepare for Tougher Sulfur Pollution Rules

Monitoring of sulfur emissions from ships on one of the world's major commercial waterways shows the industry can adapt to stricter new global limits on the air pollutant that take effect in 2020, a Danish shipping official told Bloomberg Environment.

Chemicals

Move for Global Ban on 'Teflon' Compound Hits Sticking Point

Global efforts to ban the "Teflon chemical" have hit a sticking point.

Congress

Inhofe's Hold Aims to Draw Votes on EPA Nominations

Sen. Jim Inhofe (R-Okla.) is trying to prevent a Senate floor vote on a Democratic Federal Energy Regulatory Commission nominee in an attempt to win floor votes on Environmental Protection Agency nominees facing Democratic opposition.

EPA

Pruitt Says Threats to Family Prompt Boost in His Security

The administrator of the Environmental Protection Agency said an increase in his security detail is the result of an escalation in threats to him and his family.

International Climate

Senate Democrats to Attend Bonn Climate Talks to Counter Trump

Several Senate Democrats will attend global climate talks in Germany next month to assure the nearly 200 nations in the Paris Agreement that many Americans still support it, despite President Donald Trump's decision to pull the U.S. out of the accord.

News

Air Pollution

BRP Inc. Fined $783,000 for Illegal ATVs in California

The import of all-terrain vehicles not certified to meet California emissions standards will cost Canada-based Bombardier Recreational Products Inc. $783,000, state officials said.

Biofuels

Oil-State Senators Press Trump to Remember Them in Ethanol Feud

Senators from oil states asked President Donald Trump to convene negotiations over the U.S. biofuel mandate, a week after the administration backed off possible changes to the program at the behest of farm-state politicians.

Climate Change

Brazil's Paris Climate Pledge in Doubt as Deforestation Spikes

Increased deforestation drove Brazil's annual greenhouse gas emissions up nearly 9 percent in 2016 despite an ongoing recession, casting doubt on the country's ability to meet its international climate goals.

Coal-Fired Power Plants

Merkel Coalition Talks Focus on Coal as Climate Goal Slips Away

German Chancellor Angela Merkel's bloc in parliament and its potential partners in a new coalition government are discussing climate policy, increasing doubts about the future of coal-fired power plants.

Energy

China's Wasted-Energy Problem Seen Moving to New Provinces

Anindya Upadhyay: More Chinese provinces could be grappling with wasted electricity in the next three years, while plants that run on fossil fuels face risks from China's energy reforms, according to Bloomberg New Energy Finance.

Energy

Connecticut Latest State to Throw Lifeline to Nuclear

Connecticut lawmakers took a step toward propping up the state's sole nuclear plant, following in the footsteps of New York and Illinois in seeking to avert closures.

Energy

Dynegy Inc. Could Benefit From Illinois Bill to Help Coal Plants

Legislation introduced in Illinois could allow Dynegy Inc. and other coal-fired plant owners to lock in electricity sales for three-year terms and charge higher prices in central and southern Illinois.

Energy

Puerto Rico Faces Possible Court Battle Over Utility Control

Puerto Rico Gov. Ricardo Rossello is vowing to fight a federal oversight board's effort to take away his control of the island's government-owned electrical utility, setting up a potential court battle between the commonwealth and the panel over the bankrupt company.

Enforcement

Paper Giants Thrive Amid China's Pollution Crackdown

China's drive to tackle pollution is proving a boon for the country's top paper and packaging

companies, as the closure of smaller factories and new restrictions on waste imports drive up product prices.

Environmental Reviews

Israeli Beach Closed to Development, Putting 50 Projects on Ice

A 100 meter-wide stretch of Israel's Mediterranean beach is off-limits to construction under a court ruling that jeopardizes 50 construction plans that received permits to build in that area.

Hazardous Waste

Farmers Face Learning Curve as EPA Emissions Reporting Nears

An estimated 100,000 farms could be required to report hazardous air emissions from cow, pig, chicken, and other animal wastes as soon as next month, but many lack the know-how—despite the EPA's latest guidance on how to comply.

Insurance

Groups Question Congress's Will to Overhaul Flood Insurance Program

Concern is growing that Congress may fall into a cycle of extending the troubled National Flood Insurance Program in short spurts and miss the opportunity to overhaul the program, according to some environmental, insurance, and other groups.

Mining

Trump Taps Industry Consultant to Head Interior Surface Mining

President Donald Trump picked a mining industry consultant to head the Interior Department's Office of Surface Mining Reclamation and Enforcement, a selection drawing praise from Republicans but opposition from environmental groups.

Renewable Energy

BMW Makes Cars Greener by Tapping Own Wind Power, Old Batteries

BMW AG is tapping its own wind turbines and recycled batteries to power machines that make cars like its i3 all-electric model, adding a new shade of green to the its production chain.

Renewable Energy

Denmark Signs Wind Energy Agreement with Trump Administration

President Donald Trump's climate-change skeptic administration is turning to Denmark for advice on how to boost U.S. supplies of green energy from offshore wind.

Renewable Energy

Dubai Leads Gulf's Renewable Pivot With UAE's Solar Gas Stations

The gasoline pumped in the future at more than 50 new United Arab Emirates service stations will be the same as the fuel offered now, but solar energy will power their electricity—part of a broader effort to give Dubai the world's smallest city carbon footprint.

Renewable Energy

Wind Farms of a Certain Age Aim to Extend Lifespans

Even for wind farms, middle age can be a time for replacement surgery.

Review Commission

Murray Energy Head Ordered to Tell Miners They Can Complain to Feds

Bob Murray, chief executive of coal giant Murray Energy Corp., must himself tell miners—in person or through video conferencing—that they can complain to federal regulators about safety conditions without notifying company managers, a mine safety panel agreed Oct. 26.

Toxic Substances

Marathon Can't Quell Motown Contamination Claims (Corrected)

Marathon Petroleum will again have to defend contamination claims filed by residents living near a Detroit oil refinery, the U.S. Court of Appeals for the Sixth Circuit ruled in an unpublished opinion (Cole v. Marathon Oil Corp., 6th Cir., 16-cv-2660, unpublished 10/26/17).

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

August 8, 2017

Latest News

Sessions Orders Review Of Third-Party Payments Going Back 10 Years

Attorney General (AG) Jeff Sessions is requiring the Justice Department (DOJ) to compile a list of all settlements between EPA and other agencies and defendants that include a payment to a non-government organization (NGO) third party going back a decade, potentially expanding retroactive application of his policy barring such payments.

DOJ Vows Strict Scrutiny Of EPA Settlements, But NRDC Sees No Change

AUSTIN, TX -- A senior Justice Department (DOJ) official is vowing to aggressively defend EPA and other agencies' rules rather than "going directly to a settlement" and reiterating Reagan-era guidance to ensure that settlements comply with DOJ policies, sending a message that the Trump administration will not enter so-called "sue-and-settlement" agreements with environmentalists.

EPA Diverts Staff To Implement Revised TSCA Reviews For 'New' Chemicals

EPA is diverting full-time equivalent (FTE) staff to help implement an updated process to streamline risk reviews for "new" chemicals as required by the overhauled Toxic Substances Control Act (TSCA), outlining a set of "operating principles" for the effort and vowing to release draft documents this fall offering further details.

Oil & Gas Official Fears Months Of Uncertainty Regarding Methane NSPS

AUSTIN, TX -- A top oil and gas sector official is raising the specter of months of compliance uncertainty regarding EPA's methane standards for new drilling equipment, saying that the agency has not explained how it will enforce major aspects of the rule after a court rejected its effort to pause those provisions and ordered officials to implement them.

EPA Seeks To Expand TSCA Advisory Panel For Broader Representation

The Trump EPA is seeking to add members representing various stakeholders to an advisory panel created by the Toxic Substances Control Act (TSCA) reform law

enacted last year, and is looking to candidates previously nominated but not selected to grow the size of Science Advisory Committee on Chemicals (SACC).

Subject: POLITICO's Morning Transportation, presented by the Embassy of the United Arab Emirates: Drone pilot program to drop any day now — Senate DHS approps up in the air — Ohio River lock back in service

By Brianna Gurciullo | 10/17/2017 10:00 AM EDT

With help from Tanya Snyder and Adam Behsudi

ANY DAY NOW... The White House is poised to issue an executive order as early as this week (though the timeline has slipped before) creating a pilot program within the FAA to delegate some of the agency's authority over U.S. airspace so localities can regulate drones. While Washington has so far kept federal preemption over state and local laws for driverless cars, drones have been a different story. Drones can fly far lower than traditional aircraft, creating a whole new set of questions involving safety and privacy.

The fine print: An early version of the plan involved 10 sites being selected using criteria that were never established, and it's unclear whether the pilot will still be limited that way or whether the FAA will open the door more broadly. It's also unclear whether the pilot plan will include a sunset provision or will continue in place as long as it's working. Tanya has lots more for Pros.

IT'S TUESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Send along tips, feedback and lyrics to bgurciullo@politico.com or @brigurciullo.

"Just listen to the music of the traffic in the city / Linger on the sidewalk where the neon signs are pretty / How can you lose?"

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

SENATE DHS APPROPS UP IN THE AIR: The Senate Appropriations Committee postponed the subcommittee markup of the fiscal 2018 spending bill for DHS that had been scheduled for today. The panel hasn't given a new date for the subcommittee markup, but the full committee markup is still on the schedule for Thursday. The committee announced the postponement the same day the office of Chairman Thad Cochran said health issues were preventing the Mississippi Republican from coming back to Washington. A spokesman for Cochran told our POLITICO colleagues that the chairman is looking to "get back as soon as possible."

A RIVER RUNS THROUGH IT: The Ohio River's Lock 52 is back up and running after multiple days of closure. Vessels had been stuck in a backup more than 50 miles long. The lock and dam in southern Illinois were built in 1929 and have been slated for replacement since 1988, when the Olmsted Lock and Dam project was authorized. That project is now decades overdue and billions of dollars over budget.

MAYBE NOT THIS YEAR? President Donald Trump and Senate Majority Leader Mitch McConnell acknowledged Monday that Republican efforts to overhaul the U.S. tax code could continue into 2018, POLITICO's Brian Faler reports. "I would like to see it be done this year," Trump said to reporters. "But don't forget it took years for the Reagan administration to get taxes done - I've been here for nine months." And McConnell said: "The goal is to get it done this calendar year, but it is important to remember that Obama signed Obamacare in March of year two [of his first term], Obama signed Dodd-Frank in July of year two."

TWEET(S) DU JOUR: From Monday's Cabinet meeting, ABC News Politics: "Pres. Trump tells @jonkarl he understands how Steve Bannon feels in his targeting of GOP lawmakers. 'They're not getting the job done.'" POLITICO's Josh Dawsey: "McConnell's wife, Elaine Chao, sits two seats over and smiles the whole time."

'A CLASH OF TITANS': Florida Gov. Rick Scott still hasn't announced whether he will challenge Sen. Bill Nelson, the Commerce Committee's ranking member, in 2018. But Democrats are now "airing digital ad buys against the Republican, launching early voter registration drives and coordinating sometimes-fractious progressive groups to boost Democratic voter turnout," POLITICO's Marc Caputo and Edward-Isaac Dovere report. "The all-hands-on-deck [effort] ... speaks to the deep concerns among Democratic activists and elites worried about the three-term senator's lagging fundraising and the difficulty of motivating Democratic voters in off-year elections." If Scott runs, it will be the hardest race of Nelson's career.

** **A message from the Embassy of the United Arab Emirates**: It was the largest commercial aviation order in history - UAE airlines bought $120 billion in US-made Boeing aircraft. That's hundreds of thousands of jobs for Americans. The UAE-US commercial aviation relationship is a win-win deal. http://politi.co/2yFCemS **

BOMBARDIER SEEKS OUT THE ENEMY OF ITS ENEMY: Bombardier has an ace up its sleeve as it tries to escape almost 300 percent in combined duties that Boeing is trying to have slapped on the Canadian aerospace company's new C-Series aircraft. Bombardier announced late Monday that Airbus would take over a majority stake in the aircraft and would shift final assembly to its plant in Mobile, Ala., where the planes will be American made and not subject to tariffs, if those end up being finalized early next year. The move could create a situation in which Boeing arch-rival Airbus snuffs out a major trade victory for the U.S. company, ratcheting up the tension between two major companies that have been involved in a long-running trade war.

The best-laid plans... The news could throw a wrench into Boeing's strategy of using U.S. trade remedy laws to squelch the imports of Bombardier's new competing narrow-bodied aircraft. Delta Air Lines has already reached an agreement with Bombardier to purchase at least 75 of the aircraft. Boeing argues that Bombardier's plane is unfairly subsidized and being sold in the U.S. far below its cost of production. The U.S. aerospace giant has already prevailed in getting the Commerce Department to slap preliminary anti-dumping and countervailing duties totaling almost 300 percent on Bombardier. But it's still unclear if the move will exempt any C-Series aircraft from potential tariffs. The scope of the investigation also covers all 100-seat to 150-seat aircraft "regardless of whether they enter the United States fully or partially assembled."

SCOTUS WON'T CONSIDER DIGITAL BILLBOARDS CASE: The Supreme Court has declined to review an outdoors group's case against DOT guidelines on digital billboards. Last year, a federal appeals court shot down the effort by the group, Scenic America, to terminate the guidance to FHWA field offices on how they should evaluate state plans to stand up digital billboards on interstate highways. In a statement, Justice Neil Gorsuch said he was "persuaded that the proper course is to deny certiorari in this particular case even though the issues lying at its core are surely worthy of consideration in a case burdened with fewer antecedent and factbound questions."

THE LATEST IN THE MENENDEZ TRIAL: A federal judge on Monday wouldn't throw out any charges against Sen. Bob Menendez (D-N.J.), who is on trial for corruption. The decision came days after the judge questioned a theory that's serving as the foundation of the prosecution's argument. POLITICO New Jersey's Matt Friedman explains it all.

ICYMI: Trump has picked Kathleen Hartnett White to chair the Council on Environmental Quality. "As head of the CEQ, White would help guide federal environmental initiatives and develop the administration's policies on issues such as implementation of the National Environmental Policy Act, the landmark 1970 law that requires environmental analyses for federal projects," Pro Energy's Ben Lefebvre reports. "But she's drawn sharp criticism for her unconventional views, including her stance that carbon emissions are harmless."

BILLIONS AND BILLIONS: The Brookings Institution took a stab at estimating how much money automakers, technology companies and others have put toward self-driving vehicles. The researchers found over 160 deals from the last three years totaling about $80 billion, based on public information. "The most striking feature of such investment is the timeline," Cameron Kerry and Jack Karsten of Brookings' Center for Technology Innovation wrote. "Most has been announced in the last two years, with the pace accelerating as 2016 went on."

SHIFTING GEARS: Tim Griffin is now executive vice president and chief marketing officer for Amtrak. Like Richard Anderson, the president and co-CEO of Amtrak, Griffin has experience in the airline world. Griffin had jobs at Continental Airlines, Northwest Airlines and American Airlines.

THE AUTOBAHN:

- "Federal judge hears challenge to third version of Trump's travel ban." POLITICO.

- "Self-driving cars could ease traffic, but increase sprawl." The Associated Press.

- "Toyota to test self-driving, talking cars by about 2020." Reuters.

- "U.K. transport minister: British aviation doesn't need EU open skies." POLITICO Europe.

- Top House Homeland Security Democrat voices concerns about Nielsen. The letter.

- "February derailment has Brightline officials, opponents sparring." POLITICO Pro Florida.

- "Daimler recalls over 1 million vehicles worldwide for air bag fix." Reuters.

- "Lufthansa confirms bid to restructure Alitalia." POLITICO Europe.

- "Is Uber helping or hurting mass transit?" The New York Times.

THE COUNTDOWN: DOT appropriations run out in 53 days. The FAA reauthorization expires in 166 days. Highway and transit policy is up for renewal in 1,080 days.

** **A message from the Embassy of the United Arab Emirates**: UAE international airlines Emirates Airline and Etihad Airways are major Boeing customers. Emirates is the world's largest operator of Boeing 777s. And Etihad is responsible for nearly 20 percent of all Boeing 787-10s that are currently on order. Emirates and Etihad now serve 11 US gateway cities from Dubai and Abu Dhabi respectively with more than 260 weekly flights.

The growth of the UAE's aviation industry is the most visible sign of the UAE's overall economic success - a model of stability, growth and diversity in the Middle East. No country has benefitted more from this success than the US. Since 2009, the UAE has been the US's largest export market in the Middle East and North Africa. In 2016, the US had a $19 billion trade surplus with the UAE, America's third largest trade surplus globally. http://politi.co/2yFCemS **

National Monuments May Change, But Probably Not for Energy

Posted August 24, 2017, 02:27 P.M. ET

By Alan Kovski

Recommendations sent to the White House Aug. 24 to reduce the boundaries of some national monuments may make little or no difference to oil and gas companies, even if President Donald Trump agrees to them.

Full details of the recommendations from Interior Secretary Ryan Zinke have not yet been released. However, the latest remarks by Zinke, Rep. Rob Bishop (R-Utah), and experts on Utah oil and gas development suggest the odds are low of a boundary change that would pave the way for a surge in oil drilling in or near two big national monuments in that state, Bears Ears and Grand Staircase-Escalante.

"The oil and gas elements in this are really minimal, if at all," said Bishop, who told reporters the proposed changes in Bears Ears, if reinforced by appropriate federal legislation, could be significant to local livestock grazing rights and overall management of public land in the area.

Bears Ears National Monument, a 1.4-million acre site that rests atop potential oil, gas and coal reserves, has been the focus of a political fight about federal land protection powers. The Grand Staircase-Escalante is the largest national monument, covering 1.9 million acres, according to the Bureau of Land Management.

U.S. Lays Groundwork for Rescuing Coal Plants With Grid Report

Posted August 24, 2017, 7:24 A.M. ET

By Catherine Traywick and Jim Polson

The Energy Department, in a long-anticipated report on the security of the U.S. electric grid, makes the case for rescuing the nation's coal industry from widespread plant shutdowns, but stops short of

an assault on renewable power that environmentalists had feared.

The study, commissioned by Energy Secretary Rick Perry who has warned that policies favoring solar and wind may be forcing shut plants and threatening the grid, recommends that the Environmental Protection Agency ease rules on coal plants. It also calls for changes to how wholesale electricity is traded and easier permitting for resources such as coal, nuclear, and hydropower.

The report hands President Donald Trump a plan for fulfilling his campaign promise to revive America's ailing coal industry and put miners back to work. It paints a somewhat grimmer picture of grid security than an earlier draft that concluded the nation's power system is more reliable than ever, in spite of coal plant shutdowns. By contrast, the final report cautions that "market designs may be inadequate" to keep "traditional" power generation online.

"It is apparent that in today's competitive markets certain regulations and subsidies are having a large impact on the functioning of markets, and thereby challenging our power generation mix," Perry said in a statement. "Customers should know that a resilient electric grid does come with a price."

The U.S. power industry has been waiting for the Energy Department to release the study for months. Power generator FirstEnergy Corp. said in April that it wanted to see the results before pressing ahead with a plan to divest money-losing coal and nuclear plants. Rival Exelon Corp., the largest operator of reactors in the U.S., told investors this month that it expected the report to highlight the "critical role" that nuclear plays.

Cheap Gas

The sweeping 181-page report concludes that coal-fired and nuclear power plants are being forced out of business primarily because they can't compete against cheap and abundant natural gas, which is flowing out of U.S. shale formations at a record pace. Policies favoring solar and wind energy also have played a role, the study shows.

It stresses the critical need to preserve coal, nuclear and other baseload plants that continue to produce power when the wind isn't blowing and sun isn't shining. The report argued that even natural gas-fired generators, which rely on pipelines to receive fuel, may be less resilient.

"The more we rely on natural gas, the more we're relying on fuel that arrives just in time" at a power plant, said Joseph Dominguez, Exelon's vice president of governmental and regulatory affairs and public policy.

'Warped View'

Federal regulators are "going to have to value these resilience attributes" of dependable resources, especially coal plants that can store enough fuel on-site to last months, said Paul Bailey, chief executive officer of American Coalition for Clean Coal Electricity. "Coal stacks up really well. Natural gas does OK. Nuclear does pretty well. Renewables don't do well in some respects and do OK in others.

"You need a coal fleet in order to have a resilient and reliable grid," Bailey said.

John Shelk, president of the Washington-based Electric Power Supply Association, said ensuring the resilience of the U.S. power grid doesn't simply mean handing out subsidies for coal and nuclear

plants.

"Coal and nuclear want resilience to be a code word to subsidize them when they can't compete," said Shelk, whose group represents power generators such as NRG Energy Inc. and Dynegy Inc. that sell their supplies into wholesale markets. "That's a warped view of resilience. All fuels, technologies and attributes should be considered together."

Advanced Energy Economy, a group that promotes solar and wind, said the report "seriously overstates" the challenges associated with new energy resources. The American Petroleum Institute meanwhile noted that natural gas is now the source of more electricity in the U.S. than any other fuel and has cut consumers' energy costs "without government mandates and subsidies."

One way that the federal government can assist uneconomic coal plants is to compensate baseload plants for the resilience they offer the power grid, according to the report. The authors recommend that the Federal Energy Regulatory Commission, which oversees power markets, study ways in which those reliability attributes can be appropriately valued. That could include the creation of new pricing mechanisms or changing the agency's approach to energy price formation, the report says.

That recommendation echoes comments recently made by Neil Chatterjee, who was tapped by Trump to temporarily lead the energy commission. Chatterjee said coal-fired plants are a crucial part of America's energy mix that needed to be "properly compensated to recognize the value they provide."

The commission is already weighing whether it should redesign market rules to better account for state policies encouraging the use of zero-emissions power. New York and Illinois recently established subsidies for nuclear power and others are considering doing the same.

The "study reaffirms our view that nuclear energy is a key and necessary contributor to a clean, reliable and resilient electric grid, which now is more important than ever," Nuclear Energy Institute Chief Executive Officer Maria Korsnick said in a statement.

One regulation cited by the report requires coal plant operators to apply for a permit before making substantial upgrades. That requirement "creates an unnecessary burden that discourages rather than encourages" investments, the report says.

Since ordering the study in April, Perry has taken a deliberately hands-off approach and was only briefed on its findings on the morning of Aug. 22, agency officials said. The report was overseen by Travis Fisher, a senior adviser at the department, and Brian McCormack, Perry's chief of staff.

Trump Coal Push May Be Disaster Insurance the Grid Doesn't Need

Posted August 24, 2017, 11:42 A.M. ET

By Tim Loh and Mark Chediak

If all hell breaks loose on the U.S. power grid—a terrorist blows up a key natural gas pipeline, say, in the midst of a frigid winter—how will Americans keep the lights on?

The answer is coal, according to a growing collection of the industry's leaders and lobbyists. Their pitch conveys an image of a nation plunged into darkness as solar farms, wind turbines and plants fueled by gas fail to make up for the loss of coal-fired generation. Though it's a view at least partly supported by a Department of Energy study released late Wednesday, the reality isn't so dire.

Coal companies' pleas for protection come as President Donald Trump vows to make good on campaign promises to support an industry hit by low-cost renewable energy and abundant gas from shale reservoirs. Energy Secretary Rick Perry called in April for his department to investigate whether rising supplies of wind and solar energy are threatening the grid's reliability. The resulting report recommends less stringent environmental rules for coal plants; changes in electricity trading; and easier permitting for coal, nuclear, and hydropower.

Coal plants "play an important role," said David Sandalow, inaugural fellow at Columbia University's Center on Global Energy Policy and a former Energy Department official. "But it would be costly in many ways to get locked into old notions of operating the grid when new technologies are out there."

Grid operators have already been coping with a decline in power from coal-fired plants—most of which are designed to operate around the clock to meet electricity demand—without any major mishaps. Since 2005, 14 percent of America's coal-burning capacity has closed, and 5 percent of the remaining 294 gigawatts is scheduled to shut, according to Bloomberg New Energy Finance. In May, coal generated just 29 percent of America's electricity, about half the share it had when George W. Bush was president.

The Aug. 21 solar eclipse in the U.S. was a litmus test for grid operators. Though the California Independent System Operator said 3,400 megawatts of large-scale solar came off the state's system during the event, that was less than forecast, and there were no significant disruptions to electricity service.

As more wind and solar energy is added to the power mix, new tools including battery storage are helping to smooth the transition. In March, there were 21 states with at least 20 megawatts each of storage projects in service, under construction or proposed, according to GTM Research.

Another approach is "demand response," in which customers are compensated for altering their power use at various times to bolster a region's grid reliability. California, which generated 24 percent of its power from wind and solar in May on a net basis, had no major blackouts last year during the shutdown of the Aliso Canyon gas storage field following a leak.

Better Technology

Improved technology, including more sophisticated weather models that can help grid operators predict how much wind and solar supply will be available, also has aided the growth in renewables. And new gas-fired plants that can be ramped up or down quickly to respond to demand changes are being added to the nation's electricity network. The result is an emerging fleet of smaller power sources that can actually make the grid more stable by reducing the chance of a single massive plant failing, Sandalow said.

"You're putting all your eggs in one basket," Sandalow said of relying on a few big generators.

Coal supporters, meanwhile, said America's growing use of gas and renewables is putting the electricity grid in peril. Gas plants can't store enough of the fuel on site to guarantee power if trouble

strikes, while coal-fired plants can stockpile months of supply, they argued. Coal and nuclear should be "properly compensated to recognize the value they provide to the system," said Neil Chatterjee, the new chairman of the Federal Energy Regulatory Commission, which helps monitor the nation's electricity supply.

"Where we're going with natural gas right now and coal retirements is clearly unprecedented,'' said Paul Bailey, chief executive officer of lobby group American Coalition for Clean Coal Electricity. "Solar and wind, we like them, but they're not going to help maintain a resilient grid right now."

Coal isn't immune to supply snags, however. Stockpiles can freeze together in extreme cold, and rail delays can prevent the fuel from reaching plants at all.

While existing technology may allow renewables to account for as much as 50 percent of U.S. power generation, changes to regulation and policy are still needed to make that happen, said Prajit Ghosh, head of Americas power and renewables research at Wood Mackenzie Ltd. in Houston.

Coal's Push

Coal lobbyists said it's impossible to predict when the country will be ready to accommodate that much wind and solar energy and, in the meantime, it's vital to preserve coal-fired power plants. That's part of the industry's push to market coal plants as the energy source of last resort, a grid-scale equivalent to the candles people pull out of their closets when the power fails at home.

"The U.S. ought not to mortgage itself up to the hilt by making rash decisions that could very well harm the economy of the U.S. in 10 years," said Luke Popovich, spokesman for the National Mining Association.

Still, developments in technology and policy are paving the way for wind and solar to gain a larger share of U.S. power generation in the coming years, Wood Mackenzie's Ghosh said.

"There should be concerns about reliability, how renewables can impact reliability, but it's an optimistic concern," he said. "There are enough solutions which are being currently tested and which in all likelihood could pan out perfectly."

Trump Helps Spark Biofuel Trade Wars as U.S., Brazil Slap Duties

Posted August 24, 2017, 7:55 A.M. ET

By Mario Parker

A trade war has erupted in the global biofuels market, threatening to send shockwaves through commodity markets from petroleum to soybean oil.

The latest salvo came from Brazil on August 23 when it decided to institute a 20 percent tax on ethanol imports that exceed an annual cap of 600 million liters (159 million gallons), according to two cabinet members who asked not to be named before the decision was made public. The move came a day after the U.S. Commerce Department proposed duties on biodiesel producers from Indonesia and Argentina, saying they benefit from domestic subsidies.

Shots are being fired amid escalating protectionism from President Donald Trump. The U.S. Commerce Department's action on Argentinian and Indonesian biodiesel may have given Brazil cover to take action on U.S. ethanol, said Jerrod Kitt, an analyst at Linn Associates in Chicago.

Even as the U.S. is trying to act to benefit its own industry, American producers could end up as victims since they ship a significant portion of their product overseas, including to Brazil, their No. 1 customer. China already slapped tariffs on U.S.-made ethanol and an animal feed byproduct earlier this year.

"It could get ugly," Scott Irwin, an agricultural economist at the University of Illinois in Urbana, said in a phone interview. "Everybody intervenes heavily in biofuels."

Crop Markets

The rising tensions are likely to spark a ripple effect in the agriculture markets that underpin biofuels. The U.S. is the world's biggest producer of corn and soybeans, the primary feedstocks for ethanol and biodiesel. Brazil is the largest grower of sugarcane and uses the sweetener to make ethanol. Argentina is the No. 1 soybean oil exporter.

Soybean oil futures traded in Chicago jumped to the highest in more than three weeks on Aug. 23 on speculation the duties on Argentinian biofuel shipments will squeeze domestic supplies. Biofuel credits, used for compliance in a U.S. renewable-fuel quota system, also surged following the Commerce Department's decision.

Brazil's move to tax ethanol imports will probably fall hard on U.S. producers, who sold 255 million gallons to the South American nation this year through May, according to U.S. Energy Information Administration data. That is equal to 42 percent of total exports.

The Renewable Fuels Association, Growth Energy and the U.S. Grains Council—Washington-based trade groups—expressed disappointment on the Brazilian action in an Aug. 23 joint statement.

'Politics Prevailed'

"Given the tremendous volume of information we provided to Brazil that demonstrated how misguided a tariff would be, it seemed politics prevailed today and Brazilian consumers lost," the groups said.

Tensions may escalate further from here. Trump has repeatedly scrutinized trade pacts. In an Aug. 22 speech in Phoenix, the president said he thinks the U.S. will pull out of the North American Free Trade Agreement. The U.S. biofuel industry is heavily concentrated in the Midwest, an area Trump has touted as helping to propel him to the White House.

"If this was a normal administration that didn't focus on" trade as much, it wouldn't be as impactful, Kitt of Linn Associates said. "I can see him playing to that base."

Comcast Joins Sunrun to Market Residential Solar Panels

Posted August 24, 2017, 11:28 A.M. ET

By Brian Eckhouse and Gerry Smith

Sunrun Inc., the residential solar company that's boosting market-share, said it will tap a partnership with the biggest U.S. cable-TV company to add new customers.

Comcast Corp. and Sunrun agreed to a 40-month partnership after a trial showed that cable customers had interest in solar products, according to an Aug. 24 statement. San Francisco-based Sunrun will be Comcast's exclusive residential solar provider.

"Comcast has the install base and the marketing arm," Lynn Jurich, Sunrun's chief executive officer, said in an Aug. 24 interview. "We have a product people want."

The partnership will help Sunrun—which operates in 22 states—reach a larger pool of potential customers. Comcast has about 27 million subscribers in markets that include Chicago and Philadelphia. The cable giant will advertise the solar program as an option for its XFinity Home service, which gives customers the ability to automate devices around the house, like turning lights on and off.

Comcast has been expanding into new lines of business as growth in selling cable-TV subscriptions slows. Comcast recently introduced a mobile phone service to compete with wireless offers from AT&T Inc. and Verizon Communications Inc. It's also trying to expand its business of selling home alarm systems and TV, phone and Internet for businesses.

Smart Homes

"Cellular and cable companies across the US and Europe have been looking at the energy market for years," Hugh Bromley, a New York-based analyst at Bloomberg New Energy Finance, said in an interview Aug. 24. "Solar is the obvious next step—if you can convince a cable customer to sign a 20-year agreement."

Comcast is eligible for warrants representing as much as 9.99 percent of Sunrun's outstanding common shares under the deal. They'll be earned pro rata only after Sunrun installs 30,000 new customers and will fully vest once Sunrun wins 60,000 new accounts.

Sunrun, the U.S.' largest residential solar-only installer, has just under 150,000 customers, Jurich said. It expects to do 45,000 installations this year.

This is Sunrun's third partnership with a brand-name company this year. In January, it announced that London-based utility National Grid Plc committed about $100 million to a partnership that will own about 200 megawatts of residential solar assets. It also has a partnership with Engie SA.

Brazil to Crack Down on Ships Sold Into 'Toxic' Scrap Trade

Posted August 24, 2017, 10:47 A.M. ET

By R.T. Watson

Brazilian regulators are planning to strengthen rules to prevent exporters such as Petrobras and Vale SA from selling aging ships to buyers that offload the vessels in South Asia's controversial coastal scrapyards.

Earlier this month, authorities decided to develop a legal framework to ensure former Brazilian ships don't end up with recyclers notorious for using dirty and dangerous methods, federal environmental watchdog IBAMA said by email. Brazilian companies could face fines of as much as 10 million reais ($3.2 million) if IBAMA finds that they violated international standards by letting their vessels end up in substandard shipbreaking facilities in India, Pakistan, and Bangladesh.

By selling ships to buyers who then send them to South Asian beaches for dismantling, the two Brazilian exporters aren't alone. But Vale—which sold two vessels that were sent to India this year and intends to offload four more—is one of the few mining companies that still owns its fleet, while other oil producers such as Royal Dutch Shell Plc are adopting cradle-to-grave practices in which ships end up being recycled in a safer and more sustainable fashion.

'Green' Ships

In March, IBAMA began looking into the sale of a Petrobras vessel called Lobato to recyclers planning to scrap the ship in India, the agency said. That followed a complaint lodged by Brussels-based nongovernmental organization Shipbreaking Platform. Sindmar, Brazil's maritime trade union, joined the NGO in accusing both Petrobras and Vale, the country's largest exporters, of abusing standards set by the Basel Convention, which is meant to prevent the transport of hazardous materials to less developed countries.

Both Petroleo Brasileiro SA, as the state-controlled oil company is formally known, and Vale said they offload ships in good faith to reputable buyers. Vale, the world's largest iron-ore miner, said it adopted a strategy this year of only selling to dealers that possess a "green ship recycling" classification, following standards established by the International Maritime Organization and the Hong Kong Convention on Ship Recycling.

For its part, Petrobras said it auctions older vessels to companies that it believes plan to operate them. It's up to the buyers to make decisions about the ship's final destination, the Rio de Janeiro-based company's press department said by email.

Dangerous Chemicals

The shipbreaking industry in South Asia has taken measures to clean itself up. Most of those efforts are insufficient, according to Shipbreaking Platform. The NGO describes the trade at many yards as toxic because vessels are beached at high tide, then ripped apart by workers who can be exposed to dangerous chemicals. Injury and death rates can be high and toxins sometimes leak into the sea, the group said.

Forcing Brazilian companies to monitor more carefully where their former vessels are dismantled could drive up costs. Not doing so risks fines and turning off a growing number of investors focused on environmental and social responsibility.

"What they do with ships at the end of their life does matter," said Julie Gorte, senior vice president of sustainable investing at Pax World Management. Being associated with South Asian shipbreaking would be the type of activity that would cause her firm to engage the company and possibly rethink investments, she said by telephone.

Pax World sold its Petrobras shares as the oil company become embroiled in a graft scandal in Brazil. It hasn't owned Vale shares for five years. "With Brazil you already have this one strike," Gorte said. "When you add something on top, you are multiplying your reputational risk."

Green Power's Need for Copper Boosts New Mines in Australia

Posted August 24, 2017, 8:42 A.M. ET

By David Stringer and Rishaad Salamat

Copper is shifting to an era of technology-fueled demand growth, according to OZ Minerals Ltd., which will begin work next month on a A$916 million ($724 million) mine development in Australia.

The Adelaide-based producer, announced board approval Aug. 24 for the Carrapateena underground mine in South Australia, sees renewable energy, including batteries and solar power projects, overtaking capital equipment and building as the key engine for global demand.

"I like the fact that demand is shifting," Chief Executive Officer Andrew Cole said in an Aug. 24 Bloomberg Television interview. "It's being driven as much now by technology as basic infrastructure, and the barrier to entry on new copper mines is very high—it's just hard to find them. "

Copper markets are poised to benefit as demand expands from renewable power and electric vehicles from the mid-2020s, according to BHP Billiton Ltd., which controls the world's biggest mine. The electric vehicle market alone could require about 8.5 million metric tons of copper through 2035, the company said in October 2016.

Carrapateena, about 160 kilometers (99 miles) north of Port Augusta, will begin commissioning in the final quarter of 2019, and the site has significant potential for expansion, OZ Minerals said. It will have average annual output of about 65,000 metric tons of copper and 67,000 ounces of gold over about two decades.

Copper faces a persistent deficit from late 2018 to early 2019 on a lack of new projects and depletion of existing mines, according to Jefferies LLC, and miner Antofagasta Plc said this month that the metal's outlook is being boosted by rising demand, including for electric vehicles. Prices are headed for a second annual gain and this week rallied to the highest level in London since late 2014.

"The technological age that we are moving into, the ramp up of batteries, energy storage, electric vehicles, green energy production through solar and wind—all of those things will drive copper pricing," Cole said in the interview.

The producer, which forecasts 2017 copper output of as much as 115,000 tons at its Prominent Hill mine, plans to fund Carrapateena's development from cash, Cole told analysts earlier on a conference call. It previously reported underlying profit rose to A$80.6 million in the six months to June 30, from A$55 million a year earlier.

Philippines Inaugurates 800-Megawatt Solar Manufacturing Plant

Posted August 24, 2017, 8:28 A.M. ET

By Bloomberg News

Filipino President Rodrigo Duterte inaugurated a manufacturing plant with enough capacity to produce 800 megawatts of solar panels a year.

The factory, expected to reach full production next year, will create 50,000 jobs, its owner, Solar Philippines, said in an Aug. 23 emailed statement.

"The establishment of this state-of-the-art facility in Sto. Tomas, Batangas, is timely and relevant as we address increasing demand for renewable energy," Duterte said in his speech. "It is high time that we begin to establish local solar power."

Although a relative newcomer to solar, the Philippines is getting more serious about the technology. Total installed capacity in the country surged more than fivefold in 2016 from a year earlier and is expected to grow by 14 percent this year, Bloomberg New Energy Finance estimates.

The Batangas factory came online in March with an initial capacity of 200 megawatts, Leandro Leviste, chief executive officer of the company, said by phone Aug. 24.

Solar Philippines entered solar manufacturing after SunPower Corp. shut down two of its factories in the Philippines. The company is partnering with Chinese companies to make solar panels for export to the U.S. and Europe and has begun selling panels to local distributors, it said.

Today's Playbook Power Briefing presented by Morgan Stanley

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Thursday afternoon. PRESIDENT TRUMP blamed Congress (which his party controls) this morning for America's bad relationship with Russia, the day after he signed a bipartisan sanctions bill. He tweeted: "Our relationship with Russia is at an all-time & very dangerous low. You can thank Congress, the same people that can't even give us HCare!"

RUSSIA, NOT CONGRESS, meddled in the 2016 elections, invaded neighboring countries, adopted an aggressive posture towards NATO allies and supported regimes that the U.S. opposes, like Bashar Assad in Syria. Almost eight months into his administration, the president has been reluctant to even publicly acknowledge the fact that Russia interfered with the presidential race.

MORE FROM THE WHITE HOUSE -- @realDonaldTrump at 8:08 a.m.: "Business is looking better than ever with business enthusiasm at record levels. Stock Market at an all-time high. That doesn't just happen!" ... **at 8:12 a.m.:** "I am continuing to get rid of costly and unnecessary regulations. Much work left to do but effect will be great! Business & jobs will grow." ***He also retweeted a Fox & Friends tweet on Obamacare and a supporter bashing the media.***

MUST READ TRANSCRIPTS -- "Trump urged Mexican president to end his public defiance on border wall, transcript reveals," by WaPo's Greg Miller: "President Trump made building a wall along the southern U.S. border and forcing Mexico to pay for it core pledges of his campaign. But in his first White House call with Mexico's president, Trump described his vow to charge Mexico as a growing political problem, pressuring the Mexican leader to stop saying publicly that his government would never pay.

"'You cannot say that to the press,' Trump said repeatedly, according to a transcript of the Jan. 27 call obtained by The Washington Post. Trump made clear that he realized the funding would have to come from other sources but threatened to cut off contact if Mexican President Enrique Peña Nieto continued to make defiant statements.

"**The funding 'will work out in the formula somehow,'** Trump said, adding later that 'it will come out in the wash, and that is okay.' But 'if you are going to say that Mexico is not going to pay for the wall, then I do not want to meet with you guys anymore because I cannot live with that.' He described the wall as 'the least important thing we are talking about, but politically this might be the most important.'" http://wapo.st/2hqJRpj

MORE FROM THE MUST-READ TRANSCRIPTS -- Trump, to President Pena Nieto **on the drug trade:** "And we have the drug lords in Mexico that are knocking the hell out of our country. They are sending drugs to Chicago, Los Angeles, and to New York. Up in New Hampshire - I won New Hampshire because New Hampshire is a drug-infested den - is coming from the southern border. So we have a lot of problems with Mexico farther than the economic problem." ...

... Trump on the wall: "My people stand up and say, 'Mexico will pay for the wall' and your people probably say something in a similar but slightly different language. But the fact is we are both in a little bit of a political bind because I have to have Mexico pay for the wall - I have to. I have been talking about it for a two year period, and the reason I say they are going to pay for the wall is because Mexico has made a fortune out of the stupidity of U.S. trade representatives."

TRUMP also talked to Australian Prime Minister **MALCOLM TURNBULL** on an Australia-U.S. refugee deal and why Australia was not some refugees into their country. **Turnbull:** "Okay, I will explain why. It is not because they are bad people. It is because in order to stop people smugglers, we had to deprive them of the product. So we said if you try to come to Australia by boat, even if we think you are the best person in the world, even if you are a Noble [sic] Prize winning genius, we will not let you in. ... " ... **Trump:** "That is a good idea. We should do that too. You are worse than I am." ...

... Turnbull: "This is a big deal. It is really, really important to us that we maintain it. It does not oblige you to take one person that you do not want. ..." ... **Trump:** "[W]hy is this so important? I do not understand. This is going to kill me. I am the world's greatest person that does not want to let people into the country. And now I am agreeing to take 2,000 people and I agree I can vet them, but that puts me in a bad position. It makes me look so bad and I have only been here a week."

TRUMP, growing frustrated with Turnbull: "It is an embarrassment to the United States of America and you can say it just the way I said it. I will say it just that way. As far as I am concerned that is enough Malcom [sic]. I have had it. I have been making these calls all day and this is the most unpleasant call all day. Putin was a pleasant call. This is ridiculous. ... [inaudible] this is crazy." ***The complete transcripts*** http://wapo.st/2unzTq9

--@Bencjacobs: "This may be my favorite Trump line from the transcripts: 'we do not have to worry about Canada, we do not even think about them'".

****** **A message from Morgan Stanley** : Starbucks debuted a sustainability bond in international markets that supports ethically sourced supply chains and financial and educational support for farming communities. Strong investor interest demonstrated the extent to which institutional bond buyers support social and environmentally responsible behavior by corporations. Read more from Morgan Stanley. ******

LISTEN TO THIS -- "Ryan Lizza Revisits His Phone Call with Anthony Scaramucci," on the New Yorker Radio Hour: "In this segment, Ryan Lizza and David Remnick listen to excerpts from the call and discuss what they suggest about the Trump Administration. While Scaramucci's behavior and language were shocking even by Trump's standards, Lizza believes that his appointment followed a familiar pattern. 'So many politicians believe when they're failing, they believe that the real problem is just a communications strategy-that if only the American public heard and saw what the most loyal supporters saw in the President, everything would be solved,' Lizza says." http://bit.ly/2unOSjT

THE PRESIDENT teased a "very big" announcement at tonight's campaign-style rally at a Department of Veterans Affairs event in the Roosevelt Room today. The president is scheduled to leave D.C. at 4:50 p.m. and the rally is set to start just past 7 p.m.

THE U.S. CHAMBER and other business groups sent a letter to Senate Majority Leader Mitch McConnell and Minority Leader Chuck Schumer urging the Senate to speed up the confirmation process for Trump administration nominees. The letter: "The slow pace of confirmations is depriving agencies across the government of critical leadership and in the case of independent agencies, the quorum necessary to conduct critical business." ***Full letter*** http://politi.co/2uoyjUQ

-- THE SENATE is expected to come to a deal on nominations before leaving town.

MAKING UP? -- @SecretaryZinke: "I say dinner, she says brews. My friends know me well. Thanks @lisamurkowski #Alaska #IPA #MadeInAmerica" http://bit.ly/2unBw6T

AFTERNOON READ -- "How the CIA Came to Doubt the Official Story of JFK's Murder," by Philip Shenon and Larry Sabato in POLITICO Magazine: "[T]housands of pages of long-secret, assassination-related documents released by the National Archives last week show that, within a few years of Kennedy's murder, some in the CIA began to worry internally that the official story was wrong-an alarm the agency never sounded publicly.

"Specifically, key CIA officials were concerned by the mid-1970s that the agency, the FBI, the Secret Service and the White House commission led by Chief Justice Earl Warren had never followed up on important clues about Oswald's contact with foreign agents, including diplomats and spies for the Communist governments of Cuba and the Soviet Union, who might have been aware of his plans to kill Kennedy and even encouraged the plot. (There is no credible evidence cited in the documents released so far that Cuban leader Fidel Castro or other foreign leaders had any personal role in

ordering Kennedy's murder.)

"The CIA documents also offer tantalizing speculation about the chain of events in late 1963 that explained Oswald's motives for killing Kennedy, which have previously never been established with certainty-how he may have become enraged after reading a detailed article in his hometown newspaper in New Orleans in September suggesting that his hero Castro had been targeted for assassination by the Kennedy administration. According to that theory, Oswald, who had rifle training in the Marine Corps, then set out to seek vengeance on Castro's behalf-to kill Kennedy before the American president managed to kill the Cuban leader." http://politi.co/2unraE0

HMM -- @elyratner: "DPRK policy this week Haley: All options on table ... Tillerson: No regime change; we seek talks ... Pompeo: Regime change on table ... Pence: No talks".

ABOUT THAT TRANSGENDER BAN -- A new poll from Quinnipiac University found that American voters by a margin of 68 percent to 27 percent believe that transgender people should be allowed to serve in the military. Among military households, it is 55 percent to 39 percent. ***Full poll*** http://bit.ly/2u7HjCo

THE LATEST ON RUSSIA -- "Top FBI officials could testify against Trump," by Murray Waas in Vox: "Shortly after the appointment of special counsel Robert Mueller in May, acting FBI Director Andrew McCabe told several of the highest-ranking managers of the bureau they should consider themselves possible witnesses in any investigation into whether President Donald Trump engaged in obstruction of justice, according to two senior federal law enforcement officials. McCabe has told colleagues that he too is a potential witness in the probe of whether Trump broke the law by trying to thwart the FBI's Russia investigation and the investigation into whether the Trump campaign colluded with the Russian government to defeat Hillary Clinton in the 2016 election." http://bit.ly/2u7UHGI

DESSERT -- "Gloria Estefan, hip-hop artist among Kennedy Center honorees," by the AP's Jessica Gresko: "They are: hip-hop artist LL Cool J, singers Gloria Estefan and Lionel Richie, television writer and producer Norman Lear and dancer Carmen de Lavallade. It's the 40th year of the awards, which honor people who have influenced American culture through the arts. The honorees will be celebrated at a gala on Dec. 3, featuring performances and tributes from top entertainers and attended by President Donald Trump and first lady Melania Trump. The show will be broadcast on Dec. 26 on CBS." http://bit.ly/2u7JpCm

MEDIAWATCH -- "New Fox Harassment Allegations: 'A Contributorship...Was Contingent Upon' Sex," by Mother Jones' Andy Kroll: "A former frequent on-air guest at Fox News says that a Fox consultant and top lieutenant to Roger Ailes, the network's late founder and longtime CEO, sexually harassed her repeatedly for more than a year, including dangling the possibility of a paid job at Fox if she would have sex with him. The allegation appears in a written declaration by Caroline Heldman, an associate professor of politics at Occidental College who made numerous guest appearances on

Fox starting in 2008. The Fox consultant, Woody Fraser, is a veteran television producer who helped create shows such as Good Morning America and Nightline and worked closely with Ailes at Fox for nearly a decade." http://bit.ly/2u7pzav

--@oliverdarcy: "Wait, @marcorubio - the same Marco Rubio trashed by Breitbart time and time again - wrote an op-ed for...Breitbart?!" http://bit.ly/2v0Emm3

--J. David Ake, Kathleen Hennessey and **Elizabeth Kennedy** were all named deputy Washington bureau chiefs for the AP. Ake will be the deputy for visual journalism and presentation, Hennessey a deputy for newsgathering with a focus focus on the White House, Congress and politics and Kennedy will be a deputy for newsgathering, with a focus on national security, the Trump-Russia team, law enforcement and legal beats, and our general beat teams. ***Full release*** http://bit.ly/2unBj3N

-- The Atlantic announced three additions to their global reporting team. **Rachel Donadio,** the European culture correspondent for the New York Times, will be The Atlantic's culture and politics writer based in Paris. **Yasmeen Serhan**, a current Atlantic reporter, joins the London bureau as a reporter. **Krishnadev Calamur** , currently The Atlantic's news editor, will begin this fall as a global diplomacy correspondent covering U.S.-Europe relations, the State Department, and foreign policy. ***Full release*** http://theatln.tc/2unExnR

-- @MSNBCPR: ".@MSNBC happily welcomes @WSJ reporter @EliStokols to our roster as a political analyst!"

HOT JOB -- Director, Executive Office for Immigration Review at Dept. of Justice -- From the job description: "Are you interested in a rewarding and challenging career? If yes, then come and join the U.S. Department of Justice (DOJ), ranked among top Best Places to Work in Federal Government." http://bit.ly/2unIRnc (h/t Tom Manatos)

****** **A message from Morgan Stanley** : Major global companies like Starbucks are increasingly focused on the sustainability of their supply chain. Why? Because issues like the sourcing of coffee and its environmental footprint are increasingly meaningful to its customers. Starbucks' sustainability bonds ($500 million in 2016 and ¥85billion this year) create a financial virtual cycle: What's good for coffee growers is good for Starbucks; what's good for Starbucks is good for investors; what's good for investors is good for 1 million people in coffee communities around the world. Innovation in the bond market provides companies with opportunities to identify ways to drive sustainability throughout the business and engage with investors who are interested in supporting those efforts. Read more from Morgan Stanley. ******

You can create a report customized by topic, jurisdiction, and date range by using the Regulatory Summaries Report Tool. The report can be generated in Excel, Word, or PDF.

Summaries

AIR
Carbon Pollution Emissions/Electric Generating Units
AIR

Notice of the EPA announces a hearing on and extension of the comment period for an Oct. 16, 2017, proposed rule (82 FR 48035) that would repeal the Clean Power Plan (CPP). The CPP established guidelines and approval criteria for state plans regarding carbon dioxide emission limits from electric generating units and stationary combustion turbines (80 FR 64662; 10/23/2015). The proposed repeal would be based on the EPA's determination that the second and third building blocks of the plan, which address the purchase of or investment in lower-emitting generation and purchase of emissions credits, exceed the agency's statutory authority. The agency is proposing to revise the legal interpretation under Section 111(d) of the Clean Air Act to interpret the phrase "best system of emission reduction" as considering only measures that can be applied to or at the source. The rule is issued in response to Executive Order 13783 (82 FR 16093; 03/31/2017) that requires the EPA to review and consider rescinding or withdrawing rules related to the CPP. The hearing is scheduled for Nov. 28-29, 2017, in Charleston, W.Va., and may be extended to Nov. 30, 2017, based on request volume. An additional hearing may be announced at a later date. Comments now are due Jan. 16, 2018. Contact: Peter Tsirigotis; EPA, Policies and Programs Division; 888-627-7764; airaction@epa.gov. Citations: 40 CFR 60, Subpart UUUU

82 FR 51787 (11/08/2017)

Regulatory Update

AIR
Colorado/Clean Air Act Consent Decree
AIR

Notice of the Justice Department announces a proposed consent decree in United States v. PDC Energy Inc. (Civil Action No. 1:17-cv-01552-MSK-MJW), lodged Oct. 31, 2017, with the U.S. District Court for the District of Colorado. The consent decree resolves claims concerning alleged

violations of the Clean Air Act, the Colorado SIP, and various state regulations relating to failures to adequately design, operate, and maintain vapor control systems at tank systems owned and operated by the defendant in a portion of the Denver-Julesburg eight-hour ozone nonattainment area. The consent decree requires the defendants to pay a $2.5 million civil penalty, to perform injunctive relief, and to complete two environmental mitigation projects at a cost of $1.7 million. Comments are due Dec. 8, 2017. Contact: DOJ, Environment and Natural Resources Division; 202-514-2701

82 FR 51877 (11/08/2017)

Regulatory Update

AIR
Oil and Natural Gas Sector NSPS/Methane and VOC Emissions
AIR

Notice of the EPA announces the availability of new data relating to a proposed rule (82 FR 27641; 06/16/2017) that stayed until Sept. 14, 2017, portions of a final rule (81 FR 35824; 06/03/2016) that revises the NSPS for the oil and natural gas sector. The rule stayed the effectiveness of the fugitive emissions requirements, the standards for pneumatic pumps at well sites, and the certification by a professional engineer requirements. The agency previously stayed the provisions through Aug. 31, 2017 (82 FR 25730). The additional short-term stay is intended to provide the agency time to finalize a longer-term stay during which the agency plans to reconsider issues related to low-production well sites, technical infeasibility exemptions, new construction known as "greenfield," and alternative means of emission limitation. The data addresses several topics raised by stakeholders, including the legal authority to issue a stay; the technological, resource, and economic challenges with implementing the fugitive emissions requirements; and an updated cost savings and forgone benefit analysis for a two-year stay. A concurrent notice announces the availability of new data relating to a concurrent proposed two-year stay. Comments are due Dec. 8, 2017. Contact: Peter Tsirigotis; EPA, Sector Policies and Programs Division; 888-627-7764; airaction@epa.gov. Citations: 40 CFR 60.17; 60.5360 through 60.5430 (Subpart OOOO); 60.5360a through 60.5499a (Subpart OOOOa)

AIR
Oil and Natural Gas Sector NSPS/Methane and VOC Emissions
AIR

Notice of the EPA announces the availability of new data relating to a proposed rule (82 FR 27645; 06/16/2017) that would stay until June 16, 2019, portions of a final rule (81 FR 35824; 06/03/2016) that revises the NSPS for the oil and natural gas sector. The rule stays the effectiveness of the fugitive emissions requirements, the standards for pneumatic pumps at well sites, and the certification by a professional engineer requirements. The stay is intended to provide the agency time to reconsider issues related to low-production well sites, technical infeasibility exemptions, new construction known as "greenfield," and alternative means of emission limitation. The data addresses several topics raised by stakeholders, including the legal authority to issue a stay; the technological, resource, and economic challenges with implementing the fugitive emissions requirements; and an updated cost savings and forgone benefit analysis for a two-year stay. A concurrent notice announces the availability of new data

relating to an existing short-term stay while the two-year stay is finalized. Comments are due Dec. 8, 2017. Contact: Peter Tsirigotis; EPA, Sector Policies and Programs Division; 888-627-7764; airaction@epa.gov. AIR
Ozone NAAQS State Implementation Plans
AIR

Notice of the EPA announces the reopening of the comment period for an Oct. 2, 2017, notice (82 FR 45843) regarding the submission of a continuing information collection request to the OMB regarding state implementation requirements of the 2008 ozone NAAQS adopted under a March 15, 2015, final rule (80 FR 12264). The collection addresses information from 17 states with 30 areas designated nonattainment for the 2008 eight-hour NAAQS, including state submissions of attainment demonstrations, request for proposal plans, and reasonably available control technology determinations. Comments now are due Dec. 8, 2017. Contact: Butch Stackhouse; EPA, Office of Air Quality Planning and Standards; 919-541-5208; stackhouse.butch@epa.gov. Citations 40 CFR 50, 51

Regulatory Update

AIR
State of the Carbon Cycle 2nd Report
AIR

Notice of the Agriculture Department, National Institute of Food and Agriculture, announces the availability of the draft 2nd State of the Carbon Cycle Science Report (SOCCR-2) on behalf of the U.S. Global Change Research Program and Carbon Cycle Interagency Working Group. The draft document provides updated North American carbon cycle scientific findings and projections for development of the fourth National Climate Assessment, which is expected in 2018. Comments are due Jan. 8, 2018. Contact: USGCRP; 202-223-6262

82 FR 51802 (11/08/2017)

Regulatory Update

COMMUNITY RIGHT-TO-KNOW
Risk Assessment, Mapping, and Planning Tool
COMMUNITY RIGHT-TO-KNOW

Notice of the CDC, Office of Public Health Preparedness and Response, announces the submission of a new information collection request to the OMB concerning development of the Risk Assessment, Mapping, and Planning (RAMP) tool. The RAMP tool is intended to determine risks, identify and map at-risk populations, and define response objectives for hazard-specific public health emergency plans across jurisdictional levels. The collection consists of

interviews/focus groups with public health and emergency management professionals from across the U.S. and an anonymous survey of visitors to Los Angeles County Department of Public Health clinics. Comments are due Dec. 8, 2017. Contact: Leroy Richardson; CDC, Office of Scientific Integrity; 404-639-7570; omb@cdc.gov

82 FR 51842 (11/08/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Colorado/Town of Meeker Hydro Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the receipt of a notice of intent from the White River Electric Assoc., of Meeker, Colo., to construct the Town of Meeker Hydro Project, a qualifying conduit hydropower facility along the existing Meeker Power Canal in Rio Blanco County, Colo. The project includes two turbines, two penstocks, and a small controls structure and will have an estimated annual generating capacity of up to 500,000 kilowatt-hours. FERC has preliminarily determined that the project satisfies the requirements for a qualifying conduit hydropower facility and is not required to be licensed or exempted from licensing. Motions to intervene are due Dec. 4, 2017. Comments are due Dec. 18, 2017. Contact: Christopher Chaney; FERC; 202-502-6778; Christopher.Chaney@ferc.gov

82 FR 51825 (11/08/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Deepwater Horizon Spill Restoration Planning/Draft Phase V.2
GENERAL ENVIRONMENT AND SAFETY

Notice of the Department of the Interior announces the availability of the Draft Phase V.2 Restoration Plan and supplemental environmental assessment (Draft Phase V.2 RP/SEA), which supplements the 2016 Final Phase V Early Restoration Plan and environmental assessment concerning early restoration projects in the Gulf of Mexico selected by federal and state natural resource trustee agencies in connection with the April 2010 Deepwater Horizon oil spill. The Draft Phase V.2 RP/SEA also describes and proposes the second phase of the Florida Coastal Access Project to continue the process of restoring natural resources and services injured or lost as a result of the Deepwater Horizon oil spill. A meeting is scheduled for Nov. 16, 2017, in Port St. Joe, Fla. Comments are due Dec.8, 2017. Contact: Nanciann Regalado; U.S. Fish and Wildlife Service; 404-679-4161; nanciann_regalado@fws.gov

82 FR 51858 (11/08/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Development of Drugs for Recurrent Herpes Labialis
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the availability of a final guidance for industry regarding the

development of drugs for treatment and prevention of recurrent herpes labialis. The guidance addresses nonclinical development, early phases of clinical development, phase 3 trial considerations, and safety considerations in the development of antiviral drug products used to treat or prevent recurrent herpes labialis lesions. The guidance has been updated to remove the requirement for a toxicity adverse event scale. Comments may be submitted at any time. Contact: Regina Alivisatos; FDA, Center for Drug Evaluation and Research; 301-796-1500

82 FR 51844 (11/08/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Maine/Barker's Mill Hydroelectric Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing of a hydroelectric application from KEI Power Management LLC, of Lewiston, Maine, for a subsequent minor license for the Barker's Mill Hydroelectric Project located on the Little Androscoggin River in Auburn, Maine. The existing project consists of a dam, a reservoir, a 1.5 megawatt generating unit, and an underground power line generating an average of 5,087 megawatt-hours per year. A draft environmental assessment is expected to be issued in June 2018, and a final EA is expected in October 2018. Comments are due Jan. 2, 2018. Contact: Karen Sughrue; FERC; 202-502-8556; karen.sughrue@ferc.gov

82 FR 51824 (11/08/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
PhUSE Analysis Data Reviewer's Guide Template
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the availability of the proposed Pharmaceutical Users Software Exchange (PhUSE) Analysis Data Reviewer's Guide template, a potential tool for the electronic submission of animal and human study data. The agency developed the proposed template in collaboration with PhUSE, an independent, nonprofit consortium of academic, regulatory, nonprofit, and private sector entities. The agency seeks stakeholder feedback to inform its recommendation of whether to support, reject, or modify the template. Comments are due Jan. 8, 2018. Contact: Crystal Allard; FDA, Center for Drug Evaluation and Research; 301-796-8856; crystal.allard@fda.hhs.gov

82 FR 51847 (11/08/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Programs to Expedite Development and Review of Drugs for Serious Conditions
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the FDA to seek OMB approval for a revised information collection request regarding a guidance for industry concerning programs to facilitate and expedite development and review of drugs and biologics for serious conditions. The collection

concerns programs for fast track designation, breakthrough therapy designation, accelerated approval, and priority review designation. The revision incorporates an information collection addressing designation, development, and application review of fast track drug development programs. Comments are due Jan. 8, 2018. Contact: Domini Bean; FDA, Office of Operations; 301-796-5733; PRAStaff@fda.hhs.gov

82 FR 51846 (11/08/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY

Schedules I and II Controlled Substances 2018 Aggregate Production Quotas

GENERAL ENVIRONMENT AND SAFETY

Notice of the Drug Enforcement Administration announces a final order to establish the initial 2018 aggregate production quotas for controlled substances in schedules I and II of the Controlled Substances Act and the assessment of annual needs for the list I chemicals ephedrine, pseudoephedrine, and phenylpropanolamine. The agency is adjusting the aggregate production quotas for eight controlled substances and is adjusting the assessment of annual needs for pseudoephedrine. The agency also is maintaining the proposed quotas for 16 controlled substances. The order is effective Nov. 8, 2017. Contact: Michael Lewis; DEA, Diversion Control Division; 202-598-6812. GENERAL ENVIRONMENT AND SAFETY

Washington State/North Seattle Lateral Upgrade Project

GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing by Northwest Pipeline LLC, of Salt Lake City, of an amendment to its application to abandon and to construct and operate facilities at the North Seattle Lateral Upgrade Project, in Snohomish County, Wash. The original application sought permission to remove existing pipeline on Northwest's North Seattle Delivery Lateral line, install new pipeline, and rebuild the North Seattle/Everett meter station and install miscellaneous

appurtenances. The amendment adds a request to realign existing pipeline parallel to the new pipeline. The agency plans to complete an environmental assessment or issue a notice of schedule of environmental review by Jan. 31, 2018. Comments are due Nov. 24, 2017. Contact: FERC, Office of External Affairs; 866-208-3676; FERCOnlinesupport@ferc.gov

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
West Virginia/Green Bank Observatory
GENERAL ENVIRONMENT AND SAFETY

Notice of the National Science Foundation announces the availability of a draft environmental impact statement regarding potential changes to operations at the Green Bank Observatory in Pocahontas County, W.Va. The DEIS addresses proposed operational changes resulting from a significant reduction or elimination of NSF funding for the observatory, including the potential divestment of the Green Bank Telescope from the Division of Astronomical Sciences' portfolio. The DEIS identifies the agency's preferred alternative of collaboration with interested parties for continued science- and education-focused operations with reduced NSF funding. A meeting is scheduled for Nov. 30, 2017, in Green Bank. Comments are due Jan. 8, 2018. Contact: Elizabeth Pentecost; NSF, Division of Astronomical Sciences; 703-292-4907; epenteco@nsf.gov

GENERAL ENVIRONMENT AND SAFETY
Wisconsin/Arpin Dam Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing of a hydroelectric application by Flambeau Hydro LLC, of Neshkoro, Wis., for a subsequent minor license for the Arpin Dam Project located on Chippewa River in Sawyer County, Wis. The project consists of masonry dams, an impoundment, canal headworks, a power canal, an intake structure, steel penstocks, a powerhouse, an underground generator lead line, an above-ground transmission line, a tailrace, recreation facilities, and appurtenant facilities. The project currently is manually operated in run-of-river mode with an annual generation of 7,336 megawatt-hours. Flambeau Hydro seeks to continue to release a year-round minimum flow of 40 cubic feet per second to the bypassed reach, to operate and maintain existing recreation facilities, and to develop a historic properties management plan. The commission intends to prepare a single environmental assessment. Comments are due Dec. 4, 2017. Contact: Amy Chang; FERC; 202-502-8250; amy.chang@ferc.gov

RADIATION
Nuclear Power Plant Instrumentation for Earthquakes
RADIATION

Notice of the NRC announces the issuance of Revision 3 of Regulatory Guide 1.12 regarding nuclear power plant instrumentation for earthquakes. The revision incorporates advances in seismic instrumentation and operating experience since Revision 2 was issued in 1997, including lessons learned from the recent earthquakes that impacted the North Anna nuclear power plant in Louisa County, Va., and the Fukushima-Dai-ichi nuclear power plant in Japan. The revision also describes the seismic instrumentation criteria, including instrumentation type, locations, characteristics, and maintenance, that the NRC staff considers acceptable for nuclear power plants. Regulatory Update

TOXIC SUBSTANCES
Healthy Homes and Lead Poisoning Surveillance System
TOXIC SUBSTANCES

Notice announces the intention of the CDC to seek OMB approval for a continuing information collection request regarding the Healthy Homes and Lead Poisoning Surveillance System (HHLPSS). The HHLPSS includes up to 40 state and local programs that report information regarding the presence of lead paint, age of housing, occupation of adults, and type of housing to support the CDC's efforts for primary prevention of childhood and adult lead poisoning. The

HHLPSS allows the CDC to track how state and local programs conduct case management and follow up of residents with housing-related health outcomes and to identify other housing-related risk factors. Comments are due Jan. 8, 2018. Contact: Leroy Richardson; CDC, Office of Scientific Integrity; 404-639-7570; omb@cdc.gov

WATER

Susquehanna River Basin Commission Meeting
WATER

Notice of the Susquehanna River Basin Commission announces a meeting to consider resolutions concerning fiscal year 2019 federal funding of the Groundwater and Streamflow Information Program and bylaw amendments. The agenda also includes a presentation regarding the Lower Susquehanna Subbasin area, ratification and approval of grants and contracts, and a report on delegated settlements. In addition, the agenda includes discussion of an Oct. 12, 2017, proposed rule (82 FR 47407) to codify the existing policy for access to commission records and Regulatory Program projects. The meeting is scheduled for Dec. 8, 2017, in Annapolis, Md. Comments on the rulemaking and the Regulatory Program projects are due Nov. 13, 2017, and comments on other agenda items are due Dec. 1, 2017. Contact: Jason Oyler; SRBC; 717-238-0423. Subject: Pruitt to announce policy to limit science advisers

By Emily Holden

10/30/2017 02:24 PM EDT

EPA Administrator Scott Pruitt is expected to announce a new policy on Tuesday to limit the advisory roles of scientists who have received agency research grants, according to an invitation to the event obtained by POLITICO.

The change, which Pruitt suggested two weeks ago, could exclude scores of scientists who have received EPA funding in the past from serving on independent boards that provide advice to the administrator.

Pruitt has said he questions "the independence and the veracity and the transparency" of recommendations from scientists who have had EPA grants.

Critics say the change would allow industry-financed scientists to control advice given to the agency on a range of environmental protection issues.

"Such a move bans some independent scientists from providing scientific advice while giving those with conflicts a free pass," wrote Michael Halpern, deputy director of the Union of Concerned Scientists' Center for Science and Democracy. He said about half of board members have had EPA grants.

The agency has invited conservative political allies, including those affiliated with the CO2 coalition, a group formed in 2015 that dispute mainstream climate science and touts the "important contribution made by carbon dioxide to our lives and the economy."

Pruitt will make the formal announcement at EPA headquarters at 2 p.m., as was first reported by E&E News.

Practitioner Insights

Enforcement

Practitioner Insights: Defending Environmental Criminal Cases

Federal environmental crimes cases can appear similar to other types of criminal or environmental cases because they comprise a hybrid of criminal prosecutions and environmental enforcement actions. Most federal environmental laws provide for criminal enforcement in addition to administrative and civil remedies. Criminal prosecutions allow agencies to bring enforcement against individuals—not just the companies they work for—and the ability to seek jail time.

Subject: EPA OKs Flint drinking water loan forgiveness

By Annie Snider

08/01/2017 03:06 PM EDT

Flint city officials will not have to repay $21 million they borrowed from a federally funded account to upgrade drinking water infrastructure following its year-and-a-half-long lead contamination crisis, EPA said today.

The move to forgive the beleaguered city's Drinking Water State Revolving Fund debt came at the request of Michigan GOP Gov. Rick Snyder.

"Forgiving Flint's past debt will better protect public health and reduce the costs associated with maintaining the city's water system over time," EPA Administrator Scott Pruitt said in a statement. "Rebuilding our nation's infrastructure is one of the President's top priorities, and EPA is especially focused on those communities, like Flint, that need it the most."

In December, Congress approved a $100 million aid package to help the city replace lead service lines and upgrade its aging infrastructure. The measure also included funding to create a health registry of residents exposed to dangerous levels of lead in the water supply. Grants related to that registry were also awarded by the Department of Health and Human Services today.

WHAT'S NEXT: The city of Flint is continuing its program of lead service line replacement and the loan forgiveness will help free up funds for that effort and other upgrades.

EPA Adds Agents to Guard Pruitt, While Fewer Fighting Crimes

Posted September 12, 2017, 8:27 A.M. ET

By Renee Schoof

The EPA has 151 federal law enforcement officials working environmental crimes cases—49 short of the number set by a 1990 law—and there is no indication their ranks will increase.

The only uptick in the number of special agents are those who protect Administrator Scott Pruitt around-the-clock, including when he goes home on weekends to Tulsa, Okla. Concerns about criminal division staffing came up in June when the Environmental Protection Agency's enforcement office asked for an exception to a hiring freeze in order to hire more agents for the protective services detail so that it could stop redeploying agents from the crimes beat to cover it, a letter obtained by Bloomberg BNA through a Freedom of Information Act request shows.

"Continuing to utilize other [Office of Criminal Enforcement, Forensics and Training] criminal investigators to help manage this work load is pulling them away from their core mission of investigating environmental crimes in furtherance of the Agency's mission to protect public health and the environment," Lawrence Starfield, acting assistant administrator for the Office of Enforcement and Compliance, said to the EPA's acting Deputy Administrator Michael Flynn in a June memo.

Flynn signed the memo, indicating approval for hiring the protective services agents, but the number of hires was redacted. The agency told Bloomberg BNA, however, it has 151 agents working on criminal cases, not including those assigned to protect Pruitt, down from 157 last year. The number of the EPA's criminal investigators has been in decline since the early years of the George W. Bush administration and has remained under the 200 minimum set by the 1990 Pollution Prosecution Act since 2004, numbers separately provided by the agency show.

Assistance or Enforcement?

Views differ on the significance of having fewer EPA criminal investigators, depending on whether observers think the agency either should focus more on helping companies comply with

environmental regulations or on pursuing civil or criminal enforcement. Fewer agents typically means fewer environmental cases are pursued. One former EPA official said the number of open criminal investigations was 700 to 800 four years ago, but dropped below 500 cases last year. The declines in workforce and active cases coincide with EPA budget reductions. The EPA had 205 special agents on the environmental crime beat in 2003, the last time this number was at or above 200, the level set in the 1990 law. The number of environmental law enforcement agents dropped to 180 in 2008 at the end of the Bush administration and to 154 in 2015 and 157 in 2016 in the final years of the Obama administration.

Asked if Pruitt believed that 151 EPA special agents were enough, EPA spokeswoman Liz Bowman told Bloomberg BNA in an email that he "is committed to working with law enforcement partners and the Department of Justice to punish criminals. The change in the number of agents has been ongoing since 2003, but has not stopped EPA's criminal enforcement program from maintaining a conviction rate of over 90 percent."

Bowman also said she could not say how many agents were guarding Pruitt because that would disclose law enforcement techniques or guidelines, or "could reasonably be expected to endanger the life or physical safety of any individual."

Pruitt has protection at all times, including when he goes home on weekends to Tulsa. Previous administrators typically did not have around-the-clock security. The memo requesting additional agents for the protection detail did not specify any particular threat, but instead mentioned potential ones such as "fire, natural disasters, active shooters, medical emergencies and disorders caused by civil disobedience." Flynn signed the memo, indicating his approval.

The EPA's Criminal Investigation Division special agents are law enforcement officers who work on major cases and in collaboration with state environmental agencies. EPA special agents investigate the most egregious violations of environmental laws that pose significant threats to health and the environment, such as major discharges of polluted water into rivers or selling fraudulent biodiesel credits in the renewable fuel program.

For a country of 320 million people, "200 agents doesn't seem like a lot, especially when you consider that most state environmental agencies don't have a criminal enforcement program," Eric Schaeffer, a former EPA enforcement chief who now directs the nonprofit Environmental Integrity Project, told Bloomberg BNA.

Former Trump transition team member David Schnare, who earlier worked for the EPA as an environmental attorney, said he was not concerned with the decline.

"The fact is, states don't do [environmental] criminal enforcement very often. But they don't need to if they do their civil enforcement aggressively, which they do," he told Bloomberg BNA.

Exxon Mobil Terminal Can't Withstand Climate Impacts, Judge Told

Posted September 12, 2017, 03:27 P.M. ET

By Adrianne Appel

An Exxon Mobil terminal in Massachusetts can't withstand heavy rains and storms resulting from climate change, environmentalists argued Tuesday in federal court.

The Conservation Law Foundation filed the first-in-the-nation suit in 2016, alleging an Exxon Mobil oil and gas storage facility on the banks of the Mystic and Island End rivers in Everett, Mass., has not been sufficiently upgraded to handle climate change's impacts.

"This is about rainwater runoff" as a result of storms that could send byproducts of fuel oil, gasoline and other chemicals from Exxon's facility into the Mystic River, Allan Kanner, attorney with Kanner & Whitely, told U.S. District Judge Mark Wolf in arguing on the foundation's behalf.

Wolf said he hopes to decide whether to dismiss the case by Tuesday's close of arguments.

Exxon's lawyer, Daniel Toal of Paul|Weiss, told Wolf the foundation's claims lack merit.

"We engineer all our facilities to withstand extreme weather events, regardless of the cause," Toal said.

Energy Industries Team Up to Fight Proposed Offshore Wind Ban

Posted September 12, 2017, 02:28 P.M. ET

By Brian Dabbs

Big oil representatives are banding together to protect offshore wind leaseholders in Maryland from a proposed ban on projects off its coast.

The House Environmental Protection Agency and Interior Department spending bill, which is part of a sprawling package of spending bills, is being debated on the House floor with language to ban offshore wind projects within 25 nautical miles (27.6 miles) off the Maryland coast.

Groups that represent the oil and wind industries, including the National Ocean Industries Association and the U.S. Chamber of Commerce, are pushing back, arguing the bill would jeopardize investment and ding regulatory certainty.

The legislation poses a threat to the fledgling U.S. offshore wind industry.

"All oil members are concerned about the precedent set," Tim Charters, chief lobbyist at the National Ocean Industries Association, told Bloomberg BNA. "If you want to drive investment in the United States in our energy sectors, you have to give those investors who are putting billions of dollars on the line the confidence that they have a good partner in the U.S. government."

The Maryland Public Service Commission approved and subsidized offshore projects by U.S. Wind Inc. and Skipjack Offshore Energy LLC in May. Both projects fall within the proposed 24-mile ban. The Interior Department still has to approve the projects. The appropriations language—offered by Rep. Andy Harris (R-Md.)—would prohibit that.

Christopher Guith, a senior vice president for policy at the U.S. Chamber of Commerce's Energy Institute, told Bloomberg BNA that his group opposes the language in the ban as it restricts the development of a certain technology.

But the fate of the larger package so far is unclear. President Donald Trump has vowed to support a short-term continuing resolution, as federal funding expires at the end of the month.

Furniture Industry Has Grave Concerns Over EPA Solvent Ban

Posted September 12, 2017, 03:44 P.M. ET

By Adrianne Appel

The furniture industry would be destroyed if the Environmental Protection Agency enacts a broad ban of a common paint-stripping chemical, business owners told the agency Sept. 12.

The EPA issued a proposed rule in January to ban most commercial and household uses of the solvent methylene chloride because tests show it is a liver toxin and may cause lung cancer. However, the agency exempted furniture refinishers from the proposal, saying that it wanted to take more time to learn about the impact that a ban or restriction of the chemical would have on the industry.

On Sept. 12, the EPA held a methylene chloride workshop in Boston and heard directly from small businesses. The workshop focused on possible alternative chemicals that commercial refinishers could use instead of methylene chloride, along with best practices. "It would put us out of business," Debbie Towle, owner of Master Furniture Refinishing & Woodworking, in Needham, Mass., told Bloomberg BNA.

An office of the Small Business Administration—whose job it is to protect small businesses from government regulations considered burdensome—urged the EPA to consider the concerns of furniture refinishers.

David Rostker, assistant chief counsel for the SBA Office of Advocacy, said he hoped that if good alternatives aren't available, the "EPA would decide that its actions can have a significant effect on small businesses," Rostker told Bloomberg BNA at the meeting.

Utility-Scale Solar Hits Cost Goal, Focus Turns to Reliability

Posted September 12, 2017, 02:25 P.M. ET

By Rebecca Kern

The solar industry has met the Energy Department's goal to reduce the average price of utility-scale solar to 6 cents per kilowatt-hour—three years ahead of the agency's 2020 target.

The solar industry also has made heavy gains in reducing the costs for residential and commercial solar, according to a Sept. 12 report from the Energy Department's National Renewable Energy Laboratory on its SunShot Initiative. The industry is 86 percent of the way toward the target reduction of the average cost of residential PV and 89 percent toward the cost of commercial solar PV, the report said. The Energy Department continues to aim for further price reduction while also focusing efforts on solar's reliability and resiliency, offering $82 million in funding for research and development into new technologies.

The SunShot Initiative was launched in 2011 with the aim of making solar cost-competitive with fossil fuels. It was an ambition intended to be reminiscent of President John F. Kennedy's 1961"Moon Shot" program to put a man on the moon.

Utility-scale solar dropped from 28 cents per kilowatt-hour in 2010 to 6 cents in 2017, which was the 2020 goal. Residential and commercial solar costs dropped from 52 cents and 40 cents per kilowatt-hour in 2010 to 16 and 11 cents, respectively, in 2017. The goal is to drop to 10 cents and 8 cents, respectively, by 2020.

The next challenge is to cut prices in half again, from the 2020 goal, for utility, residential, and commercial PV systems by 2030.

"It is of tremendous significance because it really shows that, with government and with industry holding hands, they're able to make solar highly competitive with traditional fossil-fuel-based electricity generation. And not only competitive, but competitive earlier than anyone forecasted," Ben Gallagher, a solar analyst at GTM Research, told Bloomberg BNA Sept. 12.

Improved Technology, Material

Technology innovation in solar modules and increased efficiency due to better material quality and design have been the primary drivers of the dramatic cost reductions in solar photovoltaic systems.

SunShot has awarded $1 billion in funding to corporations such as General Electric Corp., academic institutions such as the Massachusetts Institute of Technology, and national laboratories. The money has been used to devise ways to lower the costs of hardware and costs associated with the integration of solar panels to the electric grid.

"The point of these goals is to further the overall focus on affordable and reliable energy," Daniel Simmons, the acting assistant secretary of the Energy Department's Office of Energy Efficiency and Renewable Energy, told Bloomberg BNA in a phone interview Sept. 11. "We want to be focused on devoting our resources to early stage research and development."

Continuing to lower the costs of PV solar systems is like facing a limbo bar and "it gets progressively more difficult to slide under that limbo bar without falling backwards," Charlie Gay, director of the Energy Department's solar energy technologies office and leader of the Sunshot Initiative, told Bloomberg BNA. But he's optimistic. "I have been working in solar for 43 years, and I continue to see a lot of opportunities that will enable us to keep moving and lowering that limbo bar."

$82 Million to Improve Reliability, Resiliency

As part of the early stage research and development push, the department is offering $82 million in new funding opportunities from the Solar Energy Technologies Office, where the SunShot Initiative is housed, according to a Sept. 12 announcement at Solar Power International in Las Vegas, the largest solar industry event in North America. The funding includes up to $62 million focused on Concentrating Solar Power technologies, which can store solar energy to be used to produce electricity when the sun isn't shining, and up to $20 million to advance power electronics technologies, which can protect against physical and cyber threats to the grid. The awardees will have to contribute 20 percent of their own funding to the overall project budget. Dan Whitten, vice president of communications for the Solar Energy Industries Association, the trade group that represents the solar industry, told Bloomberg BNA that SunShot has advanced "all manner of innovations along with industry that have improved the solar value proposition dramatically."

Technology Costs Driving Reductions

James Evans, renewable energy analyst at Bloomberg Intelligencesaid that reaching the utility-scale solar cost goal was "not entirely unexpected given the dramatic cost declines in equipment over

recent years with average benchmark silicon solar panel costs declining by 35 percent just in 2016 with industrial inverter prices falling around 26 percent in the same period." However, he told Bloomberg BNA in a Sept. 11 interview, hitting the 2030 SunShot goals would be harder if the U.S. applies trade tariffs on imported solar technologies, which would increase import costs of solar panels. A petition before the U.S. International Trade Commission by Suniva and SolarWorld would apply a trade tariff on certain imported solar technologies.

Addressing 'Soft' Costs

While the hardware costs are being lowered significantly, a remaining challenge for continuing to reduce costs of solar systems are the "soft" costs, like labor, permitting, interconnection, customer acquisition, financing and grid integration. These soft costs are more associated with rooftop solar systems that occur in the residential and commerical solar sectors. SunShot Director Gay said that SunShot will continue to work with industry to help lower these costs. Efforts include helping to standardize and harmonize local building codes and funding for solar worker training. "We definitely want to reduce red tape to promote economic growth," EERE's Simmons said.

Canadian Potash Producers Guided on Emissions Monitoring

Posted September 12, 2017, 12:44 P.M. ET

By Peter Menyasz

Fertilizer and animal feed companies in Canada should monitor and report particulate matter emissions from their production as the world's largest supplier of potash cracks down on pollution.

The voluntary guidance does not supplant existing particulate matter regulations for the potash industry, but is instead intended to aid companies such as Potash Corporation of Saskatchewan Inc. (PotashCorp), Mosaic Co., and Agrium Inc. in meeting the pollution limits, the Canadian government said.

Potash can describe several minerals and manufactured chemicals containing potassium, a basic nutrient for plants that is commonly used in fertilizers. Canada boasts half the world's potash reserves.

Manufacturers praised the Canadian government for cooperating with the industry as it developed the 15 recommendations for best practices to limit particulate matter emissions, which were unveiled Sept. 9.

"It looks like the government listened," Clyde Graham, senior vice-president of industry group Fertilizer Canada, told Bloomberg BNA.

Meeting the recommendations won't impose costs on Saskatchewan's potash producers, who have spent some C$18 billion ($15 billion) over the past 10 years modernizing their operations and bringing their equipment "up to snuff," he said.

Potash facilities produced between 785 to 1,643 metric tons of particulate matter per year between the 2008 and 2010, representing 1.8 percent of total Canadian industrial emissions of the pollutant, the government said.

The code calls for the potash producers to conduct performance reviews every six to 12 months, depending on the process involved, and to report annually their total emissions of fine particulate

matter, starting June 1, 2018.

There are currently 10 potash facilities operating in Canada, all located in Saskatchewan, the government said.

Tyson, Cargill Trail Nestle on Water Conservation, Study Shows

Posted September 12, 2017, 9:36 A.M. ET

By Shruti Date Singh

Agricultural giants such as Cargill Inc. and Tyson Foods Inc. are trailing their counterparts and customers in the food and beverage industries when it comes to using, tracking and conserving water, according to a report from a climate-change researcher.

Climate change makes water "one of the biggest risks to the $5 trillion food industry," non-profit organization Ceres said in a Sept. 12 statement. Even amid the threat, more than a third of publicly traded companies analyzed made no mention of climate-related water risks in their most recent annual securities filings, the researcher said.

"Companies that have the closest links to farmers are doing the least," said Brooke Barton, senior director of Ceres' water and food program and a co-author of the report, which assessed responses to risks, security, management and efficient use related to water. Some corporations still behave as if water is "unlimited," Barton said in a telephone interview.

Even though the agriculture industry is extremely dependent on natural resources including water and arable land, packaged-food and beverage companies such as Nestle SA and Coca-Cola Co. scored far higher than Cargill, Archer-Daniels-Midland Co. and Tyson in the Ceres study. The researcher made assessments based on publicly available information and disclosures before March 16.

Out of a possible 100 points, Nestle ranked the highest with a score of 82. Cargill, the largest closely-held U.S. company with operations ranging from grain handling to beef processing, got 17, according to the report. Tyson, the biggest U.S. meat processor, got 11 and JBS SA unit Pilgrim's Pride Corp. received a score of 1.

Heightened risks from climate change are rippling through the agriculture industry. Extreme weather gyrations have led to devastating global droughts in recent years and farmers have also battled increasingly intense hurricanes and other storms. Consumers are demanding that corporations pay more attention to sustainability efforts, and many companies, including meat and crop processors, are at a "tipping point," Barton said.

In response to questions about the report, Minneapolis-based Cargill cited information on its website about efforts to better use fertilizers to reduce runoff, and how the company has improved water efficiency by 12 percent between 2005 and 2015. Earlier this year, Springdale, Arkansas-based Tyson began the installation of measuring and monitoring equipment at its U.S. plants to better manage water use, spokeswoman Caroline Ahn said in an email Monday.

Perdue Farms Inc., a closely held U.S. chicken processor, said it should have scored higher in the report, but Ceres didn't reach out for details and instead relied on public information, said Steve Levitsky, the company's vice president of sustainability. The company isn't publicly traded and thus doesn't regularly disclose internal scorecards in securities filings for water consumption and other

metrics, he said.

A Pilgrim's Pride spokesman didn't respond immediately to an email requesting a comment.

EU Said to Mull Marking U.K. Carbon Permits in Contingency Plan

Posted September 12, 2017, 12:25 P.M. ET

By Ewa Krukowska

The European Commission will propose marking carbon allowances issued by the U.K. as of January 2018 as part of Brexit-related rules to make the world's biggest emissions market resistant to potential supply turmoil.

The commission, the European Union's regulatory arm, will put forward an update to the bloc's regulation on the carbon registry to make distinguishable permits sold by the British government at auctions or given to companies for free from January 2018, according to a person with knowledge of the matter. That regulation will detail how to enact a broad law currently being drafted by EU lawmakers to put limits on the use of U.K. allowances in case Brexit talks fail and the country finds itself out of the bloc's market in 2019.

EU carbon prices lost 6.3 percent in the past two days on concerns the draft Brexit-related law will reduce the willingness of participants to trade with U.K. entities given that the place of issue of emission permits cannot be identified under existing rules. The registry regulation revision planned by the commission would make for easy electronic identification of U.K. carbon permits issued from next year, according to the person, who declined to be identified, citing policy.

The EU carbon market imposes emission quotas on around 12,000 facilities owned by manufacturers and utilities, and forces those that exceed their caps to buy permits from businesses that emit less. It also includes airlines.

Government Auctions

Benchmark contracts in the European cap-and-trade program fell almost 70 percent over the past nine years as an economic crisis cut industrial output and imports of United Nations carbon credits aggravated a surplus of permits. Emitters must hand in allowances to match the previous year's emissions by the end of each April. Allowances are sold at government auctions throughout the year and permits given for free are handed to emitters usually around February each year.

The Brexit-related law currently under discussion in the European Parliament would prevent companies in the EU Emissions Trading System from using for compliance allowances issued by the U.K. from 2018 if the country falls out of the market. It is a contingency plan to avoid a massive sale of allowances originating in the country which would otherwise remain valid even if the nation's emission-reduction obligations under the ETS expire.

The deadline for the EU and the U.K. to iron out a Brexit deal is March 29, 2019, a date that can be extended only if there is unanimous backing by member states. In practice, an agreement would need to be in place three or four months before then to give the EU Parliament enough time to approve it.

Compliance Deadline

There are currently no provisions to safeguard the ETS in case negotiators fail to reach a deal on time and the U.K. suddenly finds itself out of the market, becoming a so-called third country to the EU. With the compliance deadline for 2018 emissions falling in April 2019, in the worst-case scenario the market could be flooded by permits issued or sold by the British government while the country's obligations lapse.

The planned proposal on marking British permits would enable market participants to choose whether they want to include or exclude U.K.-issued allowances in their contracts, according to the person with knowledge of the matter. The date of tabling the proposal is not yet known. Under the EU legal system, implementing measures are proposed after the broad law that requires them has been approved.

China Solar-Cell Maker Explores Electric Cars With World No. 2

Posted September 12, 2017, 9:21 A.M. ET

By Bloomberg News

Golden Concord Group Ltd., a Chinese energy conglomerate, said it's seeking opportunities in electric vehicles, joining investors like billionaire Li Ka-shing who are pushing into the sector as the government works on a plan to phase out internal-combustion autos.

The company plans to cooperate with Jiangling Motors Group to help reduce risks when entering the industry, President Kou Bingen told Tom Mackenzie in a Bloomberg Television interview in Nanchang, eastern China, on Sept. 9. Jiangling is ranked No. 2 in Bloomberg New Energy Finance's global index of electric vehicle manufacturers.

"New-energy vehicles will definitely be a direction for development in the future," Kou said. Golden Concord is still in discussions with Jiangling Motors and the two can bring their own advantages together for innovation, he said, without elaborating on the specifics.

China, home to the largest car market in the world, is making the most concerted push among major auto-manufacturing nations for the adoption of electric vehicles. The country this month announced it's working on a timeline to phase out combustion-engine vehicles, and is set to unveil a cap-and-trade system for vehicle emissions and fuel economy that will compel automakers to introduce cleaner and more efficient models or pay fines.

The suite of measures come seven years after the government first identified EVs as an emerging industry of strategic importance and codified its importance in the 13th Five-Year Plan in 2016. China surpassed the U.S. in 2015 to become the world's biggest market for new-energy vehicles.

The rising demand for cleaner cars has attracted a raft of startups and established companies to try their hand at auto making. Hong Kong tycoon Li Ka-shing this week agreed to buy an indirect stake in a Japanese maker of electric cars that has plans to license its technology to manufacturers including those in China. He bought a stake in a Chinese electric-van and bus maker in 2015.

For Golden Concord, a push into new-energy vehicles represents an investment in a still-small but growing demand for electricity. The company owns 30 percent of GCL-Poly Energy Holdings Ltd., the world's biggest polysilicon maker. Unit GCL System Integration Technology Co. said in January that it plans to begin making batteries for electric vehicles.

Calls to representatives at Nanchang-based Jiangling Motors weren't answered.

German Coastal States Urge Merkel to Raise Offshore Wind Targets

Posted September 12, 2017, 8:34 A.M. ET

By Brian Parkin

Germany's coastal states and cities urged Chancellor Angela Merkel to raise the nation's offshore wind power target to take advantage of the technology's plummeting costs.

Officials from states and cities including Lower Saxony and Hamburg called on Merkel to raise offshore wind capacity in 2030 by at least a third over the 15-gigawatt government cap set in 2014, according to the Cuxhavener Declaration, issued Sept. 11 from the North Sea port located about 380 kilometers (236 miles) northwest of Berlin.

"We are calling for an expansion goal of at least 20 gigawatts in the North Sea and Baltic Sea by 2030 and at least 30 gigawatts by 2035," read the declaration. "In order to avoid impairing further expansion of renewable energy, grid development planning and grid connection capacities have to be adapted accordingly."

Falling offshore wind prices were on display Monday in the U.K., when the government announced winning bids dropped below the cost of building new nuclear power plants. Germany's maiden offshore wind auction in April, in which Dong Energy A/S and EnBW AG bid to build 1.45 gigawatts of capacity without subsidies, underlined how competitive the technology has become, according to the the declaration.

Germany is auctioning just 3 gigawatts of offshore to 2020. Just 1 percent of the North Sea's offshore potential has been tapped to date, Siemens Gamesa Renewable Energy said earlier this year.

North Sea nations need to add the equivalent of one turbine a day in the sea to achieve cost savings from economies of scale and to foster turbine efficiency gains, Siemens Gamesa's Chief Executive Markus Tacke said that month.

The U.K. leads Europe in offshore capacity, installing over 5 gigawatts to date. Germany had installed about 4.1 gigawatts of offshore power by the end of last year and expects the capacity to grow to about 7 gigawatts by 2020. Capacity auctioned this year and in 2018 won't be built before 2025, the Bnetza power regulator said.

Evian Aims to Deflect Water Criticism by Going Carbon Neutral

Posted September 12, 2017, 8:33 A.M. ET

By Corinne Gretler

Evian aims to become the first major spring water brand to go carbon neutral amid criticism that packaging water from the French Alps and transporting it around the world in plastic bottles causes unnecessary environmental damage.

Danone, the brand's owner, is spending 280 million euros ($336 million) on the project, according to Chief Executive Officer Emmanuel Faber, who reinaugurated the Evian factory Sept. 12. The site itself is now carbon neutral and is fully powered by renewable sources. Danone aims to offset the pollution caused by transporting Evian water by 2020 as it expands rail transport and promotes biogas.

"I'm aware, and more and more consumers are aware, that transporting water is not ideally what you'd like to do," Faber said in a telephone interview. "If you want to build a model that's sustainable, you need to deal with this reality."

Danone plans to start advertising the carbon-neutral efforts on Evian bottles in the U.S. next year, according to the brand's head, Veronique Penchienati. A few smaller producers such as Icelandic Glacial and Norway's Isklar have claimed the distinction years ago, though they're tiny compared with Evian, which sold 1.8 billion bottles last year.

While so-called sustainable products are increasingly popular, Consumers International, a federation of consumer groups, has criticized the water industry's initiatives, saying they do nothing to provide safe and affordable water to millions of people in developing countries that lack it. Environmental groups say bottling spring water wastes precious resources and creates disincentives for governments to improve tap water.

Faber countered that Evian doesn't do any harm because it's taking water that flows naturally from the mountains near Lake Geneva, rather than underground aquifers. "When it comes to Evian and the water, I don't think there's anything to redeem," he said.

Danone has annual sales of 4.6 billion euros from bottled water, a fifth of its total. Evian is its biggest brand in the product category and its revenue is increasing by a mid- to high-single-digit percentage each year, Faber said. The Evian site has reduced the amount of energy needed to produce 1 liter of water by 23 percent over the past eight years.

The move toward carbon-neutral certification in bottled water follows industry shifts in other products such as chocolate, where Nestle SA, Cadbury and Mars raced each other to switch to sustainably sourced cocoa and damp concerns of child labor in their products.

Danone's move will put pressure on other water brands to follow suit, according to Mathis Wackernagel, CEO of Global Footprint Network, an Oakland, California-based think tank. Still, he questioned whether companies should be emitting carbon to package and ship the product in the first place.

"Often it is environmentally absurd to sell bottled water when tap water is cheaper, better, and far less energy-intensive," Wackernagel said.

To offset transport, one of the biggest issues for the bottled-water business, Danone is switching from roads to rails, operating its own private terminal with trains departing every four hours. Some

60 percent of Evian's production is shipped by train, with Danone seeking to increase that to 80 percent because it reduces carbon emissions by 75 percent, according to Faber.

The yogurt maker also aims to offset carbon emissions by working with farmers in the region of Evian to collect waste for biogas energy. Evian's biggest markets by sales are France, the U.K. and the U.S. To get to its farthest markets, it ships by sea, which Faber said pollutes less than by land.

Solar Developers Hoarding Panels as Threat of U.S. Tariffs Looms

Posted September 12, 2017, 8:13 A.M. ET

By Joe Ryan and Christopher Martin

Solar developers are suspending construction as the looming threat of U.S. import tariffs has driven up prices and spurred hoarding, crippling panel supplies.

"We've had roughly $500 million worth of work that we've had to put on hold," said Scott Canada, who oversees renewable energy projects for McCarthy Building Cos. of St. Louis. "The supply of panels has just evaporated as everybody is grabbing what they can."

The disruptions date to about May, after bankrupt panel manufacturer Suniva Inc. filed a trade complaint asking for protection from cheap imports. As the case gained steam, developers rushed to stockpile every available panel. The case is currently before the U.S. International Trade Commission and may eventually reach the Oval Office, where President Donald Trump has the authority to impose tariffs.

The crunch is an abrupt reversal for the U.S solar industry, which six months ago was awash with inexpensive panels. Developers say panel prices have swelled by about 40 percent in the past four months, making some projects uneconomical to build. And that's if they're lucky enough to have a supplier at all.

"If you don't have panels lined up for '17 than you aren't going to get them," said Laura Stern, president and co-founder of Nautilus Solar Energy LLC in Summit, New Jersey. "The market is really tight."

Solar manufacturing is dominated by companies in China and elsewhere in Asia, where intense competition and booming output helped drag down global prices more than 50 percent in five years. Those falling prices have been a boon for companies that build solar farms, but they've squeezed panel makers in markets with higher labor costs, including the U.S.

Georgia-based Suniva, which filed its trade case in April, is asking for tariffs that may double the price of panels in the U.S. The ITC has until Sept. 22 to investigate the case and send its findings to Trump, who gets final say.

Panels account for about 40 percent of the cost of solar farms, and even modest price swings can drag a project underwater. Before the Suniva complaint, panels were selling for about 32 cents a watt in the U.S. Now developers say they are paying as much as 45 cents. That drove up the global average price last month by the most in more than two years.

Chinese Demand

Suniva's trade case isn't the only reason for the shortage. China, the world's largest solar market, caught analysts by surprise this year by announcing plans to more than double the nation's total solar capacity by the end of 2020. That's boosted demand in the backyard of the largest panels makers, including JinkoSolar Holding Co., JA Solar Holdings Co. and Trina Solar Ltd.

The supply has grown so thin in the U.S. that companies are reselling panel contracts on the secondary market, said Duncan Frederick of Rosendin Electric Inc., a San Jose, California-based solar contractor that's built more than 2.2 gigawatts.

Still, the current shortage is apt to be short-lived, analysts said. U.S. solar installations are forecast to decline next year, and manufacturers aren't cutting production capacity. Once the Suniva case is resolved, no matter the outcome, panel prices will stabilize.

"This should be behind the industry by the end of the year," said Credit Suisse Group AG analyst Maheep Mandloi.

But for now, the case has roiled the industry and even long-term supply agreements are no guarantee that developers can get panels. Borrego Solar Systems Inc. has been forced to delay projects for months because its suppliers can't deliver equipment on time, said Aaron Hall, president. In other cases, panel makers have pushed to renegotiate contracts to secure higher prices.

"We are struggling hard," Hall said. "We are having to take fewer panels than promised and at higher prices."

Subject: Dourson won't follow Democrat request to recuse himself on many chemicals issues

By Alex Guillén

10/04/2017 11:25 AM EDT

Michael Dourson, the nominee to head EPA's chemicals and pesticides office, declined today to recuse himself from any issue he worked on previously as an independent toxicologist, saying he would evaluate each one on a case-by-case basis.

Sen. Tom Carper, the top Democrat on the Environment and Public Works Committee, asked Dourson to agree to a blanket recusal during his nomination hearing. Carper brought a chart that showed Dourson had often recommended significantly higher "safe" levels of substances than recommended by EPA, including chlorpyrifos — which EPA Administrator Scott Pruitt this year declined to ban despite agency scientists' recommendations — as well as perchlorate, PFOA, TCE and other chemicals.

"I can give you as many or more examples of situations where the science that we brought forward as a team actually lowered the safe dose ... for various sponsors," Dourson told Carper. He added that he has previously worked with or for various government entities.

Dourson said he would rely on guidance of agency ethics officials for any recusal issues.

WHAT'S NEXT: The Senate Environment and Public Works Committee has to set a date to vote on Dourson's nomination.

Driving the Day

Good Friday morning. BULLETIN at 5 a.m.: "OSLO, Norway (AP) - International Campaign to Abolish Nuclear Weapons wins the Nobel Peace Prize."

WITH FRIENDS LIKE THESE... "Top House Democrat says Pelosi should step aside," by Heather Caygle: "Rep. Linda Sánchez, a member of House Democratic leadership, said Thursday she thinks it's time for longtime Democratic leader Nancy Pelosi and her top lieutenants to step down. 'I do think we have this real breadth and depth of talent within our caucus and I do think it's time to pass the torch to a new generation of leaders,' Sanchez said Thursday on C-SPAN.

"Sánchez currently serves as vice chairwoman of the House Democratic Caucus, the lowest ranking leadership position. Still, her comments are surprising given her prominent position within the caucus and the fact that she and Pelosi both represent California, generally a tight-knit group within the caucus. 'I want to be a part of that transition, I want to see that happen,' Sánchez continued when asked if she thinks the same three leaders should stay in place if Democrats win back the House next year. 'I think that we have too many great members here that don't always get the opportunities that they should and I would like to see that change.'" http://politi.co/2fNQtu9

-- CRITIQUES of Nancy Pelosi and opinions about whether she and her top lieutenants have stayed too long have been voiced behind the scenes for years. But, the fact that a member of her own leadership team publicly was willing to say they need to leave is a first. While several Democratic lawmakers and aides told us this isn't the time to air grievances in public, it is a telling reminder of the agitation for change and frustration within her ranks for new leadership after seven years in the minority.

BUT, BUT, BUT .... Pelosi had a really good September. Even her detractors privately say she's at the top of her game at the moment. Several Democrats publicly backed her after Sanchez's comments. No one is running against her, or can beat her, for now. And, Pelosi would have a very strong case for staying in power if Democrats win the majority in the House.

NYT, A1 -- JONATHAN MARTIN and **ALEX BURNS: "For Republican Leaders in Congress, the Headaches Keep Mounting":** "Speaking at a high-dollar fund-raiser for his re-election at Le Cirque restaurant in New York last week, Mr. Trump asked contributors what they would think if he worked with Democrats on health care, should Republicans prove unable to repeal the Affordable Care Act, according to a dinner attendee.

"'I might very well end up making a deal with the Democrats,' he said, drawing applause. 'I got to my desk,' he said, recalling his expectations when he arrived in the White House. 'I said, 'Where's the health care bill, where is repeal and replace?' And it's just been constant fighting.'" http://nyti.ms/2fVUksZ

BEHIND THE SCENES -- INSIDE TIM MURPHY'S DEMISE -- RACHAEL BADE, JAKE SHERMAN and **JOHN BRESNAHAN:** "Multiple top House Republicans during the past 24 hours pressured Murphy to resign once it became clear that the House Ethics Committee might have to investigate allegations tied to his reported mistreatment of staffers. Numerous GOP sources were aware of systemic problems in Murphy's office, including high staff turnover, which had been the topic of gossip and speculation for years. ...

"According to these aides, [chief of staff Susan] Mosychuk regularly engaged in brutal verbal abuse of lower-ranking aides, from calling aides 'worthless' and their work 'garbage' to asking derisively, 'Do you or do you not have a fucking college degree?' ...

"Prior to his resignation, POLITICO had begun seeking information from Murphy office's about whether Mosychuk earned more in outside income than was allowed under House rules. For several years, she received payments from Murphy's congressional office as well as his campaign." http://politi.co/2fNkLx2

POOL REPORT DU JOUR - From pooler Jordan Fabian of The Hill last night at 7:38 p.m.: "Around 7:10 PM, after a travel/photo lid was called, White House staff hastily assembled the pool to cover a photo spray with military leaders and their spouses before a dinner with POTUS and FLOTUS. POTUS made no news, but he did offer some cryptic remarks to the press corps. Pool was led into the State Dining Room at 7:18 PM. A five-piece Marine Corps band positioned in the entrance hall played classical music. ...

"POTUS and FLOTUS stood side-by-side in the middle of more than a dozen couples who were lined up for an official photo. ... POTUS pointed around the room and asked members of the pool, 'you guys know what this represents?' 'Tell us,' one reporter

responded. 'Maybe it's the calm before the storm,' POTUS replied. 'What's the storm?' another reporter asked. 'On Iran? On ISIS? On what?' 'We have the world's great military people,' POTUS replied. 'Thank you all for coming.' Kristen Welker of NBC News asked, 'what storm Mr. President?' 'You'll find out,' POTUS replied." ***43-second video*** http://bit.ly/2y3HGhR

IN THE WHITE HOUSE -- "John Kelly's personal cellphone was compromised, White House believes," by Josh Dawsey, Emily Stephenson and Andrea Peterson: "The discovery raises concerns that hackers or foreign governments may have had access to data on Kelly's phone while he was secretary of Homeland Security and after he joined the West Wing. Tech support staff discovered the suspected breach after Kelly turned his phone in to White House tech support this summer complaining that it wasn't working or updating software properly. Kelly told the staffers the phone hadn't been working properly for months, according to the officials." http://politi.co/2gexhX5

CHAMPAGNE TASTE -- "Seven Flights for $800,000: Mnuchin's Travel on Military Jets," by NYT's Alan Rappeport: "Treasury Secretary Steven Mnuchin has flown on military aircraft seven times since March at a cost of more than $800,000, including a $15,000 round-trip flight to New York to meet with President Trump at Trump Tower, according to the Treasury Department's Office of Inspector General. The inquiry into Mr. Mnuchin's air travel, prompted by an Instagram posting by his wife, found he broke no laws in his use of military aircraft but lamented the loose justification provided for such costly flights.

"'What is of concern is a disconnect between the standard of proof called for' by the Office of Management and Budget 'and the actual amount of proof provided by Treasury and accepted by the White House in justifying these trip requests,' the inspector general wrote." http://nyti.ms/2ysOzL8

-- @davidgura: "Last week, his predecessor [Jack Lew] told me this: 'I never used military aircraft for domestic travel'" http://bit.ly/2fQjm9k

-- BLOOMBERG: "Inside the Saudi King's 1,500-Person Entourage in Moscow": "Saudi King Salman bin Abdulaziz brought 1,500 people, a golden escalator and his own carpets on his historic, four-day state visit to Russia, a person familiar with the matter said. ... A Saudi plane is traveling daily between Riyadh and Moscow to transport supplies, said the person, who said that 800 kilograms (1,764 pounds) of food has been brought in. Members of the royal entourage also replaced some of the hotel staff with their own personnel, who know exactly how they like their coffee made, the person said. King Salman, who's staying at the Four Seasons, also came with his own furniture.

"The Saudi government booked two entire luxury hotels for the visit: the Ritz Carlton and the Four Seasons. The latter had to ask some guests to cancel their reservations to make room -- and even moved out people who live in the hotel permanently." https://bloom.bg/2ksrnXb

INSIDE THE WEST WING -- "Tillerson Summoned to White House Amid Presidential Fury," by NBC News' Carol E. Lee, Kristen Welker, Courtney Kube and Andrew Mitchell: "John Kelly, the White House chief of staff, abruptly scrapped plans to travel with President Donald Trump on Wednesday so he could try to contain his boss's fury and manage the fallout from new revelations about tensions between the president and Secretary of State Rex Tillerson, according to six senior administration officials. Kelly summoned Tillerson, and their ally Defense Secretary James Mattis, to the White House, where the three of them huddled to discuss a path forward, according to three administration officials.

"The White House downplayed Kelly's decision to stay in Washington, saying he did so to manage day-to-day operations. Vice President Mike Pence, meanwhile, was fuming in Phoenix, where he was traveling ... Pence was incensed upon learning from the NBC report that Tillerson's top spokesman had said he once privately questioned the value of Nikki Haley, the U.S. ambassador to the United Nations. Officials said the spokesman, R.C. Hammond, fabricated an anecdote that Pence had asked Tillerson in a meeting whether Haley, who is seen as a possible successor if Tillerson, is helpful or harmful to the administration." http://nbcnews.to/2yN76On

THE LATEST IN LAS VEGAS ...

-- "Search for a Motive in Las Vegas: Slow but 'We'll Get There'," by NYT's Jennifer Medina, Alex Burns and Adam Goldman: "[I]n the four days since Stephen Paddock's attack in Las Vegas - a shooting rampage that left 58 dead and hundreds seriously wounded - what drove him has remained a mystery, vexing the public and putting enormous pressure on federal and local investigators to find answers.

"'In the spirit of the safety of this community or anywhere else in the United States I think it's important to provide that information, but I don't have it,' Sheriff Joseph Lombardo of the Las Vegas Metropolitan Police Department said in an interview Thursday. 'We don't know it yet.' No grandiose manifesto has been found. No account of Mr. Paddock behaving dangerously or holding extremist views has emerged from neighbors or relatives. Unlike past killers, Mr. Paddock did not dial up the police to explain his actions." http://nyti.ms/2gfAdD6

-- "Vegas Shooter's Girlfriend Says He Would Lie in Bed Moaning, Screaming," by NBC News' Julia Ainsley and Ken Dilanian: "Marilou Danley, the woman investigators hoped would provide key details into the motive behind her boyfriend's deadly shooting attack, said she remembers him exhibiting symptoms such as lying in bed and moaning, according to two former FBI officials who have been briefed on the matter. 'She said he

would lie in bed, just moaning and screaming, 'Oh, my God," one of the former officials said. The other former official said Danley spoke about Paddock displaying 'mental health symptoms.' Investigators believe Stephen Paddock, who claimed nearly 60 lives and injured hundreds more in Las Vegas on Sunday, may have been in physical or mental anguish, the sources said." http://nbcnews.to/2y3SfBY

-- "Thousands mourn slain officer as Las Vegas probe goes on," by AP's Michael Balsamo and Brian Melley: http://bit.ly/2xkXBcW

-- "YouTube Tweaks Search Results as Las Vegas Conspiracy Theories Rise to Top," by WSJ's Jack Nicas: "YouTube this week surfaced videos peddling misinformation, hateful messages and conspiracy theories to users tracking major news events-prompting the site to change its search results to promote more authoritative sources. For example, the fifth result when searching 'Las Vegas shooting' on YouTube late Tuesday yielded a video titled 'Proof Las Vegas Shooting Was a FALSE FLAG attack-Shooter on 4th Floor.'

" **The video said there were multiple shooters** in Sunday's mass shooting, a claim dismissed by law enforcement. Posted by a channel called the End Times News Report, it amassed more than 1.1 million views in about 27 hours. The fourth result when searching 'NFL anthem protest' on Wednesday was a video that claimed Anheuser-Busch InBev was considering pulling its sponsorship of the National Football League over national anthem protests-and urged viewers to push the company to do so. The claim had been widely debunked days before." http://on.wsj.com/2kvnWiv

THE NRA SPEAKS -- "NRA CEO says legislation regulating guns won't prevent mass shootings," by Cristiano Lima: "[NRA] CEO Wayne LaPierre slammed the latest push for gun control legislation as effectively pointless in the wake of Sunday's deadly shooting in Las Vegas during a rare public interview on Thursday. 'If legislation worked, Boston massacre wouldn't have worked, San Bernardino where California has every gun law on the books, that wouldn't have happened,' La Pierre said during an interview with Fox News. ...

"LaPierre reiterated his organization's support of increased regulation on 'bump stocks,' the weapon accessory the Las Vegas gunman used to boost the firing rate of his semi-automatic weapons. 'What the NRA has said is we ought to take a look at that and see if it's in compliance with federal law and it's worthy of additional regulation,' LaPierre said of 'bump stocks' during an interview on Fox News. But he cautioned: 'That being said, we didn't say ban [them], we didn't say confiscate [them].'" http://politi.co/2ysTdbP

-- @realDonaldTrump at 9:58 p.m.: "Ralph Northam,who is running for Governor of Virginia,is fighting for the violent MS-13 killer gangs & sanctuary cities. Vote Ed Gillespie!" ***Gillespie didn't retweet this***.

HMM -- "FEMA removes statistics about drinking water access and electricity in

Puerto Rico from website," by WaPo's Jenna Johnson: "As of Wednesday, half of Puerto Ricans had access to drinking water and 5 percent of the island had electricity, according to statistics published by the Federal Emergency Management Agency on its Web page documenting the federal response to Hurricane Maria. By Thursday morning, both of those key metrics were no longer on the Web page. FEMA spokesman William Booher ... said that these measures are also shared in news conferences and media calls that happen twice a day, but he didn't elaborate on why they are no longer on the main FEMA page." http://wapo.st/2fYnvLT

ON THE WORLD STAGE -- "Trump plans to declare that Iran nuclear deal is not in the national interest," by WaPo's Anne Gearan and Karoun Demirjian: "President Trump is expected to announce next week that he will 'decertify' the international nuclear deal with Iran, saying it is not in the national interest of the United States and kicking the issue to a reluctant Congress, people briefed on the White House strategy said Thursday.

"The move would mark the first step in a process that could eventually result in the resumption of U.S. sanctions against Iran, potentially derailing a deal limiting Iran's nuclear activities reached in 2015 with the United States and five other nations. But Trump would hold off on recommending that Congress reimpose sanctions, which would constitute a clearer break from the pact, according to four people familiar with aspects of the president's thinking." http://wapo.st/2ysHLNh

BOB COSTA PROFILE -- "No snark allowed: PBS' 'Washington Week' stays true to form," by AP's Lynn Elber in Los Angeles: "For 50 years, PBS' 'Washington Week' has gathered a rotating group of reporters to share and discuss information about the nation's most pressing issues. It's an approach that's satisfyingly wonkish and, amid a TV sea of partisan megaphones and questions about journalism's role, especially important.

"An 'oasis' is how Robert Costa, The Washington Post reporter who was named the show's moderator last April after the loss of much-admired Gwen Ifill to cancer in November 2016, describes it. 'We don't have polemicists on. We don't have people who are columnists. We have reporters,' he said. 'No snark, no apocalyptic ventilating about the news, no snide opinions, no praise. Analysis. It's not complicated.'" http://bit.ly/2y3MZOj

TRUMP'S FRIDAY -- Trump will receive his daily intel briefing in the morning. He will participate in a Hispanic Heritage Month event this afternoon and later will sign the National Manufacturing Day proclamation. He will also meet with Treasury Secretary Steven Mnuchin and the U.S. Ambassador to Russia Jon Huntsman.

HOLLYWOODLAND -- "Decades of Sexual Harassment Accusations Against Harvey Weinstein," by NYT's Jodi Kantor and Megan Twohey: "An investigation by The New York Times found previously undisclosed allegations against Mr. Weinstein stretching over nearly three decades, documented through interviews with current and former employees and film industry workers, as well as legal records, emails and internal documents from the businesses he has run, Miramax and the Weinstein Company.

"During that time, after being confronted with allegations including sexual harassment and unwanted physical contact, Mr. Weinstein has reached at least eight settlements with women, according to two company officials speaking on the condition of anonymity. Among the recipients, The Times found, were a young assistant in New York in 1990, an actress in 1997, an assistant in London in 1998, an Italian model in 2015 and [colleague Lauren] O'Connor shortly after, according to records and those familiar with the agreements." http://nyti.ms/2xmtYD5

-- @Yashar: "New statement from Harvey Weinstein after bombshell NYT story. Says he's going to take leave and focus on the NRA" http://bit.ly/2fVW4CH

--"Why the Harvey Weinstein Sexual Harassment Allegations Didn't Come Out Until Now," by Rebecca Traister on The Cut: "The night before 2000 election, I was working on a story-perhaps my first seriously reported story-about O, the violent reimagining of Othello that Miramax's Dimension division was then sitting on ... After Weinstein failed to respond to my calls for comment, I was sent, on Election Eve 2000, to cover a book party he was hosting, along with my colleague Andrew Goldman. Weinstein didn't like my question about O, there was an altercation; though the recording has alas been lost to time, I recall that he called me a c*** and declared that he was glad he was the 'f***ing sheriff of this fucking lawless piece-of-s*** town.'

"When my colleague Andrew (who was also then my boyfriend) intervened, first calming him down and then trying to extract an apology, Weinstein went nuclear,

pushing Andrew down a set of steps inside the Tribeca Grand-knocking him over with such force that his tape-recorder hit a woman, who suffered long-term injury-and dragging Andrew, in a headlock, onto Sixth Avenue." http://bit.ly/2fOOwh5

--"Former Obama Adviser Anita Dunn Helped Harvey Weinstein Strategize Before New York Times Story," by BuzzFeed's Steven Perlberg: "Anita Dunn, a top Obama campaign staffer and former White House communications director, helped offer damage control advice for the Hollywood mogul. ... Dunn was not paid by Weinstein for her help ... Sources said that Lanny Davis, former special counsel to Bill Clinton, has been central to the PR effort for Weinstein, who is a major Democratic donor.

"Dunn, for her part, is the managing director of SKDKnickerbocker, a Washington public affairs firm with deep ties to Democratic politics. ... Later on Thursday, SKDK put out a statement on the matter: 'Today you may have seen a news report indicating that our colleague Anita Dunn recently advised Harvey Weinstein. Anita was asked to speak with him by a friend. Harvey Weinstein and Miramax are not now and have never been clients of our firm or of Anita's.'" http://bzfd.it/2y3wm5l

DEEP DIVE -- "Here's How Breitbart And Milo Smuggled Nazi and White Nationalist Ideas Into The Mainstream," by BuzzFeed's Joseph Bernstein: "On December 8, the New York Times published a major story about the radicalization of American Muslims on Facebook. Yiannopoulos published a story called 'Birth Control Makes Women Unattractive and Crazy.' That afternoon, Bannon emailed Yiannopoulos and Marlow. 'Dude---we r in a global existentialist war where our enemy EXISTS in social media and u r jerking yourself off w/ marginalia!!!! U should be OWNING this conversation because u r everything they hate!!! Drop your toys, pick up your tools and go help save western civilization.' 'Message received,' Yiannopoulos wrote back. 'I will do a Week of Islam next week.' ...

"And there was no way the journalists threatened with lawsuits for calling Yiannopoulos a racist could have known about his passwords. In an April 6 email, Allum Bokhari mentioned having had access to an account of Yiannopoulos's with 'a password that began with the word Kristall.' Kristallnacht, an infamous 1938 riot against German Jews carried out by the SA - the paramilitary organization that helped Hitler rise to power - is sometimes considered the beginning of the Holocaust. In a June 2016 email to an assistant, Yiannopoulos shared the password to his email, which began 'LongKnives1290.' The Night of the Long Knives was the Nazi purge of the leadership of the SA. The purge famously included Ernst Röhm, the SA's gay leader. 1290 is the year King Edward I expelled the Jews from England." http://bzfd.it/2fYnEPr

RUSSIA WATCH -- "Russian Hackers Stole NSA Data on U.S. Cyber Defense," by WSJ's Gordon Lubold and Shane Harris: "Hackers working for the Russian government stole details of how the U.S. penetrates foreign computer networks and defends against cyberattacks after a [NSA] contractor removed the highly classified material and put it on his home computer, according to multiple people with knowledge of the matter.

"The hackers appear to have targeted the contractor after identifying the files through the contractor's use of a popular antivirus software made by Russia-based Kaspersky Lab ... The theft, which hasn't been disclosed, is considered by experts to be one of the most significant security breaches in recent years. It offers a rare glimpse into how the intelligence community thinks Russian intelligence exploits a widely available commercial software product to spy on the U.S." http://on.wsj.com/2z0AtgV

-- "Facebook Cut Russia Out of April Report on Election Influence," by WSJ's Robert McMillan and Shane Harris: "Facebook cut references to Russia from a public report in April about manipulation of its platform around the presidential election because of concerns among the company's lawyers and members of its policy team, according to people familiar with the matter. ... Some at Facebook pushed to not include a mention of Russia in the report because the company's understanding of Russian activity was too speculative ... Ultimately, the 13-page report, published on April 27 and titled 'Information Operations and Facebook,' was shortened by several pages by

Facebook's legal and policy teams from an earlier draft, and didn't mention Russia at all." http://on.wsj.com/2y42Fkr

-- MUELLER UPDATE: "Mueller's team met with Russia dossier author," by CNN's Evan Perez, Shimon Prokupecz and Pamela Brown: "Special Counsel Robert Mueller's investigators met this past summer with the former British spy whose dossier on alleged Russian efforts to aid the Trump campaign spawned months of investigations that have hobbled the Trump administration, according to two people familiar with the matter. Information from Christopher Steele, a former MI-6 officer, could help investigators determine whether contacts between people associated with the Trump campaign and suspected Russian operatives broke any laws." http://cnn.it/2hSC6sQ

GE, Tesla to Outfit 50 Home Depot Stores with Solar Panels

Posted August 17, 2017, 02:01 P.M. ET

By Christopher Martin

General Electric Co.'s Current unit and Tesla Inc. will install solar systems on 50 Home Depot Inc. stores and sell the power output to the retailer.

The solar rooftops will generate enough electricity to reduce each store's demand from local utility grids by about one third, Atlanta-based Home Depot said in a statement Thursday. It's part of a company plan to get 135 megawatts of clean energy at its stores by 2020.

Home Depot will buy the output from each of the systems under power purchase agreements in New York, New Jersey, Connecticut, California and Washington, D.C. Six locations will also get battery storage from Tesla. Terms weren't disclosed.

An Eclipse Is What the U.S. Power Sector's Been Waiting For

Posted August 17, 2017, 01:23 P.M. ET

By Naureen S. Malik, Christopher Martin and Mark Chediak

Turns out the solar eclipse, set to plunge parts of the U.S. into total darkness on Aug. 21, will offer exactly what the power sector's been looking for: a completely predictable stage for experiments.

It's not often that power grid operators, utilities and electricity generators get such precise and advance notice about more than 12,000 megawatts of solar power supplies set to suddenly drop off their systems. And some are looking forward to it—as a means of testing plants, software and markets refined in recent years in anticipation of the day when renewable energy becomes the world's dominant source of power.

The way David Shepheard, managing director at consultant Accenture Plc, sees it: The eclipse is the "forecastable dress rehearsal" for the grid of the future. It'll be the perfect test, he says, "for operating the grid when the sun doesn't shine and the wind doesn't blow."

Here's a closer look at what utilities, power generators and grid operators will be watching as the eclipse plays out:

Perfecting Forecasting

Charlie Gay, director of the U.S. Energy Department's SunShot Initiative, expects the eclipse to provide instant validation for power forecasting models being developed. The department is working with the National Renewable Energy Laboratory and grid operators to improve software controls that balance supply and demand as the continent goes dark.

"It gives us a test for the models," he said. Using satellite data and maps of solar plant locations, the group expects to be able to match forecasts with what actually occurs before, during and after the eclipse.

Grid operators including PJM Interconnection LLC and Southwest Power Pool are similarly using the eclipse to measure exactly how much rooftop solar is on their systems and improve their supply models for the next eclipse in 2024.

Sizing Up Software

The proliferation of so-called smart meters, energy management equipment and software has helped provide power-line operators better data on the homes and businesses they supply. Some utilities can now control their customers' air conditioners using remote devices, helping them curb demand during extreme weather.

The need for such software and technology has only grown as rooftop solar panels increasingly turn consumers into mini-generators. "Smart" inverters can now help balance the voltage and frequency coming from solar panels.

Grids and utilities "are quite frankly becoming tech companies" in their need to crunch big data to operate more efficiently, and this eclipse "is a little bit like Y2K," said Austin Whitman, director of regulatory affairs at FirstFuel Software Inc. in Boston.

The event is going to give grid operators a chance to fine-tune their toolkit for dealing with big wind and solar fluctuations, the Energy Department's Gay said. Battery storage may end up playing a bigger role because it offers more flexibility, Accenture's Shepheard said.

Backing Up Solar

Utilities including PG&E Corp. and Edison International will also be relying on natural gas-fired power plants and hydropower resources to pick up the slack when the moon blocks the sun and solar power's wiped out.

The event is coming at an opportune time for California to flex its hydropower muscle. Snow is melting and hydro is plentiful. The flood of quick supplies is what the state is hoping to dispatch to fill a 6,000-megawatt void of solar energy.

In North Carolina, a part of which will see total darkness during the eclipse, Duke Energy Corp. expects about 2,000 megawatts, or 80 percent, of utility-scale solar farms to go offline. The utility will treat it like a "gradual sunset," said spokeswoman Tammie McGee, estimating that as much as

1,200 megawatts of gas generation will help pick up the slack. The so-called energy imbalance market, formed by a group of utilities and California's grid operator to trade power in real-time across much of the western U.S., will also be put to the test. Berkshire Hathaway Energy's NV Energy utility in Nevada said it'll rely on this regional system, capable of dispatching power every five minutes, to help balance supply swings and set aside 400 megawatts in reserves.

Power Surge?

Power bulls could meanwhile enjoy a rally in wholesale electricity prices due to solar's sudden slide. The eclipse will start curbing solar a little after 9 a.m., just when the work week is ramping up and demand is taking off. According to energy data provider Genscape Inc., the event may extend the typical period of high power prices in California by about two hours.

Prices will probably retreat as soon as the moon starts moving past the sun and solar farms return, Genscape said. And the market impact in Texas, the Midwest and the East Coast will be limited because the region's home to smaller concentrations of solar.

Those within the path of the shadow may feel a 10-degree Fahrenheit drop in temperatures, probably not enough to affect gas demand, according to WTRG Economics. "But power companies will be busy for a half hour or so trying to balance the load," the energy research firm said in a report.

Voltage Swings

Transmission operators have spent years adapting to growing volumes of renewable power coursing through U.S. power lines. So they're not anticipating outages as a result of voltage fluctuations. Utilities from California to North Carolina have also been preparing for months to avoid sudden voltage losses.

"One of the advantages of being a national leader in the amount of solar energy connected to the grid is that our operators are experienced with dealing with fluctuations in solar power production due to weather conditions," said Paul Grigaux, vice president of transmission substations and operations for Edison's Southern California Edison utility.

And solar's decline doesn't just affect high-voltage transmission lines. Utilities in California and New Jersey, where large concentrations of households have installed solar panels on their rooftops, will have to deal with fluctuating voltage levels on local power lines.

While Duke plans to follow the same procedures it always follows during sudden outages, McGee noted that the magnitude of this event "is fairly unprecedented."

Blackout Could Pressure Taiwan Leader to Reconsider Energy Policy

Posted August 17, 2017, 11:24 A.M. ET

By Stephen Stapczynski

A blackout in Taiwan Aug. 15 that struck about 6 million households may force President Tsai Ing-wen to reconsider her anti-nuclear stance and open the country's electrical grid to outside investment.

The island's energy security and the feasibility of Tsai's plan to phase-out atomic reactors by 2025 and reduce coal-fired generation is coming under greater scrutiny, BMI Research said in an Aug. 16 note. So far Tsai hasn't backed down on promises to shut the country's remaining nuclear power stations, but public pressure could determine the extent to which policies change, according to Gloria Hsu, a professor at National Taiwan University.

While the disruption was caused by human error that resulted in about 9 percent of Taiwan's generation capacity going offline, the outage highlighted the country's limited number of power plants. The reliability of that supply, generated and distributed by state-run companies, is crucial to the success of Taiwan's semiconductor industry that had sales of about $71 billion in 2015 and supplies companies including Apple Inc.

"The government may be forced to reconsider its anti-nuclear stance," said Joseph Jacobelli, an analyst at Bloomberg Intelligence. "Market liberalization could be seriously advanced as Taiwan desperately needs private investment in its power infrastructure."

Taiwan plans to separate Taiwan Power Co., known as Taipower, into separate entities to handle power generation and transmission and distribution, according to electricity act amendments passed in January. But that effort is far too little and the government should should focus on more "rational and less populist" energy policies, said Jacobelli.

Tsai posted an apology on Facebook and included a reiteration of her determination to push forward with phasing out nuclear power in favor of renewable energy.

China's Blue Skies Target May Make for Winter Gas Crunch

Posted August 17, 2017, 10:02 A.M. ET

By Aibing Guo, Jing Yang, and Dan Murtaugh

Chinese President Xi Jinping's government beat expectations in its drive to help clear the nation's notoriously smoggy skies by burning less coal and oil in favor of cleaner natural gas.

Now that success may be too much, too soon.

Gas consumption rose 15 percent in the first half of the year, including a 27 percent jump in June, as industrial customers shift toward the fuel and as distributors add more residential users. That surge during the traditionally low-demand part of the year raises the possibility that the country may find itself short of gas when winter hits, according analysts at Jefferies Group LLC and SCI International.

"China could be setting itself up for a nasty winter gas shortage," Laban Yu, a Hong Kong-based analyst at Jefferies, said this month in a research note. "We believe gas prices will have to increase,

especially in winter months, to balance supply and China's regulation-induced demand surge."

China's drive to use more natural gas and renewables has seen coal's share of the energy mix drop to just below 60 percent during the first half of the year, according to the National Energy Administration. It accounted for 64 percent in 2015, and the government is aiming for 58 percent by 2020.

China's natural gas demand will rise to 620 billion cubic meters a year by 2030, China National Petroleum Corp. said in an Aug. 16 report. The country used 206 billion cubic meters last year, according to the National Development and Reform Commission.

Natural gas use tends to fall into two categories: recurring demand from activities like power generation and industrial plants, and seasonal demand for powering air conditioners in summer and heating homes in winter. For China, which has hundreds of millions of people living in colder northern cities like Beijing, Tianjin, and Harbin, consumption peaks in the winter.

But demand this year is booming in the middle of summer. Imports in July jumped by 55 percent over the previous year and are up by almost 21 percent for the entire year, according to the General Administration of Customs. That's on top of a 8.8 percent increase in domestic output during the first seven months of the year, according to the National Bureau of Statistics.

'Big' Increase

In 2015 and 2016, seasonal demand meant December consumption was double that during July. China Petrochemical Corp., one of the country's leading liquefied natural gas importers and known as Sinopec Group, is expecting "big" year-on-year increases in the winter and spring, Shanghai Securities News reported last week, citing comments from the company after its midyear work conference.

The government will likely push energy companies to ramp up imports and production and ensure that new terminals are online to meet winter demand, said Liu Guangbin, a gas analyst at Shandong based SCI International. Energy firms may use the surge in buying to bolster requests to the government to raise regulated domestic prices, he said.

"I expect the gas supply shortage this winter to be more severe than the situation in the previous two years due to sharp increase in demand from industrial users amid the government's coal-to-gas switching policy," he said.

Neither the National Development and Reform Commission, the nation's top economic planner, nor the NEA responded to faxed requests for comment.

More LNG

The growing global LNG market will help the country meet any surge in demand this winter, said Liu Ming Hui, executive chairman of China Gas Holdings Ltd., which distributes natural gas to homes and businesses. Other distributors, such as ENN Energy Holdings Ltd. and Guanghui Energy Co., have started importing LNG themselves to supplement supplies they typically bought from China's big state-owned energy firms.

LNG has made up almost 51 percent of China's natural gas import supply during the first half of the year, up from 48 percent last year and 44 percent in 2015, according to Bloomberg calculations using data from the General Administration of Customs.

China's gas prices are set by regulators, and they're among the highest in the world by a major gas consumer. The main city-gate price in June was 1,876.1 yuan per thousand cubic meters, which equated to about $7.73 per million British thermal units.

LNG Surge

A surge in LNG production, led by new facilities in Australia, boosted global output to a record in July, according to JP Morgan Chase & Co. New plants will ensure that there's ample supply for Chinese buyers, even as they are expected to increase imports this winter by 30 percent from last year, said Zhi Xin Chong, a Singapore-based analyst with Wood Mackenzie Ltd. Prices for spot LNG will probably only rise to the $7-to-$8 per million British thermal units level this year, compared to a peak near $10 last year, he said.

"We probably won't see the same sort of spike like last year," he said. "The new supply coming on to the market is already beginning to affect prices."

Blackstone's New Pipeline Asset Is Wreaking Environmental Havoc

Posted August 17, 2017, 9:36 A.M. ET

By Naureen S. Malik and Catherine Traywick

In the energy business, it's one of the biggest projects going today: construction of a 710-mile pipeline to transport natural gas from America's most prolific shale deposit in the eastern U.S. to consumers in the Midwest and Canada. Even Blackstone Group LP has agreed to take a sizable stake.

But it holds another, more dubious, distinction. The Energy Transfer Partners LP pipeline has racked up more environmental violations than other major interstate natural gas pipelines built in the past two years, according to a Bloomberg analysis of regulatory filings during that period. And that's all since U.S. regulators approved the $4.2 billion project in February.

"Not only is it a situation where there are probably more incidents and more headlines than any other pipeline, on a project basis it's a magnitude that we haven't seen in years," said Kyle Cooper, director of research with IAF Advisors in Houston.

In Ohio, Energy Transfer has been cited for damaging protected wetlands and improperly disposing of wastewater, among other things. In West Virginia, a state regulator temporarily ordered the company last month to cease and desist activities after it inadvertently polluted streams.

And in Washington, the Federal Energy Regulatory Commission halted horizontal drilling on certain segments of the pipeline, following a massive 50,000-barrel spill of diesel-tainted drilling fluid.

The Rover pipeline, running from the Marcellus shale deposit, is Energy Transfer's biggest project since its controversial Dakota Access oil pipeline. Chief Executive Officer Kelcy Warren said July 31 that he was "baffled" by regulators' allegations. That same day, his company reached a deal to sell a 32 percent stake in the Rover unit to Blackstone for about $1.57 billion in cash. It's expected to close in the fourth quarter. Blackstone spokeswoman Paula Chirhart said the firm declined to

comment.

"Rover will be built in compliance with all safety and environmental regulations, and in some instances we will exceed those requirements," Energy Transfer spokeswoman Alexis Daniel said in response to Bloomberg's violation tally.

China's Menswear Maker Swaps Stitching for Lithium Batteries

Posted August 17, 2017, 9:30 A.M. ET

By Bloomberg News

Ten years ago, Ningbo Shanshan Co. was primarily a maker of menswear turning out shirts, casual wear and business suits from its base of Ningbo, an industrial hub in China's Zhejiang province. Not anymore.

This week, the company announced that it will spend 3.81 billion yuan ($570 million) on a new energy-storage project in China's northern city of Baotou, bolstering its growing interest in the research, development and manufacture of lithium-ion batteries.

The move is the latest by the Chinese company to become a bigger player in the market for storing electricity for everything from electronic vehicles to laptop computers. It underscores an accelerating shift for a company that got almost all its sales from apparel in 2006.

Shanshan is "a serious player in the battery material business, so it's not a surprise" to see its new plan, said I-Chun Hsiao, a Tokyo-based analyst from Bloomberg New Energy Finance. "There's an oversupply in batteries in the short term."

The industry, he said, will see enough demand to boost manufacturing capacity by more than fourfold from 2021 to 2030. Chinese companies have about 57 gigawatt-hours of lithium-ion manufacturing capacity, with another 78 gigawatt-hours announced, according to Bloomberg New Energy Finance data.

The shift has been good for Shanshan investors. Its shares have gained about 45 percent in Shanghai trading this year, outpacing the Shanghai Stock Exchange Composite Index's 5 percent increase. Citic Securities Co.initiated coverage of the stock with a buy recommendation on Wednesday, predicting Shanshan will trade at 26.5 yuan within a year, a 25 percent increase from the close on Aug. 15.

Shanshan fell as much as 1.9 percent on Thursday in Shanghai.

Shanshan's newest project each year will be able to produce 100,000 metric tons of anodes—a component in lithium-ion batteries, according to a statement on the Shanghai stock exchange on Tuesday. Construction will begin in October and is expected to be completed by June 2019.

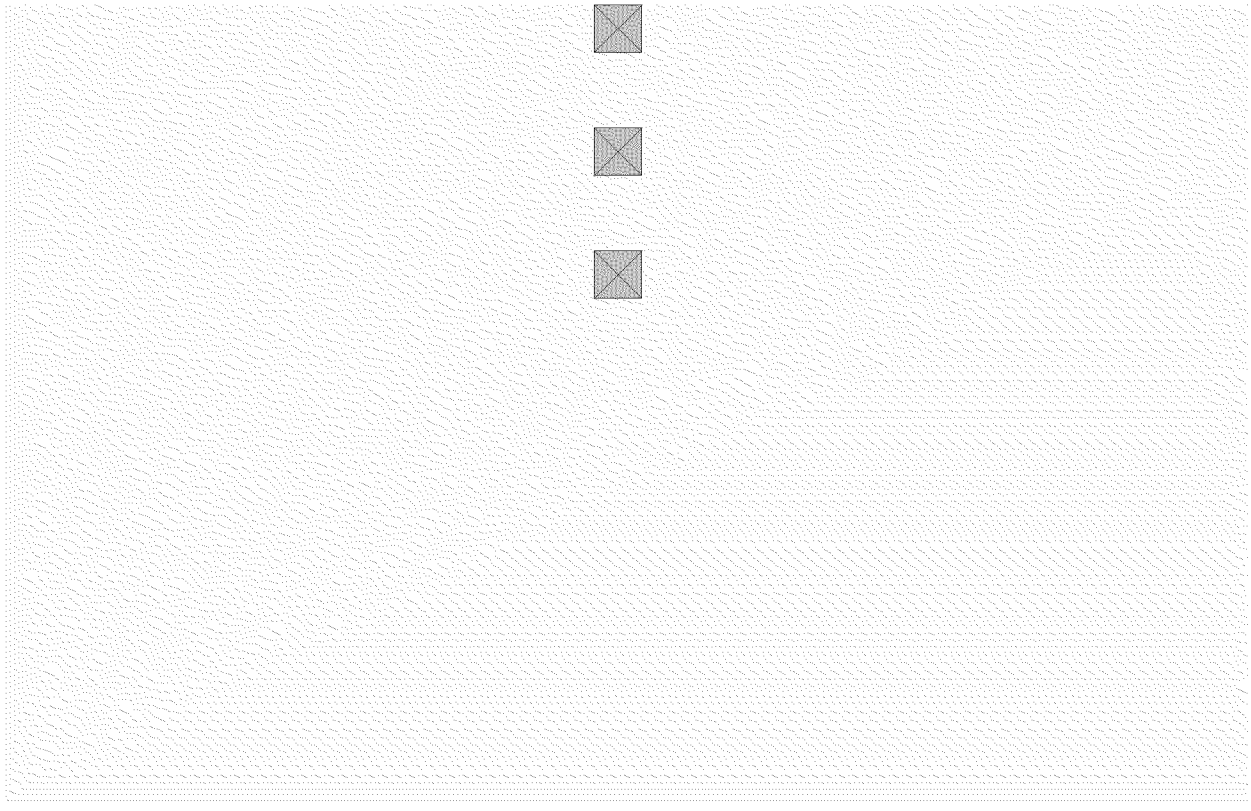
The new investment adds to Shanshan's purchase last month of 1.8 billion yuan of shares in China Molybdenum Co. in a private placement as part of its push to secure the raw materials use to

produce cathodes.

Battery materials accounted for almost 75 percent of Shanshan's revenue last year. That's up from 39 percent in 2011 and a far cry from virtually nothing in 2006 when it got 93 percent of its sales from making apparel, according to company filings.

Company Transformation

The transformation to battery material manufacturing has helped rejuvenate the company's earnings. Net income rose about 51 percent in the first half from the same period a year earlier to 339 million yuan mainly because of its battery materials business, the company said on Tuesday. Annual revenue has more than tripled in the past 10 years.



Besides anodes, Shanshan also produces other battery components such as cathodes and electrolytes. The company is expanding into more aspects of electric vehicle manufacturing, including battery system integration, vehicle design, research and development and charging pole construction.

Subject: Committee advances Interior, DOE nominees

By Esther Whieldon

08/03/2017 12:50 PM EDT

The Senate Energy and Natural Resources Committee today advanced five nominations for senior positions at the Interior and Energy departments.

Members of the committee gathered off the Senate floor to vote on the nominations. They approved Douglas Domenech, to be assistant secretary of insular affairs at Interior on a 13-8 vote.

Four other nominees were confirmed on voice votes: Mark Wesley Menezes, to be undersecretary of DOE; Paul Dabbar, to be DOE undersecretary for science; Brenda Burman, to lead Interior's Bureau of Reclamation; and Susan Combs, to be Interior's assistant secretary of policy management and budget. Sen. Bernie Sanders asked to be recorded as a no vote on all of the nominations.

The committee did not vote on David Jonas, for DOE's general counsel. Jonas was initially on the agenda for the markup, which had been rescheduled from last week.

Energy Chairman Lisa Murkowski said the vote on Jonas was postponed because of concerns from committee Democrats but she expects to take him up when they return.

WHAT'S NEXT: The Senate is expected to leave for its August recess as soon as today.

Subject: First Move: Environment Council in Spotlight • Wehrum Vote This Week? • Senate Winds Blow on Taxes

What you need to know to start your day.

Environment Council in Spotlight • Wehrum Vote This Week? • Senate Winds Blow on Taxes

By Chuck McCutcheon

Kathleen Hartnett White's Senate confirmation hearing today will focus on her outspoken advocacy of fossil fuels and questioning of human contributions to climate change. The hearing also will spotlight the White House agency she's been asked to lead.

The Council on Environmental Quality coordinates high-level environmental policies and regulations. It's helped presidents since Richard Nixon mesh those policies and regulations across multiple agencies, including the EPA and Interior Department.

President Trump wants the council to do even more. Shortly after taking office, he elevated the authority of CEQ and its chairman to speed up environmental reviews and permitting across agencies. His executive order authorizes the council chairman to decide which projects get the highest priority for expedited review.

The Senate's environment panel also will question Andrew Wheeler, Trump's choice to become EPA's deputy administrator. Abby Smith is covering.

Senate Democrats may let the EPA's nominee for air chief get an up-or-down vote this week.

Democrats have been upset with the nomination of William Wehrum, Trump's choice to lead the EPA's Office of Air and Radiation, claiming he's too close to industry. But Delaware Sen. Tom Carper, the top Democrat on the Senate environment panel, told Abby Smith that Democrats may not use the full 30 hours of debate permitted by Senate rules.

A Democratic Senate aide expects a vote late Thursday, before lawmakers leave for the Veterans Day holiday.

House Republicans want to use their sprawling tax plan to scale back the wind production tax credit.

But three Senate Republicans now say they oppose a move to do so—and that appears to boost the tax credit's chances of remaining intact. Because of widespread Democratic opposition to the tax plan, Republicans can't afford to lose the backing of many members of their party on the bill.

Other Stories We're Covering

War-torn Syria has added a new wrinkle to the United Nations climate talks in Bonn by announcing it is joining the Paris climate pact, Dean Scott finds.

The District of Columbia and its water and sewer authority are expected to file a response in court defending a city law governing what kinds of disposable wipes can be flushed down the toilet. Amena H. Sayid is watching.

The European Union's executive arm is expected to publish proposals todayto reduce greenhouse gas emissions from transportation through 2030. The European Commission's proposals likely will include tighter carbon dioxide emissions limits for private cars sold in the bloc, as well as measures to boost the use of electric vehicles. Stephen Gardner is watching.

Chia seeds, hot peppers, and Mexican squash are among the more than two dozen imported fruits, vegetables, and grains on a watch list for items that exceeded the limits for pesticide residues set by the EPA, according to an FDA report that covers 2015.

A House committee is continuing to work on legislation that would shift some onshore and offshore oil and gas permitting to states. Alan Kovski is covering.

A federal court hearing involving a ban on fracking in the four-state Delaware River Basin halted yesterday for an unexpected reason: One of the lawyers fainted. Delaware River Basin Commission attorney Kenneth H. Warren recovered consciousness quickly and told judges that he had a medical condition that wasn't serious, but the court postponed oral arguments. Leslie A. Pappas is following.

Around the Web

Commuters drive amid heavy smog in New Delhi.
Prakash Singh/AFP/Getty Images

- New Delhi's severe air pollution has returned, prompting panic in some areas of India's capital.
- Enerkem Inc. has received the EPA's backing to be the first municipal waste-to-cellulosic ethanol plant with approval to sell in the U.S.
- Financial services company HSBC says it will provide $100 billion in sustainable financing and investment by 2025 to fight climate change and

support sustainable growth.

Today's Events

- **9:45 a.m. • Nominations** • Senate commerce panel considers nominees for NASA administrator and Commerce Department environmental post.
- **10 a.m. • Geoengineering** • House science panels on environment and energy hold hearing on geoengineering research to use technology to address climate change.
- **5 p.m. • Solar** • Energy Department official discusses solar energy's potential in Cambridge, Mass. Video to be posted by Massachusetts Institute of Technology.

Quote of the Day

"One is the loneliest number."
—Delaware's Tom Carper, the Senate environment panel's top Democrat, tweeting in reaction to the news that Syria will sign the Paris Agreement, leaving the U.S. as the only outlier if it leaves the climate pact.

August 9, 2017

Today on Climate Beat . . .

. . . we went to the Great White North, where Shell has installed a new generation of continuous methane detectors in a natural gas field in Alberta -- a move environmentalists are contrasting with the Trump administration's efforts to roll back Obama-era methane limits for the oil and gas sector.

In Paris Agreement news, Secretary of State Rex Tillerson in a recent memo directed U.S. diplomats to avoid giving specifics to their counterparts about any Trump administration plans to "re-engage" in the global climate deal, which President Donald Trump announced June 1 he would exit.

And in our daily news roundup, we brought news that some typical conservative allies, including the Chamber of Commerce, Koch-backed political groups and many industry groups, are reluctant to back EPA Administrator Scott Pruitt's planned "red-team, blue-team" critique of climate science.

Subject: Proposed carbon rule repeal to be published Monday

By Alex Guillén

10/13/2017 09:21 AM EDT

EPA's proposed repeal of the Clean Power Plan will run in Monday's Federal Register, launching a 60-day comment period.

The proposed repeal argues that the regulation overstepped EPA's authority by requiring fuel shifting for compliance and must be revoked in full.

A separate advance notice for a possible replacement rule is currently under review at the Office of Management and Budget. It questions whether EPA has any authority to regulate greenhouse gases from power plants and suggests states may get the "primary role" in deciding future rules and limits, according to excerpts of a draft obtained by POLITICO. It is unclear when EPA will release that advance notice for comment.

WHAT'S NEXT: EPA will take comment on the proposed repeal through Dec. 15.

Subject: BREAKING NEWS: Bannon returns to Breitbart News as executive chairman

Ousted White House chief strategist Steve Bannon on Friday returned to Breitbart News as executive chairman, the conservative news site announced.

"The populist-nationalist movement got a lot stronger today," said Breitbart News Editor-in-Chief Alex Marlow. "Breitbart gained an executive chairman with his finger on the pulse of the Trump agenda."

Bannon, who previously ran the populist news site before joining President Donald Trump's campaign, left his West Wing post earlier on Friday.

Subject: Blue states sue EPA over Trump administration ozone delay

By Alex Guillén

08/01/2017 02:34 PM EDT

A coalition of states led by New York and California today sued the EPA over Administrator Scott Pruitt's delay of an early step in the implementation process for the 2015 ozone standard.

"One in three New Yorkers are breathing dangerous levels of smog pollution pouring in from other states. Yet again the Trump EPA has chosen to put polluters before the health of the American people," New York Attorney General Eric Schneiderman said in a statement.

Pruitt in June announced that he would put off by one year a deadline to decide which areas of the country are not in compliance with the new standard. The move came amid a Trump administration review of the Obama-era standard, which was criticized by industry groups as too severe and by public health advocates as too lax.

Environmental groups sued last month, seeking to force EPA to comply with the Oct. 1 deadline.

The states on the suit are New York, California, Connecticut, Delaware, Illinois, Iowa, Maine, Massachusetts, Minnesota, New Mexico, Oregon, Pennsylvania, Rhode Island, Vermont and Washington, as well as D.C.

WHAT'S NEXT: EPA's response in the initial lawsuit brought by environmental groups is due on Thursday. This new lawsuit likely will be consolidated with the environmentalists' case.

Subject: DOE shifts SunShot's solar goals

By Eric Wolff

09/12/2017 02:56 PM EDT

The Department of Energy is shifting the focus of its SunShot Initiative to including broader administration priorities, such as grid reliability.

The program, which had dedicated itself to lowering solar costs including both panel costs and permitting, will now also devote research dollars to resilience, reliability, and storage, DOE said today.

"With the impressive decline in solar prices, it is time to address additional emerging challenges," Daniel Simmons, acting assistant secretary for energy efficiency and renewable energy, said in a statement. "As we look to the future, DOE will focus new solar R&D on the Secretary's priorities, which include strengthening the reliability and resilience of the electric grid while integrating solar energy."

DOE was also touting the early achievement of one of its 2020 goals, reducing solar costs for utility-scale solar to 6 cents a kilowatt-hour.

Subject: BREAKING NEWS: Tillerson: 'I have never considered' resigning as secretary of state

Secretary of State Rex Tillerson said Wednesday that he has never considered resigning his position, disputing an NBC News report that he had considered such a move over the summer.

"The vice president has never had to persuade me to remain as secretary of state because I have never considered leaving this post," Tillerson said in remarks delivered from the State Department.

Tillerson did not directly address whether he had called Trump a "moron," as NBC reported. "We don't deal with that kind of petty nonsense," he said when asked about the report.

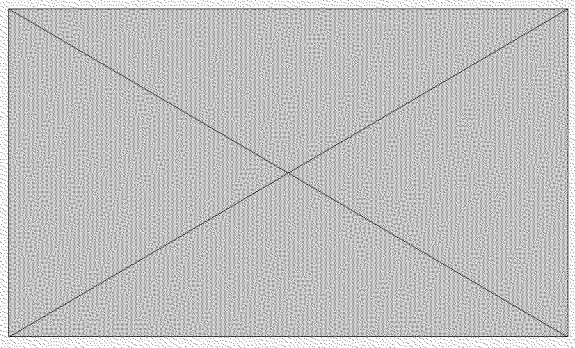
Subject: AEI Today: Top 10 Nobel Peace Prize embarrassments

While prizes in the sciences are based on life's work and proven success, Norwegian politicians and their appointed proxies award the Nobel Peace Prize more on the basis of aspiration and politics more than achievement of peace.

AEI's daily publication of independent research, insightful analysis, and scholarly debate



Reuters

Top 10 Nobel Peace Prize embarrassments

Michael Rubin | Washington Examiner

Early this morning, the Norwegian Nobel Institute announced the winner of the 2017 Nobel Peace Prize. Winners of the coveted award get a credential to opine on war and peace on the world stage. In both impact and prestige, the Nobel Peace Prize is different. So is the criteria by which it is awarded. While prizes in the sciences are based on proven success, the Peace Prize is awarded on the basis of aspiration and politics more

than achieving peace.

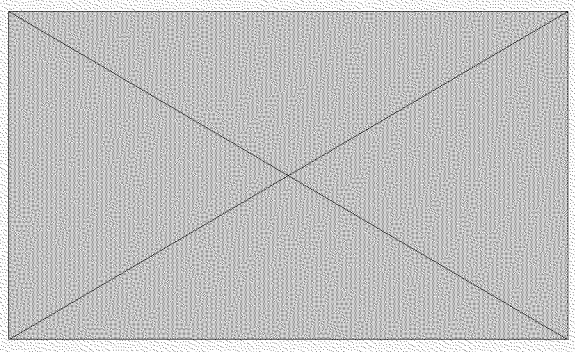
Watch: Why does government grow?

Benjamin Zycher | AEI reThink Tank

The Trump administration's budget for the 2018 fiscal year has been described widely as "dead on arrival." An attempt to cut $30 billion from total federal discretionary spending of almost $1.2 trillion doesn't look that controversial on paper. So why is it that government always gets bigger? AEI's Benjamin Zycher reviews the many hypotheses explaining why government never seems to shrink — even when officials promise that it will.



Reuters

Testimony: Defeating

Iran-backed militias is practical. So why don't we do it?

Kenneth Pollack | Statement before the House Foreign Affairs Committee

Iranian-backed militias and insurgents have become a dire threat to the fate of the Middle East — one that is likely to grow further because of the successes they've experienced. There is nothing special about these militias or Tehran's support for them. Defeating them is eminently practical. But it will require the US to commit itself to doing so in ways that we simply have not been willing to over the past decade.

Reuters

Remember, the state and local deduction paves the way for federalism

Stan Veuger | AEIdeas

Republicans have proposed eliminating the deductibility of state and local taxes (SALT) for federal income tax purposes. In their worldview, the deduction is just another loophole in the tax code; it's another way for taxpayers to avoid handing to the IRS what is rightfully the IRS's. This thinking is incorrect. The SALT deduction is a lynchpin

of the federalist system, and it expresses American society's preference for local solutions to local problems.

Subject: Playbook Power Briefing, presented by Morgan Stanley: SCOOP FROM INSIDE THE ROOM: CORY BLISS says House GOP outside group will spend 100M to boost Republican agenda -- TRUMP to visit P.R. next week -- TAX REFORM could hit speed bump right out of the gate

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Morgan Stanley

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Tuesday afternoon. PLAYBOOK SCOOP -- CORY BLISS, the Republican political operative who runs the American Action Network and Congressional Leadership Fund -- outside groups aligned with Speaker Paul Ryan -- attended a private House Republican Conference meeting this morning and said the group will spend $100 million on promoting the GOP legislative agenda. The groups have already spent millions of dollars boosting the GOP tax reform effort. This comes just one day before House Republicans go to National Defense University to talk about their tax plan. That Bliss was able to attend a closed House GOP meeting and brief lawmakers on his spending offensive shows the close ties between the outside group and elected lawmakers.

PRESIDENT TRUMP said he will visit Puerto Rico on Tuesday, per The Hill's Jordan Fabian, today's pooler. He also said he may stop in the Virgin Islands.

-- TRUMP ON PUERTO RICO "The difference is this is an island sitting in the middle of an ocean. It's a big ocean, it's a very big ocean." http://bit.ly/2xD0YdC

NOT AN ONION HEADLINE -- "Senate GOP weighs how to fail on Obamacare," by Seung Min Kim, Jen Haberkorn and Burgess Everett: "Senate Republicans are on track to fall short in their last-ditch attempt to repeal Obamacare this week -- now they're just debating how best to fail on their seven-year campaign pledge. With three GOP senators formally opposed to the latest bill to unravel the health care law, Senate Majority Leader Mitch McConnell (R-Ky.) and his conference will mull whether to hold a vote that would be almost certain to go down on the Senate floor, according to senators and aides" http://politi.co/2yFdhod

-- "Trump disappointed in 'so-called Republicans' over Obamacare repeal," by Nolan McCaskill: "President Donald Trump on Tuesday said he is 'disappointed in certain so-called Republicans.' Trump expressed displeasure at what will likely be another failed attempt by Senate Republicans to pass a repeal of former President Barack Obama's health care law.

'We'll see what happens,' Trump told reporters. ... 'We were very disappointed by a couple of senators,' Trump said Tuesday. 'Republican senators I must say. We were very disappointed that they would take the attitude that they did. We don't know why they did it - you can sort of figure that - but we'll see what happens.'" http://politi.co/2xycQvU

N.K. TRIES TO DECODE TRUMP -- "North Korea seeks help from Republican analysts: 'What's up with Trump?,'" by WaPo's Anna Fifield in Bern, Switzerland: "North Korean government officials have been quietly trying to arrange talks with Republican-linked analysts in Washington, in an apparent attempt to make sense of President Trump and his confusing messages to Kim Jong Un's regime. ... [T]o get a better understanding of American intentions, in the absence official diplomatic talks with the U.S. government, North Korea's mission to the United Nations invited Bruce Klingner, a former CIA analyst who is now the Heritage Foundation's top expert on North Korea, to visit Pyongyang for meetings. ... North Korean intermediaries have also approached Douglas Paal, who served as an Asia expert on the national security councils of Presidents Ronald Reagan and George H.W. Bush, and is now vice president for studies at the Carnegie Endowment for International Peace." http://wapo.st/2htNYI2

TV WARS -- We reported in Playbook this morning that **NBC NEWS** is running an ad in the New York Times, among other places, touting its ratings. http://politi.co/2fuPsL9 **CNN** ran an ad in the Washington Post, noting it was the top-watched cable network in Washington. http://politi.co/2yqkpnx

ABOUT TAX REFORM -- "Republicans agree to raise bottom tax rate, double standard deduction," by Axios' Jonathan Swan: "Top White House and GOP leaders have agreed to raise the lowest individual tax rate from 10 to 12 percent, paired with doubling the standard deduction, 5 senior Republicans tell us. Trump intends to sell the proposal tomorrow as a populist 'tax cut.' But as recently as yesterday top Republicans on Capitol Hill were nervous as they got word that Trump wasn't entirely thrilled with the product that had been hashed out in immense secrecy for weeks (with two members of his administration, Gary Cohn and Steven Mnuchin, working with GOP leaders.) ...

"Republicans plan to collapse the number of brackets from seven to three. The standard deduction would almost double to $12,000 for a single filer and $24,000 for married couples, meaning Trump can accurately argue that many more low income earners would pay no tax under his plan. As we previously reported, the top tax bracket would fall from 39.6% to 35%. ... Trump won't go into great detail when he talks about the tax plan tomorrow in Indiana, leaving plenty of negotiating room for the tax-writing committees in the House and Senate." http://bit.ly/2yFPrZI

-- @RachaelMBade: "NEWS- @VP will attend the House GOP tax reform retreat tomorrow, per birdie familiar w/the sked".

-- CRITICAL STORY: "Trump's State-Tax Plan Could Cause Headaches for 52

Republican Lawmakers," by Bloomberg's Sahil Kapur: "President Donald Trump's promised tax overhaul may force dozens of Republican congressmen in states including New York and New Jersey into a politically damaging vote to repeal a $1.3 trillion tax break their districts use heavily. But not if Representative Peter King of New York can help it. King, a Republican who represents Long Island, said he'll oppose any attempt to repeal the state and local tax deduction, calling it 'absolutely essential to my district.'

"King is one of 52 Republicans -- more than enough to scuttle any bill that lacks Democratic support -- who hail from districts that use the state tax deduction disproportionately. He thinks enough of those Republican colleagues will band together to keep its repeal out of any comprehensive tax legislation this fall, complicating GOP plans." https://bloom.bg/2yEwKW8

ROGER STONE ON THE HILL -- "Trump Adviser Roger Stone Says Talk with Hacker Was 'Benign'," by WSJ's Byron Tau: "Mr. Stone described his interactions with the entity known as Guccifer 2.0 as 'limited' and 'benign,' and he released screenshots of what appeared to be messages exchanged privately on the social-media platform Twitter . They show about a dozen messages Mr. Stone received from Guccifer 2.0 in August and September of 2016, as well as three messages he sent in response.

"Mr. Stone, a veteran Republican operative who advised Mr. Trump during last year's campaign, said he resented 'any allegation that I would collude with the oppressive Russian state to affect the outcome of the 2016 presidential election.' The material shows the conversation began in August 2016 after Mr. Stone wrote an article for the right-wing website Breitbart News in which he argued that Guccifer 2.0 wasn't a Russian asset but instead acted alone. The U.S. intelligence committee later assessed that the material released by Guccifer 2.0 had been pilfered by the Russian government." http://on.wsj.com/2yDkwgx

JARED WATCH -- "Jared Kushner's lawyer, fooled by 'email prankster,' offers window into private email controversy," by Business Insider's Natasha Bertrand: "Top Washington lawyer Abbe Lowell engaged in an email exchange with a prankster posing as client Jared Kushner on Monday, at one point telling the prankster that he needed 'to see all emails' sent and received from a private email account the president's son-in-law had set up in December. ... On Monday, the prankster wrote to Lowell from the email address 'kushner.jared@mail.com' asking what he should do with 'some correspondence on my private email ... featuring adult content.' 'Can I remove these?' the prankster asked. 'Forwarded or received from WH officials?' Lowell wrote in response.

"'I think one was forwarded from a White House official, we had discussed a shared interest of sorts. It was unsolicited. Then there are a handful more, but not from officials,' said the prankster, still posing as Kushner. 'I need to see I think all emails between you and WH (just for me and us),' Lowell wrote. 'We need to send any officials emails to your WH account. Not stuff like you asked about. None of those are going anywhere.' 'But we can bury it?' the prankster responded. 'I'm so embarrassed. It's fairly

specialist stuff, half naked women on a trampoline, standing on legoscenes, the tag for the movie was #standingOnTheLittlePeople :(' Lowell replied: 'Don't delete. Don't send to anyone. Let's chat in a bit.'" http://read.bi/2y6ZolG

SHAKING THE MONEY TREE -- VERONICA ESCOBAR, the Democrat running to replace Rep. Beto O'Rourke who would be the first Hispanic woman elected to Congress from Texas, was in Washington last night to raise money for her congressional bid. Lobbyist Moses Mercado hosted Escobar at his home for the event, which raised $30,000. **SPOTTED:** Dem Caucus Chair Joe Crowley (N.Y.), Dem Caucus Vice Chair Linda Sanchez (Calif.), Rep. Vicente Gonzalez (Texas), Rep. Gene Green (Texas) Marc Gonzales, Allen Chew, Karissa Willhite, Gordon Taylor and Dean Aguillen, John Meza, Adrian Saenz and José Luis Sanchez.

NOT A REAL LAUNCH -- "Iran's supposed missile launch was fake, U.S. officials say," by Fox News' Lucas Tomlinson: "Iranian state television released video footage Friday claiming to show the launch of a new type of medium-range ballistic missile, a few hours after it was displayed during a military parade in Tehran. But it turns out Iran never fired a ballistic missile, sources say. The video released by the Iranians was more than seven months old -- dating back to a failed launch in late January, which resulted in the missile exploding shortly after liftoff, according to two U.S. officials." http://fxn.ws/2yFUdX8

-- @realDonaldTrump at 5:59 p.m. on Saturday, responding to initial reports of the launch: "Iran just test-fired a Ballistic Missile capable of reaching Israel.They are also working with North Korea.Not much of an agreement we have!"

ON THE PRESIDENT'S MIND -- @realDonaldTrump at 6:28 a.m.: "Ratings for NFL football are way down except before game starts, when people tune in to see whether or not our country will be disrespected!" ... **at 6:35 a.m.:** "The booing at the NFL football game last night, when the entire Dallas team dropped to its knees, was loudest I have ever heard. Great anger" ... **at 6:47 a.m.:** "But while Dallas dropped to its knees as a team, they all stood up for our National Anthem. Big progress being made-we all love our country!" ... **at 6:55 a.m.:** "Luther Strange has been shooting up in the Alabama polls since my endorsement. Finish the job - vote today for 'Big Luther.'"

... **at 7:14 a.m.:** "Great interview on @foxandfriends with the parents of Otto Warmbier: 1994 - 2017. Otto was tortured beyond belief by North Korea." ... **at 8:13 a.m.:** "Thank you to Carmen Yulin Cruz, the Mayor of San Juan, for your kind words on FEMA etc.We are working hard. Much food and water there/on way" ... **at 9:06 a.m.:** "The NFL has all sorts of rules and regulations. The only way out for them is to set a rule that you can't

kneel during our National Anthem!" ... **at 9:31 a.m.:** "ALABAMA, get out and vote for Luther Strange - he has proven to me that he will never let you down! #MAGA" ... **at 12:13 a.m.:** "Honored to welcome Republican and Democrat members of the House Ways and Means Committee to the White House today! #USA"

--TEVI TROY in POLITICO Magazine, **"How the National Anthem Got Tangled Up With American Sports":** http://politi.co/2fOLg5M

BIG DATA -- DHS TO COLLECT SOCIAL MEDIA INFO FROM IMMIGRANTS -- BuzzFeed News' Adolfo Flores: "Federal officials are planning to collect social media information on all immigrants, including permanent residents and naturalized citizens, a move that has alarmed lawyers and privacy groups worried about how the information will be used. The Department of Homeland Security published the new rule in the Federal Register last week, saying it wants to include 'social media handles, aliases, associated identifiable information, and search results' as part of people's immigration file. The new requirement takes effect Oct. 18." http://bzfd.it/2yEehJg

CLICKER -- "Exclusive Aerial Photos Capture Puerto Rico's Devastation: Hurricane Maria flooded the island's coastal areas and blew apart homes inland" -- Dennis Manuel Rivera in NatGeo: *10 pix* http://on.natgeo.com/2hwASje

NEW OFF MESSAGE -- ISAAC DOVERE interviews **ROB REINER:** "Reiner's character on 'All in the Family,' Michael Stivic, was a liberal true believer who often clashed with his conservative father-in-law over his rants about blacks, 'commies' and hippies. In the four decades since the show went off the air, Reiner has taken up cause after liberal cause himself as a director and political activist.

"His latest cause: Trump, joining a Hollywood cast of thousands who are taking on the president. But with a cultural divide that in just the past week has seen Jimmy Kimmel, Steph Curry, LeBron James, the NFL and just about every speaker at the Emmys throw themselves into the political arena, Reiner says it's not the entertainers at fault." http://politi.co/2yDVxcM ... ***Listen on iTunes*** http://apple.co/2yEsfe8

AFTERNOON READ -- "How Fake News Turned a Small Town Upside Down: At the height of the 2016 election, exaggerated reports of a juvenile sex crime brought a media maelstrom to Twin Falls -- one the Idaho city still hasn't recovered from," by Caitlin Dickerson in NYT Mag http://nyti.ms/2wQwLJf

BUSINESS BURST -- "Equifax CEO retires following an epic data breach affecting 143 million people," by CNBC's Liz Moyer: "Richard Smith, CEO and chairman of Equifax, retired following a data breach at the credit-reporting service that affected the personal information of 143 million people, according to the company. Smith became CEO and chairman in 2005 after spending 22 years at General Electric in senior roles in various divisions. He is to appear at a hearing of the Senate Banking Committee next month, where he is currently the only person scheduled to testify." http://cnb.cx/2wRLrbh

SPORTS BLINK -- "FBI arrests four college basketball assistants on charges of fraud," by USA Today's Scott Gleeson "Four NCAA assistant basketball coaches were indicted in a fraud and corruption scheme -- which also included managers, financial advisers and representatives of a major international sportswear company -- by federal authorities on Tuesday. According to charging documents made public, the four coaches involved are Auburn assistant Chuck Person, Southern California assistant Tony Bland, Arizona assistant Emanuel Richardson and Oklahoma State assistant Lamont Evans." https://usat.ly/2yEozJg

MEDIAWATCH -- Ezra Klein is now editor-at-large at Vox. **Lauren Williams** was named Vox's new editor in chief and **Allison Rockey** was named the new executive editor and director of editorial strategy. ***Klein's memo to staff*** http://bit.ly/2yF9QOn

-- DIGIDAY: "Axios is holding off on its high-end subscription product, for now": "On Monday, at the Digiday Publishing Summit in Key Biscayne, Florida, Axios president and co-founder Roy Schwartz said that the company is putting its premium subscription product on hold while it builds out its brand. The high-end subscription product raised a lot of eyebrows within the media industry back in December 2016, when Axios CEO Jim VandeHei announced that Axios would launch a $10,000 a year subscription product.

"'For the moment, we want to focus our resources on building our brand because we have seen that once people start using Axios, they will love it and come back,' Schwartz said. 'We will launch our paid subscription model when we feel the timing makes sense.'" http://bit.ly/2wTU3cy

WAPO PASSES 1 MILLION DIGITAL SUBSCRIBERS -- MICHAEL CALDERONE writes in: "Publisher Fred Ryan informed staff Tuesday that the Post crossed the 1 million digital threshold, in addition to its base of print subscribers. 'Our growth has been exceptionally strong, with digital-only subscriptions more than doubling since January 1 this year,' Ryan wrote in a memo obtained by POLITICO's Michael Calderone. 'Digital-only subscriptions have more than tripled since last year at this time.'"

SPOTTED -- Sen. Jeff Flake (R-Ariz.) sitting outside We The Pizza last night ... Ivanka Trump at Detroit Metropolitan Airport this morning http://bit.ly/2yFLGU6

TRANSITIONS -- Lindsey Mask has joined G2 Global Solutions as a communications specialist to support HHS's Office of Security and Strategic Information. ... **Patrick Brennan** has been promoted to COO at The Rockefeller Foundation. He was previously chief of staff.

****** **A message from Morgan Stanley** : Interested in the long-term investment opportunities that might arise from disruption? Morgan Stanley Investment Management Disruptive Change Researcher Stan Delaney shares five emerging trends that investors should watch over the next decade. "Disruptive change is so pervasive that our team

looks at all of our investments through a disruptive lens," says DeLaney "Our disruptive analysis effort is really about supporting the Growth Team's strategy of long-term investing, finding companies with a sustainable competitive advantage, and making sure that we aren't holding companies that could be left behind." These trends-spanning autonomous driving, machine learning, augmented reality and more-could have far-reaching implications for economies, industries and social behavior. Read more. ******

Subject: Murkowski, Cantwell press for distributed power in Puerto Rico, Virgin Islands

By Emily Holden

10/26/2017 05:42 PM EDT

The top Republican and Democrat on the Senate Energy and Natural Resources Committee are calling on the Senate leadership to press for weather-resilient distributed energy to rebuild the power grids in hurricane-ravaged Puerto Rico and the U.S. Virgin Islands.

Committee chairmanLisa Murkowski and ranking member Maria Cantwell, today signed on to a letter spearheaded by Sen. Al Franken (D-Minn.). Sen. Orrin Hatch (R-Utah) and Rob Portman (R-Ohio) joined them.

The senators said Hurricanes Irma and Maria exposed the vulnerability of the power grids on the islands, and some communities face months without electricity. Congress has already approved about $52 billion in aid for recent hurricanes and is expected to sign off on more spending.

"Decentralized energy resources operating in microgrids are more likely to remain functioning during and after storms," the letter said, noting that the declining costs of solar, wind, energy efficiency and battery storage in many instances makes them more affordable than existing power sources. The islands rely mostly on power plants fueled by oil, natural gas and coal.

In a speech over the weekend at the Alaska Federation of Natives convention, Murkowski broke with the party line to emphasize that "climate change is real" and she backed adding more alternative energy across the state, where rural communities often rely on diesel generators.

"Our world is changing," she said, according to Alaska Public Media. "And we all know that climate change is at the heart of this change."

Driving the Day

Good Tuesday morning. TWO FUN SPOTTEDS to kick off your morning ...

-- ROBERT BENNETT, who represented Bill Clinton during the Lewinsky scandal, having lunch with **ABBE LOWELL,** who is representing Jared Kushner in the Russia investigation, at the Greenhouse Restaurant at the Jefferson Hotel Monday.

-- ROBERT REDFORD enjoying dinner last night at Geronimo in Santa Fe, dishing at length about Trump and the media. The Hollywood legend told his companions that he was glad Trump had galvanized reporters but that CNN-style panel discussions -- "they're just yelling at each other" -- were harming public discourse. The star of "All the President's Men" added that while print publications had held politicians accountable in the past, "film, not print" was necessary in this video-dominated era. He also implied that the president was a slippery target: "He's like soap."

BIDEN WATCH -- CRAIN'S DETROIT'S CHAD LIVENGOOD (@chadlivingood): "SCOOP: Ex-VP @JoeBiden recorded robo call for @MayorMikeDuggan that went out to Detroit voters tonight ahead of tomorrow's primary." http://bit.ly/2hFoIaU

SHOT: WHAT DONALD TRUMP IS TALKING ABOUT -- @realDonaldTrump at 4:48 p.m.: "I think Senator Blumenthal should take a nice long vacation in Vietnam, where he lied about his service, so he can at least say he was there" ... **at 4:39 p.m.:** "How much longer will the failing nytimes, with its big losses and massive unfunded liability (and non-existent sources), remain in business?" ... **at 4:15 p.m.:** "The Fake News Media will not talk about the importance of the United Nations Security Council's 15-0 vote in favor of sanctions on N. Korea!"

CHASER: LEAD STORY IN WSJ -- "North Korea Says It Would Use Nukes Only Against U.S.: Pyongyang threatened it will use its nuclear weapons against U.S. if provoked militarily," by Ben Otto, Jake Maxwell Watts in Manila and Farnaz Fassihi at the United Nations: "Defying pressure from new United Nations sanctions, North Korea threatened to use nuclear weapons against the U.S. if militarily provoked and said it would 'under no circumstances' negotiate on its nuclear and missile weapons programs.

"North Korean Foreign Minister Ri Yong Ho on Monday delivered the strongly worded statement to reporters on the sidelines of an Asian regional security conference hours after U.S. Secretary of State Rex Tillerson vowed to implement the stiffest sanctions yet imposed on the Pyongyang regime. ...

"Mr. Ri's statement rejected assertions by some Security Council members that North Korea's military programs constituted a global threat and said they were instead a legitimate option for self-defense 'in the face of a clear and real nuclear threat posed by the U.S.' If the U.S. attacks North Korea, the country 'is ready to teach the U.S. a severe lesson with its nuclear strategic force,' the statement said. Other countries were not being threatened unless they joined the U.S. in a military attack, it said. ... 'The unwise conduct of the U.S. will only speed up its own extinction,' North Korea said in the statement, adding that the U.S. was getting 'more frenzied and desperate' instead of learning to coexist with the country." http://on.wsj.com/2vAn1l7

-- THE ATTACKS AGAINST SEN. DICK BLUMENTHAL -- which were spread across nearly 10 hours -- seem completely and utterly irrelevant in comparison to North Korea threatening to start a nuclear war with the U.S. ... **REMEMBER WHEN** pundits and operatives were looking to recently installed chief of staff John Kelly to set a new tone at the White House? He may have changed how senior advisers are granted meetings with the commander in chief, but clearly Trump still has control of his Twitter account, which is the single most public facing element of his presidency.

TRUMP'S STRATEGY -- "Trump appeals to loyalists as support slips, agenda stalls," by AP's Julie Pace and Laurie Kellman: "President Donald Trump is trying to combat new weakness in his Republican base and re-energize his staunchest supporters after months of White House backbiting and legislative failures. White House officials have been urging the president to fire up his efforts on immigration and other agenda items favored by conservatives, evangelicals and working-class whites who propelled him to the Oval Office. The president has increased his media-bashing via Twitter and staged rallies hoping to marshal his base to his defense. On Monday, he lashed out at Democratic Sen. Richard Blumenthal in multiple tweets after the lawmaker expressed support for a special counsel's probe of Trump's associates' links to Russia.

"The surge underscores Trump's shaky political position not yet seven months into his presidency. Trump has remained deeply unpopular among Democrats, and there are signs that his support among Republicans may be softening. His advisers are aware that a serious slip in support among his core voters could jeopardize hopes for a major,

early legislative accomplishment and would certainly increase Republicans' worries about his re-election prospects." http://bit.ly/2wCPiEs

ABOUT THOSE NUMBERS -- "Poll: Trump support eroding with his base," by Henry C. Jackson: "A new poll shows Donald Trump's support dropping with his strongest supporters as he hits the 200-day mark of his presidency. In a fresh survey from CNN, conducted by the independent research company SSRS, Trump's 'strong approval' among Republicans has dropped from 73 percent in February, shortly after he took office, to 59 percent now. Overall, 83 percent of Republicans approve of Trump's performance, with 14 percent disapproving.

"Notably, there's erosion in enthusiasm among important subgroups: Trump's 'strong approval' among whites without a college degree - a group that helped propel him to office -- dropped 12 percentage points from February. The poll mirrors other recent surveys in finding Trump's overall approval rating underwater. It comes after a month of setbacks and turmoil for the White House -- including the failure to pass an Obamacare repeal in the Senate and the replacement of Trump's chief of staff. CNN and SSRS conducted the survey to mark the 200-day point of Trump's presidency." http://politi.co/2wp4PZ9

ANNIE KARNI: "Trump bashes the media but still loves good press": "Media bashing has become one of the organizing principles of Donald Trump's presidency. But behind the scenes, the Trump machine is eagerly promoting the nuggets of positive press they receive from the very outlets the president seeks to discredit. The White House director of rapid response, Andy Hemming, 31, spends his days immersed in cable television, Twitter, print and online media to suss out positive stories about Trump, which he blasts back out to his list of more than 1,000 influencers -- mainly reporters, but also television talking heads -- who together craft the overall story of Trump's presidency.

"There's nothing new about an administration trying to promote its wins. But in the Trump White House, where Hemming's job is not to discredit the mainstream media but to celebrate stories the administration likes, it can seem like he is trying to bail out a sinking boat with a teacup. And it's a role that feels out of sync with Trump's constant attacks on the press. ...

"'They don't always get it wrong,' White House press secretary Sarah Huckabee Sanders said of mainstream news outlets like the New York Times and CNN. 'But for every one good story we push out, there are probably 150 really bad process stories, or hit pieces, on the administration.' ... [F]or the first few weeks of the administration ... Hemming would blast out his carefully curated clips, sometimes multiple times a day, with the goal of driving more positive news coverage. But for weeks, sources inside the White House said, no one informed him that the White House IT system could not handle an email going out such a big list, and that all of his emails were all being blocked by a firewall and reaching an audience of zero readers. That glitch has since been corrected, and the administration thinks Hemming is helping to slowly change the

course of the coverage it gets." http://politi.co/2hFIc0rX

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : If you know only one fact about rising drug costs, know this one: drug makers set prices for prescription drugs. To help manage nearly double-digit price increases, employers, unions and government programs use PBMs to negotiate lower net prices to help curb costs for employers and patients. Learn more at affordableprescriptiondrugs.org ******

BIG CLIMATE NEWS -- NYT A1, "Government Report Finds Drastic Impact of Climate Change on U.S.," by Lisa Friedman: "The average temperature in the United States has risen rapidly and drastically since 1980, and recent decades have been the warmest of the past 1,500 years, according to a sweeping federal climate change report awaiting approval by the Trump administration. The draft report by scientists from 13 federal agencies, which has not yet been made public, concludes that Americans are feeling the effects of climate change right now. It directly contradicts claims by President Trump and members of his cabinet who say that the human contribution to climate change is uncertain, and that the ability to predict the effects is limited. ...

"Scientists say they fear that the Trump administration could change or suppress the report. But those who challenge scientific data on human-caused climate change say they are equally worried that the draft report, as well as the larger National Climate Assessment, will be publicly released." http://nyti.ms/2uk7bqC ... ***The draft report*** http://nyti.ms/2vINDQo

WASHINGTON INC. -- "Secrecy and Suspicion Surround Trump's Deregulation Teams," by NYT's Danielle Ivory and ProPublica's Robert Faturechi: "When President Trump ordered federal agencies to form teams to dismantle government regulations, the Transportation Department turned to people with deep industry ties. One appointee had previously lobbied the department on behalf of American Airlines. Another held executive roles for several electric and hybrid car companies regulated by the department. A third was a lawyer who represented United Airlines in regulatory matters.

"The three appointees have been identified by The New York Times and ProPublica in a continuing effort to track members of the deregulation teams. The appointments, previously unreported, follow a pattern identified by the two news organizations: By and large, the Trump administration has stacked the teams with political appointees, some of whom may be reviewing rules their former employers sought to weaken or kill. A full vetting of industry connections has been difficult because some agencies have declined to provide information about the appointees - not even their names." http://nyti.ms/2wCWPTN

--"Trump's Stalled Trade Agenda Leaves Industries in the Lurch," by NYT's Alan Rappeport: "Donald J. Trump promised Americans that they would be exhausted from 'winning' on trade under his presidency. But nearly seven months after Mr. Trump took office, the industries he vowed to protect have become tired of something else: waiting. After beginning his presidency with a bang by withdrawing from the Trans-Pacific

Partnership pact in January, Mr. Trump has accomplished little else of significance when it comes to reorienting deals with other countries. Instead, his administration has been struggling to work through the complicated rules that dictate international commerce.

"All the while, they are learning that bold campaign promises are hard to keep when many voices advocate different plans. For many businesses that had raised their hopes, frustration is mounting by the day. America's steelworkers are on edge as they wait for Mr. Trump to fulfill his promise to place tariffs on steel imports. Home builders are desperate for the president to cut a deal with Canada to end a dispute over its softwood lumber exports. And cattle ranchers are longing for a bilateral pact with Japan to ease the flow of beef exports." http://nyti.ms/2vlr3Y1

FOR YOUR RADAR -- "U.S. May Begin Airstrikes Against ISIS in Philippines," by NBC News' Courtney Kube: "The Pentagon is considering a plan that allows the U.S. military to conduct airstrikes on ISIS in the Philippines, two defense officials told NBC News. The authority to strike ISIS targets as part of collective self-defense could be granted as part of an official military operation that may be named as early as Tuesday, said the officials. The strikes would likely be conducted by armed drones. If approved, the U.S. military would be able to conduct strikes against ISIS targets in the Philippines that could be a threat to allies in the region, which would include the Philippine forces battling ISIS on the ground in the country's southern islands." http://nbcnews.to/2vypyfj

ISAAC DOVERE in the latest **"OFF MESSAGE"** podcast: "Thirteen independent candidates who feel they don't fit in the Republican Party in the age of Donald Trump are joining forces with a few Democrats eyeing runs for governor and Senate in 2018. The plan, this weekend at the Union League in downtown Philadelphia, is to create shared infrastructure and funding for a slate of campaigns around the country, in the hopes of making this more than the latest go-nowhere whining about how awful the two-party system is. 'If a candidate comes up and says, 'I'm a Republican, or 'I'm a Democrat,' people know within probably 70 percent of where they stand. With an independent, it's like, 'OK, tell me about yourself," Alaska Gov. Bill Walker, the only independent governor in the country, told Isaac Dovere for the latest Off Message podcast.

"Expected in Philly: Terry Hayes, running for governor in Maine; Greg Orman, expected to run for governor in Kansas; and Evan McMullin, looking at a Senate run in Utah against Orrin Hatch. Walker on climate change: 'it's real because we're seeing it.' On being concerned about Alaska being hit by North Korea: 'No one's hiding under the desk that I know of at this point, but we do have to make sure we have the technology and awareness of what could happen.' On Sarah Palin: 'I was looking for results and not just attention.' On inspiring more young independents: 'I think they may have seen the path, perhaps that they don't have to necessarily fit into a particular box.'" http://politi.co/2vhzpnx ... ***Listen to the full podcast*** http://apple.co/2e2dLvm

-- "Sanders 'litmus test' alarms Democrats: Bernie Sanders' single-payer plan sparks

fears of primary election challenges," by Gabe Debenedetti: http://politi.co/2vg8uIo

BIG NEWS FROM JERUSALEM -- "NETANYAHU: I WON'T BE TOPPLED, I HAVE NOTHING TO FEAR: Likud planning mass rally in support of Netanyahu ... A-G to indict Sara Netanyahu," by Jerusalem Post's Gil Hoffman: "Prime Minister Benjamin Netanyahu has rejected criminal suspicions leveled against him in recent days, amid speculation that his tenure will end soon.

"According to a report on Kan, the Israeli Public Broadcasting Corporation, Netanyahu lashed out -- in private conversations with Knesset members -- at the press, the opposition and members of his own party, whom he accused of conspiring to unseat him. 'They are trying to get me and attempting to topple the Right,' Netanyahu told senior officials in his coalition, according to the report. 'This is not new. They have been trying for many years. I don't see us going to elections now.'

"Netanyahu mocked reports about his former chief of staff , Ari Harow, who has turned state's witness against him, and Case 2000, in which he is accused of conspiring to harm one newspaper and help another. 'It's not like I am going tomorrow and they are going to replace me,' he said. 'I don't know what they want from me. I have nothing to fear. I don't think I have a problem.'" http://bit.ly/2vAx6OH

NOT HOW WE REMEMBER IT! -- "PM's Iran speech to Congress left no bad blood, top Democrat says," by Times of Israel's Raphael Ahren: "'All of us together support Israel and there is no residual impact [from Netanyahu's speech], whether you were pleased or not pleased,' House Democratic Whip Steny H. Hoyer told reporters at a press conference in Jerusalem." http://bit.ly/2vfeoeG

THE JUICE ...

-- WAPO'S RELIABLE SOURCES: "Stephen Miller blasted a reporter as 'cosmopolitan.' But he lives in a $1 million CityCenter condo." http://wapo.st/2hFq8IW

-- REP. ERIC SWALWELL (D-CALIF.) is heading to Iowa for this week's 2017 Iowa WingDing, the big annual Democratic grassroots fundraiser slated for Aug. 11. California Playbooker Carla Marinucci writes us: "Swalwell's made multiple trips to the Hawkeye State this year. The chair of the Democratic Steering and Policy Committee has talked with young Iowa voters in his role as a founder of the Democratic Party's 'Future Forum,' an effort to engage Millennial voters around the country. In February, he stared at the 'Unite, Resist, Reclaim' event for Iowa Progressive Dems."

-- L.A. TIMES: "'May you die in pain': California GOP congressman gets an earful at town hall," by Phil Wilson in Chico: "'May you die in pain.' That was the nastiest moment of Republican Rep. Doug LaMalfa's early morning town hall in the Northern California town of Chico on Monday. The wish was uttered by an older man who criticized LaMalfa for voting for the House GOP plan to replace the Affordable Care Act.

He was also holding a pink sign that read 'Lackey for the Rich!'" http://lat.ms/2vKmQ76

-- **@justinhendrix:** "Blackwater founder Erik Prince tells @ErinBurnett he met w/ Russian 'fund manager' over 'one beer' in Seychelles." http://bit.ly/2ukg03M

TRUMP'S TUESDAY -- THE PRESIDENT will attend an opioid briefing with HHS Secretary Tom Price in Bedminster ... **VP MIKE PENCE** is lunching with Sen. Marco Rubio (R-Fla.), Rep. Albio Sires (D-N.J.) and Rep. Jeff Duncan (R-S.C.) in D.C.

Playbook Reads

WHAT LANGLEY IS READING -- NYT A1, "Trump Likes When C.I.A. Chief Gets Political, but Officers Are Wary," by Matt Rosenberg in Aspen: "Sweating under the hot glare of stage lights, Mike Pompeo, the director of the Central Intelligence Agency, had reached the limits of his patience with questions about Russian interference in the presidential election. 'Just look,' he snapped during the rare public appearance last month at the Aspen Security Forum. 'This is the 19th time you all have asked.' It was, in fact, only the fourth question about Russia that evening. But Mr. Pompeo could be excused for snapping: He runs an agency that is certain Russia meddled in the election, yet serves a president who has dismissed the talk of Russian interference as 'fake news' and denounced the investigation into it as a witch hunt.

"All C.I.A. directors must balance the political demands of the president they serve with the agency's avowedly apolitical idea of itself. Yet rarely has a director had to straddle so wide a breach as has Mr. Pompeo, perhaps the most openly political spy chief in a generation - and one of President Trump's favorite cabinet members." http://nyti.ms/2veTmN2

ATTN. WEST WING -- JASON ZENGERLE in GQ's September issue, "Who's Afraid of President Pence?" (online headline: **"What If Mike Pence Becomes President?"**): "No matter the circumstances of Trump's exit -- whether he leaves early or not -- Pence will inherit a hangover. Recall Gerald Ford's efforts, in the wake of Watergate, to declare that America's long national nightmare is over.' Pence might need to do something similar. ... [I]f Trump were to resign or be forced from office, Republicans would struggle in the long shadow of scandal and turmoil -- and nobody would be more enveloped in it than Pence himself. ... Consensus holds that Pence would want to surround himself with new staff -- particularly Republican heavyweights, aides and operatives of the stature and pedigree that Trump wasn't able to lure to the White House. ...

"Surprisingly, one high-profile survivor might be Kellyanne Conway, who served on Pence's gubernatorial campaign as a pollster. At one point she even urged him to run for president in 2016, and later she talked him up to Trump during the veep search. 'A

lot of where Mike is today,' says the former Pence adviser, 'he owes to Kellyanne.' ... [F]or all the fears of a coming theocracy under Pence, more sober-minded observers suspect he could be largely hamstrung on sweeping social issues. Indeed, Pence's religious fervor might, ironically, give him less room to push for some of the conservative policies Trump has enacted." ***With cameos from Bill Kristol, Steve Schmidt, Ramesh Ponnuru, Ryan Williams, Rex Elsass, Anita Dunn*** http://bit.ly/2hEnrB5

-- **@HallieJackson:** "VP Press Secy. responds 'I don't talk about hypotheticals' when asked if Pence would run for POTUS in 2020" http://bit.ly/2hF6mqB

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers and other health care purchasers; however, the list price - the important starting point for those negotiations -- continues to rise, at a rate of nearly ten percent in 2016 alone. Increased competition, faster reviews of generics and biosimilars and ending anti-competitive practices can also bring down the cost of medications for patients. Learn more at affordableprescriptiondrugs.org ******

GEORGE ORWELL ALERT -- "U.S. federal department is censoring use of term 'climate change', emails reveal," by The Guardian's Oliver Milman: "A series of emails obtained by the Guardian between staff at the Natural Resources Conservation Service, a USDA unit that oversees farmers' land conservation, show that the incoming Trump administration has had a stark impact on the language used by some federal employees around climate change. A missive from Bianca Moebius-Clune, director of soil health, lists terms that should be avoided by staff and those that should replace them. 'Climate change' is in the 'avoid' category, to be replaced by 'weather extremes'. Instead of 'climate change adaption', staff are asked to use 'resilience to weather extremes'. The primary cause of human-driven climate change is also targeted, with the term 'reduce greenhouse gases' blacklisted in favor of 'build soil organic matter, increase nutrient use efficiency'. Meanwhile, 'sequester carbon' is ruled out and replaced by 'build soil organic matter'". http://bit.ly/2uBzRL8

WHAT PREET BHARARA IS READING -- "The White House Has Pitched a Nominee For Manhattan's Powerful U.S. Attorney Opening," by BuzzFeed's Zoe Tillman: "The White House is considering Geoffrey Berman, an attorney who practices in New Jersey and New York and one of Rudolph Giuliani's law partners, to lead the U.S. attorney's office in Manhattan - one of the most high-profile federal law enforcement jobs in the country. Berman's name was included as part of a package of proposed candidates for New York judicial and U.S. attorney vacancies sent by the White House in mid-July to New York's Democratic senators." http://bzfd.it/2veTKvc

VALLEY TALK -- "Google Fires Author of Divisive Memo on Gender Differences," by Bloomberg's Mark Bergen and Ellen Huet: "Google has fired an employee who wrote an internal memo blasting the web company's diversity policies, creating a firestorm across Silicon Valley. James Damore, the Google engineer who wrote the note, confirmed his dismissal in an email, saying that he had been fired for 'perpetuating

gender stereotypes.' He said he's 'currently exploring all possible legal remedies.'" https://bloom.bg/2ujZuB4

-- "The End of Typing: The Next Billion Mobile Users Will Rely on Video and Voice," by WSJ's Eric Bellman: "The internet's global expansion is entering a new phase, and it looks decidedly unlike the last one. Instead of typing searches and emails, a wave of newcomers-'the next billion,' the tech industry calls them-is avoiding text, using voice activation and communicating with images. They are a swath of the world's less-educated, online for the first time thanks to low-end smartphones, cheap data plans and intuitive apps that let them navigate despite poor literacy. Incumbent tech companies are finding they must rethink their products for these newcomers and face local competitors that have been quicker to figure them out." http://on.wsj.com/2hE84IJ

Playbookers

CONGRATS! PLAYBOOKERS on Town & Country's "The T&C 50: New Modern Swans -- The young women making waves in the age of influence": Tara Palmeri, Katy Tur, Brianna Keilar, Olivia Nuzzi and Abby Phillip. http://bit.ly/2vzgqr0

TRANSITIONS - OBAMA ALUMNI: Eric Pelofsky has joined Shell's D.C. office in as director of international government relations. He was most recently a visiting fellow at the Washington Institute for Near East Policy, a special assistant to President Obama at the NSC and is a 16-year government veteran.

-- Aaron Davis has started as national political director at J Street. He most recently was director of FEMA's congressional affairs division.

-- NEW AIRBNB HIRES -- Kaelan Richards is joining Airbnb as the new U.S. East and Canada public affairs manager, based in San Francisco. Previously, she was senior regional communications director at the Obama White House. **Molly Weedn** is joining Airbnb as the U.S. West public affairs manager, **James Lynch** is the company's new director of executive communications at Airbnb, and **Katharine Kendrick** is the new international public policy manager.

-- @AndrewHClark: "Some news: After 2.5 years, Wednesday will be my last day at @TheIJR. I'll be joining the team at @ShopFloorNAM as digital comms manager."

-- @APDiploWriter: "Veteran #US diplomat David Satterfield to replace retiring Stu Jones as acting asst secstate for Near East in Sept, per @statedept officials".

WELCOME TO THE WORLD - Will Ritter, founder of Poolhouse digital ad agency and a Romney 2012 alum, and **Kelli Ritter,** special assistant to Mitt and Ann Romney, email friends and family: "We're so excited to announce that our son, Calvin John Ritter, was born [Monday] at 3:41 p.m. He's 8 pounds, 11 ounces, and perfect. Kelli is happy and

healthy; we're all here at the hospital munching on delivered subs and singing Sturgill Simpson songs together. We're so excited to be parents and so blessed to have your love and advice during these past nine months. Can't wait for you to meet Cal." ***Instapic*** http://bit.ly/2woP4S9 ... ***Pic*** http://bit.ly/2wpiak7

OUT AND ABOUT -- Caitlin Legacki celebrated her birthday with Bingo Night at Kingfisher on Monday. The Camp 30 crew, former staffers to Sens. Jeanne Shaheen (D-N.H.) and Claire McCaskill (D-Mo.), and many others gathered to celebrate Legacki and shout "BINGO" as loud as possible. **SPOTTED:** Jen Maclellan, Chris Ortman, Chris Hayden, Kristen Bartoloni, Nu Wexler, Eli Yokley, Justin Vail, Ben Shannon, Megan Hupp, Abbey Watson, Vanessa Ide, Dan Jasnow, Thomas Winslow, Emily Beyer and Jeff Solnet.

BIRTHDAY OF THE DAY: Ron Klain, EVP and general counsel at Revolution, is 56. **A fun fact about Ron:** "The spark that flamed my interest in politics came when I was six years old, and I met Bobby Kennedy when he was campaigning in advance of the 1968 Indiana primary. He filmed a campaign commercial using the backdrop of the small plumbing supply business my Dad owned, and I got to shake RFK's hand. Decades later, when I worked in the White House, I told advance people: When you pick that site for a Presidential photo op, or 'real people' event, you never know whose life you will change. That day in 1968, some advance person absolutely changed mine." Read his Playbook Plus Q&A: http://politi.co/2uC7zjA

BIRTHDAYS: Catharine Cypher, celebrating on a boat with her mom and friends in Michigan, extending her stay at "home," where she was maid of honor in her best friend's wedding this weekend (hat tip: Kellyanne Conway) ... Sunny Feldman (h/t Vale) ... U.S. Ambassador to Israel David Friedman is 59 (h/t Jewish Insider) ... WaPo's Jackson Diehl ... Virginia Heffernan ... Claire Brinberg, senior producer and political editor at ABC's "World News" with David Muir ... Sam Wilson, a lawyer in SF for O'Melveny & Myers ... Politico's Vinay Mehra ... Tyler Bowders ... Kate Damon ... CBS News' Kylie Atwood is 28 (h/t Jackie Alemany, filing from Nairobi, Kenya, which is holding an election today - Alemany is undergoing hostile environment training in the country) ... Emily Rogers, comms manager at Urban Alliance ... Kelly Jemison Needham is 29 ... Michael Levin, who's written for Politico Magazine, is 59 ... Dee Ertukel ... Jonah Seiger ... Sara Maldonado ... Will Caggiano ... Marc Ambinder ... Elizabeth Brakebill McAdam ... Karen Hancox ... James Feinstein ... David Bass, president and CEO of Raptor Strategies (h/t Tim Burger) ... Josh Sternberg (h/t Journophish) ...

... Ken Cook, president of the Environmental Working Group (h/t Jon Haber) ... former FEC chairman Michael Toner, partner at Wiley Rein ... Hayley Matz Meadvin ... Mike Schwartz ... Joe Walsh, former deputy assistant secretary of education for state and local engagement at the Department of Education under Arne Duncan, is 51 (h/t Judge James G. Gilbert) ... AEI media relations manager Meg Cahill is 25 (h/t Maddie James) ... Mike Biundo, co-founder of Right On Strategies ... William Cronin ... Jonah Seiger ... Jeff Chu ... Lance Frank, executive director of comms at CBS News (h/t Caitlin Conant) ... former Michigan Gov. Jim Blanchard is 75 ... Nuriya Janss ... John Lambert ... Mike

Dankler ... Luke Londo ... Habib Durrani ... Dan Betts ... Kristina Dei ... Samantha Brady ... Mallory Hobson ... Fredrick Odol ... Michael Burwick ... former Sen. John Culver (D-Iowa) is 85 ... Karen Hancox ... Dee Ertukel ... Alison Diminuco ... Jay Gersema ... Cameron Terry ... Xerxes Bhappu (h/ts Teresa Vilmain)

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : The high prices that drug makers set for prescription drugs can put financial strain on patients, employers, unions and others who provide health care coverage to more than 50 percent of Americans. Pharmacy benefit managers negotiate the lowest net price for prescriptions on behalf of employers, unions and government programs. But, as list prices - the starting point for those negotiations -- continue their nearly double-digit increases, the effects ripple throughout the system. The key to ensuring greater access and affordability lies in fostering greater competition. Facilitating faster reviews of generics and biosimilars, identifying off-patent drugs with little or no generic competition, and ending anti-competitive practices that keep safe, effective alternatives out of the market are also key to abating rising drug costs for patients. Learn more at affordableprescriptiondrugs.org ******

Subject: POLITICO's Morning Energy, presented by ExxonMobil: Reading the tea leaves on Clean Power Plan repeal — More political activity from Zinke revealed — Antiquities Act revamp gets its day in committee

By Anthony Adragna | 10/11/2017 10:00 AM EDT

With help from Alex Guillén and Emily Holden

LONG CARBON RULE BATTLE LIES AHEAD: President Donald Trump's administration sought to frame Tuesday's move to rescind the Obama-era Clean Power Plan as fulfilling a campaign process, but it really just kicked off what's likely to be an arduous and lengthy legal and regulatory process that may ultimately result in a replacement rule with very modest reductions in the emissions that fuel climate change. "This is the beginning of the process to carry out the president's promise to make sure that we do our job at the agency within the bounds of the law and don't declare war on certain sections of our economy," EPA Administrator Scott Pruitt said on "Fox News," his only public appearance Tuesday to discuss his proposed rule.

Many state officials, environmental advocates, businesses and reporters were left wondering why they hadn't received any sort of briefing or additional background before or after the proposal's release - especially since senior agency officials had a closed phone call Tuesday morning with conservative organizations where they took questions from groups like the Heartland Institute and State Policy Network, as Pro's Emily Holden reports. Clint Woods, the director of the Association of Air Pollution Control Agencies, which represents mostly conservative state air agencies, said his members got a heads up on timing but would be "looking forward to more engagement prior to major announcements in the future."

Joe Goffman, EPA general counsel when the Clean Power Plan was proposed and finalized, said the agency typically had background conversations with all of those groups when rolling out a major proposal. "We thought that it was an elementary part of our obligation to present information to state governments, to the affected industry, often very broadly defined, and to environmental advocacy groups," Goffman said. A phone call between the administrator and reporters, and a briefing on the Hill for lawmakers was also customary, he said. Pruitt has accused Obama's EPA of not conducting enough outreach or listening enough to states, which Goffman said is "demonstrably false." The agency did not respond to questions about its outreach on the rollback.

ICYMI: Here's links to EPA's fact sheet, proposal and regulatory impact analysis.

Five things: Pro's Alex Guillén and Eric Wolff take a look at five of the biggest policy changes the Trump administration has made to try to prop up the prospects of fossil fuels. 1) Killing the crown jewel of Obama's climate change legacy by axing the Clean Power Plan, 2) A push to shore up coal's place in the nation's electricity marketplace, 3) The likelihood of trade barriers on imported solar products, 4) Tapping the brakes on tightened mileage standards that Obama had imposed for cars sold from 2022 to 2025 and 5) Actions designed to make federal lands more

amenable to fossil fuel development.

Push to shutter coal plants gets another jolt: Former New York Mayor Michael Bloomberg is at the Sierra Club's HQ this morning at 11:45 a.m. where he'll announce "an increased commitment" to shutter the U.S. coal fleet even amid the repeal of the Clean Power Plan. That comes as the Union of Concerned Scientists released an analysis finding 21 percent of the nation's coal fleet uneconomic and an additional 18 percent already slated for retirement or conversion to natural gas.

Quotable: California Senate leader (and potential Sen. Dianne Feinstein primary challenger) Kevin de Lèon not mincing words on the withdrawal: "Washington's utter failure to confront the existential threat of climate change will go down among the most shameful chapters in US history," he tweeted.

Here's where we are: EPA started the process to roll back the signature Obama-era effort to combat climate change even as the U.S. is reeling from back to back to back to back hits from hurricanes and ferocious wildfires slam California. Assuming a disaster aid package eventually clears Congress as expected, lawmakers will have spent more than $50 billion responding to the natural disasters already, and House Majority Leader Kevin McCarthy said last week "I do not believe this will be the last of the supplementals." Three weeks after Hurricane Maria slammed into Puerto Rico, 84 percent of the island still lacks electricity and 36 percent of residents still don't have potable water, according to official figures.

TIMELY TELEVISION VIEWING: "Frontline" titles its episode tonight "War on the EPA," as the PBS show focuses on Pruitt's rise from an anti-EPA crusader as Oklahoma attorney general to running the agency. Trailer for the episode here.

WE'RE ROLLING RIGHT THROUGH THE MIDDLE OF THE WEEK! I'm your host Anthony Adragna, and Independent Petroleum Association of America's Neal Kirby was first to identify Sen. Bill Cassidy as our most recent physician elected to the Senate. For today: Who is the only senator to win a reelection race in their 90s? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

SKI RESORTS, ALASKAN STEAKHOUSE, OH MY! Interior Secretary Ryan Zinke attended at least two additional political fundraisers during trips he took for official Interior business, Pro's Esther Whieldon and Ben Lefebvre scoop . Federal law permits Cabinet officials to participate in partisan political activities on their own time and without using any federal resources, but FEC records don't list any reimbursement payments to Interior for the events. "Both law and common sense tell us that taxpayer resources are supposed to be used when you're doing the taxpayers' business [but] are not supposed to be used to help candidates get elected," said Brendan Fischer of the nonprofit watchdog organization Campaign Legal Center.

The two events were:

- A mid-March fundraiser at a ski resort in Big Sky, Mont., organized by committees affiliated

with Republican Sen. Steve Daines. Donors were asked to contribute $3,000 if they were attending on behalf of a political action committee or $1,500 for an individual. Also in attendance: Sen. John Hoeven and Senate Energy Chairman Lisa Murkowski. He didn't charge for lodging or his per diem for part of the trip.

- A May 31 fundraiser for Alaskan Rep. Don Young where a Young campaign spokesman, Matt Shuckerow, said the secretary made "only very brief remarks." He said the campaign "took concerted efforts to follow" strict guidance from Interior's ethics personnel.

Interior's response: Spokeswoman Heather Swift said ethics officials signed off on all trips and they all complied with the law. "The Interior Department under the Trump Administration has always and will always work to ensure all officials follow appropriate rules and regulations when traveling, including seeking commercial options at all times appropriate and feasible, to ensure the efficient use of government resources," she said.

NOT PLEASED: Amid weeks of reporting on non-commercial travel and other troubling behavior from Cabinet officials, the acting head of the Office of Governmental Ethics issued a memo warning he is "deeply concerned" by recent actions. Among the suggestions is "modeling a 'Should I do it?' mentality versus a 'Can I do it?' mentality" in their actions. "It is essential to the success of our republic that citizens can trust that your decisions and the decisions made by your agency are motivated by the public good and not by personal interests," David Apol wrote.

THE WOTUS WITH THE MOSTEST: The Supreme Court today will take up a wonky but important question central to federal water law: Should challenges to the Obama administration's Waters of the U.S. rule go through a district court first or straight to an appellate venue? Of course, the Trump administration is working to repeal WOTUS in the coming months and says it will issue a rewritten version early next year. But this venue question is all but guaranteed to apply again, meaning SCOTUS guidance could prove useful.

What you need to know: The Clean Water Act says that most CWA regulations and actions should be challenged first at the district level, but it lists seven exceptions that would go straight to a circuit court. Two are in play here: one regarding rules affecting effluent limitation guidelines, and one for any action approving or denying discharge permits. The Trump administration argues both exceptions apply, and the suits should go to a circuit court first. Various challengers, led by the National Association of Manufacturers, want it to go through district courts first.

History brief: After the rule was released, lawsuits were filed in both district and circuit courts throughout the country. After some district-level proceedings that led to a stay of WOTUS in 13 states only, the circuit-level cases were consolidated into one mega-case before the 6th Circuit, which then issued a nationwide injunction. The 6th Circuit then issued a complicated 1-1-1 ruling that concluded that it should indeed hear the challenge first. One judge said both exceptions apply, one said only one exception applies and the third said neither applies and the challenges should first go through district courts.

Why it matters: This isn't entirely an esoteric spat. Supporters of district-first litigation argue

the Clean Water Act gives more time to challenge regulations that go to lower courts first. It also means challengers can pick the district court where they want to sue, whereas circuit-first challenges would be randomly consolidated. Meanwhile, those who want circuit-first review argue that it provides more certainty and helps avoid patchwork problems - such as the 13-state WOTUS freeze.

EPICALLY BUSY DAY AT HOUSE NATURAL RESOURCES: The panel is slated to convene two separate hearings Wednesday to examine controversial measures on offshore drilling and the Antiquities Act:

- At 2 p.m, the Energy and Mineral Resources Subcommittee considers a draft of the Accessing Strategic Resources Offshore Act, which would expand offshore revenue sharing program to additional states; prevent future presidents from withdrawing sections of the outer continental shelf from drilling or designating marine sanctuaries; and repeal certain Obama-era rules on Arctic drilling, among other things. Witnesses include former Senate Energy Chairwoman Mary Landrieu.

- The full committee then gathers at 4 p.m. to mark up Chairman Rob Bishop's long-awaited effort to overhaul the Antiquities Act. The bill, H.R. 3990 (115), would require a federal environmental review process to designate any monument more than 640 acres in size, require the sign off from local officials on new large monuments and prohibit marine national monuments "with no archeological or historic sites in need of protection." Committee members will also consider a resolution requiring Zinke to disclose more information about his review of existing national monument designations.

** **Presented by ExxonMobil:** We're collaborating with FuelCell Energy on a novel idea to use fuel cells to capture carbon at natural gas power plants, and in the process reduce emissions and increase electrical output. This technology could be a game changer in addressing the world's growing need for energy, while also reducing the impact on the environment. Learn more. **

A NEW DISASTER EMERGES - CALIFORNIA WILDFIRES: Trump declared a major disaster in California Tuesday as wildfires have forced the evacuations of tens of thousands, cost at least 17 lives to date and caused billions in damage. "We are with you, our prayers are with you, and we will be with you every day until we put the fires out and stand with these families to rebuild these communities," Vice President Mike Pence said alongside McCarthy and Rep. Jeff Denham after a briefing Tuesday. Separately, California Sen. Kamala Harris and Feinstein asked Trump in a letter to take all steps to release federal aid "as soon as possible."

Ryan heading to Puerto Rico Friday: According to multiple reports, Speaker Paul Ryan heads to Puerto Rico Friday along with Cathy McMorris Rodgers, the fourth-highest House Republican; Appropriations Chairman Rodney Frelinghuysen; top Appropriations Democrat Nita Lowey and Puerto Rico Resident Commissioner Jenniffer González. That comes as the Financial Oversight and Management Board for Puerto Rico hired Williams & Jensen to lobby the federal government on disaster relief and recovery efforts (h/t POLITICO Influence). The White House late Tuesday asked for an additional $4.9 billion in emergency hurricane aid to help Puerto Rico as part of a disaster funding package the House is still expected to consider this week, Pro

Budget and Appropriation's Sarah Ferris reports.

ON THE HOUSE FLOOR: Lawmakers today are slated to consider a bill of interest to ME fans. The Power And Security Systems Act S. 190 (115) would extend energy efficiency standards exemptions for external power devices and is slated to be considered under suspension of the rules, requiring two-thirds support for passage.

PROTESTING PERRY'S PUSH AT FERC: The Nuclear Information and Resource Service and allied organizations are greeting FERC employees today at 8:45 a.m. to protest Perry's push for new rules that "properly value" the coal and nuclear sectors. That comes as National Rural Electric Cooperative Association CEO Jim Matheson sent Perry a letter thanking him for "jumpstarting a conversation" about the nation's electric markets.

DRINKING WATER UTILITIES ENTER FARM BILL FRAY: The American Water Works Association wants Congress to include provisions and funding to better protect drinking water sources from agricultural runoff, Pro Ag's Jenny Hopkinson reports. The group is also pushing for "robust overall funding" for the conservation title - keeping it at $6 billion, if not adding to the current allotment.

FROM THE DEPARTMENT OF WHERE ARE THEY NOW: With his red sweater, coal plant worker Ken Bone rose to national attention as an undecided voter during last year's presidential race but he's since become quite critical of the Trump administration, CNN reports. "Almost anybody who is currently a Democrat in the Senate, I think I would probably vote for over Trump," he said.

DEPARTMENT OF AWKWARD TIMING: Perry gave an interview to the American Gas Association's magazine that prominently features a picture of the secretary with disgraced Rep. Tim Murphy. Read his interview here.

MOVER, SHAKER: Keith Maley has started as director of PR at the Trust for Public Land. He previously was director of regional media in the Obama White House (h/t Playbook).

Liam Donovan has joined Bracewell's Policy Resolution Group as a lobbyist specializing in tax, infrastructure, energy and other issues. He comes from the Associated Builders and Contractors where he was as senior director of legislative and political affairs.

Amy Graham is starting next week as communications director for Sen. Todd Young. She most recently worked as senior communications adviser and deputy associate administrator at the EPA (h/t Playbook).

QUICK HITS

Summaries

AIR
SAB Risk and Technology Review Methods Panel Meeting
AIR

Notice of the EPA announces a meeting of the Science Advisory Board Risk and Technology Review Methods Panel to discuss the draft report on screening methodologies to support risk and technology reviews (May 2017 external review draft). The report reviews newly developed screening methods designed to assess the risk to public health and the environment that would remain after stationary sources of hazardous air pollutants come into compliance with the EPA's maximum available control technologies standards. The meeting is scheduled for Dec. 5, 2017, via teleconference. Comments are due Nov. 28, 2017. Contact: Bryan Bloomer; EPA; 202-564-4222; bloomer.bryan@epa.gov

82 FR 48227 (10/17/2017)

Regulatory Update

AIR
Texas SIP and FIP/Regional Haze
AIR

Final rule of the EPA partially approves and partially disapproves a revision to the Texas SIP for regional haze and the Texas federal implementation plan (FIP). The partial approval addresses the state's determination that its electric generating units (EGUs) are not subject to best available retrofit technology (BART) for particulate matter (PM). The partial disapproval addresses the finding that the BART alternatives to address sulfur dioxide (SO2) and nitrogen dioxide BART at state EGUs meet the interstate visibility transport requirements for 1997 eight-hour ozone, 1997 24-hour and annual PM-2.5, 2006 24-hour PM-2.5, 2008 eight-hour ozone, 2010 one-hour nitrogen dioxide, and 2010 one-hour SO2 NAAQS. The rule is in response to the remand of certain Cross-State Air Pollution Rule emission budgets. The rule is effective Nov. 16, 2017. Michael Feldman; EPA Region 6; 214-665-9793; Feldman.Michael@epa.gov. Citations: 40 CFR 52.2270, 52.2304, 52.2312, 40 CFR 97, Subpart FFFFF

82 FR 48324 (10/17/2017)

Regulatory Update

AIR
Vermont/Partial Delegation of NSPS
AIR

Notice of the EPA approves a request from the state of Vermont for partial delegation of the new source performance standards for new residential wood heaters, new residential hydroponic heaters, and forced-air furnaces. The request was made in response to revisions made by the Vermont Agency of Natural Resources to state air pollution control standards for wood stoves and central heaters. Contact: Eric Wortman; EPA Region 1, Office of Ecosystem Protection; 617-918-1624; wortman.eric@epa.gov. Citations: 40 CFR 60.539a, 60.5482

82 FR 48202 (10/17/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
California/Lake Elsinore Advanced Pumped Storage Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing of a major unconstructed project license application by Nevada Hydro Co., of Vista, Calif., for the Lake Elsinore Advanced Pumped Storage Project on Lake Elsinore and San Juan Creek in Riverside and San Diego counties in California. The project, which would occupy 845 acres of federal land, would create a new upper reservoir in the mountains west of Lake Elsinore formed in a natural canyon by constructing a 200-foot high dam. The project also would include an underground powerhouse with two reversible pump-turbine units with a total installed capacity of 500 megawatts and about 32 miles of transmission line connecting to existing transmission lines. The lake and reservoir would be interconnected by one or two large pipes to generate hydroelectricity to be transmitted to the state's power grid and to store electricity produced during off-peak hours. Comments and study requests are due Dec. 1, 2017. Contact: Jim Fargo; FERC; 202-502-6095; james.fargo@ferc.gov

82 FR 48223 (10/17/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Children's Health Protection Advisory Committee Meeting
GENERAL ENVIRONMENT AND SAFETY

Notice of the EPA announces a meeting of the Children's Health Protection Advisory Committee, which provides advice to the administrator on a broad range of environmental issues affecting children's health, including lead poisoning, asthma, prenatal environmental exposures, and chemical exposures. The meeting is scheduled for Nov. 29-30, 2017, in Washington, D.C. Contact: Angela Hackel; EPA, Office of Children's Health Protection; 202-566-2977; hackel.angela@epa.gov

82 FR 48227 (10/17/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Environmental Impact Statements
GENERAL ENVIRONMENT AND SAFETY

Notice of the EPA announces the availability of environmental impact statements filed Oct. 2-6, 2017. Contact: Kelly Knight; EPA, Office of Federal Activities; 202-564-7146; knight.kelly@epa.gov. Citations: 40 CFR 1506.9

82 FR 48227 (10/17/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Massachusetts/Holyoke Hydro Projects
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing of a hydroelectric application by the City of Holyoke Gas & Electric Department concerning subsequent licenses for the Holyoke Nos. 1, 2, and 3 Hydro Projects located on the Holyoke Canal system in Hampden County, Mass. The projects consist of two 240-kilowatt and two 288-kilowatt turbine generator units, one 800-kilowatt vertical turbine generator unit, and one 450-kilowatt turbine generator unit. The applicant seeks to combine the projects under a single license and the commission intends to prepare a single environmental assessment. Comments are due Nov. 9, 2017. Contact: Kyle Olcott; FERC; 202-502-8963; kyle.olcott@ferc.gov

82 FR 48218 (10/17/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
New Mexico/Rio Grande Canalization Project
GENERAL ENVIRONMENT AND SAFETY

Notice of the U.S. Section of the International Boundary and Water Commission announces the availability of a draft environmental assessment and finding of no significant impact for sediment control alternatives for the Rio Grande Canalization Project at Thurman I and II Arroyos in Hatch, N.M. The proposed project involves sediment control at two ephemeral tributaries of the Rio Grande within a portion of the Rio Grande Canalization Project protective levee system to control the inflow of sediment into the Rio Grande mainstem. The EA evaluates the no action alternative of routine sediment excavation, the construction of mesh-based sediment traps, and the preferred alternative of the construction of sediment basins at each arroyo. Comments are due Nov. 16, 2017. Contact: Elizabeth Verdecchia; USIBWC; 915-832-4701; Elizabeth.Verdecchia@ibwc.gov

82 FR 48253 (10/17/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Public Utilities Open Access Same-Time Information System
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the submission of a revised information collection request to the OMB regarding the open access same-time information system (OASIS) and standards for business practices and communication protocols. The collection addresses responses from public utilities that own, control, or operate facilities for transmitting energy in interstate commerce that are required to provide certain information on transmission operations on OASIS. The collection also addresses requirements that utilities personnel engaged in transmission system operations function independently from those engaged in marketing functions. The revisions update the collection's respondent count and hours burden for responses based on efficiency gains and changes in business practice standards. Comments are due Nov. 16, 2017. Contact: Ellen Brown; FERC; 202-502-8663; DataClearance@FERC.gov

82 FR 48226 (10/17/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Texas/Borrego Crossing Pipeline Presidential Permit
GENERAL ENVIRONMENT AND SAFETY

Notice of the State Department announces the availability of a draft environmental assessment and preliminary finding of no significant impact for the Borrego Crossing Pipeline presidential permit application (81 FR 66322; 09/27/2016). The applicant seeks to construct, connect, operate, and maintain pipeline facilities to export refined petroleum products, including to transport gasoline, ultra-low sulfur diesel, and jet fuel across the U.S.-Mexican border between a new terminal in Laredo, Texas, and the existing Nuevo Laredo Terminal in Tamaulipas, Mexico. Comments are due Nov. 13, 2017. Contact: Jill Reilly; State Department, Office of Environmental Quality and Transboundary Issues; 202-647-9798; ReillyJE@state.gov

82 FR 48309 (10/17/2017)

HAZARDOUS MATERIALS TRANSPORTATION
Unified Carrier Registration Plan Board of Directors Meeting
HAZARDOUS MATERIALS TRANSPORTATION

Notice of the Federal Motor Carrier Safety Administration announces a meeting of the Unified Carrier Registration Plan Board of Directors to continue the development and implementation of the unified carrier registration plan and agreement. The meeting is scheduled for Oct. 26, 2017, via teleconference. Contact: Avelino Gutierrez; FMCSA, Unified Carrier Registration Board of Directors; 505-827-4565

82 FR 48312 (10/17/2017)

Regulatory Update

OCCUPATIONAL SAFETY AND HEALTH
Federal Mine Safety and Health Review Commission Meeting
OCCUPATIONAL SAFETY AND HEALTH

Notice of the Federal Mine Safety and Health Review Commission announces a meeting to consider Secretary of Labor v. Marshall County Coal Co. (Docket No. WEVA 2015-583-D) regarding whether the judge erred in requiring the operators' chief executive officer to personally read a prepared statement at the mines in question. The meeting is scheduled for Oct. 26, 2017, in Washington, D.C., and via teleconference. Contact: Emogene Johnson; FMSHRC; 202-434-9935

Regulatory Update

RADIATION
Low-Level Radioactive Waste Disposal Facilities
RADIATION

Notice of the NRC announces the availability of a draft regulatory analysis for a final rule addressing low-level radioactive waste (LLRW) disposal facilities. The rule, originally proposed March 26, 2015 (80 FR 16081), would require new and revised site-specific technical analyses and allow the development of site-specific criteria for LLRW based on the results of such analyses. A draft final rule package was developed in September 2016, and the NRC currently is preparing a supplemental proposed rule planned for 2018. The changes would establish a compliance period of 1,000 years, independent of radionuclide content, and address when the new requirements would apply to currently operating LLRW disposal facilities. Comments are requested on how to improve the approach/methodology and actual cost data used in the draft final rule regulatory analysis in light of the changes. The NRC will hold a meeting during the comment period. Comments are due Nov. 16, 2017. Contact: Gregory Trussell; NRC, Office of Nuclear Material Safety and Safeguards; 301-415-6445; Gregory.Trussell@nrc.gov. Citations: 10 CFR 20.1003, 61.2 through 61.80 (nonconsecutive)

Subject: BREAKING NEWS: Key conservatives oppose Trump debt ceiling deal

The leaders of the Republican Study Committee - a collection of more than 150 conservative House members - have come out against a deal to raise the debt ceiling that President Donald Trump negotiated with Democratic leaders.

"While some have advocated for a 'clean' debt limit increase, this would simply increase the borrowing authority of the government while irresponsibly ignoring the urgency of reforms," RSC chairman Mark Walker (R-N.C.) wrote in a letter to Speaker Paul Ryan. "Worse yet is attaching the debt limit to legislation that continues the status quo or even worsens the trajectory on spending, such as the deal announced yesterday by the President and Congressional Leadership."

Subject: POLITICO's Morning Energy: Pruitt's commitment to transparency questioned — N.Y. mulls carbon price options — Manchin-to-DOE trial balloon rises again

By Anthony Adragna | 08/14/2017 10:00 AM EDT

With help from Darius Dixon

A NEW CA-vs.-EPA SHOWDOWN: California Attorney General Xavier Becerra is the latest Democratic official from the Golden State to take on EPA Administrator Scott Pruitt - this time with a public records lawsuit alleging he has failed to promptly hand over documents related to his ethics arrangements. Becerra filed the suit Friday, Pro's Alex Guillén reports. Pruitt, a prolific litigant challenging the Obama-era EPA, has agreed to stay away from lawsuits over the various rules he challenged in court, such as the Clean Power Plan or Waters of the U.S., although he says he is not barred from working to roll back the rules themselves. Becerra asked for documents outlining Pruitt's "compliance with federal ethics regulations and obligations" as well as agency "policies and procedures for determining who (if anyone) can assume the powers of the Administrator if he is recused or disqualified from participating in a matter."

EPA spokeswoman Liz Bowman said agency staff had reached out twice to Becerra's office to say they were working on a response. "It's unfortunate that California is suing the Agency, draining resources that could be better spent protecting human health and the environment - rather than working with EPA's career staff, as they can gather all the information requested," she said in a statement.

A few hours after Becerra filed his suit, the New York Times dropped a big report documenting limits on access to EPA - for both the public, press and even agency staff. Citing interviews with 20 current and former staffers, the Times reported that EPA employees now must leave their cellphones before meeting with Pruitt and must have an escort to see the administrator, who is accompanied by his armed security staff even at agency headquarters. ("None of this is true," Bowman told the Times. "It's all rumors.")

Pruitt's tactics aren't just controversial at agency headquarters. He's frequently met with tightly-screened industry groups and opted for interviews with friendly media figures. It was three such closed events in North Dakota that earned Pruitt a rebuke from Republican Sen. John Hoeven. "I think (meetings) should be open," he said, according to The Bismarck Tribune. "I guess I saw no reason not to have it open," he said.

But Pruitt isn't shifting approaches either. He leaned into a brewing controversy over a major federal climate change report blaming human activity for climate change, promising he and his staff would gauge the "accuracy" of its findings. It's a bizarre promise, Pro's Emily Holden reports, given Pruitt's concern over so-called politicization of science and the fact the report has already undergone "rigorous" peer-review by a 14-person committee at the National Academies with 132 pages of suggestions from the reviewers already incorporated into the final version. "It's a much more extensive process than a usual peer review, which does not typically come out

as a paperback book," said Bob Kopp, a lead report author and climate scientist at Rutgers University.

The administrator also dismissed the discussion over the role of human activity in climate change during a Texas radio show last week as "political" and a "wedge issue." "Why aren't we celebrating what we're achieving with respect to CO2 ... why do we continue to engage in this political football?" he said. Multiple science organizations have sought meetings with Pruitt to discuss why he doesn't acknowledge the scientific consensus that human activity is driving climate change.

WELCOME TO MONDAY AND HAPPY AUGUST EVERYONE! I'm your host Anthony Adragna, and hope everyone had a lovely start to August. Thank you to Pro's Alex Guillén, Darius Dixon, Annie Snider and Esther Whieldon for keeping this warm for me while I was away on my honeymoon! Geronimo Energy's Jenny Monson-Miller was first to correctly identify Marguerite Higgins on Friday as the Pulitzer Prize-winning female journalist buried at Arlington Cemetery. For today, in honor of the amazing performance of "42nd Street" I just saw in London: What play holds the record for the longest initial run in history (at over 26,000 and counting)? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

NEW YORK'S 'MAJOR STEP' TOWARD CARBON PRICE: New York's grid operator released a hotly-anticipated report Friday finding that the state could support its clean energy goals with minimum costs to consumers by incorporating the social cost of carbon emissions into the its electricity prices, POLITICO New York's Marie J. French reports . NYISO CEO Brad Jones and Public Service Commission Chairman John Rhodes said the document's release marked the first step in a collaborative process to further consider what a carbon price would look like and how it could be implemented. Setting a price on carbon would help incentivize greater investments in renewable energy and more efficient combined-cycle fossil fuel-powered generators while pushing out less-efficient technologies, the report argues.

SECOND TIME'S THE CHARM? White House officials are again titillated by the possibility of luring West Virginia Democratic Sen. Joe Manchin to serve as Energy secretary, a role still currently occupied by Rick Perry, Bloomberg reports . There's high interest because Manchin's seat would be filled by newly-minted GOP Gov. Jim Justice, potentially opening the possibility the Republican-led Senate might be able to pass some form of healthcare reform. ME readers likely remember Manchin interviewed for the slot that went to Perry during the transition though there's some thought Perry could jump the vacant Homeland Security job formerly held by White House Chief of Staff John Kelly. A spokesman for Manchin, for what it's worth, said "Senator Manchin has not had any recent conversations with the Administration about the Secretary of Energy position."

PERRY GOES WEST! Far from the Washington rumor mill, Perry is out in Eastern Oregon later today where he'll tour the Army Corps-operated McNary Lock and Dam in Umatilla. That'll be followed Tuesday by visits to the Pacific Northwest National Laboratory and DOE's Hanford Site. Joining Perry at various points of his trip are Senate Energy ranking member Maria Cantwell, Rep. Dan Newhouse and House Energy and Commerce Chairman Greg Walden.

QUE TAL CON LA VENEZUELA? Vice President Mike Pence is visiting Colombia, Argentina, Chile and Panama during a South American swing this week and senior administration officials expect Venezuela to dominate their talks. One official told reporters on Friday to expect discussion of "economic options, diplomatic options - every tool that's available" to amplify pressure on Venezuelan President Nicolás Maduro. One option that's been avoided to date would be placing sanctions on Venezuelan oil imports, something four Republican senators warned last week doing would harm Gulf Coast oil refiners.

All of this comes as Trump himself refused to rule out the U.S. pursuing "a military option" against Venezuela, though Pence downplayed such talk during a press conference Sunday night with Colombian President Juan Manuel Santos. "President Santos and I discussed in some detail additional measure that could be taken to further pressure the regime in Venezuela, economically," Pence said. "We'll continue on this trip and beyond to bring diplomatic pressure to bear." Santos in his remarks stressed any talk of military intervention "shouldn't even be considered."

AND THE BEAT GOES ON: Jeff Holmstead, the former EPA air chief during the George W. Bush administrations whose name briefly popped up as a potential number two at the agency, attended an OMB meeting last week on EPA's proposed Clean Power Plan repeal on behalf of the Electric Reliability Coordinating Council, according records posted by the White House, Pro's Alex Guillén reports in Energy Regulation Watch. Holmstead wasn't available for comment, but his Bracewell colleague Scott Segal said they discussed possible replacements rules, including implementation and enforcement issues, with administration officials who "seemed interested and engaged."

THIS IS... UNUSUAL: The family of West Virginia Republican Gov. Jim Justice has filed a lawsuit against two top Kentucky environmental regulators themselves - not the state of Kentucky for which they work - because they blame the officials for their company's failure to meet reclamation deadlines, the Courier-Journal reports. The lawsuits, filed on behalf of the Kentucky Fuel Corporation, allege the actions of Kentucky Department for Natural Resources Commissioner Allen Luttrell and Deputy Commissioner John D. Small could have cost the company up to $4.5 million in fines.

STEYER THROWS HIS WEIGHT AROUND: Billionaire environmentalist and Democratic mega-donor Tom Steyer said Saturday he and his organization NextGen America would only support pro-choice candidates for office, POLITICO's Gabriel Debenedetti reports. He also pointedly refused to rule out a run for office - whether that be the presidency or a statewide role in California. "Look, I promise: There is nothing that I would not do in order to have the most impact," he said in an interview on the sidelines of the progressive Netroots Nation conference in Atlanta.

MONIZ PLUCKS DOE STAFFER FOR NEW GROUP: Former Energy Secretary Ernest Moniz has hired Jeanette Pablo away from the Energy Department as the general counsel for his nascent Energy Futures Initiatives. Pablo, who will also be a senior associate with EFI, has spent more than 20 years working in the energy world, including a long stretch with the Tennessee

Valley Authority as well as positions with PNM Resources and American Water Co.. Up until last week she was the acting deputy director for energy systems with DOE's Office of Energy Policy and Systems Analysis.

NEW GIG FOR SCHRODER: Russia's largest oil company, Rosneft, has added former German Chancellor Gerhard Schröder as an "independent director" on its board, POLITICO Europe's Emmet Livingstone reports, citing an official government statement. Chancellor Angela Merkel's predecessor already chairs the shareholders' committee of Nord Stream AG, a gas-pipeline consortium set up to transport Russian gas across the Baltic Sea and into Germany.

MAIL CALL! HOUSE ENTERS SUNIVA FRACAS TOO: Hot on the heels of their Senate colleagues, a bipartisan group of 53 congressmen, led by Reps. Mark Sanford, Mike Thompson, Pat Meehan and Matt Cartwright, sent a letter Friday to the International Trade Commission urging it not to grant petitions from Suniva and SolarWorld Americas that would impose solar trade import tariffs. The lawmakers are throwing their weight around ahead of the first public hearing on the petitions Tuesday at which hundreds of solar workers are expected to testify about the impacts the tariffs would have on their jobs.

MOVER, SHAKER: Ciaran Clayton will soon be joining the Nature Conservancy as director of global media relations; she's been working with the Center for American Progress and was previously director for communications with NOAA.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

November 8, 2017

Latest News

Hedging On Toxics Nominee, Burr Urges Pruitt To Address PFC Concerns

Even as he hedges on whether he will support the Trump administration's nominee to lead EPA's toxics office, Sen. Richard Burr (R-NC) is urging Administrator Scott Pruitt to determine whether to prioritize perfluorinated substances (PFCs) for future risk evaluations, suggesting a commitment on addressing his concerns could help secure his support for the nominee.

Criticism Of Trump's CEQ Nominee Escalates Ahead Of Senate Hearing

Senate Democrats and environmentalists during an upcoming Senate environment committee confirmation hearing appear poised to focus particularly intense criticism on President Donald Trump's pick to head the White House Council on Environmental Quality (CEQ), Kathleen Hartnett White, in light of her past statements downplaying the dangers of greenhouse gases and the need for stricter ozone standards.

EPA Seeks Remand Of Coal Ash Rule Provisions To Revise Key Mandates

EPA is asking a federal appeals court to remand to the agency several provisions of the Obama-era coal ash disposal rule currently subject to ongoing litigation without vacating the requirements, saying the agency plans to revise the provisions at the request of utilities and the ash reuse sector but will continue enforcing them while it reworks the rule.

District Court Judge Orders EPA To Release Utility ELG Review Documents

A federal district court judge is giving EPA until Dec. 31 to produce documents related to its reconsideration of the 2015 Clean Water Act (CWA) effluent rule for power plants, after slamming an attorney for the agency during a recent hearing on EPA's "unrealistic" much longer timeframe for reviewing open records requests.

Judges Question North Dakota's Right To Intervene In RCRA Deadline Suit

A three-judge appeals court panel at oral argument Nov. 7 pressed North Dakota to

explain what right the state has to intervene in a settlement between EPA and environmentalists that resolves a deadline suit over the agency's delay in reviewing whether to revise Resource Conservation & Recovery Act (RCRA) oil and gas industry waste rules.

Trump Research Appointee Sees 'Big Data' Among Short-Term Challenges

Interdisciplinary research, "big data," and research translation are among the biggest challenges facing EPA's Office of Research and Development (ORD) in the near future, Richard Yamada, President Donald Trump's top appointee to ORD, tells *Inside EPA* in an exclusive interview.

Daily Feed

GAO to investigate Pruitt's appearance in CWA lobbying video

The Government Accountability Office will consider whether the EPA Administrator broke the law by voicing GOP talking points against the 2015 Clean Water Act jurisdiction rule in an industry video.

House science committee Democrats demand Pruitt testify

The lawmakers want EPA Administrator Scott Pruitt to testify on a host of recent controversies about his travel and security costs, relations with industry, and agency science.

Some industry groups fear bill to move Energy Star to DOE

But a group representing home appliance manufacturers backs the move, noting that DOE oversaw Energy Star standards for such equipment before EPA took over those duties in 2009.

EPA reopens comment on ozone information request

EPA is taking further comment on the burden states might face in reporting on their implementation of ozone standards, amid uncertainty over which ozone standards will apply in the future.

Judge rejects claims of EPA 'duty' to expand stormwater permits

A new district ruling backs EPA's discretion on whether to require discharge permits for stormwater even after signing a pollution control plan that identifies polluted runoff as a problem.

Ewire: What today's elections mean for climate policy

In today's news roundup: A look at the key climate and environment races in Washington state, New Jersey and Virginia. Plus: Trump gets crosswise with a Beatle

on climate science.

EPA faces new suit aiming to block GHG rule rollbacks

The complaint lists a host of climate policies that the White House and EPA have targeted, including the United States' participation in the Paris Agreement and EPA's Clean Power Plan GHG rules for power plants.

Subject: Morning Media: CBS's 'The Takeout' takes radio -- How to combat media distrust -- Waxman vs. NYT, cont'd -- Union eyes Sinclair deal -- Wenner turns on biographer

By Michael Calderone | 10/19/2017 05:38 AM EDT

MAJOR GARRETT, THE RELIABLY STOICAL WHITE HOUSE CORRESPONDENT, nearly broke down on one episode of his podcast, "The Takeout," when co-host Steve Chaggaris read a letter from a Democratic fan saying how the show made him more willing to listen - yet still not agree with - the other side. Chaggaris, the network's political director, recalled that memorable moment in an interview and said, for the hosts, hearing people "willing to put polarization and partisanship aside for 45 minutes or so is a success."

- "The Takeout" began as a weekly podcast just before Donald Trump's inauguration and has built a respectable audience, with about 80,000 downloads monthly and regular appearances in iTunes' news and politics rankings. It has since been repurposed as a TV show on streaming network CBSN thanks to the addition of two cameras. Now it heads to terrestrial radio, with the network announcing today that half a dozen CBS radio affiliates have picked up the show: St. Louis (KMOX-AM) , Minneapolis (WCCO-AM), Milwaukee (WTMJ-AM), Las Vegas (KXNT-AM), Buffalo (WECK-AM) and Montauk (WJJF-FM).

- "They are, in every way, early adopters," Garrett told me, adding that he expects other radio stations to follow. Garrett and Chaggaris started "The Takeout" as a sideline from their day jobs, an opportunity to talk to newsmakers in a restaurant rather than a studio. The goal, Garrett said, has been to get guests to go beyond their policy views and into what personally motivates them to be in the political arena. The food and drinks help. "Sitting around the table breaking bread," Chaggaris said, "opens the guests up to being a little more candid."

Good morning and welcome to Morning Media. I'll be away from the city and, happily, the news cycle for a few days. So the next edition will be Monday. I'm at mcalderone@politico.com and @mlcalderone. Daniel Lippman contributed to the newsletter. Archives. Subscribe.

JOURNALISTS ARE NOT FABRICATING STORIES ABOUT TRUMP JUST BECAUSE HE SAYS SO. The president has long gone beyond conservatives' running critique of the national media - that it leans left - to claim that journalists make up sources altogether. Trump's reckless assertion is part of an ongoing attempt to delegitimize the press so critical stories are dismissed by the public. The claim is untrue, but may still be effective.

- Nearly half of voters (46 percent) believe the news media fabricates stories about Trump and his administration, according to a POLITICO/Morning Consult poll. When it comes to Republicans, 76 percent "think the news media invent stories about Trump and his administration," while about 20 percent of Democrats also think the media make up stories.

- There have been some infamous journalist fabricators over the years, like Jayson Blair and Stephen Glass. Both got drummed out of the business. News organizations deserve scrutiny and

should be held accountable for mistakes. And it's fair to question the priorities of newspaper editors and network executives. But it's simply false to claim that mainstream reporters routinely fabricate sources and information - and that such unethical behavior is tolerated or even encouraged by superiors.

- A week after the election, I suggested journalists be more transparent with the public in explaining what they do. It's not a cure-all, but perhaps one way to shed light on a newsroom process that, if left opaque, allows others to misrepresent it. But I'm open to other ideas since this problem isn't going away any time soon. Meanwhile, Trump seized on the poll late Wednesday night and told his 40-million-plus Twitter followers that the percentage distrusting the media is "actually much worse."

SESSIONS STILL WON'T COMMIT TO NOT JAILING JOURNALISTS. Attorney General Jeff Sessions said he could not "make a blanket commitment" to not imprisoning reporters for doing their jobs, The Washington Post reports. Obama Attorney General Eric Holder made such a commitment in 2014 after the Justice Department he led came under fire for its heavy-handed approach to dealing with journalists in leak cases.

- Democratic Sen. Amy Klobuchar of Minnesota, whose father was a newspaper reporter, posed the question to Sessions on Wednesday. She also asked Sessions this same question during his confirmation hearing in January. "I'm not sure," Sessions responded at the time. "I have not studied those regulations." Sessions has now had the time, and his continued unwillingness to commit isn't reassuring for those already concerned about where leak investigations may go in the Trump era.

Sound Bites

"Sean Hannity kicking serious butt in the ratings. Tapper on CNN as low as you can go." [Bill O'Reilly]

"'Low' would be sexually harassing staffers and then getting fired for it - humiliated in front of the world. Now THAT would be low." [Jake Tapper]

THAT TIME HARVEY WEINSTEIN VISITED NYT'S TOP EDITOR TO KILL MY 2004 EXPOSE, by The Wrap founder Sharon Waxman: "Three people affirm that ... Weinstein, his lawyer David Boies and spokesman Matthew Hiltzik all came personally to the newsroom to meet with Executive Editor Bill Keller about the story." One of those people, former Times editor Michael Cieply, told Waxman: "Keller never took any steps that I was aware of to kill the story. But I do remember defending your right to report the story in several heated exchanges with Harvey afterwards."

- Bloomberg's Jonathan Landman, who was The Times' culture editor in 2004, dismissed Waxman's earlier claim that the paper withheld her Weinstein reporting after pressure from the disgraced film mogul. The Times' current executive editor, Dean Baquet, said it was "unimaginable" that his predecessors would've spiked a story after pressure from Weinstein.

- Keller told Waxman he remembered Weinstein and Boies "coming in to complain about something," but said he thought it was over a 2007 David Carr column. "Ten-plus years later, The NYT and The New Yorker scooped you, and I'm sure that feels awful," Keller told Waxman. "But don't blame editors or Harvey's bullying for the fact that you failed to nail the story."

"THE POPULIST RIGHT TEARS DOWN A PRESS IT CAN'T REPLACE," by The Atlantic's Conor Friedersdorf: The Weinstein "episode was a credit to the reporters, editors and publishers who broke the story; an example of why it is vital to support an independent press that probes wrongdoing; and a spur to examine all the factors that delayed the truth outing for so long, including apparent failures by some journalists and news-gathering organizations. Still, it was surreal to see pundits employed by populist news organizations *that didn't break the story* characterizing it as a dark moment for the liberal mainstream media."

LISTEN: Gabriel Sherman, the Vanity Fair special correspondent and Roger Ailes biographer, talks to Slate's Isaac Chotiner about how Fox News has changed and why Rupert Murdoch privately "loathes" Trump.

- "I know from my reporting, people who have been in private settings with Murdoch say that he makes dismissive comments of Trump and tells him to stop tweeting," Sherman said. He added: "This is not a close personal relationship. This is, from my reporting, a business relationship in that Murdoch was smart enough to know that the audience Ailes had assembled were diehard Trump voters, so it doesn't make sense really to shift the network ideologically."

JANN WENNER ISN'T HAPPY WITH NEW BIO: Two past attempts to write a biography of the famously controlling Rolling Stone founder's life have fizzled out. Though Joe Hagan succeeded in getting extensive access to Wenner for "Sticky Fingers," an unauthorized biography out next week, the magazine publisher isn't pleased with the result. The book, Wenner told The Times, is "deeply flawed and tawdry, rather than substantial." Hagan countered: "It was all on the table - there's nothing he didn't know. He's used to having control, and that's a difficult thing."

UNION LEADER THREATENS CAMPAIGN AGAINST SINCLAIR-TRIBUNE DEAL. POLITICO's Jason Schwartz writes: "Dave Twedell, a business representative for the International Cinematographers Guild Local 600, says he hopes to rally the public against the deal and compel members of Congress to act. Twedell pointed to places like Seattle, one of 10 cities where both Sinclair and Tribune own stations, as potentially facing a drastic loss of local news coverage - and jobs - through consolidations."

- Twedell is scheduled to meet Monday with Sinclair representatives to discuss protecting union members' jobs. "If they decline to make that commitment, we are going to make a very big noise about it," Twedell told Schwartz.

OTHERS MAKING NOISE: Allied Progress, a progressive group opposed to the Sinclair-Tribune merger, has launched a new 30-second ad aimed at FCC Chairman Ajit Pai.

HEARST AGREES TO BUY RODALE: The publisher behind titles like Elle, Marie Claire, Esquire and Town & Country will broaden its stable with Rodale's publications, which include Men's Health, Women's Health and Runner's World. The Wall Street Journal reports the price tag was under $225 million and is expected to close early next year pending government approval."

REVOLVING DOOR

Sarah Yager, most recently managing editor of The Atlantic, has been named the magazine's deputy executive editor, a newly created "cross-platform leadership role," according to a memo. **Adrienne Green**, who has been helping oversee features on The Atlantic's site, will be the magazine's new managing editor. Yager and Green started out at the company as Atlantic fellows in 2011 and 2015, respectively.

Time veteran **Michael Duffy** is leaving the magazine after more than 32 years. "With Duffy gone, the vestiges of what Time used to be go with him," a former colleague told Vanity Fair.

Tanya Basu, formerly of Time and Inverse, has joined The Daily Beast as a senior editor. She'll be running the site's science section, slated to launch next month.

EXTRAS:

- Voice Media Group has sold LA Weekly to a new entity called Semanal Media, LLC.

- Morgan Freeman to play Colin Powell in new biopic.

- Sean Spicer at Harvard.

- Good question from Mediaite's Colby Hall: "Why Doesn't Joy Reid Have a Weekday Evening Show on MSNBC?"

- Behind Bethany Barnes's Oregonian investigation into long-running sexual harassment allegations against a teacher.

KICKER:

"We wanted more light and less vermin" - *Pittsburgh Post-Gazette Executive Editor David Shribman on moving* out of the paper's historic headquarters.

Subject: POLITICO's Morning Energy: Electric grid weathers total eclipse of the sun — Big biodiesel ruling expected today — Taking stock of California's climate situation

By Anthony Adragna | 08/22/2017 10:00 AM EDT

With help from Eric Wolff, Lauren Gardner, Alex Guillén and Esther Whieldon

PASSED WITH FLYING COLORS: Solar panels across a swath of the U.S. went dark Monday as the first domestic total solar eclipse since 1979 transfixed the country, but the electric grid appeared to weather the disruption easily. Applying lessons Europe learned during its own 2015 eclipse, utilities leaned more heavily on alternate supplies to fill in gaps in solar generation. As Pro's Esther Whieldon reports , Eric Schmitt, California ISO's vice president of operations, told reporters about 3,000 megawatts to 3,500 megawatts of solar generation stopped during the eclipse, but hydropower and natural gas power supplies filled in that gap. "We didn't have any major challenges on the system, even minor challenges," he said. "We're very pleased with how smooth it went. All the resources performed the way they were supposed to perform."

How'd others do? The PJM Interconnection, the grid operator for more than a dozen Mid-Atlantic and Midwestern states saw a decrease of about 520 megawatts utility scale solar during the eclipse, which is not even a drop in the bucket for the system that has 185,000 megawatts of power on call. Duke Energy estimates it saw a drop of 1,700 megawatts-worth of output from utility-scale solar generation in North Carolina. (The grid's success did not extend to traffic where numerous apocalypses were reported after the eclipse passed).

Cabinet secretaries took a break. Interior Secretary Ryan Zinke tweeted it was a "pretty cool view" from his agency's rooftop, while EPA Administrator Scott Pruitt said his staff enjoyed a "great view" from headquarters. Energy Secretary Rick Perry said the total eclipse "rocks" and linked to National Renewable Energy Laboratory staff enjoying the view.

Away from Washington, senior lawmakers did as well. Senate EPW Chairman John Barrasso "really enjoyed watching the eclipse" from Casper, Wyo. (where the totality lasted more than two-and-a-half minutes). Senate Energy Chairman Lisa Murkowski was underground in a " permafrost tunnel" near Fairbanks, Alaska, at peak eclipse, but later caught a glimpse from visiting Deputy Energy Secretary Dan Brouillette.

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and SEIA's Christopher Mansour was first to name Italy as the spot with two other independent countries within its borders (San Marino and Vatican City). For today (in honor of Monday's incredible eclipse): What is the only major U.S. city (more than 500,000 people) that enjoyed more than two minutes of totality? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

THE MITCH MCCONNELL CONNECTION: Anthony Pugliese exited the Department of Transportation to join FERC as its chief of staff, Transportation Pro's Lauren Gardner scooped

for Pros. He was DOT's senior White House adviser - a role that was intended to help 1600 Pennsylvania Ave. keep tabs on their goings-on. In this case he served next to Cabinet Secretary Elaine Chao, wife of Senate Majority Leader Mitch McConnell , and the two didn't appear to have gotten along. POLITICO reported in May how Pugliese informed Chao that he expected her to check in with him on all policy moves, a declaration that got a chilly reception.

Now Pugliese has a job as the top staffer for newly anointed FERC chairman Neil Chatterjee - for years McConnell's top energy policy aide - despite limited energy experience. The FERC announcement says Pugliese learned energy matters from his time working for Pennsylvania Gov. Tom Corbett, where he spent a year working for the department of Community and Economic Development, and as a consultant for Pugliese Associates, a Pennsylvania lobbying shop founded by Pugliese's father, Rocco. The company's website shows that it's energy clients included Tesla Motors, a filling station chain, and an energy efficiency non-profit. Pugliese's lobbying disclosure form for the state of Pennsylvania show his only energy client was Tesla.

BIODIESEL PRODUCERS CROSSING FINGERS FOR COMMERCE TRADE RULING TODAY: The Commerce Department is expected to issue a preliminary ruling today on whether to impose a tax on Argentine and Indonesian imports of biodiesel to counter those two countries' subsidies. Biodiesel exporters have been arguing for months that biodiesel feedstocks in Argentina and Indonesia are underwritten by their governments so they can sell into the U.S. market.

RFS credits in discord: Today's decision could drive up the biofuel credits that oil refiners use to comply with the Renewable Fuel Standard, because it would potentially shink supplies and increase the price of biodiesel. Those biodiesel credits can be used for compliance with the ethanol part of the program, too. But Tom Kloza, a founder of the oil tracking service OPIS, says RIN prices have been buffeted by "cross winds" since a court ruling last week that let some small refiners out of the program. "There's a little uneasiness about this small refinery exemption," he said. Today's "ruling isn't as big as the anti-dumping. It would probably provide an upward lift, but right now you have this downdraft related to small refinery exemption."

Just the first step in the trade dispute tango: A victory today for domestic producers would signal what may be a larger victory in October, when Commerce will rule on whether the two countries dumped biodiesel on the U.S. market in an effort to undermine U.S. production. Kloza said that one could potentially rattle biofuel markets. Neither decision will likely be finalized until next year.

A PRIZE PODCAST: This week's episode of Global POLITICO podcast features Dan Yergin, the Pulitzer-winning historian and expert on the geopolitics of energy, as well as Angela Stent, a former U.S. national intelligence officer for Russia, discussing the current "frigid, antagonistic, confrontational" relationship between U.S. and Russia. Yergin also discusses the dissolution of Trump's advisory council of business leaders last week, which he called very much "a comment about what's happening to our politics."

CALIFORNIA'S CLIMATE PUSH FUELS ECONOMIC GROWTH: Since the adoption of landmark climate legislation in 2006, California's gross domestic product growth has nearly

doubled what's been seen at the U.S. more broadly, but the rate of the state's emissions reductions have slowed recently due to a spike in transportation-related emissions, according to a new report out from the nonpartisan group Next 10. "Transportation sector emissions vastly outweigh other carbon-producing areas of California's economy, and the recent spike should alert policy-makers that despite our best efforts, more must be done," Adam Fowler, an economist at Beacon Economics, which prepared the report, said in a statement. Among the other findings: Energy-related carbon dioxide emissions in California were down 12.5 percent in 2016 from their 2006 levels and renewable energy made up 21.9 percent of total electricity generation in the state.

CHECK OUT THAT HASHTAG: Zinke's wife Lola raised a few eyebrows around Washington with a tweet of her and the secretary on a run to the Capitol that included the hashtag #senaterun. ME readers likely remember the Montana congressman was considered a likely Senate candidate against Democrat Jon Tester - who's up for reelection next year - prior to being tapped by the Trump administration for the Interior slot.

MAIL CALL! SCHATZ CRIES FOUL OVER EPA GRANT POLICY: Hawaii Democratic Sen. Brian Schatz sent a letter Monday to EPA's Pruitt urging him to reverse course on a new directive in which a political appointee - John Konkus within the Office of Public Affairs - now will evaluate grant solicitations. "I fail to understand the beneficial role a political appointee, without any meaningful scientific background, could have in the grant review process," Schatz wrote. He added the new policy appeared to be in "direct conflict" with the agency's scientific integrity policy.

THERE'S A HEARING! It may be August recess, but the Senate EPW Subcommittee on Superfund, Waste Management and Regulatory Oversight, chaired by Mike Rounds, today holds a field oversight hearing at his former office - the South Dakota state capitol. It'll examine efforts from the Army Corps of Engineers to manage the Missouri River to "make certain the agency is working in an appropriate and responsible manner." More information here.

DEMOCRATS TOUT ECONOMIC BENEFITS OF MONUMENTS: Ahead of Interior's Zinke's Thursday deadline to issue recommendations on the fate of nearly two dozen national monuments, the Joint Economic Committee Democrats released a series of fact sheets highlighting what they say are the substantial economic benefits the sites provide to local communities. "Removing designation in whole or in part from national monuments, as the Trump administration has proposed, would eliminate this economic engine," Sen. Martin Heinrich , the committee's ranking Democrat, said in a statement.

PUT UP YOUR DUKES: The nomination of one of their own, former New Jersey Rep. Scott Garrett, to run the Export-Import Bank has emerged as the latest battle in the Republican Party's civil war, POLITICO's Zachary Warmbrodt reports . Business groups are expected to ramp up efforts to block his appointment, while opponents of the bank are warning the Senate Banking Committee about the consequences of failing to advance Garrett's nomination."The divides among congressional Republicans appear to be deepening, and I am left with the sense that for some issues, the GOP is closer to a coalition government than a unified party," Compass Point analyst Isaac Boltansky said.

TAKE A GLANCE! DISSECTING NEW YORK'S ENERGY GOALS: The Manhattan Institute is out with a report today arguing, among other findings, New York's goal of reducing greenhouse gas emissions 80 percent from 1990 levels by 2050 is "unrealistic, unobtainable, and unaffordable." In addition, meeting renewable energy and GHG goals will mean shifting to electric-powered equipment across most sectors of the state's economy "adding many billions of dollars in costs in both the private and public sectors," the report argues. Lower-income New Yorkers would bear more of the brunt of those policies to hit the interim reduction goals, it says.

NOT A FAN: German Chancellor Angela Merkel slammed her predecessor Gerhard Schroeder for taking a high-paying post at Russian oil company Rosneft, POLITICO Europe's Victor Brechenmacher reports. "I do not find what Mr. Schroeder is doing appropriate," Merkel told German daily BILD. Schroeder has drawn criticism in Germany for his involvement in the Russian energy sector and his friendship with Russian President Vladimir Putin. He already holds a leadership role at Nord Stream AG, a gas-pipeline consortium set up by Gazprom, to transport Russian gas across the Baltic Sea and into Germany.

LET THERE BE REGIONAL ADMINISTRATOR! A former Alabama environmental regulator will serve as EPA's Region 4 Administrator, Pro's Alex Guillén reports. Trey Glenn was director of the Alabama Department of Environmental Management from 2005 through 2009 and has owned an engineering consulting firm in Birmingham for the last eight years. Alabama's ethics commission found "probable cause" back in 2007 that Glenn may have violated ethics laws but a grand jury in 2009 concluded there were no "provable violations." Regional administrators do not require Senate confirmation.

COURT REVIVES DUGONG SUIT: The 9th Circuit Court of Appeals has revived an environmentalist lawsuit dating back to 2003 alleging a plan to place a U.S. Marine Corps air base in Okinawa, Japan, threatens a local population of dugongs, which are similar to manatees. A lower court previously said the green groups did not have standing to bring the case, and the suit raised "political questions" the court could not answer. But the 9th Circuit reversed that Monday, saying the case must be heard. The green groups will now get to present their case that the new military base will threaten the Okinawa dugong, which is listed as endangered in the U.S. and Japan. However, they may still fail to change anything about the base; the 9th Circuit said the green groups "may face challenges in securing relief on the merits." The base construction has been controversial for reasons beyond dugongs, with the prefecture government taking Japan's central government to court this summer to halt work on seawalls and new land.

LOTS OF FREE TIME? Sebastian Gorka, Trump's deputy assistant, posted the personal phone number and other contact information of a blogger after he put up a post detailing how Gorka's son made an environmental documentary, Death and Taxes reports. The video at issue, made by 18-year-old Paul Gorka, looks at how plastic pollution contributes to water quality issues.

REPORT: NUCLEAR NEEDS CONGRESSIONAL HELP: Kirk Lippold, an energy policy expert who served as commanding officer of USS Cole, is out with a new report arguing Congress must extend a nuclear production tax credit for the U.S. to remain a worldwide leader in that energy sector. "It is incumbent for that leadership to continue through public support of

this clean energy source in order for it to remain a reliable power backbone for decades into the future," he writes in the paper for the Electric Reliability Coordinating Council.

QUICK HITS

- Most new Permian oil likely to be exported from Houston, Corpus Christi. Houston Chronicle.

- Coal country is ready for tech jobs - if techies will just give them a chance. Recode.

Subject: Today on Climate Beat

September 27, 2017

Today on Climate Beat . . .

. . . we checked in on the states, reporting that Democratic attorneys general from New York, Illinois and Maryland are vowing continued pressure on the Trump administration as it seeks to roll back climate policies, while also pledging to support state-led efforts to craft aggressive greenhouse gas reduction measures.

In NEPA news, four former Democratic White House Council of Environmental Quality officials are warning President Donald Trump and key Cabinet officials that their efforts to speed environmental reviews could open the door for such reviews to be rejected by courts.

In Congress, the top Democrat on the House energy committee is asking EPA's Office of Inspector General to provide a "comprehensive factual record" related to possible legal violations of anti-lobbying laws by EPA Administrator Scott Pruitt, citing concerns over his efforts to advocate for leaving the Paris climate deal.

And in auto news, our daily news roundup looked at reports that California is set to stage a "regulatory mutiny" on vehicle fuel economy standards, even as the state and the Trump administration appear to be inching toward negotiations on the issue.

News

Civil Infrastructure
Trump Said to Be Signing Order to Speed Up Public-Works Permits
President Donald Trump plans to sign an executive order August 15 designed to streamline the approval process for building roads, bridges and other infrastructure by establishing "one federal decision" for major projects and setting a two-year goal for permitting.

Climate Change
Trump to Speed Up Public-Works Permits, Drop Climate Order
President Donald Trump announced an executive order Aug. 15 that's designed to streamline the approval process for building roads, bridges and other infrastructure by establishing "one federal decision" for major projects and setting a two-year goal for permitting.

Energy
Energy Information Administration Acting Head to Depart
Howard Gruenspecht, the acting administrator of the Energy Information Administration, is leaving the post at the end of August, he told staff in an email Aug. 15.

Energy
Nuclear Power's Woes Imperil U.S. National Security, Moniz Says
The decline of the U.S. nuclear-power industry puts America's security at risk, according to a report being released Aug. 15 by former Energy Secretary Ernest Moniz that calls for greater federal investment.

Energy
Sinclair Oil Notches Win in Biofuel Mandate Exemption Battle
Sinclair Oil Corp. may no longer be required to fully comply with the EPA's biofuel blending mandate at two oil refineries in Wyoming, following a court decision to reverse a previous agency ruling.

Energy
Southern Wins Early Review of Nuclear Reactor Cost Overruns
Southern Co. may have a better idea of how much of an estimated $25 billion nuclear power project it will be allowed to charge Georgia customers before a reactor is even online.

Enforcement
Exxon Mobil's $2.6M Fine for Ruptured Pipeline Tossed
Exxon Mobil will get a break on a $2.6 million fine levied against it for a 2013 pipeline spill in Arkansas.

Fuel Efficiency

Profitable Pickup Trucks, SUVs May Get Break in Trump Review

A move under consideration by the Trump administration could ease tough fuel-efficiency standards set to take effect in 2021 on pickups, SUVs and other light trucks, the bulwark of U.S. auto industry sales and profits.

Renewable Energy

Brazil's Solar Expected to Grow With State's New Regulation

A new solar energy regulation in Brazil's Sao Paulo state is expected to encourage more small and large-scale solar systems to be built and help those under construction come online more quickly.

Sustainability

Big Oil Follows Silicon Valley into Backing Green Energy Firms

Major oil companies are joining Silicon Valley in backing energy-technology start-ups, a signal that that those with the deepest pockets in the industry are casting around for a new strategy.

Vehicle Fuels

How Elon Musk and Cheap Oil Doomed Push for Another Car Fuel

The idea was nothing short of revolutionary: convert the nation's millions of trucks, buses and other commercial vehicles to run on natural gas instead of gasoline and diesel.

Water Pollution

EPA to Rewrite Toxic Wastewater Limits Rule, No Deadline Set

American Electric Power, the nation's largest electric utility, hopes the EPA will delay all compliance deadlines for toxic wastewater limits on power plants in the wake of the agency's decision to rewrite limits for certain wastestreams.

Summaries

AIR
Alabama SIP/Volatile Organic Compounds, Particulate Emissions
AIR

Final rule of the EPA approves revisions to the Alabama SIP that modify the definition of "volatile organic compounds" by adding tertiary butyl acetate and 1,1,2,2-tetrafluoro-1-(2,2,2-trifluoroethoxyl) ethane to the list of negligibly reactive compounds. The revisions also remove recordkeeping, emissions reporting, photochemical dispersion modeling, and inventory requirements for tertiary butyl acetate. In addition, the revisions remove particulate emission and opacity limits for wood waste boilers in Talladega County because no such sources exist in the county. The EPA also addresses an adverse comment on an Aug. 16, 2017, direct final rule (82 FR 38865) that adopted the changes. A concurrent notice of the EPA withdraws the direct final rule. The rule is effective Nov. 13, 2017. Contact: Richard Wong; EPA Region 4, Air, Pesticides and Toxics Management Division; 404-562-8726; wong.richard@epa.gov. Citations: 40 CFR 52.50

Regulatory Update

AIR
Alabama SIP/Volatile Organic Compounds, Particulate Emissions
AIR

Notice of the EPA announces the withdrawal of an Aug. 16, 2017, direct final rule (82 FR 38841) that would have approved revisions to the Alabama SIP to modify the definition of "volatile organic compounds" by adding tertiary butyl acetate and 1,1,2,2-tetrafluoro-1-(2,2,2-trifluoroethoxyl) ethane to the list of negligibly reactive compounds. The revisions also remove recordkeeping, emissions reporting, photochemical dispersion modeling, and inventory requirements for tertiary butyl acetate. In addition, the revisions remove particulate emission and opacity limits for wood waste boilers in Talladega County because no such sources exist in the county. The withdrawal, which is due to receipt of an adverse comment, is effective Oct. 13, 2017. The agency addresses the comment in a concurrent final rule based on the related proposed rule

(82 FR 38865; 08/16/2017). Contact: Richard Wong; EPA Region 4, Air, Pesticides and Toxics Management Division; 404-562-8726; wong.richard@epa.gov. Citations: 40 CFR 52.50

82 FR 47635 (10/13/2017)

Regulatory Update

AIR
Connecticut SIP/New Source Review Requirements for 2008 Ozone NAAQS
AIR

Notice of the EPA announces the withdrawal of an Aug. 14, 2017, direct final rule (82 FR 37819) that would have approved a revision to the Connecticut SIP regarding nonattainment new source review permit requirements for the 2008 eight-hour ozone NAAQS for the Greater Connecticut area and the Connecticut portion of the New York-Northern New Jersey-Long Island nonattainment area. The revision addresses the change in classification of both nonattainment areas from marginal to moderate and specifies that the state's SIP complies with anti-backsliding requirements. The withdrawal is in response to an adverse comment. The agency will proceed with a final rule based on the related proposed rule (82 FR 37829; 08/14/2017). The withdrawal is effective Oct. 13, 2017. Contact: Donald Dahl; EPA Region 1, Office of Ecosystem Protection; 617-918-1657; dahl.donald@epa.gov. Citations: 40 CFR 51.1105, 52.377

Regulatory Update

AIR
Florida SIP/Emissions Monitoring for Stationary Sources
AIR

Direct final rule of the EPA approves a portion of revisions to the Florida SIP concerning requirements and procedures for emissions monitoring at stationary sources. The revisions update supplementary test procedures and volatile organic compounds capture efficiency test procedures and remove redundant language and make technical corrections. Revisions concerning the general test requirement will be addressed in a separate action. The rule is effective Dec. 12, 2017, unless adverse comments are received by Nov. 13, 2017. Contact: Andres Febres; EPA Region 4, Air, Pesticides and Toxics Management Division; 404-562-8966; febres-martinez.andres@epa.gov. Citations: 40 CFR 52.520

Regulatory Update

AIR
Florida SIP/Emissions Monitoring for Stationary Sources
AIR

Proposed rule of the EPA would approve a portion of revisions to the Florida SIP concerning requirements and procedures for emissions monitoring at stationary sources. The revisions update supplementary test procedures and volatile organic compounds capture efficiency test procedures and remove redundant language and make technical corrections. Revisions

concerning the general test requirement will be addressed in a separate action. A concurrent direct final rule adopts the revisions, effective Dec. 12, 2017. Comments are due Nov. 13, 2017. Contact: Andres Febres; EPA Region 4, Air, Pesticides and Toxics Management Division; 404-562-8966; febres-martinez.andres@epa.gov. Citations: 40 CFR 52.520

82 FR 47662 (10/13/2017)

Regulatory Update

AIR
Georgia SIP/Cross-State Air Pollution Rule
AIR

Final rule of the EPA approves portions of a revision to the Georgia SIP that establishes Cross-State Air Pollution Rule (CSAPR) state trading programs for annual nitrogen oxides, annual sulfur dioxide, and ozone season NOx emissions. The revision replaces the federal implementation (FIP) requirement for large electric-generating units (EGUs) to participate in the corresponding CSAPR federal trading programs. The rule eliminates the obligation of state EGUs under CSAPR FIPs addressing interstate transport requirements for the 1997 annual and 2006 24-hour fine particulate matter NAAQS and the 1997 eight-hour ozone NAAQS, as well as state trading programs adopted to comply with Clean Air Interstate Rules. The rule is effective Nov. 13, 2017. Contact: Ashten Bailey; EPA Region 4, Air, Pesticides and Toxics Management Division; 404-562-9164; bailey.ashten@epa.gov. Citations: 40 CFR 52.38, 52.39, 52.570

82 FR 47930 (10/13/2017)

Regulatory Update

AIR
North Carolina SIP/Air Curtain Burners
AIR

Notice of the EPA announces the withdrawal of an Aug. 17, 2017, direct final rule (82 FR 39027) that would have approved portions of revisions to the North Carolina SIP regarding the state's strategy to meet and maintain the NAAQS. The revisions address air pollution control requirements for air curtain burners. The agency did not propose to take action on air pollution control requirements for incinerators. The withdrawal is in response to an adverse comment. The agency will proceed with a final rule based on the related proposed rule (82 FR 39097; 08/17/2017). The withdrawal is effective Oct. 13, 2017. Contact: Sean Lakeman; EPA Region 4, Air, Pesticides and Toxics Management Division; 404-562-9043; lakeman.sean@epa.gov. Citations: 40 CFR 52.1770

82 FR 47634 (10/13/2017)

Regulatory Update

AIR
North Carolina SIP/Transportation Conformity Requirements
AIR

Notice of the EPA announces the withdrawal of an Aug. 16, 2017, direct final rule (82 FR 38838)

that would have approved revisions to the North Carolina SIP regarding transportation conformity requirements. The revisions specify that transportation conformity requirements apply to areas identified as nonattainment or maintenance areas by the EPA or to areas listed in state regulation. The revisions also clarify the statement that transportation conformity requirements apply to areas "not in compliance with the primary standard" by identifying the applicable fine particulate matter and ozone standards. The withdrawal is in response to receipt of an adverse comment, and the agency will proceed with a final rule based on the related proposed rule (82 FR 38864; 08/16/2017). Contact: Kelly Scheckler; EPA Region 4, Air, Pesticides and Toxics Management Division; 404-562-9222; sheckler.kelly@epa.gov. Citations: 40 CFR 52.1770

Regulatory Update

AIR
South Carolina SIP/Air Pollution Control Standards
AIR

Notice of the EPA announces the withdrawal of an Aug. 16, 2017, direct final rule (82 FR 38828) that would have approved portions of revisions to the South Carolina SIP concerning air pollution control standards. The revisions would have addressed emissions from fuel burning operations and process industries. The rule takes no action on revisions regarding administrative and clarifying changes. The withdrawal is in response to the receipt of adverse comments. The agency will proceed with a final rule based on the related proposed rule (82 FR 38874; 08/16/2017). The withdrawal is effective Oct. 13, 2017. Contact: Richard Wong; EPA Region 4, Air, Pesticides, and Toxics Management Division; 404-562-8726; wong.richard@epa.gov. Citations: 40 CFR 52.2120

AIR
South Carolina SIP/Miscellaneous Revisions
AIR

Notice of the EPA announces the partial withdrawal of an Aug. 21, 2017, direct final rule (82 FR 39537) that would have approved portions of revisions to the South Carolina SIP regarding the prohibition of open burning and related definitions. The withdrawal is due to the receipt of an adverse comment, and the agency will proceed with a final rule based on the related proposed rule (82 FR 39551; 08/21/2017). Contact: Brad Akers; EPA Region 4, Air, Pesticides and Toxics Management Division; 404-562-9089; akers.brad@epa.gov. Citations: 40 CFR 52.2120

82 FR 47636 (10/13/2017)

Regulatory Update

AIR
South Carolina SIP/State Trading Programs
AIR

Final rule of the EPA approves a revision to the South Carolina SIP concerning the Cross-State Air Pollution Rule (CSAPR). The revision replaces federal implementation plan requirements for large electricity generating units (EGUs) to participate in the federal trading program for annual emissions of nitrogen oxides (NOx) and in one of two federal trading programs for sulfur dioxide (SO2) with a substantively identical requirement for such EGUs to join a new state trading program for NOx and SO2. The revision also eliminates the FIP emission standards addressing interstate transport requirements for the 1997 fine particulate matter NAAQS. The rule is effective Nov. 13, 2017. Contact: Ashten Bailey; EPA Region 4, Air, Pesticides and Toxics Management Division; 404-562-9164; bailey.ashten@epa.gov. Citations: 40 CFR 52.38, 52.39, 52.2120

82 FR 47936 (10/13/2017)

Regulatory Update

AIR
South Carolina SIP/VOC and NOx Standards
AIR

Notice of the EPA announces the withdrawal of a portion of an Aug. 16, 2017, direct final rule (82 FR 38825) that would have approved portions of revisions to the South Carolina SIP concerning standards for volatile organic compounds and nitrogen oxides emissions from process industries. The revisions clarify the applicability of standard requirements for new sources and the exemption of combustion control devices. The revisions also modify the number of hours of operation for testing and maintenance for exempted emergency generators. The partial withdrawal concerns the control of nitrogen oxides. The withdrawal is in response to an adverse comment. The agency will proceed with a final rule based on the related proposed rule (82 FR 38865; 08/16/2017). The withdrawal is effective Oct. 13, 2017. Contact: Brad Akers; EPA Region 4, Air Planning and Implementation Branch; 404-562-9089; akers.brad@epa.gov. Citations: 40 CFR 52.2120

Vermont SIP/Regional Haze Progress Report
AIR

Notice of the EPA announces the withdrawal of an Aug. 16, 2017, direct final rule (82 FR 38834) that would have approved a revision to the Vermont SIP regarding the state's regional haze five-year progress report. The revision addresses the state's finding that the Lye Brook Class I Wilderness area, in the Mid-Atlantic/Northeast Visibility Union region, is on track to meet the reasonable progress goals for 2018 based on observed visibility improvement. The withdrawal is in response to an adverse comment. The agency will proceed with a final rule based on the related proposed rule (82 FR 38864; 08/16/2017). The withdrawal is effective Oct. 13, 2017. Contact: Anne McWilliams; EPA Region 1, Air Quality Planning Unit; 617-918-1697; mcwilliams.anne@epa.gov. Citations: 40 CFR 52.2370

ENDANGERED SPECIES
Alaska/Marine Mammal Incidental Take
ENDANGERED SPECIES

Notice of the National Marine Fisheries Service announces the receipt of a request from the Alaska Department of Transportation and Public Facilities for authorization to take marine mammals incidental to pile driving and pile removal activities of the Haines Ferry Terminal Modification Project in Haines, Alaska. The authorization would allow the take of the humpback whale, harbor seal, harbor porpoise, and Dall's porpoise by Level A and B harassment and the Steller sea lion and killer whale by Level B harassment during a four-month period between Oct. 1, 2018, and Sept. 30, 2019. The incidental take would not occur during the period of March 1 to May 31, 2019, due to the increased density of marine mammals in the inlet during those months. Comments are due Nov. 13, 2017. FOOD SAFETY
Produce Safety Regulation/Agricultural Water
FOOD SAFETY

Notice of the FDA announces a correction to a Sept. 13, 2017, proposed rule (82 FR 42963) that would extend the deadlines for compliance with agricultural water provisions of the Produce Safety Regulation (80 FR 74354; 11/27/2015) for covered produce other than sprouts to four years after the relevant farm's compliance date for all other provisions of the regulation. The rule would establish the same deadlines for all agricultural water provisions as applied to nonsprout produce, while retaining date staggering based on farm size. The extension would provide additional time to address questions about implementation of certain provisions, including testing requirements for preharvest agricultural water. The rule is issued in compliance with Executive Orders 13563, 13771, and 13777, which require agencies to consider possible reductions in regulatory burden or increased flexibility for compliance. An Aug. 24, 2016, final rule (81 FR 57784) clarified the compliance dates for certain agricultural water testing provisions as originally established in the Produce Safety Regulation. The correction inserts an omitted description for the table that summarizes changes in benefits and costs as a result of the proposed rule. Subject: Iowa, Nebraska governors ask EPA to pump up advanced biofuels

By Eric Wolff

08/01/2017 01:04 PM EDT

Iowa Gov. Kim Reynolds, and Nebraska Gov. Pete Ricketts, today asked EPA to increase the amount of biomass-based biodiesel and cellulosic ethanol in its final biofuels rule.

The two Republican governors, joined by Sen. Joni Ernst (R-Iowa), told a panel of EPA staff that companies had the capacity to produce 2.75 billion gallons of biodiesel in 2019, far more than the 2.1 billion gallons the agency proposed.

"When you set the bar high, the industry has the ability to jump," Ricketts said at the EPA hearing on its Renewable Fuel Standards targets for 2018.

The group also asked EPA to increase cellulosic volumes, which EPA proposed to reduce 23 percent in 2018 compared to this year.

"Reducing volumes for biodiesel and cellulosic would create uncertainty," Ernst said. "Especially as rural communities continue to experience a downturn in ag economy."

All three praised EPA for getting a proposal out approximately on time, a dig at the Obama administration, which missed deadlines so badly it set requirements for 2014 and 2015 at the end of 2015, in conjunction with a rule for 2016. And they were pleased the agency kept conventional biofuels, typically filled by corn-based ethanol, at the maximum level.

Ricketts and Reynolds told reporters after their testimony that they had each had an opportunity to speak with EPA Administrator Scott Pruitt both in person and on the phone on at least four occasions, and they were pleased with his accessibility.

WHAT'S NEXT: EPA will take comment on the proposed volumes through Aug. 31.

Subject: Pruitt: EPA had no emails communications with Icahn

By Eric Wolff

09/12/2017 02:28 PM EDT

EPA had no email communication with billionaire and former Trump adviser Carl Icahn, EPA Administrator Scott Pruitt told Sen. Sheldon Whitehouse (D-R.I.) in a letter this week.

In the letter sent Monday and provided to POLITICO by an EPA official, Pruitt said EPA searched the inboxes of 39 high-ranking officials for messages to or from Icahn between Feb. 17 and Aug. 18, and they found no emails on any subject.

Pruitt's letter was a response to four different letters from Whitehouse and other Senate Democrats seeking information on Icahn's efforts to modify the Renewable Fuel Standard to benefit his refining company. Icahn was an unpaid adviser to Trump until last month, when he resigned his title after questions arose about his advocating for policies that would help his businesses.

Pruitt did acknowledge meeting with Icahn as part of his vetting process to join the Trump administration.

"Mr. Icahn was one of many of the president's advisors that I met with during my confirmation process," he wrote. "During that meeting, I made no assurances with regard to the point of obligation or any other substantive issue."

Subject: BREAKING NEWS: Trump has decided to end DACA, with 6-month delay

President Donald Trump has decided to end the Obama-era program that grants work permits to undocumented immigrants who arrived in the country as children, according to two sources familiar with his thinking. Senior White House aides huddled Sunday afternoon to discuss the rollout of a decision likely to ignite a political firestorm - and fulfill one of the president's core campaign promises.

Trump has wrestled for months with whether to do away with the Deferred Action for Childhood Arrivals, known as DACA. He has faced strong warnings from members of his own party not to scrap the program and struggled with his own misgivings about targeting minors for deportation.

Conversations with Attorney General Jeff Sessions, who argued that Congress - rather than the executive branch - is responsible for writing immigration law, helped persuade the president to terminate the program, the two sources said, though White House aides caution that - as with everything in the Trump White House - nothing is set in stone until an official announcement has been made.

In a nod to reservations held by many lawmakers, the White House plans to delay the enforcement of the president's decision for six months, giving Congress a window to act, according to one White House official. But a senior White House aide said that chief of staff John Kelly, who has been running the West Wing policy process on the issue, "thinks Congress should've gotten its act together a lot longer ago."

Subject: EDF sues EPA over delays in releasing public records

By Emily Holden

10/26/2017 04:41 PM EDT

The Environmental Defense Fund said today it is suing EPA for failing to release public records about Administrator Scott Pruitt's potential ethics conflicts, schedule or plans for agency science that the group has has sought under the Freedom of Information Act.

According to the lawsuit filed with the D.C. Circuit of the U.S. Court of Appeals, one of EDF's requests dates back to January, and the others are from March and June. A statutory deadline gives EPA 20 days to make a determination on whether to release information unless there are certain "unusual circumstances." EDF says EPA has not demonstrated those circumstances or sought an extension.

The agency has said it is receiving high volumes of public records requests. The Office of Public Affairs, for example, recently said it received 154 requests in fiscal 2017, compared to 14 in fiscal 2016. OPA has said some requests will take more than a year to fulfill.

An EPA spokesperson said the agency does not comment on pending litigation.

EDF is seeking information about an ethics agreement Pruitt signed while his nomination was pending, including why he determined he could work on a rule to withdraw the Clean Power Plan even though he brought lawsuits against it as attorney general of Oklahoma.

The group is seeking Pruitt's daily schedules, too. EDF argues that releases so far have included many redactions and that a recently published public calendar is brief and vague.

Subject: Morning Media: Trump's vacation tweets -- Coalition campaigns against Sinclair merger -- Kayleigh McEnany named RNC spokesperson

By Hadas Gold | 08/08/2017 06:19 AM EDT

With Alex Weprin

PRESIDENT DONALD TRUMP TWEETED 13 TIMES ON MONDAY, 6 OF THEM ABOUT THE MEDIA. The president is at his Bedminster, New Jersey golf club on a working vacation, during which he clearly had some time for tweets about the media. He sent off screeds about the "fake news" ignoring his success and incorrectly reporting about the strength of his base, and he tweeted about The New York Times and other "Fake News" ignoring North Korean sanctions.

--This has become rote, but we'll do it again. Trump was wrong on a few points. At the same time he tweeted that "The Fake News Media will not talk about the importance of the United Nations Security Council's 15-0 vote in favor of sanctions on N. Korea!" CNN was covering those exact sanctions (their segment started about two minutes before the tweet).

--Trump slammed The New York Times several times as "totally inept" and asked "How much longer will the failing nytimes, with its big losses and massive unfunded liability (and non-existent sources), remain in business?" Let's assume Trump is responding to the Times' recent story about Republicans (and specifically Vice President Mike Pence) running a shadow 2020 primary. Jonathan Martin, one of the reporters on that piece, noted on Twitter that their story did not have a single anonymous quote. And, The New York Times has been having a bit of a Trump business boom as they also noted on Twitter: revenue is up 9 percent and subscriptions are growing 69 percent faster than same quarter last year, the newspaper announced last month. The stock was recently at its highest level since May of 2008.

TRUMP BASHES THE "MAINSTREAM MEDIA," BUT PAYS A STAFFER $89,000 TO SPOT AND DISTRIBUTE POSITIVE STORIES FROM THEM via my colleague Annie Karni: "The White House director of rapid response, Andrew Hemming, 31, spends his days immersed in cable television, Twitter, print and online media to suss out positive stories about Trump, which he blasts back out to his list of more than 1,000 influencers - mainly reporters, but also television talking heads - who together craft the overall story of Trump's presidency. There's nothing new about an administration trying to promote its wins. But in the Trump White House, where Hemming's job is not to discredit the mainstream media but to celebrate stories the administration likes, it can seem like he is trying to bail out a sinking boat with a teacup." Read the full piece, including White House Press Secretary Sarah Sanders saying the media doesn't "always get it wrong," here.

Good morning and welcome to Morning Media! I always want to hear from you -- **hgold@politico.com** / **@Hadas_Gold**. **Morning Media** is edited by **Alex Weprin** (**@alexweprin** / **alexweprin@gmail.com**) and produced with writing/reporting help from

KAYLEIGH MCENANY IS THE RNC'S NEWEST NATIONAL SPOKESPERSON, my Playbook colleagues scooped yesterday. McEnany had just ditched her CNN contract and started filming videos for Trump's campaign arm as a pseudo-anchor showcasing the positive news from the Trump administration.

--The Trump TV initiative is being run by Trump's daughter-in-law Lara Trump, the Daily Beast reports. But, the RNC said they are not involved in producing the "Trump TV" videos, adding that they "think it's a great idea for the campaign to be putting out videos that talk about the president's accomplishments." It's not clear yet whether McEnany will continue making the "Trump TV" videos. The Daily Beast also reports that the Tomi Lahren, a former anchor for right-wing media network The Blaze and a current spokeswoman for pro-Trump nonprofit Great America Alliance, had been "strongly considered" for a position with the Trump TV production.

AT&T SAYS IT WON'T SELL CNN, by Alex Weprin: A top AT&T executive said that the company has no interest in selling CNN, alleviating concerns many inside the channel had about what would happen once AT&T's acquisition of Time Warner is approved by the federal government. John Stankey, who will lead Time Warner's businesses once the deal closes, told The Hollywood Reporter "It would be a strategically missed opportunity if we weren't in that [the news] business." Stankey also said that AT&T would not interfere with CNN's editorial content, noting "you can't run a national news organization with that importance to our society without maintaining its editorial independence."

--On a related note: CBS execs also poured cold water on the idea they might be interested in buying CNN. "We feel strategically complete," CBS COO Joseph Ianniello said on the company's earnings call Monday. CBS did announce that it plans to launch a 24/7 streaming sports channel, similar to CBSN, later this year.

PREET BHARARA PODCAST GETS PUBLIC RADIO PICKUP, by Alex Weprin: Former U.S. Attorney Preet Bharara is joining the ranks of the mainstream media. Bharara's podcast, "Stay Tuned with Preet," has been picked up by WNYC Studios, the podcast and public radio show collective that also produces "Radiolab" and Alec Baldwin's "Here's the Thing." Sun Spider Studios, founded by Bharara's brother Vinit, will also produce, as will Pineapple Street Media, best known for "Missing Richard Simmons."

COALITION CAMPAIGNS AGAINST SINCLAIR-TRIBUNE MERGER, my colleague Margaret Harding McGill reports for POLITICO Pro. A group comprised of One America News Network's president, a former FCC commissioner, and satellite TV giant DISH network among others is banding together to fight against Sinclair Broadcasting Group's proposed expansion. In a call with reporters on Monday OANN President Charles Herring argued that Sinclair is already too powerful and growing larger could shut out independent sources of programming (such as his channel), and will lead to higher prices for customers.

--"The concern is that with the market strength Sinclair will have post-merger, it could take pretty much any channel it wants, regardless of the merit of that channel with the consumers or

the cable company, and basically force it on the cable company and thus the consumers," Herring said.

TRUMP ISN'T HAPPY WITH JOSHUA GREEN'S NEW BOOK ABOUT STEVE BANNON: According to the Daily Caller, President Donald Trump is not pleased that Green's new book "Devil's Bargain" says Steve Bannon had a major role in Trump's electoral victory. "A source who spoke with the president recently told TheDC that Trump complained about the new book as well as the cover of a November copy of Forbes that claims Jared Kushner was the campaign's mastermind. 'I hate it when people take credit for an election I won,' Trump said, according to the source.

VOX STUDIED 17 MONTHS OF TRUMP'S FAVORITE SHOW "FOX & FRIENDS" and found that the show has increasingly changed its role as giving advice to the president. "An analysis of the show's transcripts reveal that about 8 to 9 percent of sentences before Trump's election were imperative sentences, which instruct or advise. In the first few months of his presidency, that number increased more than 50 percent." Read the full study here.

INVESTIGATION DISCOVERY RENEWS MARIA ELENA SALINAS' SHOW "The Real Story with Maria Elena Salinas." The news comes just days after Salinas announced last week she's leaving Univision after more than 30 years with the Spanish-language network. Sources suggested to me last week that Salinas may be looking to branch into more English-language anchor work, like the ID show. The second season will have 10 episodes and will follow Salinas as she "uncovers new evidence, unheard perspectives, and updates to national headline-making crimes to see what the media originally missed."

REVOLVING DOOR:

--Esquire is ending its digital features program.

--Twitter's former VP of global media, Katie Stanton, is joining the board of directors at Time Inc.

--Joe Yerardi is now a new data reporter at The Center for Public Integrity.

--On the homefront, POLITICO announced that Christine Haughney is joining the POLITICO newsletter family to run Morning Agriculture, and Jane Norman is joining as a multi-vertical editor for the pro side. The business side also announced that Rick Robinson has been hired as VP of Product and Judy DIaz has joined as VP of Marketing.

SOUNDBITES: "I'm with the news, dude!" [A Washington NBC reporter to a driver who dressed as a car's seat in order to make it look like the van he was driving was driverless].

"Circle of life: Trump cites a story broken by the NYT to call out Blumenthal in same Twitter frenzy that he called the paper 'totally inept'" [Justin Green]

Subject: POLITICO's Morning Score: Democrats worry about Russian interference in '18 — Stewart considering Gillespie endorsement — California primary chatter

By Kevin Robillard | 10/11/2017 10:00 AM EDT

With Daniel Strauss, Zach Montellaro and Elena Schneider

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

THE NEXT HACK - "Senate Democrats worry Russia could jeopardize reelection bids," by Kyle Cheney, Elana Schor and Cory Bennett: "Democratic senators fighting to hold on to their seats next year are increasingly worried about a troubling reality: Russia appears set to mess with U.S. elections - again. ... 'If there isn't some effort to take steps against Russian interference, every campaign is going to have to be on guard and working against it,' said [Pennsylvania Sen. Bob] Casey, describing himself as 'very concerned.' ... Democrats say the president's disinterest has meant there's been little urgency behind preparing for the next wave of Russian threats, which U.S. intelligence has said included hacking and leaking Democratic operatives' emails and creating fake Facebook and Twitter accounts to push stories that hurt [Hillary] Clinton. ... 'We absolutely need to get ahead of this,' [North Dakota Sen. Heidi] Heitkamp, one of the GOP's top targets in the midterm elections, told POLITICO. 'We need to understand the threat. But more importantly, states need to understand this is real.'" **Full story.**

OL' VIRGINNY - "Corey Stewart in talks to endorse Gillespie at urging of Trump allies Bannon and Bossie," by the Washington Post's Laura Vozzella and Robert Costa: "Corey Stewart, who pilloried Republican Ed Gillespie during their GOP gubernatorial primary fight in Virginia, has been communicating with Gillespie about a potential endorsement at the urging of former White House chief strategist Steve Bannon and President Trump's former deputy campaign manager, David N. Bossie, according to five people familiar with the matter. ... At the time, Stewart declared that he would not back Gillespie unless the nominee took a harder line on protecting Confederate statues and against illegal immigration." **Full story.**

-FLASHBACK - Stewart to Campaign Pro earlier this week: "He's gotten better. He's moved to the right on Confederate statues and immigration. He's moving in the right direction."

-New Northam ad attacks Gillespie on environmental issues: Northam's campaign is airing a new television ad attacking Republican Ed Gillespie over environmental issues. "As a doctor, I trust the science on climate change," Northam say direct to camera in the ad. "But Ed Gillespie worked for a think tank that rejects climate science and fought to pull out of the global climate agreement. Now Ed's going right along with Donald Trump as he tries to roll back our clean air and water protections." **Watch the ad here.**

-Progressive Turnout Project ups investment: The Chicago-based group is adding $100,000 more to its turnout program, pushing its total spending over $600,000. The group is focusing on 10 competitive House of Delegates races, plus the three statewide contests. The group is sending digital ads, mail and text messages to inconsistent Democratic voters.

PRIMARY CONCERNS - "California old guard under siege," by Carla Marinucci and David Siders: "The state Democratic Party, until recently, has been caught in the throes of a bitter dispute over the chairmanship, pitting party veterans against the activist 'Berniecrat' wing. There are calls for Nancy Pelosi to step down as House Democratic leader. And Dianne Feinstein is now the target of progressives determined to prevent her from winning a fifth Senate term. ... Hours after she announced her reelection campaign Monday, Silicon Valley-based freshman Rep. Ro Khanna said he had urged fellow California Rep. Barbara Lee and former Secretary of Labor Robert Reich to challenge Feinstein. ... Following Feinstein's reelection announcement, Markos Moulitsas, founder of the liberal Daily Kos blog, said in a tweet directed at state Senate President Pro Tem Kevin de León, who is mulling running against the senator, 'Hey @kdeleon, let's talk! We share a common interest in this Senate race. Let's beat the most pro-Trump Blue-state Dem in the country!' On Twitter, some of the party's leftist activists began marshaling the hashtag #DraftReich, but also circulated names of other people they're hoping could be drafted for a primary contest against Feinstein - including progressive Democrat Rep. Ted Lieu, a regular tormentor of Trump on Twitter, and CNN political commentator Van Jones." **Full story.**

HOLD UP - "Twitter reverses decision, will allow Blackburn to promote Senate ad," by Kevin Robillard: "Twitter is reversing a decision to block Rep. Marsha Blackburn of Tennessee from promoting her Senate campaign launch video on the social network. ... A Twitter spokesperson said Tuesday: 'Our ads policies strive to balance protecting our users from potentially distressing content while allowing our advertisers to communicate their messages. Nowhere is this more difficult than in the realm of political advertising and the highly charged issues that are often addressed therein. ... While we initially determined that a small portion of the video used potentially inflammatory language, after reconsidering the ad in the context of the entire message, we believe that there is room to refine our policies around these issues.'" **Full story.**

MARK YOUR CALENDAR - "Senate swing vote Collins to announce Friday whether she'll run for governor of Maine," by CNN's Eric Bradner and Jamie Gangel: "Republican Sen. Susan Collins will announce Friday morning whether she will run for governor of Maine in 2018, a source with knowledge of the senator's plans told CNN. ... A source with knowledge of Collins' thinking said over the last year Collins has taken a serious look at running for governor. Collins values constituent services, felt she could do more in an executive role and, the source said, liked the idea of capping her political career as Maine's first female governor - the job she ran for unsuccessfully in 1994." **Full story.**

NEW THIS MORNING - AAN launches digital ads on tax reform: American Action Network is out with a new $550,000 digital ad buy effort to boost the GOP's tax reform plan. The ads, which run for the next two weeks targeting 42 House members, will "simulate a search query on tax reform to highlight tax cuts for middle-class families under the Tax Reform

Framework," per a memo from the group. **View the targeted districts here. Watch the digital ad here.**

Days until the 2017 election: 27.

Days until the 2018 election: 391

WELCOME TO THE RACE - "McCaskill tears into GOP challenger Hawley during Jackson County visit," by the Kansas City Star's Brian Lowry: "McCaskill, a Democratic incumbent in a state that went for President Donald Trump by double digits, railed against Hawley while talking to reporters after a town hall at the Truman Memorial Building in Independence. 'I want to congratulate (Senate Majority Leader) Mitch McConnell ,' she said. 'He got his candidate. Mitch McConnell worked very hard. I believe Josh Hawley has spent more times talking to the insiders in Washington in the last four months than he has Missourians. He's got a lot of questions to answer.'" **Full story.**

-Fellow Republican candidate Courtland Sykes released a video labeling Hawley "RINO NUMBER SIX."

Q3 FUNDRAISING - Wisconsin Senate: Republican Kevin Nicholson raised over $400,000 in the third quarter, the Milwaukee Journal Sentinel reported, while GOP primary opponent Leah Vukmir raised $250,000 in the race to take on Democratic Sen. Tammy Baldwin.

- MI-11: Democrat Haley Stevens announced that she raised $200,000 in the third quarter, finishing with $415,000 in cash on hand.

- MT-AL: Democrat John Heenan, an attorney, raised $325,000, including a $100,000 personal loan, while Democrat Grant Kier, a former land-trust manager, raised $192,000 since announcing his candidacy, KXLH reported.

- TX-32: Democrat Ed Meier raised $240,000 in the third quarter, closing the period with $440,000 in cash on hand, per a statement from his campaign.

- AL-05: GOP Rep. Mo Brooks, set to face a primary challenge next year, raised over $486,000, spent over $701,000 and had about $560,000 left on hand from July 27 to Sept. 30, during which time he lost in the special Senate primary in Alabama.

- AZ-08: Democratic physician Hiral Tipirneni raised over $165,000 and has over $123,000 on hand after the third quarter vs. GOP Rep. Trent Franks, who has a deep-red Republican district

and not faced a Democratic opponent with six-figure fundraising this decade.

- Florida governor: State Republican Sen. Jack Latvala raised over $800,000 between his campaign and leadership committee, via Florida Politics.

- New Mexico governor: Both Democrat Michelle Lujan Grisham and Republican Steve Pearce raised more than $1 million, via the Santa Fe New Mexican.

- South Carolina governor: Gov. Henry McMaster raised over $568,000 in the last three months, the Post and Courier reports.

PAGING SCOTT WALKER - "Democrat Matt Flynn Running For Governor," by Wisconsin Public Radio's Shawn Johnson: "Flynn, who made his announcement official Tuesday, said he respects all of the Democrats running for governor, but he said the most important question for voters is who could win in November. 'I know how to handle myself,' said Flynn, a retired Milwaukee attorney. 'I think that by training and demeanor and experience, I'm the best able to prosecute the case against Scott Walker.'" **Full story.**

NO NEED TO PAGE SCOTT WALKER - "Gov. Scott Walker's Son Alex Joining Vukmir's US Senate Campaign," by the Associated Press: "Vukmir's campaign confirmed Tuesday that Alex Walker will be working as deputy political director. ... The governor has not endorsed anyone in the race and typically does not get publicly involved in primaries. But his son's addition to Vukmir's campaign is the latest in a line of those close to Walker who have joined her side." **Full story.**

FIELD PROGRAM UPDATE - "To take back the House, Democrats 'arm the rebels' with new tools and manpower," via The Washington Post's Mike DeBonis: "... And on Tuesday, the organization is rolling out its latest effort to connect motivated activists with the national party's resources, takeitback.com, an online 'toolbox' that aims to put potential activists in direct touch with the party operatives on the ground in battlefield districts." **Full story.**

DEBATE NIGHT - "Sleepy New Jersey Governor's Race Turns Fiery in First Debate," by the New York Times' Nick Corasaniti: "Though the moderators tried to keep the two candidates from confronting each other, the personal invective at times overshadowed any attempts at addressing specific questions from the moderator or the audience. Lt. Gov. Kim Guadagno, the Republican candidate, repeatedly sought to bring up Goldman Sachs, the Wall Street bank where Philip D. Murphy, her Democratic opponent, worked for several years. The references drew boos at one time from the audience who seemed to view them as off topic. For his part, Mr. Murphy, over and over, tried to paint Ms. Guadagno as being attached to Gov. Chris Christie "every step of the way." **Full story.**

SHOP TALK - Screen Strategies and Talbot Digital team up: Screen Strategies, a Democratic media-buying firm, is teaming up with digital advertiser Talbot Digital. aiming to help clients save money by combing television buying and digital ad buying operations. "This partnership will ensure our clients have the best media plans across all media channels and devices, applying cutting edge tools and targeting techniques to tackle the rapidly changing

media landscape," Screen Strategies Media partner Kyle Osterhout said in a release. "We know that integrated media planning delivers more impact, and the combined approach of SSM and Talbot Digital finally brings that efficiency to the political realm: our clients can expect targeted, efficient, cross-channel media plans that get the very most out of every campaign dollar."

CODA - Quote of the Day: "Look, if you talk about an adult day care center, I'm sorry, but I think the Senate is an adult day care center." - House Budget Committee Chair Diane Black on the Hugh Hewitt Show, responding to Tennessee Sen. Bob Corker's description of the White House.

Subject: Oct 9 PRG Energy Update: CPP Repeal, Perry Hits Hill

Friends,

Happy Columbus Day from Washington. No traffic during a rain storm and free parking on the streets makes me wish every day was a Federal holiday… While I understand that there is some controversy regarding honoring Columbus, this is the special day for Italian-Americans like yours truly. To appreciate, I spent the weekend in the North End of Boston for a great meal at Giacomo's and some cannolis from Modern Pastry.

Wow… Was that a week or what? And no slow down on Friday as it seemed even busier with the CPP documents making their way out into the public. Then, *Hurricane Nate* roared ashore over the weekend with Mississippi Power and Alabama Power working hard to restore power, which as of Sunday seemed to be all back on other than a small area around hardest-hit Mobile which is supposed to be back on by noon today. *Nate* also forced offshore oil companies to curtail 92.61%, or 1.62 million barrels per day, of Gulf of Mexico oil production as of Sunday.

Back to CPP, we expect to have an announcement tomorrow after this morning's event in Kentucky. Administrator Pruitt said in a speech in Hazard, KY (by the way, yours truly is a Duke of Hazard thanks to former Mayor Bill Gorman) with Majority Leader Mitch McConnell that he will formally sign the proposal to withdraw the CPP tomorrow in Washington. My Colleague Jeff Holmstead can answer your questions. Email us at here or jeff.holmstead@bracewell.com.

SEJ in Pittsburgh was a great event, especially with all this important environmental activity making news… and Jeff just happened to be on a CPP/climate legal panel as the documents were coming out. Way to go Carolyn Whetzel. I knew that was your plan all along. And our reception was awesome...including the great, fun band that we hosted. Looking forward to Flint, but it seems like there will so many things between now and then.

In addition to the CPP activity this week, the big event on Capitol Hill with be Energy Secretary Rick Perry's visit to the House Energy Committee when he will get intense questions about his recent grid proposal to FERC. That's Thursday at 10:00 a.m. Other events include a

cybersecurity event tomorrow with rural Co-ops (featuring Arkansas Co-op leader, our friend and expert Duane Highley); a House Resources panel hearing on Wednesday to look at legislation to amend the OCS Lands Act featuring Mary Landrieu, Michael Bromwich and API's Erik Milito; Thursday CSIS hosts IEA's Renewable Energy Division head Heymi Bahar for a presentation of the IEA's Renewable Energy Market Report 2017; and Friday, House Resources returns to legislation focused on onshore energy.

Finally, stay tuned tomorrow for some more great hiring news at Bracewell's PRG. We are excited to make a big announcement on a new tax expert who is super smart on policy, very media savvy and well-connected in the nerdy tax world. He will be a huge help to those of you covering tax policy

Call with questions. Best,

Frank Maisano

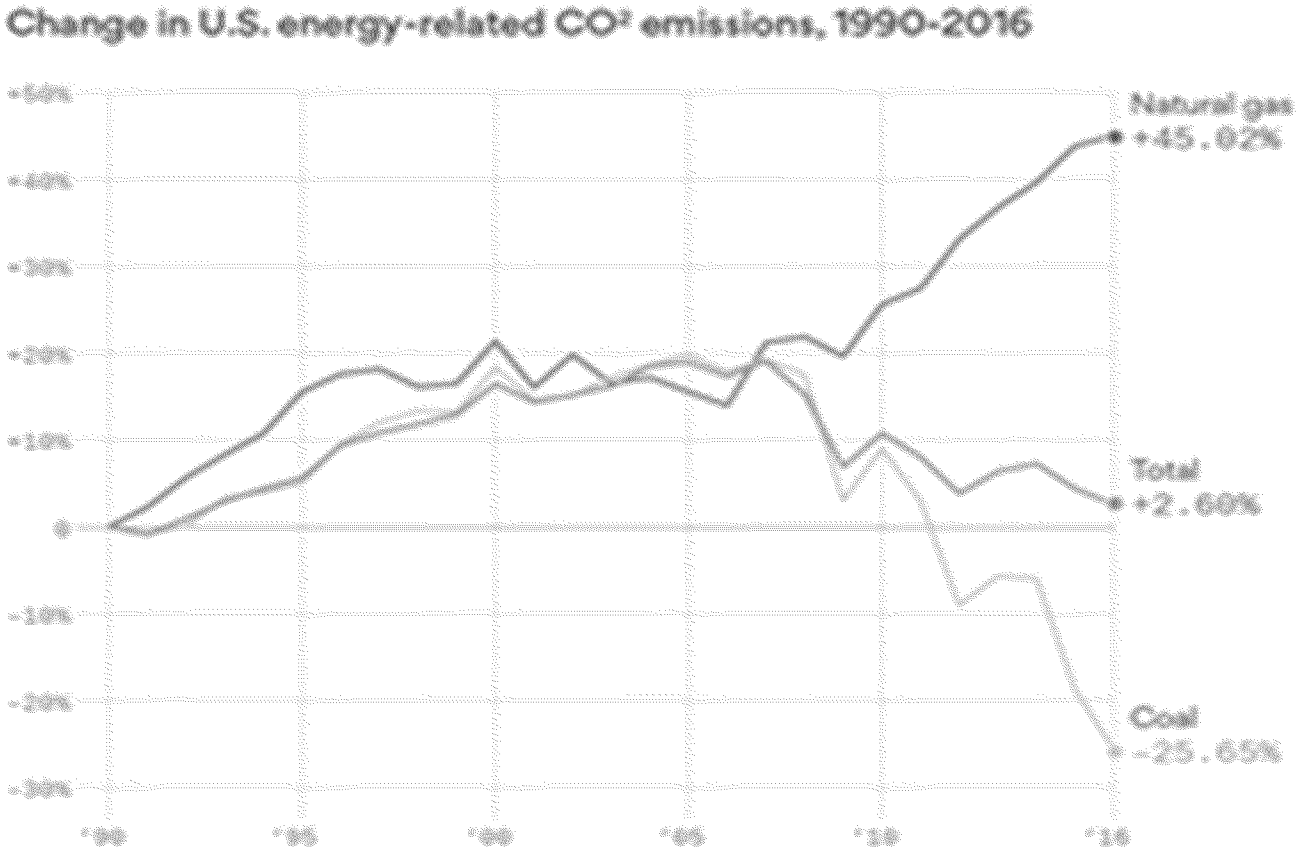
FRANKLY SPOKEN



"I'm sympathetic with the 'hurry up and fix something'" attitude, said "But this is such a draconian way of fixing it that I'm assuming it's put out there to be a lightning rod to get people off their ass and get to focusing on proper solutions to this." He added: "Everything in our society has a shelf-life and then it goes into retirement."

Former FERC Chairman Pat Wood, a Republican who is a strong advocate for markets in Darius Dixon's POLITICO.

IN THE NEWS

PA Delegation Urges Trump to Protect Refinery Jobs – Following an event at a refinery in Philadelphia this morning, members of Congress and union officials released a letter from Pennsylvania's Congressional delegation urging President Trump support refining jobs in the Northeast. Signers including Sens. Casey and Toomey, as well as Reps. Doyle, Barletta, Evans, Kelly, Brady, Meehan, Boyle, Thompson, Perry, Shuster, Rothfus and Costello.

EIA: CO2 Emissions Headed Down – The Energy Information Administration has new data on energy-related CO2 emissions and they show a 1.7% decline in 2016. The data lowers energy-related emissions to 14% below 2005 levels and just 2.6% above 1990 levels, even though the economy is much larger than it was a quarter century ago. The trend of declining coal - fired electricity generation and increasing non - fossil fuel and natural gas - fired generation continued in 2016. Coal's share of total electricity generation fell from 53% in 1990 to 30% in 2016. The natural gas share of electricity generation grew from approximately 12% in 1990 to 30% in 2012 and to 34% in 2016. The non-fossil fuel electricity generation share (35%), including both nuclear and renewables, exceeded that of both coal and natural gas in 2016. See a bunch a great charts here.

EPA GHG Report Also Shows Decrease – Another new annual report from EPA says greenhouse gas emissions from America's largest industrial facilities fell 2% in 2016 to 2.99 billion tons, led by a large cut from the power sector. The decline in emissions in 2016 was led by a 4.6% reduction from U.S. power plants, an 18% decline from five years ago.

TX Utility to Retire Coal Plant – Speaking of emissions heading down, Texas utility Vistra announced on Friday plans to retire its Monticello Power Plant in Titus County, Texas. In total, approximately 1,800 MW of power will be taken offline in January of 2018. Vistra said the market's unprecedented low power price environment has profoundly impacted the plant's operating revenues and no longer supports continued investment. Vistra estimates that approximately 200 employees will be impacted by Monticello's retirement. More here.

Wheeler EPA Nom Finally in Motion – After months of expectation and speculation, President Trump late last Thursday appointed Faegre Baker Daniels Consulting energy and natural resources expert Andrew Wheeler to the #2 position at EPA. Wheeler previously worked for Sen. Jim Inhofe and the Senate Environment and Public Works Committee.

ON THE SCHEDULE THIS WEEK

Forum to Look at Clean Energy – Today at 3:15 p.m., as part of the State Innovation Exchange's annual SiX Legislator Conference, local and state leaders will gather in Washington, D.C., for a panel discussion on clean energy efforts in the States. More than 500 progressive state legislators and legislative staff from across the nation will gather for the 4th annual legislator conference. These state lawmakers, who are on the front lines of the resistance and policy making efforts across the country will gather to discuss and find solutions to some of the most pressing issues impacting the country as well as plan new strategies to further resist the efforts of the Trump administration. The conference goes through tomorrow.

Rural Co-Ops to Discuss CyberSecurity – The National Rural Electric Cooperative Association hosts a cybersecurity forum, "Insights on Cybersecurity for Electric Utilities," tomorrow at 10:00 a.m. The event will be in collaboration with the National Cyber Security Alliance and the Department of Homeland Security.

WRI to Host Forum – Experts from the Open Government Partnership and World Resources Institute will hold a forum tomorrow at 12:30 p.m. on climate action. The forum will profile a range of innovative approaches that open government advocates have taken to strengthen countries' climate commitments under the Paris Agreement. Together, they will unpack how improving transparency, accountability and public participation in climate decision-making processes can help governments and civil society leaders around the world achieve ambitious climate targets.

Forum to Look at US-China Relations – The Atlantic Council's Global Energy Center and the Brent Scowcroft Center's Asia Security Initiative will hold a timely conversation tomorrow on the role energy plays in the US-China relationship. The US administration's emerging diplomatic strategy and the upcoming nineteenth national congress of the Communist Party of China provide an opportunity to take stock of the role energy plays in the US-China relationship, as well as in how China views its future. Key issues in the US-China relationship include the role of liquefied natural gas (LNG) in the US-China Comprehensive Economic Dialogue, China's view of US energy exports, and how energy fits into the administration's trade agenda. Speakers include our friend Robert Fee of Cheniere Energy, ITC Assistant Secretary Alan Turley and DOE China advisor Maria DiGuilian with our friend Keith Johnson of *FP* moderating.

Report top Look at Highly-Enriched Uranium Facilities – On Wednesday at 10:00 a.m., the Fissile Materials Working Group and International Panel on Fissile Materials will launch of a major new IPFM research report, edited by Pavel Podvig, with contributions by six leading Russian experts on highly enriched uranium (HEU) facilities. The report describes in unprecedented detail Russian programs that use HEU as fuel in military and civilian applications. Further, it asses Russia's contribution to the effort to convert research reactors from HEU to non-weapon-usable low-enriched uranium fuel, and Russia's efforts to repatriate HEU fuel it had supplied to facilities abroad. Finally, it evaluates the organizational structure and regulations governing the security of HEU in civilian facilities in Russia. It makes recommendations for securing Russia's commitment to the goal of a comprehensive global HEU minimization strategy.

House Resources Look at Revenue Legislation – The House Natural Resources Committee's Subcommittee on Energy and Mineral Resources will hold a legislative hearing on Wednesday at 2:00 p.m. to look at a discussion draft of legislation to amend the Outer Continental Shelf Lands Act to distribute revenues from oil and gas leasing on the outer Continental Shelf to certain coastal States, and for other purposes. Witnesses will include former Louisiana Sen. Mary Landrieu, South Caroline State Senator Stephen Goldfinch, API's Erik Milito and former BOEM director Michael Bromwich.

Walden, DOE Official Headline Canadian Energy Efficiency Forum – On Thursday, the Canadian Embassy hosts the 28th annual Energy Efficiency Forum, featuring Dan Brouillette, deputy secretary at the Department of Energy, and Rep. Greg Walden (R-Ore.), chairman of the House Energy & Commerce Committee.

House Energy to Discuss Grid Proposal – Energy Secretary Rick Perry testifies before the House Energy Subcommittee on Thursday at 10:00 a.m. to offer his vision for managing and executing the department's missions and opportunities to update and align DOE's missions and operations with the emerging energy, national security, environmental, and technological challenges confronting the nation. Expect some interesting questions as a many energy industries have raised concerns about the DOE approach

ACORE Finance Forum Set – The American Council on Renewable Energy will hold forum on the state of the renewable energy public policy, financial markets and corporate renewables strategy when they hold ACORE Finance West on Thursday at the Bently Reserve in San Francisco. This annual conference convenes senior investors, industry executives, and other top transactional professionals to address market trends in the context of renewable investment opportunities in the Western U.S.

Bloomberg Hosts Sustainability Forum – Bloomberg holds its 3rd annual Sustainable Business Summit on Thursday and Friday in its New York offices to discuss how companies are yielding positive returns for investors, creating sustainably valuable products and processes, and developing innovative sustainable business models. Uniquely positioned at the intersection of sustainable business and sustainable investing, the summit will explore the challenges and even greater opportunities emerging across industries.

WAPA to Host Road Rally – The Washington Automotive Press Association holds its 2017 WAPA Rally on Thursday. This year's event will be a drive event on the roads just beyond the Chesapeake Bay Bridge on the scenic Eastern Shore of Maryland. The event provides the opportunity to drive or ride in the latest and greatest cars, trucks and SUVs provided by WAPA's automotive partners.

CSIS to Host IEA Renewable Energy Report Launch – The CSIS Energy and National Security Program is hosting Heymi Bahar, Project Manager of the Renewable Energy Division at the International Energy Agency (IEA), on Thursday at 9:30 a.m. for a presentation of the IEA's Renewable Energy Market Report 2017 (formerly titled Medium-Term Renewables Market Report). The report provides a detailed market analysis and overview of renewable electricity

capacity and generation, biofuels production, and heat consumption, as well as a forecast for the period between 2017 and 2022. This year's report also assesses the off-grid solar market in Africa and developing Asia and the contribution of electric vehicles to renewable road transport. Our friend Kevin Book will moderate.

Groups to Look at Nuclear Report – The Natural Resources Defense Council, the Union of Concerned Scientists, and the Heinrich-Böll-Stiftung will host a forum on Thursday at noon for the U.S. launch of the *World Nuclear Industry Status Report 2017.*

Women's Energy Groups Hold Reception – The Women's Energy Network hosts its October Happy Hour reception at Asia Nine on Thursday evening starting at 5:30 p.m. WEN DC is an organization that supports the professional development and advancement of women in the energy industry through relationships and networking. The events feature great food, drinks, networking, and socializing with your WEN members and other professionals from across the energy industry.

KB Hutchison to Address *WaPo* Forum – On Thursday at 6:30 p.m., U.S. Permanent Representative to NATO Kay Bailey Hutchison – former TX Senator and Bracewell colleague will speak one-on-one with columnist David Ignatius at *The Washington Post*. Hutchison will explore the future of NATO, mounting threats from Russia against Western allies and the ambassador's top priorities for military cooperation, intelligence-gathering and combating terrorism.This live, on-stage interview is a part of the ongoing "Securing Tomorrow" series.

House Resources Looks at Onshore Energy – On Friday at 9:00 a.m., the House Resources Committee's Subcommittee on Energy and Mineral Resources will hold a legislative hearing on a discussion draft of legislation looking at opportunities for to harness onshore resources to achieve domestic energy independence by empowering States to manage the development and production of oil and gas on available Federal land, and for other purposes.

Wilson Forum to Look at Mexico Energy Outlook – On Friday at 4:00 p.m., the Woodrow Wilson Center will hold a forum looking at Mexico's energy outlook. Mexico's landmark 2013 energy reform has caused a transformation for PEMEX from a monopolistic national oil company to a company with a competitive entity, with a more efficient business model. José Antonio González Anaya has been leading this effort since February 2016, and has emphasized the importance of partnerships along the breath and length of PEMEX activities. PEMEX is now fully engaged, since 2016, in exploration and production activities in partnership with private

and foreign companies. The event will feature a conversation with José Antonio González Anaya, where he will speak about the progress that has been made and the challenges the company will face in the next 12 months.

IN THE FUTURE

Wilson Center to Host Events on Resilience Week – The Wilson Center's Global Sustainability and Resilience Program is hosting the 2017 Resilience Academy Capstone Conference next week in cooperation with the Munich Re Foundation, UN University-Institute for Environment and Human Security, and International Centre for Climate Change and Development. Among the event will be three public sessions of the Academy, covering the many ways in which resilience is vital for communities around the world.

JHU to Host Sustainable Energy Institute – Next Monday, October 16th at Noon, Johns Hopkins University's SAIS will launch its Initiative for Sustainable Energy Policy (ISEP) to conduct policy analysis that will help governments universalize energy access at minimal environmental impact. Directed by Johannes Urpelainen, the Prince Sultan bin Abdulaziz Professor of Energy, Resources and Environment, ISEP offers bold ideas, rigorous policy analysis, and sustained engagement with policymakers and other change agents.

Wilson Forum to Look at Cities, Cars, Air – The Woodrow Wilson Center's China Environment Forum will host a forum next Tuesday at 9:30 a.m. on how cities are confronting the challenges of adapting a transportation system to new sustainability concerns. Simon Ng, an independent researcher formerly with Civic Exchange, will reflect on Los Angeles' and Hong Kong's quests for sustainable mobility and urban livability while also shedding light on the similar challenges faced by ever-growing Chinese megacities. Drawing on years of International Council on Clean Transportation (ICCT) engagement in the PRD lowering vehicular emissions, Zifei Yang will introduce the increasingly effective vehicle emission control programs that Shenzhen and other PRD cities have instituted.

National Bioenergy Day 2017 – The Department of Energy (DOE) will celebrate its 5th annual National Bioenergy Day on Wednesday October 18th to celebrate bioenergy, a form of renewable energy derived from biomass—organic material—that can be used to produce transportation fuels, products, heat, and electricity. This is an opportunity to showcase bioenergy facilities and

the bioenergy supply chain around the United States.

BPC to Host Moniz on Nuclear – The Bipartisan Policy Center will host former Energy Secretary Ernest Moniz a conversation on October 18th at 9:00 a.m. with BPC President Jason Grumet to discuss the vital role U.S. nuclear energy plays in achieving national security objectives. The conversation will highlight the key takeaways from *The U.S. Nuclear Energy Enterprise: A Key National Security Enabler*, a report issued by Sec. Moniz's new Energy Futures Initiative.

USEA Hosts Energy Transition Outlook – The US Energy Assn will roll out the DNV GL Energy Transition Outlook on Wednesday, October 18th at 9:00 a.m. in the Fourth Estate Room at the National Press Club. The Outlook provides a balanced forecast of our energy future through to 2050 and draws on DNV GL's independence and its broad involvement across the entire supply chain, spanning complex offshore infrastructure, onshore oil & gas installations, large-scale wind, solar and energy efficiency projects and the world's most advanced electricity transmission and distribution grids. The report forecasts energy demand and supply globally, and in 10 world regions.

Press Club to Host Comms Summit – On Wednesday, October 18, the National Press Club will host its annual Communicators' Summit at the Club's First Amendment Lounge. This year's theme is "Content is King." Leading experts will share insights on producing content suited to the unique strengths of different digital, online and social media channels, as well as emerging technologies. We'll discuss the challenges of developing credible and compelling content at a time when trust in corporations, government, NGO's and the media is being tested more than any time in a generation. Speakers will include AARP's Bill Walsh, AXIOS Editor Nicholas Johnston, Twitter's head of Global Public Policy Communications Emily Horne, Richard Levick, Scripps News Washington Bureau investigative correspondent Mark Greenblatt and several more. The Luncheon Keynote speaker will be Richard Edelman, President and CEO of Edelman. Special kudos to our friend Tim Brown of GE Renewable who is helping put the program together.

ELI Hosts Annual Dinner, Forums – The Environmental Law Institute holds its annual awards dinner honoring Achim Steiner, Administrator for the United Nations Development Program on Wednesday October 18th at the Omni Shoreham in DC. At 2:00 p.m., they will host a discussion about "cooperative federalism" and the need to ensure that environmental program administration reflects the significant expertise and experience state environmental agencies now

have after decades of administrating environmental protection laws. Panelists will include ECOS's Alexandra Dapolito Dunn, Chevron's Richard DeSanti, BNSF's John Lovenburg, Todd Parfitt of the Wyoming DEQ, C2ES's Janet Peace and Martha Rudolph, Director of Environmental Programs at the Colorado Department of Public Health and Environment. They will also hold the Miriam Hamilton Keare Policy Forum on cooperative Federalism, featuring GE's Neil Kemkar, Bob Martineau of the Tennessee DEC and several others.

JHU to Look at EVs – On Wednesday, October 18th at 5:00 p.m., Johns Hopkins University hosts a forum on electric cars. Speakers will address range, infrastructure, environmental impacts and other Issues.

CSIS to Look at Vehicle Issues – The CSIS Energy & National Security Program and Van Ness Feldman are pleased to announce a conference on the history of vehicle efficiency standards and electricity regulation in honor of the late Robert Nordhaus. This program looks at the evolution of two policy areas in which Bob made an important mark, and which raise issues of great significance today. Panels will include former Energy Committee Chair and RFF Head Phil Sharp, former Bush 43 CEQ chief Jim Connaughton and Alliance of Automobile Manufacturers CEO Mitch Bainwol, as well as former FERC Commissioners Tony Clark and Joe Kelliher.

DOE, NEI Host Nuclear Forum – The Department of Energy and the Nuclear Energy Institute will host the Millennial Nuclear Caucus on Thursday, October 19th at 5:00 p.m. in Washington, DC. Stay tuned for details.

Forum to Look at Storage, Micro Grids – On Thursday, October 19th at 5:30 p.m. at EEI, Leaders in Energy, along with Resilient Virginia, will be sponsoring a forum on improving resilience through microgrids and battery storage. The utilization of microgrids plus battery storage is seen increasingly by public and private organizations as the wave of the future to help ensure energy reliability and security in the age of intense hurricanes and cybersecurity threats. Topics include: technology that supports the utility/microgrid interface, tools for developers to assess microgrid viability based on existing infrastructure and regulations, how local governments in the DMV are working with private companies to make microgrid development financially feasible, and how our regional Department of Defense installations are utilizing microgrids as part of their energy security systems. Speakers include EEI's John Caldwell, USGBC's Brendan Owens, Dan Ton of DOE's Smart Grid R&D and Michael Yambrach, the Energy and Sustainability director in Montgomery County, MD.

Economists to Host Weather Hedge Specialist – The National Capitol Chapter of the US Assn Of Energy Economists will host their October forum with Munich Re's Edward Byrne on Friday October 20th at Carmines. Ed Byrns has specialized in weather hedging for many years. His talk focuses on how the new world of big data is creating innovative weather risk products to manage business exposure.

This presentation is a journey from the past to the present and on to the future. Throughout this journey, we will learn what weather risk management is, where market capabilities are today and how future solutions could target micro-level risks.

Renewable Tour Set for October Shenandoah Fall – JMU's Center for Wind Energy joins the nonprofit American Solar Energy Society (ASES) and hundreds of solar-savvy installers and grassroots organizations throughout America to showcase thousands of solar-powered homes, schools and businesses in Virginia and across North America -- for the 22nd Annual National Solar Tour, the world's largest grassroots solar event. The ASES National Solar Tour shows families and businesses real-life examples of how their neighbors are harnessing free energy from the sun to generate electricity, warm and cool their homes, heat water and slash monthly utility bills.

Green Bonds Conference Set for NYC – Environmental Finance will host Green Bonds 2017 at 10 on the Park in New York City on October 23rd. According to the Green Bonds Database, the American green bonds market has continued its rapid growth with over 17$ billion issued in the last twelve months.

At the conference this year we will look at the drivers behind this boom and how to ensure sustainable growth as the market matures.

AWEA Finance, Offshore Conferences Set for NYC – AWEA hosts its Wind Energy Finance & Investment Conference in NYC on October 24-26th at the Roosevelt Hotel. Wind energy continues to grow and is providing jobs, community value and, solid investment opportunities. The event will also be co-located with AWEA's annual Offshore WINDPOWER conference, which will feature Denmark's Minister of Energy, Utilities and Climate Lars Christian Lilleholt and DOE's Tim Unruh, Deputy Assistant Secretary for Renewable Power.

Women Renewable Energy Forum Set – The Women of Sustainable Energy and Renewable Industries (WRISE) Leadership Forum 2017 on November 6-7 in its inaugural year under the new brand (previously WoWE). Co-located with the AWEA Fall Symposium, this event will feature keynote speakers, professional development, networking, and expert panels on key issues

in the industry.

AWEA Fall Symposium Returns to New Mexico – On November 7th through the 9th , AWEA hosts its annual Fall Wind Energy Fall Symposium at the Hyatt Regency Tamaya Resort**,** where key strategic decisions are made to build the future of wind energy. The event will feature new executive insights, and actionable strategic plans to power your business in the upcoming year.

Alaska

WATER
APDES General Permit for Aquaculture Facilities
Alaska WATER

Notice of the Department of Environmental Conservation announces the availability of a draft Alaska Pollutant Discharge Elimination System general permit for discharges from aquaculture facilities. The general permit applies to all commercial and noncommercial concentrated aquatic animal production facilities that produce, hold, or contain 20,000 pounds or more of aquatic animals per year in ponds, raceways, or similar structures; feed 5,000 pounds or more of food during a calendar month; and discharge at least 30 days per year. The permit authorizes and sets conditions on the discharge of pollutants from such facilities, which include total suspended and settled solids, pH, ammonia, dissolved oxygen, and chlorine. The permit also limits the types and amounts of pollutants that may be discharged, provides best management practices, and requires effluent and receiving water monitoring. A hearing is scheduled for Nov. 13, 2017, in Anchorage and via conference call. Comments are due Nov. 20, 2017. Contact: Angela Hunt; DEC; 907-269-7599; angela.hunt@alaska.gov

Regulatory Update

California

HAZARDOUS MATERIALS TRANSPORTATION
Hazardous Materials/Explosives Routes and Stopping Places
California HAZARDOUS MATERIALS TRANSPORTATION

Proposed rule of the California Highway Patrol amends regulations under 13 CCR 1152.6.1 regarding commercial vehicle routes and stopping places for transportation of explosives. The

rule updates Map 16A of explosives routes for the San Diego area by removing 4.3 miles and extending 42.4 miles of currently designated routes. Hearing requests are due Nov. 13, 2017. Comments are due Nov. 27, 2017. Contact: Tian-Ting Shih; CHP, Commercial Vehicle Section; 916-843-3400; cvsregs@chp.ca.gov

—California Regulatory Notice Register (10/13/2017)

Regulatory Update

HAZARDOUS WASTE MANAGEMENT
Hazardous Waste Facilities/Postclosure Requirements
California HAZARDOUS WASTE MANAGEMENT

Proposed rule of the Department of Toxic Substances Control amends regulations under 22 CCR 66264.90, 66264.110, 66265.90, 66265.110, 66270.1, and 66270.14 and adopts regulations under 22 CCR 66264.121, 66265.121, and 66270.28 regarding hazardous waste permitted facilities and interim status facilities that have never received full authorization or a postclosure permit. The rule allows the DTSC to issue an enforcement mechanism in lieu of a postclosure permit as long as the enforcement mechanism is adequately protective of human health and the environment. The rule provides that such enforcement mechanisms may be used to address releases, to seek cost recovery, and to compel other responsible parties such as generators to carry out response or remedial activities. The rule also establishes public notice and comment requirements for the issuance of enforceable documents in lieu of permits. A workshop is scheduled for Nov. 2, 2017, and a hearing is scheduled for Dec. 1, 2017, both in Sacramento and via webcast. Comments are due Dec. 1, 2017. Regulatory Update

OCCUPATIONAL SAFETY AND HEALTH
Occupational Exposure to Beryllium
California OCCUPATIONAL SAFETY AND HEALTH

Final rule of the Department of Industrial Relations, Occupational Safety and Health Standards Board, amends regulations under 8 CCR 5155 and adopts regulations under 8 CCR 1535.1, 5205, and 8359.1 to align state requirements for occupational exposure to beryllium for construction; general industry; and ship building, repairing, and breaking with Jan. 9, 2017, federal amendments. The rule reduces the airborne permissible exposure limit to 0.2 micrograms per cubic meter (µg/m3) of air as an eight-hour time-weighted average and 2.0 µg/m3 as a short-term exposure limit determined over a sampling period of 15 minutes. The rule also establishes requirements for exposure assessment, methods for controlling exposure, respiratory protection, personal protective clothing and equipment, medical surveillance, hazard communication, and recordkeeping. In addition, the rule provides a list of nonmandatory control options that employers can use to comply with the rule in a number of specific beryllium operations. Finally, the rule specifies compliance dates for the three industry standards and requirements for change rooms and engineering controls. The rule is effective Oct. 2, 2017. Regulatory Update

PESTICIDES
Pesticides and Pest Control Operations/Filtering Facepieces
California PESTICIDES

Proposed rule of the Department of Pesticide Regulation amends regulations under 3 CCR 6000 and 6739 regarding pesticide worker safety. The rule clarifies that a filtering facepiece respirator is one that is approved by the National Institute for Occupational Safety and Health. The rule also removes the term "dust mask" from the definition of "filtering facepiece" and removes an obsolete reference to "dust mask" in voluntary respiratory protection provisions. Hearing requests are due Nov. 13, 2017. Comments are due Nov. 27, 2017. Contact: Linda Irokawa-Otani; DPR; 916-445-3991

CONTACT: press@epa.gov

EPA Approves Emergency Fuel Waivers for 38 States and Washington, D.C.

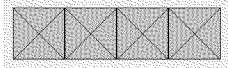
WASHINGTON (September 7, 2017) – EPA Approves Emergency Fuel Waivers for 38 States and Washington, D.C.

As a result of the continuing impacts on Gulf Coast-area refineries and disruption to the fuel distribution system caused by Hurricane Harvey and the effects of large-scale evacuations in response to Hurricane Irma, U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt today exercised EPA's emergency fuel waiver authority to help ensure an adequate supply of fuel throughout the country.

EPA has waived requirements for reformulated gasoline through September 26 and low volatility conventional gasoline through September 15 in the following states and the District of Columbia: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont, Delaware, Maryland, New Jersey, New York, Pennsylvania, Florida, Georgia, North Carolina, South Carolina, Virginia, West Virginia, Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, Oklahoma, South Dakota, Tennessee, Wisconsin, Alabama, Arkansas, Louisiana, Mississippi, New Mexico, Texas, and the District of Columbia. Today's waiver supersedes the waiver issued on August 31.

Today's waiver also waives requirements for low volatility gasoline in El Paso County, Texas through September 16 and to a number of counties in Eastern Texas through September 26.

The waiver authority was exercised under the Clean Air Act and was granted by EPA Administrator Pruitt, in coordination with the U.S. Secretary of Energy Rick Perry.



As required by law, EPA and the Department of Energy (DOE) evaluated the situation and determined that granting a short-term waiver was consistent with the public interest. EPA and DOE are continuing to actively monitor the fuel supply situation as a result of Hurricane Harvey and Hurricane Irma, and will act expeditiously if extreme and unusual supply circumstances exist in other areas.

The sale of gasoline containing up to 15 percent ethanol (E15) must continue to comply with federal rules, which are designed to minimize the potential for E15 being used in vehicles that are not designed to use this fuel.

To mitigate any impacts on air quality, the Clean Air Act provides strict criteria for when fuels waivers may be granted, and requires that waivers be limited as much as possible in terms of their geographic scope and duration.

Subject: POLITICO's Morning Score: Missouri's $10M man — Why the Messer-Rokita primary got out of hand so quickly — State of play ahead of Alabama Senate, UT-03 primaries

By Daniel Strauss | 08/14/2017 10:00 AM EDT

With Scott Bland

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

CAMPAIGN IN WAITING - "Sources: Club for Growth raises $10M for Hawley," by Campaign Pro's Kevin Robillard: "The Club for Growth has raised $10 million to support a Senate run by Missouri Attorney General Josh Hawley, two Republicans with knowledge of the group's fundraising said. The 37-year-old Hawley, who has formed an exploratory committee but has not yet officially entered the race against Democratic Sen. Claire McCaskill , is the establishment Republican pick for the race. The Club for Growth and other prominent Republican outside groups have expressed excitement about his candidacy, and McCaskill is considered one of the Senate's most vulnerable Democrats. One major donor pledged to match millions of dollars in donations earmarked for Hawley, and the Club has been collecting donations against that pledge, the two Republican sources said."

- "Hawley, who was educated at Stanford and Yale and clerked for Supreme Court Chief Justice John Roberts, was a favorite of big national donors during his run for Attorney General in 2016. Tamko Building Products CEO David Humphreys and his sister Sarah Atkins combined to give $4 million to Hawley's 2016 state campaign, and a number of other Republican megadonors chipped in thousands, including Richard Uihlein, Randy Kendrick and Darwin Deason." **Full story.**

NOT INDIANA NICE - "The slugfest underway between Republican Reps. Luke Messer and Todd Rokita in Indiana isn't just for the right to compete for possibly the GOP's best opportunity to seize a Senate seat from Democrats in next year's midterms. It's a chance to finally settle the score between two ambitious pols who've been vying to outdo one another politically since they graduated from the same small college more than 25 years ago. Yes, this one is personal. Their campaign didn't officially get underway until last week, but Messer, 48, has already accused Rokita of attacking his wife and 'spreading lies' about his record. Rokita, 47, has questioned his rival's mental health, calling Messer 'unhinged' and a 'ticking time bomb.'"

- "More than a dozen professional colleagues and personal acquaintances painted the hostility between Rokita and Messer as the product of three decades of pent-up rivalry. The two men have climbed Indiana's political ladder alongside each other for years and even attended the same small, all-male Wabash College together in the early 1990s - a school whose unofficial motto, a former dean noted with a touch of irony, is 'competition without malice.' ... Over the years,

Messer has enjoyed the full embrace of Indiana's political elite, which appointed him to a seat in the state legislature and embraced him as part of its leadership. That same elite has always kept Rokita at bay." **Full story.**

ONE DAY 'TIL PRIMARIES - Curtis 31, Herrod 23, Ainge 15 in UT-03 poll, via the Deseret News' Lisa Riley Roche: "Provo Mayor John Curtis continues to lead former state lawmaker Chris Herrod and political newcomer Tanner Ainge in the 3rd Congressional District GOP primary, according to a poll released Thursday. The UtahPolicy.com poll comes as spending by so-called super political action committees supporting Herrod or Ainge approaches $1 million. Curtis is the main target of the advertising, which many have described as largely negative. ... Just over one-fourth of the voters - 26 percent - said they remain undecided in the three-way race for the GOP nomination." **Full story.**

MORE MOORE - "The GOP rebel threatening to snag Sessions' Senate seat" by POLITICO's Seung Min Kim: "Roy Moore lacks the war chest of two chief rivals in his bid to become the next senator from Alabama. He didn't land the coveted endorsement of President Donald Trump, and doesn't enjoy the advantages of incumbency. Yet the controversial former state Supreme Court justice is coasting over his Republican challengers in Tuesday's closely watched GOP Senate primary. Moore is set to easily secure a place in a September runoff, as the establishment-backed Sen. Luther Strange and Rep. Mo Brooks scrape for the second spot. ... 'I resent people from Washington, raising money in Washington, and sending negative ads to Alabama and trying to control the vote of the people,' Moore said in an interview after a GOP executive committee meeting here. 'If the Washington crowd wants somebody, the people of Alabama generally don't.'" **Full story.**

CHARLOTTESVILLE REACTIONS - NRSC Chair and Colorado Sen. Cory Gardner, on Twitter: "Mr. President - we must call evil by its name. These were white supremacists and this was domestic terrorism. Praying for those hurt & killed today in Charlottesville. This is nothing short of domestic terrorism & should be named as such."

- Alabama Sen. Luther Strange, on Twitter: "We as Americans must stand together in opposition to those who encourage hate or promote violence. I stand with President Trump and leaders from both parties condemning these actions."

- Virginia Lt. Gov. Ralph Northam, on CNN: "The governor and I have made it very clear to

white supremacists and other groups such as that, that they're not wanted in Virginia. And we strongly encouraged them ... to go home and don't come back."

- Virginia GOP gubernatorial nominee Ed Gillespie in a statement: "Having a right to spew vile hate does not make it right. It is painful to see these ugly events in Charlottesville last night and today."

- Virginia Sen. Tim Kaine, in a statement: "Virginia has come so far in recent decades to put division behind us. ... The fact that people like David Duke cited the President to justify their views is a disturbing reminder that divisive rhetoric has sadly contributed to a climate where individuals who espouse hate feel emboldened.

- Prince William County Board of Supervisors Chair and Virginia GOP Senate candidate Corey Stewart: "Democrats and the media never denounce the violence perpetrated by the unhinged left. Antifa is simply answering the call for violence in the streets by Loretta Lynch, so it's no wonder Tim Kaine refuses to denounce his son's participation in fascist Antifa riots, even as he exhorts leftists to 'fight in the streets.'"

NEW THIS A.M. - Super PAC backing Kelli Ward launches ad against Sen. Jeff Flake: "Once again Arizona conservatives are sold out by our senators plotting with liberals on amnesty and blocking Trump's conservative agenda," the ad's narrator says, before introducing "pro-America conservative Kelli Ward" and saying that "if Dr. Ward were in the Senate today, Obamacare would be repealed." Kelli PAC is paying over $100,000 to air the ad on broadcast and cable TV after taking in a big donation from Trump megadonor Robert Mercer recently. **Watch the ad here.**

- STAFFING UP - "2 Trump backers join Flake opponent Kelli Ward's campaign," the Associated Press reports: "A political operative who helped raise millions of dollars to support President Donald Trump's 2016 campaign is joining the U.S. Senate campaign of former Arizona state Sen. Kelli Ward. Thursday's announcement that Great America PAC founder Eric Beach was joining Ward's primary campaign to unseat Republican Sen. Jeff Flake comes a day after another Trump supporter, Robert Mercer, donated $300,000 to Ward's super-PAC.The political action committee Beach founded was independent but raised more than $28 million to back Trump. The announcement said Great America PAC executive director Brent Lowder is also joining Ward's campaign." **Full story**.

UN-RETIREMENT WATCH - "Rep. Ed Perlmutter is reconsidering a re-election bid," by ColoradoPolitics.com's Peter Marcus: "Multiple sources confirmed that after Perlmutter was approached by constituents and fellow colleagues in Congress about a re-election campaign, he began reconsidering running for re-election." Perlmutter had declared he would retire after dropping out of the governor's race. "Several Democrats have been running to replace Perlmutter in a tightly contested primary, including state Sens. Andy Kerr of Lakewood and Dominick Moreno of Commerce City, and state Rep. Brittany Pettersen, also of Lakewood. Also running in the race is former Obama-era U.S. ambassador Dan Baer. A re-election bid by the popular Perlmutter could cripple those campaigns." **Full story.** (The Denver Post has reaction from the Democratic primary field **here**.)

HIGHLY IMPORTANT - "Marijuana politics emerge as 2020 flashpoint" by Carla Marinucci: "Marijuana legalization just moved from the fringes of the last presidential campaign to center stage in 2020. Between a sweeping new package of legislation introduced last week by one of the top Democratic presidential prospects and, on the other end of the spectrum, Attorney General Jeff Sessions' vigorous opposition to recreational use of marijuana, the debate over legalization of cannabis is about to receive a full airing on the presidential campaign trail. ... While Bernie Sanders also supported medicinal use of marijuana and the decriminalization of recreational marijuana, drug policy stayed on the outskirts of the 2016 presidential debate, and growing action at the state level was barely acknowledged. Tom Angell, chairman of Marijuana Majority, a bipartisan nonprofit advocacy group, said New Jersey Sen. Cory Booker's introduction of "the farthest-reaching bill ever proposed" will have a catalytic effect on the politics of legalized marijuana and the myriad criminal justice issues related to it." **Full story.**

LINE IN THE SAND - "Megadonor Steyer vows to only back candidates that support abortion rights" by Gabriel Debenedetti: "Democratic mega-donor Tom Steyer said on Saturday that he and his NextGen America group do not intend to work on behalf of anti-abortion politicians, jumping into the Democratic Party's debate on the topic. "We're pro-choice," the hedge fund manager-turned-activist told POLITICO on the sidelines of the progressive Netroots Nation conference here. Asked if his group would help candidates or sitting lawmakers who don't support abortion rights, he said, "We do not work for a single candidate who is not pro-choice. I think people like to have litmus tests. We are explicitly pro-choice. We work a lot with Planned Parenthood, we work a lot with NARAL. We are absolutely committed to it." **Full story.**

MORE STAFFING - Rauner hires former Johnson campaign manager Betsy Ankney: NBC Chicago reported on Sunday that Illinois Gov. Bruce Rauner, whose campaign is set to spend record amounts, has hired Betsy Ankney, best known for running Wisconsin Sen. Ron Johnson's upset victory over Democrat Russ Feingold in 2016, an effort she won a campaign manager of the year award for from the American Association of Political Consultants. **Full story.**

CODA - QUOTE OF THE DAY: "The stakes are very high in September" - Tea Party Patriots chairman Jenny Beth Martin in a POLITICO story on the Trump administration's agenda for September.

Subject: Interior, Energy nominations to get committee vote today

By Eric Wolff

08/03/2017 11:59 AM EDT

The Energy and Natural Resources Committee will hold an impromptu vote in the Capitol today to advance six nominees to serve in the departments of the Interior and Energy to the Senate floor.

The vote will take place in the Capitol, potentially in an effort to move the nominees directly to the floor soon after. The committee will assemble soon after a full floor vote on Energy Department nominee Dan Brouillette.

The committee is expected to advance nominees Mark Wesley Menezes, to be undersecretary of DOE; David Jonas, for DOE's general counsel; Paul Dabbar, to be DOE undersecretary for science; Brenda Burman, who would lead Interior's Bureau of Reclamation; Susan Combs, to be Interior's assistant secretary of policy management and budget; and Douglas Domenech, to be assistant secretary of insular affairs at Interior.

The committee vote had been planned for July 27, but Chairman Lisa Murkowski (R-Alaska) postponed it.

WHAT'S NEXT: The committee will vote early this afternoon in a brief session in the Capitol. Leaders from both parties are continuing to negotiate over what nominees will be confirmed by the full Senate before it adjourns for recess as soon as today.

Driving the Day

ONE YEAR AGO TODAY, Donald Trump beat Hillary Clinton.

Happy Wednesday. WHAT WE'RE HEARING ... In the last 24 hours a pair of House Republicans retired: **NEW JERSEY REP. FRANK LOBIONDO** and **TEXAS REP. TED POE** . Several sources have told us there are likely to be more departures. Other lawmakers we hear could announce they will not seek reelection to their House seat: **REP. BOB GOODLATTE**, the Virginia Republican who is term limited atop the Judiciary Committee, and **REP. MARTHA MCSALLY (R-ARIZ.),** who is likely to run for a Senate seat. Goodlatte's office did not respond to a request for comment, and McSally's office did not have a comment.

THE BIG PICTURE -- BIG NIGHT FOR DEMOCRATS -- Democrats won the governor's mansions in New Jersey and Virginia. **DAVE WASSERMAN** (@redistrict) says that "raw votes cast" in Virginia were up 16% from 2013. Charlottesville was up 31%. Maine voted to expand Medicaid. Manchester, New Hampshire had its highest turnout this decade and elected a Democrat to its mayorship for the first time in 14 years.

PRESIDENT DONALD TRUMP's response to Republican Ed Gillespie's loss in Virginia? **@realDonaldTrump** at 8:40 p.m.: "Ed Gillespie worked hard but did not embrace me or what I stand for. Don't forget, Republicans won 4 out of 4 House seats, and with the economy doing record numbers, we will continue to win, even bigger than before!"

-- THE HOUSE SEATS that Republicans won were in all solidly red districts.

--THE MOOD: "Democrats euphoric after Tuesday election romp," by Gabe

Debenedetti: "Jubilant Democrats struck a defiant tone after sweeping victories across the country on Tuesday night, led by Democrat Ralph Northam's surprise pummeling of Republican Ed Gillespie in Virginia's gubernatorial race. Surveying their first electoral sweep in half a decade after a soul-crushing 2016 campaign and a desultory start to the Donald Trump era, Democratic leaders reset their expectations for the 2018 midterms.

"They're now expecting a fundraising and candidate recruitment surge, powered by grass-roots fury at the Trump administration. While most Democrats stopped short of predicting the party will take the House next year, they noted in Gillespie the failure of a candidate who tried balancing between Trump-style populism and establishment Republicanism." http://politi.co/2hRgLgM ... ***More from Kevin Robillard*** http://politi.co/2znbhnS

-- THE BIG PICTURE IN THE COMMONWEALTH: "Trumpism Without Trump: A Losing Formula in Swing-State Virginia," by NYT's Michael Tackett in Alexandria, Virginia: "For Ed Gillespie, Trumpism was an ill-fitting suit. His résumé was pure establishment -- national Republican Party chairman, counselor to President George W. Bush, well-connected K Street lobbyist. But the messaging of his campaign for governor of Virginia was that of a cultural flamethrower, emphasizing crimes by undocumented immigrants as well as monuments to Confederate heroes - and even suggesting that his opponent, a pediatric neurologist, supported child pornographers. As the Republican candidate, Mr. Gillespie tried to run in a very narrow lane by embracing some of the most divisive elements of President Trump's agenda while treating him like Voldemort and mostly refusing to utter his name." http://nyti.ms/2zqcgTS

-- RICHMOND TIMES DISPATCH: "Democrats erase 32-seat GOP advantage in House; recounts likely to determine control" http://bit.ly/2zqYX5r

JESSICA POST (@JessicaPost), executive director of the Democratic Legislative Campaign Committee: "Flipping 14 seats from red to blue in VA is the biggest Democratic pick-up since 1899."

QUOTE OF THE DAY, in **NYT's JONATHAN MARTIN** and **ALEX BURNS' A1 PIECE:** "Representative Scott Taylor, a Republican from Virginia Beach, said he considered the Democratic sweep in Virginia a repudiation of the White House. He faulted Mr. Trump's 'divisive rhetoric' for propelling the party to defeat, and said he believed traditionally Republican-leaning voters contributed to Mr. Northam's margin of victory.

"'I do believe that this is a referendum on this administration,' Mr. Taylor said of the elections. 'Democrats turned out tonight, but I'm pretty sure there were some Republicans who spoke loudly and clearly tonight as well.' Channeling the shock of Republicans across the state, Mr. Taylor voiced disbelief at the party's rout down ballot. 'I know folks that lost tonight who were going against candidates I'd never even heard of,' he said." http://nyti.ms/2zpBbVF

-- ROMP IN NEW JERSEY -- STAR-LEDGER: "Phil Murphy beats Kim Guadagno to

succeed Christie as N.J. governor": "As of about midnight, with 99 percent of districts reporting, Murphy led Guadagno by about 14 percentage points -- 56 percent to 42 percent, according to the Associated Press. Murphy was ahead by nearly 250,000 voters -- 1.12 million to 856,000." http://bit.ly/2j9o9Yk

-- ... AND IN THE NORTHEAST... PORTLAND PRESS HERALD: "Maine becomes first state to approve Medicaid expansion by popular vote," by Edward D. Murphy: "Maine voters passed a measure to expand Medicaid on Tuesday, giving about 70,000 Mainers health care coverage and making the state the first in the nation to approve Medicaid expansion at the ballot box. With 75 percent of Maine precincts reporting, the measure was favored by 59 percent of the voters." http://bit.ly/2hkLx4o

-- **@mviser:** "Good luck getting Susan Collins to ever vote to repeal Obamacare".

-- NEW HAMPSHIRE UNION LEADER: "History made in Manchester: Joyce Craig elected as Queen City's first female mayor," by Paul Feely: "Unofficial results from Tuesday's municipal election show Craig defeated incumbent Mayor Ted Gatsas by almost 1,500 votes to become the 48th mayor of Manchester. The largest turnout so far this decade helped Craig beat Gatsas, following her loss two years ago by just 64 votes. ... Craig is the first Democrat to be elected mayor of Manchester in 14 years." http://bit.ly/2zra5Q6

-- BY THE NUMBERS: "Exit polls: This was a message to Trump," by Steven Shepard: "This one was for Donald Trump. Exit polls revealed an unmistakable anti-Trump backlash Tuesday, as Democrats won resounding victories in governors races in Virginia and New Jersey. Majorities of voters in both states disapproved of the job Trump is doing as president, with significant numbers of voters in each state saying Trump was a reason for their vote. And far more of those voters said they made their choice to oppose Trump than to support him. ... [W]hat is unusual about Tuesday night is the extent to which the two races were about Trump. And the stark results cast fresh doubt on the health of Republican majorities in the House and Senate, in addition to gubernatorial races in next year's midterm elections." http://politi.co/2hSNeDf

CATCHING YOU UP ON TRUMP ABROAD ...

-- AFTER THE WHITE HOUSE CALLED a trip to the DMZ cliché in Washington, Trump attempted to go with the South Korean president but was thwarted by bad weather.

--HOW POOLER JULIE DAVIS REPORTED IT: "Your pool was summoned earlier than originally scheduled Wednesday morning and briefed by Press Secretary Sarah Huckabee Sanders about the president's surprise trip to the Demilitarized Zone. 'This is where we're going,' Ms. Sanders said, holding up a piece of notepaper on which the letters 'DMZ' were scrawled. She said that was the way she had been instructed to alert us to our destination. ... The pool boarded Chinook helicopters in a grassy field that had metal bleachers on one side.

"A half-dozen camouflage-clad guys in tactical gear were seated at the back of your press pool's bird, closest the open back door. Wheels up at 7:43a. The skyscrapers and dense neighborhoods of Seoul were barely visible through thick fog as we lifted. At 8:01, your pool was informed there had been a bad weather call and at 8:08a we landed back at Yongsan. Sanders said we would wait 10-20 mins and try again, weather-permitting. After nearly an hour of holding, we boarded the motorcade."

-- TRUMP at the South Korean national assembly, per the White House: "Today, I hope I speak not only for our countries, but for all civilized nations, when I say to the North: Do not underestimate us, and do not try us. We will defend our common security, our shared prosperity, and our sacred liberty."

****** **A message from Morgan Stanley:** Disruption in retail: Automation and digitalization are helping athletic footwear brands chase growth via fast fashion. Read more from Morgan Stanley. ******

THE PRESIDENT also congratulated Park Sung-hyun, who won the U.S. Women's Open this year at Trump National. "The Women's U.S. Open was held this year at Trump National Golf Club in Bedminster, New Jersey, and it just happened to be won by a great Korean golfer, Sung-hyun Park. An eighth of the top 10 players were from Korea. And the top four golfers -- one, two, three, four -- the top four were from Korea. Congratulations. (Applause.) Congratulations. And that's something. That is really something."

THE WHITE HOUSE described this speech as historic to reporters on Air Force One, per poolers Mark Landler of the NYT and our own Andrew Restuccia.

-- IN CHINA, Trump and Chinese President Xi Jinping toured the Forbidden City. ***Photo*** http://bit.ly/2hSgdqE

--"Jumping children, soldiers greet Trump at Beijing airport" -- AP/Beijing: "The ceremony accompanying Trump's arrival at Beijing's airport on Wednesday afternoon was elaborate even by China's lavish standards. ... As he exited Air Force One, Trump and his wife, Melania, were met by Chinese and American dignitaries, soldiers standing stiffly at attention, a band playing martial music and smartly attired children waving miniature Chinese and American flags while chanting 'Welcome, welcome.'

"As Trump's motorcade pulled away, the tempo increased, with children jumping up and down while they waved and chanted. The president and first lady appeared pleased, smiling and accepting flower bouquets, with Trump at one point throwing his arms open and appearing to exclaim 'Wow.'" http://bit.ly/2hkVFtR

--AP at 5:31 a.m.: "BEIJING (AP) - Chinese, U.S. companies sign deals the 2 sides say are worth $9 billion during Trump visit."

INSIDE TRUMPWORLD -- "Tee times, smoothie diets, and fat paychecks: A look

inside post-Trump life," by Josh Dawsey and Matt Nussbaum: "Steve Bannon now only flies by private plane - and has his own small security team that surrounds him 24 hours a day. Reince Priebus spends Friday afternoons at the swanky Belle Haven Country Club in Alexandria, sipping Heineken on the patio and trying to break 90 over 18 holes. He is charging at least $50,000 to give private talks about the White House to CEOs and carries a phone that seems to ring non-stop. ...

"There have been few constants in Trump's White House, but personnel churn has proven one. Much of his inner circle has turned over since he took office, a remarkable pace surpassing any other West Wing in decades. Among the departures are a dizzying array of names: Flynn, Priebus, Bannon, Sebastian Gorka, Michael Short, Marc Lotter, Anthony Scaramucci, Tom Price, Keith Schiller, George Gigicos, George Sifakis, Michael Dubke, Katie Walsh, Josh Pitcock, Ezra Cohen-Watnick and even the White House usher.

"Some are richer and cashing in on their work with the president. Some face significant legal risks. And some of them are just content to be out of the spotlight. But all of them seem happy about one thing: The morning tweets are no longer their problem." ***With mini profiles of Bannon, Priebus, Sean Spicer and Michael Flynn*** http://politi.co/2yfR3II

FOR THE RECORD BOOKS -- "Ryan breaks record for shutting down floor debate," by Rachael Bade: "Paul Ryan vowed an end to the much-despised, top-down approach of his predecessor when he took the speaker's gavel in 2015, promising a House that's 'more open, more inclusive, more deliberative, more participatory.' 'We're not going to bottle up the process so much and predetermine the outcome of everything around here,' he said in his first press conference as speaker. But two years later, the House Rules Committee, which is controlled by the speaker, just set a new record for the most closed rules in a session - barring lawmakers for the 49th time from offering amendments on a bill. Ryan has yet to allow a single piece of legislation to be governed by an open rule, which allows members to propose changes on the floor." http://politi.co/2yFWSn6

ON TAX REFORM -- "Trump, wooing Democrats, says he asked accountant how he'd be affected by GOP tax bill," by WaPo's Mike DeBonis and Ed O'Keefe: "President Trump on Tuesday made a personal appeal from across the globe to ask moderate Senate Democrats to support the emerging Republican tax plan, saying he has explored the impact of the plan on his personal finances and believes it won't help the rich. ... Trump pitched the plan as a benefit to the middle class that comes at the expense of the rich - an assessment at odds with independent tax experts who have analyzed the bill and concluded the bulk of its benefits go to corporations and the wealthy.

"Trump told the senators that he has spoken to his own accountant about the tax plan and that he would be a 'big loser' if the deal is approved as written, according to multiple people in the room who heard the president on the phone. 'The deal is so bad for rich

people, I had to throw in the estate tax just to give them something,' Trump said, according to the people, who spoke on the condition of anonymity to share details of the meeting." http://wapo.st/2zFF6ke

-- "Tax hike reports throw Republicans on political defensive," by Brian Faler: "House Republicans are on the defensive after a new analysis, the latest in a string, shows that some middle-income people would see tax increases under their plan to rewrite the tax code. While most taxpayers -- 61 percent -- would see their taxes fall in the next two years, almost one-fifth would pay higher taxes by 2027, the Joint Committee on Taxation said Tuesday. That year, 46 percent would get a tax cut while more than one-third would see only minimal changes in their tax bills, totaling less than $100. It promises to be an explosive issue, especially given President Donald Trump and other Republicans' promises to make the middle class the focus of their tax plans." http://politi.co/2hRgNoU

-- IMPORTANT: "Senate GOP tax bill could delay corporate tax cut and make other major changes that break sharply with House plan," by WaPo's Damian Paletta, Mike DeBonis and Ed O'Keefe: "Senate Republicans on Tuesday were considering a starkly different approach to overhauling the tax code than their House colleagues, weighing a delay in the implementation of a major corporate tax cut and other measures to alter the cost and impact of the plan.

"Senate leaders were exploring postponing the centerpiece of the effort -- an $845 billion corporate tax cut -- until 2019, according to four people familiar with a draft of the legislation. The move would make it easier to comply with Senate rules that aim to limit any legislation's impact on the debt.

"At the same time, Republican senators were planning to eliminate the state and local tax deduction, going further than the House, which retained part of the popular tax break, said the people familiar with the matter, speaking on the condition of anonymity because they were not authorized to discuss sensitive deliberations. Senators also were debating how to ensure that fewer of the plan's benefits flow to the wealthy and more flow to the middle class." http://wapo.st/2Ajhj5J

-- IT'S WORTH NOTING: The corporate rate is sacrosanct for many House Republicans, and behind the scenes, President Trump has taken a very hard line on the 20-percent rate. Eliminating the state and local tax deduction would be a big problem for the Republican lawmakers from New York, New Jersey and California. Keep in mind that the high-tax states are represented by Democrats in the Senate.

SOMETHING TO WATCH -- "Obamacare sign-ups surge despite Trump cuts," by Paul Demko: "Obamacare's open-enrollment season is off to a booming start despite widespread fears the Trump administration is seeking to sabotage the sign-up period. The number of individuals signing up for coverage through HealthCare.gov during the first week of open enrollment is 'roughly double' the pace of the previous year, according to an HHS source familiar with the enrollment data. It's way too early to

determine whether more Americans will ultimately sign up for coverage this season. One big reason to treat the initial surge with caution: The enrollment period is just six weeks long, half the length of last year's sign-up period." http://politi.co/2zpsuKN

TEXAS UPDATE -- "Texas church gunman escaped mental health facility in 2012 after threatening military superiors," by WaPo's Eli Rosenberg, Mark Berman and Wesley Lowery: "The gunman who killed more than two dozen people in a small church outside San Antonio on Sunday had a string of troubling episodes in recent years, including an escape from a mental health facility in 2012 after he was caught sneaking guns onto an Air Force base 'attempting to carry out death threats' against military superiors, according to a police report." http://wapo.st/2j8JvoB

--"Air Force secretary says Texas shooter was a 'serious problem' in the Air Force" - CBS News: http://cbsn.ws/2zFD1o3

-- "Senators look to bolster background check system after Texas shooting," by Seung Min Kim: "Senate Majority Whip John Cornyn (R-Texas) is speaking privately with at least three Democratic senators about legislation that would better ensure the criminal histories of potential gun buyers are properly transferred to the FBI's National Instant Criminal Background Check System. Separately, Sens. Jeff Flake (R-Ariz.) and Martin Heinrich (D-N.M.) said they are working on legislation meant to ensure all domestic violence convictions in the military are captured in the federal database." http://politi.co/2Aj7kxg

POLITICO GETS RESULTS -- "Congresswoman's top aide suspended after harassment claims," by Rachael Bade and Heather Caygle: "Rep. Brenda Lawrence has placed her chief of staff on leave following allegations of sexual harassment by former employees, her office confirmed to POLITICO. The Michigan Democrat suspended Dwayne Duron Marshall after POLITICO reported Tuesday on four former staffers' accounts of how Marshall treated women in the office. The aides said he made frequent comments about their looks and engaged in occasional unwanted touching - something Marshall firmly denied in a statement." http://politi.co/2zrSjtT

VP MIKE PENCE is going to Texas today to visit victims of the shooting. Flying with the VP: Karen Pence, Attorney General Jeff Sessions, Reps. Will Hurd (R-Texas) and Henry Cuellar (D-Texas). Local law enforcement will brief the group, and they'll participate in a prayer vigil.

FIRST PERSON - "I Dined With Alwaleed in the Desert Days Before His Arrest: Watching soccer, talking politics, with the billionaire Saudi prince," by Bloomberg's Erik Schatzker: "On my first trip to Saudi Arabia in 2010, Alwaleed gave me a five-day tour of his business interests, properties and lifestyle. ... The prince let me explore his palace, with its 400-odd rooms, and we visited his apartment on a high floor of Riyadh's Kingdom Tower, the 'resort' overlooking a canyon on the outskirts of the city and his old desert camp.

"We ate meals together, played with his grandchildren, went on a bicycle ride and shot pool in his outdoor living room. We even got caught in a sandstorm. The prince depended on a staff that numbered in the hundreds: chefs, florists, travel coordinators, personal security, pilots and more. He didn't have one private jet; he had several, including a gold-trimmed Boeing 747." https://bloom.bg/2zqpxJZ

-- "Saudi Crackdown Targets Up to $800 Billion in Assets," by WSJ's Margherita Stancati in Beirut and Summer Said in Dubai: "The Saudi government is aiming to confiscate cash and other assets worth as much as $800 billion in its broadening crackdown on alleged corruption among the kingdom's elite, according to people familiar with the matter. ... The crackdown could also help replenish state coffers. The government has said that assets accumulated through corruption will become state property, and people familiar with the matter say the government estimates the value of assets it can reclaim at up to 3 trillion Saudi riyal, or $800 billion." http://on.wsj.com/2AjHmJX

NEW WOMEN RULE PODCAST -- What Actually Did Happen? -- 365 days later, POLITICO Editor Carrie Budoff Brown looks at Election Day 2016 through the perspectives of five women who worked for different presidential candidates. In this exclusive POLITICO Women Rule podcast, Symone Sanders, Pam Bondi, Jennifer Palmieri, Catherine Frazier and Jessica Ennis share their experiences, memories and takeaways from inside the campaigns and outline what they think the next woman who runs for president needs to do to win. ***Tune in*** http://politi.co/2gFsL7y

OBAMAWORLD -- "Barack Obama is building a library -- and grappling again with Chicago politics," by WaPo's Krissah Thompson in Chicago: "When the Barack Obama Presidential Center opens in 2021, it will sprawl across 20 acres on this city's densely packed South Side. A museum will occupy one towerlike building; another, dubbed 'The Forum,' will house a test kitchen, recording studio and auditorium. The library itself won't literally house his papers, since they plan to digitize everything, but will feature a rooftop park to complement the complex's community garden, sledding hill and playground. The 44th president says he wants it to serve not as a monument to himself but to bigger ideals -- democracy, citizenship, civic engagement. Still, Chicago Sun-Times columnist Lynn Sweet spoke for many when she predicted that the complex will one day be known around here as 'Obamaland.'" http://wapo.st/2zIlfVN

BEN WHITE talks with **LARRY SUMMERS** in Brookline, Mass., for his latest POLITICO Money podcast: "Larry Summers thinks it's 'crazy' that President Donald Trump spends so much time bragging about how great he's been for the stock market. The former Treasury secretary and current Harvard professor argues that Trump, who tweets regularly about new stock market records, is setting himself up for a crushing blow if markets tumble. 'It's crazy for a president to wrap himself in the stock market,' Summers said in an interview for the POLITICO Money podcast from his home in this leafy Boston suburb. 'The market goes up and the market goes down and if you take credit when the market goes up, I don't see how you can avoid taking responsibility when the market goes down.'" http://politi.co/2zG6iiD ... ***Listen to the podcast*** http://apple.co/2m4dOhp

****** **A message from Morgan Stanley:** Consumers want new and now, a trend pushing athletic-wear brands to rethink how fast they can design and manufacture footwear. The rise of "fast fashion" is pushing brands to continuously roll out new models. The shift poses both a challenge and an opportunity. Read more. ******

THE NEW GILDED AGE -- NYT A1, "How Business Titans, Pop Stars and Royals Hide Their Wealth: Records from an offshore hideaway show how an American billionaire grew one of the world's largest trusts and another owned part of a company accused of exploiting the poor," by Scott Shane, Spencer Woodman and Michael Forsyth: "Appleby had 31,000 American clients, the most common nationality by far. The firm's files include a who's who of the nation's wealthiest citizens: prominent Democrats like George Soros, the financier and philanthropist, and Penny Pritzker, commerce secretary in the Obama administration; and high-profile Republican supporters of President Trump, including Sheldon Adelson, the casino magnate, and Carl Icahn, the private equity investor." http://nyti.ms/2AjV4MX

HMM -- "Senator Menendez Juror Asks Trial Judge: 'What Is a Senator?'" by Bloomberg's David Voreacos and Neil Weinberg: "U.S. District Judge William Walls declined to answer the question, and he refused that juror's request for a transcript of Monday's closing argument by Menendez's attorney, Abbe Lowell. The panel had returned to the Newark, New Jersey, federal courthouse Tuesday after spending about 75 minutes deliberating the day before. Walls told jurors that they should rely on their individual and collective memories to determine how to define a senator." https://bloom.bg/2jdglzq

MEDIAWATCH -- @mlcalderone: "NYT terminates relationship with David Boies over his 'reprehensible' work for Weinstein to spy on paper's reporters" http://bit.ly/2zqDlpQ

-- REMEMBERING SARAH PORTLOCK - WSJ editor Gerry Baker emails the staff: "I'm deeply saddened to tell you that Sarah Portlock, our colleague who suffered a brain injury in March while pregnant with her daughter, died suddenly [Monday]. Our thoughts and prayers are with her husband, Sam, and daughter, Aviva ... Sarah will be remembered by colleagues in Washington and New York as a warm and kind colleague ... the organizer of cards and gifts when someone had a new baby or got married; the planner of team-building happy hours; and the cheerleader of friends and colleagues

when they landed a big scoop, finished a big project or received some recognition for work well done. ... Sarah joined The Wall Street Journal in June 2012 as an economics reporter, where she developed deep friendships with a number of colleagues." ***How to support her family*** http://bit.ly/2yhmUc5

****** **A message from Morgan Stanley:** It has become commonplace for consumers to see new footwear styles online and shop for them instantly-followed by speedy delivery. For the world's largest athletic brands, the shift toward "new and now" poses both a challenge and an opportunity. Revamping the lengthy design and manufacture process for footwear can be arduous, while streamlining the process to incorporate new technology for creating prototypes and 3D printing can speed production of key materials. These and other innovations could boost revenues, improve margins, reduce operational risk, and finally, win more market share in an already booming category. Since 2007, global sales of athletic wear have increased 61%, and faster supply chains can help sustain that growth for years to come. As brands shift investments toward digital design and automated manufacturing, digitization could have a significant impact on supply chains. Read more. ******

PHOTOS: Administrator Pruitt Takes State Action Tour to North Dakota

Meets with Bipartisan Delegation of State Leaders

Fargo, N.D. (August, 9, 2018) – U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt continued his state action tour in North Dakota on Wednesday, visiting his ninth state in four weeks.

"As I've traveled state-to-state, farmers and landowners have told me firsthand the harmful impacts the 2015 WOTUS rule would have on American agribusinesses," **said Administrator Pruitt**. "EPA is no longer in the business of advancing unnecessary and burdensome regulations that harm the agriculture industry and do little to help keep water clean."

Administrator Pruitt began his trip with a stop at North Dakota State University in Fargo where he was joined by North Dakota Governor Doug Burgum, U.S. Senator John Hoeven, U.S. Congressman Kevin Cramer, North Dakota Lt. Governor Brent Sanford, North Dakota Attorney General Wayne Stenehjem, a representative from U.S. Senator Heidi Heitkamp's office, and other state officials. Together, they held a roundtable with the North Dakota Farm Bureau, North Dakota's Farmer Union, and other state agribusiness leaders where they discussed EPA's recent decision to begin the process of redefining 'Waters of the United States' (WOTUS) to better provide regulatory certainty for farmers and landowners while also helping empower traditional state governing powers.

"We're very grateful to host Administrator Pruitt in North Dakota and discuss how federal regulations impact energy, agriculture, and natural resources in our state, and to thank him for his efforts to roll back burdensome and overreaching regulations such as the Waters of the U.S.," **said Governor Burgum.** "We share the fundamental goals of protecting the environment, improving public health and bolstering our economy. We appreciate Administrator Pruitt's commitment to empowering states to solve our collective challenges through more innovation instead of more regulation."

"I appreciate Administrator Pruitt coming to North Dakota to hear from our agriculture and energy producers firsthand," **said Senator Hoeven**. "Their input is vital as we continue working to provide regulatory relief and certainty to empower economic growth and job creation, while ensuring good environmental stewardship."

Administrator Pruitt later traveled to Grand Forks, N.D. with Governor Burgum, Senator Hoeven, Congressman Cramer, Lt. Governor Sanford, and other state officials where they toured the University of North Dakota's Energy and Environmental Center that is working to implement solutions for the world's environmental and energy challenges. After the tour, Administrator Pruitt and the bipartisan North Dakota delegation held a roundtable with UND faculty and members of the local energy industry to discuss how EPA is working to advance environmental stewardship and encourage innovation for more efficient sources of energy.

Earlier today, Administrator Pruitt and Governor Burgum joined Scott Hennen on his radio show on AM 1100 The Flag. The interview can be listened to here:

Subject: POLITICO's Morning Score: DNC preps 2020 opposition research on Pence, Kasich, Haley — NRSC launches digital ads vs. Rosen, Heitkamp — Abbe Lowell faces his toughest challenge yet in Menendez trial

By Elena Schneider | 08/22/2017 10:00 AM EDT

With Zach Montellaro and Kevin Robillard

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

2020 WATCH - "Dems prep for Trump primary challengers in 2020," by POLITICO's Gabriel Debenedetti: "The Democratic National Committee is conducting full-scale opposition research on multiple Republicans it believes could challenge President Donald Trump for reelection - or are likely to run if he does not. The effort, which began in late spring, covers Vice President Mike Pence, Ohio Gov. John Kasich, United Nations Ambassador Nikki Haley, and Nebraska Sen. Ben Sasse , among others. 'With Trump's tumultuous presidency in complete chaos, we are prepared for all scenarios,' said DNC research director Lauren Dillon, confirming the campaign to POLITICO. In the case of Republicans like Pence and Kasich, the team of over two dozen DNC researchers is mostly updating the existing research books they deployed in 2016, according to Democrats familiar with the arrangement. For the others, the operatives are combing through voting and governing records, compiling financial files, searching for conflicts of interest, and saving clips on their relationships with Trump." **Full story.**

- "Susan Collins: 'Too difficult to say' whether Trump will be 2020 GOP nominee," via POLITICO. Full story.

ABOUT LAST NIGHT - "Trump Advances New Strategy to Seek Victory in Afghanistan," by The New York Times's Maggie Haberman, Eric Schmitt and Michael R. Gordon: "President Trump on Monday pushed forward with a new strategy for the struggling United States-led campaign in Afghanistan, saying 'the American people are weary of war without victory.' Mr. Trump has been accused by lawmakers of dragging his feet on Afghanistan, and his strategy follows a detailed review that his military officials have said is likely to result in the deployment of up to 4,000 additional troops." **Full story.**

- "Trump's challenge: A wall of public skepticism on Afghanistan War," by POLITICO's Steven Shepard. Full story.

- And about tonight - "GOP on eggshells as Trump storms into Phoenix," by POLITICO's Alex Isenstadt in Phoenix: "President Donald Trump faces a decision on Tuesday evening with profound implications for his already strained relationship with the GOP: Whether to attack a vulnerable Republican senator on his home turf. While White House officials won't say exactly

what's on Trump's agenda when he holds a campaign-style rally here, there is a widespread expectation that he will go after GOP Sen. Jeff Flake, a loud critic of the president who recently published an anti-Trump manifesto, 'Conscience of a Conservative.' In the days leading up to Trump's Arizona trip, Senate GOP leaders have implicitly warned Trump that attacking Flake, who faces a treacherous path to reelection, would only serve to further rupture his relationship with a congressional GOP wing that he's grown increasingly isolated from in recent weeks." **Full story.**

NEW THIS MORNING - NRSC launches digital ads vs. Rosen, Heitkamp: The NRSC is launching new Facebook ads against North Dakota Sen. Heidi Heitkamp and Nevada Rep. Jacky Rosen, the start of month-long digital buys in both states. The North Dakota ad attacks Heitkamp for opposing President Donald Trump's agenda and "defending the swamp." **See it here.** The Nevada ad attacks Rosen for voting with House Speaker Nancy Pelosi and calls her "Pelosi's puppet." **See it here.**

2018 WATCH - "Schools superintendent Tony Evers to make run for Wisconsin governor official Wednesday," by the Milwaukee Journal-Sentinel's Jason Stein: "State schools superintendent Tony Evers will formally announce his gubernatorial run Wednesday, making him the third Democrat to commit to a bid and the first statewide office holder to challenge GOP Gov Scott Walker. Evers, who heads the state Department of Public Instruction, will announce his run at a suburban Madison park for children, according to an email sent to supporters Sunday and obtained by the Milwaukee Journal Sentinel. The venue at McKee Farms Park in Fitchburg will highlight Evers' main credential for voters - his years working on behalf of children as a local school leader and state education official. ... Evers has won three statewide elections as schools superintendent since 2009, beating challenger Lowell Holtz in April with 70% of the vote." **Full story.**

- Wisconsin GOP attacks with digital ads: Like it has done with previous Democratic challengers, the Wisconsin GOP welcomed Evers to the race with digital ads attacking him. The ad says Evers "allowed a middle-school teacher found guilty of spreading pornographic material at school to keep teaching students."

- "Beth Lindstrom, former Mitt Romney aide, says she's running against Sen. Elizabeth Warren in 2018," via MassLive: "Beth Lindstrom, whose resume includes top posts under former Gov. Mitt Romney and former US Sen. Scott Brown, is launching her US Senate campaign on Monday. Lindstrom joins a field of GOP candidates hoping to take on Elizabeth Warren, the Cambridge Democrat who is up for re-election in 2018." **Full story. Watch the annoucement video here.**

Days until the 2017 election: 77.

Days until the 2018 election: 441.

COURTROOM DRAMA - "Abbe Lowell faces his toughest challenge yet in Menendez trial," by POLITICO's Josh Gerstein: "Defense attorney Abbe Lowell, who has emerged as a fixture in criminal cases involving high-profile Washington politicians, is staring down one of his toughest challenges yet: helping a sitting United States senator beat a slew of federal bribery charges. The veteran white-collar Washington lawyer will travel to a Newark courtroom this week to helm the defense of New Jersey Sen. Bob Menendez. The 63-year-old Democrat faces corruption charges over his repeated interventions with the federal government on behalf of a Florida donor." **Full story.**

GUESS WHO'S BACK - Perlmutter announces reelection bid: "Colorado Rep. Ed Perlmutter will run for his House seat, doubling back on a promise to not run for reelection after he exited the governor's race last month. 'Over the last few weeks a lot has happened, both for me and in the world. I've taken some time to regroup and recharge, and in so doing I've had many meaningful conversations with friends, neighbors, supporters and family who have encouraged me to run again,' Perlmutter said in a statement. 'And I've come to the conclusion to run again for reelection.'" **Full story.**

- Update: Two of the four Democrats vying to replace Perlmutter dropped out of the race by Monday evening. State Rep. Brittany Pettersen said she was "disappointed," but she knows the district will be "well represented" by Perlmutter. State Sen. Dominick Moreno tweeted his support for Perlmutter, endorsing him for reelection. State Sen. Andy Kerr and former Obama administration official Daniel Baer have not released statements yet.

CHARLOTTESVILLE FALLOUT - "Democratic gubernatorial candidates plunge into Confederate fight," by Campaign Pro's Daniel Strauss and Negassi Tesfamichael: "The white supremacist march that turned violent in Charlottesville, Va., is spurring a wave of Democratic governors and gubernatorial candidates to call for Confederate monuments in their states to come down. The push offers Democrats an opportunity to take on President Donald Trump and mobilize the base ahead of the 2018 elections - though some strategists say the focus should be on bread-and-butter issues rather than a revived culture war. Democratic candidates in Maryland, Florida, Georgia, New Mexico and Tennessee have all called for Confederate statues or icons to be taken down. In New York, Gov. Andrew Cuomo tweeted last week that he had asked the secretary of the Army to "remove confederate names from the streets of Fort Hamilton in Brooklyn." In North Carolina, Gov. Roy Cooper said he wanted Confederate monuments around the state to be taken down. And in Montana, Gov. Steve Bullock hailed the Helena City Council's decision to remove a Confederate memorial fountain from a park there." **Full story.**

MORE ON 2020 - "This House Democrat Lost A Leadership Race To Nancy Pelosi. Now He May Run For President," by Buzzfeed's Alexis Levinson: "It's still more than three years until the next presidential election, and yet here was Ray Buckley - the chairman of the New Hampshire Democratic Party for the last decade - riding shotgun last Wednesday from Boston to Hopkinton, New Hampshire with Rep. Tim Ryan, the 44-year old Democrat from Youngstown,

Ohio. ... But despite the near-constant ribbing, last week's New Hampshire visit was not just a reunion of old friends. In June, Ryan campaigned for a Democratic candidate in South Carolina. Next month, he'll make his second trip of the year to Iowa. Which begs the question: what the hell is Ryan doing?" **Full story.**

EARLY POLLING DATA - "Kid Rock's favorables approaching Stabenow territory, polls show," by POLITICO's John Lauinger: "Sen. Debbie Stabenow's name recognition in Michigan is only slighter better than that of Robert Ritchie, aka Kid Rock, aka the Michigan-bred rocker who appears to be flirting with challenging the Senate Agriculture Committee's ranking member next year. An NBC News/Marist poll in Michigan , out Sunday, showed that 39 percent of registered voters polled from Aug. 13-17 had a favorable opinion of Stabenow, compared with 32 percent who said they held an unfavorable opinion. More than a quarter of those surveyed - 28 percent - were either uncertain or had never heard of Stabenow, who has been in office since 2001. The line for Kid Rock, by contrast, was 36 percent favorable versus 34 percent unfavorable, with 30 percent unsure or unfamiliar with him." **Full story.**

CODA - QUOTE OF THE DAY: "You must have been blinded by #eclispe2017 to not see the 'guns' !" - South Carolina Sen. Lindsey Graham jabbing back at Nebraska's Sasse, who teased him about his "upper arms," on Twitter.

Subject: Court delays coal ash arguments to November

By Alex Guillén

09/27/2017 04:54 PM EDT

The D.C. Circuit Court of Appeals today granted a one-month delay in arguments over EPA's 2015 coal ash rule following Administrator Scott Pruitt's decision to reconsider key parts of the regulation.

Arguments had been scheduled for Oct. 17, but a three-judge panel ordered them delayed until Nov. 20.

The judges ordered EPA to reveal by Nov. 15 which portions of the rule will be reconsidered "and setting forth with specificity the timeline for reconsideration." In addition, all sides, including industry and environmental challengers, are supposed to file new briefs by Oct. 11 addressing whether the new state-based coal ash permitting program that passed Congress as part of the Water Infrastructure Improvements for the Nation Act at the end of 2016 affect the broader lawsuit at all. And the court told attorneys to be ready at arguments to discuss whether a longer delay in the lawsuit is appropriate, opening up the possibility of further delay.

The court set 90 minutes' worth of arguments in total, split into four sections: Three dealing with various legal and technical challenges to the rule and one on whether the case should be delayed longer.

The case will be heard by Judges Karen LeCraft Henderson, a George H.W. Bush appointee, and two Obama appointees, Judges Patricia Millett and Cornelia Pillard.

WHAT'S NEXT: The parties must submit briefs regarding the permitting program by Oct. 11. Oral argument is scheduled for Nov. 20.

Subject: Today on Climate Beat

August 15, 2017

Today on Climate Beat . . .

. . . we pined for Congress, reporting that a conservative group that supports addressing climate change warns that the Obama administration's climate legacy may prove "unremitting" despite the Trump administration's efforts, and that only Congress could offer "durable" climate deregulation as part of a "compromise" bill to curb emissions through a carbon tax.

Speaking of climate rules, our daily news roundup noted that Detroit's "Big Three" auto companies could be the biggest winners if the Trump administration softens vehicle greenhouse gas standards in model year 2021, given that those companies sell a large percentage of light trucks.

In infrastructure news, a new executive order from President Donald Trump seeks to limit National Environmental Policy Act reviews to two years, while also creating "accountability" for federal agencies involved in the permitting process.

In the courts, a split panel of the U.S. Court of Appeals for the 10th Circuit rejected EPA's denial of a pair of requests from a small refiner in Wyoming for the agency to waive its renewable fuel blending requirements under the renewable fuel standard (RFS), potentially bolstering other pending challenges to EPA denials of RFS waiver requests.

And regarding climate science , one prominent scientist is offering the latest criticism of EPA Administrator Scott Pruitt's plan to conduct a "red-team, blue-team" review of climate science, saying the goal of such an approach is to disrupt climate policy rather than test scientific hypotheses.

California Regions

AIR
GHG Emission Standards for Crude Oil and Natural Gas Facilities
California Regions AIR

Proposed rule of the San Joaquin Valley Air Pollution Control District adopts regulations under Rules 2260 and 3156 to establish registration requirements and fees for equipment subject to state greenhouse gas emission (GHG) standards for crude oil and natural gas facilities. The rule requires owners and operators to register existing, newly installed, and replacement equipment specified in the state rule, including certain separator and tank systems, circulation tanks for well stimulation treatments, reciprocating and centrifugal natural gas compressors, natural gas powered pneumatic devices and pumps, natural gas wells, well casing vents, and natural gas underground storage facilities. The rule establishes application requirements, registration content, and registration fees. A workshop is scheduled for Oct. 20, 2017, in Bakersfield, via video teleconference in Fresno and Modesto, and via webcast. Comments are due Oct. 30, 2017. Contact: Leonard Scandura; San Joaquin Valley APCD; 661-392-5500; leonard.scandura@valleyair.org

Regulatory Update

AIR
Petroleum Refinery Emission Limits
California Regions AIR

Notice of the Bay Area Air Quality Management District announces that the district has suspended further action on a proposed rule to adopt regulations under Rule 12-16 regarding petroleum refining facilitywide emission limits. An initial proposal would have limited emissions of greenhouse gases (GHGs), particulate matter (PM-2.5 and PM-10), nitrogen oxides, and sulfur dioxide from petroleum refineries and associated facilities by setting a maximum annual emission rate based on emissions reported during a 2010-2014 baseline period, plus a 7 percent additional allowance. A subsequent revised proposal would have established a cap on GHG

emissions from petroleum refineries and associated facilities, and a rule to reduce emissions of criteria pollutants, including PM emissions, would have been proposed at a later date. The suspension is due to the adoption of Assembly Bill 398, which extends the state cap-and-trade program to 2030 and prohibits air districts from adopting carbon dioxide emissions reduction requirements for stationary sources that are also subject to the state cap-and-trade requirement. AIR

Sources of Hazardous Air Pollutants

New Hampshire AIR

Final rule of the Department of Environmental Services amends regulations under NHAR Env-A 501.01, 502.01, and 503.01; adopts regulations under NHAR Env-A 506; and readopts regulations under NHAR Env-A 504 and 505 regarding standards applicable to certain new or modified facilities and sources of hazardous air pollutants. The rule updates the incorporation by reference of new source performance standards (NSPS) and national emission standards for hazardous air pollutants (NESHAP) under 40 CFR 60, 61, and 63, as of July 1, 2016. The rule also incorporates the NSPS for municipal solid waste landfills (Subpart XXX), new residential wood heaters (Subpart AAA), and new residential hydronic heaters and forced air furnaces (Subpart QQQQ). In addition, the rule incorporates federal requirements under 40 CFR 62, Subpart LLL, concerning the federal plan requirements for existing sewage sludge incineration units. The rule is effective Sept. 22, 2017. Contact: Karla McManus; DES, Air Division; 603-271-6854; Karla.McManus@des.nh.gov

North Carolina

HAZARDOUS WASTE MANAGEMENT

Assessment, Corrective Action for Petroleum USTs/Noncommercial USTs

North Carolina HAZARDOUS WASTE MANAGEMENT

Temporary rule of the Department of Environmental Quality, Environmental Management Commission, amends regulations under 15A NCAC 2L.0404, .0405, .0406, .0408, and .0409 regarding noncommercial underground storage tanks (USTs). The rule requires owners and operators to immediately respond to any release by trying to recover all accessible contamination and specifies that initial abatement action requirements apply for commercial UST releases. The

rule also addresses public notification, clarifies requirements for limited site assessments, revises the definitions of "high risk" and "intermediate risk," and updates assessment and remediation procedures. In addition, the rule describes the emergency response and reporting requirements for a release from a noncommercial UST and the initial abatement action requirements for a release from a noncommercial UST determined to represent a high risk. Finally, the rule differentiates the risk posed by a release of petroleum from a commercial UST, a release of motor fuel from a noncommercial UST, and a release from a noncommercial UST. The rule is effective Sept. 29, 2017, and expires March 28, 2018. Contact: Jared Edwards; DEQ, Environmental Management Commission; 919-707-8153; jared.edwards@ncdenr.gov

Subject: Playbook Power Briefing, presented by Morgan Stanley: W.H. turns to debt ceiling fight -- WRAY could be confirmed as FBI director as early as this afternoon -- Audio from KUSHNER meeting with interns leaked -- Jake and Anna interview HICKENLOOPER tonight

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Morgan Stanley

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Tuesday afternoon from Denver. THE NEXT BATTLE -- "Mnuchin pushes for 'clean' debt ceiling boost," by John Bresnahan and Seung Min Kim: "Treasury Secretary Steve Mnuchin has begun lobbying congressional leaders for a 'clean' debt ceiling increase, according to Capitol Hill sources. But that debt increase -- needed sometime this fall -- will prove a tough vote for both parties, and neither GOP nor Democratic leaders have signed yet off on the Trump administration's plan to raise the debt limit without attaching other policy sweeteners. Mnuchin met Tuesday morning with Senate Majority Leader Mitch McConnell (R-Ky.) and Minority Leader Chuck Schumer (D-N.Y.) to discuss the issue, as well as other topics, per Senate aides.

"Mnuchin is seeking a clean debt ceiling increase by Sept. 29, according to a letter he sent to congressional leaders last week. To get it through Congress by then will require both the House and Senate to begin work soon after they return from the August recess. Democrats, however, are not sure that Mnuchin and the White House can line up a significant number of GOP votes for any such debt boost. Conservative Republicans frequently tried to use the debt ceiling increase during the Obama era to push for other spending cuts, though they faced stiff opposition from Democrats and former President Barack Obama. The 2011 debt limit showdown led to a downgrade in the U.S. credit rating." http://politi.co/2hkMfOg

-- THIS FIGHT is going to take up a lot of oxygen on Capitol Hill over the next several weeks. Republican aides for weeks have said they expect the Senate to pass a clean debt ceiling bill, and send it to the House, where it would be passed with a small number of House Republicans and a majority of House Democrats. This will inflame conservative Republicans, who want to extract something before the Congress raises the country's borrowing limit. **THE PROBLEM:** There is a split in the White House, where some aides want to try to extract some policy changes alongside the debt limit.

-- THE WASHINGTON POST'S Damian Paletta says there's been no progress in the debt ceiling talks. http://wapo.st/2u1rkG9

BREAKING -- "Former Fox News Executive Said to Be Considered for White House Job," by NYT's Michael Grynbaum: "Bill Shine, a former co-president of Fox News and top lieutenant to the network's founder, Roger Ailes, has spoken with White House officials about taking a position on President Trump's communications team, according to several people briefed on the discussions.

"Mr. Shine has no political experience outside of producing cable news , and he was forced out of Fox News in May after his name surfaced in lawsuits that accused him of abetting Mr. Ailes's harassing behavior toward women. (Mr. Shine has denied all wrongdoing, as did Mr. Ailes, who died in May.) But Mr. Shine has an influential ally in the Fox News host Sean Hannity, an informal adviser to Mr. Trump - and one of his most loyal on-air supporters - who dined with Mr. Shine, the president and the first lady at the White House last week." http://nyti.ms/2uVxbtO

-- IT'S WORTH NOTING: Shine was Hannity's first producer and they remain best friends.

STAFFING UP -- "Military academic Mike Bell promoted to top Middle East adviser on NSC," by Connor O'Brien and Andrew Restuccia: "Retired Army Colonel Michael Bell has been promoted to the top Middle East adviser on the National Security Council, two White House officials said. Bell, who was most recently the NSC director of Persian Gulf affairs, is now the senior director for the Near East. He succeeds Derek Harvey, who was dismissed last week by national security adviser H.R. McMaster, as the three-star Army general continues to overhaul an NSC he inherited from his predecessor, Michael Flynn." http://politi.co/2u0leoj

COMING ATTRACTIONS -- "Senate could confirm Wray to lead FBI on Tuesday," by Seung Min Kim: "The Senate could vote to confirm Christopher Wray to replace James Comey as head of the FBI as early as Tuesday afternoon, according to senators and aides. The top two party leaders have been negotiating a larger package of nominations to clear the Senate before the August recess begins after next week. But confirming Wray is something that senators would like to do independently of any major nominations deal, and the former Justice Department official and corporate lawyer has faced few hurdles as he waded through the confirmation process." http://politi.co/2u0tJRs

RETURNING FIRE -- "China's State Media Slams Trump's 'Emotional Venting' on Twitter," by NYT's Chris Buckley and Austin Ramzy: "After President Trump pilloried China in 48 tweeted words, accusing it of failing to tame its neighbor and longtime ally North Korea, Beijing issued its own rebuke to Mr. Trump - in a cutting editorial of 1,000 Chinese characters from Xinhua, the official news agency.

"'Trump is quite a personality, and he likes to tweet,' said the Xinhua response issued late Monday and widely displayed on Chinese news websites. 'But emotional venting cannot become a guiding policy for solving the nuclear issue on the peninsula,' it said, referring to the divided Korean Peninsula. The United States, it added, 'must not

continue spurning responsibility' for the volatile standoff with North Korea, 'and even less should it stab China in the back.'" http://nyti.ms/2ufMlrR

****** **A message from Morgan Stanley:** Growing disparities in income and more are among today's greatest socio-economic challenges. Private sector capital can help create prosperous communities and reduce inequality globally. Morgan Stanley, with The Economic Intelligence Unit, created a tool to rank 20 countries in terms of finance, healthcare, education and gender disparities. Read more. ******

MORE LEAKED AUDIO -- "Kushner on Middle East peace: 'What do we offer that's unique? I don't know,'" by WIRED's Ashley Feinberg: "ON MONDAY, WHITE House senior advisor Jared Kushner spoke to a group of congressional interns as part of an ongoing, off-the-record summer lecture series. During the question-and-answer portion of the event, Kushner may have inadvertently offered some insight into the negotiating tactics he is using in the Middle East. ...

"While the recording doesn't catch the entirety of the question, Kushner appears to be responding to a question about how he plans to negotiate peace between Israelis and Palestinians, as well as why he believes he'll be successful where every other administration has failed. He doesn't directly answer either question, but he does reveal that, from his extensive research, he's learned that 'not a whole lot has been accomplished over the last 40 or 50 years.' He also notes that he's spoken to 'a lot of people,' which has taught him that 'this is a very emotionally charged situation.' ...

"Finally, Kushner closed with the following statement of reassurance: 'So, what do we offer that's unique? I don't know... I'm sure everyone that's tried this has been unique in some ways, but again we're trying to follow very logically. We're thinking about what the right end state is. And we're trying to work with the parties very quietly to see if there's a solution. And there may be no solution, but it's one of the problem sets that the president asked us to focus on. So we're going to focus on it and try to come to the right conclusion in the near future.'" http://bit.ly/2ug6gqq

-- CHECK THIS OUT, from the same piece: "Prior to Kushner's talk, Katie Patru, the deputy staff director for Member Services, Outreach & Communications, told the assembled interns, 'To record today's session would be such a breach of trust, from my opinion. This town is full of leakers and everyone knows who they are, and no one trusts them. In this business your reputation is everything, I've been on the hill for 15 years. I've sat in countless meetings with members of congress where important decisions were being made. During all those years in all those meetings, I never once leaked to a reporter. ... If someone in your office has asked you to break our protocol and give you a recording so they can leak it, as a manager, that bothers me at my core.'"

HAPPENING TONIGHT -- Jake and Anna are interviewing Colorado Gov. John Hickenlooper at 8 p.m. eastern time in Denver. **EMAIL US** with questions for the governor. Can't make it? Tune in to our livestream here: http://politi.co/2ugbUsU

FOGGY BOTTOM WATCH -- JOSH ROGIN'S latest in WaPo: **"State Department considers scrubbing democracy promotion from its mission":** "Secretary of State Rex Tillerson has ordered his department to redefine its mission and issue a new statement of purpose to the world. The draft statements under review right now are similar to the old mission statement, except for one thing - any mention of promoting democracy is being eliminated. According to an internal email that went out Friday, which I obtained, the State Department's Executive Steering Committee convened a meeting of leaders to draft new statements on the department's purpose, mission and ambition, as part of the overall reorganization of the State Department and USAID. (The draft statements were being circulated for comment Friday and could change before being finalized.)" http://wapo.st/2ugEqKO

-- QUITE THE DATA POINT: "UN staff ran up a $9.5 million bill at the Four Seasons hotel in Damascus, co-owned by Syria's tourism ministry, according to the UN's annual report on procurement for 2016, a 739-page document published in June." https://bloom.bg/2hknUbk ... ***The report*** http://bit.ly/2uUqqIB

FROM THE WHITE HOUSE -- @realDonaldTrump at 8:49 a.m.: "Stock Market could hit all-time high (again) 22,000 today. Was 18,000 only 6 months ago on Election Day. Mainstream media seldom mentions!" ... **at 9:03 a.m.:** "'Corporations have NEVER made as much money as they are making now.' Thank you Stuart Varney @foxandfriends Jobs are starting to roar,watch!" ... **at 9:55 a.m.:** "Only the Fake News Media and Trump enemies want me to stop using Social Media (110 million people). Only way for me to get the truth out!"

-- The stock market closed at 18,333 on Election Day, which was about nine months ago. It closed at 19,891 six months ago on February 1.

FASCINATING -- "Behind Fox News' Baseless Seth Rich Story: The Untold Tale," by NPR's David Folkenflik: "The Fox News Channel and a wealthy supporter of President Trump worked in concert under the watchful eye of the White House to concoct a story about the murder of a young Democratic National Committee aide, according to a lawsuit filed Tuesday. The explosive claim is part of the lawsuit filed against Fox News by Rod Wheeler, a longtime paid commentator for the news network. The suit was obtained exclusively by NPR. Wheeler alleges Fox News and the Trump supporter intended to deflect public attention from growing concern about the administration's ties to the Russian government. His suit charges that a Fox News reporter created quotations out of thin air and attributed them to him to propel her story. Fox's president of news, Jay Wallace, told NPR Monday there was no 'concrete evidence' that Wheeler was misquoted by the reporter, Malia Zimmerman. ...

"The lawsuit focuses particular attention on the role of the Trump supporter, Ed Butowsky, in weaving the story. He is a wealthy Dallas investor and unpaid Fox commentator on financial matters, who has emerged as a reliable Republican surrogate in recent years. Butowsky offered to pay for Wheeler to investigate the death of the DNC aide, Seth Rich, on behalf of his grieving parents in Omaha. On April 20, a month

before the story ran, Butowsky and Wheeler - the investor and the investigator - met at the White House with then Press Secretary Sean Spicer to brief him on what they were uncovering.

"The first page of the lawsuit quotes a voicemail and text from Butowsky boasting that President Trump himself had reviewed drafts of the Fox News story just before it went to air and was published. Spicer now tells NPR that he took the meeting as a favor to Butowsky, a reliable Republican voice. Spicer says he was unaware of any contact involving the president. Butowsky now tells NPR he was kidding about Trump's involvement." http://n.pr/2u0p9T8

-- @chrisgeider: "Big story. But, a big caveat, too: This is simply a lawsuit being filed, which anyone can do at any time about anything. There's a lot in here, and a lot of people are going to be making claims about what different parts of it mean or meant. Just be careful."

MIDDLE EAST PEACE WATCH -- "Top PA official Saeb Erekat treated in Israel as he awaits lung transplant," by the Times of Israel: "Palestinian Authority chief negotiator and secretary general of the Palestine Liberation Organization Saeb Erekat has a serious lung disease and is currently on the waiting list for a transplant in Israel and the US, according to a report Tuesday on the Ynet news site. ... The chief PA negotiator has been receiving additional treatment at a hospital in central Israel, but doctors have warned that his condition cannot improve without an immediate transplant, the report said." http://bit.ly/2uglvQ8

TODAY'S BEYOND THE BELTWAY -- How the Olympics will shake up the California gubernatorial race -- de Blasio applies for matching funds for primary http://politi.co/2ugLQgV

MEDIAWATCH -- "How the Hollywood Reporter Became a Must-Read in DC," by Washingtonian's Elaina Plott: "Now with Trump in the White House, the Hollywood Reporter has earned almost as much real estate in Politico Playbook as many DC publications have. That's been good for the bottom line: Between November 2015 and November 2016, web traffic surged by more than 50 percent. Two of the magazine's highest-trafficked stories in the last two years weren't the kinds you'd normally associate with a La La Land publication but post-election exclusives with Megyn Kelly and Steve Bannon." http://bit.ly/2ug7aDo

SPOTTED: Former New York Gov. George Pataki in Russell today

REMEMBERING MARK SILVA -- "Mark Silva, longtime newsman, dies of brain cancer," by the Tampa Bay Times' Mary Ellen Klas: "Mark Silva, longtime Tallahassee bureau chief for the Miami Herald who went on to cover the White House for the Chicago Tribune, died early Tuesday at his home in Arlington, Va.. He was 63 and recently diagnosed with a brain tumor. Silva led the Herald's capital bureau from the mid-1980s through the 1990s and became the paper's political editor through the 2000

presidential election, a contest decided only after a pivotal Florida recount that brought Tallahassee global fame.

"He joined the Orlando Sentinel as political editor in 2001, moving to Washington three years later to cover the George W. Bush White House. Later, he was an editor with Bloomberg News and mostly recently an editor with U.S. News & World Report, where he led a new team examining politics and policies in the 50 states at the organization's Best States project. Silva leaves his wife of 33-years, Nina, and two children, Dylan and Lisa and a grandson, Noah.

"Silva was a force in Tallahassee during a newspaper heyday during which Florida dailies maintained robust capital bureaus that competed fiercely over every inch of political, legislative and policy territory. Silva was rarely beaten. But he often beat others. With a relentless work ethic and a passion for collecting news tips from lobbyists drinking 'see-through' at Clydes, Silva could power out a steady stream of dailies and weekenders. He also could turn a phrase." http://bit.ly/2vpYE9Q

****** **A message from Morgan Stanley:** The Morgan Stanley Institute for Sustainable Investing, with The Economist Intelligence Unit, created the Inclusive Growth Opportunities Index to explore technology investments that can increase access to finance, healthcare and education, and enhance gender inclusion. The report and interactive tool, which allows users to rank 20 emerging and developed countries, highlights the potential for investment opportunities that drive inclusive economic growth. See which countries indexed high on the list, and where there are opportunities to invest in inclusive growth. Read more from Morgan Stanley. ******

Subject: Morning Energy: Pruitt's new TSCA plan burns greens — Conservatives attack to defend Ex-Im pick — Dominion v. Kaine challenger

By Darius Dixon | 08/08/2017 05:42 AM EDT

With help from Ben Lefebvre and Matt Daily

EPA GOES NARROW WITH NEW TSCA POLICY: EPA says a new plan to evaluate the the safety of chemicals will ease the path for bringing new substances to market and increase transparency, Annie Snider reports . But environmentalists contend the plan will undermine critical safety measures that were included in last year's landmark bipartisan chemicals law overhaul. The 'operating principles' announced Monday will limit EPA's evaluation of new chemicals to solely the "intended uses" that the manufacturer identifies in its initial notice to the agency, Annie writes. If the agency decides that intended use is safe, the chemical could go on the market, even if EPA experts have concerns about other potential uses. Those concerns would be addressed through a later rulemaking, the agency said. Administrator Scott Pruitt said EPA "can either be a roadblock to new products, or it can be supporter of innovation and ever-improving chemical safety."

This is not the TSCA we were looking for: The the American Chemistry Council praised the move, but greens complained it's a major shift from the approach embraced by lawmakers when they updated the Toxic Substances Control Act, the country's primary chemical safety law, which pushed for chemicals to be evaluated as a whole for their safety, rather than breaking evaluations down into individual uses. "What your body cares about is not, 'How much was I exposed to by that use versus another use.' It's how much was I exposed to in totality," said Richard Denison, a lead senior scientist at the Environmental Defense Fund.

Annie adds: Internal documents obtained by POLITICO showed that career staffers disagreed with those changes to focus on the intended uses, which were made after the Trump administration put a former top expert for the chemical industry's top lobbying group in charge of TSCA implementation.

BRING ON TUESDAY! I'm your guest host, Darius Dixon. David Brown at Exelon was the first to name Frank Oppenheimer as the Manhattan Project physicist I was referring to who later founded the Exploratorium in San Francisco. That said, a lot of you, beginning with reader Craig Meyers, mentioned the Bradbury Science Museum in Los Alamos, N.M. That museum was founded by Robert Krohn, a Manhattan Project scientist. The more you know! Today's trivia: The U.S. Fermi award is one of the most prestigious for scientists, but in the first 20 years, its monetary prize was cut in half. That happened after who won it? And bonus points for naming the first person to get the skimpier check.

Send your guesses, tips, energy gossip and comments to Esther Whieldon, who will get you through the week, at ewhieldon@politico.com. Follow us on Twitter @esthernow, @aadragna, @Morning_Energy and @POLITICOPro.

CLIMATE REPORT LEAKS: In a bid to prevent the Trump administration from sitting on a new assessment of the impacts of climate change, sources have leaked to The New York Times a report from scientists at 13 federal agencies that says temperatures in recent decades are rising because of human activity. "It directly contradicts claims by President Trump and members of his cabinet who say that the human contribution to climate change is uncertain, and the ability to predict the effects are limited." One government scientist who worked on the document, part of the National Climate Assessment mandated by Congress, told the paper that he and others were concerned that the Trump administration may try to suppress it.

What we'll be comparing to the final version: The Times says the report finds it "extremely likely" that more than half of the global mean temperature increase since 1951 can be linked to human influence. The National Academy of Sciences has already gone over the report but several agencies have until Aug. 13 to approve it.

OPEC TRIES TO PLUG THE LEAKS: Washington may have gone quiet for August, but the oil industry is not exactly in a position to rest on its laurels. NYMEX crude oil futures turned sideways in the past few days after popping above $50 a barrel last week, and there seems to be little momentum to move back above that psychological barrier unless OPEC members, who are finishing a two-day meeting today in Abu Dhabi today, can crack down on the cheating among cartel members who are overproducing on their output quotas. Oil bulls are also hoping Russia steps forward to deepen its cuts, but as oil prices rise, the temptation for oil-producing OPEC nations to sell some extra supplies grows. A survey by Platts showed that OPEC nations were exporting more than 900,000 barrels per day above its agreed ceiling last month, hitting the highest production level of the year at 32.82 million bpd. Much of that is coming from Libya and Nigeria, which are not subject to the cartel's output cuts agreed to in November, but OPEC members have pledged to keep their current cuts in place in to March 2018 — and compliance among the cartel members tends to decline over time.

ANOTHER LOG ON THE EX-IM FIRE: Just when it didn't seem like the fight over former Rep. Scott Garrett's nomination to head the Export-Import Bank couldn't get any more heated, conservative groups lit a torch on Monday. In a letter to Senate Banking Chairman Mike Crapo, the leadership of organizations including the Club for Growth, Heritage Action for America and FreedomWorks denounced business groups that have been urging the White House to drop Garrett, Pro Financial Services' Zachary Warmbrodt reports . In fact, they plan to oppose any appointments to the agency's board if Garrett's name does not move forward. "We're extremely hopeful that President Trump will ignore the special interests that are so desperate for their Export-Import Bank gravy train to continue," they said in the letter.

THE TRIAL OF THE RECESS: Since Congress has skipped town for the rest of August, you'll have more time to watch the week-long hearings on the Keystone XL oil pipeline taking place at the Lincoln Marriott Cornhusker Hotel in Nebraska. The Nebraska Public Service Commission is taking testimony from TransCanada executives, local landowners and others on the potential impact of the project's proposed route through the state.

Most of Monday was taken up with lawyer Dave Domina, who represents the landowners in the

state and quizzed TransCanada execs on issues like the web of companies that own a piece of Keystone XL, how far below waterways the pipeline will be laid, and easements. Domina also asked TransCanada Pipelines Limited President Tony Palmer whether the company will decide later this year whether to actually build the pipeline. "Sir, we hope to do so," Palmer replied. The hearings start at 10 a.m. Eastern Time. Nebraska regulators are scheduled to rule on the route proposal by the end of this year. Just last month, TransCanada suggested that it may not build the project.

STATES PREP FOR ECLIPSE: California produces more solar power than any other state in the union, so when the total solar eclipse cruises across North America on Aug. 21, grid operators there say they expect to draw about 6,000 megawatts from other sources to cover the losses. The Golden State has a solar capacity of about 10,000 megawatts, which the state's ISO says can sometime cover 40 percent of its electricity demand. California has preparing for the eclipse for more than a year, the grid operator said. The path of the eclipse will affect 17 utility-scale solar PV generators, mostly in eastern Oregon, according to the Energy Information Administration. Meanwhile, hundreds of plants totaling about 4,000 MW of solar capacity — largely in North Carolina and Georgia — will be at least 90 percent obscured, the EIA said. The next solar eclipse isn't expected to cross the continent until 2024.

DOMINION OPENLY FEUDS WITH KAINE CHALLENGER: "Why is Corey Stewart putting politics over people?" reads a Dominion ad in several Prince William County, Virginia, newspapers. The Washington Post reports that the ad is meant to highlight the role Prince William Board of County Supervisors Chairman Corey Stewart, a Republican challenging Sen. Tim Kaine next year, had in blocking an alternative route for a controversial power line through a wetlands, leading to the plan to run it through a historic black community. The ad continues: "The residents of Carver Road should look no further than Corey Stewart for the reason their community was selected."

Stewart, who failed to win the GOP gubernatorial primary earlier this year, is relishing the battle: "It's bringing in people and donors who otherwise wouldn't support a Republican candidate," he said.

STATE LAWMAKERS PRESS DOE, CONGRESS ON EFFICIENCY RULES: The Energy Department's efficiency rulemaking operation got a big endorsement from state capitols on Monday. As part of its legislative summit this week in Boston, the National Conference of State Legislatures approved a resolution (it starts on page 42) urging Congress to "fully fund" DOE's efficiency standards program. It also urges Congress and DOE to stick to its so-called look-back schedule, which requires the agency to revisit each of its efficiency standards every six years to see if they can be tightened. We're told that Vermont state Rep. Curt McCormack sponsored the resolution.

DEMS PRESS FOR WAYS TO DECARBONIZE THE OCEANS: Sens. Sheldon Whitehouse and Heidi Heitkamp have asked the National Academy of Sciences to investigate ways of extracting carbon dioxide from ocean water. As carbon dioxide builds up in the atmosphere, greater amounts get infused into the planet's waters, a driver of ocean acidification. "As the committee on Developing a Research Agenda for Carbon Dioxide Removal and Reliable

Sequestration continues to develop your Carbon Dioxide Removal (CDR) report, we request that you consider expanding your focus to include ocean carbon capture technologies and processes," the two lawmakers wrote.

BENNET BILL TO DIVERSIFY 'COAL COMMUNITIES': Before skipping town last week, **Democratic** Colorado Sen. Michael Bennet introduced a bill aimed at promoting investment and business in areas that have lost jobs in the coal industry. The measure would designate 90 counties as "coal communities," including six in his home state, and create hiring credits, tax incentives and training grants.

QUICK HITS

— Here's how Carl Icahn's bet on Donald Trump went terribly wrong. CNBC.

— California pension fund divests from coal as industry rebounds. The Sacramento Bee.

— U.S. federal department is censoring use of term 'climate change,' emails reveal. The Guardian.

— Iowa Gov. Kim Reynolds: The red state with an energy blueprint. The Hill.

THAT'S ALL FOR ME!

Cloudy with a high of 81.

Stories from POLITICO Pro

EPA plans narrower chemical reviews, critics see TSCA reversal Back

By Annie Snider | 08/07/2017 07:12 PM EDT

EPA announced a new approach to evaluate the safety of chemicals that it said would remove roadblocks to bringing new substances to market and increase transparency, but that environmentalists contend will undermine critical safety measures established under last year's landmark bipartisan chemicals law overhaul.

Under the "operating principles" the agency announced Monday, EPA will evaluate new chemicals based solely on the "intended uses" that the manufacturer identifies in its initial notice to the agency. If the agency decides that intended use is safe, the chemical could go on the market, even if EPA has concerns about other potential uses. Those concerns would, "as a general matter," be addressed through a later rulemaking, the agency said.

"EPA can either be a roadblock to new products, or it can be supporter of innovation and ever-improving chemical safety," EPA Administrator Scott Pruitt said in a statement.

This method is a major shift from the approach embraced by lawmakers under last year's bipartisan update to the Toxic Substances Control Act, the country's primary chemical safety law, which pushed for chemicals to be evaluated as a whole for their safety, rather than breaking evaluations down into individual uses. Under the law, If EPA has concerns about any of the ways that a chemical might reasonably be used, it should issue an order setting conditions on the substance before it comes onto the market.

"What your body cares about is not, 'How much was I exposed to by that use versus another use.' It's how much was I exposed to in totality," said Richard Denison, lead senior scientist at the Environmental Defense Fund. He argued that the approach laid out by EPA on Monday would return EPA's chemicals program to the way it was before last year's TSCA overhaul.

Environmentalists say that once a chemical is on the market, it is difficult for EPA to know how it is being used and to limit uses that may present hazards.

But chemical manufacturers prefer to have substances evaluated for the individual use that they are designing their product for, rather than for additional uses that may be outside of their control. The chemical industry's trade group lauded the newly announced changes.

"We strongly support the Administrator's commitment to a more predictable and transparent process for decision-making and look forward to continued collaboration in achieving these improvements," the American Chemistry Council said in a statement.

Monday's announcement follows a pair of rules finalized in July that laid out how EPA will evaluate the safety of existing chemicals. The Trump administration made significant changes to the rules originally proposed by the Obama administration's EPA.

Internal documents obtained by POLITICO showed that career staffers disagreed with those changes to focus on the intended uses, which were made after the Trump administration put a former top expert for the chemical industry's top lobbying group in charge of TSCA implementation.

Environmental groups — and congressional Democrats — opposed the final version of those rules pertaining to existing chemicals and still could challenge them in court.

The approach laid out by EPA for evaluating new chemicals, however, is not a formal agency action, so it is unclear whether it can be legally challenged. Denison said his group and others are still evaluating their options.

The agency also announced Monday that it has eliminated the backlog of new chemicals awaiting review. More than 600 new chemicals had piled up, awaiting review, as the agency got up to speed on implementing the new processes required under the new law passed by Congress last year. As of Aug. 1, the agency had decreased that backlog to 382, according to EPA's

website, which says the caseload typically hovers around 300.

EPA also said it would post weekly updates of program statistics on its website in a bid to improve transparency.

Pruitt has prioritized TSCA in his first months at the agency, with programs directly supporting the new law's implementation protected under the Trump administration's budget — although other related programs were targeted for cuts. The agency has also staffed up the offices reviewing chemicals and said Monday it will continue to redeploy employees from other parts of the agency to work on new chemical reviews.

Conservative groups threaten fight over Ex-Im nomination Back

By Zachary Warmbrodt | 08/07/2017 03:35 PM EDT

Conservative groups escalated the fight over former Rep. Scott Garrett's nomination to lead the Export-Import Bank, warning lawmakers today that they would oppose any appointments to the agency's board if Garrett's name did not move forward.

In a letter to Senate Banking Chairman Mike Crapo (R-Idaho), the leadership of groups including the Club for Growth, Heritage Action for America and FreedomWorks denounced business groups that have been urging the White House to drop Garrett.

"We're extremely hopeful that President Trump will ignore the special interests that are so desperate for their Export-Import Bank gravy train to continue," they said in the letter. "To that end, our groups and the people we represent will vocally oppose any nomination (or slate of nominations) to Ex-Im's board if Garrett's nomination is not considered."

The letter marked the latest skirmish in a battle for influence involving businesses that rely on the agency and critics who have fought to rein it in. At issue is Garrett's opposition to the existence of the bank while he served in Congress.

Separately, the Office of Government Ethics has released Garrett's financial disclosure form.

His finances are less complicated than other Trump economic appointees. He disclosed a checking account worth up to $50,000 and a savings account worth up to $100,000, as well as retirement investments, stock in Lakeland Bank and a mortgage with the Credit Union Mortgage Association. In an ethics agreement, Garrett said he would not participate in matters affecting Lakeland unless he obtained a waiver.

WHAT'S NEXT: The White House is giving Garrett a chance to secure support for his

confirmation. At least three GOP senators have indicated they're on the fence about confirming him.

Too soon to say whether Keystone XL will be built, TransCanada exec says Back

By Ben Lefebvre | 07/28/2017 02:20 PM EDT

The company behind the Keystone XL pipeline has not yet determined whether there is enough demand for the project to justify actually building it, a top executive said Friday.

It was the strongest acknowledgment from TransCanada to date that the nearly decade-long Keystone saga may end in failure — despite President Donald Trump's overwhelming support for the project, which he green-lit as one of his first acts in office. The company says it remains confident in the project. But it has been struggling to find enough customers, and it still needs approval from Nebraska regulators for the pipeline's route, which landowners and activists in the state have been fighting since the project was first proposed.

TransCanada on Thursday called for an "open season" on Keystone XL, a process in which potential customers are invited to bid for contracts to ship oil on the pipeline, which would connect oil sands in Alberta with refiners and export opportunities in the U.S. The open season will last until September, TransCanada Executive Vice President Paul Miller said during the company's second-quarter earnings call Friday.

A decision on whether to follow through with construction of the $7 billion pipeline will come later, he said.

"In November, we'll make an assessment of commercial support and [Nebraska] approval," Miller said. "In the event we do decide to proceed on the project, we'll need six to nine months" before construction could start.

It would be another two years once construction begins before the project comes online, Miller added.

If TransCanada decides to build, that schedule means oil would start flowing through the pipeline just before the 2020 presidential election — but any further delays could complicate Trump's ability to boast about Keystone when he runs for re-election.

On the campaign trail last year, Trump promised to green-light the pipeline, saying "I want it built, but I want a piece of the profits." When he approved the project in March, Trump did not apply any special conditions to his approval of the project that would have required TransCanada to share its profits, and he backed away from another promise to make the company use all U.S.-

made steel for the pipeline. He seemed caught off guard when TransCanada CEO Russ Girling told him in a televised Oval Office appearance that construction was not imminent.

Keystone XL would transport up to 830,000 barrels a day of heavy crude from oil sands in western Canada to Steele City, Neb. From there it would go to refiners in the Midwest and along the Gulf Coast, where it also could be exported thanks to Congress lifting the oil export ban in late 2015 after then-President Barack Obama had denied an earlier permit for the line.

But refiners have been able to take delivery of Canadian crude without Keystone XL, using either rail cars or alternative pipelines. Oil imports from Canada grew to 3.8 million barrels a day in 2016, up 52 percent from when TransCanada first proposed the pipeline in 2008, according to EIA data.

One problem facing TransCanada is that much of the new demand for oil is coming from Asia. Canadian oil shippers would most likely prefer to ship oil to the west coast via Kinder Morgan's proposed Trans Mountain pipeline or rail car for easier export to Asia, said Rusty Braziel, president of energy consulting firm RBN Energy.

"If you're a producer in Alberta, the conundrum you face here is you really want to go west. Do you want to take barrels to the Gulf Coast and fight with everyone else sending barrels through the Gulf Coast? Hell no."

TransCanada is also trying to woo back companies who had signed on for Keystone XL but then dropped away after Obama denied the cross-border permit it needed, Miller said.

"When the permit was decided in late 2015, many of our shippers reviewed other options," Miller said.

TransCanada spokeswoman Jacquelynn Benson said the company "maintains shipper support for the project and remains committed to Keystone XL. We are confident that we will have the support we need to move this project forward as we seek additional shipper commitments through the open season."

Subject: POLITICO's Morning Transportation: Huerta to ATC opponents: 'Listen to each other' — Highways and Transit hearing on infrastructure today — Meanwhile, truckers to hear Trump talk taxes

By Brianna Gurciullo | 10/11/2017 10:00 AM EDT

With help from Tanya Snyder, Lauren Gardner and Stephanie Beasley

WHY CAN'T WE ALL GET ALONG? FAA Administrator Michael Huerta Tuesday called for collaboration among the camps waging war over whether to separate air traffic control operations from the FAA. "We must not allow ourselves to dig in so deeply to our own position that the debate becomes a volley of talking points that we lob past one another," Huerta told members of the National Business Aviation Association, according to his prepared remarks. "Disagreement can be a good thing when both sides listen to each other and agree to collaborate rather than draw lines in the sand."

Close to home: At the NBAA event in Las Vegas, Huerta highlighted the stories of two FAA employees who survived the Oct. 1 shooting. One employee "was shot and seriously injured as he attempted to shield his wife from gunfire," Huerta said. The other employee, an air traffic controller, "called the control tower and warned the crew to keep aircraft from straying into the line of fire."

ADS-Behind: Huerta, who has served as permanent administrator since 2013, thanked NBAA for urging the general aviation industry to install ADS-B, a key piece of NextGen. All planes need to have the technology installed by the start of 2020, but just around 30,000 general aviation planes have satisfied the requirement so far. FAA spokesman Paul Takemoto told us last month that an estimated 160,000 general aviation planes will need ADS-B by the first day of 2020 "in order to fly in certain controlled airspace."

So long: With his term set to expire in January, Huerta said his remarks Tuesday would be his last in front of NBAA. He praised NBAA President and CEO Ed Bolen, saying he "was one of the first people I met when I came to Washington after I joined the Department of Transportation in the early 1990s."

IT'S WEDNESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Send along tips, feedback and lyrics to bgurciullo@politico.com or @brigurciullo.

"It's been two years since I let you go / I couldn't listen to a joke or a Rock and Roll / Muscle cars drove a truck right through my heart."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

LET'S HEAR IT: The House Transportation Highways and Transit Subcommittee is holding a

hearing this morning on infrastructure needs. MT drinking game: Drink every time the American Society of Civil Engineers infrastructure report card is mentioned (and by drinking, we mean coffee, of course). We expect lawmakers and witnesses to have their say on the ideas the Trump administration has presented so far, including the use of public-private partnerships and streamlining regulations. Chairman Sam Graves (R-Mo.) is sure to bring up the Highway Trust Fund and will probably signal again that he is open to all options for making it solvent. So, yes, there should be some talk about both raising the federal gas tax and VMT. Graves and his Democratic counterpart, D.C. Del. Eleanor Holmes Norton, want a tax overhaul to deal with the HTF.

The witnesses: Patrick McKenna, the director of Missouri's DOT, who will represent AASHTO; James Roberts, the president and CEO of Granite Construction, who will represent the Transportation Construction Coalition; Brent Booker, the secretary-treasurer of North America's Building Trades Unions; Ray McCarty, the president and CEO of Associated Industries of Missouri, who will represent NAM; and Peter Rogoff, the CEO of Sound Transit.

SPEAKING OF GAS TAXES: The California press has been all over the drama surrounding the Golden State's gas tax hike, which goes into effect Nov. 1. The Los Angeles Times has a good rundown here, but the abridged version is this: A majority of the state's GOP congressional delegation supports proposed ballot initiatives that would undo the higher tax, and a coalition of California business groups and construction companies is ready to wage war over it. Keep in mind that the Trump administration is advocating a "self-help" philosophy on infrastructure investment, encouraging state and local governments to do more to fund their own needs.

Back and forth: The Fix Our Roads coalition has alleged that the federal-level support from 11 Republicans, including House Majority Leader Kevin McCarthy and senior appropriator Ken Calvert, is linked to an effort "to protect all incumbent Republicans and increase the number of Republicans in the House as well as other elected bodies." The lawmakers shot back that the tax increase is bad policy and doesn't fix the underlying issues of the state's transportation gridlock.

Nota bene: California Rep. Jeff Denham, who's eyeing the T&I gavel next Congress (and who won a tight reelection race last cycle), didn't sign onto the Republican letter. Granite Construction's Roberts, who's testifying today, signed onto the coalition letter. Maybe it'll come up?

A HOT CUP OF VMT: Six states have gotten a new shot of money from FHWA to keep trying out VMT fees. The $15.5 million pot is largely being divided among the recipients of last year's round of Surface Transportation System Funding Alternatives grants. The states: California, Delaware, Missouri, Washington and Oregon. Colorado is also included this time, while Hawaii and Minnesota are out.

What's it for? The biggest grant, $4.6 million, goes to Washington's DOT and transportation commission for a public campaign to determine the best way to assess and collect mileage-based fees. Oregon's DOT and the Western Road User Charge Consortium will get almost $2.6 million to link the Oregon and California VMT pilot programs. Meanwhile, both Delaware and Missouri will study issues associated with VMT fees like privacy.

FOR YOUR RADAR: "Hundreds" of truck drivers will be in Harrisburg, Pa., for President Donald Trump's speech today on overhauling the tax code. "They keep our economy moving - literally," White House press secretary Sarah Huckabee Sanders told reporters during Tuesday's briefing. "And they are excited about the president's tax reform plan, which will create more jobs and empower workers and families to keep more of their hard-earned money."

ICYMI: In an op-ed, the head of Airlines for America slammed Senate appropriators for including a Passenger Facility Charge cap increase in their transportation spending bill. "A measure to significantly raise the airport tax on millions of flyers is being sprung on the American people with zero transparency, and the money that would flow to airports' coffers is not needed," A4A President and CEO Nicholas Calio wrote. "This issue could have been addressed, debated and voted on in the Senate Commerce Committee, where by jurisdiction it belongs." (h/t Jacob Fischler at CQ for spotting the op-ed.)

MT note: Kevin Burke, the president and CEO of Airports Council International-North America, told us in the summer that the Commerce Committee didn't touch the PFC issue as part of its FAA bill because it was already dealing with the controversial subject of pilot training.

PRETTY VACANT: In the transportation world, folks are getting antsy for Trump to nominate key officials including a NHTSA administrator. But the president indicated in a recent Forbes interview that he is lagging behind other presidents in his pace of nominations across the government on purpose and said he'll leave many spots empty. "I'm generally not going to make a lot of the appointments that would normally be - because you don't need them," Trump said. "I mean, you look at some of these agencies, how massive they are, and it's totally unnecessary. They have hundreds of thousands of people." (Of course, everyone expects Trump to nominate a NHTSA administrator at some point.)

HERE WE GO: Hawaii filed a motion Tuesday to impede parts of Trump's new travel ban, Ted Hesson reports for Pro Employment & Immigration. The state and a local imam argue that the new travel limitations still "reflect an intent to exclude Muslims from the United States."

GAME OVER: Beginning this month, TSA will tell travelers at airports in upstate New York to put their large electronics in separate bins when they reach security checkpoints. TSA will instruct passengers who don't have PreCheck to take any device bigger than a cell phone out of carry-on bags and put them in a bin for X-ray screenings. The new requirement will go into effect at both small and large airports "in the weeks ahead," TSA said in a release Tuesday. The agency initially unveiled plans to update U.S. screening procedures for portable devices in July, just weeks after then-Homeland Security Secretary John Kelly issued a directive for all international airports operating U.S.-bound flights to revamp their security.

REPORT ALERT: TransitCenter and the Eno Center for Transportation published a report Tuesday on transit agencies contracting with private operators to boost service and maintain labor safeguards at the same time. The report comes as Washington, D.C., and Boston are grappling with contracting issues. The organizations said in a release that contracting may be a way for cities to "engage in more transparent assessments of service levels, transit performance

and ways to improve them," but that it "is not a quick fix for lowering public costs."

MT MAILBAG: House Transportation Committee Democrats wrote to Transportation Secretary Elaine Chao this week to urge her to finalize a rule that would align DOT's drug test panel with recently revised HHS guidelines, which now include certain prescription opioids. DOT proposed that harmonization on Jan. 23, just as the incoming administration was ordering a freeze on most new regulations, but the comment period closed March 24. The letter was prompted by revelations that two Amtrak maintenance workers struck and killed had opioids or cocaine in their system, and that the engineer at the controls of the passenger train showed he'd been using marijuana.

ACROSS THE POND:

- After U.K. Prime Minister Theresa May said she is gearing up in the event of Britain withdrawing from the European Union with no free-trade agreement between them in place, the British Airline Pilots' Association said that situation would be "a total disaster for our world-leading U.K. aviation sector and beyond." Cathy Buyck has more.

- Meanwhile, Uber anticipates that by year's end a U.K. labor tribunal will decide on the company's appeal of a ruling that its drivers could qualify for a different status than "independent contractor." "As workers, they would gain additional rights, such as paid holiday leave and the national minimum wage," Joanna Plucinska reports.

THE AUTOBAHN:

- "It's no use honking. The robot at the wheel can't hear you." Bloomberg.

- "Uber riders in Dubai can now select electric-powered Tesla." The Associated Press.

- "GM's Mary Barra makes a U-turn on China." Fortune.

THE COUNTDOWN: DOT appropriations run out in 59 days. The FAA reauthorization expires in 172 days. Highway and transit policy is up for renewal in 1,086 days.

Subject: POLITICO's Morning Transportation: Al Qaeda threatens U.S. rail — Kelly focuses Trump's policy agenda — NTSB investigates Charlottesville helicopter crash

By Stephanie Beasley and Brianna Gurciullo | 08/14/2017 10:00 AM EDT

EMERGING RAIL/TRANSIT THREAT: Al Qaeda is encouraging its terrorist followers to target the U.S. rail and transit system, according to the Middle East Media Research Institute. The group, which monitors Middle Eastern publications, said the latest issue of Al Qaeda's Inspire Magazine - released in English and Arabic - includes several articles urging followers to attack public transportation systems in the United States to undermine public security and cause economic harm. "It also lists some of the main passenger train lines across the country, such as the Washington DC-Boston Acela Express, the Amtrak Cascades, the Empire Builder from Chicago to the Pacific Northwest, the Coast Starlight, etc., with a map," MEMRI said in a statement released Sunday. MEMRI further noted that at least one of the articles appeared to have been written before President Donald Trump took office in January. TSA did not immediately respond to a request for comment.

Heavy load: This latest threat to U.S. transportation emerges just days after David Pekoske took over the top spot at TSA. During a June 21 nomination hearing, Sen. Cory Booker (D-N.J.) pressed Pekoske to prioritize modes other than aviation and specifically to implement a 9/11 Commission report recommendation to develop a more coordinated surface transportation security plan focusing on rail safety. "If confirmed, I would put a lot of effort in TSA into looking at the intelligence around the rail threat, in particular," Pekoske responded. "TSA has an exceptional intelligence and analysis operation. It's very well-coordinated with the intelligence community overall. And from my perspective, the intelligence community has done a very good job of keeping Americans safe."

WELCOME TO MONDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Don't forget to send tips, feedback, lyrics and your "Game of Thrones" reactions to sbeasley@politico.com or @Steph_Beasley and bgurciullo@politico.com or @brigurciullo.

"He said, 'Son, how long you been drivin' this rig? / You know I drove all shapes, forms, fashions and kinds / Here you are worried about this one little trip / Why, I drove a million miles and then some.'" (Matt Barron at MLB Research Associates)

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

TWEET DU JOUR: "Nobody likes being regulated, but everything (cars, planes, food, drugs, etc) that's a danger to the public is regulated. AI should be too." - @elonmusk.

FALLING IN LINE: President Donald Trump is scheduled to lead an infrastructure discussion on Tuesday, and aides say they hope he'll have a better idea of how to proceed on that and other

issues after meetings in New York this week. While Trump mans that ship publicly, White House chief of staff John Kelly is quietly working behind the scenes to change the administration's policy operations to ensure Trump's "ambitious fall policy drive" - including an infrastructure package, a tax overhaul and possibly health care - actually gets off the ground, POLITICO's Nancy Cook reports. "Since arriving two weeks ago, Kelly has instructed White House aides to stay in their lanes and tackle policies only within their portfolios," Cook writes.

High hopes: But White House staffers and Republicans outside the administration say they are worried that despite Kelly's best efforts to rein in the chaos in the Oval Office, he still hasn't managed to stop Trump's policymaking via tweets. TIME Magazine recently declared Kelly "Trump's last hope," and we'll be watching to see if he can finally get the ball rolling on that infrastructure package.

And speaking of infrastructure plans: Texas Central announced today that it has hired Fluor Corp. and Lane Construction to help design and engineer a high-speed rail line between Dallas and Houston. Construction for the project should begin soon, a spokesman for the companies said.

SEE, WHAT HAD HAPPENED WAS ...: Customs and Border Protection has spent more than $5 million on polygraph tests for applicants whose backgrounds disqualified them as eligible hires. An IG report found that 20 percent of the 380 polygraph exams CBP administered from fiscal 2013 to 2016 was given to applicants who had already disclosed criminal behavior or drug use, which would knock them out of the hiring pool, our Mary Lee writes. The new findings come as CBP faces a hiring shortage that officials have connected to the challenge of finding qualified applicants who can pass the polygraph requirement. The agency is also facing pressure from the White House to hire 5,000 additional Border Patrol agents.

Get it together: The IG had two recommendations for CBP: interview applicants before giving polygraph exams, and make sure adjudicators flag disqualified applicants before they reach examiners. The Department of Homeland Security has said it is also considering exempting military veterans and some law enforcement officers from the polygraph requirement to help grow its pool of eligible applicants.

NTSB INVESTIGATING CHARLOTTESVILLE HELICOPTER ACCIDENT: NTSB launched an investigation into the crash of a Virginia State Police helicopter that left two policemen dead on Saturday near Charlottesville, Va. NTSB's Peter Knudson told MT that the crash of the Bell 407 was in a wooded area, and some parts of the helicopter were in the trees. A fire occurred after the crash, Knudson said. Investigators will focus today on retrieving all the parts to document and examine them.

LIFE IN THE SLOW LANE: Almost 150 of Trump's nominees have yet to be confirmed by the Senate, POLITICO's Elana Schor reports. By contrast, "President Barack Obama had 115 nonjudicial civilian nominees still waiting for Senate confirmation by Aug. 7 in his first term, while Bill Clinton had 87 and George H.W. Bush had 104," Elana writes, citing the Partnership for Public Service. As Elana notes, Sen. Tammy Duckworth (D-Ill.) put a hold on one of DOT's nominees: Steven Bradbury, chosen to be the agency's general counsel.

SHAKE IT UP: Amtrak has hired AECOM and Network Rail to review its repair work at Penn Station for an undisclosed sum, Dana Rubinstein reports for POLITICO Pro New York. The consultancies will examine daily management operations and ways to improve them through better coordination within the station. Former MTA CEO Tom Prendergast had been in charge of the review but decided to step down in July because of conflicts related to his previous post with MTA Long Island Rail Road.

KEEP DOIN' WHAT YOU'RE DOIN': The Association of American Railroads and GoRail are giving their Railroad Achievement Award to Rep. Peter DeFazio (D-Ore.) today. The groups said recipients of the award recognize "the need for safe and efficient operations made possible through sustained investment." Sens. John Thune (R-S.D.) and Bill Nelson (D-Fla.) received the award earlier this year.

SHIFTING GEARS: Margaret Anne Moore is now the House Homeland Security Committee's communications director, per Playbook Power Briefing. She was previously broadcast communications adviser to Senate Majority Leader Mitch McConnell (R-Ky.). ... And Playbook reports that Leacy Burke is joining Sen. Jim Inhofe 's (R-Okla.) office as communications director after serving in the same role for Rep. Joe Wilson (R-S.C.).

THE AUTOBAHN:

- "Read the letter Uber shareholders sent Benchmark asking the firm to step down from the company's board." Fortune.

- "A glorious infographic of North America's transit fleets." City Lab.

- "Texas scraps some toll roads while other states add more." The Associated Press.

- "America's buses lose riders, imperiling their future." The Wall Street Journal.

- "For electric cars to take off, they'll need place to charge." The Associated Press.

- "Pushing for a commute that would rise above the rest." The New York Times.

- "Amtrak's eclipse train in Illinois sells out in 22 hours." The Associated Press.

THE COUNTDOWN: DOT appropriations run out in 47 days. The FAA reauthorization expires in 47 days. Highway and transit policy is up for renewal in 1,143 days.

Subject: BREAKING NEWS: DeVos to revamp Obama-era schools sexual assault policy

The Trump administration will rewrite an Obama-era schools directive on sexual assault in an effort to balance the rights of victims and the accused, Education Secretary Betsy DeVos announced Thursday.

The Obama guidance for the first time pushed school district, college and university leaders to combat sexual harassment, including sexual violence, saying they were required to do so under Title IX, a federal law that prohibits sex discrimination. Women's groups hailed the 2011 policy as a crucial step in cracking down on sexual violence on college campuses, but critics said it trampled the rights of the accused.

The Trump administration will revamp the guidance through a rule-making process that likely will take months, DeVos said during a speech at George Mason University in which she blasted the current guidance for undermining the due process rights of those accused of sexual assault or harassment. She said the administration will give all sides a chance to deliver their opinions on how it should move forward.

Subject: Today on Climate Beat

August 4, 2017

Today on Climate Beat . . .

. . . we checked in on Congress before its August recess, reporting that the Senate Judiciary Committee on a party-line 11-9 vote approved the nomination of Jeffrey Clark to lead the Justice Department's environment division, paving the way for Senate floor consideration.

Out West, former California Gov. Arnold Schwarzenegger (R) and the National Caucus of Environmental Legislators are launching an initiative to help spur states to pass new laws to combat climate change and reduce greenhouse gases.

In biofuel news, EPA appears poised to formally reject a petition from refiners that were seeking to shift the renewable fuel standard's compliance burden, or "point of obligation," from oil refiners and importers to other entities such as fuel blenders.

Our daily news roundup looked at what the newly constituted quorum at the Federal Energy Regulatory Commission means for state climate policies and energy storage.

And we also highlighted some of our must-read stories from this week, including coverage of methane litigation, EPA's vehicle GHG rules, the Clean Power Plan and new advocacy on the renewable fuel standard.

October 18, 2017

Today on Climate Beat . . .

. . . we went to Iowa, where Gov. Kim Reynolds (R) failed to extract a pledge from President Donald Trump not to cut levels of biofuels under the Renewable Fuel Standards (RFS) program.

Speaking of the RFS, our daily news roundup looked at reports that corn-state Republicans' concern over EPA's plans to scale back biofuel mandates under the program is the reason that the Senate environment committee postponed votes on the administration's nominee for EPA air chief and other agency picks.

And in regulatory news, a group seeking to boost clean energy is criticizing the Trump EPA's new approach to calculating the climate-related benefits of its Clean Power Plan that was released alongside a proposal to repeal the rule, charging that the agency ignored key economics principles in a bid to limit such projected benefits.

Driving the Day

Good Saturday morning and happy weekend. **SHOT -- @realDonaldTrump at 8:22 a.m.:** "Very little reporting about the GREAT GDP numbers announced yesterday (3.0 despite the big hurricane hits). Best consecutive Q's in years!"

CHASER -- FRONT PAGES OF MAJOR AMERICAN NEWSPAPERS: WALL STREET JOURNAL: "U.S. Economy Picks Up Steam: Despite hurricanes, U.S. consumers and businesses drove a six-month expansion" http://bit.ly/2yUuQ4g ... **NEW YORK TIMES:** "Economy's 3% Spurt Emboldens Tax Cut Supporters (and Critics)" http://nyti.ms/2gHVAwt ... **TAMPA BAY TIMES**: "Jobs, stocks, growth add up: The economy posts a second quarter with 3 percent GDP. Can it be sustained?" http://bit.ly/2zM6Z5O ... **WAPO:** "Economy shows strong growth, could provide GOP m:omentum" http://bit.ly/2ibTZzd

-- ALSO FROM TRUMP: ... at 8:28 a.m.: "Just read the nice remarks by President Jimmy Carter about me and how badly I am treated by the press (Fake News). Thank you Mr. President!"

BUT, BUT, BUT ... NUMBERS TRUMP WON'T LIKE -- "Most Americans say divisions under Trump as bad as during Vietnam, poll shows," by WaPo's John Wagner and Scott Clement: "Seven in 10 Americans say the nation's political divisions are at least as big as during the Vietnam War, according to a new poll, which also finds nearly 6 in 10 saying Donald Trump's presidency is making the U.S. political system more dysfunctional. The Washington Post-University of Maryland poll - conducted nine months into Trump's tumultuous presidency - reveals a starkly pessimistic view of U.S. politics, widespread distrust of the nation's political leaders and their ability to compromise, and an erosion of pride in the way democracy works in America."

http://wapo.st/2y9l3sJ

POLITICO GETS RESULTS -- FRONT PAGE OF THE MIAMI HERALD: "In affair fallout, top Fla. Senate Democrat resigns" http://bit.ly/2ilyBFP

-- MARC CAPUTO, ALEXANDRA GLORIOSO and **MATT DIXON** in Tallahassee: "The incoming Florida Senate Democratic leader abruptly resigned Friday and acknowledged he's been in therapy after admitting to an extramarital affair with a lobbyist.

"State Sen. Jeff Clemens' decision to quit office came less than a day after Politico Florida first reported his tryst, prompting Republicans to accuse him of abusing his position of power while calls poured in from fellow Democrats who said it wasn't an isolated incident." http://politi.co/2yS1Dcr

IT BEGINS -- "First charges filed in Mueller investigation," by CNN's Pamela Brown, Evan Perez and Shimon Prokupecz: "A federal grand jury in Washington on Friday approved the first charges in the investigation led by special counsel Robert Mueller, according to sources briefed on the matter. The charges are still sealed under orders from a federal judge. Plans were prepared Friday for anyone charged to be taken into custody as soon as Monday ...

"On Friday, top lawyers who are helping to lead the Mueller probe, including veteran prosecutor Andrew Weissmann, were seen entering the court room at the DC federal court where the grand jury meets to hear testimony in the Russia investigation. Reporters present saw a flurry of activity at the grand jury room, but officials made no announcements." http://cnn.it/2ySQPsb

-- Garrett M. Graff (@vermontgmg): "Remember, FBI investigations rarely start at the top. First charges likely to be sure-fire cases at peripheral figures."

ABOUT TAX REFORM ...

-- "GOP tax bill shrouded in secrecy," by Aaron Lorenzo and Seung Min Kim: "Rank-and-file House Republicans are increasingly alarmed by the secrecy shrouding the massive tax bill their party leaders plan to ram through Congress next month. Just days ahead of the legislation's release, GOP members of the House Ways and Means Committee are still in the dark on numerous details being ironed out by the powerful tax-writing committee's chairman, Kevin Brady (R-Texas), and his staff. And they're blaming the panel's top-down approach for the uncertainty.

"'There are a lot of open issues,' said Rep. Jim Renacci (R-Ohio), echoing comments made by several of his colleagues on the committee. Heading into the weekend, question marks remained on at least two high-profile proposals to offset the cost of slashing individual and business tax rates: curbing federal deductions for state and local taxes and business interest as well as potential changes to taxing retirement savings.

"The uneasy feeling among members extends to their tax aides, who've been excluded from a recent series of hours-long member meetings with Brady and his tax counsels. Several personal office tax staffers to committee Republicans indicated that they're grappling with how to brace their bosses for the coming lobbyist wave. Well-funded special interests are ready to pounce on the tax bill when Brady brings it out Nov. 1; aides are worried about the onslaught, particularly over any surprises in the legislation." http://politi.co/2gJ5ttL

KEVIN BRADY LIVE! -- YOU'RE INVITED -- KEVIN BRADY, the chairman of the tax-writing Ways and Means Committee, will sit down with Jake and Anna **FRIDAY** (Nov. 3) at noon to discuss the Republicans' tax plan. The bill will be introduced this week, so we'll have plenty to talk about. The event will be at **THE NEWSEUM** (555 Pennsylvania Avenue, NW). ***RSVP*** http://bit.ly/politicobrady Outside cameras welcome!

L.A. TIMES: "GOP says lower-tax states are subsidizing California. It's the other way around, and tax overhaul could make it worse," by Jim Puzzanghera: "California is among 13 states that ship more tax money to Washington than they get back in federal spending, according to the Rockefeller Institute of Government, a public policy think tank in Albany, N.Y. They're known as donor states, a title California has held for years, mostly because of the state's relatively younger population and large number of high-income earners. Killing the state and local tax deduction, as President Trump and congressional Republican leaders have proposed, probably would tilt the equation even more against California." http://lat.ms/2yahdkq

****** **A message from Chevron:** When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat-buckwheat. Watch the video: http://politi.co/2xp19qf ******

RUSSIA REPORT -- NYT A1, "Conservative Website First Funded Anti-Trump Research by Firm That Later Produced Dossier," by Ken Vogel and Maggie Haberman: "The Washington Free Beacon, a conservative website funded by a major Republican donor, first hired the research firm that months later produced for Democrats the salacious dossier describing ties between Donald J. Trump and the Russian government, the website said on Friday. The Free Beacon, funded in large part by the New York hedge fund billionaire Paul Singer, hired the firm, Fusion GPS, in 2015 to unearth damaging information about several Republican presidential candidates, including Mr. Trump.

"But The Free Beacon told the firm to stop doing research on Mr. Trump in May 2016, as Mr. Trump was clinching the Republican nomination. Hillary Clinton's campaign and the Democratic National Committee had begun paying Fusion GPS in April for research that eventually became the basis for the dossier. The Free Beacon informed the House Intelligence Committee on Friday that it had retained the firm." http://nyti.ms/2ze4D3J

-- NYT A1, "Talking Points Brought to Trump Tower Meeting Were Shared With Kremlin," by Sharon LaFraniere and Andrew E. Kramer: "Natalia V. Veselnitskaya

arrived at a meeting at Trump Tower in June 2016 hoping to interest top Trump campaign officials in the contents of a memo she believed contained information damaging to the Democratic Party and, by extension, Hillary Clinton. The material was the fruit of her research as a private lawyer, she has repeatedly said, and any suggestion that she was acting at the Kremlin's behest that day is anti-Russia 'hysteria.'

"But interviews and records show that in the months before the meeting, Ms. Veselnitskaya had discussed the allegations with one of Russia's most powerful officials, the prosecutor general, Yuri Y. Chaika. And the memo she brought with her closely followed a document that Mr. Chaika's office had given to an American congressman two months earlier, incorporating some paragraphs verbatim.

"The coordination between the Trump Tower visitor and the Russian prosecutor general undercuts Ms. Veselnitskaya's account that she was a purely independent actor when she sat down with Donald Trump Jr., Jared Kushner, the president's son-in-law, and Paul J. Manafort, then the Trump campaign chairman. It also suggests that emails from an intermediary to the younger Mr. Trump promising that Ms. Veselnitskaya would arrive with information from Russian prosecutors were rooted at least partly in fact - not mere 'puffery,' as the president's son later said." http://nyti.ms/2ySzWAk

--"Manafort Realtor testified before grand jury in Russia probe," by Josh Gerstein: "The Realtor who helped former Trump campaign chairman Paul Manafort buy the Virginia condo that was recently raided by the FBI testified last week before the federal grand jury hearing testimony in Robert Mueller's Russia probe, POLITICO has learned. The real estate agent, Wayne Holland of Alexandria, Virginia-based McEnearney Associates, appeared before the Washington-based grand jury after a federal judge rejected the firm's lawyer's bid to quash subpoenas for testimony and records about various real estate transactions." http://politi.co/2zWtJkr

FOR YOUR RADAR -- "Mattis says threat of nuclear attack by N.Korea accelerating," by AP's Robert Burns in Seoul, South Korea: "In remarks in Seoul with South Korean Defense Minister Song Young-moo at his side, Mattis accused the North of illegal and unnecessary missile and nuclear programs - and vowed to defeat any attack. Mattis said North Korea engages in 'outlaw' behavior and that the U.S. will never accept a nuclear North. He added that regardless of what the North might try, it is overmatched by the firepower and cohesiveness of the decades-old U.S.-South Korean alliance." http://bit.ly/2yTcAbk

TRUMP'S DIPLOMACY -- "Trump finds golf isn't the way to Congress' heart," by Darren Samuelsohn: "The president found some early success using golf to his advantage in office, inviting Japanese Prime Minister Shinzo Abe to play with him at two of his South Florida courses in February to cement their personal relationship - a favor Abe is planning to repay by hosting a golf game when Trump visits Tokyo next weekend. But it has worked less well in Washington, where the president hasn't been able to leverage his nearby golf club into close relationships on Capitol Hill." http://politi.co/2xwj9iy

-- "Trump says he'll announce Fed chair pick 'sometime next week'," by Cristiano Lima: "'People are anxiously awaiting my decision as to who the next head of the Fed next week. I will be announcing it sometime next week,' the president said in a video posted on his official Instagram account. Trump added: 'It will be a person who hopefully will do a fantastic job. I have somebody very specific in mind. I think everybody will be very impressed.'" http://politi.co/2xujan6 ... ***The Instagram video*** http://bit.ly/2hjTLqt

OBAMA'S POST-PRESIDENCY LIFE -- "Former President Obama called to jury duty in Cook County and plans to serve," by Chicago Tribune's Steve Schmadeke: "Cook County ... Chief Judge Tim Evans told county commissioners during a budget hearing that Obama, who owns homes in Washington, D.C., and Chicago's Kenwood neighborhood, will serve next month. Evans later told the Tribune that adjustments would be made to accommodate Obama's security detail, but he could not say the date or courthouse location where the former president is expected to report." http://trib.in/2iGqkSQ

WITH FRIENDS LIKE THESE... -- "Likely Trump envoy nominee slams Senate Republicans," by Nahal Toosi: "Potential nominees usually choose their words with extreme care. But this week a conservative activist said to be President Donald Trump's likely foreign envoy for women's issues lashed out at two Senate Republicans who would have a major say in her confirmation. Democrats are already preparing to fight the expected nomination of Penny Young Nance, president and CEO of Concerned Women for America, to be Trump's ambassador-at-large for global women's issues.

"But they hope her recent Twitter swipes at GOP Senators Bob Corker and Jeff Flake - whom she likened to a 'middle school girl' - could kill her chances of a nomination. A congressional aide said that Nance is being considered for the ambassador's job, and a second congressional aide as well outside activists report hearing the same. The possibility has alarmed Democrats who say she is too fringe for a position that can address issues ranging from women in the workforce to family planning." http://politi.co/2xui4YL

Playbook Reads

PHOTO DU JOUR: President Donald Trump greets children dressed in their Halloween costumes in the Oval Office on Oct. 27. The White House invited members of the media to visit the president with their kids and to trick-or-treat. | Pablo Martinez Monsivais/ AP Photo

2020 WATCH -- "2020 hopefuls dodge Iowa and New Hampshire," by Gabe Debenedetti: "In the early run-up to 2020, would-be candidates are skipping Iowa and New Hampshire for a new set of must-stop destinations: big battleground states like Florida, Ohio and Michigan. Wary of planting a Trump-sized target on their backs so far out from the election, many potential 2020 hopefuls are avoiding headline-drawing trips to traditional primary-season destinations like Des Moines, Manchester, Columbia and Las Vegas.

"Instead, at least half a dozen Democrats with the potential to become serious contenders - including Sens. Elizabeth Warren of Massachusetts, Kamala Harris of California and Cory Booker of New Jersey - have been quietly visiting battleground states that will likely be front-and-center in the next presidential election. The official purpose of the trips is almost always to raise money for colleagues up for reelection in 2018. But the visits also provide White House wannabes an easy way to build in-state credibility and ties to local power-players and contributors who may prove influential three years down the line." http://politi.co/2yRaBXt

MORE ON HALPERIN - "Four more women accuse Mark Halperin of harassment, bringing total to at least a dozen," by CNN's Oliver Darcy: "[T]he number of accusers has grown to at least a dozen women, including four who are now sharing their accounts for the first time. ... The new accusations from the four women include that Halperin masturbated in front of an ABC News employee in his office and that he violently threw another woman against a restaurant window before attempting to kiss her, and that after she rebuffed him he called her and told her she would never work in politics or media.

"The alleged incidents occurred while Halperin was in a position of significant authority at ABC News, while the women were young and had little power. Halperin denies that he masturbated in front of anyone, that he physically assaulted anyone, or that he threatened anyone in the way described in this story. ... 'He put both hands on my arms and threw me against the window of the restaurant hard. So my head banged against the window hard, in a way I thought people inside were going to think something terrible had happened to me,' [one woman] said, adding, 'This was rough, and hard, and violent. And not in a seductive way -- in a way that telegraphs some anger and meanness.'" http://cnnmon.ie/2yUPZvi

FIRST PERSON -- LARA SETRAKIAN in WaPo, "I'm one of Mark Halperin's accusers. He's part of a bigger problem we need to fix": "I speak out now because I should have then. And because we need the broadcast industry -- everyone in it -- to acknowledge what happens to women in our newsrooms, including but beyond the physical abuse. Young television journalists in their 20s are often under intense pressure to look sexually attractive and physically flawless - as judged by their

supervisors. Intense anxiety, self-loathing and eating disorders can ensue. With time, newswomen in their 30s and 40s can feel terrorized by the same pressure; it implies a 'sell by' date to their time on air.

"Losing one's sex appeal can mean losing one's seat as a reporter. That fact stings even deeper when men can not only age gracefully, but lie, plagiarize, assault women and stay on air. I understand that television is a visual medium. But we are reporters, not fashion models. We are putting ourselves forward for our journalism. We should expect some dignity in how we are treated, both on air and off. Something toxic happens in the newsroom when men can comfortably comment on the sex appeal of their female colleagues." http://wapo.st/2iJvT37

RONAN FARROW on NewYorker.com, "Weighing the Costs of Speaking Out About Harvey Weinstein: Annabella Sciorra, Daryl Hannah, and other women explain their struggles with going public": "In March, Annabella Sciorra, who received an Emmy nomination for her role in 'The Sopranos,' agreed to talk with me for a story I was reporting about Harvey Weinstein. Speaking by phone, I explained that two sources had told me that she had a serious allegation regarding the producer. Sciorra, however, told me that Weinstein had never done anything inappropriate. ...

"But, two weeks ago, after The New Yorker published the story ... Sciorra called me. The truth, she said, was that she had been struggling to speak about Weinstein for more than twenty years. She was still living in fear of him, and slept with a baseball bat by her bed. Weinstein, she told me, had violently raped her in the early nineteen-nineties, and, over the next several years, sexually harassed her repeatedly.

"All told, more than fifty women have now levelled accusations against Weinstein, in accounts published by the New York Times, The New Yorker, and other outlets. But many other victims have continued to be reluctant to talk to me about their experiences, declining interview requests or initially agreeing to talk and then wavering. As more women have come forward, the costs of doing so have certainly shifted. But many still say that they face overwhelming pressures to stay silent, ranging from the spectre of career damage to fears about the life-altering consequences of being marked as sexual-assault victims." http://bit.ly/2ySOgGv

****** **A message from Chevron:** This is a story about DOERS, butterflies, and buckwheat. In '75, the endangered El Segundo Blue butterfly was found near a Chevron refinery. We protected the habitat and planted the only thing they eat-buckwheat. We're still planting and keeping an eye on our littlest neighbor. Watch the video: http://politi.co/2yKoarC ******

THE NEW MEDIA LANDSCAPE -- BUSINESS INSIDER: "A founder who sold his last startup for ~$50 million wants to make iconic TV for teens in the YouTube era" http://read.bi/2ySo3KL

GREAT WEEKEND READS, curated by Daniel Lippman:

--"Leon Wieseltier: A Reckoning," by The Atlantic's Michelle Cottle: "Women who once worked at The New Republic reflect on their experiences with the legendary literary editor, who is now facing allegations of workplace 'misconduct.' ... Whatever else he was aiming for, Leon delighted in making young women sexually uncomfortable." http://theatln.tc/2xvDIf3

--"The Very Busy, Very Unproductive Life of Leon Wieseltier," by Lloyd Grover in the March 1995 issue of Vanity Fair: "In [one] letter, he reported, 'Today I will write a bit, read a bit, receive friends and a few strangers who have phoned to say they admire my work (the fools! I do no work!)" http://bit.ly/2yV2qaq

-- "Cheater's Poker," by Charlotte Shane in Book Forum, reviewing "The State of Affairs: Rethinking Infidelity": "Esther Perel's suave, crowd-pleasing take on surviving infidelity." http://bit.ly/2zVakke ... ***$18.35 on Amazon*** http://amzn.to/2iGL9gU

-- "Boko Haram strapped suicide bombs to them. Somehow these teenage girls survived," by NYT's Dionne Searcey in Maiduguri, Nigeria: "The New York Times interviewed 18 girls who were captured by militants in Nigeria and sent into crowds to blow themselves up. Here are their stories." http://nyti.ms/2iCtRBv

-- "Did We Adopt A Jihadist?" by Scott Sayare in GQ: "When one family took in a Syrian refugee, they did it out of compassion, to help a kid who said he'd escaped an ISIS prison. But then the boy got caught up in lies about his terrifying past, and they realized they no longer knew who was living in their home." http://bit.ly/2gHO8Bt (h/t Longform.org)

Subject: EPW to host EPA, NRC nomination hearing Oct. 4

By Anthony Adragna

09/27/2017 04:25 PM EDT

The Senate Environment and Public Works Committee will hold a confirmation hearing Oct. 4 on a host of President Donald Trump's picks for posts at EPA and the Nuclear Regulatory Commission.

The session will include four EPA nominees: Matthew Leopold to be general counsel, William Wehrum to run the air office, Michael Dourson to run the Office of Chemical Safety and Pollution Prevention and David Ross to run the water office. Lawmakers will also consider Jeff Baran's re-nomination to the NRC.

The committee shelved a hearing planned for last week on the picks after the Senate adjourned earlier than expected for Rosh Hashanah. Wehrum's and Dourson's nominations have attracted the most controversy from Democrats and the environmental community.

WHAT'S NEXT: The full EPW Committee will consider the nominees at the Oct. 4 hearing.

Subject: BREAKING NEWS: Collins declines run for Maine governor

Republican Sen. Susan Collins announced Friday that she would not run for governor of Maine, ending weeks of speculation with a decision to stay in the Senate.

Collins' decision preserves her role as a key moderate and swing vote in the Senate. She had considered running for governor for months and faced pressure from fellow Republicans and moderates to stay in the chamber. Collins said her decision was based on where she could do the most good.

Maine Gov. Paul LePage, a Republican, is barred from running again due to term limits. Collins would have been the best-known candidate in the race to replace him, which includes several current and former legislative leaders and Democratic Attorney General Janet Mills.

Collins announced her decision at a local Chamber of Commerce event, where she touted her Senate seniority and "persistent advocacy" for Maine in the Senate.

Subject: POLITICO's Morning Score: Rosendale jumps into Montana Senate race — Barletta planning Pennsylvania run — Ryan, Walker tout Foxconn deal — Mid-year campaign finance reports

By Daniel Strauss | 08/01/2017 10:03 AM EDT

With Zach Montellaro, Kevin Robillard, Elena Schneider, Scott Bland and Maggie Severns

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

REPUBLICANS JUMP IN - "State auditor Rosendale enters Montana Senate race," by Campaign Pro's Elena Schneider: "Montana State Auditor Matt Rosendale is formally launching his campaign to challenge Democratic Sen. Jon Tester today, Rosendale confirmed to POLITICO. 'I've always said that I will serve wherever Montanans feel I can be the most effective, and I've gotten calls from the across the entire state from people who are not satisfied with the job that Tester is doing,' Rosendale said. 'He acts like a farmer when he's here, but he goes back to Washington and votes just like Chuck Schumer.' A handful of Republicans are already in the race, including businessman Troy Downing and state Sen. Al Olszewski. But Rosendale is the first statewide officeholder to jump into the race against Tester, a two-term incumbent who is one of the GOP's top Senate targets of 2018." **Full story.**

- "Sources: Barletta planning Pennsylvania Senate run" by Campaign Pro's Kevin Robillard: "Rep. Lou Barletta plans to challenge Democratic Sen. Bob Casey in 2018, according to two Republican sources. Barletta, an early supporter of President Donald Trump and the former mayor of Hazelton, is an immigration hard-liner serving his fourth term in the House. Trump has publicly suggested that Barletta challenge either Casey or Democratic Gov. Tom Wolf ... Barletta won his House seat during the 2010 GOP wave, in his third run for Congress. With this move, he becomes the biggest name in a large Republican field that has formed to challenge Casey. State Reps. Rick Saccone and Jim Christiana are also running in the Republican primary, as is businessman Jeff Bartos. Rep. Pat Meehan has already passed on a run for Senate." **Full story**.

FIRST IN SCORE - Ryan launches local digital ads touting Foxconn investment in Wisconsin: The House speaker is tending the home fires, where Democrat Randy Bryce is raising a lot of money online to challenge Ryan in 2018, as he also raises millions to help protect House Republicans in other districts. Ryan's campaign is launching digital display and search ads praising Ryan as "delivering on Wisconsin jobs" in the wake of the deal, which involved President Donald Trump, Gov. Scott Walker and Ryan, to bring a Foxconn plant to the state. The ads direct to Ryan's website and a video touting the state economy, with Ryan saying, "What this Foxconn announcement showcases is the fact that southern Wisconsin can become an epicenter for high-tech manufacturing." Team Ryan executive director Kevin Seifert, in a statement: "In Wisconsin, you are judged on results - if you are actually improving people's lives. Well, this

Foxconn announcement is a big win for Wisconsinites because it will bring good-paying jobs to our state and I can tell you this - it makes Paul so proud to advocate for the state and the people he loves"

- And so does Scott Walker: Wisconsin Gov. Scott Walker's political operation is launching a targeted statewide digital ad campaign to promote the FoxConn deal. The ads link to a fact sheet promoting the deal and an e-mail sign-up list. The group says it's the "centerpiece of centerpiece of Friends of Scott Walker's digital spending ahead of the fall," and says the ads will run on a variety of platforms. **Read the Walker sheet here.**

Days until the 2017 election: 98.

Days until the 2018 election: 462.

BIG MONEY - About yesterday's mid-year campaign finance filings: The Democratic Governors Association raised $21 million in the first half of 2017, while the Republican Governors Association raised $36 million ... **The Trump-aligned super PAC America First Action** reported raising $204,277 and spending $26,099 during the first six months of the year - $200,000 of which was raised from a single donor, Michigan GOP chairman Ronald Weiser. ... **The anti-incumbent group Justice Democrats** reported raising $923,803 and spending $499,634 during the first half of this year. Most of Justice Democrats' spending was in the form of transfers to anti-incumbent Brand New Congress and was labeled as "strategic consulting." ... **Jason Kander's voting rights 527 group Let America Vote** raised $1,768,331 and spent $681,771 during the first half of the year. The Let America Vote PAC reported raising an additional $402,449 and spent $288,939. ... **Wisconsin-based GOP megadonor Richard Uihlein** poured $1.5 million into his Solutions for Wisconsin PAC during the second quarter of 2017. Solutions for Wisconsin distributed $750,000 each to two other groups, Restoration PAC and Americas PAC. ... **The Democratic Attorneys General Association** raised $2.96 million and spent $2.59 million during the first six months of the year.

- Senate Leadership Fund takes in $1M from Steven Cohen, $700K from Chevron: Senate Leadership Fund complemented its usual array of big-dollar individual donors with some big corporate donations on its way to raising $8.3 million in the first six months of the year. Chevron donated $700,000, private prison company GEO Corrections donated $100,000 and Nextera Energy donated $500,000. Oft-quoted-friend-of-Trump and NewsMax CEO Christopher Ruddy

donated $50,000, hedge funder Steven Cohen donated $1 million and Zuffa CEO Lorenzo J. Fertitta and Red Rock Resorts CEO Frank Fertitta each donated $500,000. The group has $9.6 million on hand.

- Senate Majority PAC takes big money from unions, shopping mall heiress: Deborah Simon, the daughter of shopping mall pioneer Melvin Simon, was the biggest individual donor to Senate Majority PAC in the first six months of the year, sending a $1 million check. Former hedge fund manager and scientist David E. Shaw donated $500,000. The committee also got nearly $660,000 in ActBlue donations. The National Association of Letter Carriers' political fund donated $250,000, as did the political arm of the American Federation of Teachers. Actor Dennis Haysbert chipped in $600. The group raised $4.6 million and has $4.5 million on hand.

- CODA - Perez paid more to Harrison than other DNC chair opponents: Several weeks ago, POLITICO reported that DNC Chairman Tom Perez covered $22,270 in debt of Jamie Harrison, his opponent in the DNC race who dropped out and endorsed him shortly before the chairmanship election. Perez had covered debt for two other DNC rivals, and yesterday in his FEC filing the full amounts he covered became clear. Perez gave Sally Boynton Brown and Jehmu Greene $5,000 each to help cover their campaign debts-- less than he gave Harrison. **See the original story** here . All together, Perez raised $755,677 and spent $779,248 through the 527 group he established for his run for DNC chair, according to the filing.

ECHOING PELOSI... - "Dem campaign chief vows no litmus test on abortion," by The Hill's Ben Kamisar and Reid Wilson: "Democrats will not withhold financial support for candidates who oppose abortion rights... [DCCC chair] Ben Ray Luján (D-N.M.) said there will be no litmus tests for candidates as Democrats seek to find a winning roster to regain the House majority in 2018. ... 'Throwing weight behind anti-choice candidates is bad politics that will lead to worse policy,' said Mitchell Stille, who oversees campaigns for NARAL Pro-Choice America. 'The idea that jettisoning this issue wins elections for Democrats is folly contradicted by all available data.' ... Luján, a close ally of Pelosi, would not rule out supporting a candidate who does not back Pelosi's bid to become Speaker. 'We want to win back the House. Once we win back the House we can have the conversation as to who we're going to elect as the new Speaker of the House,' Luján said. 'The only way that we're able to have that real conversation is if we're able to put the majority in play and win it back.'" Full story.

DAILY WAR EAGLE - "New Strange ad ties him to Trump, Sessions," by Campaign Pro's Daniel Strauss: "Sen. Luther Strange's campaign released a new TV ad today, framing him as an opponent to "never-Trump insiders" who's working closely with President Donald Trump and Attorney General Jeff Sessions to fight illegal immigration...Sen. Luther Strange's campaign released a new TV ad today, framing him as an opponent to "never-Trump insiders" who's working closely with President Donald Trump and Attorney General Jeff Sessions to fight illegal immigration." Full story.

- The top three candidates in the Alabama Republican primary for Senate highlighted endorsements on Monday. Rep. Mo Brooks announced in a press release the support of Ann Coulter. Former Alabama chief justice Roy Moore's campaign emailed supporters to highlight being endorsed by the Alabama Republican Assembly last week. Meanwhile, Sen. Luther

Strange's campaign, released a new ad, reported by Strauss, reminding voters that he had been endorsed by the NRA. Watch the ad here.

HMM... - "LePage rallies his supporters against Susan Collins," by the Bangor Daily News' Michael Shepherd: "Gov. Paul LePage looks to be leading a Republican civil war against U.S. Sen. Susan Collins' 2018 gubernatorial bid before anyone's sure she'll declare one and as she sits at the center of the national health care debate. The governor railed against the moderate Republican senator at a Saturday pig roast put on by the Somerset County Republican Committee in Canaan, where an attendee said LePage repeatedly mentioned working to defeat Collins if she runs for governor next year." **Full story.**

ADMINISTRATION SPEED READ - "Scaramucci's short, wild ride through Trump's White House," by POLITICO's Josh Dawsey, Annie Karni, and Tara Palmeri: "Financier Anthony Scaramucci came into his new role as White House communications director threatening "to fire everybody."Ten days later, he was pushed out before lunch by John Kelly, the chief of staff who replaced the chief of staff Scaramucci was instrumental in pushing out...The reality, described in interviews by more than a half-dozen administration officials and others close to the White House, was even more complicated. Scaramucci's arrival in the West Wing six months into Trump's presidency seemed to herald a return to the visceral and brash New York ways of the campaign-and a rejection of the clubby, more buttoned-up instincts of Republican operatives brought into the administration by Priebus from the RNC. Instead, it brought more chaos to a White House defined by disorder." **Full story.**

CODA - QUOTE OF THE DAY: "Those are immediate things, but in the longer term, Republicans have some ideas, we have some ideas, and we'll sit down and try to hash them out as Congress should do." - Sen. Chuck Schumer on Obamacare.

Air Pollution

Diesel Becomes Campaign Issue for Merkel in German Elections

Germans head the polls Sept. 24, and an unexpected issue has wedged itself into the campaign along with the usual themes of jobs and refugees: diesel.

Climate Change

Are Hurricanes Winds of Change for Insurers' Climate Risk?

The insurance industry faces a dilemma when it comes to climate change: fundamentally, companies understand the risk natural disasters intensified by climate change can pose, but they see relatively little risk to their business in the near future.

Climate Policy

Storm Resiliency Enters Senate Debate on Flood Insurance

Senate Democrats who have been largely shying away from any debate about the role of climate change in worsening recent storms that hit Texas, Florida, Puerto Rico, and the U.S. Virgin Islands say they're ready to raise climate influence and the need for resilient infrastructure in an upcoming debate over reauthorizing the federal flood insurance program.

Climate Policy

Trump Climate Confusion Is the New Brexit, Top UN Official Says

When U.K. Prime Minister Theresa May criticized President Donald Trump for taking the U.S. out of the landmark Paris climate change deal this week, she might as well have been talking about another kind of exit closer to home.

Climate Regulation

California Sets Demands for Talking Emissions Targets with Trump

California could be willing to re-open discussions on its greenhouse gas limits for cars and trucks for 2025—so long as automakers and the Trump administration embrace the significantly tougher targets it's contemplating for later years.

Coal-Fired Power Plants

Threats to Sue Duke Energy Shelved If Utility Hands Over Data

Recent lawsuit threats against Duke Energy will be dropped if the utility follows through on promises to provide additional information about coal ash hazards, the lawyer for an environmental group told Bloomberg BNA.

Dumping

International Trade Commission Votes to Tax U.S. Solar Imports

The U.S. International Trade Commission concluded that a flood of cheap, foreign solar panels is hurting U.S. manufacturers, teeing up an opportunity for President Donald Trump to impose tariffs and import quotas.

Emissions Trading

California, Quebec, Ontario Ink Deal to Join Carbon Markets

California, Quebec, and Ontario cemented plans Sept. 22 to launch North America's largest carbon allowance market next year.

Energy

A $21 Billion Failed Nuclear Project is Still Haunting Scana

Scana Corp. may have dropped a $21 billion plan to build a nuclear power plant in South Carolina, but washing its hands of the project altogether won't be so easy.

Energy

Lack of IRS Solar Tax Credit Guidance Clouds New Projects

Solar energy developers hoping to break ground on large-scale projects want the IRS to define new-construction requirements for a renewable energy tax incentive.

Enforcement

SolarCity to Pay $29.5M After Inflating Recovery Act Claims

SolarCity will pay $29.5 million to resolve allegations that it submitted inflated claims for itself and affiliated investment funds for grants under the Obama administration's stimulus plan, the Justice Department said Sept. 22

Hydraulic Fracturing

CORRECTION

A story published Sept. 21, "Obama Fracking Rule Restored Temporarily as Court Halts Case," misstated what intervening environmental advocacy groups sought. They wanted the district court's ruling to be vacated, not the rule as originally reported. The online version has been corrected.

Motor Vehicles

How Electric Cars Can Create the Biggest Disruption Since iPhone

It's 10 years since Apple Inc. unleashed a surge of innovation that upended the mobile phone industry. Electric cars, with a little help from ride-hailing and self-driving technology, could be about to pull the same trick on Big Oil.

Natural Gas

Twice-Rejected LNG Exporter Gives Project Another Shot

The developer of a liquefied natural gas export terminal in Oregon that has already twice been denied permits by U.S. regulators is giving it another shot.

Renewable Energy

Italy's Enel Group Starts Latin America's Two Largest Solar Parks

Latin America's two largest solar parks, which can provide enough power to meet the annual

demand of more than half a million homes, are now online in Brazil.

Renewable Energy

The Most Expensive Teslas and the Policy 'Paradox' Behind Them

Fun fact: A poster child of green energy policies has cemented its place in Europe as the most expensive place to own a Tesla.

Subject: POLITICO's Morning Score: Supreme Court eyes gerrymandering — Blackburn, Haslam on collision course — Pence aide floats 'purge' of anti-Trumpers

By Maggie Severns | 10/04/2017 10:00 AM EDT

With Zach Montellaro, Elena Schneider and Scott Bland

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

REDISTRICTING WATCH - "Supreme Court eyes partisan gerrymandering," by POLITICO's Josh Gerstein: "The politically explosive high court fight over so-called partisan gerrymandering has the potential to radically reshape the political scene by thrusting courts across the country into the role of vetting district maps for excessive partisan bias. Critics of that idea say judges are ill-suited to that complex task, while proponents say the practice of legislators essentially picking their voters has gotten out of control. ... The arguments Tuesday were tailored almost entirely to an audience of one: Justice Anthony Kennedy. He's widely believed to be the only Republican-appointed justice who might side with the court's Democratic appointees to invalidate a redistricting plan Wisconsin adopted for its state assembly in 2011. Kennedy was cryptic about how he might rule in the case, but gave no sign that he has abandoned his view that extreme partisan gerrymandering might - at least in theory - violate the Constitution."

"Chief Justice John Roberts, who's known for a desire to safeguard his court's reputation, was unusually blunt about his concern that opening the door to partisan gerrymandering cases would drag the justices into a political morass. He said voters will look askance at the notion that districts failed to meet a complex formula that assesses wasted votes and a so-called efficiency gap." **Full story.**

- Read the oral argument transcript here. **The Roberts quote on the "efficiency gap" that's riling proponents:** "The whole point is you're taking these issues away from democracy and you're throwing them into the courts pursuant to, and it may be simply my educational background, but I can only describe as sociological gobbledygook."

- Republican attorney Jason Torchinsky, a senior adviser at the new National Republican Redistricting Trust, told Score: "Obviously everybody interested in this area is interested to see what Justice Kennedy has to say. There were some zinger quotes from justices on both sides this morning, but without Kenendy tipping his hand it's tough to know" what the outcome will be.

- UC Irvine's Rick Hasen on his Election Law Blog: "Justice Kennedy asked questions only to those defending Wisconsin's gerrymander, and the questions suggested he believed, as he

suggested in *Vieth*, that Wisconsin's redistricting plan violated the First Amendment associational rights of Democrats."

- "Holder-led group challenges Georgia redistricting, claiming racial bias," by The New York Times' Alexander Burns: "A Democratic group led by the former Attorney General Eric H. Holder Jr. has accused the State of Georgia of flouting the Voting Rights Act, claiming that Georgia Republicans reshaped two state legislative districts to minimize the electoral influence of African-American voters. Mr. Holder's group, the National Redistricting Foundation, is expected to file suit in Federal District Court in Atlanta on Tuesday. The complaint charges that race was the 'predominant factor' in adjusting two districts - the 105th and 111th - in the Atlanta area where white lawmakers had faced spirited challenges from black Democrats." **Full story.**

PRIMARY WATCH - "Blackburn, Haslam on primary collision course in Tennessee," By POLITICO's Kevin Robillard: "Tennessee Rep. Marsha Blackburn and Gov. Bill Haslam are on a potential collision course in the race to replace retiring Sen. Bob Corker... Republicans in Tennessee believe both are seriously considering the contest and see the two as the most likely entrants. Andy Ogles, a former director of Americans for Prosperity in Tennessee, had entered the primary even before Corker's retirement.

A person who spoke to Blackburn said she plans to enter the contest, and said she would need to raise $10 million for a run, with that number increasing to $15 million if Haslam enters the contest. Her supporters are hopeful she can clear the field and unite traditional hard-line conservatives like the Club for Growth and nationalist Trump supporters like former White House chief strategist Steve Bannon - all without alienating establishment donors and groups. ... Haslam isn't moving as quickly toward a run, but Republicans in the state are surprised at how seriously he is considering a bid. **Full story.**

FIRST IN SCORE - Tiffany Shedd announces House bid in AZ-01: Lawyer and farmer Tiffany Shedd announced today she's running for Congress in Arizona's 1st District. Shedd has a family history in the rural district dating back more than 100 years. She refers to herself as a "constitutional conservative" and a "Washington outsider" in her announcement video. Arizona's 1st District is currently represented by first-term Democratic Rep. Tom O'Halleran . Other Republicans currently running for Congress in the district include Pinal County deputy sheriff Kevin Cavanaugh and GOP state Sen. Steve Smith. "I cannot sit idly by while rural Arizona is forgotten, her values are lost, and her people, my people, are struggling and discouraged. I will not let the western way of life be destroyed until it only exists in history books. " Shedd says in her announcement video. Watch Shedd's announcement video here.

PARTY INFIGHTING - "Pence's chief of staff floats 'purge' of anti-Trump Republicans to wealthy donors," by POLITICO's Andrew Restuccia and Matt Nussbaum: "Vice President Mike Pence's chief of staff railed against congressional leaders in closed-door remarks to wealthy donors and called for a 'purge' if GOP lawmakers don't quickly rally behind President Donald Trump's agenda. In remarks at a Republican National Committee event at the St. Regis Hotel in Washington on Tuesday morning, Nick Ayers also warned that Republicans are 'on track to get shellacked' in next year's midterm elections if GOP lawmakers don't pass Trump's legislative priorities." **Full story.**

Days until the 2017 election: 34.

Days until the 2018 election: 398.

Q3 CAMPAIGN FINANCE -

- FL-18: Former Obama administration foreign policy adviser Lauren Baer launched her campaign and announced raising over $250,000 since starting an exploratory committee in August, via Florida Playbook. (Meanwhile, Palm Beach County State Attorney Dave Aronberg told the Palm Beach Post he's not running.)

- KY-06: Democrat Amy McGrath raised $768,000 with $550,000 on hand, POLITICO Playbook first reported.

- NY-19: Jeff Beals raised $111,000, including a $56,000 candidate loan, and has over $82,000 on hand in the crowded Democratic primary to take on GOP Rep. John Faso.

- TN-07: Democrat Justin Kanew, who's seeking Blackburn's seat, raised more than $100,000 last quarter, per a statement from his campaign.

BAD HEADLINES - GOP Rep. Tim Murphy faces scathing internal staff memo, reportedly urged abortion in affair: Pennsylvania Rep. Tim Murphy is facing a bombshell report from The Pittsburgh Post-Gazette, which reported that text messages show that Murphy, who is anti-abortion rights, urged a woman he was having an affair with to have an abortion. The Post-Gazette also released an internal staff memo, reportedly written by his chief-of-staff, that details verbal abuse towards staffers.

- Democrats in the state believe that this report "puts this race in play," said Mike Mikus, a Democratic strategist. He acknowledged that it's a red district - Trump won it by nearly 20 points - but, "I think you'll see more Democrats taking a look at this and considering jumping in now. With the right Democrat, with the right message who fits the district, they could do well," Mikus added. A handful of Democratic candidates are in the race, including Pam Iovino, a veteran. National Democrats, however, voiced much more skepticism. "[Murphy] is certainly weaker today than he was yesterday, but it'd be a stretch to say this is a Democratic pickup opportunity," a national Democratic strategist said. Given Murphy's baggage, J.J. Balaban said that "at first blush," it's "hard not to see this and think that the Republicans have a greater chance of holding an open seat rather than Murphy's" reelection.

CASH RACE - Mike Braun raises $1M for Indiana Senate bid: Mike Braun, a state legislator and businessman running against Reps. Todd Rokita and Luke Messer in Indiana's GOP Senate primary, will announce today he raised $1 million in the third quarter. "This campaign will receive support from a combination of grassroots donors and my own resources to ensure we can battle the money flowing from the DC swamp to my opponents," Braun said in a statement. "When I go to the US Senate, I will not owe anything to anyone other than the Hoosiers I want to represent."

ON THE AIR - Campbell airs ad touting charity work: Tom Campbell, the wealthy farmer and GOP state legislator challenging North Dakota Sen. Heidi Heitkamp, is up with his fifth ad of the campaign, this one touting his charity work, including running a prison ministry and volunteering at a homeless shelter. Watch the ad here.

- WHOOPS: Say Anything blog points out some female nudity is accidentally visible in a shot of the prison in the ad.

DAILY ROLL TIDE - Alabama automated poll has Moore at 48, Jones at 40, POLITICO's Daniel Strauss reports: "Republican nominee Roy Moore leads Democrat Doug Jones by 8 points in the latest poll of the Alabama Senate special election. The JMC Analytics and Polling survey released today found Moore with 48 percent and Jones at 40 percent, with 11 percent undecided. The poll's findings are the latest in a string of polls showing a closer-than-usual race between Moore, a former state Supreme Court justice, and Jones, a former U.S. attorney." **Full story.**

GOLDEN STATE UPDATE - NextGen, California Labor Federation aim to flip 7 California seats: NextGen America, a group founded by Tom Steyer, and the California Labor Federation announced a "multimillion-dollar program" to create "sustained filed organizing efforts" to flip seven House seats in California, per a statement from the group, Uniting California. The targeted districts include Rep. Jeff Denham (CA-10), Rep. David Valadao (CA-21), Rep. Steve Knight (CA-25), Rep. Ed Royce (CA-39), Rep. Mimi Walters (CA-45), Rep. Dana Rohrabacher (CA-48) and Rep. Darrell Issa (CA-49).

FROM THE COURTROOM - "Former judge admits concealing payments he got from Brady campaign," via The Philadelphia Inquirer's Jeremy Roebuck: "A onetime challenger to U.S. Rep. Bob Brady has agreed to cooperate - and potentially testify - in an ongoing federal investigation into $90,000 he says the congressman's campaign gave him to drop out of a 2012 primary race. But Jimmie Moore, a former Philadelphia municipal court judge, remained tight-lipped Monday on whether his testimony could implicate Brady, one of Philadelphia's most powerful Democrats, in a crime." **Full story.**

HAPPENING TODAY - Pelosi does CNN 'town hall': House Minority Leader Nancy Pelosi is scheduled for a town hall event with CNN at 9 p.m. tonight. Pelosi will take questions from voters, per CNN.

- AAN circulates anti-Pelosi billboard: American Action Network, never one to pass up a chance to focus on Pelosi, will circulate a mobile billboard around Washington today that urges

Pelosi to cut taxes.

QUOTE OF THE DAY: "If I'd have watched ["Game of Thrones"] two years ago, I would've been president," Marco Rubio joked at a Congressional Hispanic Leadership Institute event. "It's got a lot of good strategies."

Subject: POLITICO's Morning Transportation, presented by Coalition for Future Mobility: House FAA extension stumbles — Next steps on the bill — FMCSA has a new chief-to-be

By Tanya Snyder, Stephanie Beasley and Brianna Gurciullo | 09/26/2017 10:00 AM EDT

With help from Lauren Gardner and Adrienne Hurst

NOTHING IS EASY: Not even an extension, apparently. An attempt to pass a six-month FAA patch failed Monday night in the face of opposition from House Democrats. House Minority Leader Nancy Pelosi panned the measure (H.R. 3284) Monday morning, saying it was "laden with completely unrelated and inadequate items" and that the House should be voting on an immigration bill. Her statement was followed by a Dear Colleague letter from House Minority Whip Steny Hoyer, top Transportation Committee Democrat Peter DeFazio (D-Ore.) and other Democratic committee leaders opposing what they described as a "partisan package of extraneous provisions." House Speaker Paul Ryan fired back, saying Dems "are willing to shut down air traffic control to make a political point."

Procedural note: The evening vote was scheduled to happen under suspension of the rules, a process requiring two-thirds of those present and voting for passage, which was impossible with the number of Democrats voting no. But Republicans should be able to pass an extension under normal simple majority procedures with most of the caucus on board, plus perhaps a few Democrats. Expect to see the House Rules Committee act to set up floor action in the next day or two.

Notable defections: Twenty-six Democrats -- including many from the hurricane-ravaged states of Texas and Florida -- voted for the bill, while eight Republicans opposed. Transportation Committee member Dan Lipinski (D-Ill.) and FAA overhaul bill co-sponsor Kyrsten Sinema (D-Ariz.) supported the extension; Committee Republicans Mark Sanford of South Carolina and Garret Graves of Louisiana opposed it, as did two opponents of Transportation Chairman Bill Shuster's air traffic control overhaul bill: Ralph Abraham of Louisiana and Ron Estes of Kansas. (Abraham said in a statement that he objected to the short length of the extension as well as the flood insurance and "disaster tax relief" measures in the bill.) Also of note: Oklahoma Republican Steve Russell , another detractor of the ATC spin-off plan, voted for the bill -- after telling reporters last week he planned to vote "no."

Case in point? Before the vote, Shuster (R-Pa.) said on the House floor that "progress is being made every day" on his FAA reauthorization bill (H.R. 2997 (115)). "The very fact that we have passed this bill today is one of the many reasons why we need a fundamental comprehensive FAA reform," Shuster said.

IT'S TUESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Send tips, feedback and lyrics to bgurciullo@politico.com or @brigurciullo.

"You gave your heart to me / And soon the world will see / Our graffiti love / Spray-paint on my glove / They'll wonder who you are / On every subway car." (h/t Jennifer Kalczuk at AlphaVu)

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

IT'S MARTINEZ FOR FMCSA HEAD: President Donald Trump is set to nominate Raymond Martinez, the New Jersey Motor Vehicle Commission's chairman and chief administrator, to be the head of FMCSA. Martinez is also a New Jersey State Planning Commission member. He formerly served as deputy U.S. chief of protocol during the George W. Bush administration. Before that, he was commissioner of the New York State Department of Motor Vehicles. The American Trucking Associations came out in support of Martinez's nomination Monday night.

KEEPING SCORE: The CBO published a longer cost estimate Monday for Shuster's multi-year FAA bill. The analysis said that a nonprofit corporation taking on the costs of managing air traffic control "would not materially change the overall magnitude of federal spending," but only "if future appropriations are reduced." Jeff Davis at the Eno Center for Transportation has a more thorough breakdown.

MORNING TRANSPORT THEFT: From our cousins at Pro EU Transport: Emirates CEO Tim Clark spoke out against a new European Commission plan intended to fight "unfair" competition in the aviation sector in an interview with Dutch newspaper Financiele Dagblad . "We have aviation agreements with all EU member states. I see no reason to change that," Clark said. "We suspect that the Germans and the French try to stop us because they do not want competition for their own airlines. We don't receive state aid. Anyone with doubts can look into our administration." The Commission set out a plan for new "868" rules giving Brussels the power to slap penalties on non-EU entities or airlines that harm the bloc's own carriers.

- The Trump problem: Clark said he is worried about growing political interference in the aviation industry. "Just look at the new U.S. government. If those sentiments grow, some countries may perhaps give in to their protectionist instincts. Then it will be harder for us [to operate]." Emirates saw its profit decline by 82 percent as a result of developments in the aviation industry including the U.S. laptop ban and a Qatar boycott.

** **A message from the Coalition for Future Mobility**: Driving Safety: Human error. It's a factor in 94% of all crashes according to government data. So imagine how much safer our roads would be with Autonomous Vehicles. By reducing risky and dangerous driving behaviors, AVs will help save lives. Tell Congress to greenlight Autonomous Vehicle testing and deployment. http://bit.ly/gl-sd **

WHAT DO WE WANT? A JONES ACT WAIVER: Seven Democrats asked the Trump administration Monday for a one-year Jones Act waiver to expedite hurricane relief aid to Puerto Rico. In a letter to Acting DHS Secretary Elaine Duke, they noted that the island already faced a severe financial crisis and crumbling infrastructure before the hurricane, which has left the entire island without power that could take months to restore."Temporarily loosening these requirements - for the express purpose of disaster recovery - will allow Puerto Rico to have more

access to the oil needed for its power plants, food, medicines, clothing, and building supplies," the lawmakers wrote.

BACK IN BUSINESS: The FAA is permitting more than a dozen daily commercial flights to operate at Luis Munoz Marin International Airport in San Juan, Puerto Rico. The agency said Monday that although efforts to restore radars and navigational tools at the airport continue, the airport has been able to handle nearly 100 arrivals and departures, including military and relief flights. FAA has instituted a slot system and expects San Juan's capacity for commercial flights to increase soon, though it did not provide a timeline for when it expected service to be fully restored.

STORM-DRAINED: The Coast Guard took an estimated $1 billion hit from Hurricanes Harvey, Irma and Maria, Commandant Adm. Paul Zukunft said Monday. Harvey alone caused about $380 million worth of damage to Coast Guard assets. Pro Defense's Jacqueline Klimas has more for Pros.

REVERSE, REVERSE: After being hit by lawsuits from environmental groups and Democratic attorneys general, DOT is letting an Obama-era greenhouse reduction rule to go into effect, Pro Energy's Alex Guillen reports . The Trump administration initially delayed implementation of a rule aimed at reducing emissions from major highways before eventually placing it on indefinite hold earlier this year. However, DOT is now planning to publish the rule this Thursday. "In a letter to a federal judge in New York, the Justice Department said the rule has been submitted to the Federal Register and is expected to run Sept. 28," Alex writes.

CHANGE OF PLANS: The Supreme Court on Monday nixed oral arguments on Trump's travel ban after the administration unveiled new travel limits for individuals from eight countries the previous day, POLITICO's Josh Gerstein reports.

STB DOWN A MEMBER: Daniel Elliott, the vice chairman of the Surface Transportation Board, will resign, effective Saturday. Elliott was the board's chairman until Trump picked Ann Begeman to be acting chairwoman.

LETHALISH WEAPON: A new report from the Mineta Transportation Institute shows that while vehicle-ramming incidents are on the rise, they aren't as lethal as other terrorism tactics. The institute found that victims of the 37 vehicle-ramming incidents recorded since 1970 accounted for just two percent of the total number of fatalities from surface transportation attacks. Nevertheless, the number of incidents have greatly increased since 2014, analysts said. Steph has more details on the report's findings for Pros.

DHS RAMPS UP TRANSIT SURVEILLANCE: Recent metro bombings throughout Europe, last month's vehicle attacks in Spain and Al Qaeda's threats to target U.S. railways have raised questions about the Department of Homeland Security's efforts to prevent similar attacks in the United States. The department announced Monday that it is testing new tools, including technology that could remotely screen subway or rail commuters and their bags as well as allow authorities to scan hours of surveillance video footage more quickly. DHS said that with the new technology, it can better address the "unique security challenge" posed by transit systems, which

typically lack security checkpoints. Check out videos explaining the initiative on the DHS website.

CAN UBER WIN LONDON BACK? Just a few days after announcing that Uber was "not fit and proper to hold a private hire operator license," London authorities are showing signs of softening. London Mayor Sadiq Khan said Monday that he wants Transport for London to meet with Uber. Khan said he "welcomed" Uber CEO Dara Khosrowshahi's apology and that "London should be a place for innovation," but that companies have to "play by the rules." In revoking its license, TfL had cited Uber's inadequate approach to "reporting serious criminal offenses" and its use of software to throw law enforcement off the scent of illegal operators.

MOVING FORWARD: The head of ICAO has called on the governments of member states affected by the hurricane season to upgrade their infrastructure as they recover, emphasizing the role of public and private investment in tourism and aviation development. "ICAO encourages local leadership to seek to ensure that more robust infrastructure and facilities are rebuilt so that these important economic benefits are less exposed to future risks," Secretary General Fang Liu said in her address to the Directors General of Civil Aviation for ICAO's North and Central America and Caribbean region.

IT'S WORLD TOURISM DAY EVE... and ICAO and a host of industry groups have dropped a joint report on the economic benefits of aviation - an industry that's expected to see a 122 percent jump in U.S. GDP between 2014 and 2034, according to the report. Targeting mainly government officials and national planners, the report details air transport's contributions to both global and regional economies, and it recommends steps leadership can take to "maximize air transport's socio-economic influence," according to a press release. (One takeaway: Aviation has contributed to the global economy about the equivalent of the U.K.'s overall GDP.)

SHIFTING GEARS: Will Otero is Volvo's new government affairs director for the Americas, per POLITICO Influence. Otero formerly worked for the Alliance of Automobile Manufacturers and, prior to that, NHTSA.

THE AUTOBAHN:

- "Flight plan for failure." The Boston Globe.

- "Dubai begins testing drone taxi service." ZDNet.

- "Allegiant Air jet has emergency at California airport." The Ledger-Enquirer.

- "Professional drivers fear job loss to self-driving vehicles." The Detroit News.

- Millions of drivers lost licenses over unpaid court fees. The Washington Post.

- Air France tries under-$50 fares to attract millennials. *(But do they serve avocado toast?)* CNBC.

- Thai authorities warn: Don't buzz the casket. Bangkok Post.

THE COUNTDOWN: DOT appropriations run out in 74 days. The FAA reauthorization expires in 5 days. Highway and transit policy is up for renewal in 1,101 days.

** **A message from the Coalition for Future Mobility**: Driving Safety: Human error. It's a factor in 94% of all crashes according to government data. So imagine how much safer our roads would be with Autonomous Vehicles. By reducing risky and dangerous driving behaviors, AVs will help save lives. Tell Congress to greenlight Autonomous Vehicle testing and deployment.http://bit.ly/gl-sd **

Subject: Federal Insider: Trump tries to weaken federal unions, but their membership grows in reaction to GOP actions

Trump tries to weaken federal unions, but their membership grows in reaction to GOP actions

By Joe Davidson

(Pool photo by Eliot Blondet via Agence France-Presse/Getty Images)

President Trump and Capitol Hill Republicans have been good for federal unions, even as they attempt to undermine the labor organizations and the public servants they represent.

With the GOP running the White House and Congress, membership in federal unions is on the rise, fed by an administration and legislature that leaves the workforce anxious about budget cuts, layoffs and an erosion of civil service protections.

The American Federation of Government Employees (AFGE), the biggest federal employee union, had a net increase of 1,022 members last month alone, part of almost 5,000 new members since January. Three of the four other major unions also reported growth — the National Treasury Employees Union (NTEU) did not provide membership information — with the National Federation of Federal Employees on pace to achieve 7 percent growth this year.

While membership has grown previously, important factors currently are White House and congressional proposals that would cut government contributions to federal employee benefits, significantly devaluing the 1.9 percent pay raise that staffers are slated to get in January. The union growth occurred even

ADVERTISEMENT

before Thursday's House approval of a budget proposal that would reduce subsidies to the Federal Employees Health Benefits Program. The budget plan calls for $32 billion in cuts targeted at feds over 10 years. While unspecified in the House budget resolution, those hits could include damaging retirement proposals previously offered by Trump.

At the same time AFGE recorded impressive growth in September, Trump was doing his best to weaken federal unions through his executive order revoking the labor/management forums created by predecessor President Barack Obama.

The forums "have consumed considerable managerial time and taxpayer resources, but they have not fulfilled their goal of promoting collaboration in the Federal workforce," the order argues. "Public expenditures on the Council and related forums have produced few benefits to the public, and they should, therefore, be discontinued."

The governmentwide council and agency forums were designed to foster cooperation between unions and management. Discussions included such things as workplace safety, productivity and data security.

Trump's action is "a major step backward in the relationship between managers and front-line federal employees [that] will weaken efforts to make government more efficient and effective," according to NTEU.

"This is an ominous sign for the future of federal labor-management relations," NTEU President Tony Reardon added.

It's not the only one.

After Trump announced his appointees to the Federal Services Impasses Panel in July, union leaders were aghast. The panel resolves disputes between agencies and federal labor organizations. With Trump's appointees, labor leaders feel the deck is stacked against them.

"The Trump administration pulled out all of the stops on this one," said Randy Erwin, president of the National Federation of Federal Employees (NFFE). "The diversity of this panel ranges from people who publicly campaign against unions to people that actively litigate against unions. I have little faith that this panel can properly evaluate a dispute without inherent bias or personal

The proposal was approved, 219 to 206, by the House last week, with no Democratic support and 18 Republicans defecting from their party line. It's a measure that's worked as a way for Republicans against "official time." Now, they can argue, there is less reason for it.

On a related front, Trump's plan to weaken government through personnel cuts and reductions in benefits could have significant effects on unions. Federal employees who are paid by the government while representing everyone in a bargaining unit, even those who don't pay dues. That degradation led NTEU's Reardon to ask: "Since when is it acceptable to reward employees who are providing taxpayers and stakeholders the services they deserve?"

The law also limits what "union work," such as recruiting members, is not allowed. Official time covers working with management on issues involving represented employees, union members or not, such as safety and efficiency.

[Trump's budget director says he wants federal workers to join unions for protection. A law affecting the Department of Veterans Affairs, for example, weakens due process for all employees and eliminates the ability of VA employees to appeal disciplinary actions outside the agency, as other feds can.

[Trump's budget director says he wants federal workers to join unions for protection.]

"From private sector to federal, Congress has acted with the latest example being the House-passed budget," said Matt Biggs, legislative director of the International Federation of Professional and Technical Engineers.

ADVERTISEMENT

More from Federal Insider

PowerPost • Perspective

Federal employees pay more for insurance, but it's still a good deal

There are no dramatic changes in the 2018 Federal Employees Health Benefits Program, and its premium increase "is not out of line," said Walt Francis, an independent health economist.

Subject: Today on Climate Beat

July 28, 2017

Today on Climate Beat . . .

. . . we went to court, where environmental groups challenging the Bureau of Land Management's stay of the Obama-era regulation limiting venting and flaring of "waste" methane are asking a federal court to grant summary judgment against the stay, arguing that the bureau's action violates the law by its "plain terms."

In personnel news, EPA finally responded to the controversial op-ed in Inside EPA from former agency transition official David Schnare, calling his claims about Administrator Scott Pruitt "wildly untrue."

And we also highlighted several must-read stories from this past week, including news about EPA criticism from a former agency transition official, as well as updates on fuel economy standards, California cap-and-trade, a renewed carbon tax push and the social cost of carbon.

OIL AND GAS INDUSTRY
Oil Spill Prevention and Response Planning/Definitions, Inland Facility Contingency Plans
California OIL AND GAS INDUSTRY

Notice of the Department of Fish and Game, Office of Oil Spill Prevention and Response, announces the second readoption of a Sept. 18, 2015, emergency rule that amended regulations under 14 CCR 790 and adopted regulations under 14 CCR 817.04 to revise definitions and abbreviations. The rule also establishes requirements for oil spill contingency plans, response strategies, and equipment delivery time frames for inland facilities. The readoption was filed Aug. 7, 2017. Contact: Christine Kluge; OSPR; 916-327-0910; Christine.Kluge@wildlife.ca.gov

OIL AND GAS INDUSTRY

Oil Spill Prevention and Response Planning/Financial Responsibility
California OIL AND GAS INDUSTRY

Notice of the Department of Fish and Game, Office of Oil Spill Prevention and Response, announces the second readoption of a Sept. 18, 2015, emergency rule that amended regulations under 14 CCR 791 through 797 and adopted regulations under 14 CCR 798 regarding oil vessel and facility certificates of financial responsibility. The rule revises the definition of "reasonable worst case spill," revises the process for obtaining and renewing a certificate of financial responsibility, and adds application forms for certificates of financial responsibility for railroads and inland facilities. The rule also reflects the expansion of the Oil Spill Act and the authority of the administrator to cover all waters of the state. In addition, the rule requires a certificant with multiple vessels or facilities to demonstrate to the satisfaction of the administrator financial responsibility for the vessels or facilities not associated with a spill. The readoption was filed Aug. 7, 2017. Contact: Christine Kluge; OSPR; 916-327-0910; Christine.Kluge@wildlife.ca.gov

OIL AND GAS INDUSTRY
Oil Spill Response Organization Rating Program
California OIL AND GAS INDUSTRY

Notice of the Department of Fish and Game, Office of Oil Spill Prevention and Response, announces the second readoption of an Oct. 23, 2015, emergency rule that amended regulations under 14 CCR 819 through 819.07 regarding the oil spill response organization (ORSO) rating program. The rule specifies that ORSOs with a terrestrial response services rating do not have to demonstrate on-water recovery capability and revises ORSO application requirements. The rule also requires inland facility owners or operators who do not contract with a rated ORSO for the terrestrial service requirements and capabilities and intend to meet such requirements with owner-operator-owned equipment and personnel to obtain a terrestrial services rating. In addition, the rule requires ORSOs to periodically conduct announced and unannounced drills to test response and cleanup operations, equipment, contingency plans, and procedures. Finally, the rule specifies that ORSOs rated for only a terrestrial service do not need to submit a drill schedule, specifies that unannounced drills must only include equipment and personnel inspections, and revises performance standards for ORSOs to meet during drills. The readoption was filed Aug. 7, 2017. Contact: Christine Kluge; OSPR; 916-327-0910; Christine.Kluge@wildlife.ca.gov

Colorado

WATER
Section 303(d) List/Monitoring and Evaluation List
Colorado WATER

Proposed rule of the Department of Public Health and Environment, Water Quality Control

Commission, amends regulations under 5 CCR 1002-93 to update the list of water quality-limited segments requiring total maximum daily loads (TMDLs) under Section 303(d) of the Clean Water Act and the monitoring and evaluation list. Water segments that were added to, removed, or retained on the lists are specified by analyte. The rule also defines an allowable cumulative impact for water temperature and includes segments with exceedances of the temperature standards on the list. In addition, the rule removes water segments from the list due to recent approval by the EPA of TMDLs or based on recent assessment of water quality data. Finally, the rule reformats the list to allow generation directly from the state's assessment tracking database. A hearing is scheduled for Dec. 11, 2017, in Denver. Various deadlines and prehearing conference dates are specified for those seeking party status. Comments are due Nov. 29, 2017. Contact: Sarah Wheeler; DPHE, Water Quality Control Commission; 303-692-3436; sarah.wheeler@state.co.us

Regulatory Update

North Carolina

AIR

Air Pollution Control/Air Quality Permit Procedures

North Carolina AIR

Proposed rule of the Department of Environmental Quality, Environmental Management Commission, amends regulations under 15A NCAC 2D.1204 and 2Q.0106 through 2Q.0902 (nonconsecutive) and readopts regulations under 15A NCAC 2Q.0101 through .0903 (nonconsecutive) regarding air pollution control requirements and air quality permit procedures. The rule incorporates federal emissions guidelines for existing facilities, including limits for sewage sludge incineration units located at wastewater treatment facilities designed to treat domestic sewage sludge for nine pollutants. The rule also deletes a nitrogen oxides and volatile organic compound emissions reporting requirement for a portion of the former 1997 eight-hour ozone maintenance area. In addition, the rule updates references and definitions, defines "responsible official," clarifies the definitions of new and modified facilities, and specifies record maintenance and submission requirements for the individual source category. Finally, the rule deletes obsolete provisions and references, clarifies the submittal of test reports concerning temporary crushers, and updates the necessary number of copies of letters and applications regarding construction and operation permits. A hearing is scheduled for Sept. 27, 2017, in Winston-Salem. Comments are due Oct. 16, 2017. Contact: Joelle Burleson; DEQ, Division of Air Quality; 919-707-8720; daq.publiccomments@ncdenr.gov

Regulatory Update

HAZARDOUS WASTE MANAGEMENT

Soil Remediation

North Carolina HAZARDOUS WASTE MANAGEMENT

Proposed rule of the Department of Environmental Quality, Environmental Management Commission, amends regulations under 15A NCAC 2T.1502, .1505, and .1507 and readopts regulations under 15A NCAC 2T.1501 and .1503 through .1506 regarding the remediation of

contaminated soils originating from underground storage tanks. The rule requires closures or cleanup based on either the "soil-to-groundwater" or the residential maximum soil contaminant concentrations, rather than nondetection levels of soil contamination, for closures of soil remediation permitted facilities. A hearing is scheduled for Aug. 30, 2017, in Raleigh. Comments are due Oct. 16, 2017. Contact: Jeremy Poplawski; DEQ, Division of Waste Management/Underground Storage Tank Section; 919-707-8151; jeremy.poplawski@ncdenr.gov

Regulatory Update

WATER

Division of Mitigation Services/Rate Schedules for In-Lieu Fee Programs

North Carolina WATER

Proposed rule of the Department of Environmental Quality, Environmental Management Commission, amends regulations under 15A NCAC 2R.0102 through .0602 (nonconsecutive) and repeals regulations under 15A NCAC 02R.0101, .0201, and .0401 to update methods for calculating rate schedules for the in-lieu fee (ILF) programs offered by the Division of Mitigation Services. The rule establishes a flat fee for the coastal wetland mitigation category, based on coastal land costs and credit pricing in other states that offer a coastal marsh mitigation credit. The rule also provides that the flat fee will be applied for the category until sufficient data exists to apply the actual cost method (ACM). In addition, the rule specifies the ACM currently used to calculate rates for nutrient ILF program is applicable to the statewide stream and wetland ILF and the riparian buffer ILF programs. Finally, the rule reflects recent name changes for the department and division. Hearings are scheduled for Sept. 27 and Oct. 4, 2017, in Wilmington and Raleigh, respectively. Comments are due Oct. 16, 2017. Contact: Kelly Williams; DEQ, Division of Mitigation Services; 919-707-8915; kelly.williams@ncdenr.gov

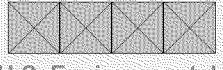
EPA Announces Intent to Revisit Provisions of Phase 2 Heavy-Duty Rules



WASHINGTON (August 17, 2017) —The U.S. Environmental Protection Agency (EPA) announced today its intent to revisit provisions of the Phase 2 Greenhouse Gas Emissions and Fuel Efficiency Standards for Medium- and Heavy-Duty Engines following concerns raised by stakeholders in the trailer and glider industry.

"In light of the significant issues raised, the agency has decided to revisit the Phase 2 trailer and glider provisions," **said EPA Administrator Scott Pruitt**. "We intend to initiate a rulemaking process that incorporates the latest technical data and is wholly consistent with our authority under the Clean Air Act."

Background:

In September 2011, EPA and the National Highway Traffic Safety Administration (NHTSA) issued greenhouse gas (GHG) emissions and fuel efficiency standards for medium- and heavy-duty vehicles for model year 2014-2018 ("Phase 1"). These standards applied to newly manufactured engines, tractors, vocational vehicles, large pickups, and vans. In October 2016, EPA and NHTSA updated the standards for medium- and heavy-duty vehicles MY 2021-2027 ("Phase 2"), and regulated trailers and gliders – for the first time under the GHG program – with compliance deadlines beginning in 2018.

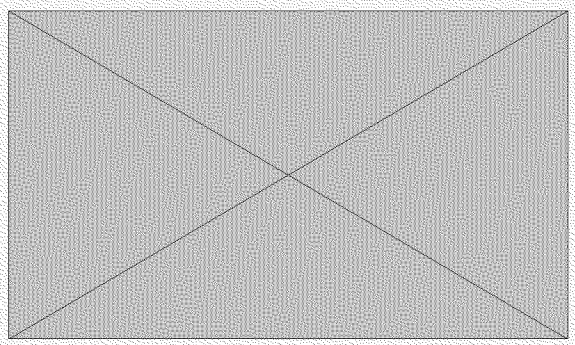
Subject: AEI Today: One year out, setting the stage for the 2018 midterm races

Virginia and New Jersey voters went to the polls yesterday in two of the first statewide elections following Donald Trump's surprising 2016 victory.

AEI's daily publication of independent research, insightful analysis, and scholarly debate



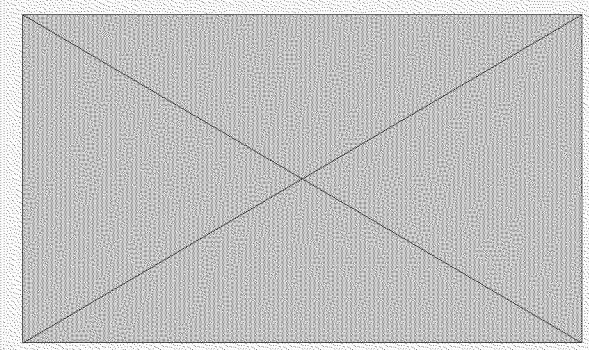
Reuters

One year out, setting the stage for the 2018 midterm races

Karlyn Bowman and Eleanor O'Neil | AEI

Virginia and New Jersey voters went to the polls yesterday in two of the first statewide elections following Donald Trump's surprising 2016 victory. With the much-anticipated 2018 midterms a year out, let's look at the landscape. There are 34 Senate contests next November, with Democrats holding 23 of those seats. Republicans, for their part, will need to defend 24 of 35 governors' mansions and 239 House seats. Nearly all polls give Democrats

the edge.

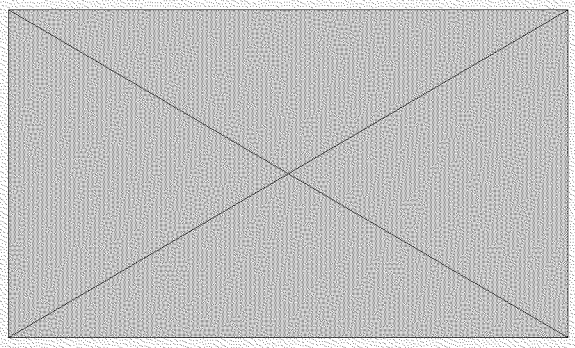


Reuters

Tax reform gets heated. The GOP plan is an opportunity.

Aparna Mathur | The Hill

Tax policy often faces the challenge of a trade-off between equity and efficiency. It may not be efficient to redistribute money from high-income taxpayers to low-income taxpayers, but it does lead to a more equitable society. So how does the Republican tax plan, in its current iteration, perform on those key metrics? The biggest boost to household incomes is expected to come from the private sector through corporate tax reform.



Reuters

Game of thobes: Saudi Arabia

Danielle Pletka | AEIdeas

Over the weekend, Saudi Crown Prince Mohammad bin Salman launched a new anti-corruption commission, arrested at least 11 senior government officials and super-rich Saudis, and axed the head of the Saudi Arabian National Guard. A busy weekend indeed, and Middle East watchers worldwide seized the opportunity to gossip wildly. So what does it all mean?

Reuters

A real strategy for success in Libya

Emily Estelle | AEI

America needs a new policy in Libya. The current approach is failing and will likely leave a permanent safe haven for the Islamic State and al Qaeda on Europe's southern border. This future will strengthen the global Salafi-jihadi movement, facilitate further attacks against the US homeland and Europe, and require a perpetual American counterterrorism campaign in Libya.

Subject: Inhofe waiting for deal on EPA picks before lifting his FERC hold

By Darius Dixon

10/18/2017 05:19 PM EDT

Sen. Jim Inhofe said he doesn't plan to release his hold on Democratic FERC nominee Richard Glick until senators reach a larger deal to move ahead with President Donald Trump's nominees to the EPA.

"I've still got a hold on Glick," the Oklahoma Republican told POLITICO. He said he is "concerned that we don't have our nominees confirmed on the EPA."

Inhofe said that he has raised the issue with Senate leadership and that he hopes there might be an arrangement to consider the EPA and FERC nominees within the next month or so. Both Republicans and Democrats have raised concerns about EPA nominees.

"I don't think it could happen as one package, but it could be an agreement that they will bring those up prior to the next recess," he said of the nominees.

FERC nominees traditionally move in bipartisan packages, so Trump's pick for FERC chairman, Kevin McIntyre, will likely be stuck until Glick's nomination gets floor time.

Senate Energy and Natural Resources Chairwoman Lisa Murkowski (R-Alaska) attempted to have both FERC nominees approved just before the Senate's most recent recess earlier this month, but Inhofe objected.

WHAT'S NEXT: The Senate's next extended recess is Thanksgiving week.

Subject: POLITICO's Morning Transportation: Senate Dems want answers on sleep apnea — Pugliese leaves DOT for FERC — New drone regulations on tap for next year

By Stephanie Beasley | 08/22/2017 10:00 AM EDT

With help from Lauren Gardner, Eric Wolff and Tanya Snyder

SOME 'SPLAINING TO DO: New York and New Jersey's senators urged DOT Monday to reconsider its decision to withdraw an ANPRM on obstructive sleep apnea among train operators and commercial truck drivers, a disorder that has been linked to 10 highway and rail crashes since 2000, including deadly derailments in New York and New Jersey. In a letter to Transportation Secretary Elaine Chao, Sens. Cory Booker, Chuck Schumer, Robert Menendez and Kirsten Gillibrand demanded access to the data behind DOT's "decision to vacate this potentially life-saving rule."

WORKING ON THOSE STAFF MOVES: Anthony Pugliese has left DOT to join the Federal Energy Regulatory Commission as its chief of staff, our Lauren Gardner scooped for Pros. He was the department's senior White House adviser - a role deployed across federal agencies that was intended to help 1600 Pennsylvania Ave. keep tabs on agencies' goings-on, but ended up irritating Cabinet secretaries instead (some POLITICO colleagues broke down the "shadow Cabinet" here). Pugliese has a background in energy policy, working as a consultant on those issues in Pennsylvania after a stint with former Gov. Tom Corbett, according to FERC's hiring announcement.

THE MITCH MCCONNELL CONNECTION: Pugilese served next to Elaine Chao, who readers know is married to Senate Majority Leader Mitch McConnell - and the two may not have gotten along. POLITICO reported in May how Pugliese informed Chao that he expected her to check in with him on all policy moves, a declaration that got a chilly reception. Now Pugliese has a job as the top staffer for newly anointed FERC chairman Neil Chatterjee, for years McConnell's top energy policy aide. The FERC announcement says Pugliese learned energy matters from his time working for Pennsylvania Gov. Tom Corbett, where he spent a year working for the department of Community and Economic Development, and as a consultant for Pugliese Associates, a Pennsylvania lobbying shop founded by Pugliese's father, Rocco. The company's website shows only Tesla Motors, a filling station chain, and an energy efficiency non-profit for energy-related clients. Pugliese's lobbying disclosure form for the state of Pennsylvania show his only energy client was Tesla.

Wait, there's more: Some birdies tell MT that Jane Williams is starting this week as FTA's deputy administrator. That would make her the most senior political appointee at the agency, since the White House has yet to nominate anyone to the administrator post. Williams comes from the Maryland Department of Transportation, where she was director of the Washington Area Transit Office. She previously worked for Rep. Andy Harris (R-Md.) and did stints in other GOP administrations.

HAPPY TUESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Be sure to send tips, feedback, lyrics, and solar eclipse reflections to sbeasley@politico.com or @Steph_Beasley.

Now the soft new snows of December / Lightly fall my cabin 'round / And the last train from Poor Valley / Takin' brown haired Becky Richmond bound (h/t Dan Gurley North Carolina State Ports Authority)

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

TWEETS DU JOUR: Check out Rep. Hal Rogers (R-Ky.) and company gazing up at yesterday's solar eclipse from his home state; meanwhile, ABC News nabbed footage of a huge traffic jam resulting from the celestial event in Oregon.

WELCOME BACK: DOT updated its monthly "significant rulemaking" report for the first time since the change in administrations. Among upcoming actions listed is an NPRM for operating small commercial drones over people, which was initially submitted to OMB last November. FAA is expected to publish that NPRM by Feb. 28, 2018 and also issue a final rule requiring registration and marking for drones by Feb. 26, 2018. A revised metropolitan planning organization coordination rule is expected by the end of next month. Read more here. (h/t to Jeff Davis at the Eno Center)

QUIET AS IT'S KEPT: White House aides, the Treasury Department and congressional leaders have significantly expanded a tax overhaul plan since President Donald Trump put out a six-paragraph framework in July. However, they have yet to hammer out key details like whether a tax bill should add to the deficit or if any tax cuts should be permanent, POLITICO's Nancy Cook reports . They are also finding it hard to stay focused on the tax overhaul, along with other policy issues, given the recent controversy over the president's response to violence in Charlottesville, Va and disruptive personnel changes in the West Wing.

THE ROCK HITTING THE WINDSHIELD: And speaking of distractions, Republican Party insiders say they worry that policy goals for taxes, spending and health care could be derailed by divisions within the party. "Loyalty to Trump has quickly become the most potent issue within the Republican base, according to a dozen candidates and strategists immersed in 2018 races," writes POLITICO's Kevin Robillard. Many Republican Senate campaigns are reportedly preparing to "bludgeon" primary opponents seen as disloyal to Trump.

KEEPING SCORE: Conservative advocacy group FreedomWorks said it plans to score senators based on whether they vote to confirm former Rep. Scott Garrett as president of the Ex-Im Bank and Kevin Hassett as chairman of the White House Council of Economic Advisers, according to Pro Trade's Zachary Warmbrodt. The Senate Banking Committee has yet to schedule a nomination hearing for Garrett who, like FreedomWorks, has proposed abolishing the Ex-Im Bank. The committee approved Hassett but he has not been confirmed by the full Senate.

CONGESTION PRICING A.K.A. THE DARK HORSE: New York City Mayor Bill de

Blasio remains optimistic that he can get enough support to institute a tax on the wealthy to help fund the city's transit system but said congestion pricing - which seems to have Governor Andrew Cuomo's approval - isn't "politically viable," report POLITICO New York's Dana Rubinstein and Gloria Pazmino. De Blasio said he was doubtful that state leadership would back the idea and that the need for MTA funding was too urgent to bet on a losing horse, so to speak.

In the eye of the beholder: But transportation funding groups say de Blasio's preferred fundraising method seems even less likely to go anywhere with state lawmakers. "This is like the third millionaire's tax, right?" said Jon Orcutt of the Transit Center, which supports congestion pricing.

NOT TODAY: Fiat Chrysler is downplaying rumors that China's Great Wall Motors is seeking to buy it or its Jeep Unit, POLITICO Europe's Hans von der Burchard writes. Fiat Chrysler said in a statement Monday that it had not received a bid from the Chinese automaker, though that might not be enough to quell market anxieties. The news "comes at a sensitive moment as Germany, Italy and France are pushing the European Commission to screen buyouts from Beijing more strictly, saying some are politically driven and heavily subsidized by state money."

ID ON THE GO: Nowadays people, especially Millennials, like being able to access everything from their phone and that includes their driver's licenses, MorphoTrust USA reveals in a new study out today. The company, which is involved with TSA PreCheck enrollment, surveyed 3,835 people over the age of 16 and also hosted 10 focus groups to assess their reactions to the concept of a mobile driver's license. People under the age of 39 were more open to the idea than those over 40, according to MorphoTrust. Though - 80 percent of survey respondents said they would be interested in a mobile ID.

SPOTLIGHT ON OPEN SKIES: U.S. Airlines for Open Skies Coalition released a new fact sheet on the economic, consumer and job benefits of the agreements in the United States. The group said that, among other things, Open Skies agreements support more than 16 million jobs. Partnership for Open & Fair Skies Spokeswoman Jill Zuckman responded by saying the fact sheet was part of a "misinformation campaign to try to trick people about the number of American jobs at stake" while the United Arab Emirates and Qatar were "cheating on their trade agreements with the United States."

A ROCK'S TALE: The Bureau of Land Management published an Interior Solicitor's opinion that overrides policy that prevented the agency from selling minerals materials such as gravel, rock and sand from public lands for federal highway projects. (h/t to Morning Energy)

SHIFTING GEARS: Melissa Froelich was named chief counsel of the House Energy and Commerce Committee's digital commerce and consumer protection subpanel. Froelich most recently served as counsel for the subpanel and was previously counsel for the subpanel on commerce, manufacturing and trade.

THE AUTOBAHN:

- "U.S. board to vote on likely cause of Tesla 'Autopilot' crash." Reuters.

- "Can GE's former chief executive turn Uber around?" The Washington Post.

- "Businesses keep on truckin' through solar eclipse." The Wall Street Journal.

- "Insider Q&A:General Motors learning the rental business." The Associated Press.

- "Trump administration: Rail funds not at risk for 'sanctuary' communities." Miami Herald.

- "US Navy collisions stoke cyber threat concerns." McClatchy DC.

- "Maryland to get $900-million federal full funding agreement for Purple Line." The Washington Post.

- "Feds say brake problems preceded derailment in Pennsylvania." The Associated Press.

THE COUNTDOWN: DOT appropriations run out in 39 days. The FAA reauthorization expires in 39 days. Highway and transit policy is up for renewal in 1,135 days.

Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

Hurricane Maria May Be U.S. Preview of Climate-Fueled Migration

Posted September 27, 2017, 01:28 P.M. ET

By Christopher Flavelle

Hurricane Maria's devastation of Puerto Rico may offer a preview for Americans of one of the most jarring potential consequences of global warming: the movement of large numbers of people pushed out of their homes by the effects of climate change.

The storm, which destroyed houses, washed away roads and cut off power to the commonwealth's 3.4 million residents, risks accelerating an exodus that's already under way as people flee economic stagnation and rising taxes brought on by a fiscal and debt crisis.

Puerto Rico Governor Ricardo Rossello warned Sept. 26 that without "unprecedented relief" from the U.S. government, "thousands if not millions" of residents could leave the island for the mainland. That would strain housing and job markets in the cities that received those people, as well as local government services.

In Puerto Rico, a further drop in population would make it harder to reverse its economic decline. The commonwealth declared bankruptcy in May and has stopped making payments on much of its more than $70 billion in debt. Fewer residents would mean less economic activity, further reducing tax revenue and leaving officials even less able to repay Puerto Rico's loans.

Scientists say higher water and air temperatures, as well as rising sea levels, increase the intensity and destructive power of hurricanes, a trend that will continue as the concentration of greenhouse gases in the atmosphere increases.

Researchers at the International Monetary Fund, in a report released Sept. 27, looked at the links between extreme weather and emigration in more than 100 countries over three decades. They found that "a rise in temperature and greater incidence of weather-related disasters increase out-migration," according to Petia Topalova, the IMF researcher and lead author of the report.

It describes migration as an "adaptation strategy for households hurt by weather shocks" and predicts that "substantial migration flows, potentially spilling across country borders, could arise if climate change causes a significant rise in sea levels."

In some parts of the world, that's already happening. In Africa, climate change forced an estimated 1 million people to leave their homes in 2015; in the Pacific, the World Bank has urged Australia and New Zealand to open their doors to residents forced off small island nations such as Tuvalu and Kiribati. Even in Syria, internal migration sparked by a historic drought contributed to the civil war, which has added to the wave of people trying to enter Europe in recent years.

Whole U.S. Open to Puerto Ricans

Maria, which struck Puerto Rico Sept. 20, could expose the U.S. to a similar dynamic. The scale of destruction on the island, combined with its large population and Puerto Ricans' legal right to move anywhere in the U.S., could prompt migration on a larger scale than other natural disasters.

That raises questions about the country's ability to handle such a movement of people. The housing market in those cities may not be able to accommodate that kind of influx, according to Jesse Keenan, an expert on climate adaptation at Harvard University.

"Let's say just 350,000 leave," Keenan said. Of those, he added, "let's say just half end up in cities. It's a major housing crisis. We don't have that much slack in housing inventory."

Keenan used the example of New York, which has the largest concentration of Puerto Ricans outside of the island. The city's traditionally Puerto Rican neighborhoods, where new arrivals might settle -- East Harlem, Bushwick, parts of the Bronx -- already have low vacancy rates and high rental costs, Keenan said.

"The city of New York right now needs to set up a plan to house these people," he said. If they're forced to stay with friends or relatives, "you're talking about housing being burdened by having too many people legally in the unit," Keenan said, leading to fire risks, domestic strife and other problems.

Large numbers of newcomers also would place "a tremendous burden on social service delivery, at least for a couple of years," Keenan said.

Big Employment Challenges

Topalova, the IMF researcher, said that people who leave Puerto Rico because of Maria may have a harder time finding their feet in their new homes.

"Previous IMF work suggests that people who were forced to depart their home country due to various events outside their control may be different, in terms of demographics and skills, than economic migrants," she said. "They may face greater challenges integrating in the job market relative to economic migrants who -- by definition -- chose their destination to maximize employment outcomes."

With enough planning and foresight, the U.S. "will be able to absorb and put to good work a wave of climate refugees," said Giovanni Peri, an economist at the University of California, Davis, who studies climate migration.

Natasha Lycia Ora Bannan, an associate counsel at LatinoJustice, an advocacy group in New York, got a call Sept. 26 from a friend on the island, asking if she could help him find a job in the city. She described him as "somebody I never imagined asking that."

For those who feel they need to leave the island, "this promise of economic opportunity elsewhere often does not lead to a job, or the job that they thought they would encounter," she said. "I call it the forced migration."

Climate Shocks May Cost U.S. $1 Billion a Day as Planet Heats Up

Posted September 27, 2017, 12:17 P.M. ET

By Joe Ryan

Stronger hurricanes, hotter heat waves, more frequent wildfires and more severe public-health issues are all adding to the costs of climate change, which will reach almost $1 billion a day in the U.S. within a decade, according to a report released Sept. 27.

Total costs to address the impact of rising temperatures will swell 50 percent by 2027, to $360 billion annually, according to the study from the Universal Ecological Fund. That equates to about 55 percent of expected economic growth in the U.S.

The report comes as the U.S. continues to reel from one of the costliest hurricane seasons in history. Hurricanes Harvey, Irma and Maria have inflicted an estimated $173 billion in damage in Texas, Florida, Puerto Rico, and the U.S. Virgin Islands. On the West Coast, record dry conditions and heat have triggered wildfires in nine states. Unless the U.S. cuts fossil fuel use, the economic toll from such events will continue to rise, the study concludes.

"The increasing damage from climate-change related storms, wild fires, human health, agriculture loss and the like are taxing the potential of economic growth," said James McCarthy, a Harvard University professor whose co-authors included Robert Watson, former chairman of the Intergovernmental Panel on Climate Change. The researchers weren't paid for their work.

The study's conclusion that fossil fuels exacerbate global warming and create a drag on economic growth runs counter to the view of the White House.

President Donald Trump, who has called climate change a hoax, has put oil, natural gas and coal production at the center of his economic agenda. Energy Secretary Rick Perry told a meeting of the National Petroleum Council Sept. 25 that fossil fuels are even saving lives in developing nations by increasing access to energy.

The economic toll of climate change is not limited to storms. Droughts in states including California, Texas and Oregon have led to $56 billion in crop losses since 2012, according to the study, which used data from the National Oceanic and Atmospheric Administration, the Centers for Disease Control and Prevention, and other federal agencies. If global warming goes unchecked, corn and soybean production may fall as much as 30 percent in the next three decades, costing farmers as much as $25 billion annually, according to the study.

For years, policy makers argued it was impossible to grow the economy without increasing fossil fuel use. Renewable energy has become more common, challenging that notion.

"That's no longer true," McCarthy said.

World's First Green Exchange Lists $74 Billion in Its First Year

Posted September 27, 2017, 9:13 A.M. ET

By Anna Hirtenstein

The Luxembourg Green Exchange, the world's first bourse for securities related to climate change, listed 63 billion euros ($74 billion) of bonds after one year.

"This far outstripped what we expected," Jane Wilkinson, head of sustainable finance at the Luxembourg Stock Exchange, said in a phone interview. "It clearly outstrips the growth we've seen in Luxembourg on the regular market, which was stable."

The Luxembourg Green Exchange, also known as the LGX, was set up as a place where investors could be certain that what they were buying was really a green bond. The industry is unregulated to date, although issuers can voluntarily follow frameworks such as the Green Bond Principles or the Climate Bond Initiative. The LGX obliges its issuers to provide full documentation, both before and after issuance.

The 63 billion euros makes up about 1 percent of the Luxembourg Stock Exchange, in terms of value of listed assets, according to Wilkinson. The global green bond market reached $95 billion last year. After a record-breaking 2017 first half, Bloomberg New Energy Finance raised its 2017 forecast for issuance to $130 billion from $123 billion. Wilkinson said the figure could be as much as $140 billion.

The LGX receives as many as two to three questions and requests daily from parties such as treasury departments and law firms that are interested in issuing green bonds, according to Wilkinson.

"There's definitely an increased interest by potential issuers," Wilkinson said. "New players that are waking up and thinking this could be an interesting market for us and starting to do their homework."

There is rising interest in China, U.S. municipalities and Latin American financial institutions, she said. Corporate issuers are also getting more involved.

"It's still a bit of a nascent market, if you're a big company I feel like they should lead the way," Wilkinson said. "I understand that they don't need to list because they have enough interest, but that kind of issuer can use their influence."

Some large companies in the clean energy industry haven't labeled their bonds as green, even if they could, such as Tesla Inc.'s recent $1.8 billion offering. This may be because of the additional reporting that's generally expected from investors to prove that the funds raised are only being used for environmentally-focused projects, Wilkinson said.

Now One of the World's Energy Powerhouses Has a Coal Squeeze

Posted September 27, 2017, 10:14 A.M. ET

By Perry Williams and Ben Sharples

Australia's energy crisis keeps getting stranger.

The world's second-biggest seller of liquefied natural gas is already threatening producers with export curbs as it struggles to find enough supply for its own use. Now the country that ships more thermal coal overseas than almost any other is scrambling to replenish stockpiles at some power plants after they dwindled following a surge in demand and constrained supply.

It's the latest twist in the saga of how a global energy powerhouse is struggling to sustain reliable and affordable electricity for its own population. Power price spikes and gas shortages have already frustrated businesses and homes across the nation and put pressure on the government and generators to prioritize domestic customers over sometimes more lucrative export markets.

Coal inventories at Australia's three largest electricity providers—AGL Energy Ltd., Origin Energy Ltd. and CLP Holdings Ltd.'s EnergyAustralia—have shrunk over winter as they use more of the fuel to compensate for natural gas shortages. The closure of the Hazelwood coal-fired power plant in Victoria state also put further pressure on the nation's remaining generators to produce more power, eating through their stockpiles at a faster pace.

Against this backdrop, the power producers have struggled to get sufficient supplies as they compete with overseas buyers for lower-quality coal that was once considered too poor to export. Miners in Australia can command higher prices for coal known as high ash in China, South Korea and India.

"The high ash market has developed in North Asia over a number of years and that has caused complications for some power stations," said Robin Griffin, a research director at Wood Mackenzie Ltd. in Brisbane. "It means that miners can actually sell a much lower quality product into the export market."

Griffin estimates miners can probably sell coal to international customers at double the price sold to domestic utilities. Australia exported 116.1 million metric tons of thermal coal during the first seven months this year, compared with 114.4 million in the same period last year, according to government data.

"The local power producers have got a set delivery amount and they may be asking for more coal," he said. "It's going to be very difficult to convince miners to sell coal at a lower price to domestic utilities, it's just a no-brainer."

Strong Chinese imports and the price gap Australian producers can achieve by exporting coal rather than selling to local plants was a factor contributing to low stockpiles, according to Gavin Wendt, a senior resource analyst at MineLife Pty.

There's growing concern power supply disruptions may trigger blackouts during the peak summer demand period. Three of the biggest LNG producers on Wednesday guaranteed to supply more of the fuel to alleviate domestic shortages and lower spiraling prices after Prime Minister Malcolm Turnbull threatened to impose export curbs from their projects.

Australia has been scrambling to find additional sources of electricity since the national market operator said in March that gas-fired power shortfalls may be possible next year. The warning

spurred Turnbull to propose rules to restrict gas exports in the eastern state of Queensland amid concern outbound shipments had contributed to supplies being crimped and a tripling of Australia's wholesale gas price in the past two years.

'Historic Lows'

Coal accounts for 76 percent of Australia's power generation. Stockpiles at AGL's Liddell and Bayswater plants in New South Wales state fell to "historic lows" over winter as consumption rose due to limited natural gas supplies and the loss of power from the Engie SA-owned Hazelwood, an AGL spokesperson said in an emailed statement. International coal demand has also placed pressure on the rail lines that thread through the Hunter Valley region of the state, adding to constraints.

EnergyAustralia and Origin have struggled to procure sufficient quantities of the fossil fuel. The Mt. Piper power station, which supplies 15 percent of electricity demand in New South Wales, only has stockpiles to operate at "very low production levels" for a few months due to a legal dispute impacting mine supplies, EnergyAustralia said in an emailed statement.

Origin said its Eraring power station in the state "ran very hard" to meet demand over winter that created an issue with coal stockpiles, which now "needs to be managed." It has since sourced additional supply to replenish stocks and expects record coal to be delivered by rail to Eraring in September, according to Origin's general manager for energy supply and operations, Greg Jarvis.

The New South Wales government is working with the Australian Energy Market Operator to ensure there is sufficient fuel supplies this summer while also looking at how it may reduce demand on the power grid during heatwaves.

"There are many parallels with what is happening in the gas space and what's happening in the coal space right now and I think it's taken the market by surprise," MineLife's Wendt said in an interview Sept. 27.

S.C. Regulators Asked to Review Rate Hikes for Canceled Project

Posted September 27, 2017, 9:43 A.M. ET

By Jim Polson

South Carolina utility regulators are weighing a request to suspend previously approved rate increases for Scana Corp. related to its canceled V.C. Summer nuclear plant expansion.

The request by staff of the Public Service Commission of South Carolina cites a state attorney general's opinion that rate hikes for unfinished or abandoned power plant projects were approved under a "constitutionally suspect" state law. Customers may be due credits or refunds should the law be amended or deemed unconstitutional, according to the filing Tuesday. Scana will "vigorously contest the request," the Cayce, South Carolina-based utility owner said Sept. 27 in a separate filing.

Scana and its partner, state-owned utility Santee Cooper, halted construction on two new reactors at the Summer plant after costs ballooned to over $20 billion, a decision that leaves Southern Co. as the only utility building a nuclear plant in the U.S. Scana had asked utility regulators for permission

to recover $4.9 billion in expenses for the project before withdrawing the request in August to give officials more time for review.

"This would be a severe, a huge financial blow to the utility," Kit Konolige, a New York-based utility analyst for Bloomberg Intelligence said by phone Wednesday. "My guess would be, the commission won't want to do that."

Scana shares fell 2.1 percent to $54.41 at 9:43 a.m. in New York.

The utility's South Carolina Electric & Gas utility is collecting about $445 million a year for the Summer project, Konolige said. Suspending rate hikes would save the average residential customer about $27.03 a month, according to the staff filing.

The commission staff also cited allegations that Scana failed to disclose information that would have appeared to provide a basis for challenging rate increases. The utility "should not be allowed to continue to benefit from nondisclosure," it said.

Amazon.Com for Fuel Is How China Oil Wolves Battle State Tigers

Posted September 27, 2017, 8:18 A.M. ET

By Alfred Cang and Serene Cheong

China's oil-industry "wolves" want to help fuel buyers get rid of paperwork, and instead provide them with the Amazon.com experience.

Dongming Petrochemical Group, the biggest of China's private refiners in the eastern province of Shandong, has set up a website where traders, factories and pump stations within a 300 kilometer radius can ask for fuel to be delivered within 12 hours. They can also choose to place orders via an app or even through instant messaging service WeChat. There's a digital wallet payment option too. Chambroad Petrochemicals Co., another independent processor in the region, also has a similar service.

The strategy is part of their plan to take on more powerful state-owned refining giants such as Sinopec amid increased competition in the domestic market, while fuel demand is threatened by everything from electric vehicles to shared bikes. Moreover, while the state behemoths have government approval to export their oil products, the private companies, known as teapots, don't—meaning they can't access overseas markets for their merchandise.

Dongming says it's having to sell fuel to its bigger state rivals at a discount of 1,200-1,500 yuan ($180-$226) per metric ton to market prices. Other private refiners outside Shandong province, such as Rongsheng Petrochemical Co., are also seeking to make their mark and are posing a threat to the independent processors within the region. Dongming will be part of a new $5 billion group that's banding together to better take on rivals and have support from the regional government.

"Independent refiners in Shandong think of themselves as wolves, alongside tigers that are the national oil companies," Zhang Liucheng, vice president of Dongming Petrochemical, said in an interview in Singapore during the S&P Global Platts APPEC conference. "But with the emergence of other bigger independents that will soon bring new capacity online, they will become the wolves,

while the tigers remain, and we will be the sheep in their presence."

China's New Silk Road Seen as Spur for Electric Cars in Europe

Posted September 27, 2017, 02:16 P.M. ET

By Jonathan Tirone

China's new silk road stretching into the heart of Europe may be what ultimately delivers more climate-friendly technologies like batteries and electric cars.

The trade route known in Beijing as the Belt and Road Initiative is spurring $1 trillion of investment on rail, highways and ports linking Europe and Asia. China's renewable-energy companies already are using the initiative to open new markets in southern Asia, the Middle East and Africa, according to Bloomberg New Energy Finance.

Austrian executives gathered outside Vienna to discuss the future of energy are banking on similar market-making effects in Europe. They anticipate the scale of manufacturing from China and quicker market access through the Belt and Road links to drive down the costs of electric cars and energy storage technologies in Europe.

"It's not a question of if but when, because it's happening," Verbund AG Chief Executive Officer Wolfgang Anzengruber said Sept. 27 at a green energy conference in the small Alpine town of Fuschl, Austria. "If China says it, it is so."

China's market-making role in Europe extends beyond developing EVs and is striking at the heart of traditional European businesses, according to Wolfgang Hesoun, chief executive officer of Siemens AG's Austrian unit, which employs 2,500 workers making trains and trolleys.

"The best ideas come from outside," Ramon Vullings told the energy executives gathered in Austria. The Dutch consultant said he traveled China's ancient silk road for 1 1/2 years in a bid to bring back new ideas to help Europe's companies deal with transition to renewables.

European companies will only be able to challenge Chinese companies by developing "locally-oriented" supply chains that cultivate customer loyalty, Hesoun said at the event a day after Siemens merged its rail unit with Alstom SA.

Similarly, just how quickly European companies can develop things like the lithium-ion batteries—used in electric cars and grid-balancing systems— depends on how much demand there is for those things consumers in China at the other end of the Belt and Road.

Automakers who employ 300,000 in Austria—and supply German giants Volkswagen AG and Daimler AG—are looking for ways to use electric cars to tap into China's market of 1.4 billion people.

"We need to start developing these technologies because if we don't, others will," World Energy Institute Secretary General Christoph Frei said, adding that China's huge market is leading the green energy shift.

Brazil Gets $3.8 Billion Boost to Budget from Power Auction

Posted September 27, 2017, 02:28 P.M. ET

By Vanessa Dezem and Rachel Gamarski

Brazil raked in 12.1 billion reais ($3.8 billion) in revenue from a power plant auction that was key for efforts to hit a closely-watched budget goal.

The government sold concessions to operate four hydroelectric plants previously run by state-owned utility Cemig in an auction Sept. 27 that lasted less than an hour and beat policy makers' expectations of 11 billion reais in revenue. A separate auction for 287 oil exploration blocks is also underway, with that sale seen raising around 500 million reais.

The power auction results boost chances that President Michel Temer's administration will deliver its 2017 fiscal goal of a 159 billion reais deficit. Even after announcing plans to target a wider budget gap than previously forecast, policy makers are facing an up-hill battle as Latin America's largest economy recovers slowly from recession.

"In the short-term, the income will help deliver the target," Leonardo Costa, an economist at Rosenberg Associados, said in an interview. "But the pressure continues."

Since assuming the presidency last year, Temer has placed fiscal responsibility at the center of his strategy to woo back investors and spark growth. His government has cut spending, announced plans to postpone civil servant pay raises and said it will sell other assets including a lottery service run by state-controlled bank Caixa Economica.

Still, a series of corruption allegations against Temer have hindered the agenda. Lawmakers are now focused on voting on the second round of charges against the president, which will likely further delay deliberations on his flagship pension reform.

After the results were announced, Temer said on his Twitter account confidence in Brazil has been recovered. The government will use additional funds from the sale to help compensate any future disappointment in tax income, according to an official with direct knowledge of the matter.

The government expected to raise at least 11.05 billion reais with auction, while analysts from Goldman Sachs had an estimated range of 14.45 billion reais to 17.99 billion reais

China's State Power Investment Corp., known as SPIC, won the rights to operate the biggest of the hydroelectric dams being auctioned, Sao Simao. The bid was 7.18 billion reais, 6.51 percent above the set minimum

Engie SA won the contracts for Jaguara and Miranda plants, paying 2.171 billion reais and 1.36 billion reais, respectively. The company paid the highest premiums for the assets in the auction

Enel SpA, Italy's biggest utility, had the winning bid on the Volta Grande dam for 1.419 billion reais

The plants have a combined 2,922 megawatts of installed capacity and are located in the states of Minas Gerais, Goias, and Sao Paulo. They were previously operated by Cia. Energetica de Minas

Gerais, a state-run utility known as Cemig

—With assistance from Ana Carolina Siedschlag.

U.K. Opposition Steps Up Push to Nationalize Energy Companies

Posted September 27, 2017, 01:14 P.M. ET

By Jessica Shankleman

Jeremy Corbyn's Labour Party is talking more about nationalizing Britain's energy companies, suggesting it could "take control" of major utilities like SSE Plc and Centrica Plc if the opposition wins the next election.

Key figures at the party's conference in Brighton the week of Sept. 25 hinted that Labour is poised to go beyond its current pledges of renationalizing local grid networks, a move they say would bring down costs for consumers and expand clean energy supplies.

To a standing ovation, Corbyn pledged "to take utilities back into public ownership" during his speech to the party conference Sept. 27. Shadow Chancellor John McDonnell on Sept. 26 vowed to bring energy companies under the "ownership and control" of "the people who use and work in them."

Their promises are broader than the manifesto pledge published in May to only change the licensing arrangements for regional grids in order to take them into public ownership and to make new publicly-owned grid companies that would compete with the Big Six utilities.

Rebecca Long-Bailey, the party's lawmaker who speaks on business, energy, and industrial strategy, explained some of these details at a energy-policy meeting on the sidelines of the conference. The party leadership may be banking on many members confusing the finer points of the manifesto with more popular pledges made on stage.

"We've said we want to set up regionally owned energy companies to rival the 'Big Six' energy companies and create competition in the market. But that's not the only thing we want them to do," Long-Bailey said. "In time we want them to be able to harness the ability to generate electricity on a local level alongside other business in the area."

CBI business group, which represents British industry, bristled at the idea.

"Forced nationalization of large parts of British industry will send investors running for the hills and puts misplaced nostalgia ahead of progressive vision," said Carolyn Fairbairn, the CBI's director-general.

The Conservative Party said Labour's entire nationalization plan of rail, mail, water, and energy networks listed in the manifesto could add at least 134 billion pounds ($180 billion) to the public debt, citing figures from the non-partisan Institute for Fiscal Studies.

Chi Onwurah, a Labour lawmaker speaking on industrial strategy, said nationalizing energy companies wasn't "a backward step."

"What isn't working is what we have now," Onwurah said at an event at the conference on Monday. "Where we have private sector generation and distribution and a market which is supposed to be competitive but isn't."

Today's Playbook Power Briefing presented by CTIA

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

TWO BITES OF NEWS ...

-- SENS. LINDSEY GRAHAM (R-S.C.) and **BILL CASSIDY (R-LA.)** are meeting with **SENATE MAJORITY LEADER MITCH MCCONNELL (R-KY.)** this afternoon about their health care proposal.

-- THE WHITE HOUSE seems pretty confident that they will be able to release a tax-reform framework from the Big Six at the end of the month. But we're sensing some skepticism from House and Senate sources that they'll be able to meet that deadline.

STEVEN MNUCHIN spoke at CNBC's "Delivering Alpha" conference -- "[M]nuchin insisted that a tax overhaul would happen this year. 'We're going to get this done by the end of the year,' Mnuchin said, adding that the administration is 'super focused' on the goal following the three-month debt limit and government funding extension passed last week. ...

"Mnuchin said that President Donald Trump's goal of chopping the corporate tax rate to 15 percent could be difficult to achieve. 'I don't know if we'll be able to achieve that given the budget issues. But we're going to get this down to a very competitive level,' Mnuchin said." http://cnb.cx/2wYcUEY

-- OTHER HIGHLIGHTS: Mnuchin said he thought it was "a mistake" to break up the CEO councils. ... Repealing and replacing Obamacare is not the focus at the moment, he said.

Good Tuesday afternoon. STORY OF THE DAY -- MCCONNELL SPEAKS to NYT's **CARL HULSE -- "McConnell Says Democrats' Glee on Debt Limit Deal Was Premature":** "'Let's put it this way,' Mr. McConnell, the Kentucky Republican and majority leader, said Monday in an interview for The New York Times podcast 'The New Washington.' 'The deal is not quite as good as my counterpart thought it was.' The reason? Mr. McConnell said that he insisted the newly passed legislation preserve

Treasury's ability to apply 'extraordinary measures' and shift money within government accounts to pay off debt and extend federal borrowing power. That will delay the need for another increase in the debt limit well beyond the December deadline that Democrats have been trumpeting as their big moment of leverage. And Mr. McConnell said he did so over the objections of Senator Chuck Schumer of New York, the Democratic leader and aforementioned counterpart. ...

"Clearly irked by the perception that he got rolled by Democrats when President Trump accepted their proposal for a three-month extension of the debt limit and government funding, Mr. McConnell, an avid college football fan, said Democrats 'spiked the ball in the end zone a little too early.' Instead, he said, he used his majority leader's position to make something of an end run. 'One of the advantages of being the majority leader is you control the paper,' Mr. McConnell said, referring to legislation. 'I wrote it in such a way that it does not prevent what is frequently done, which is the use of extraordinary measures. The minority leader and his team were trying to get us not to write it that way, but I did write it that way and that is the way it passed.'" http://nyti.ms/2xu0KGT

-- LET'S UNPACK THIS A BIT: McConnell is right. He, along with Speaker Paul Ryan and Treasury Secretary Steven Mnuchin, tried to convince Trump that he didn't want another debt ceiling vote this year. What ended up happening didn't really anger Ryan and McConnell, which is why they didn't put up a fight. But now the debt limit will likely be pushed to 2018 -- due to the extraordinary measures we've explained here a few times -- and that could stunt Trump's legislative agenda.

MCCAIN TO CONTINUE TREATMENT -- Statement from his office: "Senator McCain received an MRI at the National Institutes of Health (NIH) in Bethesda, Maryland yesterday. Following the advice of his doctors, Senator McCain will continue to receive targeted radiation and chemotherapy treatments at the NIH will maintaining a regular work schedule in the United States Senate."

THE FOUR SEASONS BREAKFAST CROWD -- JACK QUINN with George Crowley ... Bill Kennard, former U.S. ambassador to the EU, with Robert Mandell, former U.S. ambassador to Luxembourg ... Don Baer ... former U.S. ambassador to Belgium Howard Gutman with Andrew Smith of McGuire Woods ... former U.S. ambassador to Slovakia Tod Sedgwick

HOPE HICKS IN CHARGE, PERMANENTLY -- Bloomberg's **JEN JACOBS** and **JUSTIN SINK:** "Hicks, who has been serving as interim communications director, will now lead the communications team on a permanent basis, two White House officials said. She's viewed by staff as a strong leader because she is one of the president's most trusted aides and therefore secure in her standing."

STOP US IF YOU'VE HEARD THIS BEFORE -- BLOOMBERG -- SELLING TAX REFORM: "President Donald Trump plans an aggressive travel schedule, taking him to as many as 13 states over the next seven weeks, to sell the idea of a tax overhaul as

the administration tries to avoid repeating the communications failures of its attempt to repeal Obamacare. ... The strategy was revealed by top advisers to about 40 allies during a closed-door meeting last week. It calls for the president to visit states he won where a Democratic senator is up for re-election next year, including Florida, Indiana, Michigan, Montana, Ohio and Pennsylvania, said three people who attended." https://bloom.bg/2h0Gge0

****** **A message from CTIA and America's wireless industry:** The global race to deploy 5G wireless is on-and America needs to win. Government action on spectrum and infrastructure policy will allow U.S. wireless companies to invest $275 billion, create more than 3 million jobs, and add $500 billion to the economy, according to Accenture. Learn more at CTIA.org. ******

ON THE PRESIDENT'S MIND -- @realDonaldTrump at 8:56 a.m.: "Fascinating to watch people writing books and major articles about me and yet they know nothing about me & have zero access. #FAKE NEWS!"

THE LATEST ON THE HURRICANE -- 12:06 p.m. -- MIAMI (AP): "Utility says much of Florida's east coast could have power back by Sunday; other areas could take 10 days or more."

TODAY'S MUST READ -- WAPO'S PAUL KANE speaks to **LIN-MANUEL MIRANDA -- "Lin-Manuel Miranda comes to Washington - with lessons from the era of Hamilton"** http://wapo.st/2xuEVa5

--HAPPENING TONIGHT -- MIRANDA is getting the 2017 Freedom Award from the U.S. Capitol Historical Society at 6 p.m. in Statuary Hall.

TRUMP INC. -- "Trump Beach Resort Wants More Foreign Guest Workers," by BuzzFeed's Jessica Garrison, Jeremy Singer-Vine and Ken Bensinger: "The Trump International Beach Resort, in Sunny Isles Beach, Florida, has asked the government for permission to hire more temporary foreign workers to labor as housekeepers, according to records posted by the Department of Labor on Monday. The resort, which is near Miami, licenses President Donald Trump's name but is owned by the International Resorts Management Group. It asked for permission to bring in 10 housekeepers, claiming no Americans wanted the jobs. The positions pay $10.64 an hour." http://bzfd.it/2ffHke1

A BANNON UPDATE ...

-- THE BANNON/TRUMP BACKCHANNEL: WSJ's Julie Steinberg and Steven Russolillo, with a Hong Kong dateline: "Mr. Bannon said he talks to Mr. Trump every two to three days, and that the pair last spoke the previous night for an hour, according to two people who attended the closed-door meeting with the former presidential adviser. The gathering, at a Grand Hyatt hotel restaurant, included a group of about 20 money managers. ... Mr. Bannon at the Tuesday lunch described himself as a 'schmendrick'

engineer -- invoking the Yiddish word for 'foolish person' -- while Mr. Trump was the architect of the campaign, the attendee said. Mr. Bannon said while he had influence before in the White House, he now has 'power' at Breitbart." http://on.wsj.com/2jlNVYN

-- BANNON'S MEDIA FOOTPRINT: "How Steve Bannon Is Preparing For War," by BuzzFeed's Tarini Parti and Adrian Carrasquillo: "What sources close to him say they are most confident about are Bannon's plans to increase his media footprint, with his team discussing how to ramp up the broadcasting of Bannon's economic nationalist ideas through television and radio. A confidante who recently spoke to Bannon said he is working on a book and his three hours of airtime on SiriusXM will now double to six hours with the addition of a nightly show.

"A separate source close to Bannon said Bannon has talked with Christopher Ruddy, a Trump friend and the CEO of Newsmax Media, about bringing him on to work on a TV effort. The Sinclair Broadcast Group, a conservative-leaning television company with a growing presence in local markets around the country, also reached out to Bannon about possibly producing content for their networks." http://bzfd.it/2h1oIP6

AIR FORCE ONE WATCH -- "Trump is visit U.S. Virgin Islands in wake of Irma," by The Virgin Islands Consortium's Ernice Gilbert: "President Donald Trump will visit the U.S. Virgin Islands 'within the next six or seven days,' Governor Kenneth Mapp said during a press conference at Government House late Monday. Mr. Mapp said he had a conversation with the president today, and Mr. Trump expressed his full support for the territory in providing disaster relief, following the calamitous state Hurricane Irma left St. Thomas and St. John in.

"Mr. Trump wants 'to see firsthand the damages of the territory, and to get on-ground reports of the federal operation, to ensure that the people of the Virgin Islands are receiving recovery as fast as humanly possible, and that the assets of the federal government were being appropriately deployed,' the governor said. Mr. Trump said he loves the U.S. Virgin Islands, Mr. Mapp added." http://bit.ly/2xuwuLR

OOPS -- "Ted Cruz blames staffer for 'liking' porn tweet," by Louis Nelson and Burgess Everett http://politi.co/2y2sMXb

HMM... -- "Billionaire Tom Steyer's PAC donates $1 million to help Virginia immigrant groups mobilize for November election," by WaPo's Antonio Olivo: "California billionaire Tom Steyer is giving $1 million to immigrant advocates in Virginia to mobilize voters in November's state elections, part of an effort to fuel a Democratic resurgence in the Trump era by focusing on a swing state that has embodied the nation's polarized political climate. The contribution by Steyer's super PAC, NextGen America, aims to tap into voter resentment over President Trump's immigration policies, in particular the travel ban against immigrants from six Muslim-majority countries and plans to phase out an Obama administration program that protected from deportation 800,000 undocumented immigrants who arrived here illegally as children." http://wapo.st/2h1MQ44

JOB OF THE DAY: Fraud analyst for Equifax. "The Fraud Monitoring Analyst is responsible for analysis and controls maintaining review of systems and processes supporting identity and fraud. These analysts are responsible for monitoring; analyzing and investigating interactions to identify fraudulent access or attempted access to Equifax consumer facing systems in near real-time ... This function is a critical line of defense for Equifax and integral to business goals." ***District Daybook has the listing*** http://bit.ly/2jkNKgI

-- "Ousted NSC Official Takes Job at Oracle," by Just Security's Kate Brannen: "Ezra Cohen-Watnick, who was fired from the National Security Council in August, has landed a new job at the Washington, D.C. office of Oracle, the Silicon Valley software giant, according to two sources with knowledge of his move. His new job title is not confirmed and the company declined a request for comment." http://bit.ly/2w5tZiR

TOP-ED - "You Won't Like Mexico When It's Angry: President Trump's insults are pushing the Mexican political system into dangerous territory," by Jorge Guajardo, former Mexican ambassador to China, in POLITICO Magazine: "[W]hat would happen if Mexico were to break with the U.S. on NAFTA? ... The first item off the table would likely be cooperation on issues of migration. ... Next up would be cooperation on the drug war. ... The fight against terrorism would suffer. Since 9/11, Mexico has arguably been the biggest obstacle against terrorists trying to reach U.S. soil. ... The list goes on: health, environment, transportation, water, disease control. No two countries in the world cooperate in as many areas as Mexico and the United States." http://politi.co/2xuSfLP

TODAY'S BEYOND THE BELTWAY -- Blagojevich gives two interviews -- Florida starts Irma recovery http://politi.co/2y2cNs1

FIRST-PERSON -- MARC CAPUTO in POLITICO Magazine, "This Is What It's Like to Ride Out a Hurricane: Why do people stay behind? This is why I didn't evacuate": "Over the years, these storms taught me to respect nature and fear man. I covered them as a reporter; I endured them as a Florida resident. They showed me how wind can wrap steel around a tree and how boats get flung on dry land while cars submerge. ... How desperate people without power, food or gas can be far more dangerous than any storm. And, perhaps most importantly, how something will go wrong if it can-but you're never sure what that something is.

"Hurricane Irma would teach me that lesson, again, like no other. People who have never lived through a hurricane often have a hard time understanding why anyone would stay in the path of one. Are you stupid? Get out of there! But everyone has their reasons, or rationalizations. And when you've survived a few of these things, you figure: What's one more?" http://politi.co/2y2gEoP

MEDIAWATCH -- JAMES ASTILL, Washington correspondent for The Economist, has started writing the magazine's Lexington column about American politics. He previously was political editor and Bagehot columnist. **David Rennie** will be moving to Asia for The

Economist next year.

SPOTTED: Former FBI Director James Comey dining at Capital Grille last night ... former Sen. Gordon Smith (R-Ore.), Dennis Wharton, Ted Johnson, and Kim Hart at lunch at Greenhouse at the Jefferson Hotel ... At Bombay Club yesterday: Matt Viser, Rick Klein, James Hohmann, AB Stoddard, Jen Epstein, Jonathan Last, Jen Rubin, Doyle McManus and David Catanese for a media lunch sponsored by the New Center (http://bit.ly/2eTC7YM) with speakers Bill Kristol and Bill Galston

TRANSITIONS -- OBAMA ALUMNI -- ERIC FANNING, former Secretary of the Army, has joined the Board of Advisors of the Truman Center for National Policy.

--"RNC Announces First Wave Of State Director Hires" for 17 states: http://bit.ly/2f2VYZj

WELCOME TO THE WORLD - OBAMA ALUMNI -- Michael Pan, special adviser at the Open Society Foundation and former director for strategic planning at the NSC and alum of the U.S. mission to the U.N. under Susan Rice, and **Eva Bonime,** deputy political director at SEIU 32BJ, welcomed Cassie Safir Pan over the weekend, at 6lb. 15oz, 19.5 inches. "Big sister 3-year old Edie came up with the name."

****** **A message from CTIA and America's wireless industry:** Tomorrow's 5G networks will create 3 million jobs, add $500 billion to the economy, and fuel innovation and entrepreneurialism across every sector. If policymakers move quickly to release more spectrum and modernize infrastructure rules, the wireless industry stands ready to invest $275 billion to build these next-gen networks, according to Accenture. This will drive breakthrough advancements in remote health care, connected vehicles, energy, education and beyond-making our lives better and safer. But the race to deploy 5G wireless networks is underway-and we're at a critical moment. The EU, China, Japan, South Korea and others are doing everything they can to win. If policymakers act now, the U.S. can continue our global leadership in wireless. Learn how at CTIA.org. ******

Subject: POLITICO's Morning Energy: EPA to get earful on corn ethanol — Court orders EPA to reinstate methane rule immediately — Trump finding tough balance on coal, nuclear — Mnuchin won't rule out blocking Venezuelan oil imports

By Alex Guillén | 08/01/2017 10:00 AM EDT

With help from Eric Wolff, Doug Palmer, Annie Snider and Esther Whieldon

RFS HEARING WILL BE POPPING LIKE CORN: EPA is throwing its annual Renewable Fuel Standard bash today, an all-day hearing for the agency to get feedback on its proposed rule that will set the amount of biofuel that must be blended into the nation's fuel supply. The agency kept the ethanol mandate at the legal maximum of 15 billion gallons, but it dramatically cut the amount of advanced biofuels, and it will surely get an earful on that.

A-listers of biofuels: EPA will hear from Iowa Gov. Kim Reynolds and Nebraska Gov. Pete Ricketts, Chris Bliley of Growth Energy, Bob Dinneen of the Renewable Fuels Association, Frank Macchiarola of the American Petroleum Institute, and Donnell Rehagen of the National Biodiesel Board. Reynolds, whose state leads the nation in ethanol production, will tell EPA she's glad they're on track for an on-time rule (they're actually a bit behind schedule). But "I urge the EPA to raise the advanced biofuel, biodiesel and cellulosic volumes. The RFS is a bold policy, and Iowans and the industry as a whole have always risen to the challenge," she plans to add.

If you go: L'affaire du RFS will be at the Hyatt Regency Washington, 400 New Jersey Avenue NW. It will start at 9 a.m. and end when everyone who wants to has had their say.

COURT REVIVES EPA METHANE RULE, AGAIN: The full D.C. Circuit Court of Appeals on Monday ordered EPA to resume enforcing its methane rule for new oil and gas wells, a potentially temporary but important loss for EPA Administrator Scott Pruitt's deregulatory agenda. A three judge panel reversed Pruitt's stay, but gave EPA time to appeal. The agency hasn't done so, but industry groups have. The court's order was issued by a 9-2 vote. Judges Janice Rogers Brown, who will retire from the court effective Aug. 31, and Brett Kavanaugh voted against reinstating the rule immediately. More here.

For those keeping track at home: EPA's methane rule has been on, off, on again, off again, and now back on again. Plus, it's likely to be off again within a couple months, once Pruitt's proposed two-year hold is finalized - and then possibly back on following a new judicial review.

TRUMP STRUGGLES TO BOOST BOTH COAL, NUCLEAR: President Donald Trump has promised to revive the nuclear industry and put more coal miners back to work, but he is already finding it difficult to do both at the same time. Dueling announcements on Monday illustrated how difficult it will be for the Trump administration to square its support for nuclear power - whose main attribute is its ability to deliver reliable, carbon-free electricity - with its position that reducing carbon emissions are no longer a priority for the federal government. A

pair of South Carolina utilities said Monday that they would be pulling the plug on two unfinished new nuclear reactors; Santee Cooper, one of the companies, pointed out that "the current political landscape has reduced the urgency for emissions-free base load generation" among the reasons for the decision. That announcement came just a few hours after Trump Cabinet members trumpeted newly announced exports from a Pennsylvania coal mine to Ukraine, a deal the administration said it helped to negotiate. Darius Dixon explains it all.

HAPPY TUESDAY AND WELCOME TO AUGUST. I'm your special guest host Alex Guillén. The NRDC's Joan Matthews was first to correctly name all five former presidents who were the same height as Trump (6 feet, 2 inches): George Washington, Chester A. Arthur, Franklin D. Roosevelt, George H.W. Bush and Bill Clinton. For today: How many presidents were born in August, and how many have died in August? Sadly, my time as guest ME host was even shorter than Anthony Scaramucci's time as White House communications director, so please welcome your guest host for the rest of the week, Annie Snider. Send your tips, energy gossip and comments to asnider@politico.com. Or follow us on Twitter @AnnElizabeth18, @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

MNUCHIN WON'T RULE OUT BLOCKING VENEZUELAN OIL IMPORTS: After taking the dramatic step Monday of slapping sanctions on Venezuelan President Nicolás Maduro, the Trump administration kept open the possibility of also shutting down oil trade with the South American country to punish Maduro's government. The U.S. "will continue to monitor the situation and consider additional sanctions," Treasury Secretary Steven Mnuchin said told reporters at a White House briefing Monday, one day after what U.S. officials called a sham election to give the Venezuelan government sweeping new powers.

The United States imports about 700,000 to 800,000 barrels per day of Venezuelan heavy crude oil to refineries in Texas, Louisiana and Mississippi. It also exports about 30,000 barrels per day of oil to Venezuela for blending with the heavier product. Mnuchin deflected questions on whether the Trump administration could impose an embargo on oil imports from Venezuela or shut down U.S. oil exports to the country. "This president is not going to advertise what he's going to do in the future. So, all options are on the table and we will consider everything," Mnuchin said.

BERNHARDT STARTS AT INTERIOR TODAY: Today is former lobbyist David Bernhardt's first day as Interior Deputy Secretary. Bernhardt had worked at Interior in several roles, including solicitor, during the George W. Bush administration and was a lobbyist for Westlands Water District.

TRUMP PICKS HEALTH COMPANY LAWYER FOR KEY INTERIOR POST: President Donald Trump plans to nominate Ryan Nelson to be the Interior Department's solicitor, its top lawyer and third in command. Nelson since 2009 has been general counsel for Idaho-based Melaleuca, an online "wellness shopping club." Nelson previous was the deputy assistant attorney general for the Environment and Natural Resources Division and a lawyer at the Office of Management and Budget. Melaleuca CEO Frank VanderSloot is a noted GOP donor who at first clashed with Trump on the campaign trail (even garnering a scornful tweet when he initially backed Marco Rubio) before backing Trump after he secured the GOP nomination. Donald

Trump Jr., who has shown influence over and interest in Interior nominees, then visited the company last September.

Trump will also nominate John Henderson to be assistant secretary of the Air Force for installations, environment and energy, the White House said. Henderson previously commanded the Army Corps of Engineers' Omaha district, where he oversaw work related to the Dakota Access pipeline - and recommended its approval under the Obama administration.

API: BORDER TAX, SHMORDER TAX, AS LONG AS WE PROMOTE GROWTH: API CEO Jack Gerard told ME Monday he was pleased Republicans in Congress and the White House had agreed to drop a border adjustment tax from plans to rewrite the tax code. He instead wants tax writers to give oil and gas companies the means to recoup their investments quicker with tools like accelerated depreciation. "We're encouraged they listen to the public and the consumers, leaving behind the border adjustment tax," he said. Gerard believes a pro-growth tax policy would replace the lost income from the proposed BAT. "The best tax policy is a job creation policy. If you want to grow taxes, you want people who are in a position to pay taxes." Gerard was touting a report sponsored by API that showed the oil and gas industry supported millions of jobs and added billions of dollars to the economy.

KOCH BACKS PRO-MORRISEY SUPER PAC IN WEST VIRGINIA: Koch Industries has been a major early contributor to a super PAC supporting West Virginia Attorney General Patrick Morrisey's campaign to challenge Sen. Joe Manchin. The group, 35th PAC, which was formed to boost Morrisey against his key Republican opponent, Rep. Evan Jenkins , reported to the FEC Monday that $10,000 of the $20,500 it raised as of the end of June came from Koch Industries. Koch is a contributor to the Republican Attorneys General Association, where Morrisey is currently chairman, and Morrisey is one of the most frequent challengers of Obama-era environmental regulations. Morrisey's actual campaign was only formed a couple of weeks ago and hasn't filed any FEC reports yet. Jenkins' campaign, meanwhile, has about $1.2 million thanks to his previously existing House campaign chest and more than $680,000 in donations this year.

CONTENTIOUS ASIAN CARP STUDY COMING NEXT WEEK: The Army Corps of Engineers has alerted lawmakers it will release a draft plan for halting the spread of dangerous Asian carp into the Great Lakes on Aug. 7. The study was originally due out Feb. 28, but was put on hold by the Trump administration amid concerns from the barge industry that it could hamper navigation between Lake Michigan and the Mississippi River. Both Republican and Democratic lawmakers have been pushing for the study's swift release, through methods including policy riders inserted in pending appropriations measures.

THE POSTMAN ALWAYS RINGS THRICE: Letters from ME's mailbag.

FERC quorum: The Electric Reliability Coordinating Council would very much like the Senate to approve the nominations of Robert Powelson and Neil Chatterjee to seats on FERC to get the commission back to a quorum. The group says $50 billion in capital is "hamstrung" in projects requiring FERC approval, with another $25 billion starting applications. "Every week's delay compounds the problem as seasonal windows for pipeline analyses close and potential for energy

price spikes increase," wrote ERCC Director Scott Segal.

'Red team' climate science review: The American Association for the Advancement of Science and 15 other science groups have asked for a meeting with EPA Administrator Scott Pruitt to talk over his forthcoming "red team" climate science review program. The existing peer review system is already "a multi-dimensional, competitive "red team/blue team" process whereby scientists and scientific teams are constantly challenging one another's findings for robustness," they write.

Monuments: The Northwest Guides and Anglers Association wants Interior Secretary Ryan Zinke to leave the Cascade-Siskiyou National Monument in Oregon and California intact.

GROUP LAUNCHES ZINKE-TARGETED ADS: The watchdog group Center for Western Priorities is launching a six-figure ad buy today pressuring Zinke against shrinking or revoking any national monuments. The spot will air in Washington starting today, with an online campaign running through the month.

Another watchdog group, the Western Values Project, will launch a website today cataloguing "the revolving door between special interest lobbyists and political appointees at the Department of the Interior." WVP's "Department of Influence" site has found 21 political appointees with backgrounds in oil, gas, coal or another resource extraction industry and three with conservation or recreational backgrounds. A dozen served in the Trump campaign.

INTERIOR SAW 79 NEW EMPLOYMENT DISCRIMINATION COMPLAINTS: The Interior Department on Monday posted its fiscal 2017 third quarter report on employee and job applicant discrimination complaints. In the last quarter, during which Interior Secretary Ryan Zinke was in office, the agency received 79 new complaints, 58 percent of which involved retaliation allegations. A former Interior senior staffer filed a whistleblower retaliation complaint earlier this month. The agency has received 260 discrimination complaints thus far this fiscal year. The numbers are largely in line with the data from the past five fiscal years.

ENVIRO ATTORNEY RUBIN DIES: Noted Washington energy attorney Jim Rubin died Friday just weeks after being diagnosed with cancer, reports Greenwire. Rubin spent almost 15 years at DOJ working on environmental trial issues and on a Clinton-era climate change task force. He spent the last decade at several D.C. law firms, most recently Dorsey & Whitney.

LOS ANGELES OLYMPICS PUT PRESSURE ON CITY POLLUTION: Los Angeles reached a deal with the IOC to host the 2028 Summer Olympics, giving the city about a decade to work on its historically high levels of smog and other pollution the world's athletes will be sucking into their lungs. The American Lung Association says Los Angeles has the worst smog pollution of any U.S. city, and despite significant strides in recent years, the area has a long way to go, ALA's Bonnie Holmes-Gen told ME. "In some parts of LA, we have over 140 bad air days every year," she said. "The good news is there are a lot of important initiatives underway. But the state of California and the South Coast air district need to step up the work to move away from polluting fossil fuels, which is the No. 1 cause of pollution in the LA region."

Smog-choked cities have hosted Olympics before - Beijing in 2008, for example. But China resorted to some serious steps to clear the skies for the games, including shutting down factories and construction projects and limiting car usage, none of which would likely go over well in La La Land. That may help temporarily, but Los Angeles' smog chronically plagues millions of residents. Coincidentally, Beijing organizers learned some of their smog reduction techniques from the 1984 Olympics in Los Angeles, when car-crazy L.A. implemented new vehicle restrictions and longtime residents were astounded to see haze clear and reveal mountain ranges.

MOVER, SHAKER: Vince Griffin is the new executive director of Indiana Advanced Energy Economy, the state branch of the national group with a similar name that promotes renewables and other advanced energy technologies. Griffin retired last year from the Indiana Chamber of Commerce, where he was vice president of energy and environmental policy.

Morning read: FERC has issued new guidelines for "reporting on culture resources investigations for natural gas projects," for compliance with laws protecting historic and preserved sites.

Subject: POLITICO's Morning Energy, presented by Chevron: Pruitt's flight, meeting habits raise eyebrows — Four EPA nominees get hearings today — Bishop sends broad letter on Zinke's travel habits

By Anthony Adragna | 10/04/2017 10:00 AM EDT

With help from Alex Guillén, Eric Wolff, Darius Dixon and Ben Lefebvre

SCRUTINY MOUNTS OF PRUITT'S HABITS: Critics of EPA Administrator Scott Pruitt increasingly see a chief who avoids contact with the broader public and distrusts even his own agency's career staff, opting instead for meetings with like-minded industry and political leaders that could prove useful in a future political run, Pro's Emily Holden and Alex Guillén report. The Trump administration doesn't consider Pruitt's $58,000 in charter and military flight expenses to be as troubling as former HHS Secretary Tom Price's and now consider the controversy resolved after Price's resignation last week, one administration official said.

Environmentalists and other critics say Pruitt's spending is at best tone-deaf given agency budget reductions and at worst speaks to paranoia. Christine Todd Whitman, a Republican who ran EPA during President George W. Bush's first term, said she recalls taking chartered planes only while visiting remote areas of Alaska that were otherwise inaccessible. "Most people have to wait in line for a long time for planes," Whitman said. "The fact that you just turn around and order a private plane ... that starts to look really problematic. It's a lot of money." The agency said the flights were all cleared by ethics officials and say Pruitt's unprecedented around-the-clock security protection is necessary given increased threats.

Others point to who he met with as especially revealing. An analysis of Pruitt's broader schedule shows he's met most often with oil and gas executives, followed by agriculture and farming interests. And the former Oklahoma attorney general has paid especially close attention to his home state. Of at least 30 meetings or speaking engagements Pruitt had with oil and gas executives or trade groups, seven appear to have connections to Oklahoma. He's also spoken at events or held calls with right-wing policy groups that spend little of their time on environmental issues, such as the Family Research Council, Council for National Policy, State Policy Network and Federalist Society.

PRUITT LIEUTENANTS HOP ONTO HOTSEAT: Sparks are guaranteed to fly as Senate Environment and Public Works Committee hears from four EPA nominees and an NRC candidate today. Expect Democrats to pay close attention to William Wehrum, the EPA air nominee, and his long history as an industry attorney, the same issue that kept him from this post in the pre-nuclear option George W. Bush era. Since leaving EPA a decade ago, Wehrum's client list is a who's who of industry groups, including the American Petroleum Institute, American Fuel & Petrochemical Manufacturers and the Utility Air Regulatory Group. Wehrum just last week helped industry groups challenge OSHA's silica rule in court - though the judges indicated they weren't buying his arguments that the agency had failed to prove new health benefits.

Heavy focus expected on Dourson: The other nominee likely to face heat is Michael Dourson, nominee for EPA chemicals and pesticides chief. The job will be vital as EPA works to implement the reformed Toxic Substances Control Act. Critics were also incensed when Pruitt earlier this year rejected agency scientists' suggestion to ban the pesticide chlorpyrifos. Dourson's work as an independent toxicologist often concluded that safe levels of various chemicals and pesticides were significantly higher than the findings of government and university scientists. Dourson is also the author of a series of self-described "science-Bible stories."

Also slated to attend: Matt Leopold, the nominee for EPA general counsel, and David Ross, the pick to run EPA's water office. Leopold is a Florida lawyer who was previously the Florida Department of Environmental Protection's general counsel. Ross heads the Wisconsin Department of Justice's Environmental Protection Unit and previously helped challenge the Obama administration's WOTUS rule, which EPA is working to repeal and replace. Joining the EPA nominees is Democrat Jeff Baran, who is up for renomination to the NRC through 2023.

If you go: Chairman John Barrasso will gavel in the hearing at 10 a.m. in Dirksen 406.

WHAT ABOUT THE BOSS?: Pruitt himself hasn't been to an EPW hearing since he was confirmed in February, and the committee's top Democrat Tom Carper is out of patience. "It's almost nine months into the administration and we're still waiting for the head of EPA to come in and defend the administration's budget for EPA, which is appalling," Carper told ME.

The House Energy and Commerce Committee has never heard from Pruitt in a public hearing, though it is traditional for the EPA boss to testify there at least once a year. Illinois Republican John Shimkus , who chairs the E&C environment subcommittee, says a visit is overdue, especially in light of the heightened scrutiny of his spending. Shimkus said he thinks Cabinet officials should fly commercial, just like members of Congress do. "We're also stewards of taxpayers' dollars and these agencies, we're asking them to do more with less," Shimkus told ME Tuesday. "It probably would have been better had he come earlier than later."

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and the Joyce Foundation's Ed Miller first identified Rep. Fred Grandy, aka Gopher from *The Love Boat*, as the Iowa congressman. For today: Who did Nancy Pelosi succeed when she first won election to Congress in 1987? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

ADMINISTRATION PICKS ARMY CORPS CHIEF: Trump announced late Tuesday his choice of R.D. James to lead the Army Corps of Engineers. He's previously served on the Mississippi River Commission where he's provided water resources advice to several administrations and Congress. James has also served as president of the Southern Cotton Ginners Association. Among other responsibilities, James would have a major role as the Trump administration revamps the Waters of the U.S. regulation. An April report made it sound like James was lukewarm on taking the post: "I'm a country boy, and I can't imagine living up there, but, if chosen, I will, and I will do my very best."

TRUMP STRIKES HARSH TONE IN PUERTO RICO: Visiting the devastated island of Puerto Rico Tuesday, President Donald Trump warned the island's millions of residents - many of whom have been told not to expect electricity or potable drinking water for months - they had "thrown our budget a little out of whack because we've spent a lot of money on Puerto Rico" and avoided a "real catastrophe" like Hurricane Katrina. As POLITICO's Matthew Nussbaum and Nolan D. McCaskill note, Trump maintained his boasts about a wildly successful response effort that hasn't matched the reality of the hurricane-ravaged island.

At a stop later in the day Trump insisted residents didn't need flashlights (it's unclear what he meant) even though 95 percent of the island lacks electricity. "The power grid, honestly, was devastated before the hurricanes even hit. And then the hurricanes hit and they wiped them out," Trump said, as he repeatedly seemed to blame the island for its poor infrastructure and financial situation. Joining him on the trip were Pruitt and Energy Secretary Rick Perry.

POLITICO's Burgess Everett and Seung Min Kim report the administration will today ask for $13 billion in hurricane recovery funding, $16 billion in flood insurance relief and more than $500 million for wildfires with congressional consideration likely in mid- to late-October.

BISHOP PROBES YEARS OF NON-COMMERCIAL TRAVEL: House Natural Resources Chairman Rob Bishop and Rep. Bruce Westerman sent a letter to Interior Secretary Ryan Zinke Tuesday asking for all records of non-commercial travel by the Interior secretary since the start of the Obama administration, as well as copies of department policies on the matter. "When partisan opportunists conflate diligent conformance to scandal, no one wins," they wrote. "Let's get all facts on the table, ensure taxpayers are protected and proceed with the peoples' business."

More questions raised for Zinke: A group of 26 House Democrats, led by Nanette Barragan and Don Beyer, asked Zinke in a Tuesday letter to immediately disclose all details of his use of charter aircraft.

Zinke doesn't plan to repay the government for his charter flights, the Associated Press reports.

NUCLEAR WASTE BILL ON ICE - FOR NOW: Shimkus said plans to bring a committee-passed nuclear waste package, H.R. 3053 (115), to the House floor are on hold for now as Nevada lawmakers, some of the most vocal opponents of the measure, deal with Sunday's massacre. "In light of the tragedy, there's no desire to move quickly," he said.

BISHOP: SILENCER CONTROVERSY 'SILLY': Delaying a broad sportsmen's package over language loosening gun silencer restrictions amid the response to the Las Vegas tragedy would be silly, Bishop told reporters. As your ME host reports, Bishop added: "If that's a hang-up, that's sad that that's a hang-up." GOP sources have previously indicated the SHARE Act, H.R. 3668 (115), likely won't come to the floor anytime soon after the shooting that killed 59 people and injured hundreds others.

COAL, NUCLEAR CAUTIOUSLY BACK PERRY'S PLAN: Representatives of the coal and nuclear industries offered qualified support before a House Energy and Commerce subcommittee for Perry's plan to extend their plants a lifeline through FERC, Pro's Darius Dixon reports.

Nuclear Energy Institute CEO Maria Korsnick voiced support for an extended public comment period while Paul Bailey, who heads the American Coalition for Clean Coal Electricity, said he'd back the proposal if forced to answer yes or no with "a huge caveat [that] we're still looking at it."

Lotsa wiggle room: FERC General Counsel James Danly told Senate lawmakers Tuesday the commission intends to act on DOE's resiliency pricing rulemaking proposal within the 60 days outlined by Perry, but he left plenty of room to tease out what that might look like, Pro's Darius Dixon reports.

Not giving up: Three new groups - the Energy Storage Association, the American Biogas Council, and the Business Council for Sustainable Energy - have linked arms with the other 11 energy groups asking DOE and FERC to slow down. The groups were spooked by FERC's decision on Monday to take comments on DOE's proposal even before the rulemaking was published but it's unclear how the processes will mesh. They have asked FERC to respond by Friday to their request for an extended comment period and technical conference.

** **A message from Chevron**: Advanced technology is helping us find safer ways to deliver energy. We're piloting a program that uses drones to monitor tanks and pipelines. Watch the video: http://politi.co/2xO60oe **

GREENS PLAN SUIT OVER MISSED OZONE DEADLINE: A group of 10 environmental groups said Tuesday they plan to sue Pruitt after he missed a deadline to decide which parts of the U.S. do or do not meet the 2015 ozone, standard, Pro's Alex Guillén reports. In response, an agency spokesman told ME: "The agency is continuing to work closely with the states to work through the designations process for the 2015 ozone standard."

SEIA GOES TO THE WHITE HOUSE: The Solar Energy Industries Association has a meeting today at the White House with presidential aides and staff from DOE, USTR and other cabinet agencies, Abigail Ross Hopper from the Solar Energy Industries Association said Tuesday. SEIA is trying to ward off tariffs on imported solar panels that will ultimately be decided by the president. The group would not specify who they'd be meeting with. "We are speaking with all of those folks who have a seat at the table and will help advise the president what the right decision is," Hopper said. "This is a conversation about American jobs, American blue collar jobs from many of the states that voted for our president."

LET'S GET TOGETHER, ROYALLY: Interior convenes the initial meeting of its new Royalty Policy Commission today. Counselor to the Secretary for Energy Policy Vincent DeVito will chair the commission, which he said will help with "looking at financial elements [at Interior] that have not been looked at in quite some time." The department caught flak earlier this year for stacking the commission with industry representatives but failing to fill slots reserved for public interest groups. NGOs said they will provide public comments, however, with The Wilderness Society set to ask Interior to increase royalty rates for oil and gas developed on public land from the current 12.5 percent. "Remarkably, for oil and gas, this rate has not changed since the 1920s," TWS said in prepared remarks seen by ME.

MORE JABS AT MANCHIN FROM BLANKENSHIP: Former West Virginia coal executive Don Blankenship released an ad Tuesday attempting to link Sen. Joe Manchin to both the Benghazi consulate attack and the deaths at Upper Big Branch Mine, Campaign Pro's Kevin Robillard reports . The spot, airing on state television, provocatively asks: "Does Manchin have blood on his hands?" Blankenship, who served a year in prison for conspiring to violate mine safety standards, has previously mused about challenging Manchin for his Senate seat as a Republican.

MURRAY JOBS SUIT REACHES SUPREME COURT: Coal producer Murray Energy asked the Supreme Court Tuesday to conclude Section 321(a) of the Clean Air Act requires EPA to produce a detailed study of its effects on coal jobs, Pro's Alex Guillén reports . A federal appeals court said that study represents a discretionary duty after a district court judge originally called it a mandatory one. But keep your expectations in check: It'll likely take the administration months to respond and there's no guarantee SCOTUS will ultimately hear the appeal.

AHEAD OF THE CLASS: Solar energy capacity in 2016 was 4,500 percent higher than the government thought it would be 10 years earlier, and wind supply is 350 percent above projections, the Natural Resources Defense Council finds in a report out Tuesday. "When you look at how clean energy development has exploded beyond official government projections from just 10 years ago, it offers hope that its potential will continue to far surpass expectations and we'll meet our U.S. climate goals," Amanda Levin, co-author of the report, said.

CEI SUES FOR PARIS DOCUMENTS: The Competitive Enterprise Institute filed a lawsuit Tuesday seeking emails and text messages concerning the communications of three former Obama-era State Department officials in the lead up to the Paris climate agreement being reached. In particular, the lawsuit seeks records related to Todd Stern and Sue Biniaz's communications with officials at NRDC and the World Wildlife Fund.

LAWSUIT FILED OVER ADVISORY BOARD RECORDS: The Center for Biological Diversity filed a lawsuit Tuesday seeking NOAA records concerning its decision to end a federal climate change advisory panel - Advisory Committee for the Sustained National Climate Assessment - over the summer. Copy of the filing here.

MOVERS, SHAKERS: State Energy & Environmental Impact Center at NYU School of Law, which aims to help state attorneys general fight Trump environmental rollbacks, today announced the additions of **Elizabeth Klein** as deputy director and **Chris Moyer** as communications director. Klein was most recently Interior's associate deputy secretary under the Obama administration and Moyer was most recently deputy communications director for California Attorney General Xavier Becerra.

Former FERC Commissioner Colette Honorable has joined the Bipartisan Policy Center as a senior fellow.

Subject: POLITICO's Morning Score: Five things to watch in the Alabama runoff election — Trump takes on Bannon in Alabama Senate showdown — New NRCC senior adviser

By Daniel Strauss | 09/26/2017 10:00 AM EDT

With Zach Montellaro, Elena Schneider and Maggie Severns

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

DAILY ROLL TIDE - "5 things to watch in Alabama's Senate race" by Campaign Pro's Daniel Strauss: "President Donald Trump and Senate Majority Leader Mitch McConnell have put their political muscle on the line in Alabama's Senate race - and they've done it for the clear underdog in Tuesday's primary. Not a single public poll has shown appointed Sen. Luther Strange beating former state Supreme Court Justice Roy Moore for the Republican nomination. But the super PAC aligned with McConnell has spent millions of dollars trying to boost Strange past his controversial opponent, and Trump lent Strange his personal endorsement in a Friday rally in Alabama, where the president enjoys sky-high popularity among Republicans. If it doesn't work, Strange could become the first senator since 2012 to lose a primary. Here are POLITICO's five things to watch when the polls close in the GOP primary at 8 p.m. Eastern time." **Full story.**

- **Last-minute spending roundup:** A number outside groups disclosed spending money during the final days of the runoff, though none came close to matching the more than $5 million that Senate Leadership Fund has disclosed spending so far to the FEC. The biggest spenders in recent days were all on Team Strange: pro-Trump America First Policies reported spending $452,254 on Strange's behalf over the last five days. The NRSC dropped $200,000 in support of Strange during that time. And the U.S. Chamber of Commerce dropped $350,000 on billboards and advertising, bringing the Chamber's total spending in Alabama close to $1 million.

BANNON BET - "Bannon to Alabama: 'They think you're a pack of morons'" by POLITICO's Alex Isenstadt : "Steve Bannon barreled onstage at a raucous rally inside a barn here to deliver a warning to the national Republican establishment ahead of Tuesday's special Senate election: I'm just getting started. In a thundering 20-minute speech Monday night that was partly a rally for insurgent Senate candidate Roy Moore but equally a declaration of war on the Republican Party hierarchy, Bannon made clear that this next act of his political career could make the Republican civil war of recent years look tame. 'For Mitch McConnell and Ward Baker and Karl Rove and Steven Law - all the instruments that tried to destroy Judge Moore and his family - your day of reckoning is coming,' Bannon said, referring to the Republican Senate leader and a trio of prominent GOP strategists backing incumbent Sen. Luther Strange. 'But more important, for the donors who put up the [campaign] money and the corporatists that put up the money, your day of reckoning is coming, too.'" **Full story.**

FIRST IN SCORE - NEW NRCC ADVISER - "New NRCC senior adviser Joe King expected to lead IE unit" by Campaign Pro's Elena Schneider: "The National Republican Congressional Committee is naming Joe King, an Ohio-based strategist with close ties to NRCC Chairman Steve Stivers, as a senior adviser to the committee - with the expectation that King will later lead the committee's independent expenditure unit in the 2018 election, according to a source close to the committee. King will advise the committee on races by 'surveying the battlefield, determining what's important to us,' and developing a 'winning strategy,' he said in an interview. But, in his expected future role leading the NRCC's outside-spending unit, King will be charged with overseeing tens of millions of dollars of TV advertising and polling in what could be the most expensive midterm election ever." **Full story.**

FLORIDA FUNDRAISERS - Sen. Marco Rubio, former Sen. Connie Mack and a number of top Republicans are hosting a fundraiser for Florida state Rep. Mike Miller's bid to replace Rep. Stephanie Murphy. Other names listed on the host committee include Rep. Pete Sessions, lobbyist Brian Ballard, Rep. John Rutherford, and Rep. Vern Buchanan. Read the invite **here**.

Days until the 2017 election: 42.

Days until the 2018 election: 406.

PENNSYLVANIA POLLING - A McLaughlin & Associates poll conducted for state Sen. Scott Wagner's gubernatorial campaign finds him leading Republican primary rival Paul Mango 45 percent to 16 percent with 39 percent undecided. The poll was conducted between Sept. 18 and 20 and had a margin of error of plus or minus 4.9 percentage points. Read the full results **here**.

... AND VIRGINIA NUMBERS - A poll from Christopher NewPort University's Wason Center has Democrat Ralph Northam leading his Republican opponent Ed Gillespie 47 percent to 41 percent in the gubernatorial race. The poll was in the field from Sept 12 to 22, with an MoE of 3.7 percent. **More here.**

- AAN out with polling on tax reform: American Action Network's Middle-Class Growth Initiative is highlighting that 73 percent of surveyed voters call "passing comprehensive tax reform" a top or important priority, as Republicans are expected to roll out their plan soon. AAN also noted that "the survey found Americans, across party lines, view lowering the middle-class tax rate as the most important tax reform initiative." **Read the full polling memo here.**

AIR WAR - TV ads kick off against Rep. Rod Blum: Not One Penny, a progressive group, is

going up with a six-figure ad buy against Iowa Rep. Rod Blum, urging him to oppose the Republican tax reform plan "that rigs the tax code in favor of of millionaires like Blum," per a memo from the group. "Congressman Rod Blum has a tall stack of votes that only benefit millionaires like him - like this one, which will give a huge tax break for health insurance CEOs already making over half a million each year," says the ad, which will air in the Cedar Rapids market. **Watch the ad here.**

NO CORDRAY HERE - The Ohio Democratic Party announced Virginia Gov. Terry McAuliffe will be the keynote speaker at its second gubernatorial debate, scheduled for Sunday, October 29th. Democrats on the stage include former Ohio state Rep. Connie Pillich, former Ohio state Senate Minority Leader Joe Schiavoni, former U.S. Rep. Betty Sutton and Dayton Mayor Nan Whaley.

INVITING A PRIMARY - Coffman taunts Tancredo: Colorado Rep. Mike Coffman asked former Rep. Tom Tancredo to "come after me" in a GOP primary. Coffman said that he decided to challenge him after Tancredo "defended a group called VDARE, which serves as an online platform for racist and white supremacist viewpoints," 9News reported. "We could define what the Republican party is for a generation to come," Coffman said. Tancredo, for his part, has "openly advocated" for a conservative challenge to Coffman, but when asked said he didn't plan to personally challenge him.

GETTING THE NOD - NewDem PAC adds a dozen candidates to 'watch list': The NewDem PAC named a dozen Democratic House challengers to its "Candidate Watch List" on Monday: Dave Min (CA-45), Hans Keirstead (CA-48), Harley Rouda (CA-48), Paul Davis (KS-02), Elissa Slotkin (MI-08), Angie Craig (MN-02), Brad Ashford (NE-02), Mikie Sherrill (NJ-11), Anthony Brindisi (NY-22), Jana Lynne Sanchez (TX-06), Jay Hulings (TX-23) and RD Huffstetler (VA-05).

QUOTE OF THE DAY: "I'm here tonight to say, I stand with Luther. I stand with President Donald Trump. And I will always stand for our national anthem." - Vice President Mike Pence speaking at a rally for Sen. Luther Strange in Birmingham.

Energy and Climate Report

August 07, 2017 - Number 151

News

Biodiversity
Soy and the Cerrado: Exports, Ecology Collide in Brazil's Savanna
Soybean cultivation cutting deep into the Cerrado is turning Brazil's vast wooded savanna into farmland, a transformation so swift that endemic species are being pushed to extinction and even the country's water supply could be affected, scientists and environmental groups warn.

Biofuels
Trump Foiling Bid to Shun Unwanted Ethanol Spat with Brazil
President Donald Trump's America First rhetoric is doing no favors for U.S. ethanol producers, who are hoping to avoid a trade fight with fuel buyers in Brazil.

Climate Policy
Merkel Climate Goal in Doubt with Greenhouse Gases on the Rise
More than 12 straight months of rising greenhouse gas pollution in Germany are casting doubt on whether Chancellor Angela Merkel's government can meet climate targets.

Endangered Species
Interior Department Calls for Changes in Sage Grouse Conservation Plans
Federal policy on the greater sage grouse in 11 states has much room for changes, including modification of guidelines on oil and gas leasing as well as reconsideration of the strictest protections aimed especially at mining, according to an Interior Department report released Aug. 7.

Energy
Big Oil's Dream of $65B Hidden Off Norway Is Fading Away
Norway's oil industry has been salivating for years over the Arctic Lofoten islands, which could hold billions of barrels of crude. It will likely have to keep dreaming.

Energy
Electric Car Boom Drives Rush to Australia's Lithium Hub
A scramble by the lithium market's biggest players to tie up supply of the high-tech metal is gathering pace in the 170-year-old heartland of Australia's $90 billion mining industry.

Oil & Gas
Obscure New Mexico Shale Source Means Big Results for BP
As U.S. gas drillers pay up for prime assets in Texas and Pennsylvania, BP PLC may have just found a gem in a largely ignored New Mexico source.

Pipeline Safety

Pipeline Safety Agency Hires Deputy Administrator

The Pipeline and Hazardous Materials Safety Administration has a new deputy administrator.

Process Safety

California's Most Protective Oil Refinery Rules Will Cost Millions

California oil refinery operators including Chevron Corp., Andeavor Inc., and Valero, could spend about $58 million during the next year to comply with the state's new refinery safety rules, the state says.

Renewable Energy

U.K. Clears $5.5 Billion Offshore Wind Farm for Scottish Power

The U.K. government gave the green light to ScottishPower Renewables Ltd. to build a 1.2-gigawatt wind farm off the coast of Norfolk that may cost as much as $5.5 billion.

Driving the Day

FIRST IN PLAYBOOK -- SOME HEALTH CARE/TAX NEWS -- THE CONGRESSIONAL BUDGET OFFICE is expected to release a new report **MONDAY** detailing the budgetary impact if Congress were to repeal the individual mandate as part of tax reform. House Ways and Means Chairman Kevin Brady told us that it was a priority for President Donald Trump -- Trump has called him twice and mentioned it in person once. Insiders estimate repealing the mandate would bank $400 billion in savings. But the new estimate is expected to be far less, which might make it less attractive to include gutting the provision as part of tax reform.

-- Here's how Brady put it to us yesterday during a Playbook Interview: "There are pros and cons to this. Importing health care into a tax reform debate has consequences, especially one where the Senate has yet to produce 50 votes on anything related to health care that I'm aware of. And so there is all those considerations to think about as we're looking at this. So, no decisions have been made. We're listening to the members, and certainly the president, as well."

BULLETIN at **7:13 a.m.:** "BEIRUT (AP) - Lebanon's Prime Minister Saad Hariri says he is resigning as premier, blames Iran for meddling in Arab affairs." ***AP's story*** http://bit.ly/2h6gCF7

YOWZA! -- NYT's PETER BAKER -- "President Trump is not a favorite in the extended Bush household. Former President George Bush considers him a 'blowhard,' only interested in feeding his own ego. Former President George W. Bush, his son, thinks Mr. Trump fans public anger and came to office without any understanding of the job. ... In 'The Last Republicans,' Mark K. Updegrove chronicles an era that feels almost dated

in today's reality-show politics, when the Republican establishment controlled the party and Washington, and when a single family could occupy the presidency and vice presidency for a combined 20 years. ...

"Neither of the two Republican former presidents voted for Mr. Trump -- the father voted for Hillary Clinton and the son voted for 'none of the above,' as he told Mr. Updegrove. Indeed, at one point during the 2016 presidential campaign, the younger Mr. Bush confided to the author, 'I'm worried that I will be the last Republican president.' ...

"In discussing Mr. Trump, the elder president was blunter. 'I don't like him,' Mr. Bush said in May 2016. 'I don't know much about him, but I know he's a blowhard. And I'm not too excited about him being a leader.' Rather than being motivated by public service, Mr. Bush said Mr. Trump seemed to be driven by 'a certain ego.'" http://nyti.ms/2A6YXEU ... ***Pre-order -- $19.49 on Amazon*** http://amzn.to/2hbgx79

THE TRUMP ONE-YEAR ANNIVERSARY STORIES BEGIN -- "Trump's year of anger, disruption and scandal," by Annie Karni and Eliana Johnson: "It was after midnight on Nov. 9, 2016, and Donald Trump was sitting at the kitchen table of his Trump Tower penthouse. ...

"'Now it is time for America to bind the wounds of division.' He paused. 'To bind? To heal? Which is better?' he asked his campaign manager, Kellyanne Conway, who was hovering close by. It was the mirror image of the scene unfolding in Hillary Clinton's hotel room, where the Democratic nominee had a victory speech ready to go, but no concession to deliver. Trump had been glued to the television, watching what was supposed to be Clinton's Javits Center victory party -- and taking note of the shocked faces in the crowd.

"'I think he was aware of how unexpected this was,' said his longtime aide, Hope Hicks, now the White House communications director, explaining the un-Trumpian unity rallying cry. 'He wanted to give a speech that would de-escalate everything and, while the whole world was watching, be a leader for all.' Onstage, Trump would say: 'To all Republicans and Democrats and independents across this nation, I say it is time for us to come together as one united people. It's time.' It was a glimpse of a presidency that could have been." http://politi.co/2AjqKTp

****** **A message from BP: We sell enough natural gas to meet the daily needs of every home in the U.S.** *Check out what else we're doing across the country.* ******

HARASSMENT FALLOUT -- "Congressional leaders call for sexual harassment training," by AP's Erica Werner and Juliet Linderman: "On Friday, Ryan sent lawmakers a letter urging them to undergo sexual harassment training and make it mandatory for their staffs. 'Any form of harassment has no place in this institution. Each of us has a responsibility to ensure a workplace that is free from discrimination, harassment, and retaliation,' wrote Ryan, R-Wis. 'We can and should lead by example.'

House Democratic leader Nancy Pelosi called for passage of Democratic-sponsored legislation that would require anti-harassment training, enhance anti-retaliation protections for staffers who report harassment, and streamline dispute resolution." http://bit.ly/2zeaiUt ... ***AP's original investigation on sexual harassment on the Hill*** http://bit.ly/2zeKnOC

POLITICO FLORIDA -- "Six women accuse Florida Senate budget chair Latvala of groping, sexual harassment," by Marc Caputo, Matt Dixon and Alexandra Glorioso in Tallahassee: "Six women who work in Florida's Capitol say the state Senate's powerful budget chairman, Republican gubernatorial candidate Jack Latvala, has inappropriately touched them without their consent or uttered demeaning remarks about their bodies. ...

"Latvala, in an interview on Friday with POLITICO Florida , pointed to the fact that in 16 years in the Senate he has never had a complaint filed against him. 'The Senate provided you with a letter that I have never had a complaint filed against me in 16 years,' said Latvala. 'I'm sure that you have handpicked people and you are going to let anonymous people have this kind of impact on the career of a guy who has been there for 16 years,' he said. 'I've never had a complaint filed against me.' 'Govern yourself accordingly,' he told a POLITICO Florida reporter." http://politi.co/2hbzmXD

ON PRESIDENT DONALD TRUMP'S MIND -- @realDonaldTrump at 8:35 a.m.: "Unemployment is down to 4.1%, lowest in 17 years. 1.5 million new jobs created since I took office. Highest stock Market ever, up $5.4 trill" ... **at 8:49 a.m.:** "Would very much appreciate Saudi Arabia doing their IPO of Aramco with the New York Stock Exchange. Important to the United States!"

-- A TWEET LIKE THAT about Aramco could be worth a lot of money to a lot of people. The Aramco tweet was sent at 2:49 a.m. in Hawaii.

****** **A message from BP: Over the past 10 years, no energy company has invested more in the U.S. than BP - $90 billion in total.** *Take 15 seconds to see what we're doing to help keep America moving forward.* ******

DEPT. OF UNINTENDED CONSEQUENCES -- "Trump's push for inquiries challenges Justice Dept. independence," by Darren Samuelsohn: "With his forceful pleas via Twitter and recent media interviews to launch inquiries into everything from Hillary Clinton's e-mails to an Obama-era uranium deal, the president is essentially setting the department up for a major breach of protocol if it actually follows through on his requests, according to former government attorneys and prosecutors." http://politi.co/2xYSICl

THE BANNON EFFECT -- "Poll: Bannon's endorsement doesn't help in GOP primaries," by Eliana Johnson: "The Alabama Senate primary between Senator Luther Strange and Roy Moore raised questions about how powerful the endorsements of President Donald Trump and his former chief strategist, Steve Bannon, are on the campaign trail. Though Moore, Bannon's candidate, bested the Trump-backed Strange,

a new poll suggests that among voters in the upcoming midterm elections, Bannon's endorsement will make little difference.

"The survey, conducted by Firehouse Strategies and Optimus Consulting, found that just 13 percent of Republican voters said Bannon's endorsement made them more likely to support a candidate. Precisely the same number said the backing of the Breitbart chief would make them less likely to support a given candidate. Firehouse was founded by former aides to Sen. Marco Rubio, and Optimus is a Republican analytics firm." http://politi.co/2zdXbF3

ON TAX REFORM -- "Dems' plan to tank Trump's tax bill," by Elana Schor and Heather Caygle: "Democrats helped crush the GOP's Obamacare repeal push by maintaining total unity and generating broad public outrage. It's a powerful formula that fractured Republicans - but one that will be harder to replicate against the GOP tax bill. Already a handful of vulnerable Democrats in the House and Senate say they remain open to whatever tax legislation is ultimately produced. And while progressive groups and lawmakers are deploying plans to rev up the base, it's not clear taxes will energize people outside the Beltway as the more visceral topic of health care does." http://politi.co/2lPSrQN

-- "Lobbying Frenzy Begins on Tax Bill," by NYT's Jim Tankersley, Tom Kaplan and Ken Vogel: "The Republican tax rewrite unveiled on Thursday has set off a scramble among lobbyists and interest groups desperate to preserve prized tax breaks that are suddenly at risk in the sweeping bill moving through the House. Yet the ability of K Street to prevent longstanding tax provisions from getting the ax is running headfirst into Republicans' own mad dash as they attempt to quickly pass the tax rewrite and get it to President Trump's desk by Christmas.

"The rapid pace set out by Republican leaders is by design: They want to prevent the kind of arm-twisting that has long bedeviled previous tax overhaul efforts by leaving little time for outside groups to blitz lawmakers with concerns. Several consultants and lobbyists said on Friday that individual companies were just beginning to digest how the 400-plus page bill, which drastically changes how American businesses are taxed at home and abroad, would affect their bottom lines." http://nyti.ms/2y1K723

CATCHING YOU UP ON TRUMP ABROAD ...

FOLLOW POLITICO'S man with Trump in Asia: @AndrewRestuccia

IT'S CHALLENGING to cover trips like this -- the time difference is brutal -- so we'll try to find the best nuggets from stories and pool reports.

WSJ'S MIKE BENDER was pool yesterday, with **PRESIDENT TRUMP** in Hawaii: "At 1:14 p.m. local, POTUS & FLOTUS deplaned into 87 degree weather. The were greeted

with leis by Hawaii Gov. David Ige and his wife, Dawn Ige; US Navy Adm. Harry Harris, commander of the US Pacific Command, his wife, Bruni Bradley; and Mikayla Webb, the daughter of Adm. Harris's aid. ... POTUS arrived at US Pacific Command at 1:43 p.m. local, two minutes ahead of schedule for the first stop on his 12-day trip. ... 'I tell you this is very special being in Hawaii,' he said. ...

"**POTUS also appeared legitimately excited** about his visit this evening to Pearl Harbor, 'which I've read about, spoken about, heard about, studied, but I haven't seen. And that is going to be very exciting for me.' ... POTUS made a somber and short visit to the USS Arizona Memorial - about 13 hours before wheels-up to Japan. POTUS & FLOTUS spent about 20 minutes at the simple yet stark shrine to the 1,177 crewmen who died during the Dec. 7, 1941 attack on Pearl Harbor. The pair stood for about a minute in front of the white marble wall etched with the names of the fallen during a wreath laying ceremony.

"The first couple adjusted the wreath slightly before two soldiers placed it near the wall. The Trumps then threw white pikake flower petals into the water where the remains of more than 900 Arizona crewmen rest. ... Most of the president's top staff traveling with him joined the tour, including HR McMaster, Dina Powell, Rob Porter, Hope Hicks, Sarah Sanders, Matt Pottinger, Bob Lighthizer, Michael Anton, and Jared Kushner. ... From his first tweet this morning at 6:51 a.m. Eastern, to the return to his Honolulu hotel at 7:33 p.m. Hawaii time, that's nearly a 19-hour day for POTUS on the first day of his 12-day trip halfway around the world."

-- TRUMP'S WEEKEND: The president will leave Hawaii at 1:20 p.m. D.C. time (7:20 a.m. in Hawaii) for Tokyo. They land at 9:45 p.m. tonight. When Trump lands, he'll have an event at Yokota Air Base and then he'll have lunch with Japanese Prime Minister Shinzo Abe and the golfer Hideki Matsuyama at Kasumigaseki Country Club. Trump is having dinner with Abe with the first lady and Mrs. Abe at Ginza Ukai Tei in Tokyo.

IVANKA ABROAD -- THE DAILY MAIL: "A cultural homage (kind of)! Ivanka Trump dons a $2,000 Italian faux kimono - and models a new wavy hairdo - as she enjoys dinner with Japanese Prime Minister Shinzo Abe" -- ***with 29 pix on one page*** http://dailym.ai/2zgWSJn

FOR OBAMA ALUMNI -- "Here's the letter Obama is sending to people who ask him about the state of the country," by Yahoo's Hunter Walker: https://yhoo.it/2y1AFve

THE RUSSIA INVESTIGATION -- JUDGE PROPOSES MAY 7 trial date for Manafort and Gates. http://politi.co/2j1GR43

--"Mueller braces for challenges to his authority," by Darren Samuelsohn and Josh

Gerstein: "Robert Mueller is on an early winning streak. Stacked with some of the country's premier prosecutors, the special counsel has beaten back a pair of preliminary attempts to block his subpoena power and limit who he can question as a potential witness. In July, Mueller's team also managed to win approval to execute a no-knock search warrant-unusual in a white-collar case.

"But as the criminal case against former Donald Trump campaign officials Paul Manafort and Rick Gates speeds toward a possible spring 2018 trial, Mueller's team is bracing for an array of challenges to its authority. The battle lines are already taking shape. Kevin Downing, Manafort's lead attorney, submitted a document Friday indicating that he anticipates filing pre-trial motions that question 'the legal basis for and sufficiency of the charges, the suppression of evidence improperly obtained by search warrant, subpoena or otherwise.' Downing also said he may try to prevent Mueller's prosecutors from presenting some of their evidence during the criminal trial." http://politi.co/2A7Qe5B

-- "McConnell: No need to pass bills to protect Mueller," by Brent D. Griffiths: "Senate Majority Leader Mitch McConnell said on Saturday that special counsel Robert Mueller is not in need of congressional protection from President Donald Trump. 'I don't hear much pressure to pass anything,' McConnell told MSNBC's Hugh Hewitt. 'There's been no indication that the President or the White House are not cooperating with the special counsel.' McConnell added, 'I think the view up here is let him do his job.'" http://politi.co/2yuNO4E

-- "Longtime Trump bodyguard to face questions about 2013 Moscow trip," by WaPo's Carol D. Leonnig and Greg Miller: "One of President Trump's most trusted confidants, a security chief who served as his sounding board for nearly two decades, will face questions from congressional investigators next week about Trump's 2013 trip to Moscow, according to people familiar with their plans. ... The House Intelligence Committee has called former longtime bodyguard Keith Schiller to appear for an interview Tuesday as part of its probe of Russian meddling in the 2016 election. Investigators plan to press Schiller about allegations in the 35-page dossier that Russian officials obtained compromising information about Trump's personal behavior when he visited Moscow for the 2013 Miss Universe pageant." http://wapo.st/2IN34DM

-- "Trump Campaign Adviser Met With Russian Officials in 2016," by NYT's Mark Mazzetti and Adam Goldman: "Carter Page, a foreign policy adviser to the Trump presidential campaign, met Russian government officials during a July 2016 trip he took to Moscow, according to testimony he gave on Thursday to the House Intelligence Committee. Shortly after the trip, Mr. Page sent an email to at least one Trump campaign aide describing insights he had after conversations with government officials, legislators and business executives during his time in Moscow, according to one person familiar with the contents of the message. The email was read aloud during the closed-door testimony." http://nyti.ms/2AkuLqY

NEW POLICY -- "Protected status no longer justified for Central Americans and

Haitians in U.S., State Dept. says," by WaPo's Nick Miroff and Karen DeYoung: "More than 300,000 Central Americans and Haitians living in the United States under a form of temporary permission no longer need to be shielded from deportation, the State Department told Homeland Security officials this week, a few days ahead of a highly anticipated DHS announcement about whether to renew that protection.

"On Tuesday, Secretary of State Rex Tillerson sent a letter to acting DHS secretary Elaine Duke to inform her that conditions in Central America and Haiti that had been used to justify the protection no longer necessitate a reprieve for the migrants, some of whom have been allowed to live and work in the United States for 20 years under a program known as Temporary Protected Status (TPS)." http://wapo.st/2A7oopO

Subject: Pruitt to sign Clean Power Plan repeal proposal Tuesday

By Alex Guillén

10/09/2017 11:14 AM EDT

EPA Administrator Scott Pruitt said today he will formally sign a proposal to withdraw the Obama administration's Clean Power Plan on Tuesday in Washington.

"That rule really was about picking winners and losers. Regulatory power should not be used by any power to pick winners and losers," Pruitt said an event in Kentucky's coal country with Senate Majority Leader Mitch McConnell.

"The last administration just simply made it up," he continued, referring to the regulation that was designed to curb carbon emissions from power plants. "When you think about the Clean Power Plan, it was not about regulating to make things regular. It was truly about regulating to pick winners and losers."

Text obtained by POLITICO on Friday shows EPA will argue that the Clean Power Plan exceeded EPA's regulatory authority by requiring fuel shifting. Pruitt reiterated that point in his remarks today.

"They really interpreted that 'best system of emission reduction' as generating electricity in ways that they didn't want to use fossil fuels, so they used authority to do otherwise," he said.

Subject: First Move: Californians Choke Over Blazes • Pruitt Heads to the Hill • Energy Regulator Speaks Again

What you need to know to start your day.

Californians Choke Over Blazes • Pruitt Heads to the Hill • Energy Regulator Speaks Again

By Chuck McCutcheon

How badly are California's worst-in-history wildfires hurting air quality? Really badly.

More than 7 million people in the San Francisco area have been exposed to unhealthy levels of air pollution. Of those, 1 million are facing air quality the EPA would deem extremely unhealthy.

A fire burns near Kenwood, Calif.
Photo by David McNew/Getty Images

And the health effects could linger even after the fires are brought under control, Jennifer Lu and Carolyn Whetzel report. Once a fire has passed or been extinguished, rising smoke from smoldering embers could remain for as long as a week.

Neighboring states are assessing whether the pollution will blow their direction. One of them, Oregon, uses satellite and meteorological data to show how traveling smoke affects air quality.

Iowa Republican Sen. Chuck Grassley is well-known for his advocacy of ethanol. Today, EPA Administrator Scott Pruitt will see that advocacy firsthand.

Grassley is expected to join several of his colleagues in a meeting with Pruitt to discuss the Renewable Fuel Standard and biofuels. The sit-down follows months of senators raising concerns that the Trump administration isn't living up to the president's 2016 campaign commitment to help their states' corn growers and processors of biofuels.

The lawmakers say the EPA's current proposed rule would mark a step backward for advanced biofuels by lowering how much should be blended into the nation's gasoline and diesel. The Renewable Fuel Standard adds to the cost of refining petroleum, oil and gas industry officials argue.

Grassley said last month on the Senate floor that Trump's policy "seems like a bait-and-switch. Big Oil and oil refineries are prevailing, despite assurances to the contrary." Abby Smith will monitor the meeting.

FERC's chairman is expected to speak today to an energy law conference. It will be the second time in less than a week that Neil Chatterjee publicly addresses a contentious Energy Department proposal asking FERC to help out the coal and nuclear industries.

That proposal has drawn lots of questions from other Federal Energy Regulatory Commission members and opposition from oil, natural gas, and other market sectors competing with coal and nuclear, along with environmental groups. Chatterjee said last week that he's "sympathetic" to Energy Secretary Rick Perry's proposal, which aims to prop up coal and nuclear plants in certain competitive energy markets, but is keen to explore a middle ground.

West Virginia Democrat Sen. Joe Manchin, one of Congress's biggest coal boosters, is among those encouraging Chatterjee and other members to back the department's proposal, while some energy company CEOs came out against it. Rebecca Kern is watching the developments.

Other Stories We're Covering

- Justice Department attorneys will seek to enforce subpoenas at a court hearing in Los Angeles seeking Exxon Mobil documents related to an explosion and another near-miss at the company's Torrance, Calif., refinery. Carolyn Whetzel will track.
- New York officials are objecting to the feds' approval of a proposed 7.8-mile natural gas line.
- Pruitt wants to curb EPA settlements with environmentalists.

Quote of the Day

"Dr. Strangelove is alive and lurking somewhere in the corridors of EPA."
— Jeff Ruch, executive director of a watchdog group of government workers and retirees, blasting new agency radiation guidelines that ease off on established safety levels.

Today's Events

- **9:30 a.m. • City Planning** • Wilson Center forum explores city planning to address air pollution and greenhouse gas emissions in Los Angeles, Hong Kong, and Pearl River Delta.
- **10 a.m. • Local Regulation** • American University professor discusses local regulations to address climate change.
- **All Day • Blacks in Energy** • American Association of Blacks in Energy holds

energy policy summit.

- **All Day • Water and Health** • University of North Carolina's Water Institute holds conference on drinking water supply, sanitation, hygiene, and water resources.
- **All Day • Exposure Science** • International Society of Exposure Science continues a meeting that began Sunday in Research Triangle Park, N.C.

Around the Web

- Some Puerto Ricans are using car batteries for power while relying on quickly depleting propane tanks to boil water.
- A Swiss company has begun extracting carbon dioxide from Iceland's air and storing it underground, with the expectation that the carbon dioxide turns to stone.
- One of Yucca Mountain's biggest critics predicts the government will never find enough money to open the Nevada nuclear-waste burial ground.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

August 24, 2017

Latest News

EPA Struggling With Perchlorate Review, Raising Doubts On Court Deadline

EPA is struggling to complete a peer review of the science and modeling underlying its efforts to assess and regulate the ubiquitous rocket fuel ingredient perchlorate in drinking water, raising doubts that the agency will be able to meet its court-ordered October deadline for completing the work.

RGGI Floats Strict Post-2020 Cap, Drawing Praise From Environmentalists

The nine Northeast and Mid-Atlantic states that participate in the Regional Greenhouse Gas Initiative (RGGI) have released a “consensus” package of proposed changes to the cap-and-trade program after 2020, with the region's main emissions cap set to decline by 30 percent through 2030.

New Industry Coalition Launched On TSCA New Chemicals Review Issues

Bergeson & Campbell, a law firm that specializes in chemical industry issues, is creating a coalition of companies to craft uniform comments to EPA on industry concerns that have arisen with the agency’s process for reviewing “new” chemicals before they enter the market under the revised Toxic Substances Control Act (TSCA).

Domestic Biofuels Producers May Get Boost From Import Limit, RFS Push

Domestic biofuels producers may get a boost from the Commerce Department's plan to limit some imports of fuels that qualify as “advanced” biofuels under EPA's renewable fuel standard (RFS), and could also benefit if cellulosic biofuels producers succeed in their push for the agency to hike blending goals for those fuels in 2018.

New NPL 'Orphan' Sites May See Limited Impact From Superfund Reforms

Recommendations from an internal EPA task force to overhaul the Superfund program are expected to apply to the seven sites the agency recently placed on the National Priorities List (NPL), but their application may be limited given several of the sites could fall into the "orphan" category and are unlikely to attract third-party financing, according to an EPA source.

Environmentalists Seek High Bar For Challenges To CWA Citizen Lawsuits

Environmentalists are urging a federal district court to set a high bar for when companies can file legal challenges in response to notices of threatened future citizen suits to enforce the Clean Water Act (CWA), saying the water law requires that companies wait 60 days after such notices are filed before they can file "declaratory" challenges.

4th Circuit issues mandate in Murray 'jobs' review case

The move formally adopts a precedent that limits courts' rights to oversee agency actions or inactions.

Quote-Unquote: Talking about water, coal, renewable fuels and GHGs

On the increasing court challenges to EPA actions, DOE's grid study, 2018 RFS, and vehicle GHG requirements.

2nd Circuit's CWA ruling could bolster Virginia pipeline fight

The 2nd Circuit upheld New York's denial of a water quality certification for the Constitution Pipeline, which could bolster environmentalists in Virginia who are urging the state to block construction of two natural gas pipelines.

Ewire: Environmentalists take their defense of EPA's budget to key states

Environmentalists and other EPA supporters are using the congressional recess to make the case that lawmakers should reject the Trump administration plans to slash the agency's budget and provide at least level funding.

Democratic states float arguments to vacate EPA's RMP delay

The officials charge the delay violates the Clean Air Act and is arbitrary and capricious because it misconstrues a federal arson finding as central to the Obama administration's regulation.

Summaries

AIR
California SIP/San Joaquin Valley Unified APCD
AIR

Final rule of the EPA approves a revision to the San Joaquin Valley Unified Air Pollution Control District (APCD) portion of the California SIP. The revision addresses a local rule concerning emissions of nitrogen oxides and particulate matter from boilers, steam generators, and process heaters. The revision specifies that the use of liquefied petroleum gas in tree nut pasteurizers is permitted in addition to Public Utilities Commission quality natural gas. The rule is effective Sept. 13, 2017. Contact: Nancy Levin; EPA Region 9; 415-972-3848; levin.nancy@epa.gov. Citations: 40 CFR 52.220

Regulatory Update

AIR
Connecticut SIP/New Source Review Requirements for 2008 Ozone NAAQS
AIR

Direct final rule of the EPA approves a revision to the Connecticut SIP regarding nonattainment new source review permit requirements for the 2008 eight-hour ozone NAAQS for the Greater Connecticut area and the Connecticut portion of the New York-Northern New Jersey-Long Island nonattainment area. The revision addresses the change in classification of both nonattainment areas from marginal to moderate and specifies that the state's SIP complies with anti-backsliding requirements. The rule is effective Oct. 13, 2017, unless adverse comments are received by Sept. 13, 2017. Contact: Donald Dahl; EPA Region 1, Office of Ecosystem Protection; 617-918-1657; dahl.donald@epa.gov. Regulatory Update

AIR
Connecticut SIP/New Source Review Requirements for 2008 Ozone NAAQS
AIR

Proposed rule of the EPA would approve a revision to the Connecticut SIP regarding nonattainment new source review permit requirements for the 2008 eight-hour ozone NAAQS for the Greater Connecticut area and the Connecticut portion of the New York-Northern New Jersey-Long Island nonattainment area. The revision addresses the change in classification of both nonattainment areas from marginal to moderate and specifies that the state's SIP complies with anti-backsliding requirements. A concurrent final rule adopts the provisions, effective Oct. 13, 2017. Comments are due Sept. 13, 2017. Contact: Donald Dahl; EPA Region 1, Office of Ecosystem Protection; 617-918-1657; dahl.donald@epa.gov. Citations: 40 CFR 51.1105, 52.377

Regulatory Update

AIR
Stationary Source Particulate Matter Monitoring
AIR

Final rule of the EPA revises new source performance standards for emission monitoring system quality assurance of particulate matter (PM) (Procedure 2). The rule modifies the procedure for assessing PM continuous emissions monitoring systems (CEMS) to allow facilities to extend the correlation regression line set during testing to the lowest PM CEMS response obtained during the annual response correlation audit or relative response audit when a PM CEMS response is less than the lowest response used to develop the existing correlation curve. The rule is effective Sept. 13, 2017. Contact: Kimberly Garnett; EPA, Office of Air Quality Planning and Standards; 919-541-1158; garnett.kim@epa.gov. Citations: 40 CFR 60, Appendix F

ENDANGERED SPECIES
Atlantic Fleet Training and Testing Study Area/Marine Mammals Incidental Take
ENDANGERED SPECIES

Notice of the National Marine Fisheries Service announces the receipt of a request from the U.S. Navy for authorization to take marine mammals incidental to sonar activities conducted at the Atlantic Fleet Training and Testing Study Area in the western Atlantic Ocean, portions of the Caribbean Sea, and the Gulf of Mexico. The authorization would allow take in the form of Level A and Level B harassment from October 2018 through October 2023 of 39 marine mammals incidental to activities from the use of sonar and other transducers, in-water detonations, air guns, and impact pile driving/vibratory extraction. The authorization also would allow nine mortalities of four marine mammal species during ship shock trials and three takes by injury or mortality from vessel strikes. Comments are due Sept. 13, 2017. Contact: Stephanie Egger; NMFS, Office of Protected Resources; 301-427-8401

Regulatory Update

ENDANGERED SPECIES
Virginia/Atlantic Sturgeon Chesapeake Bay DPS Incidental Take Permit
ENDANGERED SPECIES

Notice of the National Marine Fisheries Service announces the receipt of an application and draft habitat conservation plan from Dominion Virginia Power, of Richmond, Va., for a 10-year incidental take permit for the Chesapeake Bay distinct population segment of the endangered Atlantic sturgeon in connection to continued operation and maintenance of the Dominion Chesterfield Power Station in Chesterfield, Va. The authorization would allow take incidental to otherwise lawful activities associated with the withdrawal of cooling water from the James River and entrainment and impingement sampling. The notice also announces the availability of a draft environmental assessment for the proposed activities. Comments are due Sept. 13, 2017. Contact: Julie Crocker; NMFS; 978-282-8480

82 FR 37849 (08/14/2017)

Regulatory Update

ENDANGERED SPECIES
Washington State/Mazama Pocket Gopher Incidental Take Permit
ENDANGERED SPECIES

Notice of the U.S. Fish and Wildlife Service announces the receipt of an application and proposed habitat conservation plan from a private citizen for a two-year incidental take permit for the threatened Olympia subspecies of the Mazama pocket gopher in connection with the construction of a single-family home in Thurston County, Wash. The agency also has prepared a draft environmental action statement for its preliminary determination that the project is "low-effect" and is eligible for a categorical exclusion under the National Environmental Policy Act. Comments are due Sept. 13, 2017. Contact: Tim Romanski; USFWS, Washington Fish and Wildlife Office; 360-753-5823

Regulatory Update

FOOD SAFETY
Ultrafiltered Milk in the Production of Standardized Cheeses
FOOD SAFETY

Notice of the FDA announces the availability of a guidance for industry for manufacturers seeking to use ultrafiltered (UF) milk or UF nonfat milk in the production of standardized cheeses and related cheese products. "UF milk" is defined as raw or pasteurized milk that passed over one or more semipermeable membranes to partially remove water, lactose, minerals, and water soluble vitamins, without altering the casein-whey protein ratio of the milk, resulting in a liquid product. "UF nonfat milk" is defined similarly, with the exception that raw or pasteurized nonfat milk is used. Upon completion of a rulemaking action, the agency intends to exercise enforcement discretion regarding the use of UF milk in the production of standardized cheese and related cheese products. The agency also will exercise enforcement discretion regarding the declaration

of ingredients in the labeling of such products when fluid UF milk and fluid UF nonfat milk are used as ingredients. Comments may be submitted at any time. Contact: Terri Wenger; FDA, Center for Food Safety and Applied Nutrition; 240-402-2373. Citations: 21 CFR 133

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
International Drug Scheduling
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces a request for comments concerning abuse potential, actual abuse, medical usefulness, trafficking, and impact of scheduling changes on availability for medical use of 17 drug substances, including various synthetic opioids and cannabinoids. Comments received will be considered in preparing a response from the U.S. to the World Health Organization (WHO) regarding the abuse liability and diversion of the drugs. WHO will use the information to consider whether to recommend that certain international restrictions be placed on the drugs during the meeting of its 39th Expert Committee on Drug Dependence, scheduled for Nov. 6-10, 2017, in Geneva. Comments are due Sept. 13, 2017. Contact: James Hunter; FDA, Center for Drug Evaluation and Research; 301-796-3156; james.hunter@fda.hhs.gov

GENERAL ENVIRONMENT AND SAFETY
Maine/American Tissue Hydroelectric Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing of an application by KEI (Maine) Power Management (III) LLC, of Gardiner, Maine, for a subsequent minor license for the American Tissue Hydroelectric Project, on the Cobbosseecontee Stream in Gardiner. The existing project involves a run-of-river mode with an average annual generation of 5,430 megawatt-hours. The proposed revision concerns the year-round release of minimum flows of 10 cubic feet per second (cfs) and 52 cfs into project facilities and the construction and operation of an upstream passage facility for American eel. The commission seeks comments concerning Scoping Document 1 that includes the information to be addressed in the environmental assessment. Comments are due Sept, 7, 2017. Contact: John Baummer; FERC; 202-502-6837; john.baummer@ferc.gov

HAZARDOUS MATERIALS TRANSPORTATION
Department of State International Maritime Organization Meeting
HAZARDOUS MATERIALS TRANSPORTATION

Notice of the State Department announces a meeting to prepare for the fourth session of the International Maritime Organization (IMO) Subcommittee on Carriage of Cargoes and Containers, to be held Sept. 11-15, 2017, in London. The meeting agenda includes discussions regarding other IMO body decisions; amendments to and interpretations of various codes, regulations, and conventions; and consideration of reports of incidents involving dangerous goods or marine pollutants in packaged form on board ships or in port areas. The agenda also includes discussions regarding the development of guidelines for low-flashpoint fuels and the suitability of high-manganese austenitic steel for cryogenic service. The meeting is scheduled for Aug. 30, 2017, in Washington, D.C., and via teleconference. Contact: Amy Parker; U.S. Coast Guard; 202-372-1423; Amy.M.Parker@uscg.mil

OCCUPATIONAL SAFETY AND HEALTH
NIOSH Board of Scientific Counselors Meeting
OCCUPATIONAL SAFETY AND HEALTH

Notice of the National Institute for Occupational Safety and Health announces a meeting of the Board of Scientific Counselors. The agenda addresses occupational safety and health issues concerning stockpiled surgical gowns and respirators, the increased use and complexity of robots, NIOSH's disaster science responder research, and fentanyl exposures to emergency responders. The meeting is scheduled for Sept. 26, 2017, in Washington, D.C., and via teleconference and via webcast. Comments are due Sept. 26, 2017. Contact: Alberto Garcia; NIOSH; 413-841-4596

82 FR 37858 (08/14/2017)

Regulatory Update

RADIATION
Louisiana/Entergy River Bend Station Unit 1
RADIATION

Notice of the NRC announces the receipt of a license renewal application from Entergy Operations Inc., of Jackson, Miss., for continued operation of the River Bend Station, Unit 1, boiling-water reactor located in St. Francisville, La. The applicant requests authorization to operate the unit for an additional 20 years beyond the current license expiration date of Aug. 29, 2025. The NRC will prepare an environmental impact statement as a supplement to the generic environmental impact statement for license renewal of nuclear power plants (NUREG-1437). Meetings will be announced at a later date. Hearing requests and petitions to intervene are due Oct. 13, 2017. Contact: Emmanuel Sayoc; NRC, Office of Nuclear Reactor Regulation; 301-415-4084; Emmanuel.Sayoc@nrc.gov. Citations: 10 CFR 51

TOXIC SUBSTANCES
Scientific Advisory Committee on Alternative Toxicological Methods Meeting
TOXIC SUBSTANCES

Notice of the NIH announces a meeting of the Scientific Advisory Committee on Alternative

Toxicological Methods. The committee advises the Interagency Coordinating Committee on the Validation of Alternative Methods (ICCVAM), the National Toxicology Program (NTP) Interagency Center for the Evaluation of Alternative Toxicological Methods, and the director of the National Institute of Environmental Health Sciences and NTP. The agenda will include a discussion of the U.S. strategic roadmap for implementation of new approaches to safety evaluation and ICCVAM activities related to the development and implementation of alternative methods. The preliminary agenda, a roster of committee members, and background materials will be available by Aug. 15, 2017. The meeting is scheduled for Sept. 18-19, 2017, in Bethesda, Md., and via webcast. Comments are due Sept. 11, 2017. Contact: Mary Wolfe; NIH, Office of Liaison, Policy and Review; 919-541-7539; wolfe@niehs.nih.gov

82 FR 37885 (08/14/2017)

Regulatory Update

WATER
Texas/Lynx Terminals Liquefied Hazardous Gas Project
WATER

Notice of the U.S. Coast Guard announces the receipt of a letter of intent and preliminary waterways suitability assessment regarding a liquefied hazardous gas (LHG) terminal in Port Arthur, Texas, proposed by Lynx Terminals LLC. The project involves the handling and transportation of LHG at the Port Arthur docks and would increase LHG marine traffic on the Sabine-Neches Waterway. The USCG intends to task the Area Maritime Security Committee, Port Arthur, Texas, and the Southeast Texas Waterways Advisory Council with forming a subcommittee comprised of affected port users and stakeholders to assess the proposed project and potential impacts on navigational safety and maritime security. Comments are due Sept. 13, 2017. Contact: Loan O'Brien; USCG; 409-723-6564; Loan.T.O'Brien@uscg.mil. Citations: 33 CFR 127

Subject: Morning Energy, presented by ExxonMobil: Fireworks expected as White, Wheeler head to EPW — Democrats demand EPA officials testify — Reading the leaves on FERC comments

By Anthony Adragna | 11/08/2017 05:41 AM EDT

With help from Alex Guillén, Esther Whieldon, Darius Dixon and Eric Wolff

EPW TAKES UP WHEELER, WHITE NOMS: The Senate Environment and Public Works Committee will hear from two high-profile environmental nominees today: Andrew Wheeler for deputy EPA administrator and Kathleen Hartnett White to lead the White House's Council on Environmental Quality. White has a long history of controversial statements for Democrats to pull from, including her belief that "carbon dioxide is not a pollutant," her declaration that those who believe in climate change subscribe to a "kind of paganism " for "secular elites," and her 2014 blog post arguing fossil fuels helped end slavery in America.

But White's biggest liability may prove to be her position on the Renewable Fuel Standard. As ME wrote last week, Republican Sens. Deb Fischer and Joni Ernst are wary of White, who in 2013 called for repeal of the "counterproductive and ethically dubious" RFS. A single EPW defection could tank White's nomination, and Ernst proved last month with EPA air nominee William Wehrum that she's willing to walk the walk when defending ethanol.

Ranking member Tom Carper summed up his questions for White to ME: "I just want to ask her, 'Did you really say those things?' And there's a lot of them." Ahead of the hearing, nearly 50 environmental advocates sent a letter urging the committee to oppose her nomination. "Ms. White is unfit to hold the highest environmental post in the government to advise the president on the most pressing environmental issues our nation faces," the letter, signed by groups such as 350.org, the Natural Resources Defense Council and the Sierra Club, said.

More familiar face: Wheeler, meanwhile, is a known quantity for lawmakers who have been around for a while. He worked for Sen. Jim Inhofe in various capacities until 2009, when he departed as EPW staff director. He's been an attorney and lobbyist at Faegre Baker Daniels ever since, with his most notable client being Murray Energy, whose owner has proven adept at influencing the Trump administration. ME will be watching to see whether lawmakers delve into Wheeler's work with the ethanol group Growth Energy, which was first reported by POLITICO last month.

If you go: The hearing is at 10 a.m. in Dirksen 406.

BRIDENSTINE GETS COMMITTEE VOTE: The Senate Commerce Committee votes on Oklahoma Republican Rep. Jim Bridenstine's nomination to run NASA at 9:45 a.m. along with several other nominations. He's faced sharp criticism from Democrats, including ranking member Bill Nelson who slammed him in the nomination during his confirmation hearing: "NASA is not political. The leader should not be political." The panel also votes on Neil Jacobs' selection for another top NOAA post.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and the American Chemistry Council's Jonathan Corley was first to identify Sen. John Hoeven as the past president of North Dakota's state bank. For today: The father of which senator served three terms of governor of their state before corruption convictions ended their career? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

BIG NIGHT FOR DEMOCRATS: The League of Conservation Voters' $4 million investment in Virginia races paid off handsomely as Lt. Gov. Ralph Northam trounced Republican Ed Gillespie to become the commonwealth's next governor. In New Jersey, Democrat Phil Murphy (also backed by green groups) decisively beat Lt. Gov. Kim Guadagno for the governorship. In Flint, Mich., Mayor Karen Weaver survived a recall attempt by a wide margin. And Democrat Manka Dhingra appeared poised to win a Washington state Senate seat, effectively handing control of the entire state government to her party in a special election that drew millions in outside spending.

DEMOCRATS: IT'S TIME! More than 10 months after his confirmation, Senate and House Democrats are officially fed up with EPA Administrator Scott Pruitt's absence from congressional oversight hearings. After calling the lack of agency witnesses "unacceptable" during a Tuesday hearing, Energy and Commerce ranking member Frank Pallone demanded Chairman Greg Walden hold oversight hearings on EPA's review and management of chemicals under the revised Toxic Substances Control Act. "The Committee bears a responsibility to the American public to make sure EPA is protecting human health and the environment," he wrote, joined by senior committee Democrats Paul Tonko and Diana DeGette.

Not alone: All 16 Democrats on the House Science Committee sent their own letter to Chairman Lamar Smith demanding Pruitt come testify "as soon as possible," pointing out Gina McCarthy came before the full panel just four months after confirmation. "Not only is such oversight routine, but as a public official Administrator Pruitt has an obligation to address his conduct and management of EPA," they wrote.

And Carper too: "I wonder what my friend John Barrasso would have said if Gina McCarthy had refused to come before our committee for months? I wonder what my Republican EPW colleagues would have said if our committee hadn't held a single oversight hearing after a Democratic administration had issued multiple environmental executive orders and was the subject of several ongoing investigations? I heard them push for transparency for eight years, but suddenly there's silence over the last eight months."

TELL ME HOW YOU REALLY FEEL ABOUT THE DOE RULE (AGAIN!): Reply comments were due at FERC Tuesday night, and there was no less passion in this set of filings than in the first round two weeks ago. But ME was hard-pressed to see if anyone had really budged from their positions. FirstEnergy's comments started with a refrain that was almost poetic. "This proceeding is not about picking fuel supply winners and losers. This proceeding is not about the reliability of natural gas pipelines... This proceeding is not about the Polar Vortex...," former FERC general counsel Bill Scherman wrote on the company's behalf. Instead,

the company pressed for its own resiliency tariffs that would serve as a Band-Aid until new market rules were crafted. "Simply put, the imminent closure of resilient generation presents a clear and present danger to the Nation," Scherman wrote, echoing the call of Energy Secretary Rick Perry. "If the Commission does not act now, our national security will be put at risk."

Where FirstEnergy downplayed the usefulness of the 2014 "polar vortex," Murray Energy argued the critics just don't get it. "During the Polar Vortex, the country was relying on an unacceptably high percentage of interruptible gas-fired generation," the company said. There's been too much talk as it is, Murray said, and "FERC appears to have lost its moorings." Murray's filing even refers to an article by House Science Chairman Lamar Smith to tally how the federal government has repeatedly created energy subsidies with everything from tax policy to R&D funding.

Among those who tried to find middle ground was PJM itself, a critic and central target of Perry's plan, arguing that FERC should approve an alternative proposal that instructs all the grid operators to report back with new pricing or tariff proposals within 180 days. It also suggests creating a new docket aimed at defining resilience.

SOLAR FOR PUERTO RICO: The Solar Foundation, along with a host of companies and the Clinton Foundation, is launching an industry-wide push to get the lights back on in Puerto Rico and the U.S. Virgin Islands. Initial priorities will be restoring electricity to two food markets in San Juan and 62 rural medical clinics around the island. More on the project, Solar Saves Lives, available here.

** **Presented by ExxonMobil:** We're collaborating with FuelCell Energy on a novel idea to use fuel cells to capture carbon at natural gas power plants, and in the process reduce emissions and increase electrical output. This technology could be a game changer in addressing the world's growing need for energy, while also reducing the impact on the environment. Learn more. **

HYDROPOWER BILL STREAMS ONTO FLOOR: House lawmakers are expected today to consider H.R. 3043 (115), which would revamp the licensing process for hydropower projects. Ahead of the vote, utility and labor groups sent a letter encouraging support for what they called "a moderate proposal developed with bipartisan input" and warned "the current regulatory environment is placing hydropower at risk."

MODERATE CLIMATE REPUBLICAN HEADS FOR THE EXITS: South Jersey Republican Rep. Frank LoBiondo, one of the few congressional GOPers to land environmental group endorsements in recent years, will retire from Congress. With LoBiondo and Rep. Dave Reichert departing at the end of this Congress, Reps. Chris Smith and Leonard Lance will be the two remaining House Republicans that backed cap and trade legislation in 2009.

LET'S KICK AGAIN? Chatter's already getting louder that Congress may have to consider another kick-the-can extension of government funding by Dec. 8 to keep the lights on, but top Appropriators aren't throwing in the towel yet, Pro Budget & Appropriations Jennifer Scholtes and Sarah Ferris report. "So, hopefully, if we consider one, it will be very, very short," Appropriations Chairman Rodney Frelinghuysen told them. Others say it's too early to give up.

"I don't think we even need to be thinking about a CR," says Hal Rogers, who endured tough spending negotiations many times in his six years of chairing the House Appropriations panel.

TRUMP RELATIVE MOVES UP AT DOE: Kyle Yunaska, brother-in-law to Eric Trump, seems to be climbing the ladder at the Energy Department's Energy Policy and Systems Analysis office recently, adding the title of chief of staff to his resume, in addition to his senior adviser role. A DOE source told ME that Sean Cunningham, the head of EPSA, made the announcement in a staff email last week. Yunaska joined DOE early this year as a member of the "beachhead" team. His sister, Lara, married the president's son in 2014. (Greenwire first reported the move.)

ZINKE HIRES FORMER NAVY SEALS TO KEY ROLES: Interior Secretary Ryan Zinke has hired former Navy Seal Mike Argo as deputy chief of staff and former SEAL Captain Rick May to head up the agency's focus on increasing recreation opportunities on public land. Speaking at a webcast honoring veterans event in Interior's Washington headquarters, Zinke, who is himself a former SEAL, said "we're bringing recreation back."

MARKING ON UP: Nine bills are on the House Natural Resources Committee mark up agenda today, but most of the attention will be on the SECURE American Energy Act H.R. 4239 (115). Among other provisions, the bill would give more oil and gas permitting power to the states, create an offshore oil and gas revenue program for East Coast drilling and roll back Obama-era offshore drilling rules. ME hears the measure may be fast-tracked to the floor as quickly as next week. Also of note: H.R. 2907 (115) from Rep. Scott Tipton, which would require an all-of-the-above quadrennial federal onshore energy production strategy.

PANELS LOOKS AT GEOENGINEERING LATEST: Two House Science subcommittees today take a look at the latest technologies and possibilities concerning geoengineering, in which humans attempt to alter the worldwide climate system in effort to avoid human-caused climate change. The committee will hear from experts on reducing the total sunlight hitting the earth and pulling carbon from atmosphere. But ahead of the session, nearly two dozen leading proponents warn the committee in a letter that geoengineering should not be viewed as a substitute for swift action to curb greenhouse gases that are fueling climate change. "Geoengineering is not a silver bullet, and treating it as one could greatly increase already severe climate change risks," they wrote. The hearing kicks off at 10 a.m. in Rayburn 2318.

MAIL CALL! DON'T EXPAND CCS CREDITS: More than 40 environmental groups released a letter Tuesday urging lawmakers not to include an expansion and extension of the Section 45Q tax credit for carbon capture and sequestration in an emerging tax package. A second letter warned efforts to subsidize CCS technologies are "false solutions" to climate change and impose significant burdens on communities on the front lines.

CHANGE COURSE! Sixty-two members of Congress, led by Rep. Bill Foster, asked Pruitt to reverse a policy instituted last week barring any scientists receiving agency funds from serving on scientific advisory boards. Letter here.

NOT TO BE LEFT OUT: Representatives from the hydropower, biomass power, waste-to-energy and biogas industries sent a letter to the top Republican tax writers asking them to

"provide parity and a level playing field for all renewable energy technologies" as they work on the tax package. HR1 "would extend the same tax treatment to fiber-optic solar energy, fuel cells and small wind energy property that is afforded solar technology under current law," they write. "However, the bill fails to provide equal treatment for hydropower, biomass power, waste-to-energy and biogas."

COMMERCE SET TO DO ITS BIODIESEL DUTY: The Commerce Department is expected to announce a final decision on its countervailing duties and anti-dumping cases against Argentine and Indonesian imports of biodiesel. Commerce has already started collecting the duty after making a preliminary determination that both countries were undercutting U.S. biodiesel.

EPA SEEKS REMAND OF PARTS OF COAL ASH RULE AHEAD OF ARGUMENTS: EPA on Tuesday asked the D.C. Circuit Court of Appeals to remand key parts of the coal ash rule to the agency for reconsideration ahead of Nov. 20 oral arguments that could see the case put on ice. The court in September said it would not put the case on hold indefinitely while EPA reconsiders the rule, though it did order attorneys for all sides to be prepared to discuss abeyance at arguments. In a new motion, EPA asks that five specific parts of the rule be remanded without being vacated, meaning they would remain in place while EPA reworks them. Because it is reconsidering the rule, EPA argued, its attorneys "will likely be unable to represent EPA's present position on these issues at oral argument."

Four of the provisions are related to challenges brought by industry groups: rules for temporary coal ash piles; EPA's rules for inactive ponds; a lack of a risk-based compliance option; and a provision dealing with large piles of coal ash intended for "beneficial use" in products like wallboard. The fifth provision, dealing with regulation of legacy ponds, was raised by environmental groups. The industry challengers had no problem with the remand request, but greens plan to object to their provision being remanded.

APPROVED: The California State Water Resources Control Board green lighted a 10-year plan for adding new wildlife habitat and curbing toxic dust from the Salton Sea lake in Southern California, Pro's Esther Whieldon reports.

PERRY SPEAKS... ON TAX OVERHAUL: Even as he attends meetings this week in Paris, Energy Secretary Rick Perry released an op-ed in Syracuse, N.Y.'s local paper Tuesday strongly backing Republican tax overhaul efforts. "Americans deserve a low tax climate and responsible regulation to spur the economic and energy revolution we have been waiting for," the former Texas governor wrote.

NOT MINCING WORDS: Actor Alec Baldwin didn't hold back on his dislike of Pruitt during an interview with *Entertainment Weekly*. "He's done more damage to one department than anyone in American history," Baldwin, who plays Trump on SNL, said. "It's like being in a vegetarian restaurant and the chef decides he's only gonna cook steak, to insist everyone eat a meal that's abhorrent to them."

EPA deputy nominee Wheeler represented ethanol group Back

By Alex Guillén | 10/18/2017 03:47 PM EDT

Andrew Wheeler, the nominee for EPA deputy administrator, worked for the ethanol group Growth Energy this year, according to his financial disclosure documents.

Wheeler, an attorney at Faegre Baker Daniels, was previously known to lobby for coal producer Murray Energy, among several other companies, as revealed in lobbying disclosures. But his financial disclosure shows Wheeler provided "strategic advice and counseling" rather than lobbying services to Growth Energy.

Growth Energy hired FBD for lobbying earlier this year, according to records, but Wheeler was never named on those disclosures.

"We hired Faegre Baker Daniels for lobbying and consultant help on renewable fuels issues. Andrew Wheeler has not lobbied on our behalf but has provided consultant services," Growth Energy spokeswoman Jenni Roberson said in an email. Wheeler did not return a request for comment today.

Growth Energy was one of the groups that successfully sued EPA over its 2014-2016 Renewable Fuel Standard volumes. It has also opposed EPA Administrator Scott Pruitt's recent move to potentially weaken biodiesel requirements, a proposal that has angered several key corn state Republican senators and threatened to hold up several other EPA nominees.

The financial disclosure shows Wheeler also provided advice and counsel, but not lobbying work, to International Paper, Archer Daniels Midland and General Mills. Previously reported lobbying clients included Xcel Energy, Bear Head LNG and Energy Fuels Resources.

WHAT'S NEXT: Wheeler was nominated earlier this month and has yet to have a nomination hearing in the Senate.

Northam beats Gillespie in Virginia governor's race Back

By Gabriel Debenedetti | 11/07/2017 05:59 PM EDT

Democrat Ralph Northam was elected governor of Virginia on Tuesday in a sweeping victory that defied the conventional wisdom of a tightening race.

The lieutenant governor's victory joins Democrat Phil Murphy's win in New Jersey's gubernatorial race to hand Democrats new hope in the Donald Trump era.

After a bruising race against former Republican National Committee chairman Ed Gillespie, Northam outran Hillary Clinton in a state she carried by 5 points while losing the presidency in November 2016. A series of late-campaign controversies hitting Northam had Republicans cautiously optimistic that Gillespie could close the gap and pull off an upset, but Democrats rode a wave of anti-Trump backlash and satisfaction with outgoing Gov. Terry McAuliffe's administration.

"It was said that the eyes of the nation are now on the commonwealth," Northam said in his victory speech. "Today, Virginians have answered and spoken. Virginians have told us to end the divisiveness, that we will not condone hatred and bigotry, and to end the politics that have torn this country apart."

Murphy, a former U.S. ambassador, defeated Kim Guadagno, New Jersey's lieutenant governor, to replace unpopular Republican Gov. Chris Christie. Murphy led the race from the start by double digits.

The pair of off-year governors races is traditionally read as a bellwether for the next year's midterm elections, but this year the results — particularly in Virginia — are also likely to be read as referenda on the state of each party's national well-being in the age of Trump.

Democrats had eyed the race nervously, as an opportunity to both demonstrate political momentum and help the party dig out from a historic low in terms of governorships. Democrats currently have just 15 compared to Republicans' 34 (Alaska Gov. Bill Walker is an independent), so party officials had for months seen flipping the New Jersey seat and retaining Virginia's as top priorities. Come January, they will hold 16.

"This was a vote for an inclusive Virginia," said former Rep. Tom Perriello, who lost to Northam in the primary but went on to endorse him and help lead his party's charge in the House of Delegates, where Democrats on Tuesday elected the first Latina members of the House of Delegates and a transgender candidate. "Gillespie went all-in on an identity politics agenda, and we rejected it."

Near tears with excitement, Perriello sounded a bullish note on his party's future.

"We're seeing the Prop 187 of Virginia, and probably of America," he said, referring to the famous California ballot proposition targeting illegal immigration that helped Republicans win in 1994 but has been credited with turning state voters against the Republican Party ever since.

Gillespie sought to strike a balance between engaging moderates with talk of jobs and taxes and firing up his base by running ads on illegal immigration and sanctuary cities — which don't exist in Virginia — and cultural touchstones like Confederate monuments and NFL anthem protests. Gillespie did not initially home in on those subjects, but they became a bigger part of his

campaign after he nearly lost the June Republican primary to Trump's former Virginia campaign chairman.

Trump, who tweeted in support of Gillespie before the election, quickly turned on him after the race was called.

"Ed Gillespie worked hard but did not embrace me or what I stand for," Trump tweeted, before referencing Republican special election wins earlier this year. "Don't forget, Republicans won 4 out of 4 House seats, and with the economy doing record numbers, we will continue to win, even bigger than before!"

Democratic turnout in Virginia's primary skyrocketed from previous years' levels. Party leaders including former President Barack Obama and Vice President Joe Biden swooped into the state to back Northam in the final month.

"The initial goal was for Democrats to nationalize the race and make it about the president; our initial goal was to localize the race and make it about Virginia," Virginia Republican Party chairman John Whitbeck said before Tuesday's vote. "If we win, it will say that a mainstream conservative like Ed Gillespie can win in an era of uncertainty. What it says about the Democrats is they have a lot of soul-searching to do: I don't think they know what their message is, their agenda is."

Though Trump loomed over the race, Gillespie did not actually appear with him in Virginia — the first time in years a sitting president did not cross the Potomac River to campaign in the governor's race. "Ralph Northam will allow crime to be rampant in Virginia. He's weak on crime, weak on our GREAT VETS, Anti-Second Amendment and has been horrible on Virginia economy," Trump tweeted during his Asia trip on Tuesday. Gillespie appeared multiple times with Vice President Mike Pence, who is more popular among conservatives and perceived as less likely to fire up Democrats who can't stand the president.

In New Jersey, Murphy was heavily favored in large part because of the unpopularity of Christie. Guadagno, Christie's deputy, tried tacking away from Christie, but the former presidential candidate's abysmal 14 percent approval rating — according to a late October Suffolk poll — proved to be a serious drag on his hoped-for successor.

While Guadagno tried tarnishing Murphy's image by painting him in ads as soft on illegal immigration, Murphy — a former Goldman Sachs executive and Democratic National Committee finance chairman — relied heavily on support from local and national-level Democrats to pad his comfortable margin.

In Virginia, Democrats also aimed to peel back the GOP advantage in the state legislature. The party hopes that Northam's win, combined with continued down-ballot gains, will put Democrats in position to exert more influence over the next round of political map-drawing in Virginia at the end of this decade.

Democrats also won the closely watched mayoral races in Manchester, New Hampshire, and St.

Petersburg, Florida.

LoBiondo to retire from Congress Back

By Elena Schneider | 11/07/2017 02:51 PM EDT

New Jersey Rep. Frank LoBiondo, a senior Republican on the Armed Services Committee, will not run for reelection in 2018, he announced Tuesday.

LoBiondo cited committee term-limits for his departure, but the 12-term incumbent also took parting shots at partisan gridlock in Congress.

"There is no longer middle ground to honestly debate issues and put forward solutions," LoBiondo said in a statement. "... Those of us who came to Congress to change Washington for the better through good governance are now the outliers. In legislating, we previously fought against allowing the perfect to become the enemy of the good. Today a vocal and obstinate minority within both parties has hijacked good legislation in pursuit of no legislation.

LoBiondo said that his decision isn't "electoral" and that he was "very confident voters would again reelect me" in 2018 had he decided to run for reelection.

The decision opens a battleground district in southern New Jersey that LoBiondo has held easily since 1994. New Jersey's 2nd District backed President Donald Trump with 50.6 percent of the vote to Hillary Clinton's 46 percent in 2016. But former President Barack Obama also won the seat twice with between 53 and 54 percent of the vote.

Harry Hurley, a New Jersey talk radio host, first reported the news of LoBiondo's retirement.

LoBiondo raised $117,000 in the last fundraising quarter, among the lowest totals reported by House Republican incumbents, sparking speculation that he would retire instead of running for reelection. Though the district has 147,000 registered Democrats to 132,000 registered Republicans, LoBiondo has managed to easily and consistently win reelection thanks in part to strong labor ties.

National Democrats have actively recruited state Sen. Jeff Van Drew, a conservative-leaning Democrat, in years past, but he's declined to run. Democrat Tanzie Youngblood, a retired teacher, already launched her bid to challenge LoBiondo in July. Democrats also floated retired judge Ray Batten as a potential candidate for the district.

Republican operatives in the state floated two potential GOP candidates to replace LoBiondo: State Assemblyman Chris Brown, who's on the ballot for a state Senate seat on Tuesday, and

former Atlantic County Sheriff Frank Balles.

LoBiondo's retirement adds another major opportunity for Democrats to pick up a House seat in New Jersey. Already, two normally well-entrenched New Jersey GOP incumbents in the northern half of the state, Rodney Frelinghuysen and Leonard Lance, have attracted several credible Democratic challengers who are raising substantial amounts of campaign cash.

LoBiondo, a member of the moderate Tuesday Group caucus, is the latest in a string of what Rep. Charlie Dent (R-Pa.) called "governing-wing" Republicans who have opted against running for reelection in 2018. Dent, Florida Rep. Ileana Ros-Lehtinen, Washington Rep. Dave Reichert and Michigan Rep. Dave Trott have all announced their plans for retirement.

Matt Friedman, Jake Sherman and Alex Isenstadt contributed to this report.

Pruitt to reconsider parts of 2015 coal ash rule Back

By Alex Guillén | 09/14/2017 04:15 PM EDT

EPA will reconsider key portions of the 2015 coal ash rule, according to a letter from Administrator Scott Pruitt to industry officials released by Earthjustice.

Two petitions were filed in May by AES Puerto Rico and the Utility Solid Waste Activities Group, an umbrella group whose members include the Edison Electric Institute, National Rural Electric Cooperative Association, American Public Power Association and more than a hundred utilities and related companies.

Pruitt's letter does not specify which parts of the rule he plans to reconsider, but both USWAG and AES identified specific issues with the regulation.

USWAG's petition asked that pending deadlines be pushed back and called for the rule to be changed in the wake of a December 2016 law changing the enforcement scheme in order to accommodate new management options based on site-specific risk analyses rather than the original "burdensome, inflexible, and often impracticable requirements." USWAG also argued that various executive orders from President Donald Trump dealing with regulations justify cracking the rule open.

AES' petition focused on requirements for how power plants store their coal ash piles before they are moved off site to be disposed of or to make products such as concrete and wallboard.

Oral arguments at the D.C. Circuit Court of Appeals over the rule are currently scheduled for Oct. 17, but EPA is likely to ask the case be put on hold while it reconsiders the rule.

WHAT'S NEXT: Pruitt will initiate a formal reconsideration process. Any actual changes to the rule will have to go through public comment and will be open to legal challenge.

Court delays coal ash arguments to November Back

By Alex Guillén | 09/27/2017 04:54 PM EDT

The D.C. Circuit Court of Appeals today granted a one-month delay in arguments over EPA's 2015 coal ash rule following Administrator Scott Pruitt's decision to reconsider key parts of the regulation.

Arguments had been scheduled for Oct. 17, but a three-judge panel ordered them delayed until Nov. 20.

The judges ordered EPA to reveal by Nov. 15 which portions of the rule will be reconsidered "and setting forth with specificity the timeline for reconsideration." In addition, all sides, including industry and environmental challengers, are supposed to file new briefs by Oct. 11 addressing whether the new state-based coal ash permitting program that passed Congress as part of the Water Infrastructure Improvements for the Nation Act at the end of 2016 affect the broader lawsuit at all. And the court told attorneys to be ready at arguments to discuss whether a longer delay in the lawsuit is appropriate, opening up the possibility of further delay.

The court set 90 minutes' worth of arguments in total, split into four sections: Three dealing with various legal and technical challenges to the rule and one on whether the case should be delayed longer.

The case will be heard by Judges Karen LeCraft Henderson, a George H.W. Bush appointee, and two Obama appointees, Judges Patricia Millett and Cornelia Pillard.

WHAT'S NEXT: The parties must submit briefs regarding the permitting program by Oct. 11. Oral argument is scheduled for Nov. 20.

California board approves 10-year Salton Sea water mitigation plan Back

By Esther Whieldon | 11/07/2017 06:31 PM EDT

The California State Water Resources Control Board today approved the state's 10-year plan for adding new wildlife habitat and curbing toxic dust from the Salton Sea lake in Southern California.

The plan addresses expectations the 350-square-mile lake will shrink by one-third as the Imperial Irrigation District, other water users and states continue cutting back on water usage amid diminishing Colorado River supplies.

The lake is an ecological haven for migratory birds, but its receding shoreline is polluted with chemicals from farming irrigation drainage, and the resulting dust from the dry lake bed has caused asthma problems in nearby communities.

The plan is also key to Imperial agreeing to a voluntary water conservation compact among lower Colorado River basin states to preserve water levels at Lake Mead, the river's most important reservoir. Under a deal that expires this year, Imperial has been putting extra water into the Salton Sea in exchange for the state's pledge to install mitigation projects — a commitment California has failed to meet. Imperial has been reluctant to agree to further water cuts without assurances the state will actually act.

The plan outlines the state acreage goals for habitat creation and dust suppression, requires it to come up with a long-term mitigation plan for the Salton Sea by 2022, and would have board staff create a correction plan if the state falls more than 20 percent short of any annual goal.

WHAT'S NEXT: Californians will vote on a ballot measure in June 2018 to issue $200 million in bonds for Salton Sea projects.

Long-Awaited EPA Lead Pipe Rule Could Be Pushed Back Again

By *David Schultz*

The long-awaited revamp of the EPA's lead pipe regulations may be delayed once again, despite an urgency surrounding the issue following the Flint, Mich., lead water contamination crisis that began in 2014.

Longer, Costlier Legal Battles Ahead as EPA Vows No Settling

By *Jennifer Lu*

EPA Administer Scott Pruitt's refusal to settle environmental lawsuits means longer and more expensive legal battles, legal observers say.

Practitioner Insights

Practitioner Insights: California Tackles Climate Change

California has pledged to continue its climate change efforts after President Donald Trump announced the U.S. would withdraw from the international Paris climate change agreement. In this article Shannon S. Broome and Clare Ellis of Hunton & Williams LLP explore the steps the state has already taken and legal

limitations on California's ability to go further.

Today's News

Houston Tries to Hold the Line Against Future

Flooding

By *Nushin Huq*

Houston is grappling with how to ready itself for more frequent and powerful storms as it cleans up from its third 500-year flood in the last several years. But preparing for the next storm will prove complicated for a pro-growth region reliant on property taxes and where tying policies to a changing climate is shunned.

Energy Plan Wrong Way to Prop Up Nuclear Plants, Moniz Says

By *Rebecca Kern*

The federal government is responsible for driving investment in the U.S. nuclear energy industry to ensure national security, not state or regional market operators, as has been proposed by the Energy Department, former Energy Secretary Ernest Moniz said today.

Trump Tells EPA to Halt Ethanol Quota Changes Amid Iowa Uproar

By *Ari Natter, Jennifer A. Dlouhy* and *Jennifer Jacobs*

White House officials have directed the Environmental Protection Agency to stand down on efforts to weaken a federal biofuel mandate after pressure from Iowa politicians seeking to preserve demand for corn and soy, said people familiar with the decision.

Republicans May Use Budget to Open Arctic, Atlantic to Oil Rigs

By Ari Natter and Jennifer A. Dlouhy

Congressional Republicans have found a way to use the federal budget to open the Arctic National Wildlife Refuge to oil drilling—and they don't plan on stopping there.

Water Utilities Could Face More Liability, Permit Costs

By *Amena H. Saiyid*

Wastewater utilities, and potentially homeowners, could face greater liability if federal courts rule pollutants seeping into the Pacific Ocean or Long Island Sound through groundwater should be regulated under the Clean Water Act.

Costs of Closing NJ Landfill Not Recoverable Under Superfund

By *Peter Hayes*

A company that entered into an agreement to close a landfill and construct a solar farm on the site can't recover its closure costs under the Superfund law, the U.S. District Court for the District of New Jersey said.

States Go Head to Head in Rare 'Original Jurisdiction' Cases

By *Kimberly Strawbridge Robinson*

The U.S. Supreme Court's original jurisdiction cases—that is, the cases the court hears without any lower court litigation—are few and far between. But this term

the court is set to *hear two* : Texas v. New Mexico and Florida v. Georgia .

America's Miners Are Digging for Hotter Coals as Old Plants Shut

By Emma Ockerman and Tim Loh

Early next year, three massive coal-fired power plants in Texas will close for

good. And their absence will be felt 1,000 miles away in the coal pits of Wyoming and Montana.

World's First Floating Offshore Wind Farm Begins

Operating

By Anna Hirtenstein

The world's first floating offshore wind farm started delivering electricity to the grid in the north of Scotland.

Fiji Set to Issue Green Bonds to Reach 100% Clean Energy Target

By Jessica Shankleman

Fiji, the Pacific island nation that's presiding over global climate talks this year, will issue green bonds valued at 100 million Fijian dollars ($49 million) to help it reach a target of getting all of its energy from renewables.

BP's Oilfield Cleanup Plan Ruled Properly Rejected

By *Steven M. Sellers*

An oilfield contamination cleanup plan proposed by BP Products North America Inc. and other companies was properly rejected by a trial court as inadequate, a Louisiana appeals court ruled Oct. 18.

Tuesday Night Wrapup

Flood Insurance Program May Be Reauthorized in Third Supplemental

By *Brandon Ross*

The National Flood Insurance Program may be reauthorized in a third disaster aid supplemental, Sen. Mike Crapo (R-Idaho), Senate Banking Committee chairman, told reporters Oct. 17.

Democrats Urge Energy Regulator to Reject Pro-Coal Proposal

By *Rebecca Kern*

Sen. Maria Cantwell (D-Wash.) is pressing the Federal Energy Regulatory Commission to reject an Energy Department proposal aimed at propping up coal and nuclear plants in certain competitive energy markets, saying it's ultimately bad for consumers.

Australian Prime Minister's Clean Energy Plan Draws Criticism

By *Murray Griffin*

Australian Prime Minister Malcolm Turnbull calls his new energy policy a "game changer," but his plan is drawing criticism from environmentalists and some industries and faces an uphill battle.

Conservation Program Would Get Boost Under Senate Bill

By *Teaganne Finn*

The existing Regional Conservation Partnership Program would receive more funds and flexible resources to expand projects under a bipartisan bill introduced by members of the Senate Agriculture Committee.

Next Farm Bill May Include Revamp of Sodsaver

Provisions

By *Teaganne Finn*

A federal program designed to protect native grasslands may be added to the 2018 farm bill. It would expand to all 50 states and close what supporters characterize as a loophole in the existing statue giving farmers a crop insurance incentive to break native sod.

Energy Regulator Wants Faster Review of Gas Pipelines

By *Rebecca Kern*

The head of the Federal Energy Regulatory Commission wants to speed up natural gas pipeline certificate reviews, but said he disagrees with another commissioner's suggestion to rely less on existing pipeline contracts.

Most Companies' Financial Reports Don't Mention Climate Risks

By *Andrea Vittorio*

Almost three-quarters of companies worldwide don't include in annual financial reports the risks that climate change could pose to their business, according to new *research* from KPMG International.

With Brazil Ban Looming, Carbofuran Maker Shifts to Alternative Pesticides

By *Adam Allington*

The U.S. maker of the insecticide Furadan says it had been expecting its product would be banned in Brazil even before that country announced a six-month phaseout.

Climate Reports May Slow Trump's Push to Undo Obama-Era Rules

Posted August 09, 2017, 7:29 A.M. ET

By Christopher Flavelle and Brian K. Sullivan

A pair of highly anticipated government studies, one of them due to be released this week, could complicate President Donald Trump's effort to roll back federal climate regulations, according to people on both sides of the debate over global warming.

A National Oceanic and Atmospheric Administration-backed report summarizing the global effects of climate change in 2016 is scheduled for release Aug. 10. Its conclusion will be similar to previous years' versions, according to people familiar with the report: Climate change is real, it's man-made and it's dangerous.

That report dovetails with a broader National Climate Assessment, which is due next year from the administration. Drafts of the study, compiled by scientists from across the federal government, show that the effects of climate change in the U.S. are severe.

Both reports are at odds with Trump's contention that climate change is a "hoax" and may hinder his moves to undo President Barack Obama's efforts to address the issue, analysts say. Revoking Obama's rules requires agencies to give a legally sound justification for the policy pivots—such as arguing they are no longer necessary.

David Schnare, who worked on Trump's transition team at the Environmental Protection Agency and then advised EPA Administrator Scott Pruitt, said that both reports will make it harder for the agency to reverse the Obama administration's limits on carbon dioxide emissions from power plants, as well as the broader policy that defines those emissions as a danger to the public, called an endangerment finding.

"If the NCA comes out with an unflattering report on carbon dioxide, the only way EPA can change its endangerment finding is to reexamine all that science, and have a reasonable basis for rejecting" it, said Schnare, who left EPA in March. Once those reports become public, "it's hard to dodge," he said.

Opponents of Trump's climate policies agreed that the reports could slow his administration's repeal of Obama-era regulations.

"It will make it harder for them to justify," said David Hawkins, director of climate programs for the Natural Resources Defense Council. "It's yet another document that weighs against whatever claims Trump political appointees attempt to make about the state of the science."

The Aug. 10 report, which was written by more than 450 scientists in the U.S. and abroad, will show that ice levels in Antarctica have set a record low, according to Keith Seitter, executive director of the American Meteorological Society. Antarctic ice levels had previously been increasing, a point highlighted by those who say climate change is a hoax.

The study will be released in the group's Bulletin of the American Meteorological Society.

Otherwise, the report doesn't contain many surprises, according to Seitter—because the public has become accustomed to continually breaking temperature records. On Aug. 8, NOAA reported that 2017 is so far the second-warmest year to date.

"As a standard practice, NOAA does not discuss leaked or draft reports," said Brady Phillips, a spokesman for the agency.

NOAA's willingness to publicize data about the threat of climate change presents a stark contrast with other agencies. The EPA has removed information about climate change from its website; Pruitt has said human activity isn't the primary contributor to global warming, as has Secretary of Energy Rick Perry. And the Interior Department reassigned dozens of employees, including one scientist who said his transfer to an office processing revenue was in retaliation "for speaking out publicly about the dangers that climate change poses to Alaska Native communities."

An Interior spokeswoman declined to discuss specific personnel matters among the senior executive service and said the reassignments "are being conducted to better serve the taxpayer and the department's operations." The EPA didn't respond to a request for comment.

The difference, according to Schnare, reflects the fact that the Trump administration has yet to assign political appointees to NOAA, which has left the agency—a division of the Department of Commerce—with an unusual degree of independence. Nor has the administration filled key climate positions at the White House; the Office of Science and Technology Policy still has no confirmed director, preventing it from aligning policy across federal agencies.

"This administration has simply not gotten its coordinating process together," said Schnare. Ross Gillfillan, a spokesman for the science office, declined to comment.

National Assessment

A test of that coordinating process will be the National Climate Assessment, which the White House is required by Congress to release every four years. The last report, in 2014, concluded that average global temperatures had increased more than 1.5 degrees Fahrenheit (0.8 Celsius) since 1880, and predicted as much as four feet of sea-level rise by 2100. A draft version of the 2018 report projects temperatures in the U.S. will rise as much as 12 degrees if emissions aren't reduced. The New York Times reported Aug. 8 that scientists involved were worried the Trump administration would suppress that study.

"The White House will withhold comment on any draft report before its scheduled release date," White House spokeswoman Sarah Sanders said in a statement referring to the New York Times story.

Hawkins, of the Natural Resources Defense Council, said the administration could in theory try to stop publication of the final report, which must be approved by 13 federal agencies; it could even go so far as to reassign or fire the scientists working on it. But, he added, those strategies are unlikely to do much good.

"Now that the current draft report is public knowledge, firing people isn't going to undermine the validity of what's written down," Hawkins said. "They can't prevent the understanding of the science anymore than Canute could hold back the seas."

National Grid Modernization Plan May Get Massachusetts Approval

Posted August 09, 2017, 02:38 P.M. ET

By Adrianne Appel

National Grid expects to receive approval from Massachusetts in January on its plan to dramatically change electricity service for customers under a broad grid-modernization plan.

In June 2014, Massachusetts asked major electric suppliers Eversource Energy, National Grid and Unitil Corp. to submit blueprints to modernize their portions of the state's 60-year-old electric grid.

National Grid's plan would give customers real-time data each day about when it would be cheapest to run appliances and cool homes and businesses, Marcy Reed, president of National Grid in Massachusetts, said. The company also would make it easier for wind, solar and other renewable energy to deliver power to the grid.

The upgrades would cause monthly electric rates to rise, though the company estimates customers would save in the long run, Reed told Bloomberg BNA Aug. 8, after addressing state lawmakers attending a national meeting in Boston.

"The benefits will outweigh the costs," she said.

In Eclipse, Natural Gas Sees Its Future as Solar's Backstop

Posted August 09, 2017, 11:23 A.M. ET

By Christopher Martin, Mark Chediak and Naureen S. Malik

Natural gas is about to get a glimpse of its future role in the U.S. power mix as solar energy's backup.

During the upcoming Aug. 21 eclipse, operators of giant solar fields from California to the Carolinas will rely on power from fast-start natural gas generators as well as hydroelectric plants and other sources to fill the gaps as the sky darkens. The celestial event will provide owners of gas turbines a chance to shine even as the fossil fuel is expected to be displaced over time by solar and wind energy.

The eclipse comes as the U.S. power grid undergoes a transformation that will bring increasing amounts of flexible resources needed to complement growing supplies of solar and wind energy. Solar installations have grown ninefold since 2012 and renewable sources are forecast to supply just as much of America's electricity demand as gas by 2040, according to Bloomberg New Energy Finance.

The "electric grid of tomorrow" will increasingly have to deal with fluctuating power supplies from the wind and sun while incorporating quick-start gas turbines during events like the upcoming eclipse, said Stephen Berberich, president of California ISO, the state's grid operator. Operators will also use new technologies to control demand when the moon will completely block the sun along a 70-mile-wide (113-kilometer) corridor stretching from Oregon to South Carolina.

The eclipse, in which the moon will completely obscure the sun, will cast a shadow along a 70-mile-wide (113-kilometer) corridor stretching from Oregon to South Carolina. Based on a Bloomberg calculation of grid forecasts, more than 9,000 megawatts of solar power may go down. That's the equivalent of about nine nuclear reactors.

To help keep the lights on, the California Independent System Operator will tap the state's network of gas generators and hydroelectric dams to make up for the loss of about 6 gigawatts of solar output over two hours as the sun is obscured by the moon. Duke Energy Corp. said it will utilize gas generators in North Carolina, the biggest solar state after California, to make up for output that is expected to sink 92 percent to about 200 megawatts in 90 minutes.

Reliability Issues Not Foreseen

The North American Electric Reliability Corporation doesn't foresee any reliability issues as grid operators have been planning for the eclipse for months.

"Given that the timing and path of the eclipse are well understood and well reflected in solar generation forecasts by CAISO and other grid operators, generation dispatch or curtailment would be managed as a part of routine operations," said Steve Krum, a spokesman for First Solar Inc., the largest operator of solar plants in the U.S.

AutoGrid Systems Inc. says some utilities will be using its software systems to shut off unnecessary appliances during the height of the eclipse, and bring them on slowly as solar power returns, said Adam Todorski, a director of product technology for the Palo Alto, California-based company.

Shedding Demand

"It's a lot like a planned outage; you know it's coming," Todorski said. "You can get hundreds of megawatts by shedding things like water heaters and pool pumps, and heat pumps."

The California Solar Energy Industries Association is asking residents to "pledge" to turn off lights, unplug microwaves and dial back air conditioners in order to reduce the need for the state to use gas plants and to limit carbon emissions.

Demand for gas is forecast to stop growing by 2040 as new technologies such as battery storage ramp up to provide backup for wind and solar, according to Bloomberg New Energy Finance.

During a March, 2015 eclipse that crossed Europe, German grid operator TenneT TSO GmbH

brought on 8 gigawatts of generating capacity to compensate for the loss of solar power as the sun disappeared, double the usual amount. It also kept hydropower plants that can store energy on standby and coordinated its flows with neighboring grid operators.

Power prices in Germany's wholesale market surged then dipped for a short time as the first eclipse of the emerging solar age passed, briefly switched off thousands of panels that on the brightest days provide 40 percent of Germany's power.

Samarco Executives' Homicide Charges Suspended in Brazil Spill

Posted August 09, 2017, 02:48 P.M. ET

By Michael Kepp

A Brazilian judge suspended and could potentially dismiss homicide charges against 21 officials of Samarco mining company, Vale SA and BHP Billiton Ltd., in connection with the rupture of an iron-ore tailings dam two years ago that killed 19 people.

The judge suspended criminal proceedings to determine whether wiretapping of the officials' phones by prosecutors was legal. If not, it "could result in the annulment of the case," the judge wrote.

The case stems from the Nov. 5, 2015, rupture of a Samarco tailings dam in Minas Gerais state that sent 62 million cubic meters of iron-ore waste into the valleys below, flattened a village of 600, left 19 dead and polluted the Doce River. Brazil's Environment Ministry called the spill "the country's worst environmental catastrophe."

The executives are charged with qualified homicide, which in Brazil means homicide aggravated by certain factors. When the charges were filed last year, prosecutor Jose Leite Sampaio said the Samarco executives knew or should have known that the dam was unsafe and at risk of failing.

Illegal Wiretapping?

Judge Jacques de Queiroz Ferreira of the first regional federal court in the Minas Gerais state municipality of Ponte Nova suspended the criminal case (No. 0002725-15.2016.4.01.3822) July 4, but the court just publicly confirmed the suspension, a court spokeswoman said Aug. 8. It is not known when the judge will decide how to proceed.

Former Samarco President Ricardo Vescovi and ex-director of Samarco operations and infrastructure Kleber Luiz de Mendonca Terra allege that phone wiretaps between executives charged in the case took place outside the time frame that the judge had authorized.

Those charged include 16 current or former executives of Samarco, the reservoir's operator, and five current or former executives of Samarco's two co-owners, the Brazilian iron-ore giant Vale S.A. and the Anglo-Australian BHP Billiton Ltd, on Samarco's board of directors. VOGBR, a geotechnical auditor that does reservoir safety inspections, and one of its employees were also criminally charged with presenting false reservoir stability reports.
